Public Company Accounting Oversight Board
1666 K Street, NSW
Washington, DC, 20006-2803 USA

Dear Members of the Board:

We are writing to comment on your Docket Matter 034 concerning a proposed change in auditing standards. Wulff, Hansen & Co. is a small privately owned broker/dealer. As such, we are registered with the Securities and Exchange Commission, FINRA, and the Municipal Securities Rulemaking Board.

After more than 80 years as a carrying and clearing firm, we recently terminated our carrying and clearing operations and are now an introducing broker/dealer carrying no customer accounts, clearing no transactions, and having no customer funds or securities in our possession. We do not see any public benefit in requiring small firms such as ours to retain a PCAOB-registered auditor or to otherwise be subject to requirements designed for broker/dealers whose financial statements are available to, and used by, the public whose assets are held in their custody.

There are several thousand small closely held broker/dealers, many of which have no more than ten employees and many of which have but a single employee/owner. When we were carrying customer accounts the public had a right and a need to view our financial statement, and we gladly made it available to them on a continuing basis. A non-carrying and non-clearing firm, however, has no such obligation. The public has no access to its financial statements and has no need for such access since no publicly owned assets are held in custody by the firm.

Since the PCAOB's mission is to protect the public, we see no reason to require that such broker/dealers be audited by a PCAOB-registered firm. This requirement entails additional costs for the firm and for its auditors and since the resulting statements are not available to the public there is no demonstrable public benefit in requiring them to be produced by a registered firm. The public is not at risk with regard to the financial condition of such firms: Customer assets are held elsewhere and, should the firm disappear overnight, no customer assets would be endangered or unavailable.

The only persons who could conceivably receive the 'protection' ostensibly offered by a PCAOB-registered auditor are the owners of the firm themselves. Since the owners can always choose to select such an auditor that option would remain open to them if they so desired. If they did not wish to incur the additional costs involved, the result would affect no one but themselves.

Thank you for your consideration.

Very truly yours,

Chris Charles
President

I totally endorse and support Lisa Roth's comments. As a small independent business, the proposed rules will inflict significant additional costs, with
little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in our small business are only ourselves.
Thank you for your interest in our opinion.
Regards,
Frank

*Re: PCAOB Rulemaking Docket Matter No. 034: Proposed Auditing Standards on Auditor's Report and Auditor's Responsibilities Regarding Other information – The Required communication of Critical Audit Matters*

Dear Members and Staff of the Public Company Accounting Oversight Board:

I appreciate the opportunity to comment on PCAOB's Proposed Auditor Reporting . As a member of the financial community and a investor, I support the proposed standards because they are intended to increase the informational value of the auditor's report and thus to promote its usefulness and relevance to investors and other financial statement users. While, I also want to express my concerns regarding the use of the new information, such as "critical audit matters", and the economic considerations entailing the proposed standards, especially the potential cost.

Basically, the type of auditor's report in the United States has been commonly described as a pass/fail model. The existing model seems to be useful since it states a straightforward and clear position on whether the financial statements are fairly presented (pass) or not (fail). However, the existing Auditor's report provides little, if any, information specific to a particular audit. Admittedly, the existing Auditor's report provides discussion and analysis for each significant financial statement account with some degree of detailed breakdown and necessary disclosure. But it fails to communicate with investors the considerations on specific accounts in terms of auditor's subjective judgment and evidence gathering, or the influence and weights of matters in issuing Auditor's final opinion. Thus, the existing auditor's report is not informative enough for investors to make investment decision.

The proposed Auditor Reporting Standard would require the auditor to communicate in the auditor's report "critical audit matters", which could help to alleviate the information asymmetry that exists between company management and investors. Because company management is usually aware of the auditor's most challenging areas in the audit due to regular interactions with the auditor as part of the audit. However, investors do not usually know this information. When investors have a better grasp of the company's business, risk and material accounting issues, company would allocate the capital more efficiently and could lower the average cost of capital when investors have a better understanding of the company's business and risks.

The following are some examples of "critical audit matters" that could be communicated in the auditor's report under the proposed auditor reporting standard and that would be the additional information investor's are interested in obtaining.

- Areas of high financial statement and audit risk. For instance, a deficiency in internal control over financial reporting.
- Areas of significant auditor judgment. For instance, company's loss contingency, or going concern assumption
- Significant management judgments, estimates, and areas with significant measurement uncertainty, and application of accounting policy
- Significant changes or events affecting the financial statements, including unusual transactions; or incurrence of restatement.

To apply the proposed auditing standards regarding the "critical audit matters" to the practice of Auditor's report, I analyzed the Diamond Food's annual report as of and for the fiscal year ended July 31, 2010 and other relevant information concerning the company's financial reporting to prepare a "critical audit matters" section. The format complies with the Board's recommendations by including the identification of critical audit matters in the annual financial statement and related notes, considerations that led to determine the matter as critical, and relevant financial statement accounts and disclosure. There are two specific critical audit matters regarding Diamond Foods's financial statements and other significant information, which are: 1) Company's internal control over financial reporting, as of and for fiscal year ended on July 31, 2010 which was four month after its acquisition of Kettle Foods, and 2) Company's estimation of Cost of Goods Sold and Account Payable after its restatement of financial statement for fiscal year 2010 and 2011.

*****

The following comments primarily reflect my understanding and limited analysis are in response to certain questions set forth in the Proposed Auditing Standards.

10. *Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?*

    Yes. The proposed communication of "critical audit matters" section in the auditor's report would be tailor-made to be specific for each financial statement audit by the auditor. By focusing on the areas involving high financial statement and audit risk and significant management and auditor judgment, the communication of "critical audit matters" would serve as the bridge for the gap of information that company's management knows or auditor obtains during the audit while is unknown to investors. If these information is not sufficiently relevant and useful in terms of meeting investor's need, the

Auditor Discussion & Analysis, required and expanded emphasis paragraphs or auditor assurance on other information outside would provide with additional information.

11. *What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?*

Undoubtedly, investors would benefit from additional auditor reporting and further unique and relevant insight obtained by the auditor during the audit of financial statements. Communicating “critical audit matters” would provide investors and other financial statement users with previously unknown information about the audit that could enable them to analyze more closely any related financial statement accounts and disclosures. Essentially, the required communication of “critical audit matters” would have two direct positive impact on investors, one is that it could direct investors’ attention on challenges associated with the audit that may contribute to the information used in their investment decision making; another one is that it could let investors focus on aspects of the financial statement that the auditor also found to be challenging.

To meet the proposed auditing standards requirement, auditor may change or adjust how they plan the audit procedure, obtain reliable evidence, present and disclose information and express their opinion, which would have an indirect positive impact on investors and other financial statement users. Since the auditor's new focus on and communication of critical audit matters could lead to improved financial statement disclosures related to areas that gave rise to critical audit matters in the first place. The potential improvement in the related financial statement disclosures could incrementally increase the quality of the information in the financial statements, which assist the investors in investment decision-making and better evaluating the company’s financial position, results of operations, internal control environment and cash flow.

13. *Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?*

Yes. On one side, the quality of the audit of the financial statement could be improved because auditor would focus on areas where 'critical audit matters" gave rise to offer deeper insight. On the other side, due to the staffing constraint and tight deadline, auditor may compromise some of its work in areas less material. The tradeoff may lead to the ignorance of potential risk of omission or misstatement. I expect that the incremental cost in terms of time and effort for auditor would be modest since auditor could leverage the audit works that have already required to be performed under the existing standards. And the "critical audit matters" could have already been addressed by auditor in forming the opinion on the financial statements.

22. *What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?*

Responding to the requirement of communicating "critical audit matters" in the auditor's report, companies, including audit committee, would incur additional cost related to management review of and discussion with auditor about the "critical audit matters". Although it's auditor who determine, document and communicate the "critical audit matters" to the investors via auditor's report, it's actually the company's responsibility of addressing the potential issues and material concerns. These costs or other considerations could be different for audits of large and small companies. For instance, small company may not have audit committee and need to set up a special committee to work with auditor for the proposed standards. While, large companies have audit committee which already has resource and personnel.

*****

There are concerns about the use of the "critical audit matters" from investor's perspective. The proposed communication in the auditor's report could be something investors and other financial statement users not accustomed to review or analyze. The "critical audit matters" section could be misleading because it may deliver a wrong impression that all of the information important to investment decisions already highlighted as a critical audit matter, or investors may not understand the meaning of the critical audit matters correctly. Investors may seek guidance on the interpretation of a certain critical audit matter in the context of specific industry or company. It will be a good resource for investors to turn to if PCAOB could come up with a list of potential "critical audit matters" for reference.

In sum, the proposed communication of "critical audit matters" in the auditor's report is intended to make the auditor's report more informative and commutatively valuable to enhance its relevance and usefulness to investors and other financial statement users. The substantial benefits of the increased quality of corporate financial reporting and increased value of the auditor's report to investors would outweigh the potential cost increase for auditor and company related to the proposed auditing standards.

I appreciate the opportunity to share my viewpoints on the Proposed Standards. If the Public Company Accounting Oversight Board has any questions regarding my comments, please contact me at az318@georgetown.edu.

Sincerely,

Emily Zhang

August 10th 2016

Dear Madam Secretary

**Re: PCAOB Rulemaking Docket Matter No. 034**

We are writing, as a major institutional investor, to support the PCAOB's proposals for enhancing auditor reporting. By way of background, Aberdeen Asset Management is a UK-based global fund management house, with over $400 billion assets under management (as at the end of June 2016).

As a global investor, we have followed closely the debate on auditor reporting as it has developed around the world. In particular, we have welcomed the additional insights which the new reports have afforded to us as investors in UK companies as these reports have been enhanced over the last three years. The reports have helped build our confidence in the quality and effectiveness of the audit process, as well as giving us insight into the work that the auditors have done. They do indeed help to reduce information asymmetries and build trust between the parties to corporate reporting. By increasing transparency, we also believe that these reports tend to enhance the quality, both of the audit, and of company reports.

It has long been our view that the existing form of auditor reporting does the profession a profound disservice. It seemingly places greater emphasis on what the auditor has not done than what has actually has been delivered, and focuses on why investors should not rely on the auditor's work rather than providing confidence in the effectiveness of the audit process.

We regard the PCAOB's current proposals as an important opportunity to address these failings of the current auditor reporting model and we urge that they should be taken forwards into effect, applying to all public companies (including EGCs).

We are members of the Council of Institutional Investors and support their letter to you. In particular, we back their call that the definition of Critical Audit Matters should not be narrow, but should in fact be drawn broadly so as appropriately to encompass matters relevant to long-term shareholders. We support the formulation proposed by the CII, that Critical Audit Matters encompass issues involving significant accounting judgement or estimation by management. We also agree that the auditor should make some indication about its findings in relation to these Critical Audit Matters. These changes would be more congruent with the emerging international approach as well as adding to investor confidence.

It may be useful for us to outline the use we as an investor make of enhanced auditor reports in those markets where they are already available. Where they exist, these are now one of the earliest elements of the company's annual reporting that we read. The issues which are highlighted in the auditor report are typically the more judgemental elements of the accounting, and therefore the ones on which we wish to focus one of our key assessments when understanding a company as a long-term investor: the approach and mindset of management and their approach to communications with shareholders. This informs our trust and comfort in remaining invested for the long term. The auditor reports therefore do not provide new information, but they do offer new – and highly valuable – insight. The issues highlighted often form an element of our discussions with both management and non-executive directors, discussions which increase our understanding of the company and of its prospects. This specific use that we make of the reports as part of our investment and stewardship processes is in addition to our clear view that the greater transparency that the auditor reports is of itself a good thing. The simple fact of greater disclosure should encourage better performance by the auditor in their role, and so also enhance the quality of company reporting.

We also strongly support the disclosure of auditor tenure in the auditor's report. This is important data to inform investor perceptions of auditor independence, and its disclosure is unhelpfully inconsistent in the US at the moment. Our current position is that we cannot support the reappointment of auditors who have been in place at a company for more than 50 years (notwithstanding our recognition of the rotation of individual members of the audit team); our experience of tenders for the audit and changes of auditor in those markets where this is now required is that bringing in a new firm with a different approach and perspective has been positive for audit quality. Even where there is no regular requirement to change auditor, mandating disclosure of tenure would allow auditors the scope to explain to shareholders why they should not regard long tenure as a matter of concern.

Yours sincerely

Re: Rulemaking Docket Matter No. 034: Proposed Auditing Standard – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*

To Whom It May Concern:

The American Bankers Association[1] (ABA) appreciates the opportunity to comment on the Proposed Auditing Standard – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (Proposal). The major change proposed is the inclusion within the standard auditor's report of a description of "critical audit matters" (CAMs), intended to provide audit-specific information about especially challenging, subjective, or complex aspects of the audit as they relate to the relevant financial statement accounts and disclosures.

Representing both users and preparers of financial information, ABA recognizes the importance of effective auditing procedures as the underlying lynchpin of the securities markets. In short, investors rely on the reasonableness of reported financial performance. With that in mind, ABA has evaluated the Proposal in light of the current state of the auditing profession, new accounting standards recently issued, and the interface auditors have with both investors and preparers. We have also evaluated the Proposal in light of the fact that bank financial statements are normally full of matters that are especially challenging, subjective, or complex. In addition to those issues not unique to the financial services industries, valuation of financial instruments (including many equity and debt securities, derivatives, retained interests in variable interest entities, and other financial instruments) and goodwill, as well as estimating credit losses in a broad range of loan portfolios, will likely qualify as CAMs in a typical bank audit.

If the Proposal is approved, the new auditing standard could be the biggest change ever to the auditor's report. It also will largely converge with international standards. In the end, however, ABA sees little, if any, ongoing value provided to investors and analysts, while burdening both registrants and auditing firms with costly processes that will take the focus away from the registrant and onto the auditing firm – from the results of operations to the results of auditing procedures.

[1] The American Bankers Association is the voice of the nation's $16 trillion banking industry, which is composed of small, regional and large banks that together employ more than 2 million people, safeguard $12 trillion in deposits and extend more than $8 trillion in loans.

The PCAOB must carefully assess both the short- and long-term benefits and costs of reporting CAMs. Prudent investors already understand that auditors focus their efforts on those areas disclosed by registrants in various sections of their quarterly and yearly filings. The incremental value of a separate auditor's discussion will be minimal to these stakeholders, especially because descriptions of auditing procedures will inevitably become boilerplate and unnecessary scrutiny will accompany even the tiniest of CAM wording changes made by auditors. We believe investor focus should be on the registrant and not the auditor.

There is little doubt that the Proposal will generally result in increased auditing documentation requirements over issues identified as CAMs. In light of the continually increasing emphasis on auditing procedures over internal controls over financial reporting during the past several years, the Proposal could become the final blow to the PCAOB's common sense Auditing Standard No. 5 *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements* (AS 5). If the Proposal is approved, check-the-box-like audit procedures that require overly-detailed documentation– those audit procedures that have increased dramatically over the past several years – will become a central part of registrant audits. This will provide value to no one.

As a result, ABA recommends that the PCAOB suspend this project and perform the steps described below.

**Provide Transparency to Audit Practice Expectations**

It appears that the disclosure of CAMs could undermine the importance of attestation reports of internal controls over financial reporting. Since Significant Deficiencies normally result in additional audit procedures, the Proposal appears to require, on a practical basis, the disclosure of Significant Deficiencies[2]. As per the SEC's guidance related to Sections 302 and 404 of the Sarbanes-Oxley Act of 2002 (SOX), Significant Deficiencies are currently reported by the auditor only to the Audit Committee and, therefore, should be excluded from the scope of the Proposal. Unless this contradiction is addressed prior to a final auditing standard, both investors and auditors will be confused on how to assess such internal control deficiencies. Significant deliberation had been conducted over these SOX internal control reporting requirements, and any auditing standard that changes those requirements should be subject to a similar extensive due process.

Although the above must be resolved, a much more urgent effort is needed from the PCAOB to help alleviate the confusion experienced by many companies (bank and non-bank) and their auditors about the appropriate level of documentation needed to support internal controls. It seems that auditors and PCAOB have constantly expanded requirements for detailed supporting documentation to the point of overkill.

[2] While the CAM may not explicitly name the Significant Deficiency, an investor will be able to review the internal control attestation report to identify Material Weaknesses and deduce the Significant Deficiencies through the CAMs.

Over the past several years, continuous changes to auditors' supporting documentation requests have transformed much of the "top-down" and "risk-based" approach of AS 5 to one that requires untenable levels of detail and precision that often do not reflect the company's internal control structure – work is performed merely to satisfy auditor demands that are apparently made in response to PCAOB inspection comments. This has particularly affected banks, which normally have very large balance sheet totals in comparison to net income statement results. Income statement materiality thresholds are often applied to balance sheet account testing, resulting in inordinately detailed documentation required to support items that are often clearly trivial to the balance sheet.

This situation needs to change, as the demand for detail grows with each passing audit. Since internal control testing, and the challenges thereof, will be fundamental aspects of any CAM, companies and their auditors must be able to anticipate what levels of detail and precision will be acceptable. Until these concerns are addressed, companies will not be able to adequately assess and structure their internal control systems. This is a high priority for not only auditors and SEC registrants, but also non-SEC registrants, in the likely event that similar auditing standards are adopted for all financial statement audits.

We recommend that comprehensive and ongoing outreach and education be performed by the Inspections Division of the PCAOB. The focus should be on the acceptable levels of audit evidence and other supporting documentation over internal controls. Roundtable and workshop sessions that include both auditing firms and SEC registrants should be a part of this effort. Without such discussions, the level of internal control testing and documentation will either remain at high levels or continue to skyrocket, and CAM challenges will unnecessarily turn the investor's attention from one of substance to one of compliance. That should not be the intent of the Proposal.

## Reevaluate Whether Actual CAM Disclosures will Add Value to Investor Decisions

If the PCAOB decides to issue a final auditing standard that contains CAMs, the issuance of FASB's Current Expected Credit Loss accounting standard (CECL) promises to open the floodgates to not only more internal control concerns as expressed above, but also to a continuous stream of CAMs to be listed in a typical bank's audit opinion. Given the high measurement uncertainty related to the highly subjective and judgmental process of estimating credit losses[3], the Proposal could result in requiring a separate CAM discussion on the allowance for credit losses related to virtually every lending product offered by a bank[4]. Such an expansion

[3] Such challenges related to measurement uncertainty will be significantly increased upon the adoption of FASB Accounting Standards Update 2016-13 *Measurement of Credit Losses on Financial Instruments*. Detail on the additional challenges can be found in the International Auditing and Assurance Standards Board's paper *The IAASB's Project to Revise ISA 540: An Update on the Project and Initial Thinking on the Auditing Challenges Arising from the Adoption of Expected Credit Loss Models*. (March 2016)

[4] While auditors will conceivably limit discussion to one CAM covering the entire loan portfolio, we believe auditors will feel a need to break out their discussions to align with how they will be discussed by registrants within their public filings.

of the auditor's report will result in pages of narrative of little worth, as general auditing procedures will likely be similar for each product. We question whether this is the intent of the PCAOB, as the focus should be on areas that are *especially* challenging, subjective and complex compared to the rest of the audit.

With this in mind, the Proposal attempts to rank some audit challenges as being higher than others (if *especially* challenging, it is deemed a CAM). Although we do not agree with identifying the entire ALLL estimation process as being a CAM (as described above), the ranking of audit challenges into CAMs versus non-CAMs could lead one to believe the standard ALLL estimation process is without significant risk. For instance, in the Illustrative Example on page 32 of the Proposal, a CAM is identified on a new loan product that represents 18% of one segment of a loan portfolio held by a company. Investors could be wrong to assume that accounting matters related to the other portions of this loan portfolio are not challenging, but that is what the disclosure implies. Worse, any possible subsequent financial statement restatements related to those challenges that did not rank high enough to be a CAM will unnecessarily increase audit liability to the point that nearly every challenge could eventually be considered a CAM. Thus, there is risk of identifying too few CAMs as well as the risk of watering down disclosures if there are too many CAMs.

Finally, we question how CAMs that are continuously disclosed will be handled in years subsequent to implementation. Will unnecessary attention be given to trivial language changes in the CAM disclosures? We believe this could be the case, which, along with the confusion just noted on the risks related to too-extensive CAM disclosure and non-CAMs, would divert investor focus from registrant performance to work by the auditors.

**Determine How Other Disclosures Can Address CAMs**

Analysts that are familiar with specific industries normally have a reasonable level of knowledge related to the most challenging audit areas. Banking analysts, for example, normally identify a critical auditing matter after reading sections in periodic registrant filings addressing key accounting policies, accounting estimates, fair value measurements, risks, and management's discussion and analysis. At the level of detail that can be expected during a bank audit, it is difficult to see significant incremental value provided to an investor derived from the information provided in a CAM, considering other existing reports (internal control attestations and the overall audit opinion, in combination with company disclosures) address the auditor's focus and the related results (including those for financial statement accounts, footnote disclosures, and internal controls).

As drafted, the Proposal will result in bank audit opinions that span pages with CAM disclosures of little difference between each other. Investors and analysts do not normally possess detailed knowledge of specific audit procedures and, therefore, will likely either ignore CAM disclosures or unnecessarily question them. In the event there are questions, it would appear that investors will need to speak directly with the auditors, and this seems to virtually eliminate the purpose of the audit committee. We do not believe this is a good result.

If the PCAOB wishes to consolidate information related to key accounting issues or otherwise educate the investing public on the nature and extent of auditing procedures, we believe such efforts can be done outside the audit opinion. In addition to other disclosures within a typical filing, the PCAOB can explore working with the SEC in appending such consideration to their project reviewing the recent SEC Concept Release *Possible Revisions to Audit Committee Disclosures.* The Concept Release currently addresses certain processes performed by audit committees, but mainly in regards to the audit committee's relationship to the external auditor. Overseeing the company's relationship to the external auditors is only one of the various purposes of the typical audit committee. The SEC should consider whether a discussion by the audit committee of key audit risks is appropriate within periodic filings.

In summary, ABA supports efforts to provide investors with relevant and decision-useful information. However, the Proposal will result in increasing the visibility of the audit report with noise that will not provide incremental decision-useful information for investors, and could create unwarranted and unnecessary confusion. Considering the evolving and ever-detailed audit demands that have resulted from PCAOB inspections, we believe the PCAOB should resolve those issues before ratifying a new audit opinion.

Thank you for your attention to these matters and for considering our views. Please feel free to contact me (mgullette@aba.com; 202-663-4986) if you would like to discuss our views.

Sincerely,

Michael L. Gullette

**Re: PCAOB Rulemaking Docket Matter No. 034 –
The Auditor's Report on an Audit of Financial Statements
when the Auditor Expresses an Unqualified Opinion**

Dear Ms. Brown:

On behalf of the American Federation of Labor and Congress of Industrial Organizations (the "AFL-CIO"), I am writing to express our strong support for the Public Company Accounting Oversight Board's (the "PCAOB") proposed auditing standard "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion." The AFL-CIO is the umbrella federation for U.S. labor unions, including 56 unions representing 12.5 million members. Union-sponsored and Taft-Hartley pension and employee benefit plans hold more than $646 billion in assets. Union members also participate directly in the capital markets as individual investors and as participants in single-employer and public pension plans.

Investors are the intended beneficiaries of public company audits, and yet today's auditor's reports on U.S. public company financial statements are almost entirely devoid of useful information. They contain nearly identical boilerplate and can be summarized as a single binary data point of whether the opinion was qualified or unqualified. Accordingly, auditor's reports are often skimmed or ignored by investors. In contrast to archaic nature of auditor's reports in the U.S., other jurisdictions outside the U.S. now require enhanced transparency. The International Auditing and Assurance Standards Board, the European Union, and the U.K. Financial Reporting Council have all adopted expanded auditor reporting requirements in recent years.

**Critical Audit Matters**

Overall, we support the PCAOB's proposed rule requiring auditors to disclose critical audit matters ("CAM") in the auditor's report. Mandatory CAM disclosure will help investors better understand audited financial statements. For example, CAM disclosure will provide new information that investors can evaluate to gage the possibility of an audit failure or the risk of an earnings restatement. Investors will be able to incorporate this information into their trading decisions, and thereby CAM disclosure will facilitate price discovery for securities and enhance overall efficiency of the capital markets. Moreover, we believe that investors should be entitled to receive information about CAMs in the auditor's report as a matter of good corporate governance.

In our view, mandatory CAM disclosure will also lead to more informed proxy voting by investors. Shareholders routinely vote to ratify the audit committee's selection of the auditor at company annual meetings. Yet today, shareholders are not provided with substantive information about the audit to take into consideration when voting. Accordingly, proxy voting decisions on auditors are based on limited information such as the ratio of audit fees to non-audit fees. Requiring auditor's reports to include a discussion of CAMs will help proxy voters to better evaluate the quality of the audit. Auditors rather than audit committees are best positioned to communicate CAMs to investors because they are the ones who are responsible for conducting the audit.

The PCAOB's proposed rule defines a CAM as a matter that was communicated or required to be communicated to the audit committee, relates to accounts or disclosures that are material to the financial statements, and involved especially challenging, subjective, or complex auditor judgment. While this definition encompasses audit issues that are of greatest relevance to investors, we are concerned that including a materiality threshold for the identification of CAMs may unduly limit the flow of useful information to investors. As a legal concept, materiality defines the floor for disclosure below which financial reporting becomes fraudulent. However, reasonable investors can differ in whether they consider information to be material to financial statements.

Instead of including a materiality threshold in the definition of CAMs, we urge the PCAOB to look to the IAASB's definition of key audit matters that requires auditors to select the most significant matters in the audit for discussion in the auditor's report. The IAASB's standard also avoids reliance on the auditor's determination of whether a matter involved especially challenging, subjective, or complex auditor judgment. Such a determination gives auditors too much discretion to decide whether a matter needs to be communicated to investors. In other words, investors deserve a discussion of the significant issues presented in the audit regardless of whether the auditor believes that they are material to investors or especially challenging to the auditor.

We also believe that auditors should be required to provide a gradated assessment of management's significant accounting estimates and judgements. For example, auditors could communicate whether management's accounting estimates and judgements are conservative, average, or aggressive rather than simply stating that they conform with GAAP. Such a differentiation would be useful to investors in making a determination as to the overall quality of a company's financial reporting. Moreover, a more gradated approach to the auditor's opinion would help investors better understand the nature of the audit and narrow the "expectations gap" between what investors expect from auditors and what auditors are actually responsible for.

**Additional Improvements**

We support the PCAOB's proposed additional improvements to the auditor's report. Regarding auditor independence, we support requiring auditors to state that they are required to be independent with respect to the audited company, and further believe that audit firms should be required to state if they are in fact independent and in compliance with the applicable independence rules. We also favor requiring that auditor's reports be addressed to investors in addition to company boards of directors. Investors are the intended third party beneficiaries of the audit, and therefore it makes sense that the auditor's report be addressed to them.

Finally, we strongly favor requiring disclosure of auditor tenure in auditor's reports. Many investors believe that an audit firm's independence can become compromised when a company employs the same audit firm for a substantial period of time. For example, the AFL-CIO's proxy voting guidelines recommend that voting fiduciaries consider voting against ratifying an auditor when a company has had the same audit firm for more than seven years. While long tenure is just one factor that can compromise objectivity, investors should be provided with this data point. Many companies have begun to voluntarily disclose their audit firm's length of tenure, but investors need to be able to access this information in a standardized location.

**Conclusion**

We commend the PCAOB for taking steps to make auditor's reports more meaningful to investors. The auditor's report is the primary means through which auditors communicate to investors regarding the audit of a company's financial statements. Updating the substantive content of the auditor's report is long overdue, and we hope the PCOAB will take into consideration our suggestions on how the proposed rulemaking may be further improved. If you need any additional information regarding our views, please contact me at (202) 637-5152 or brees@aflcio.org.

Re: Request for Public Comment: Reproposed Rule on the Auditor's Report, PCAOB Rulemaking Docket Matter No. 034

Dear Office of the Secretary:

We are pleased to have the opportunity to provide comments on the Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* ("Reproposed Rule"). The comments contained below are based upon our collective experiences as senior leaders in various business, governmental, legal and academic organizations, including our roles as audit committee chairpersons for the indicated American Funds (the "Funds"). The American Funds are one of the oldest and largest mutual fund families in the nation. Capital Research and Management Company is the investment adviser to these Funds; however, the views expressed here are our own and do not reflect those of Capital Research and Management Company.

As members of the audit committees, we applaud the Public Company Accounting Oversight Board's (the "Board") ongoing efforts to enhance the form and content of the auditor's report to make it more relevant and informative to investors and other financial statement users. We appreciate the Board's efforts to modify its previous proposal related to the auditor's report based upon comments received (including our own). As discussed in more detail below, we are supportive of both (1) the Reproposed Rule's exclusion of audits of investment companies from reporting critical audit matters, and (2) the inclusion of explanatory language in the auditor's report related to the auditor's responsibilities around internal controls over financial reporting, consistent with our original comment letter; however, we continue to question whether the disclosure of an auditor's tenure provides useful information in determining the quality of the audit.

Critical Audit Matters

As we previously commented in December 2013, an investment company's key accounting policies, such as fair valuation (as required by Accounting Standards Codification ("ASC") 820) and taxes (as required by ASC 740), are already extensively disclosed in the notes to the financial statements. Disclosure of these items as critical audit matters would be repetitive and could lead to boilerplate language in the auditor's report, resulting in increased audit costs while adding little value for investors. Furthermore, an investor's decision to invest in an investment company is primarily based on the investment company's investment objectives, risks, performance and fees, which are disclosed not only in the semi-annual and annual reports but also in the Fund's prospectus sent to each shareholder. We do not believe that the auditor reporting on valuations and tax as critical audit matters would provide meaningful, additional information or context. Accordingly, we support the Board's Reproposed Rule to exclude the audits of investment companies from reporting on critical audit matters.

Auditor Report Disclosure of its review of Internal Controls over Financial Reporting

Currently, an auditor of an investment company is not required to perform an audit of the company's internal controls over financial reporting ("ICFR"). However, the current auditor's report is inconsistent with the fact that the auditor has not expressed an opinion on the effectiveness of ICFR. We support the proposed additional language to the auditor's report which clarifies the auditor's responsibilities and promotes comparability across auditor's reports. We support the Board's inclusion in the Reproposed Rule to require language in the auditor's report describing the auditor's responsibilities over ICFR.

Auditor Tenure

The Reproposed Rule requires the auditor report to include a statement disclosing the year the auditor began serving the company. For an investment company, the rule states that the year to be disclosed should be the year the auditor began serving any investment company in the complex. As stated in our original comment letter, we do not believe auditor tenure provides meaningful information on audit quality or the independence of the audit firm issuing the opinion. Disclosure of the year the audit firm began serving the investment company complex ignores both personnel change (such as the mandatory rotation of audit partners, different audit committee members and management turnover at both the audit firms and the fund's investment adviser) and conformity to the evolving PCAOB guidance and best practices in this area. Many large investment company complexes engage two audit firms, each having audit responsibility for different funds within the complex, subjecting the fund's investment adviser to separate audits by two independent auditors. The Reproposed Rule defines auditor tenure to begin with the first year of service to the entire complex which might confuse or even mislead the reader of the auditor's report for a new fund, especially if the auditor has served the complex for several years. For the reasons above, we continue to believe that disclosing auditor tenure in the investment company's auditor's report could confuse or mislead the reader. As a result, we do not support the disclosure of auditor tenure in the Reproposed Rule.

* * * * *

Thank you for considering these comments, and please feel free to contact any of us should you have questions or wish to discuss our thoughts on the Reproposed Rule.

Re: PCAOB Release No. 2016-003 Rulemaking Docket No. 034

Dear Board Members:

This letter reflects the comments of ArcBest Corporation ("ArcBest") on the May 11, 2016 Proposed Auditing Standard (Exposure Draft or ED), *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards.*

We appreciate the Board's objective to improve the relevance and usefulness of the auditor's report. However, we are concerned by the provisions in the 2016 re-proposed standard regarding the inclusion of critical audit matters (CAMs) and the disclosure of the audit firm tenure in the audit report.

**Critical Audit Matters (CAMs)**

We understand that the Board has made a number of changes in what would be classified as CAMs and how these would be reported. However, we are concerned that the inclusion of CAMs in the audit report will fail to add relevant information for users of the audit report and related financial statements, while it is certain to add costs to the audit and impact the management and auditor relationship.

Page 74 of the Exposure Draft states, "Overall the results from research analyzing whether the information provided in expanded auditor reporting is useful to investors are limited. Collectively, the results are ambiguous as to whether the expanded auditors' reports have provided investors with new information beyond what is contained in the financial statements." We agree with the view that including lengthy CAMs in the auditor's report will not provide additional value to investors or other users of financial statements, and recommend that the Board remove this requirement from any final standard.

We oppose the inclusion of CAMs because we also believe the provision improperly shifts the responsibilities of management and the audit committee to the auditor, inappropriately expanding the auditor's role and straining the relationship between management, the audit committee, and the auditor. In accordance with rules and regulations, management is responsible for disclosure of the financial information and risks, as well as the accounting policies that are critical to understanding the financial information and that require difficult or complex judgments. The auditor's report should not be the original source for company information, rather the auditor should opine on information provided by management. Including this type of information in the audit report could lead to duplicate or conflicting reports with management disclosures and lead to confusion among financial statement users. Drawing attention to certain CAMs may also cause investors to conclude there is a problem with the audit in spite of an unqualified opinion.

We also believe that there is a significant risk that third parties may conclude there is a correlation between the volume of CAMs included in the auditors' report and the quality of the audit, a completely erroneous conclusion. Such a development would create the potential for more and expanded CAMS as audit firms seek to improve the perceived quality, but not necessarily the actual quality, of their audits. Such an increase in CAM disclosures would result in additional audit costs to public companies and their investors disproportionate to any benefits.

The requirement to include CAMs in the auditor's report will also distract attention from the audit for both the auditor and the company at a very critical time for all those involved under tight filing deadlines. With two separate descriptions of certain critical accounting policies and estimates, discussions would be necessary to determine which version appears in the CAM vs. MD&A and the footnotes. Because the auditor's identification, evaluation and description of CAMs would require the attention of highly experienced audit executives, it is possible that the attention given to CAMS would result in less availability of those audit executives in the actual performance of the audit of the financial statements and of internal controls over financial reporting. That could have the effect of detracting, rather than adding to, the quality of the audit.

Finally, with respect to the concept of auditor reporting on CAMs, we believe that any action on this proposal should be deferred until after the finalization of amendments proposed by the Securities and Exchange Commission in July, 2016 regarding (quoting from the proposing release) "disclosure requirements that have become redundant, duplicative, overlapping, outdated, or superseded in light of other Commission disclosure requirements, U.S. Generally Accepted Accounting Principles ("U.S. GAAP"), International Financial Reporting Standards or changes in the information environment." The Commission in that release also solicited comment on certain Commission disclosure requirements that overlap with, but require information incremental to U.S. GAAP to determine whether to retain, modify, eliminate, or refer them to the Financial Accounting Standards Board (FASB) for potential incorporation into U.S. GAAP. The comments to that release will very likely include views of investors and others regarding currently required disclosures in financial statements and otherwise included in SEC filings. The SEC's analysis of those comments and its final conclusions and possible referrals to the FASB will provide relevant information regarding such items as critical accounting estimates and U.S.GAAP requirements which bear directly on the audit of registrants financial statements. No final rule on the inclusion of CAMs in the auditors' report should be finalized until after the SEC has completed its work.

If inclusion of CAMs is ultimately deemed necessary by the Board, then the CAMs should be selected from the critical accounting estimates as disclosed in detail by management, rather than from matters the auditor is required to communicate to the audit committee. This approach would eliminate the potential for the auditor to become the original source of information as well as the potential for duplicative or conflicting disclosures between the auditor and management. An alternative would be the inclusion of a statement that the audit included evaluation of the accounting policies and significant estimates. A single statement could be added to the auditor's report referencing the location of such policies in the document which the audit report is included.

For larger U.S. public companies, investors are also provided additional assurance in the auditor's report on internal control over financial reporting.

While the Board's changes to limit CAMs to those reported to the audit committee and introducing a materiality consideration help limit the number of items potentially reported, if including CAMs in the auditor's report is expected to remain in the final standard, we support the use of public roundtables to bring auditors, preparers, and users together to discuss CAMs and exactly how they would be developed and used in practice prior to the issuance of a final standard.

**Auditor Tenure**

In addition, we do not support the inclusion of auditor tenure in the auditor's report. We do not feel there is convincing evidence to support this information would provide value to investors or improve audit quality. Research outlined on page 91 of the Exposure Draft showed that views varied as to how short-term vs. long-term tenure is perceived among investors. With such mixed results, it does not appear that we can directly associate auditor tenure with audit quality and it is possible that investors could draw incorrect inferences about auditor tenure as it relates to audit quality. We also note the increased voluntary disclosure of this information in proxy statements, and we recently added auditor tenure in our proxy statement. Currently, the proxy disclosure format provides for additional discussion of auditor engagement in proper context. Therefore, we suggest that this item be removed from the proposal.

**Conclusion**

In conclusion, we oppose the inclusion of CAMs or auditor tenure information. We also believe that the magnitude of these proposed changes should be made in collaboration with the Securities and Exchange Commissions' related disclosure framework. We appreciate the opportunity to express our views on this exposure draft.

Dear Board Members:

The Auditing Standards Committee of the Auditing Section of the American Accounting Association is pleased to provide comments on the PCAOB Rulemaking Docket Matter No. 034; PCAOB Release No. 2016-003: Proposed Auditing Standard -- The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion.

The views expressed in this letter are those of the members of the Auditing Standards Committee and do not reflect an official position of the American Accounting Association. In addition, the comments reflect the overall consensus view of the Committee, not necessarily the views of every individual member.

We hope that our attached comments and suggestions are helpful and will assist the Board. If the Board has any questions about our input, please feel free to contact our committee chair for any follow-up.

Respectfully submitted,

Auditing Standards Committee
Auditing Section – American Accounting Association

**Responses to Selected Questions in the Reproposal**

**<u>Question 1a.</u>** *Are matters communicated or required to be communicated to the audit committee the appropriate source for critical audit matters? Why or why not?*

We generally agree that requiring auditors to consider, for critical audit matter (CAM) treatment, all matters communicated or required to be communicated to the audit committee is appropriate, subject to the materiality requirement discussed in the reproposal. We believe that the requirements for auditor communication to the audit committee in PCAOB Auditing Standard No.16 (reorganized as AS 1301) align neatly with the intentions of the reproposal. We also believe that the reproposal requirement will help achieve a more uniform approach for auditors' consideration of which matters merit CAM treatment and provide a more orderly platform against which auditors, including quality review auditors, can perform and document their CAM-related procedures and decisions.

We do however acknowledge concerns raised by many respondents to the original proposal that the CAM reporting requirement may "chill" communications between management, auditors, and audit committees. Two recent studies provide insight into this issue. In one study, Gay and Ng (2015) find that auditors who face a more "reactive" audit committee are less likely to communicate with the audit committee about an uncertain accounting estimate in the presence of a CAM reporting requirement than when no such requirement exists. This effect is not observed with a more proactive audit committee, suggesting that the rigor of an audit committee's oversight of the external audit will be key to addressing this concern. In another study, Cade and Hodge (2014) find that managers exhibit less "communication openness" toward their auditors in the presence of a CAM reporting requirement. Participants acting in the role of management were less likely to share private information about a key accounting estimate with auditors if the auditors were required to report on the key estimate. Each of these studies suggest that CAM reporting requirements risk less candid communication regarding key matters of uncertainty in the financial statements. Such a risk could be exacerbated by requiring auditors to consider all matters communicated to the audit committee for treatment as CAMs.

**<u>Question 4.</u>** *Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, rather than only the current period? For example, should communication be required in an IPO or in a re-audit? Why or why not?*

We generally believe that the critical audit matter reporting requirements should extend to *all* financial reporting periods covered by the audit report, and should apply to all audits. While this "all periods" approach undoubtedly leads to increased length of the audit report, we think it is important for three primary reasons. First, the audit report itself usually covers multiple periods and we believe it should stand on its own in a manner similar to the financial statements and disclosures. Next, excluding critical audit matters related to prior periods increases the burden on users of information search. Prior research (Loibl and Hira 2009) suggests that investors with higher search costs (e.g., unsophisticated investors) decrease their information search relative to investors with lower search costs (e.g., financial analysts). We note that the Board highlights the burden of information search in other sections (e.g., audit tenure) of the reproposal and we appreciate this concern and believe it also applies in this context. Finally, prior year CAMs (e.g., uncertain reserve estimates), by construction, would frequently have multiple year implications.

**Question 6.** *Do the reproposed communication requirements appropriately address commenter concerns regarding auditor communication of critical audit matters, such as:*

a. *The auditor providing original information in describing the principal considerations for the determination that the matter is a critical audit matter or describing how the matter was addressed in the audit.*

We know of one recent study that might provide some insight on this concern. Fuller (2016) studies whether management disclosure decisions are impacted by the level of detailed discussion an auditor provides for a critical audit matter involving an uncertain accounting estimate (no CAM, brief CAM, or detailed CAM) and the vigor of audit committee oversight. Fuller (2016) found that when audit committee oversight was strong, auditors providing more detailed discussion of a CAM led to enhanced management disclosure of the uncertain accounting estimate including important *quantitative* information about the estimate such as the range and sensitivity analysis of the estimate. The study was done before the reproposal requirement that the auditor specifically discuss the audit procedures employed to address the CAM was added, which would merit further research.

Rather than two independent binary choices (disclose/not disclose) made by the auditor and management, we believe it is much more likely that disclosure of specific information regarding a CAM will be guided by an iterative "negotiation" between auditor and client management similar to how proposed audit adjustments are resolved (Fuller 2016). As many voices in the debate over CAMs have mentioned, the requirement of the auditor to report on CAMs is likely to give leverage to the auditor in seeking out necessary disclosure by management. Such a scenario would reduce the likelihood that the auditor would be the original source of information. Rather, the auditor will be including information within its CAM discussion that will likely overlap with greater management disclosure.

b. *Investors and other financial statement users misinterpreting critical audit matters as undermining the auditor's pass/fail opinion or providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate?*

The literature speaks to two possible misinterpretations of the audit report: (1) CAM-related content causing users to confuse a CAM statement with an audit qualification and (2) users failing to ascribe the same level of assurance and auditor responsibility to CAM areas as other areas of the audit. Each is discussed in turn.

With respect to the first possibility, Brasel, Doxey, Grenier, and Reffett (2016) provide some direct evidence regarding unsophisticated users' interpretations of CAMs. Brasel et al. conducted an online experiment using U.S. citizens eligible for jury duty as subjects. The participant pool is, therefore, likely in the lower tail of financial sophistication, and thus, most likely to misinterpret aspects of the auditor's report. Despite this low level of financial sophistication, the results of manipulation checks included in Brasel et al. suggest such basic misinterpretation is unlikely. After reading an auditor's report with the CAM language proposed in PCAOB Release 2013-005, and a specific CAM paragraph similar to those in the current proposal (including the reasons the item was considered a CAM, the procedures applied, and the results of the procedures) participants were asked two true/false questions to assess their understanding of the unqualified audit report; 1) "[the auditor] issued an unqualified (clean) opinion for [the company]," and 2) "[the auditor] believes that [the company's] financial statements are materially misstated." Respondents answered these two questions correctly at a rate of 97.9 percent and 93.5 percent, respectively, indicating a low rate of misinterpretation caused by CAMs. It appears that this sample of unsophisticated users still largely understood the basic nature of the unqualified audit report and that the auditors were not indicating the presence of a misstatement. Consistent with these findings, Kachelmeier, Schmidt, and Valentine (2015) report that participants reviewing a CAM audit report expressed the same confidence in the financial statements "in general" as participants reviewing a control (current regime) report.

Five recent studies speak to the second possibility. These studies largely examine CAM disclosures in a legal liability setting and cases involving litigation over misstatements, so are reviewed in detail when we respond to questions 10 and 12, not here.[1] Though we provide the implication of those studies for the current question 6b here.[2]

In order to reduce the risk that users would misconstrue CAM paragraphs as modifying the audit report or that users would ascribe differing levels of assurance to CAM discussions and the remainder of the audit report, we propose modest changes to the Board's illustration of the Unqualified Report on pgs. A-17 to A-18 of the reproposal. Our suggested modifications are highlighted in blue in the draft auditor report in our Exhibit 1 below, the last two pages of our response.

First, to provide a stronger linkage between the *Opinion Paragraph* and the discussion of CAMs, we suggest the following words be included at the end of the Opinion Paragraph:

> "We are providing under "Critical Audit Matters" below, information on certain matters we communicated to the Audit Committee, which in no way alters our opinion on the financial statements taken as a whole. We do not provide separate opinions on the critical audit matters, or on the accounts or disclosures to which they relate."

[1] A sixth study by Christensen, Glover, and Wolfe (2014) also examines investor reactions to modifications to the auditor's report. However, we do not include the results in the main text because the study was conducted prior to the Board's 2013-005 release and uses a "CAM" approach and wording substantially different from those subsequently proposed and reproposed by the Board. To summarize, Christensen et al. found that including a paragraph in the auditor's report regarding difficult audit areas resulted in an increased likelihood that participants would "stop considering the firm as an investment" (2014, 72), but the effect was eliminated with the addition of a paragraph explaining the resolution of the matter (the procedures applied by the auditor) and specific assurance over the audit area.

[2] The studies reviewed in our response to questions 10 and 12 suggest CAM disclosure may act as partial disclaimers or public forewarnings of increased misstatement risk in a majority of settings, decreasing auditor liability (Brasel et al. 2016; Brown, Majors, and Peecher 2015; Kachelmeier et al. 2015). Whereas two studies suggest there might be settings in which CAM disclosure increases auditor responsibility / liability (Backof, Bowlin, and Goodson 2014; Gimbar, Hansen, and Ozlanski 2016b).

Second, the following similar language (as shown in Appendix – B illustration of the Unqualified Report on pgs. A-17 to A-18) would be removed from the *CAM section*:

> "Critical audit matters do not alter in any way our opinion on the financial statements, taken as a whole, and we do not provide separate opinions on the critical audit matters or on the accounts or disclosures to which they relate."

The introduction to the CAM section would then only contain the definition.

**Question 7.** *In addition to referring to the relevant financial statement accounts and disclosures, would it be appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating a critical audit matter? Why or why not?*

We believe that it would not be appropriate for the auditor to reference other information outside of the audited financial statements for two main reasons. First, the audit report conveys the auditor's opinion on the financial statements, and, accordingly, all references to information in their report should be contained in the financial statements under audit. Second, referencing information not contained in the financial statements could confuse readers. Research has long shown (c.f. Libby 1979) that users of financial statements have a difficult time distinguishing between various levels of auditor association with information, and referencing unaudited information in the audit report would only serve to exacerbate their misperceptions. Report readers would need to accurately determine the reliability of the referenced information, and may ascribe a higher (or lower) level of reliability, or auditor level of assurance to the information. For example, if information in Management's Discussion and Analysis (MD&A) is referenced in the audit report, readers may readily assume that the MD&A has been audited, when it has not been. Thus, referring to disclosures outside the financial statements risks readers being confused as to the level of association the auditor has with the referenced information.

**Question 8.** *Is it appropriate for the reproposed standard to retain the possibility of the auditor determining that there are no critical audit matters and, if so, require a statement to that effect in the auditor's report? Why or why not?*

We are aware of one study that directly addresses the explicit "No CAM" condition.[3] Brasel et al. (2016) manipulated CAM paragraphs such that participants either saw a CAM that matched the litigated misstatement, a CAM that did not match the litigated misstatement, a control (no mention of CAMs), or a "No CAM" statement in which CAMs were defined, but the auditors explicitly stated that they did not identify any CAMs. All conditions were run with two misstatement types (a liability and an asset). The "No CAM" condition exhibited the highest levels of auditor liability, significantly higher than the matched CAM conditions, marginally higher than the mismatched CAM conditions, and not statistically different than the control condition. This result suggests stating that there are no CAMs potentially increases auditor liability.

[3] The CAM research summary by Gimbar et al. (2016a) identifies the Kachelmeier et al. study as having a "No CAM" condition. However, a careful review of the most recent (December 2015) version of the paper available on SSRN found no such condition mentioned.

**<u>Question 9.</u>** *Is the reproposed documentation requirement clear and appropriate? Why or why not? If not, how should the documentation requirement be formulated?*

We agree with the Board that the newly limited scope for CAM inclusion to only relate to amounts or disclosures that are material to the financial statements should make CAM identification and documentation requirements easier to comply with. As a practical expedient, some members of our committee believe the reproposed documentation requirement should include only items that the auditor considered for CAM inclusion be subject to the documentation requirement, even among those items communicated to the audit committee. Admittedly this may be a distinction without a difference if firms feel it is necessary to consider every item communicated to the audit committee for inclusion as a CAM. The reasoning is as follows: while prior academic research *suggests* that documenting issues considered, but ultimately rejected as CAMs could increase auditor liability in those areas (see Reffett 2010 and Backof 2015), failure to document why an area is or is not a CAM could be even more problematic. It would be a daunting task for the firms to protect themselves from second-guessing during Board inspections, internal quality control reviews, and litigation if there is no documentation of the auditor's conclusion as to why a "likely suspect" area considered for inclusion was *not* identified as a CAM. Tautologically, any given audit area/issue *not* identified as a CAM either was not considered for CAM inclusion, in which case, we believe it should not be covered by the documentation requirement. Or if it is considered for CAM inclusion and rejected, the auditor should have some justification for that conclusion. Assuming that an item was considered for CAM inclusion and rejected, this would seem to be an important audit judgment that ought to be documented for review by the engagement and quality control review partners.

Other members believe that another possible way to address the CAMs documentation requirement would be to limit §17a to matters that are required to be communicated to the audit committee (as in AS No. 16, reorganized as AS 1301), and exclude matters that were communicated to the audit committee, but were not required communications. For example, if an audit committee member of a manufacturing company, in a meeting with their auditors, asks a question regarding the reasonableness of the entity's depreciation calculation and related estimates, the documentation requirement in the reproposal would require auditors to document why the accounts and amounts related to depreciation expense and accumulated depreciation are not CAMs. More broadly, requiring auditors to filter though all issues discussed in audit committee meetings to determine whether the issues relate to accounts or disclosures that are material to the financial statements, in order to document that they did not involve especially challenging, subjective or complex auditor judgement would create unintended additional documentation. Limiting documentation of potential CAMS to items required to be communicated to audit committees would also be consistent with the discussion in the reproposal that suggests auditors "…could start with the communications to the audit committee, which are already documented, identify which matters relate to accounts or disclosures that are material to the financial statements, and then document the basis for the auditor's determination of whether each matter involved especially challenging, subjective, or complex auditor judgment" (p. 39).

**<u>Question 10.</u>** *What effect, if any, could the auditor's communication of critical audit matters under the reproposed standard have on private litigation? Would this communication lead to an unwarranted increase in private liability?*

<u>and</u>

**<u>Question 12.</u>** *Are there other steps the Board could or should take to address the likelihood of increasing an auditor's or company's potential liability in private litigation through the requirement to communicate critical audit matters in the auditor's report?*

To date, the preponderance of evidence suggests that disclosure of a CAM may effectively act as a disclaimer (Kachelmeier et al. 2015) or a public forewarning (Brasel et al. 2016) and may reduce auditor liability for a misstatement, subject to the caveat that the CAM matches the misstated area. Brown, Majors, and Peecher (2015) also find that CAMs related to a misstatement reduce judgments of auditor negligence in litigation over the misstatement. These three studies taken together provide evidence that CAMs matching subsequently discovered misstatement areas reduce auditor legal liability. It is also important to note that these findings are robust to theory (each study employs a unique theory), participant pool (jury eligible individuals, law students, attorneys, financial analysts and MBA students), case facts, and the financial statement area of the CAM. However, the apparent liability reduction is somewhat sensitive to the comparison group in each study. For instance, in Brasel et al. (2016) the liability reduction was significant for matching CAMs compared to a control (current reporting regime) and compared to an explicit statement that there were no CAMs. However, there was no difference in legal liability compared to the case in which the CAM did not match the subsequently misstated area. This pattern of findings is similar to those of Kachelmeier et al. (2015).

The effect of CAMs on legal liability may also depend on the nature of the financial statement area associated with the CAM. Brasel et al. (2016) point out that the reduction in auditor liability occurred for a financial statement area (inventory) where the participants believed the plaintiff was less likely to expect financial reporting difficulties absent a CAM. Liability was not reduced when the CAM matched a financial statement area where participants believed users should already have a higher expectation of financial reporting difficulties (an estimated environmental restoration liability).

The findings of two additional papers appear to conflict with the findings of Brasel et al., Brown et al., and Kachelmeier et al. (2015). Specifically, Gimbar, Hansen, and Ozlanski (2016b) find that, relative to the current audit report, CAMs do not affect auditor liability under imprecise accounting standards, while both related and unrelated CAMs increase auditor liability under precise (bright-line) standards. Backof, Bowlin, and Goodson (2014) find that CAMs increase auditor liability only when audit procedures are included in the report (including audit procedures is also a feature in Brasel et al. (2016), where the opposite conclusion is reached), but that this effect is nullified when the meaning of reasonable assurance is also clarified. Thus, a simple, but potentially useful takeaway from the Backof et al. (2014) findings is that clarifying reasonable assurance in the auditor's report could potentially combat any increases in auditor liability associated with CAMs. Also, as noted by Kachelmeier et al., in both the Backof et al. (2014) and Gimbar et al. (2016b) studies, auditor liability was increased in cases where there was a violation of correct GAAP accounting (an inappropriate inventory valuation method and incorrect lease classification, respectively) indicating that the auditors accepted a GAAP violation in the accounting method. Thus, matching CAMs may only reduce auditor liability in "gray" areas of accounting, or as in the Brasel et al. (2016) study, in cases of management fraud in which the auditor did not know the accounting was incorrect.

Kachelmeier et al. (2015) go beyond jury decision making for auditor liability (proxied by MBA students) and also examine the effects of CAMs on the confidence MBA students, attorneys (plaintiff and defense perspectives), and financial analysts express in the financial statement areas associated with the CAM prior to any information about subsequent misstatements. They find that all groups expressed significantly lower confidence in the specific financial statement values associated with a CAM compared to values not associated with CAMs. Defense-perspective attorneys and MBA students also expressed lower confidence in CAM financial statement values compared to a control (current-practice) report. However, as previously noted, none of the groups expressed lower confidence in the financial statements "*in general*" (Kachelmeier et al. 2015, 3). Kachelmeier et al. (2015) conclude that CAM disclosures act as a partial disclaimer and that their findings are consistent with a piecemeal opinion. A more detailed and nuanced discussion of the results of all five of these studies can be found in the individual papers and in a summary by Gimbar et al. (2016a).

**Question 13.** *Is the reproposed requirement relating to auditor independence clear? Would this information improve investors' and other financial statement users' understanding of the auditor's independence responsibilities? Why or why not?*

The answer to the question, *"Is the reproposed requirement relating to auditor independence clear?"* is yes. However, the answer to *"whether or not this information improves investors' and other financial statement users' understanding of the auditor's independence responsibilities"* is more complicated. Considering that neither the PCAOB nor the SEC regulations provide a definition for auditor independence nor adequately discuss the inter-relationships between independence, objectivity and integrity, and conflicts of interest, this assumption lacks a strong foundation. Taylor, DeZoort, Munn and Wetterhall-Thomas (2003) state that definitional inconsistencies, or the use of varied and inconsistent definitions and conceptualizations, is a major source of confusion and controversy surrounding auditor independence. In 2008, the Advisory Committee on the Accounting Profession (ACAP) report to the U.S. Department of Treasury noted potential misunderstanding, at least with requirements about independence, among audit stakeholders and encouraged "improved understanding of … auditor independence requirements among auditors, investors, public companies, audit committees, and boards of directors to enhance investor confidence in the quality of the audit process and audits (ACAP 2008)."

Perhaps a more productive means of improving all parties understanding of auditor independence would be to clarify within the standards themselves the meaning and role of auditor independence to protect the virtues of integrity, objectivity and professional skepticism in situations involving conflicts of interest. Rather than defining the terms of objectivity, integrity or independence, Interpretations under Rule 102.02 provide a list for determining misrepresentations in the preparation of financial statements or records[4]. Gramling, Jenkins, and Taylor (2010) suggest independence rules such as these meet at least two public policy goals. First, is to protect "independence in fact" by attempting to reduce the influence of incentives provided by external factors that could undermine auditor objectivity and inappropriately influence auditor judgments and decisions. Second, is to maintain "independence in appearance" by promoting auditor reliability and audit quality to inspire investors' confidence in the audit opinion. We question whether the direction taken by the PCAOB to rely on proscriptions of relationships rather than providing guidance through definitions and frameworks demonstrating the interrelationship of these important concepts will sufficiently promote the intended benefits of an independence requirement. How realistic is the expectation that the independent auditor will *achieve a proper degree of independence* in the conduct of his work by administering his practice within the spirit of these *precepts* and *rules*?

In conclusion, while we believe that the reproposed requirement relating to auditor independence is clearly stated, we suggest that merely requiring the inclusion of the auditor independence requirement in the audit report does not provide the necessary information to improve investors' and other financial statement users' understanding of the auditor's independence responsibilities. We suggest that as standard setters, the PCAOB needs to incorporate within its standards clear definitions and a more specific discussion of interrelated concepts of independence, integrity, objectivity and conflicts of interests. This action will more appropriately provide the necessary information to improve investors' and other financial statement users' understanding of the auditor's independence responsibilities.

**Question 16.** *Are the reproposed requirements for information regarding auditor tenure appropriate and clear? Why or why not? Are there any specific circumstances that could affect a firm's ability to include tenure information in the auditor's report which the Board should consider? If so, what are they?*

The Committee does not believe that the case for requiring audit firm tenure information has been adequately made or supported in the reproposal. We largely agree with the sentiments of Board Members Franzel (2016) and Hanson (2016) that there is no clear documented link between auditor tenure and multiple measures of audit and financial reporting quality. For example, research on the association between audit firm tenure and audit reporting accuracy (Geiger and Raghunandan 2002), fraudulent financial reporting (Carcello and Nagy 2004), financial reporting quality (Johnson, Khurana, and Reynolds 2002) and meeting analyst expectations (Davis, Soo, and Trompeter 2009) either find no association or find that the early years of auditor tenure are more problematic for audit quality in the U.S. Yet, as noted by Franzel (2016), the mere inclusion of this data in the auditor's report presumes that there is some sort of overriding relationship between audit firm tenure and audit quality.

Further, as noted by Lennox (2014) in his review of this literature, if there is a relationship between audit firm tenure and audit quality, we do not even have a good grasp of the direction

[4] Both the SEC and the PCAOB sets of standards provide a generally consistent number of requirements and proscriptions related to the auditor's financial, business and employment relationships, the provision of non-audit services, contingent fees, partner rotation, and audit committee responsibilities around independence focused on financial and relationship-based independence.

of causality. That is, we do not know if longer audit firm tenure leads to higher audit and financial reporting quality, or if higher audit and financial reporting quality leads to longer audit firm tenure. Accordingly, supplying this information in the audit report may be data, but it is data that is very difficult for users of the auditor's report to interpret, and the implication is that longer tenure equates to lower audit quality.

In addition, in support of this disclosure, the reproposal mentions that the European Union (EU) includes information on audit firm tenure in their new audit report. However, the EU has recently instituted mandatory audit firm rotation rules which make information on audit firm tenure of more direct interest to report readers of EU companies. The U.S. does not have such a rule, eliminating the need for report readers in the U.S. to be concerned with monitoring audit firm tenure in order to determine when the company will be required to change audit firms.

***<u>Question 18.</u>*** *Should disclosure of auditor tenure be made on Form AP rather than in the auditor's report? Why or why not?*

While there is no extant research directly addressing this question, we believe that auditor tenure information is something that some investors may want, but that inclusion in the auditor's report is inappropriate. Providing the auditor tenure on Form AP would be a reasonable alternative solution. Information on the length of audit firm tenure is consistent with the intended provision of Form AP to increase the transparency and accountability for key participants in issuer audits and is consistent with the type of information on the current audit required on Form AP. In addition, inclusion of this information on Form AP would appear more of a "fact" than an implication of an association with audit quality. Alternatively, auditor tenure information could be included in the proxy statement in regards to shareholders' approval of the audit committee's selection of the independent auditor.

The reproposal states: "*The intent of the reproposed requirement, consistent with the 2013 proposal, is to require consistent reporting of the duration of the auditor's relationship with the company and have this information in a consistent location—the auditor's report (p. 48).*" We believe this is best accomplished by requiring disclose of auditor tenure on Form AP (or in the appropriate section of the company's proxy statement). Accordingly, we modified the draft auditors report eliminating the sentence "~~We have served as the Company's auditor since [year]~~"in our Exhibit 1 below, the last page of our response.

***<u>Question 19.</u>*** *Would requiring disclosure of auditor tenure in the auditor's report reduce investor search costs? Why or why not? Should the Board require a specific location for disclosure of auditor tenure in the auditor's report? If so, where and why?*

For those investors interested in such information, certainly inclusion on the face of the auditor's report would reduce search costs. However, most investors interested in this data likely already have access to data aggregators (e.g., Thomson Reuters, *FirstData*, *Audit Analytics*, etc.) that will include this as part of their database whether in the auditor's report, on Form AP, or in the appropriate section of the proxy statement.

If the Board votes to require this information in the auditor's report, requiring disclosure in a specific location would be beneficial both in terms of practitioner implementation of the requirement, as well as investors locating the information.

**Question 20.** *Are the changes to the basic elements of the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor appropriate and clear? Why or Why not?*

We believe that the audit report should positively state the concept that an audit is intended to provide reasonable assurance that the financial statements are free of material misstatements whether due to error or fraud. Such communication is likely to (i) motivate auditors to effectively plan and execute the audit to achieve this purpose, and (ii) enable investors to use the information communicated by the audited financial statements without seeking too much additional information for making decisions.

A field experimental study by Gist, Shastri, Ward, and Wilson (2005) manipulated the audit report wording (using three versions of auditor's report formats) and examined 122 auditors (partners and managers) and 123 financial statement users (financial analysts and bank lending officers) and found that incorporating 'fraud wording' both in the scope (auditor's responsibility) and opinion paragraphs significantly enhanced the users' evaluation of the audit report compared to the audit report without the 'fraud wording.' Accordingly, we believe the opinion paragraph should incorporate "free of fraud" related wordings[5]. More specifically, in addition to stating that the "…financial statements are free of material misstatements due to error or fraud…" in the *Basis for Opinion* paragraph, we suggest that the *Opinion* paragraph incorporate fraud-related wordings, as follows: "In our opinion, the financial statements *are free of material misstatements due to error or fraud, and* present fairly, in all material respects … Our suggested modification is highlighted in blue in the draft auditor report in our Exhibit 1 below, the last page of our response.

**Question 22.** *Should auditors be permitted to include the critical audit matter communications in the required explanatory paragraph? Would integrating explanatory paragraphs and critical audit matters be helpful to investors? Alternatively, would it decrease the impact of the explanatory paragraph? Why or why not?*

We agree with the reproposal requirement that inclusion of CAMs within explanatory paragraphs located elsewhere in the audit opinion should not serve as a *substitute* for their inclusion in the new *Critical Audit Matters* section of the report or vice versa for several reasons. First, allowing for such a substitution could lead to great diversity in practice and possible confusion of users as to where the discussion of CAMs and explanatory paragraph topics are located within each opinion.

Second, it is possible that if CAMs are distributed across multiple sections of the report, users might unconsciously assign to various CAMs differential importance not intended by the auditor. Kahneman and Frederick (2002) find that when people perform difficult judgment tasks (e.g., evaluating the importance of CAMs to the financial statements), they sometimes

[5] See Gist, Shastri, Ward and Wilson. (2005) regarding the effectiveness of the Auditing Standards Board in improving audit communication with the SAS 58 auditor's standard report.

resort to using heuristic cues as a substitution for the more effortful processing necessary for the judgment. Inclusion of a matter in a less prominent location in the report (e.g., within an explanatory paragraph) as opposed to including it within a prominently labeled *Critical Audit Matters* section of the report could provide such a cue leading the user to find the matter less important.

Finally, we believe that distribution of CAMs across multiple sections of the report unnecessarily increases the cost of information search to users. We agree with the Board's proposal allowing for cross-referencing of CAMs between the *Critical Audit Matters* section of the report and explanatory paragraphs elsewhere so long as each CAM is identified in the *Critical Audit Matters* section of the report and each explanatory paragraph required is included in the proper location within the report.

**Question 27**. *How would investors use the information communicated in critical audit matters? Would the communication of critical audit matters help reduce information asymmetry between investors and management? Investors and the auditor?*

and

**Question 29**. *Would critical audit matters be useful in assessing company financial performance? If so, how?*

Essentially, these two questions are directed toward identifying the benefits investors and other audit report users would hope to gain from disclosure of CAMs. We believe that investors will derive the following benefits from CAMs reporting:

1. A better understanding of the range of possible outcomes for the amounts and disclosures presenting the greatest uncertainty in the financial statements.[6]
2. A better sense of the overall quality of the company's financial reporting.
3. More informed models of a firm's current performance and future prospects.
4. Lower cost of information acquisition by the leveraging the auditor's clearer communication in the audit report.

Some recent research has addressed these issues. Sirois et al. (2015) find that investors do key in on CAMs and acquire information related to the CAMs elsewhere in the financial disclosures more efficiently. However, they also identify some negative aspects of reporting CAMs in that investors tend to neglect non-CAM issues in the financial statements. Further, Christensen et al. (2014) find that nonprofessional investors are more influenced by a CAM paragraph than when the identical information is provided by management in the financial disclosures. As discussed further in response to Question 35 below, a study by Elliott, Fanning, and Peecher (2016) addresses the information needs of investors and finds that investors will use CAMs as intended sources of additional information from the auditor regarding uncertainty surrounding specific financial statement amounts and disclosures. Elliott et al (2016) also find that a well-crafted CAM discussion can decrease "extraction costs" for investors seeking information on financial reporting quality.

---

[6] This has been a common theme among investor stakeholders in much of the five years of debate.

The results reported in Foster and Shastri (2013) suggest that disclosure under CAM of non-trivial yet immaterial misstatements that affect income/earnings could none-the-less provide useful information to investors. As noted by the former SEC Chairman, Mr. Arthur Levitt, "missing an earnings projection by as little as a penny can result in a loss of millions of dollars in market capitalization (Levitt 1998)."

**Question 31.** *Would the communication of critical audit matters enhance attention by auditors, audit committees and management to the matters identified as critical audit matters? If not, why not? Would such changes enhance audit quality, improve management's disclosures, or otherwise be beneficial to investors? Why or why not?*

One recent study provides evidence regarding the impact of CAM reporting on management disclosure behavior. Specifically, Fuller (2016) investigates how managers respond when auditors bring heightened attention to a critical accounting estimate in their CAM reporting. The study also investigates the influence of the audit committee on managers' disclosure behavior using an experiment with public company CFO participants.

Results suggest that managers are more likely to expand their accounting estimate disclosures when auditors provide more than a cursory CAM discussion of the estimate in the audit report. Further, managers are more likely to expand their accounting estimate disclosure when strong audit committee oversight of financial reporting exists (Fuller 2016). This finding highlights the continuing importance of the audit committee in its primary role of investor protection. Finally, managers are more likely to expand their accounting estimate disclosures in areas that are highly valued by investors such as disclosing *quantitative* uncertainty information. Quantitative uncertainty information may include items such as the estimate range, the key assumptions used in arriving at the estimate, and sensitivity of the estimate to changes in the underlying assumptions. Enhanced disclosure in these areas provides significant benefits to investors as they quantify the risk in a company's complex accounting estimates.

**Question 35.** *Are there additional academic studies or data the Board should consider? The Board is particularly interested in study or data that can be used to assess potential benefits and costs.*

We note that Elliot et al. (2016) examine whether investors are willing to pay higher prices for stock in companies where auditors use more expansive CAM reporting, particularly when the content is relevant to the assessment of clients' financial reporting quality. Elliot et al. (2016) theorize that more informative audit reporting lowers the "extraction costs" borne by users in the complex task of assessing financial reporting quality. In their experiment, they find that participants expressed a higher willingness to pay for shares of a mature company exhibiting higher quality financial reporting compared to a growth firm exhibiting lower quality financial reporting. Investors' willingness to pay only increased for the higher financial reporting quality firm when the auditor's report included commentary within the discussion of a CAM which helped investors assess the differing levels of financial reporting quality between the two firms. Elliot et al.'s findings suggest that more expansive auditor reporting benefits not only investors but also improves capital market efficiency, both in general and for individual firms, resulting in higher firm valuation and lower cost of capital for higher financial reporting quality firms.

| Opinion on the Financial Statements<br>We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of operations, stockholders' equity, and cash flows, for each of the three years in the period ended December 31, 20X2, and the related notes [and schedules] (collectively referred to as the "financial statements"). In our opinion, the financial statements are free of material misstatements due to error or fraud, and present fairly, in all material respects, the financial position of the Company as of [at] December 31, 20X2 and 20X1, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 20X2, in conformity with [the applicable financial reporting framework].<br><br>We are providing under "Critical Audit Matters" below, information on certain matters we communicated to the Audit Committee, which in no way alters our opinion on the financial statements taken as a whole. We do not provide separate opinions on the critical audit matters, or on the accounts or disclosures to which they relate. |
| Basis for Opinion<br>These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB. We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation |
| Critical Audit Matters [if applicable]<br><br>The critical audit matters communicated below are matters arising from the current period audit that were communicated or required to be communicated to the audit committee and that: (1) relate to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex judgments. ~~Critical audit matters do not alter in any way our opinion on the financial statements, taken as a whole, and we do not provide separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.~~ |

Washington, DC 20006-2803

**Re: PCAOB Release No. 2016-003, Rulemaking Docket Matter No. 034: Proposed Auditing Standard -** *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* **and Related Amendments to PCAOB Standards**

Dear Office of the Secretary:

BDO USA, LLP appreciates the opportunity to respond to the request for comments on the Public Company Accounting Oversight Board's (the PCAOB or the Board) reproposal of the auditor reporting standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* and Related Amendments to PCAOB Standards (the 'Reproposal' or 'reproposed standard'). As previously expressed in our comment letter dated December 13, 2013 on PCAOB Release No. 2013-005, *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report,* and Related Amendments to PCAOB Standards (the '2013 Proposal'), we support the PCAOB's efforts to modernize the auditor reporting model by enhancing the usefulness and informational value of the auditor's report, including: (1) expansion of the existing language in the auditor's report related to the auditor's responsibilities for error or fraud, (2) a description of the nature of the audit, and (3) the communication of audit related matters the auditor considered critical, among other enhancements. While we are supportive of the overall direction of the Reproposal, we have provided suggestions for areas of improvement and refinement of some of the concepts presented in the proposal that we believe will result in improved implementation of the standard, and where appropriate, alignment with the International Auditing and Assurance Standards Board's (IAASB) revised suite of auditor reporting standards[1].

As noted in the Reproposal, the form and content of the auditor's report is undergoing change globally. The IAASB, the European Union, and additional national bodies such as the Financial Reporting Council in the United Kingdom and the Authority for the Financial

[1] The International Auditing and Assurance Standards Board's (IAASB) new and revised suite of auditor reporting standards are effective for audits of financial statements for periods ending on or after December 15, 2016.

Markets in the Netherlands, have all adopted requirements for expanded auditor reporting. While the details of the standards established by these bodies differ, there is a common theme – to increase the informational value of the auditor's report for users of the financial statements. We recognize that that the regulatory environment in each jurisdiction differs, and we appreciate the Board's consideration of the initiatives and developments already undertaken by other regulators and standard setters in an effort to minimize differences where appropriate. Minimizing differences will strengthen comparability among reports, making it easier for investors to make comparisons between reports from different jurisdictions.

Our specific comments relate to the following topical areas:

- Critical Audit Matters (CAM)
- Additional Improvements to the Auditor's Report
- Audit Firm Tenure
- Exclusions to the Reproposed Standard and Considerations of Emerging Growth Companies
- Effective Date

**Determining and Communicating Critical Audit Matters**

Determination of Critical Audit Matters

The reproposed standard defines a critical audit matter as 'any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and involved especially challenging, subjective, or complex auditor judgment.' This definition reflects a change from the 2013 Proposal which was more prescriptive and included a larger population of matters that could potentially have been considered a critical audit matter. We support the revised CAM definition for a number of reasons, but most importantly because we believe that given the audit committee's oversight role in representing the interests of shareholders, communications to the audit committee is the appropriate starting point for considering potential critical audit matters. Furthermore, limiting the population of potential CAM to matters communicated or required to be communicated to the audit committee is consistent with the findings of the CAQ's field testing, in which BDO participated, that found that most matters determined to be CAM had been previously communicated to the audit committee.

As noted in our introductory remarks, we believe that alignment with the International Standards on Auditing (ISAs) is an important objective because of the interconnected nature of the global economy and the needs of investors for a consistent reporting framework in evaluating decision useful information such as CAM. While we recognize that there are differences in the actual definition between the IAASB's Key Audit Matters and the PCAOB's CAM, we believe that the approach in both are substantially similar and for all practical purposes would result in similar communications - which are the matters of interest to investors and other users of the auditor's report.

Communication of Critical Audit Matters

*Original Information Regarding the Company*

The note to requirement 14 on page A1-7 of the Reproposal states:

> When describing critical audit matters in the auditor's report the auditor is not expected to provide information about the company that has not been made publicly available by the company unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit.

Consistent with our views set out in our 2013 comment letter, we do not believe that the auditor should be required by this rule to provide information about the company that has not been made publicly available to the company, nor is it the auditor's responsibility to communicate matters within the auditor's report that are not already required to be reported on by management. Given that critical audit matters are intended to focus on those matters the auditor addressed during the audit that involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate evidence, we would expect that such matters would also be the most difficult, subjective, or complex management judgments, and would also be reported by management within the notes to the financial statements, or elsewhere in documents containing the financial statements. If this understanding is not correct, then we believe that changes to the rules and regulations that management is required to comply with would be the appropriate starting point for expanding disclosure. Accordingly, we suggest deleting the phrase 'unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit' from the note.

Furthermore, to explain why it would not be appropriate for the auditor to provide original information about an entity, we suggest looking to paragraph A34 of ISA 701, *Communicating Key Audit Matters in the Independent Auditor's Report*, which explains that 'the nature and extent of the information provided by the auditor is intended to be balanced in the context of the responsibilities of the respective parties (i.e., for the auditor to provide useful information in a concise and understandable form, while not inappropriately being the provider of original information about the entity).' We believe such guidance would be helpful to practitioners in applying the provisions of the reproposed standard.

*Description of How Each CAM is Addressed*

Paragraph 14, on page A1-9 of the reproposed standard, states that for each CAM communicated in the auditor's report, the auditor must describe, among other details, how the critical audit matter was addressed in the audit. However, the reproposed standard does not provide any guidance relating to the level of detail that might be expected. While we support a principals-based approach that allows for auditor judgment in how best to explain how a CAM was addressed in the audit, we also believe that it would be helpful to practitioners if the reproposed standard included guidance that outlined matters the auditor may consider describing.

We note that paragraph A46 of ISA 701 explains that the amount of detail to be provided is a matter of professional judgment, and that in exercising such judgment, the auditor may describe (1) aspects of the auditor's response or approach that were most relevant to the matter or specific to the assessed risk of material misstatement, (2) a brief overview of procedures performed, (3) an indication of the outcome of the procedures, and (4) key observations with respect to the matter. We believe such guidance would benefit practitioners in the consistent application of the requirement and, accordingly, should be included within the reproposed standard. We note that these factors are included in the introductory section of the Reproposal; however, to ensure that this supportive guidance is not lost in the process of codifying the reproposed standard and to reflect the high level of subjectivity that is inherent in how auditors can potentially describe their procedures, we recommend moving this content into the body of the reproposed standard.

Additionally, ISA 701, paragraph A48 explains that the language used in describing a CAM (or in ISA 701 terminology, a Key Audit Matter or KAM) should be carefully structured to ensure the description of a KAM (1) does not imply the matter has not been appropriately resolved by the auditor in forming the opinion, (2) relates the matter directly to the specific circumstances of the entity, while avoiding generic or standardized language, (3) takes into account how the matter is addressed in the related disclosure(s), and (4) does not contain or imply discrete opinions on separate elements of the financial statements. While Note 1 to paragraph 14 of the reproposed standard states that the language used to communicate a critical matter should not imply that the auditor is providing a separate opinion on the critical audit matter or on the accounts or disclosures to which they relate, matters (1) – (3) are not included within the reproposed standard and we believe the inclusion of such guidance would be helpful to auditors in implementing the standard.

*Significant Deficiencies*

Auditing Standard 2201, *An Audit of Internal Control Over Financial Reporting That is Integrated with An Audit of Financial Statements*, requires the expression of an adverse opinion on internal control over financial reporting (ICFR) when a material weakness has been identified and also requires a description of the material weakness. Significant deficiencies, in and of themselves, do not result in an adverse opinion on ICFR and are not required to be described in management's assessment of ICFR nor in the auditor's report.

However, Note 2 to paragraph 14, on page A1-9 of the reproposed standard, states that while the auditor is not expected to provide original information about the company, it may be necessary to provide original information if it is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit. We continue to believe that the auditor should avoid descriptions of CAM that inappropriately provide original information about the entity that is properly within the responsibility of management and Audit Committee, and therefore the communication of significant deficiencies would not be appropriate. Such an approach is consistent with ISA 701, and we encourage the PCAOB to look to the ISA guidance in this regard.

**Additional Improvements to the Auditor's Report**

Consistent with our comments on the 2013 proposal, we support including the opinion as the first section of the auditor's report followed by the basis for opinion. Such an approach aligns with ISA 700 (Revised), *Forming an Opinion and Reporting on Financial Statements,* and is consistent with investor feedback to provide the most relevant information in a more prominent position. In addition, we support providing for flexibility in the placement of other components of the auditor's report and the inclusion of a statement regarding independence.

With respect to the addition of the phrase 'whether due to error or fraud' to the description of the auditor's responsibilities regarding obtaining reasonable assurance about whether the financial statements are free of material misstatement, we suggest including the phrase 'as a whole' to this statement to clarify that the objective of an audit is to provide an opinion on the financial statements as a whole and not on individual accounts, balances, or disclosures. As a result, paragraph .09 of the reproposed standard would be revised as follows: (additions in bold italics)

> .09 d. A statement that PCAOB standards require that the auditor plan and perform the audit to obtain reasonable assurance about whether the financial statements ***as a whole*** are free of material misstatement, whether due to error or fraud;

As noted in the introductory section of this letter, we believe it is important to eliminate unnecessary differences between the standards of the IAASB and the PCAOB to avoid any confusion in the market-place about whether differences between auditor's reports are the result of meaningful differences in the way an audit is conducted or simply a matter of format and presentation. For example, ISA 700 (Revised) includes expanded descriptions of the responsibilities of management, including those charged with governance, and the auditor, which is missing from the PCAOB standard. In addition to promoting consistency in reporting, we believe including these descriptions would be helpful to users in understanding more fully the separate responsibilities of each of the parties as it relates to the audited financial statements.

**Audit Firm Tenure**

While we understand that investors are calling for disclosure of auditor tenure, we do not believe such disclosure is appropriate within the auditor's report. The auditor's report is the communication mechanism audit firms use to convey the results of the audit and describe the responsibilities of each of the parties involved in the issuance of the audited financial statements. The disclosure of auditor tenure does not fit within this context. Moreover, we understand that some proponents of the disclosure of auditor tenure believe that it may be useful as an indicator of audit quality, and as such should be included within the auditor's report; however, as noted in the Reproposal, the academic research on this matter is inconclusive. For these reasons we do not support disclosure of auditor tenure within the auditor's report, nor do we believe there is support for a regulatory requirement for such disclosure.

We believe a more appropriate manner to disclose auditor tenure would be through audit committee disclosures as proposed by the SEC in Concept Release No. 33-9862, *Possible Revisions to Audit Committee Disclosures*. We note that some audit committees are already voluntarily disclosing auditor tenure as part of their responsibility for oversight of the auditor. In 2015, 54% of audit committees disclosed the tenure of their auditors, according to the 2015 *Audit Committee Transparency Barometer*.

**Exclusions to the Reproposed Standard and Considerations of Emerging Growth Companies**

We support the PCAOB's decision to exclude brokers and dealers reporting under Exchange Act Rule 17a-5, investment companies that that are not business development companies, and benefit plans from the communication of CAM. As explained in the Reproposal, providing such information would not provide meaningful information for this group of entities.

While we support the limited exclusions noted above, we do not believe that emerging growth companies should be excluded from communicating CAM, as investors and other financial statement users would likely find the communication of these matters informative for this group of issuers.

**Effective Date**

The implementation of the Reproposal, in particular as it relates to the identification and communication of CAM, will require the development of training programs and quality control processes, to ensure the identification of CAM is done in a timely manner and there is appropriate oversight and review of the development of CAM by senior members of the engagement team. Additionally, it will be important to inform management and audit committees about the implication of changes to the expanded auditor's report (including additional areas of oversight and communication) to ensure successful implementation. For this reason, we believe that the effective date should be, at a minimum, a year after SEC approval, and no earlier than for audit reports issued on or after December 15, 2018.

Due to the significance of the proposed changes to the auditor's report, in particular as it relates to critical audit matters, we believe that a delayed compliance date for audits of smaller filers, such as non-accelerated filers, is appropriate. A delayed compliance date would provide auditors of smaller entities additional time to learn from the experience of audits of larger filers.

PCAOB
1666 K Street N. W.
Washington, DC 20006-2803

Rulemaking Docket No. 34

Dear Board Members:

This letter contains my comments on the May 11, 2016 Proposed Auditing Standard (Exposure Draft or "ED"), "The auditor's report on an audit of financial statements when the auditor expresses an unqualified opinion." I previously commented on the August 13, 2013 ED (my letter dated October 13, 2013) and earlier concepts release (my letter dated July 21, 2011) on the same subject. My comments are based primarily on having served as chairman of the audit committee of five large public companies from 2001 through 2013 as well as having earlier spent 26 years at one of the now Big 4 accounting firms.

Summary

First and foremost, I thank the Board for its very careful consideration of the important issues in this project. Given the earlier concepts release and ED, the Board may well have concluded that it should issue a final standard without further input from constituents. But it obviously has recognized the great public interest in this project and the need to thoroughly vet the significant modifications it has made to the last proposal.

This project has been under consideration for many years after being added to the PCAOB's formal standard-setting agenda in 2010. Its genesis perhaps derives mainly from the 2008 Treasury Advisory Committee report recommending improvements to the auditor's report. But over my fifty plus years in the accounting profession there have been several other calls for change to a report that is usually only a single page in length and provides little detail about the significant work involved in reaching a conclusion that a company's financial statements are fairly presented. Thus, it is easy to understand the calls from many to make such reports more informative.

At the same time, many of the suggestions for improvement considered over the years have been rejected after determination that they would provide few insights to investors and other users of auditor's reports and possibly create distractions from basic auditing procedures or have other unintended consequences. In that regard, I am pleased that during the current project the PCAOB has rejected the notion of an auditor's discussion and analysis and has deferred, for needed additional study, reporting on other financial information.

I am also pleased that in the latest ED the Board has adopted the recommendation in my 2013 letter that the opinion paragraph be presented first in the auditor's report in order to give it the greatest prominence and to avoid the possibility of its being "lost in the trees" of several pages of critical audit matters (CAMs) and other descriptions about the audit. Further, the required section subheadings are consistent with my suggestion in that same letter of having a table of contents so that readers of the report will be able to easily find what is most interesting to them (presumably, the opinion in most cases). And retaining the basic pass/fail measure of whether the audited company's financial statements are fairly presented is, of course, the most important aspect of the ED and I strongly endorse it.

I also agree with the proposed minor wording changes to the report such as standardizing the addressees and including the phrase "whether due to error or fraud." Consistent with my 2013 letter, however, I do not support two of the key features of the ED: required presentation of CAMs (or a statement that there were none) and required disclosure of auditor tenure. For the Board's CAMs proposal I suggest an alternative that I believe will accomplish the only meaningful aspect of this proposal. For the disclosure of auditor tenure I believe the topic should be removed from this project and left to the SEC to consider in the context of proxy statement disclosure rules. My reasoning for each of these issues is presented in the remainder of this letter.

Critical Audit Matters

A good portion of my 2013 letter was devoted to the reasons why I believed the Board should not require CAMs to be included in auditor's reports. To briefly summarize my reasoning from that letter, I believed:

Auditors would be motivated to over report CAMs in order to avoid later criticism from PCAOB inspectors or others, thus leading to unnecessarily lengthy auditor's reports

Not requiring descriptions of audit procedures related to CAMs may cause readers to infer that auditors are expressing reservations about those matters – a sort of qualification of the overall opinion

Determining the wording of CAMs would require extensive engagement partner/national office time and negotiation with company executives at the time of the audit when meeting SEC deadlines is quite challenging

Audit partners would spend time haggling over wording issues for CAMs rather than spending time on much more important substantive audit matters

In certain cases the auditor would be required to disclose information in CAMs that is not required to be disclosed by the company

Many of the comment letters on that earlier ED had similar or additional reservations about required disclosures about CAMs, particularly letters from company managers and audit committee members. To be fair, the PCAOB has extensively analyzed and addressed those comments in the new exposure draft and has made changes that it believes will mitigate many if not most of the concerns raised. However, of all of the matters listed above, I believe that only the second issue has been truly resolved in the new ED through the required descriptions of audit procedures (which raise other issues as discussed later) and required lead-in language to CAMs in auditor's reports. All of my earlier concerns remain as commented on further below and with reference to comments in my 2013 letter.

I will touch on these concerns in the paragraphs below but first will mention a very important issue that should have been covered in my 2013 letter.

Will CAMs actually present value-relevant information to investors and other users of financial statements? - A good deal of the ED is devoted to the Board's reasoning as to this matter in both the Discussion of the Reproposal and Economic Considerations sections. But all of the discussion seems to boil down to, in my words, "Several users have told us that they would like to have this information. They haven't told us how they would use it and we don't have any compelling evidence that it would help in investment decisions. But some other audit regulators have required this and it might help users analyze financial statements." It is particularly interesting that the first three questions in the Economic Considerations section about CAMs ask how investors would actually use them. And Board member Hanson said in his statement at the meeting at which the proposal was approved, "... it is important that we hear from investors about whether they believe CAM's will provide relevant, helpful information and how that information is likely to be used."

After six plus years of this project, I would have assumed that the Board should know the answer to those questions before proceeding further. It is possible that through this new exposure process the Board will obtain better information about whether and how disclosures about CAMs can assist users. At this point, however, the record would seem to indicate that the Board itself is not entirely convinced about the usefulness of this information.

More specifically, the ED summarizes the current state of play as follows on page 74: "Overall the results from research analyzing whether the information provided in expanded auditor reporting is useful to investors are limited. Collectively the results are ambiguous as to whether the expanded auditors' reports have provided investors with new information beyond what is contained in the financial statements."

On page 64 of the ED, the Board suggests a possible benefit of making these matters more prominent by going on to say this "... could facilitate (investors' and other financial statement users') analysis of the financial statements and other relevant disclosures." And page 70 states that "... the disclosure of previously unknown value-relevant information directly benefits the market because it allows market participants to make better-informed decisions." But in neither of those sections nor elsewhere that I found does the ED explain exactly how the Board thinks the description of audit procedures will provide value-relevant information (except, perhaps, in the case of disclosing some company information that the company hasn't previously provided – see next section).

I did note in the ED's Summary (page 2) that the Board suggests, "For instance, additional reporting by the auditor could facilitate analysis of the financial statements and help investors and analysts engage management with targeted questions about critical audit matters (emphasis added)." I agree that drawing more attention to critical accounting policies and estimates may be a good idea (see my modest proposal below). But questions the company responds to should be about its financial reporting and not the approach the independent auditor has taken to become satisfied with that reporting. Suggesting that investors and analysts will have targeted questions about critical audit matters seems to confuse the respective responsibilities of the reporting company and the independent auditor.

SEC proxy statement rules require that registrants must state whether representatives of their principal auditing firm are expected to attend the annual meeting and whether those representatives will have the opportunity to make a statement or respond to questions. Having attended a few dozen annual meetings as a board member, I have never heard a shareholder ask a question of the auditing firm representatives attending the meeting. And in informal discussions with other audit committee members they indicate similar experiences. (If this is considered relevant input for the current project I'm sure the PCAOB could quickly survey practice and find out whether my experience is common or not.) This causes me to conclude that while shareholders are very interested in the credibility added to financial statements through the annual audit, they aren't really interested in the details of what went into arriving at the auditor's opinion because they would derive no added value therefrom.

Auditor's opinions shouldn't initially report company information – As noted earlier, one of my comments on the earlier ED was that in certain cases the auditor would be required to disclose information in CAMs that is not required to be disclosed by the company. This was a concern shared by many commenters. The new ED addresses this in Note 2 to the draft standard: "When describing critical audit matters in the auditor's report the auditor is not expected to provide information about the company that has not been made publicly available by the company unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit[1] (emphasis added)." This is explained further in Board member Ferguson's statement as "... additional information is confined to what the auditor did in the audit and the principal reasoning behind key facets of the audit – all activities within the exclusive purview of the auditor."

While the position in the new ED is obviously an improvement, it is still objectionable. In short, it has the practical effect of mandating corporate disclosures in certain cases, which I believe is not within the PCAOB's purview.

The part of the Sarbanes-Oxley Act of 2002 that calls for the establishment of the PCAOB says this about its scope of activities: "There is established the Public Company Accounting Oversight Board, to oversee the audit of public companies that are subject to the securities laws, and related matters, in order to protect the interests of investors and further the public interest in the preparation of informative, accurate, and independent audit reports for companies the securities of which are sold to, and held by and for, public investors." The Board essentially repeats this in its Mission by stating: "The PCAOB mission is to oversee the audits of public companies in order to protect the interest of investors and further the public interest in the preparation of informative, accurate, and independent audit reports."

Thus, both the law and its Mission make clear the Board's responsibility for the form and content of independent audit reports. And while it is clearly the Board's responsibility to continue efforts to improve the informative value of auditor's reports, it has long been established in the law that the Securities and Exchange Commission (with reliance on the Financial Accounting Standards Board for most aspects of Generally Accepted Accounting Principles) has the responsibility for the form and content of company financial and other information necessary to properly inform investors. Therefore, any changes to the auditor's report to make it more useful to investors in public company financial statements must be limited to matters relating to the audit and not provide additional information that wouldn't have otherwise been provided by the reporting company. The exception in Note 2 is, accordingly, inappropriate and should be deleted.

Further, the exception in Note 2 isn't really necessary based on other PCAOB auditing standards. That is, if a company should omit a disclosure that is material in relation to the presentation of the overall financial statements, the auditor would be required to issue a qualified opinion. In my experience, in the very rare cases where this might have happened in practice, the leverage that this requirement provided to the auditor always resulted in the company and the auditor

---

[1] In this regard I note the analysis of the ED prepared by the Gibson Dunn law firm. In referring to this matter, Gibson Dunn states, "This note says that the auditor will not be expected to provide information about the company that has not been made publicly available by the company 'unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit.' Companies and audit committees may wish to consider whether this exception in effect nearly swallows the rule, and if so, what disclosure considerations may be implicated, including whether it would put the auditor in a position of having to make disclosures in the first instance about any number of matters, such as loss contingency considerations or investigations."

reaching a meeting of the minds as to appropriate disclosure. Thus, in my opinion, the exception covered by Note 2 should be deleted from any final standard on the basis that (1) it is not within the PCAOB's jurisdiction to require company disclosures, and (2) the exception is unnecessary based on other, existing auditing standards.

Illustrating concerns by reference to examples – To help explain my continuing concerns about disclosure about CAMs, let me focus on the two illustrative examples that are included on pages 32-35 of the ED.

Company A's example is that of the allowance for loan losses for a loan product. While the first paragraph of the example does make reference to the company's financial statements, that paragraph also provides extensive information about the new loan product, including its percentage of the loan portfolio and how the company has developed an allowance for losses. While there is insufficient context for me to properly evaluate that description, it appears that the example provides information that would not normally be included in a note to the financial statements. More likely, the details about how much of the portfolio consists of this new category of loans would be included in MD&A. And any description of how the company has developed an allowance for losses would also be included in MD&A, assuming it was one of the critical accounting policies and estimates, which it may well not be.

It may be that the PCAOB intends this paragraph to illustrate the application of Note 2 to the draft standard as discussed earlier. If so, that explanation should be added because otherwise this example appears to go well beyond the guidance in the ED of "Refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter."

There is also the issue of redundancy between what the company plans to say about this matter in the financial statement footnotes or elsewhere in the 10-K and what the auditor says in the CAM. At a minimum, having to coordinate any such language will lead to extensive discussions between company management, both financial and legal, and senior partners at the accounting firm, including national office representatives. In an ideal world, these discussions will take place well before year end so that the parties know what each plans to include in their report. But the pressures of completing an audit under tight SEC deadlines often result in matters that weren't fully planned at an earlier date. Haggling over wording issues could easily distract the engagement partner from attention to wrapping up more important, substantive auditing issues when facing these deadline pressures.

Moving beyond that opening paragraph for the Company A example, the next two paragraphs are more or less boilerplate simply describing why the new loan category is a critical audit matter and a lead in to the audit procedures.

The final two paragraphs cover the audit procedures performed per the draft standard requirement to "Describe how the critical audit matter was addressed in the audit." These sentences could be summarized as, "With the involvement of a specialist, we tested the reasonableness of the company's estimates and their computational accuracy." It's certainly possible that drawing readers' attention to these accounting estimates through mentioning them in the auditor's report will cause those readers to think more about these matters. However, I don't see how describing audit procedures will provide any further value-relevant information, particularly such summarized and generalized descriptions.

Further, while adding a description of audit procedures does address the concern I mentioned in my earlier letter about readers possibly inferring reservations about the matters listed, I now have the opposite concern. That is, notwithstanding the required lead-in caveat, I believe that readers will likely interpret the inclusion of audit procedures for CAMs as a form of implicit opinion that each one is fairly stated on its own and not just in the context of the overall financial statements.

Company B's example – begins with a brief reference to financial statement footnotes. However, the second paragraph then discloses certain information that arguably ought to be provided by the company or perhaps already was. Apparently, the inclusion of this information, which seems inconsistent with limiting CAMs to material within the purview of the auditor (see above), is needed in order to explain why this is a critical audit matter although that isn't clear. If the Board moves forward with the notion of CAMs in a final standard and includes examples along these lines it could help if it would explain why the various matters have been included, perhaps by cross references to the applicable sections of the standard.

The three paragraphs describing audit procedures go into a bit more detail than those for the first example. However, they are still general in nature and provide no quantitative or other information that could be used by an investor to "facilitate analysis of the financial statements" or otherwise do more than draw their attention to this being an important area of the company's accounting.

Possible chilling effect on communications – As a former audit committee chairman I would be concerned about any PCAOB action possibly having a chilling effect on communications between the committee and the independent auditors. The revised proposed documentation requirement is one that could have that effect. I'm confident that auditors would continue to communicate about the matters that truly belong in critical accounting policies and estimates, material unusual items, and the like. However, requiring that only those communicated need be documented could cause matters on the margin to be left out of communications so as to avoid even more documentation or PCAOB inspection second guessing of the documentation. On the other hand, the fact that all matters communicated to the audit committee have to be documented would seem to encourage auditors to err on the side of including all such items in their reports rather than leaving out some matters that qualify for communication but don't seem to require inclusion in the report.

This seems to lead to a sort of "damned if you do, damned if you don't" situation. It's hard to predict whether auditors will be like Goldilocks and get it "just right," but I suspect that in most cases we would find that the response is "too much" with at least some being "too little."

One other matter – While I do not favor even more additions to the auditor's report, I must comment on the Board's reasoning on page 52 in response to a couple of letters on the earlier ED that suggested an auditor's report should provide additional explanations about certain key elements of the report. The Board states, "Since it may not be practical to describe these elements concisely, adding these to the auditor's report would unnecessarily lengthen it without providing additional useful information to investors." I think that many (if not most) from the corporate world would apply that same reasoning to the whole notion of CAMs!

While I clearly do not support requiring the presentation of CAMs in the auditor's report, I believe that perhaps the most important aspect of the reasoning for requiring CAMs can be accomplished in a greatly simplified manner and I present that suggestion now.

A modest proposal – As noted, I believe the inclusion in the auditor's report of several, lengthy CAMs is not likely to provide value-relevant information to investors and other users of those reports. Further, there are costs and unintended consequences that are likely to ensue. But I believe that the major benefit of the proposal, focusing more user attention on the significant accounting policies and estimates section of the 10-K, can be accomplished with a simple solution that has essentially no costs or other consequences. That would be for auditor's reports to merely refer to the applicable section of the 10-K or, alternatively, list the policies and estimates included by the company.

For example, the next to last sentence in the Basis for Opinion section of the proposed auditor's report now states, "Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements." A sentence could be added along the lines of, "The most important of these principles and estimates are presented on pages __ to __ under Critical Accounting Policies and Estimates."

I would prefer the above approach as it is simple, straight-forward, and avoids any implication of separate auditor assurance on the individual critical accounting policies and estimates. However, those aspects of the company's reporting will always be among those to which the greatest attention is given during the audit. Therefore, even if readers would infer a degree of specific assurance about the individual items by their being listed separately in an approach similar to that in the next paragraph, I think this would be an acceptable alternative.

The alternative of listing the critical accounting policies and estimates individually would give these matters somewhat more emphasis and could be provided along the following lines using the examples from the March 31, 2013 Legg Mason 10-K as described in my 2013 comment letter:

> The most important of these principles and estimates are presented on pages __ to __ under Critical Accounting Policies and Estimates and are:

Consolidation (variable interest entities)
Revenue recognition
Valuation of financial instruments
Intangible assets and goodwill
Stock based compensation
Income taxes (recovery of deferred tax asset)

This suggested approach is somewhat similar to Auditor's Association with Portions of MD&A as discussed on page 93 of the ED as one of the policy choices considered but rejected by the Board. However, the important difference is that I am not suggesting the auditor provide separate assurance on the critical accounting policies and estimates. I am only recommending that they be highlighted in the auditor's report so that users of the report can appropriately go to the company's section of the 10-K where these matters are discussed by the party that has responsibility for them. As noted above, I believe this will accomplish what the Board suggests is one of the principal objectives of CAMs – drawing readers' attention to the most important accounting policies and estimates – without any related costs or unintended consequences.

I have long thought that the critical accounting policies and estimates section was one of the most important parts of the 10-K. For someone wishing to have a broad understanding of a company's reporting I would strongly suggest reading that part of the document before looking at the financial statements or other financial data. Enough attention probably hasn't been paid to this valuable section of the 10-K by investors, analysts, and other interested readers. So a requirement to highlight that section of the 10-K in the auditor's report could be quite useful without creating some of the other problems referred to above.

Auditor Tenure

As noted in my 2013 letter commenting on the earlier ED, "Audit firm tenure may be useful when asking shareholders to vote on an Audit Committee action, in order to give them a full understanding of the situation. However, in an auditor's report a simple statement of when the audit relationship began won't have any context and, thus, will be of limited or no value to nearly all users." That continues to be my position.

The current ED carries forward the earlier proposal but adds no convincing reasoning beyond what was stated in the earlier proposal. It seems to boil down again to (slightly rewording my earlier letter) (1) some users want this information and think it will be useful, (2) there is some research that this information may be relevant but the research doesn't give a conclusive answer, and (3) it would cost almost nothing for auditors to do this. In response to this line of thinking, two of the five Board members continue to have reservations and apparently share my view that the record developed to date does not support this portion of the ED.

The Board does offer the alternative of the tenure information being presented on Form AP. This strikes me as a "least bad" solution. As summarized above and in my earlier letter, if presented at all I think logic would call for its inclusion in the proxy statement in connection with shareholder votes on ratification of selection of the independent auditors by the audit committee. Putting it in Form AP at least avoids further muddying up the auditor's report with irrelevant information. But I would greatly prefer that the PCAOB leave it to the SEC to decide whether this is something that should be addressed in the context of annual meeting proxy statement disclosures.

Conclusion

While the PCAOB has spent many years on this project, I urge careful consideration of the comments received on this ED. Board member Harris hopes for a vote on a final standard by year end 2016. That might be possible if there are relatively few comment letters or most don't have significant concerns about the ED. However, the normal process of reading and analyzing the comment letters and then redeliberating any significant issues would seem to call for at least a bit more time. This is one of the Board's most important projects and it should make every effort to get it right.

Please let me know if you have any questions about the contents of this letter.

Sincerely,

Dennis R Beresford

Re: PCAOB Rulemaking Docket Matter No. 034
*The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*

Dear Secretary:

The members of the audit committee of CA, Inc. (the "Company") appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (the "PCAOB" or the "Board") proposed auditing standard, Rulemaking Docket Matter No. 034 (the "Proposed Standard"), "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion".

We fully support the PCAOB's objective of improving the auditor's report to make it more informative and relevant to financial statement users and commend the Board on its thoughtful exploration of the important issues in this project. The Board's decision to repropose the standard for a second time after receiving over 400 comments in response to the initial proposed standard dated August 13, 2013 and the concept release dated June 21, 2011 shows how important and impactful this topic is to financial statement preparers, auditors and investors.

While we believe that there are certain aspects of the Proposed Standard which do further the PCAOB's objective, such as retaining the pass/fail model of the existing auditor's report, requiring the opinion to be the first section of the auditor's report and requiring section titles to guide the reader, we also firmly believe that there are other sections, mainly the requirement to communicate critical audit matters and disclose auditor tenure in the auditor's report, which will not further the Board's objective and should not be included in the final Proposed Standard.

CRITICAL AUDIT MATTERS

We acknowledge the Board's efforts to provide additional clarification on critical audit matters ("CAMs") but continue to believe that the inclusion of CAMs in the auditor's report will not provide the expected value to the users of the financial statements. We have the following specific concerns with the Board's CAM proposal:

- The primary responsibility for reporting on a company's financial matters has historically and appropriately resided with management in its duty to meet the disclosure requirements set forth in the Securities and Exchange Commission ("SEC") rules and regulations. Under existing SEC rules, companies are required to disclose areas of critical accounting, many of which involve complex situations and a high degree of judgment either in the application and interpretation of existing accounting literature or in the development of estimates that affect the financial statements, within Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A") as "critical accounting policies and estimates". Since the SEC rules for determining what qualifies for disclosure as critical accounting policies and estimates differ from the Board's framework for determining CAMs, this will invariably lead to differences in identification of matters for disclosure. Moreover, the proposed disclosure requirements for CAMs differ from the SEC disclosure requirements. Together these fundamental differences will cause the auditor to become the original source of disclosure of company information. We believe that it is the responsibility of the SEC, not the PCAOB, to determine what disclosures a company must make to its investors. While it might be appropriate under certain circumstances for management and the auditor to work closely in determining the appropriate level of disclosures, we firmly believe that management, not auditors, should be the primary source for disclosure of critical accounting matters and be able to make final determination of what would be deemed critical information to the users of the financial statements and the auditor must determine if such disclosure, in the context of the financial statements taken as a whole, impacts their ability to issue an unqualified opinion.

- An unqualified audit opinion should, by definition, be free from qualifications. Since investors do not have direct access to the auditor and many may not have a thorough understanding of the audit process, CAMs will likely be misinterpreted as an indicator of an issue with any particular matter highlighted as a CAM and may also be perceived as an implicit qualifier to the audit opinion. This, in turn, could result in undue investor focus on the impact of CAMs on an unqualified opinion, unnecessary effort by management in answering questions on or providing explanations about CAMs and ultimately weaken the effectiveness and value of the auditor's unqualified opinion.

- The effort required to incorporate CAMs into the audit opinion will result in a diversion of time and attention of all parties involved in the financial reporting process that will lead to a chilling effect on communications between the auditor and the audit committee. The revision to the definition of CAMs to include "any matter that was communicated or required to be communicated to the audit committee…" may make some auditors include matters in audit committee communications that might not otherwise have been included out of concern the omission of the item from the CAM section of the auditor's report could lead to a PCAOB finding or legal exposure. On the other hand, some auditors may think twice about communicating border-line or judgment-based matters to the audit committee and may not do so knowing that this will need to be disclosed in the auditor's report and could perhaps be misconstrued or confusing to investors and/or regulators. Either way, it is reasonable to expect that CAMs that were not previously anticipated in the early phases of the audit will arise during the tight reporting deadline, and, as such, there will be a considerable investment of time and effort by the auditor in determining whether or not a matter "involved especially challenging, subjective or complex auditor judgment" and is therefore a CAM that should be included in the report and in formulating language describing a particular CAM that is acceptable to both management and the auditor. Furthermore, such assessment of what audit matters are "challenging, subjective and complex" requires the auditor to make a separate determination on each audit matter, which arguably is inconsistent with the objective of an integrated audit - the reasonableness of the financial statements taken as a whole and that the company maintained, in all material respects, effective internal controls over financial reporting as of the balance sheet date. In order to properly convey the context of a CAM to external financial statement users, disclosure will need to be expansive, and the likely battles over wording as well as the inclusion/exclusion of certain CAMs will cause other audit matters to receive less focus and could put pressure on communications between the auditor, management and the audit committee, thus undermining the overall quality of the audit while increasing the amount of time spent by the auditor on the engagement, ultimately leading to an increase in overall audit fees.

AUDITOR TENURE

The new Proposed Standard requires that the auditor's report include a statement regarding auditor tenure. As with the initial Proposed Standard, the new Proposed Standard once again indicates that there is no conclusive evidence as to how auditor tenure impacts audit quality or how the disclosure of auditor tenure would benefit investors. Likewise, there is no objective evidence on linkage between the auditor's tenure and audit firm independence. As such, we do not believe that this part of the Proposed Standard would add value to the auditor's report and should not be included in the final standard.

Just as important, requiring the auditor to disclose its tenure is inconsistent with the auditor/client relationship established by the Sarbanes-Oxley Act. The auditor is appointed by a company's audit committee and does not necessarily control its tenure. In response to the SEC's concept release seeking comment regarding an audit committee's reporting requirements, we noted that the Company, as well as other companies, have provided voluntary disclosures. Included among the Company's voluntary disclosures is the number of years our auditor has been the Company's auditor. We believe, in the Company's case, our auditor's tenure may be meaningful information. However, consistent with the auditor/client relationship framework such determination should be voluntarily made by the registrant.

CONCLUSION

We appreciate having the opportunity to comment on the Proposed Standard and commend the PCAOB's efforts to make the auditor's report more informative and relevant to financial statement users. With respect to the proposed enhancements to the auditor's report regarding retaining the pass/fail model of the existing auditor's report, requiring the opinion to be the first section of the auditor's report and requiring section titles to guide the reader - since these matters promote this objective, we believe that they should be included in the final standard. However, we believe that the PCAOB needs to more strongly consider the negative impacts caused by provisions in the Proposed Standard requiring disclosure of critical audit matters and disclosure of audit firm tenure.

We believe the proposed shift of responsibilities for original source of disclosure of company information from the company's management and audit committee to the auditors, as suggested in the Proposed Standard, inappropriately expands the role of the auditor and unavoidably takes away from the importance of management's responsibility to communicate important financial information and the governance role performed by the audit committee, thus essentially undermining the foundation of financial reporting. Therefore, we encourage the Board to take steps towards ensuring that the roles of management, the audit committee and the auditors are neither compromised nor diminished under the Proposed Standard, and that the objective of improving the auditor's report is achieved while maintaining the integrity of the current financial reporting infrastructure.

If it would be helpful to the Board, the chairman of our audit committee, Raymond J. Bromark, is available to discuss our comments with the Board or its staff. If you wish to arrange this meeting, please contact the Company's Executive Vice President, General Counsel and Corporate Secretary, Michael Bisignano, at 1-800-225-5224. Thank you for your consideration of our comments.

Very truly yours,

**Re: PCAOB Rulemaking Docket Matter No. 034, Reproposed Auditing Standard - The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards**

Dear Madam Secretary

On behalf of the California Public Employees' Retirement System (CalPERS), thank you for the opportunity to provide our comments on the Public Company Accounting Oversight Board (PCAOB) Release No. 2016-003 proposed auditing standard titled "The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB standards" (Reproposal).

CalPERS is the largest public defined benefit pension fund in the United States with approximately $300 billion in global assets. CalPERS provides benefits to more than 1.8 million employees, retirees, and beneficiaries. CalPERS strives to achieve long-term, sustainable, risk-adjusted returns consistent with our fiduciary duty. To do so, we are guided by CalPERS Global Governance Principles[1] (Principles) which frame our approach to governance issues that impact the integrity and efficiency of capital markets. Embedded in our Principles is the expectation that shareowners are provided with fair, accurate and timely reporting on how companies manage and identify risks related to the three forms of capital: financial, physical, and human. We believe that PCAOB audit standards help protect these shareowner interests and strengthen investors' confidence in capital markets.

[1] See, CalPERS Global Governance Principles , dated March 14, 2016

As stated in our Principles, effective financial reporting depends on high quality accounting standards, consistent application, enforcement, and rigorous independent audits. Accordingly, it is critical that auditors bring integrity, independence, objectivity, and professional competence to the financial reporting process. As providers of capital, we have a strong interest in standards which strengthen the auditor's objective and unbiased audit of financial reports. Therefore, we support the efforts of the PCAOB to enhance the form and content of the auditor's report to make it more relevant and informative for investors. We believe that enhancing the audit report will help improve how we understand and use the information provided in financial statements thereby strengthening investor confidence in the use of financial statements to allocate capital and make informed investment decisions.

We commend the PCAOB for taking action on the comments received in the 2013 proposal about the proposed auditor reporting standard on an audit of financial statements when the auditor expresses an unqualified opinion, as well as the auditor's responsibilities regarding other information in certain documents containing audited financial statements and related amendments. In our response[2] to the 2013 proposal, we expressed support for the PCAOB's proposed auditor reporting standard that introduced the concept of critical audit matters (CAMs) and included new requirements for auditors to communicate CAMs as well as additional improvements to the auditor's report. Like the 2013 proposal, the Reproposal would retain the pass/fail model of the existing auditor's report. However, the Reproposal would also require auditors to include significantly more information in their reports including details on auditor tenure and independence. In particular, the Reproposal would require auditors to include CAMs that were communicated to the audit committee that related to material accounts or disclosures and involved especially challenging, subjective or complex auditor judgments.

Although some of the requirements in the Reproposal differ from the 2013 proposal, we understand that the requirements in the Reproposal have been narrowed to address the comments and concerns received, analysis of economic considerations, academic research, as well as international developments following the 2013 proposal. Specifically, the reproposed requirements have been narrowed by:

- Limiting the source of potential CAMs to matters communicated or required to be communicated to the audit committee;
- Adding a materiality component to the definition of CAM;
- Narrowing the definition to only those matters that involved especially challenging, subjective, or complex auditor judgments; and
- Revising the related documentation requirement.

We are happy to see some of our concerns addressed in the Reproposal. For example, we appreciate the inclusion of expanded communications requiring the auditor to

[2] See, https://www.calpers.ca.gov/docs/2014-05-02-enhanced-auditor-reporting.pdf, dated May 2, 2014

describe how the critical audit matter was addressed in the audit. The expanded communications would give shareowners a better understanding of the auditor's opinion taken as a whole and how the auditor reached that opinion. We believe the auditor is best suited to provide insights on how and on what basis the auditor developed its opinion. As highlighted in an article[3] published by the Analyst's Accounting Observer, "if auditors are going to bring attention to a financial reporting area that caused them concern as auditors, and draw investor attention to a soft spot in the company's financial statements, the managers are going to have a hard time pushing back against the auditors who are arguing for proper accounting." Accordingly, whether a CAM is disclosed or not, there is still value in the fact that bad company behavior may be altered by virtue of the threat of CAM disclosure.

Additionally, we are pleased to see progress on the requirement to provide an auditor statement regarding independence and a disclosure of auditor tenure. From our perspective, a statement regarding auditor independence and the disclosure of auditor tenure provides necessary context for shareowners with respect to auditor objectivity, ratification, and rotation. However, we note that the Reproposal considers the inclusion of a materiality component in the definition of CAM. We believe that, if used, the materiality standard should be in line with the actual holding in TSC Industries, Inc. v. Northway, Inc. (1976).[4] In TSC Industries, Inc. v. Northway, Inc. (1976) the Supreme Court explicitly defined the standard of materiality in securities fraud cases, holding that:

> "An omitted fact is material if there is a substantial likelihood that a reasonable shareholder would consider it important in deciding how to vote."[5]

The holding narrowed the focus of materiality to issues that impact shareowner judgment in making voting decisions. Our Principles set out the expectation that shareowners should annually ratify the selection of the independent external auditor. Therefore, the additional insights as to how a firm addressed a CAM will have a direct impact on how shareowners vote on ratifying the auditor.

We are delighted to see PCAOB make progress on this standard in light of the global efforts to enhance auditor reports that have already started to take shape. For example, the Financial Reporting Council (FRC) in the United Kingdom[6] already requires disclosure in the auditor's report of key audit matters (KAMs) that go beyond the binary pass/fail model similar to those found in the Reproposal. Additionally, new standards for enhanced auditor reports including discussion of KAMs and how the matter was

---

[5] See, *id*

[6] See, https://www.icas.com/technical-resources/international-standards-on-auditing-uk-and-ireland-the-frcs-key-proposed-changes

addressed in accordance with the International Standards on Auditing issued by the International Federation of Accountants (IFAC) through the International Auditing and Assurance Standards Board (IAASB)[7] which will become effective December 2016. Finally, in April 2014 the European Union (EU) adopted legislation[8] for newly expanded auditor reporting requirements for audits of public interest entities such as listed companies, credit institutions, and insurance companies. In April 2016, the FRC updated its auditor reporting requirements to incorporate the EU and IAASB requirements including adopting the IAASB's definition of KAM. Although the detailed requirements and processes may differ in each jurisdiction, the Reproposal notes[9] that all of these initiatives would result in expanding the auditor's report beyond the traditional pass/fail model to communicate information specific to the particular audit.

As the Reproposal builds on more than five years of PCAOB outreach and the consistent request by commenters to make the auditor's report more relevant and informative, we find comfort in the fact that PCAOBs Reproposal is analogous in many respects to auditor reporting requirements recently established in other jurisdictions. As the Reproposal notes, there are commonalities in the underlying criteria regarding CAMs to be communicated and the communication requirements, such that expanded auditor reporting could result in the communication of many of the same matters under the various approaches. Therefore, CalPERS' overall message in support of an auditor standard that includes requirements related to disclosure of CAMs in the auditor report is consistent with our May 2, 2014 letter[10] to the PCAOB. Consequently, in our responses to the Reproposal, we do not provide answers to the specific questions; instead we highlight certain points made in our responses to the PCAOB's 2013 proposal.

**Critical Audit Matters**

As stated in our prior response[11] to the PCAOB, we believe the PCAOB's proposed auditor reporting standard would provide four important attributes - transparency, relevance, reliability, and credibility. The reproposed standard revised the definition of a CAM to any matter arising from the audit of the financial statements that was

[9] See, p. 10, Public Company Accounting Oversight Board (PCAOB) Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards, Release No. 2016-003, Rulemaking Docket No. 034, dated May 11, 2016

[10] See, https://www.calpers.ca.gov/docs/2014-05-02-enhanced-auditor-reporting.pdf, dated May 2, 2014

[11] See, *ibid.*

communicated or required to be communicated to the audit committee and that relates to accounts or disclosures that are material to the financial statements and involved especially challenging, subjective, or complex auditor judgment. We believe that auditors should provide independent assurance and attestation as to the quality of financial statements to investors in narrative reports including a statement demonstrating that the financial statements and disclosures are complete, materially accurate, and free of material misstatement, whether caused by error or fraud.[12] Since the purpose of CAMs is to provide disclosures that document the basis and determination for the auditor's opinion regarding financial accounts, we believe that requiring the auditor to communicate CAMs in the auditor's report provides investors with a better range of information about the audit thereby increasing the relevance and usefulness of the auditor's report. From our perspective, mandating CAMs and CAM-related communications will help users to better utilize and value the audit report, enhanced reporting, and the audit opinion.

Furthermore, our Investment Beliefs[13] includes an understanding that long-term value creation derives from the effective management of both risk and opportunities in the oversight of financial, physical, and human capital. As providers of financial capital, shareowners need a detailed explanation as to how a company employs, identifies and addresses CAMs to provide greater context for assessments of risk and return. Therefore, we continue to support the opinion proffered by others that insights on CAMs would be relevant in analyzing and pricing risk.

**Auditor Independence and Tenure**

As stated in our prior response to the PCAOB, we believe that confidence in a company's audited financial statements is key to the efficient functioning of capital markets. This relies on auditors bringing integrity, independence, objectivity and professional competence to the financial reporting process. Therefore, we agree that adding a statement by the auditor on their independence from the company and board of directors reinforces investors' understanding of the auditor's obligations to be independent and objective in expressing the audit opinion. Furthermore, including an affirmative statement concerning the auditor's independence could help demonstrate that the audit opinion is not simply a "rubber stamp" for information prepared by management. Additionally, as supporters of periodic tendering and auditor rotation we support the disclosure of the auditors' tenure. Tenure disclosures help advance the fiduciary responsibility of the audit committee in determining the appropriate length of tenure to ensure the independence of the auditor.

[12] See, p. 34, CalPERS Global Governance Principles, dated March 16, 2016

[13] See, https://www.calpers.ca.gov/docs/forms-publications/calpers-beliefs.pdf

We applaud the work of the PCAOB in its efforts to address investor concerns regarding the Reproposal thereby reinforcing your mission to protect the interests of investors and further the public interest in the preparation of informative, accurate, and independent audit reports. Accordingly, we will continue to support the PCAOB in initiating meaningful change to the audit reporting model. Thank you for your consideration of our responses. If you have any questions, please do not hesitate to contact me at (916) 795-9058 James.Andrus@calpers.ca.gov.

Sincerely,

JAMES ANDRUS

Subject: Comments on PCAOB Rulemaking Docket Matter No. 034
Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion And Related Amendments to PCAOB Standards

The California Society of CPA's ("CalCPA") Accounting Principles and Assurance Services Committee (the "Committee") is the senior technical committee of CalCPA. CalCPA has approximately 43,500 members. The Committee consists of 55 members, of whom 45 percent are from local or regional firms, 32 percent are from large multi-office CPA firms, 12 percent are sole practitioners in public practice, 6 percent are in academia and 5 percent are in international firms. Members of the Committee are with CPA firms serving a large number of public and nonpublic business entities, as well as many non-business entities such as not-for-profits, pension plans and governmental organizations.

The Committee is pleased to provide its responses to the questions raised by the PCAOB in the reproposed standard. However, a significant number of the Committee's members are opposed to the proposed requirement to include critical matters ('CAMs") in the auditors' report. As stated in the Committee's letter of November 23, 2013 on the original PCAOB Rulemaking Docket Matter No. 34, inclusion of CAMs in the auditors' report will lead to perceived differences in audit quality where such perception should not exist, and identifying CAMs would duplicate disclosure already included (or should have been included) in annual reports under risk factors, management's discussion and analysis and summary of significant accounting policies, which are often currently duplicative already. The Committee also has continuing concerns over the use of CAMs by the plaintiff's bar in asserting claims against auditors; this is a far more severe concern in the United States than it might be in certain foreign countries where a more expansive auditors' report has been adopted in practice. Please refer to our November 23, 2013 letter for more information.

**IV. Discussion of the Reproposal**

**A. Auditor Communications of Critical Audit Matters:**

1. Is the definition of "critical audit matter" appropriate for purposes of achieving the Board's objective of providing relevant and useful information in the auditor's report for investors and other financial statement users? *Yes.* Is the definition sufficiently clear to enable auditors to apply it consistently? If not, describe why the definition may not be clear, including examples demonstrating your concern. *The Committee believes the proposed definition is fine.*

    a. Are matters communicated or required to be communicated to the audit committee the appropriate source for critical audit matters? Why or why not?

    *Yes, as the auditor currently has a responsibility to identify and discuss such matters with the audit committee. It is a natural extension of communications currently being made under AS 1301 – Communications with Audit Committees*

b. Are there any audit committee communications that should be specifically excluded from consideration as a source of potential critical audit matters? If so, identify and explain the reason for the exclusion.

*Yes, but the proposed definition addresses this by its further qualifications.*

c. Is the "relates to accounts or disclosures that are material to the financial statements" component of the definition of a critical audit matter appropriate and clear? Why or why not?

*The Committee believes that materiality is a matter of judgment, but the phrase is appropriate and clear.*

d. Is the "involved especially challenging, subjective, or complex auditor judgment" component of the definition of a critical audit matter appropriate and clear? Why or why not?

*The Committee believes this phrase is ambiguous and will be interpreted differently by different people. The Committee believes it might be better to expand the definition by including examples, e.g. items requiring consultation, items questioned by the EQR, etc. The Committee strongly recommends that sufficient interpretive materials be provided to supplement the new standard.*

2. Are factors helpful in assisting the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? Why or why not?

*Yes, factors such as those suggested in the Committee's response to Question 1.d. above, will be helpful but are items to be "taken into account" which is softer than saying something definitive.*

3. Are there any factors that the Board should consider adding or removing to better assist the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? If so, what are those factors?

*See the Committee's response to Question 1.d. above.*

4. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, rather than only the current period? For example, should communication be required in an IPO or in a reaudit? Why or why not?

*Yes, but not as contemplated by the question. The Committee believes the auditor should be required to communicate in the current period only matters of continuing relevance or if a matter previously reported as a CAM is resolved in the current period in a manner materially different than how it was handled in the period in which the CAM was originally reported.*

5. Are the reproposed requirements regarding the description of critical audit matters in the auditor's report, including the principal considerations and how the matter was addressed in the audit, sufficiently clear for consistent implementation by auditors? Why or why not? If not, how could the requirements be clarified?

*The Committee believes the reproposed requirements are sufficiently clear.*

6. Do the reproposed communication requirements appropriately address commenter concerns regarding auditor communication of critical audit matters, such as:

a. The auditor providing original information in describing the principal considerations for the determination that the matter is a critical audit matter or describing how the matter was addressed in the audit, and

*The Committee does not believe it is the auditor's responsibility to disclose original or confidential information. If such information is considered necessary to be disclosed to understand a CAM, that information should be disclosed by the registrant in the financial statements or footnotes (see the Committee's response to Question 7 below).*

b. Investors and other financial statement users misinterpreting critical audit matters as undermining the auditor's pass/fail opinion or providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate? Are there other steps the Board could take to address these concerns? If so, what are they?

*The Committee does not believe the reproposed standard can fully mitigate a third party's misunderstanding regarding the communication of CAMs. The Committee also believes that all CAM disclosures will subject the auditor to being second-guessed with the benefit of 20/20 hindsight. Perhaps the PCAOB, in conjunction with the SEC, could devise a "safe harbor" to protect auditors from lawsuits related to the disclosure of CAMs.*

7. In addition to referring to the relevant financial statement accounts and disclosures, would it be appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating a critical audit matter? Why or why not?

*No. The CAM definition is qualified as being related to matters with the potential for material misstatement of the financial statements. This suggests that all appropriate disclosure should be within the financial statements, including the footnotes.*

8. Is it appropriate for the reproposed standard to retain the possibility of the auditor determining that there are no critical audit matters and, if so, require a statement to that effect in the auditor's report? Why or why not?

*Yes, but the Committee believes it is presumptuous to assume that every audit contains at least one CAM.*

9. Is the reproposed documentation requirement clear and appropriate? Why or why not? If not, how should the documentation requirement be formulated?

*The Committee believes the reproposed documentation requirement is clear. However, documenting the negative would ultimately always come down to something like, "in our (i.e. "the auditors'") judgment ....*

10. What effect, if any, could the auditor's communication of critical audit matters under the reproposed standard have on private litigation? Would this communication lead to an unwarranted increase in private liability?

*Given the potential for misunderstandings, the biggest risk associated with the PCAOB's proposal to expand the auditor's reporting model is increased litigation and the unwarranted increase in private liability arising from the disclosure of CAMs. As the Committee suggested in our response to Question 6.b. above, perhaps the*

*PCAOB, in conjunction with the SEC, could devise a "safe harbor" to protect auditors from unwarranted and frivolous lawsuits related to the disclosure of CAMs.*

11. Do the changes from the 2013 proposal address concerns that have been raised about private liability? If not, what additional changes would you suggest should be made?

*All of the "changes" addressing this issue are auditor judgment qualifiers, i.e. they are all subject to legal challenge. The reproposal may be a bit better, but it won't make much difference if there is litigation.*

12. Are there other steps the Board could or should take to address the likelihood of increasing an auditor's or company's potential liability in private litigation through the requirement to communicate critical audit matters in the auditor's report?

*Yes. The Committee suggests having the audit committees indicate, as a matter of public record, its acceptance of the auditors' discussion of CAMs. Please refer to the Committee's ' response to Question 6(a).*

### B. Additional Improvements to the Auditor's Report

13. (a) Is the reproposed requirement relating to auditor independence clear? (b) Would this information improve investors' and other financial statement users' understanding of the auditor's independence responsibilities? Why or why not?

- *(a) Yes*
- *(b) No. The auditors' report already uses the caption "independent auditors' report". Therefore, including similar wording within the body of the report is redundant and unnecessary.*

14. (a) Is it appropriate to limit the required addressees to the shareholders and the board of directors, or equivalents for companies not organized as corporations? (b) Are there other parties to whom the auditor's report should be required to be addressed, and if so, who are they?

- *(a) This is fine, however, please refer to the Committee's response to (b) below.*
- *(b) The auditors' report is intended for general use. Therefore, why address it to any one or two particular users?*

15. Is it clear how the auditor's report would be addressed for companies not organized as corporations? Why or why not?

*See the Committee's response to Question 14.*

16. Are the reproposed requirements for information regarding auditor tenure (a) appropriate and (b) clear? Why or why not? Are there any specific circumstances that could affect a firm's ability to include tenure information in the auditor's report which the Board should consider? If so, what are they?

- *(a) The Committee believes this information should not be included in the auditors' report as it is included in the new Form AP.*
- *(b) See the Committee's response to (a) above. .*

17. Is it appropriate to disclose the earliest period the auditor began auditing any company in the group of investment companies even if the auditor has not audited all of the companies in the group for the same period of time? Why or why not?

*The Committee believes that disclosing audit tenure within the components of investment companies to be useful information. However, this information should be considered for* *disclosure in Form AP. By moving this disclosure out of the report and into Form AP, more detail can be provided when relevant, without cluttering up the auditors' report.*

18. Should disclosure of auditor tenure be made on Form AP rather than in the auditor's report? Why or why not?

*Yes. Please refer to the Committee's responses to Questions 16 and 17.*

19. (a) Would requiring disclosure of auditor tenure in the auditor's report reduce investor search costs? Why or why not? (b) Should the Board require a specific location for disclosure of auditor tenure in the auditor's report? If so, where and why?

*(a) Not significantly*
*(b) Use Form AP, not the auditors' report*

20. Are the changes to the basic elements of the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor appropriate and clear? Why or why not?

*The Committee does not see any substantive changes in the form and content of the basic auditors' report that warrant any comment.*

**C. Explanatory Language and Emphasis of a Matter**

21. Is the interaction between the communication of critical audit matters and required explanatory paragraphs clear and appropriate? Why or why not?

*Yes*

22. Should auditors be permitted to include the critical audit matter communications in the required explanatory paragraph? Would integrating explanatory paragraphs and critical audit matters be helpful to investors? Alternatively, would it decrease the impact of the explanatory paragraph? Why or why not?

*EOMs are about matters handled appropriately in the financial statements to which the auditor wants to draw the reader's attention. They are not necessarily a CAM. The opposite is also true; every CAM does not require an EOM. Therefore, the Committee believes they should be separate, not integrated.*

23. Should the Board's requirement to include an explanatory paragraph in the auditor's report when the auditor did not perform an audit of ICFR apply not only if company's management is required to report on ICFR, but also if management is not required to report, such as for investment companies?

*Yes.*

24. Is the interaction between the communication of critical audit matters and emphasis paragraphs clear and appropriate? Why or why not?

*Yes. However, please see the Committee's response to Question 22.*

**D. Information About Certain Audit Participants**

25. (a) Would the reproposed requirements for a specific order of certain sections in the auditor's report and for section titles make the auditor's report easier to use? (b) Should the standard allow more or less flexibility in the presentation of the auditor's report?

> *(a) Yes*
> *(b) In this regard, the Committee believes that a standard order of presentation is desirable.*

**V. Amendments to Other PCAOB Standards**
**B. Other Amendments to PCAOB Standards**

26. Are the reproposed amendments to PCAOB standards appropriate? If not, why not? Are there additional amendments related to the reproposed standard that the Board should consider? If so, what are they?

> *The Committee has no input on the specific details of the proposed amendments aside from asking the PCAOB to reconsider the need to disclose CAMs, as suggested in the Committee's introduction to this letter.*

**VI. Economic Considerations**
**E Alternatives Considered, Including Policy Choices Under the Reproposal**

27. How would investors use the information communicated in critical audit matters? Would the communication of critical audit matters help reduce information asymmetry between investors and management? Investors and the auditor?

> *The Committee cannot comment on this question. It is for users to answer.*

28. How would each of the elements of the communication (i.e., identification, principal considerations, audit response, and financial statement reference) be used by investors?

> *See the Committee's response to Question 27.*

29. Would critical audit matters be useful in assessing company financial performance? If so, how?

> *Although really for users to answer, a possibility is that CAM disclosures would reveal something about management's appetite for risk.*

30. Would critical audit matters be useful in assessing audit quality? If so, how?

> *The Committee believes that audit quality is assessed with the benefit of 20/20 hindsight. The identification of CAMs and whether they were properly handled will also be evaluated with the benefit of 20/20 hindsight.*

31. (a) Would the communication of critical audit matters enhance attention by auditors, audit committees, and management to the matters identified as critical audit matters? If not, why not? (b) Would such changes enhance audit quality, improve management's disclosures, or otherwise be beneficial to investors? Why or why not?

> *a) Maybe. Once a matter is identified as a CAM, it will undoubtedly receive extra attention.*
> *b) See the Committee's response to Question 30 regarding audit quality, and Question 6 (a) regarding management's disclosures. The Committee cannot respond on behalf of investors.*

32. Would the communication of critical audit matters trigger other changes in behavior? If so, what changes? Would such changes enhance audit quality or otherwise be beneficial to investors? Why or why not?

*The Committee cannot comment on this question.*

33. Would the impact of critical audit matters vary depending on the size of the accounting firm? The size of the company? If so, what would the differences be?

*The Committee believes the number of CAMs reported will likely vary based on the size and complexity of the company as well as the size of the accounting firm. The Big 4 may be less likely to conclude that matters "involved especially challenging, subjective or complex auditor judgment" due to their deep technical resources, while smaller public companies who employ the services of smaller accounting firms could find more issues to be sufficiently challenging and complex requiring inclusion as a CAM.*

34. Would the communication of critical audit matters provide a basis on which auditors could differentiate themselves? Why or why not?

*See the Committee's response to Question 33. If the Committee's view is correct, the Big 4 could promote their vast resources of highly experienced personnel as a means of to reduce the number of matters being considered CAMs.*

35. Are there additional academic studies or data the Board should consider? The Board is particularly interested in studies or data that could be used to assess potential benefits and costs.

*The Committee is not in a position to comment.*

36. Are there additional benefits, costs or unintended consequences, or other economic considerations, such as competitive effects, associated with critical audit matters or the additional improvements to the auditor's report that the Board should consider? If so, what are they?

*None that the Committee is aware of, other than as stated in the introduction to this letter regarding substantially increased risk of litigation against auditors.*

***VII. Exclusions from Critical Audit Matter Requirements***

37. Is it appropriate for the communication of critical audit matters not to be required for the audits of brokers and dealers reporting under Exchange Act Rule 17a-5, investment companies other than BDCs, and benefit plans? Why or why not?

*Considering the definition of a CAM, the Committee believes it is applicable to every audit.*

38. For these specific types of entities, are there situations in which critical audit matters would be useful to investors? If so, what are these situations?

*It is possible, since management's appetite for risk may perceived through the identified CAMs.*

39. While not requiring communication of critical audit matters in the audits of these specific entities, should the Board encourage voluntary communication? Why or why not?

*The Committee believes it should be required, not encouraged.*

40. Should the requirements related to critical audit matters not apply to the audits of other types of companies, such as shell companies? Why or why not?

*No, for the same reason the Committee stated in our response to Question 37.*

**VIII. Considerations for Audits of Emerging Growth Companies**

41. (a) Should the reproposed requirement regarding communication of critical audit matters be applicable for the audits of EGCs? (b) Should the other elements of the reproposed standard and amendments be applicable for the audits of EGCs? (c) Should the reproposed requirements be modified to make their application to EGCs more appropriate? (d) Would excluding audits of EGCs benefit or harm EGCs or their investors? Why or why not?

(a) *Yes*
(b) *Yes*
(c) *No*
(d) *If the concept of CAMs is valuable to any investors, it is valuable to all investors.*

42. If the Board determines not to apply all or part of the reproposed standard and amendments to the audits of EGCs, would there be any unintended consequences if auditors complied voluntarily? If so, what are they?

*It would raise questions about why some are and some are not.. The Committee believes any final rules in this area should be applied consistently.*

43. Are there any other benefits, costs or considerations related to promoting efficiency, competition, and capital formation that the Board should take into account with respect to applying the reproposed standard to audits of EGCs?

*The Committee has no comment.*

44. (a) If the reproposed standard is adopted by the Board and approved by the SEC, how much time would auditors need to implement it? (b) Should the Board consider a delayed compliance date for the reproposed standard, or for certain parts of the reproposed standard, for audits of smaller companies? (c) If so, what criterion should the Board use to classify companies, for example smaller reporting companies? (d) Are there criteria other than the size of the company that the Board should consider for a delayed compliance date?

*(a) The Committee suggests at least twelve to eighteen months at a minimum.*
*(b) Yes*
*(c) Yes, something based on market capitalization*
*(d) No*

We thank you for the opportunity to comment on this matter. We would be glad to discuss our opinions with you further should you have any questions or require additional information.

Sincerely,

A.J. Major III

Re: **PCAOB Rulemaking Docket Matter No. 034 – Release 2016-003 Reproposed Rule - Auditor's Report -** ***Expanded –Auditor Reporting***

Dear Ms. Brown and PCAOB Board members:

I am writing on behalf of the members of the California State Teachers' Retirement System (CalSTRS) in response to the Public Company Accounting Oversight Board's (PCAOB, Board) request for written comments to the reproposed rule, release 2016-003, on the Auditor's Report. Thank you for the opportunity to provide a long-term investor's perspective on this reproposal on what is required in the auditor's report that would be useful to investors. We view this as a critical project and strongly support the PCAOB's finalizing what builds on more than five years of Board outreach, in which many investors such as CalSTRS reinforce the need for the Board to make the auditor's report more relevant and informative. We encourage the PCAOB to adopt a final standard on an expanded auditor's report expeditiously with an effective date that allows for audits of financial statements for periods ending on or after December 2017.

CalSTRS' mission is to secure the financial future and sustain the trust of California's educators. We serve the investment and retirement interests of more than 896,000 plan participants.[1] CalSTRS is the largest educator only pension fund in the world. We have a global investment portfolio valued at approximately $193.3 billion as of July 31, 2016, with approximately $108.9 billion of the fund's assets being invested in the public equity markets, on both a domestic and an international basis.[2] With such a large part of our investment portfolio exposed to the risks and rewards of the public equity markets, CalSTRS is grateful for the work done by the PCAOB that helps to promote investors' protection. We appreciate the Board's continued efforts to further the public interest in the preparation of informative, accurate and independent audit reports.

---

[2] CalSTRS Current Investment Portfolio for the period ending July 31, 2016. http://www.calstrs.com/current-investment-portfolio

Additionally, the long-term nature of CalSTRS' liabilities, the composition of its portfolio and the CalSTRS Board's fiduciary responsibility to its members makes the fund keenly interested in the rules and regulations that govern the securities market. We have a vested interest and rely on the quality and integrity of financial reporting and believe a robust auditor's report is integral to our capital allocation analysis done on behalf of our beneficiaries. We believe the proposed rule changes will provide four important attributes – *transparency, relevance, reliability and credibility*. Investors are the intended beneficiaries of public company audits, with shareholders' capital paying for the auditor's report.

Furthermore, CalSTRS reinforces the need for vigorous enforcement of auditing standards and appreciates the efforts of the enforcement actions by the Board. CalSTRS affirms the continued dialogue and work with the International Forum of Independent Audit Regulators (IFIAR) to stress enforcement.

CalSTRS emphasizes support for:

1. Additional improvements to the auditor's report regarding independence, auditor tenure, addressee and language.
2. The importance and criteria of Critical Audit Matters (CAMs), being entity-specific. CAM criteria should be determined as outlined in the proposal along with the auditor's consideration of a nonexclusive list of factors. Additionally, CAMS should include matters that involve especially challenging, subjective, or complex auditor judgment; such as the auditor's assessment of the risks of material misstatement, including assessed risks of material misstatement due to fraud and other significant risks specific to the issuer's industry.
3. The need for an enforcement mechanism to insure that CAMs do not degenerate into boilerplate. CalSTRS agrees with the requirement for a statement by the auditor in circumstances where there are no CAMs to report.
4. Alignment of the PCAOB's concept of CAMs to the International Auditing and Assurance Standards Board's (IAASB) concept of Key Audit Matters (KAMs), strengthening and improving consistent global audit standards.[3] Leverage the insights gained from the IAASB, the European Union (EU) and the Financial Reporting Council in the United Kingdom (FRC) from expanded auditor reports.
5. Inclusion of a going concern supplementary paragraph in the auditor's report and requirement, the minimum period considered to be at least, but not limited to, twelve months from the reporting date.

**Proposed Requirements in 2013 and this Release - Additional improvements to the Auditor's Report**

***Language***

1. In 2014, CalSTRS responded to Release No. 2013-005, Docket Matter No. 034 to support the proposal requiring the auditor to communicate critical audit matters (CAMs) in the auditor's report. We continue to believe the proposed changes would improve the current auditor's reporting model that merely states a pass or fail opinion. CalSTRS agrees the auditor's report should include "That the auditor plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement whether due to error or fraud."

[3] IAASB, *The New Auditor's Report: A Comparison between the ISAs and the US PCAOB Reproposal,* May 2016. https://www.ifac.org/system/files/publications/files/IAASB-Auditor-Reporting-Comparison-between-IAASB-Standards-and-PCAOB-Reproposal_0.pdf

Adding the language requirement "due to error or fraud" articulates the already existing responsibility of the auditor under PCAOB standards. From our perspective, this is an essential clarification and should be included in the basis for opinion and description of procedures performed.

***Independence***

CalSTRS believes the lack of auditor independence negatively impacts the auditor's objectivity. We are concerned where an audit firm receives significant fees for non-audit services. We agree that adding a statement by the auditor on their independence from the company and board of directors reinforces investors' understanding of the auditor's obligations to be independent and objective in expressing the audit opinion. However, we feel it is important for the auditor to expand and explain the policies and processes the auditor completes to ensure their independence of the issuer. For example, in the HSBC Holding plc report of the independent auditor, the audit firm explained the steps they took to ensure their independence of the issuer and its worldwide subsidiaries.[4]

***Tenure***

We support the disclosure of the tenure of the auditor with a statement containing the year the auditor began serving consecutively as the company's auditor, not only for informational purposes but also to advance the Audit Committee's fiduciary responsibility in determining the appropriate maximum length of tenure to ensure the independence of the auditor. CalSTRS Corporate Governance Principles support companies clearly articulating their policy on audit firm rotation.

***Addressee***

As a shareholder and provider of capital, we agree the audit report should be addressed to the company's shareholders and board of directors, permitting additional addresses.

**Critical Audit Matters**

2. CalSTRS supports the PCAOB's proposed rule requiring auditors to disclose CAMs. Specifically, CalSTRS maintains the need for the auditor's report to contain consideration and articulation of:
    - critical financial statement and audit risks,
    - the auditor's assessment of management's estimates and judgments,
    - discussion of unusual transactions, restatements and other significant changes in the financial statements,
    - the auditor's assessment of the quality of the issuer's accounting policies and practices including those that are uncommon to the industry,
    - audit issues and their resolution which the audit partner documents in a final audit memo to the Audit Committee, and
    - the auditor's responsibilities regarding "Other Information."

---

[4] HSBC, *Value of the Network, HSBC Holdings plc Annual Report and Accounts 2015,* Report of the Independent Auditors, Page 323 Preparing to change auditors (steps taken to ensure the independence of the auditor), Richard Oldfield (Senior Statutory Auditor) for and on behalf of PricewaterhouseCoopers, LLP, 22 February 2016. http://www.hsbc.com/investor-relations/financial-and-regulatory-reports?WT.ac=HGHQ_f3.5_On,

Further we would recommend clarifying, that when the auditor describes CAMs that involve significant accounting judgment or estimation by management, the auditor would be expected to include information about their assessment and insight providing whether these are conservative, average or aggressive rather than simply stating they conform to Generally Accepted Accounting Principles (GAAP). The Board should consider expanding the criteria of CAMs, ensuring the criteria is not narrowly defined by materiality within one given period, versus the cumulative effect and/or trends in issues, restatements and adjustments. We would support the auditor reporting prior period CAMs, along with steps taken toward resolution of these, to identify trends that may not be apparent with current listing of CAMs.

**Enforcement**

3. The auditing profession plays a critical role in ensuring the integrity and efficiency of the capital markets. The financial interests of CalSTRS beneficiaries are most effectively served where investors can justifiably expect reliable financial reporting to evaluate investment risks and returns. Only with rigorous independent audit and enforcement are these attributes possible in the capital markets.

   The PCAOB and other audit regulators around the world must collaborate to develop enforcement mechanisms to protect the interests of investors to increase efficiency, relevancy, reliability and transparency in accurate and reliable financial reporting. Only with consistent and broad regulation and enforcement will the enhanced auditor's report provide genuine and insightful information for investors. Moreover, it is essential that issuers and auditors preserve CAMs from weakening into boilerplate discussions that provide little value to investors and other users of financial reporting.

**Alignment of CAMs to Key Audit Matters (KAMs) – Global Standardization of the Auditor's Report**

4. CalSTRS reinforces the need for global standardization of the auditor's report, requiring ordering of paragraphs and obligator subheadings to mirror the auditor's reporting model under IAASB's ISAs.[5] Although the format would be structured, the content would be issuer-specific with flexibility to ensure the auditor is able to provide the "story" that is pertinent to the audit of that company. We advocate the use of the IAASB's definition of KAMs that requires auditors to select the most significant matters in the audit for discussion in the auditor's report.[6]

*The New Auditor's Report: Greater Transparency into the Financial Statement Audit,* January 2015. https://www.ifac.org/system/files/uploads/IAASB/Auditor-Reporting-Fact-Sheet.pdf

[6] IAASB, Determining and Communicating Key Audit Matters, prepared by the Auditor Reporting Implementation Working Group, July 6, 2016. http://www.ifac.org/system/files/publications/files/IAASB-KAM-Overview-Diagram.pdf

**Going Concern and Other Information**

5. Although the Board is addressing these topics under separate initiatives with a different timeline, CalSTRS agrees with the IAASB's requirements regarding the communication of going concern and other information in the auditor's report.[7]

**Benefits and Use by Investors**

CalSTRS see many benefits and improved usage of the expanded auditor's report. We agree with the intended benefits of the enhanced auditor's report which include:

- Enhanced communication between auditors and investors, as well as those charged with corporate governance, Audit Committees
- Increased user confidence in audit reports and financial statements
- Increased transparency, audit quality and enhanced information value
- Increased attention by management and financial statement preparers to disclosures referencing the auditor's report
- Renewed auditor focus on matters to be reported that could result in an increase in professional skepticism
- Enhanced financial reporting in the public interest

As a long-term shareholder and owner of more than 7,000 domestic and global companies, CalSTRS believes mandatory CAM disclosures through the enhanced auditor's report will lead to additional information and insight when we consider ratification of the auditor during proxy voting. Currently our voting policy is based on limited information provided by the auditor and the issuer using the ratio of audit fees to non-audit fees as a voting guideline. We believe the enhanced auditor's report will provide additional insight into the audit process, and improve our ability to evaluate the quality of an audit. This additional information may provide additional insight to gauge the possibility of an audit failure or the risk of an earnings restatement. Investors may be able to gain additional information that heightens their ability to engage with corporate boards to potentially enhance the long-term value of the company as well as possibly lower the cost of capital for the company. Additionally, we believe that insights on CAMs may be relevant in analyzing and pricing risks in our valuation and allocation of capital.

**Auditor's Responsibilities Regarding Other Information**

We concur with the requirement that when issuing an auditor's report, the auditor will include a separate section explaining the auditor's responsibilities and use of other information during the audit.[8]

**Broker Dealers and Emerging Growth Companies**

CalSTRS believes all issuers, including broker dealers, investment companies and emerging growth companies, should be subject to the same audit standards and requirements of an expanded auditor's report.

**Alternative Dispute Resolution Clauses – Auditor Liability**
CalSTRS principles outlines, "The external auditors should not receive indemnification from the company. Contracts with the external auditors should not require the company to use alternative dispute resolution."[9] We believe the auditor should disclose these types of clauses when this type of provision is included in the audit engagement agreement.

Lastly, we have included reference to a few audit reports that we believe capture the spirit of what an expanded auditor's reporting should include.[10]

We hope our summary perspective as a long-term investor provides insight to what we deem critical to the PCAOB's reproposal. We commend the PCAOB for taking steps to improve meaningful disclosures in the auditor's report for investors. If you would like to discuss this letter further, please feel free to contact me at my number above or Mary Hartman Morris at 916-414-7412, MMorris@CalSTRS.com.

Sincerely,

Anne Sheehan

CAREER EDUCATION CORPORATION™

August 11, 2016

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, D.C. 20006-2803

**RE: PCAOB Rulemaking Docket Matter No. 34; PCAOB Release No. 2016-03; Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards**

Dear Office of the Secretary:

Career Education ("CEC") is a for-profit provider of higher education. CEC's academic institutions offer a quality education to a diverse student population in a variety of disciplines through online, campus-based and hybrid learning programs. Career Education is committed to providing quality education that closes the gap between learners who seek to advance their careers and employers needing a qualified workforce. We appreciate the opportunity to provide comments on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* ("Proposal").

We support efforts to improve audit quality that will enhance investor confidence in and understanding of the audit process. We recognize and commend the Board's outreach to various stakeholders in order to receive feedback on the Proposal. However, we believe some of the types of changes outlined in the Proposal, in their current form, will have significant costs and negative unintended consequences which will far outweigh any potential benefits perceived.

**Critical Audit Matters ("CAMs"):**

We support retaining the existing pass/fail model of auditor reporting. Currently, the roles of auditors and management are clearly defined with management responsible for financial statement disclosures and auditors responsible for verifying management's disclosures and providing an opinion on those disclosures. We believe maintaining the current principle of all financial reporting disclosures stemming from management to be appropriate. Some specific concerns related to the Proposal are addressed in the following paragraphs.

*Evaluation of CAMs*

While the current Proposal has narrowed the scope of a CAM to 1) any matter that is communicated or required to be communicated to the audit committee, 2) relates to accounts or disclosures that are material to the financial statements and 3) involved especially challenging, subjective or complex auditor judgment, we believe that the range of matters that could meet the definition of a CAM remains quite broad and could lead to significant new disclosures in the audit report.

This broad definition raises the potential for auditors to err on the side of caution when identifying which items meet the definition of a CAM. The risk would be greater to the auditor to not include an item that may not meet the definition of a CAM in their opinion but could be questioned in hindsight as there is no risk to the auditor to include more. This creates a potential for excessive disclosure. Additionally, the criteria of a CAM which states it should "relate to accounts or disclosures that are material to the financial statements" could also influence the erroneous inclusion of a CAM as the matter itself may not be material but could impact accounts or disclosures that are material to the financial statements in total.

An unintended consequence of CAMs is that it may provide a disincentive for topics to be brought to audit committees' attention. A company's management team may be inclined to discuss fewer items with the audit committee in order to reduce the number of CAMs disclosed in the audit report. This may result in additional audit procedures required as the auditors may have to find alternative procedures to test areas where management may be less forthcoming to discuss or provide information for.

*Communication in the Auditor's Report*

Additionally, we question whether the inclusion of CAMs will provide an investor with any additional information that is not already provided for in the financial statement disclosures. In fact, we believe that users may not fully understand the concept of a critical audit matter. Furthermore, they may not understand the context surrounding audit procedures related to a CAM versus any other work performed related to the financial statement audit. They may question the reliability of the financial statements as a whole due to the auditor specifically identifying areas which were more challenging to audit.

It was noted in the Proposal that the auditor language must be specific as the common user may not understand the technical language used in describing audit procedures surrounding CAMs. This suggests that the common user does not have the technical expertise to understand how the auditor gained comfort over the CAM. The potential for misperception can influence investors' decision-making processes. CAM disclosures may also raise additional questions on the part of investors to management if CAM disclosures reference forward-looking information such as future projected cash flows. As not all companies disclose forward-looking information or disclose only pieces of this type of information this could lead to problematic and inconsistent disclosures.

Under the Proposal, the auditor would be required to describe the principal considerations that led the auditor to determine that the matter is a critical audit matter, describe how it was addressed in the audit and refer to the relevant financial statement accounts and disclosures. We do not believe that this objective can be accomplished in a concise and straightforward manner. Given that readers of the financial statements are not experts in audit technique and procedures, an abbreviated description would not be prudent as this may lead to increased misunderstanding or items taken out of context. Therefore, we believe that expanded disclosure will be required in order to effectively provide the information required under the Proposal for each CAM disclosed. As a result, we believe excessive and duplicative disclosure will occur and overshadow the relevant audit opinion.

The potential for boilerplate language also increases with the introduction of CAMs to the auditor report. Auditors of companies will compare CAMs to benchmark against others within the industry. This could create boilerplate language and lose the objective of the Proposal. Investors also would make comparisons to auditors' disclosure of CAMs across companies. This comparison could lead to conclusions regarding audit quality and effectiveness. As there is significant judgment regarding identification of a CAM, this conclusion could irreparably harm companies and shareholders.

A key concern with the Proposal is the potential for the auditor to provide information about a company's financial statements that would typically be management's responsibility to disclose. The Proposal does note that when describing critical audit matters in the auditor's report, the auditor is not expected to provide information about the company that has not been made publicly available by the company. Yet, the guidance provides an exception to this statement which allows new information to be presented if it is necessary information to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit. We believe that this exception negates the statement that an auditor would not be expected to provide new information. This blurs the role of auditor and management and shifts responsibility from management to the auditor. Irreparable harm could be made to the company and its shareholders if some of this information impacts its competitive advantage and discloses new information about a company's operations and strategy.

*Documentation of CAM determination*

The auditor would be required to document the basis for their conclusion for each audit matter presented to the audit committee. This documentation would take time away from the auditor during a critical period as these matters would be discussed towards the end of an audit when key items are typically coming to resolution. An auditor will likely expend significant additional effort to document its conclusion regarding each matter in order to limit any potential risk to the auditor if questioned. This additional effort would impact the timeliness of the audit.

As CAMs by definition relate to accounts or disclosures that are material to the financial statements, disclosure around these items would already be contained within the financial statement disclosure as well as within the Management's Discussion and Analysis section. Currently, readers of financial statements have expressed that duplicative disclosures exist within Form 10-Q and 10-K filings as companies typically provide similar disclosures within different items of quarterly and annual filings. Layering on another area to disclose material items to the financial statements will cause excessive and duplicative disclosures. As auditors review a company's filing to ensure that appropriate disclosures are made in relation to material items, this would indicate that the disclosures management has made would be sufficient for a reader of the financial statement to understand the matter absent additional disclosure of the same item in the auditor's report.

Overall, the additional effort related to identification of CAMs, determination of appropriate disclosures to communicate each CAM and the documentation necessary within audit work papers will significantly increase the time associated with each audit on the part of the auditor, audit committee and management as each play a role in these discussions. The significant effort will increase the costs of the audit which will be passed along to companies and their shareholders. The perceived benefit of the addition of CAMs in an audit report for which disclosures should already be contained within the financial statement disclosures do not outweigh the real costs that will be incurred.

231 N. MARTINGALE ROAD • SCHAUMBURG • ILLINOIS 60173
TEL (847) 781-3600 • FAX (847) 781-3610 • www.careered.com

Another unintended consequence that must be considered related to the inclusion of CAMs in an audit report relates to the litigious environment within the United States. This litigious environment including with respect to securities class action lawsuits plays a role in corporate governance. The addition of CAMs within the auditor's report will create a new exposure by encouraging frivolous lawsuits that have no real merit but will be able to be used by the plaintiffs' trial bar to force companies into settlements they would not normally settle given the inclusion of CAMs in the audit report. We believe the CAM disclosure proposal has the potential to change the nature of securities class action and other types of litigation and will not be a positive development for corporate governance.

Specific characteristics of the U.S.-issuer audit market, specifically the legal environment, have the potential to significantly increase the liability for audit firms and companies. Investors may conclude that the type of audit procedures related to a CAM may not be considered appropriate. Auditors may be held liable for either 1) not identifying or disclosing CAMs in the audit report or 2) excessive disclosure of CAMs which negatively impact shareholder value. Overall, mandating disclosure of CAMs increases the likelihood of lawsuits and provides investors with an additional pathway to bring lawsuits forward as the auditor is identifying and disclosing higher risk areas in the audit and challenges in gaining assurance over these areas.

A suggestion to the auditor's report that would address the Proposal would be to add a statement in the auditor's report indicating that the auditor has reviewed the Company's critical accounting policies disclosed within Management's Discussion and Analysis and agrees with the Company's identification of critical accounting matters.

**<u>Additional Improvements to the Auditor's Report:</u>**

*Clarifications of Existing Auditor Responsibilities*

We are supportive of the clarifications and proposed additions to the report language that would enhance standardized language by clarifying the nature and scope of the auditor's existing responsibilities, including statements regarding auditor independence and the addition of the phrase "whether due to error or fraud" when describing the auditor's responsibility under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements. We are in agreement with the Board's Proposal to limit the required addressees of the report to the shareholders and the board of directors, or equivalents for companies not organized as corporations and to allow auditors to retain the option to include additional addresses, consistent with today's guidance.

*Auditor Tenure*

We are supportive of disclosures surrounding the year in which the auditor began serving consecutively as the company's auditor. While we understand the desire for consistency in placement of this disclosure, we do not agree that the disclosure should be included in the auditor's report. We believe that the inclusion of this disclosure in the audit report would be misinterpreted as having a direct correlation to audit quality. We believe that this disclosure should be required in other required filings, such as the audit firms' annual report on Form 2 or in the company's proxy disclosures.

*Standardization Form of the Auditor's Report*

We are supportive of the proposed changes to the order of the auditor's report. We believe that the requirement to place the opinion first and to require section titles to guide the reader supports an overall objective to provide more concise and user friendly information to shareholders.

********

In summary, as discussed above, we believe that the overall costs associated with the additional disclosure of CAMs in the audit report outweigh the potential benefit. We believe that this additional disclosure would be duplicative to managements' disclosures, blur the roles between auditor and management and imply piecemeal opinions while distorting the overall audit opinion. We are concerned that the addition of CAM disclosures to the audit report would adversely affect audit quality, timeliness of financial reporting, increase audit costs and have negative implications to practical and legal applications. We are supportive of the proposed improvement to the auditor's report but recommend that auditor tenure be a required disclosure outside of the auditor's report.

Once again, we appreciate the opportunity to comment on these proposed standards. If you have any questions, please contact me at (847) 851-7119.

Sincerely,

Michele

Re: PCAOB Rulemaking Docket Matter No. 034: Proposed Auditing Standard - *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, *and Related Amendments to PCAOB Standards*

Dear Office of the Secretary:

The Center for Audit Quality (CAQ) is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets. The CAQ fosters high quality performance by public company auditors, convenes and collaborates with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocates policies and standards that promote public company auditors' objectivity, effectiveness, and responsiveness to dynamic market conditions. Based in Washington, DC, the CAQ is affiliated with the American Institute of CPAs.

The CAQ welcomes the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or the Board) reproposal of Proposed Auditing Standard - *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, and Related Amendments to PCAOB Standards* (the Reproposal). This letter represents the observations of the CAQ, but not necessarily the views of any specific firm, individual, or CAQ Governing Board member.

Similar to views previously expressed on this topic, the CAQ applauds the PCAOB's efforts to consider ways to update and enhance the auditor's reporting model to provide additional information to stakeholders in an increasingly complex and global environment.[1] We recognize that the Board has been working diligently since the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (the Concept Release) in June 2011 to develop an approach that is beneficial to all stakeholders. We appreciate the extensive outreach and commend the Board for its responsiveness to concerns raised and recommendations made by a variety of stakeholders throughout the process, including those of the CAQ.

[1] See comment letters from the CAQ on this topic dated June 28, 2011, September 30, 2011, December 11, 2013, January 30, 2014, and June 19, 2014.

We have organized our observations and suggestions on the Reproposal into the following categories:

- Critical Audit Matter(s) (CAM)
- Additional Improvements to the Auditor's Report
- Applicability
- Effective Date

We have also included an Appendix to help illustrate some of our recommendations with respect to the illustrations included in the Reproposal related to communication of CAM.

**Critical Audit Matter(s) (CAM)**

*Determination of CAM*

The CAQ supports narrowing the source of CAM to those matters communicated, or required to be communicated to the audit committee. As indicated in our previous CAQ comment letters, we believe that narrowing the source of potential CAM to those matters discussed with audit committees will assist auditors in identifying matters that involved especially challenging, subjective, or complex auditor judgment in the audit in an effective and efficient manner. We believe narrowing the sources of potential CAM in this way will also enhance the ability for auditors to communicate only the most important matters to users of the financial statements (i.e., including too many matters in the auditor's report would serve to minimize the intended emphasis on the matters of most significance). The CAQ's 2014 field testing initiative observed that 98 percent of matters determined to be CAM had been previously communicated to the audit committee. The field testing also indicated that potential CAM identified through the application of paragraph 8 of PCAOB Release 2013-005, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*; *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* (the Original Proposal) resulted in a broad population of matters to consider.[2] In many instances, the inventory of potential CAM was substantial.

This change should reduce differences between the PCAOB's CAM approach and the International Auditing and Assurance Standards Board's (IAASB) approach to determining key audit matters (KAM), which are determined from those matters communicated with those charged with governance.[3] Stakeholder feedback gathered by the IAASB supported the approach as being "responsive to investor requests for further insights

[2] See CAQ comment letter from June 19, 2014 for full details on the field testing: https://pcaobus.org//Rulemaking/Docket034/247b_CAQ.pdf.

[3] Definition of *key audit matter* in ISA 701: Those matters that, in the auditor's professional judgment, were of most significance in the audit of the financial statements of the current period. Key audit matters are selected from matters communicated with those charged with governance. https://www.ifac.org/system/files/publications/files/ISA-701_2.pdf. See also, IAASB, *The New Auditor's Report: A Comparison between the ISAs and the US PCAOB Reproposal* (May 2016), available at https://www.ifac.org/system/files/publications/files/IAASB-Auditor-Reporting-Comparison-between-IAASB-Standards-and-PCAOB-Reproposal_0.pdf. The IAASB document observes that the framework for determining CAM under the PCAOB Reproprosal is substantially similar to determining Key Audit Matters (KAM) under the IAASB's Standards.

into auditor communications with the audit committee."[4] It was also viewed as consistent with the overarching role of the audit committee to represent the interests of shareholders.[5]

*Original Company Information*

As shared in our prior comment letters, the CAQ developed a set of guiding principles to frame our recommendations related to auditor reporting. One of the primary guiding principles was that the auditor should not be the original source of information about the company (i.e., should not provide information in the auditor's report about the company's financial statements and other financial information or its system of internal control over financial reporting that is the responsibility of the company's management to consider for disclosure). Further, during the May 11, 2016 open meeting where the Board voted to release the Reproposal for public comment, statements were made by members of the Board that the intent of certain clarifications made in the Reproposal were to prevent the auditor from being the original source of information about a company through the identification of a CAM.[6] This intent appears to be a primary reason for the inclusion of materiality in the definition of a CAM. We therefore support including the concept of materiality in the definition of a CAM and appreciate the PCAOB's change in the Reproposal in this regard. As recommended in our previous comment letter on the Original Proposal, the addition of the concept of materiality for consideration when determining CAM will focus the auditor on those matters that are most critical to the financial statements and that, as a result, are most critical to the audit. However, we do not believe that the revised definition, when combined with the factors in paragraph .12 of the Reproposal, fully aligns with the Board's intent that the auditor not be the source of original information about the company in the determination of a CAM.

For example, a significant deficiency in internal control is a required communication to an audit committee that may relate to one or more accounts or disclosures that are material to the financial statements. If the significant deficiency involved especially challenging, subjective or complex auditor judgement, it could meet the definition of a CAM. As such, the matter could be identified in the auditor's report; however, management has no requirement to disclose a significant deficiency under the SEC rules.

We believe the suggested edit below to the definition of a CAM in paragraph .11 and .A2 of the Reproposal will still provide investors with the information they are looking for about the audit, while preventing certain types of original company information, such as a significant deficiency, from meeting the definition of a CAM. A significant deficiency may *relate to* a material account or disclosure; however, a significant deficiency by itself would not be a material matter to the financial statements. We believe the revised definition will most likely prevent other potential items that are not required to be disclosed by management, but relate to accounts or disclosures that are material to the financial statements from being a CAM.

> .11 The auditor must determine whether there are any critical audit matters in the audit of the current period's financial statements. A critical audit matter is any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee

---

[4] Staff of the IAASB, *Basis for Conclusions: Reporting on Audited Financial Statements – New and Revised Auditor Reporting Standards and Related Conforming Amendments*, p.12 (Jan. 2015), available at https://www.ifac.org/system/files/publications/files/Basis%20for%20Conclusions%20-%20Auditor%20Reporting%20-%20final.pdf.
[5] Ibid.
[6] See statements by Lewis H. Ferguson https://pcaobus.org/News/Speech/Pages/Ferguson-statement-ARM-051116.aspx and Jay Hanson https://pcaobus.org/News/Speech/Pages/Hanson-statement-ARM-051116.aspx.

and that: (1) ~~**relates to accounts or disclosures**~~ ~~**matters that are**~~ **is** material to the financial statements **taken as a whole**[7] and (2) involved especially challenging, subjective or complex auditor judgment.

Further, we foresee a potential situation where auditors would, under the Reproposal, identify a CAM related to an account or disclosure that would not otherwise require especially challenging, subjective or complex auditor judgment, but could result in especially challenging, subjective, or complex auditor judgement regarding the audit approach to be employed to an account or disclosure due to a significant deficiency in the company's internal controls. In this case, even though the significant deficiency would not likely be a CAM in and of itself, judgments about the audit strategy could be principal considerations that led the auditor to determine the matter was a CAM based upon the factors in paragraph .12. As a result of it being a principal consideration, the significant deficiency could require disclosure in the communication of the CAM in the auditor's report. Such disclosure could result in the auditor being the original source of information about a company's system of internal control in an area where there was no similar disclosure requirement for the company.

To help further prevent auditors from being the original source of information for a company, we recommend the Board consider revising the factors to determine whether a matter involved especially challenging, subjective, or complex auditor judgment, in paragraph .12, as shown below. We believe that removing "determining" from the second factor will focus the auditor on the audit procedures executed to obtain sufficient and appropriate audit evidence, as opposed to an audit strategy decision. Additionally, the nature of audit evidence is a component of determining whether sufficient appropriate audit evidence has been obtained. To clarify how the auditor should consider one of the many factors involved in the evaluation of audit evidence, we are recommending that the last factor be removed, and the consideration for obtaining sufficient appropriate audit evidence be included in the third factor (c). These recommendations are illustrated below.

.12 In determining whether a matter involved especially challenging, subjective, or complex auditor judgment, the auditor should take into account, alone or in combination, the following factors, as well as other factors specific to the audit:

a) The auditor's assessment of the risks of material misstatement, including significant risks;
b) The degree of auditor subjectivity in ~~**determining or**~~ applying audit procedures to address the matter or in evaluating the results of those procedures;
c) The nature and extent of audit effort required to **obtain sufficient appropriate audit evidence to** address the matter, including the extent of specialized skill or knowledge needed or the nature of consultations outside the engagement team regarding the matter;
d) The degree of auditor judgment related to areas in the financial statements that involved the application of significant judgment or estimation by management, including estimates with significant measurement uncertainty; and
e) The nature and timing of significant unusual transactions and the extent of audit effort and judgment related to these transactions.
~~**f) The nature of audit evidence obtained regarding the matter.**~~

Note: It is expected that, in most audits, the auditor would determine that at least one matter involved especially challenging, subjective, or complex auditor judgment.

[7] Please see below the *Introductory Language* section of the comment letter.

In addition, we suggest that the Board also consider revising note 2 of paragraph .14 to clarify that the auditor will not be the source of original company information:

> When describing critical audit matters in the auditor's report the auditor **should not** ~~**is not expected to**~~ provide information about the company that has not been made publicly available by the company ~~**unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit**~~.

These suggested revisions would also be consistent with the following statement in the Reproposal: "The Board believes that critical audit matters are likely to be identified in areas that investors have indicated would be of particular interest to them, such as significant management estimates and judgments made in preparing the financial statements; areas of high financial statement and audit risk; unusual transactions; and other significant changes in the financial statements."[8]

*Communication in the Auditor's Report*

We appreciate the inclusion in the Reproposal of the illustrations of example CAM communications. We expect that many auditors will utilize these illustrations as a resource to develop their own CAM communications, and therefore we want to ensure the content of the illustrations aligns with the principles of the Reproposal.

The Reproposal would require that each matter communicated in the auditor's report include a description of the principal considerations that led the auditor to determine the matter is a critical audit matter, as well as a description of how the matter was addressed in the audit. The illustrations included in the Reproposal seem to indicate that all aspects of how the matter was addressed in the audit be included in the description of the CAM. In the CAQ's previous comment letter on the Original Proposal, we recommended that the Board explicitly state that the auditor may provide a description of the CAM's effect on the audit if the auditor considers it necessary in describing why a matter is a CAM. Both examples in the Reproposal provide information on how the matter was addressed in the audit beyond what would appear to be key or critical audit procedures directly related to the principal considerations that resulted in the CAM, including detail about every phase of the audit. We believe that the PCAOB should consider revising the examples to make clear that they are intended to illustrate how an auditor may describe the *principal* considerations that led the auditor to determine that the matter is a CAM and the principal way in which the auditor addressed the CAM. We believe this would more clearly demonstrate the Board's intent on page 32 of the Reproposal. Otherwise, we are concerned that the examples could be interpreted by auditors to require additional detail, beyond the principal considerations and the principal way in which the CAM was addressed, which could result in boilerplate CAM communications.

Please see the Appendix, which illustrates suggested changes to the examples included in the Reproposal to demonstrate what we believe were the *principal* considerations that lead the auditor to determine the matter was a CAM, and the principal audit procedures related to those considerations.

*Legal Implications for Auditor Liability*

As before, the Board has inquired whether expanded auditor reporting as set forth in the Reproposal would increase legal liability. As communicated in previous CAQ comment letters,[9] an auditor can be liable under

[8] See p. 2 of the PCAOB Release 2016-003.
[9] See the CAQ's comment letter on the Original Proposal (link).

the federal securities laws for the statements it makes in the auditor's report, and enhanced auditor reporting inevitably increase the risk of litigation over liability.

Some of the changes in the Reproposal mitigate this risk, but the addition of the requirement to describe how the CAM were addressed in the audit could significantly increase it. The CAQ accepts that this is a necessary consequence of the communication requirement under the Reproposal. However, the Board should recognize the potential for adverse impact on auditors and on communication between auditors, companies and audit committees, and it should design the standard to avoid or reduce that impact where possible.

This idea underlies several of the modifications suggested in this comment letter. In particular, as discussed above under the "*Original Company Information*" section, the Reproposal should be modified so the auditor is not the required to include original company information in the auditor's report. Requiring the auditor to include information in its report, when the ultimate source should be the company, is unnecessary, and it creates a risk of liability that could have unintended consequences for the auditing process and the communication among the auditor, the company and the audit committee.[10]

Auditors may also be exposed to litigation from companies for exposing their original information under contract and state law duties of client confidentiality.

*Introductory Language*

We are supportive of introductory language preceding the description of the CAM in the auditor's report to make clear that the communication of CAM does not imply that the auditor is providing a separate opinion on the CAM or the accounts or disclosures to which it relates. However, we do have the following observations and recommendations for enhancements to the introductory language.

The language in the audit report introducing CAM, as proposed, refers to the auditor's opinion on the financial statements taken as a whole. That accurately reflects the requirements of paragraph .01 in the Reproposal. We believe that same language should also be included in the introductory language that defines a CAM. We would also recommend greater precision, as noted below, in the proposed language introducing the CAM that starts "Critical audit matters do not alter…"; we believe the subject of the sentence should be the auditor's communication of the CAM, not the CAM themselves.

The following markup of the CAM introductory language reflects the discussion above.

> The critical audit matters communicated below are matters arising from the current period audit that were communicated or required to be communicated to the audit committee and that (1) **~~relate to accounts or disclosures that~~** are material to the financial statements **taken as a whole** and (2) involved our especially challenging, subjective, or complex judgments. **~~Critical~~ The discussion of critical** audit matters **~~do~~ does** not alter in any way our opinion on the financial statements taken as a whole, and we ~~do~~ **~~not provide~~ are not, by communicating the critical audit**

[10] One of the potential sources of auditor liability is Section 10(b) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder, and the Supreme Court has held that a person cannot be held liable for a false or misleading statements under these provisions unless the person actually makes the statement. *Janus Capital Group v. First Derivative Traders* 131 S. Ct. 2296 (2011). Another potential source of auditor liability is Section 11 of the Securities Act of 1933, and an auditor can be held liable under this provision for statement and omissions in its report.

**matters below or otherwise, providing** separate opinions on ~~the~~ critical audit matters **~~or on the accounts or disclosures to which they relate~~**.

**Additional Improvements to the Auditor's Report**

*Clarifications of Existing Auditor Responsibilities*

We continue to support the Board's proposed changes to enhance the wording of the auditor's report in relation to independence and the auditor's responsibilities regarding financial statement notes and for obtaining reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Further, we also support moving the opinion paragraph, as the requirement to put the opinion paragraph first in the auditor's report more closely aligns the auditor's report with the IAASB standards.

In an effort to create further alignment with IAASB standards, we strongly encourage the Board to adopt the additional improvements to the auditor's report that are consistent with the IAASB standards. These additional changes are expanded descriptions of the responsibilities of management and those charged with governance, as well as the auditor's responsibilities, in separate sections of the report. We continue to believe that these changes would enhance users' understanding of the auditor's role and responsibilities, the audit process, and the responsibilities of others in the financial reporting supply chain, and would promote consistency of auditor reporting globally.

Also in line with IAASB standards and our recommended edits for the CAM introductory language, we encourage the PCAOB to consider revising paragraphs .08(e) and .09(b) to change the words "the financial statements" to "the financial statements, taken as a whole."

*Audit Firm Tenure*

Because we do not see a correlation between auditor tenure and audit quality, and consistent with our past views, the CAQ does not support including auditor tenure in the auditor's report. The PCAOB itself has acknowledged in the Original Proposal that it had not found a correlation between auditor tenure and audit quality,[11] and in the Reproposal stated that academic research is still divided on the relationship between auditor tenure and audit quality.[12] We believe that including auditor tenure in the auditor's report would create the false impression that a correlation exists between auditor tenure and audit quality and would give undue prominence to this information. Accordingly, we do not believe the auditor's report is the appropriate location to disclose auditor tenure. We do support other ways of making auditor tenure more transparent. For example, if the audit committee believes that the tenure of the auditor is important information for users of the financial statements to be aware of, the audit committee report in the proxy is an appropriate place for such disclosure. In fact, we are seeing an increasing number of audit committees of the S&P 500 disclosing the tenure of their auditors, from 47 percent in 2014 to 54 percent in 2015, according to the *2015 Audit Committee Transparency Barometer*.[13] Preliminary research by Audit Analytics for the *2016 Audit Committee Transparency Barometer* show that this trend continues with the percentage increasing from 54 percent in

[11] See Original Proposal, page A5-16.
[12] See page 49 of the PCAOB Release 2016-003.
[13]According to *2015 Audit Committee Transparency Barometer,* in 2015 approximately 54% of Audit Committees for S&P 500 Companies disclose the length of time the audit firm was engaged by the Company. http://www.thecaq.org/docs/default-source/reports-and-publications/2015-audit-committee-transparency-barometer.pdf?sfvrsn=2.

2015 to 59 percent in 2016. As audit committees are charged with responsibility for oversight of the auditor, including their appointment, we are encouraged by this increasing transparency being provided in proxy statements.

**Applicability**

The CAQ is supportive of the Reproposal's provision to not require the identification, communication, and documentation of critical audit matters in auditor reports for non-issuer brokers and dealers, investment companies (that are not business development companies), and employee benefit plans (i.e., employee stock purchase, savings, and similar plans). We are pleased to see the PCAOB's consideration of comments received and economic analysis to develop an informed decision for excluding these entities from CAM requirements.

Consistent with our comment letter on the Original Proposal, we believe that the Reproposal should be applicable to emerging growth companies (EGCs).[14] As we have noted previously, certain financial reporting risks can be more prevalent with EGCs than other public companies because of the size, nature, and complexity of their business model, capital structure, business processes and controls, and regulatory environment.

**Effective Date**

The preparation for and implementation of the Reproposal as it relates to expanded auditor reporting will take a considerable amount of time. In anticipation of implementation, audit firms will need to develop and implement training and effective quality control processes to support expanded communications that are (1) providing users with meaningful and useful information, (2) in compliance with applicable laws and regulations, and (3) not unnecessarily increasing potential legal liabilities. We also believe that the auditor's process of developing communications related to CAM will likely require extensive discussions with preparers and audit committees as they evaluate the potential effect of the additional auditor communications in the auditor's report.

We believe that the implementation of the Reproposal, particularly the effort to develop and deliver training and implement effective quality control processes, could place a significant and possibly disproportionate burden on smaller audit firms. As a result, we recommend that the Board allow for a two-phased adoption of the Reproposal. The first phase would be applicable to large accelerated filers with an effective date for audit periods ending two years after the SEC approves the final standard. The second phase would be applicable to all accelerated and non-accelerated filers one year after the phase one effective date in order to allow for firms to benefit from the experience of audits of large accelerated filers. Another benefit of a phased approach is that the PCAOB could leverage its inspection observations during inspections of audits performed during the first phase and provide insights to assist in phase two adoption.

We encourage the Board to take these matters into consideration when determining an effective date that will allow audit firms and preparers the necessary time to develop the appropriate processes, policies and procedures to implement the new standard.

****

**Appendix – Suggested Modifications to the Illustrations**

**Company A**
**Critical Audit Matter**
The critical audit matter communicated below is a matter arising from the current period audit that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. Critical audit matters do not alter in any way our opinion on the financial statements, taken as a whole, and we do not provide separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

*Allowance for Loan Losses – New Loan Product*

As more fully described in Note 7 to the financial statements, during 2014, the Company [a mid-size regional bank] began actively marketing a nine-year auto loan in addition to the three- and five-year auto loans historically marketed. At December 31, 2015, the nine-year loans represented approximately 18% of the auto loan portfolio. ~~The Company estimates and records an allowance for loans that are impaired but are not yet specifically identified (collective impairment allowance) by developing a loss rate based on historical losses and other factors, including qualitative adjustments to historical loss rates based on relevant market factors.~~ Since management has limited historical loss data for the nine-year loans, it developed a new model to estimate this allowance using historical loss data from its auto loans of shorter terms and loss data from external sources for auto loans of longer terms to model a loss rate for the nine-year loans. In addition, management made qualitative adjustments to the historical loss rates to reflect lower borrower quality and higher risk of collateral impairment compared to its shorter term loans and for economic factors, primarily due to increasing unemployment in the markets served. There was a significant amount of judgment required by management when developing the model, which in turn involved our significant judgment.

The principal considerations for our determination that the allowance for loan losses for nine-year auto loans is a critical audit matter are that it is a new loan product with limited historical loss data and auditing the estimated allowance for losses on these loans involved our complex and subjective judgment.

Our audit procedures related to the collective impairment allowance for the nine-year loans included the following procedures, among others.

~~We tested the effectiveness of controls over the Company's new model, historical loss data, and the calculation of a loss rate.~~ We evaluated the qualitative adjustment to the historical loss rates, including assessing the basis for the adjustments and the reasonableness of the significant assumptions. ~~We tested the accuracy and evaluated the relevance of the historical loss data as an input to the new model.~~

We used a specialist to assist us in evaluating the appropriateness of the new model and to review the loss data from external sources used by the Company to determine its relevance to the Company's nine-year loan portfolio and consistency with external data from other sources.
Finally, with the assistance of the specialist, we evaluated the incorporation of the applicable assumptions into the model ~~and tested the model's computational accuracy~~.

**Company B**
**Critical Audit Matter**

The critical audit matter communicated below is a matter arising from the current period audit that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. Critical audit matters do not alter in any way our opinion on the financial statements, taken as a whole, and we do not provide separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

*Accounting for Acquisitions*
Refer to Notes 2 and 13 to the financial statements

~~The Company's strategy includes growth by acquisition. Acquisitions represent a significant component of the Company’s sales growth through the addition of new customers and new products~~ During 2015 the Company completed eight acquisitions for net consideration of $2.1 billion. The most significant of these were (1) the acquisition of all outstanding equity of ABC Inc. for net consideration of $1.1 billion and (2) the acquisition of all outstanding equity of XYZ Corp. for net consideration of $0.5 billion.

Auditing the accounting for the Company’s 2015 acquisitions involved a high degree of subjectivity in evaluating management's estimates, such as the recognition of the fair value of assets acquired and liabilities assumed. We planned and performed the following procedures in connection with forming our overall opinion on the financial statements. ~~We tested controls over the accounting for acquisitions, such as controls over the recognition and measurement of assets acquired, liabilities assumed, and consideration paid and payable, including contingent consideration.~~ For each of the acquisitions, we ~~read the purchase agreements,~~ evaluated the significant assumptions and methods used in developing the fair value estimates, and tested the recognition of (1) the assets acquired and liabilities assumed at fair value; (2) the identifiable acquired intangible assets at fair value; and (3) goodwill measured as a residual.

More specifically, for the acquisitions of ABC and XYZ, we assessed whether (1) intangible assets, such as acquired technology, customer lists, and noncompetition agreements, were properly identified, and (2) the significant assumptions, including discount rates, estimated useful lives, revenue growth rates, projected profit margins, and the expected rate of return, used in valuing these intangibles were reasonable. Specifically, when assessing the assumptions related to the revenue growth rate and projected profit margins, we evaluated whether the assumptions used were reasonable considering the past performance of ABC and XYZ and the Company’s history related to similar acquisitions and considered whether they were consistent with evidence obtained in other areas of the audit, such as assumptions used by the Company in its budget.

The purchase consideration for the acquisitions of ABC and XYZ also reflected, in part, the estimated fair value of significant contingent consideration arrangements based on attainment of product development milestones and patent approvals. In testing the valuation of contingent consideration, we assessed the terms of the arrangements and the conditions that must be met for the arrangements to become payable. Finally, we evaluated management’s classification of contingent payments to continuing employees as either contingent consideration in the business combination or employee compensation.

Office of the Secretary
Public Company Accounting Oversight Board
Office of the Secretary
1666 K Street N.W.
Washington, D.C. 20006-2803

To the Members of the PCAOB;

**Reference:** *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards (PCAOB Rulemaking Docket Matter No. 034)*

CFA Institute,[1] in consultation with its Corporate Disclosure Policy Council ("CDPC"),[2] appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards*.

CFA Institute is comprised of more than 130,000 investment professional members, including portfolio managers, investment analysts, and advisors, worldwide. CFA Institute seeks to promote fair and transparent global capital markets and to advocate for investor protections. An integral part of our efforts toward meeting those goals is ensuring that corporate financial reporting and disclosures provided to investors and other end users is of high quality.

***CFA Institute Position on Rationale for Changes Needed to the Independent Auditor's Report***
CFA Institute has consistently supported the efforts of the PCAOB to improve the independent auditor's reporting model. We have long expressed the need to improve the Standard Auditor's Report (SAR) as a means of communicating important information to investors and other users regarding the audit of a company's financial statements. It is our belief that the SAR along with the financial statements and management's discussion and analysis should be considered part of a holistic communication of valuable information to investors to make informed capital allocation decisions. Significant efforts and costs go into an audit, yet investors are provided very little information in the three paragraph report provided by the current SAR. Through increased transparency, a revised auditor's reporting model should heighten user confidence in the audited financial statements and better inform them about the auditor's role.

---

[1] With offices in Charlottesville, New York, London, Brussels, Hong Kong, Mumbai, Beijing, CFA Institute is a global, not-for-profit professional association of more than 142,000 investment analysts, portfolio managers, investment advisors, and other investment professionals in 154 countries, of whom nearly 135,000 hold the Chartered Financial Analyst® (CFA®) designation. The CFA Institute membership also includes 147 member societies in 69 countries and territories.

[2] The objective of the CDPC is to foster the integrity of financial markets through its efforts to address issues affecting the quality of financial reporting and disclosure worldwide. The CDPC is comprised of investment professionals with extensive expertise and experience in the global capital markets, some of whom are also CFA Institute member volunteers. In this capacity, the CDPC provides the practitioners' perspective in the promotion of high-quality financial reporting and disclosures that meet the needs of investors.

The current SAR contains largely "boilerplate" language which has contributed to an "expectations gap", commonly understood as the gap between the auditor's performance, the auditor's communication of what they did, and the users' expectations regarding the audit process and findings. It is our belief that enhancements to the SAR hold the greatest promise to narrow this expectations gap and to provide decision-useful information to investors.

We urge the PCAOB to act decisively and with the best interests of the investor in mind as it works to complete this project. Investors throughout the globe are already benefitting from new auditor's reports issued in accordance with the UK Financial Reporting Council Standards and will soon see new reports issued un the International Standards on Auditing as issued by the International Auditing and Assurance Standards Board. Those who invest in the US capital markets should be given the opportunity to benefit from a more informative auditor's report and the time has come for the PCAOB to thoughtfully conclude this project.

We refer you to our previous letters for more specific comments and reference to our survey's etc. We believe those comments apply in many respects to the current re-proposal.

The links to those letters appear below:

- PCAOB Release No. 2013-005 August 13, 2013 (Proposed Rule)
- PCAOB Release No. 2011-003 June 21, 2011 (Concept Release)

The links to CFAS Institute surveys appear below:

- CFA Institute, Usefulness of the Independent Auditor's Report, March 2011
- CFA Institute, Independent Auditor's Report Survey Results, March 2010

Our aim in this letter is to address certain key changes as shown below from the PCAOB 2013 proposal.

***CFA Institute Comments on Current Proposal***

Determination of Critical Audit Matters (CAM)

The re-proposal narrowed the source of potential CAMs to matters communicated or required to be communicated to the audit committee. The 2013 proposal would have required CAMs to be those matters required to be:

(1) documented in the engagement completion document;
(2) reviewed by the engagement quality reviewer;
(3) communicated to the audit committee; or
(4) any combination of the three.

While we also agree with the PCAOB that narrowing the source of CAMs may be technically correct in that they ordinarily would be communicated to the audit committee, thus would be captured in the revised definition. However, we think that this narrowing further provides a more subjective approach when a more objective approach would lead to a more thorough disclosure of CAMs. Our concern remains that the proposed subjectivity might easily allow for an artful avoidance of providing information to investors. Investors have been seeking specific information from the auditor for years, and giving more objective, prescriptive guidance is necessary to ensure that those specific matters are conveyed by the auditor.

Definition of CAM
We believe the definition of CAM has been weakened under the 2016 re-proposal by the addition of a materiality component to the definition. We agree with the Council of Institutional Investors comment letter to the PCAOB in response to materiality stated below:

> *First, the definition of CAMs as interpreted in the reproposal is too narrow and unnecessarily excludes relevant information from investors. More specifically, we would not limit CAMs to any matter that "relates to accounts or disclosures that are material to the financial statements" as that phrase is interpreted in the reproposal. We note that the reproposal provides an example indicating that the phrase would exclude from the definition of CAMs a "loss contingency that was communicated to the audit committee but that was determined by management to be remote." We believe that such a narrow interpretation of the phrase would unnecessarily exclude relevant information from investors.*

This sort of example demonstrates why narrowing the definition could omit information important to investors. We believe instead that the auditor should simply apply their judgement to reporting CAMs in accordance with the factors used to determine CAMs as approved by the PCAOB in the final standard.

Further, as previously mentioned in our 2013 letter, we believe that the auditor should provide details about the quantitative and qualitative materiality levels and factors the auditor considered in establishing materiality levels.

Factors Used to Determine CAMs
We disagree with the PCAOB eliminating the following two items from the list of factors that the auditor would need to take into account when determining CAMs:

1) The severity of control deficiencies identified relevant to the matter, if any
2) The nature significance, quantitatively or qualitatively, of corrected and accumulated uncorrected misstatements related to the matter, if any.

We believe that both of these items would be relevant information to investors as they assess the overall control environment and nature of any uncorrected misstatements. We believe that narrowing the list of factors could potentially further restrict information reported to investors.

Communication of CAMs
Adding a requirement for the auditor to describe how the CAM was addressed is an improvement to the 2013 proposal. The feedback from auditor's reports issued under the Financial Reporting Council's requirements has shown that this information is valuable to investors.

Interaction Between CAMs and Explanatory Paragraphs
We agree with the changes to clarify the communication of the CAMs and required explanatory paragraphs. It is important that the CAMs and explanatory paragraphs be appropriately cross-referenced in order for users to fully understand what is being communicated by the auditor.

The re-proposal calls for the auditor to communicate in the auditor's report critical matters relating to the audit of the current period's financial statements or state that the auditor determined that there are no critical audit matters. This would imply that the auditor's report for any given audit on a comparative basis would not necessarily include critical audit matters that may have related to the prior period. Although the user could go back and review the auditor's report from the prior period, we believe that given the audit covers the prior period, that any critical audit matters relating to that period should also be in the report. By doing so, users will be able to understand the audit implications related to prior periods by reviewing only one report.

Auditor Independence
As mentioned in our 2013 letter; we believe that a statement regarding auditor independence is useful to investors and establishes a heightened sense of professional accountability. However, as we previously noted simply stating that the auditor is "required" to be independent, rather than is "in fact" independent is a less than optimal positive statement. A more definitive statement is preferable and adds further assurance that the auditor is independent. We do not believe that the PCAOB explanation for why it decided to retain the 2013 proposal language is sufficiently justified. The auditor is either independent or not, stating so should be simple.

Form of Auditor's Report
We agree that the "Opinion on the Financial Statements" should be the first section of the auditor's report followed by the "Basis for Opinion" section. We also agree that there should be titles for all other sections. These requirements improve the readability of the report.

Investor Use of the Auditor's Report
A key question being asked by the PCAOB is: how will investors use the information in the CAMs? To answer this question, the Board has to look no further than the letter of R.G. Associates, Inc. filed with the PCAOB in response to the re-proposal. The R.G. Associates, Inc. letter captures the essence of how investors will use the auditor's report and how over the many decades the auditor's report, beyond the pass/fail test (which is still very important) lacks any useful information.

## CLOSING REMARKS

CFA Institute commends the PCAOB and especially those Board members who have consistently supported investors and other users over the last several years to advance matters of audit quality, of which expanded more informative audit reports is an important element. We realize that brining the auditor's reporting project to a close has been challenging for the PCAOB, but we stress that is important for the PCAOB to deliver a new model. Other standard setters have completed their projects on this matter and it is now time for the PCAOB to deliver something for the benefit of investors.

We thank the PCAOB for the opportunity to express our views on this proposal. If the PCAOB has questions or seek furthers elaboration of our views, please contact Matthew M. Waldron by phone at +1.212.705.1733, or by e-mail at matthew.waldron@cfainstitute.org.

Public Company Accounting Oversight Board
1666 K Street N.W.
Washington, D.C. 20006-2803

RE: PCAOB Rulemaking Docket Matter No. 034

Dear Office of the Secretary:

We greatly appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or the Board) Release No. 2016-003, Proposed Auditing Standard–The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards (Proposed Standard).

We support enhancing the form and content of information available to investors and make information more relevant and informative to investors and other financial statement users.

However, we disagree with the incorporation of critical accounting matters (CAMs) into the audit report. We believe that to do so would dilute the current pass/fail model and diminish the value of an audit report. We believe that due to the litigation environment in the United States most if not all auditors are likely to be overly cautious and conservative and include an overabundance of matters and in a standardized way "mirroring" audit reports of similar companies. The numerous CAMs added to the majority of audit reports will make auditor reports overly voluminous and confusing to the users of financial statements adding no substantial benefit but significantly adding to the cost to investors.

The foregoing notwithstanding, we appreciate the opportunity to comment and contribute and have answered certain questions which we feel are particularly relevant to consider:

Questions:

1. Is the definition of "critical audit matter" appropriate for purposes of achieving the Board's objective of providing relevant and useful information in the auditor's report for investors and other financial statement users? Is the definition sufficiently clear to enable auditors to apply it consistently? If not, describe why the definition may not be clear, including examples demonstrating your concern.

   a. Are matters communicated or required to be communicated to the audit committee the appropriate source for critical audit matters? Why or why not?

      We do not believe that the source of CAMs should begin with those matters that are required to be communicated to the audit committee. We believe this because the audit committee's purpose is to oversee audit services, which includes both CAMs and non-CAMs. As highlighted in AS 16, the Audit Committee and the auditor should be working as a team, including timely two-way communications about matters critical to performing an effective audit such as risk assessment. In addition, the communication between auditor and audit committee is private.

      The above points create an environment between auditor and audit committee designed to foster open communications which best services the investing public.

      By starting the CAM decision with communications to the audit committee the Board would be creating an incentive counter to the goals of free and open, timely and two-way communications as prescribed in AS 16. This could result in matters which otherwise might be discussed and communicated from being communicated and thus counter-productive.

We recommend that if the Board is to follow through with introducing the concept of CAMs that the Board allow auditors to determine what are and are not CAMs. Auditor judgment has always been relied upon, whether in determining materiality, determining risks, designing audit procedures to address those risks or assessing the results of those procedures. Why would auditor judgment not be sufficient for determining what is and is not a CAM?

d. Is the "involved especially challenging, subjective, or complex auditor judgment" component of the definition of a critical audit matter appropriate and clear? Why or why not?

We do not disagree with the inclusion of this as a component in determining CAMs. However, we are unsure how this component would relate to critical accounting estimates and significant accounting estimates as disclosed in Management's Discussion and Analysis and the footnotes to the financial statements. Would all critical accounting estimates also be CAMs? If an account or disclosure involves critical accounting estimates would it not also involve challenging, subjective, or complex auditor judgment? If not considered a CAM, would the omission increase the risk of litigation and be perceived as an inconsistency?

2. Are factors helpful in assisting the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? Why or why not?

We agree that there should be a list of factors to consider when making the CAM determinations.

3. Are there any factors that the Board should consider adding or removing to better assist the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? If so, what are those factors?

We recommend that the board remove the phrase "extent of audit effort" from any factors. We agree that the use of specialized skills and judgment should be considered because they address the degree of uncertainty that investors seek to understand through the concept of CAM. However, certain audit procedures might be extensive but require little or no judgment or uncertainty while other audit procedures might not require as much work but involve significant judgment and uncertainty.

6. Do the reproposed communication requirements appropriately address commenter concerns regarding auditor communication of critical audit matters, such as:

b. Investors and other financial statement users misinterpreting critical audit matters as undermining the auditor's pass/fail opinion or providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate?

Given the definition of critical audit matters as "involving especially challenging, subjective or complex auditor judgment" it is impossible for a reader not to then interpret those balances and disclosures as being equal to balances and disclosure not deemed a CAM.

7. In addition to referring to the relevant financial statement accounts and disclosures, would it be appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating a critical audit matter? Why or why not?

We believe that the auditor should not reference any information outside of the financial statements because the auditor's responsibility over other information is limited to review for consistency with the financial statement and footnotes. The auditor is not and should not be responsible to audit the other such information.

8. Is it appropriate for the reproposed standard to retain the possibility of the auditor determining that there are no critical audit matters and, if so, require a statement to that effect in the auditor's report? Why or why not?

> We believe that many audits, especially those performed by mid-sized or smaller accounting firms, are often less complex than those performed by larger firms. While risks are always present, audit areas with "challenging, subjective or complex auditor judgment" are not always present.

10. What effect, if any, could the auditor's communication of critical audit matters under the reproposed standard have on private litigation? Would this communication lead to an unwarranted increase in private liability?

> We believe that the inclusion of CAMs to highlighting difficult audit areas will inherently increase the risk of litigation despite the Board's efforts to minimize the likelihood. Those seeking to bring litigation would point to the absence of a CAM disclosure as support for either the auditor's negligence in identifying a CAM or in disclosing it. We believe that this increased risk will likely result in over disclosure of CAMs in a broad and ambiguous way using standardized wording thus increasing the length of the auditor's report but making it equal or less useful to investors.

12. Are there other steps the Board could or should take to address the likelihood of increasing an auditor's or company's potential liability in private litigation through the requirement to communicate critical audit matters in the auditor's report?

> Yes, similar to the inclusion of limiting language regarding and audit of internal control, we believe that there should be standardized language that limits the reliance on the auditor's communication of CAMs.

18. Should disclosure of auditor tenure be made on Form AP rather than in the auditor's report? Why or why not?

> We believe that disclosure of auditor tenure would best be disclosed on Form AP because we believe that the auditor's pass/fail model is weakened whenever extraneous information is provided. For example, audit reports with differing auditor tenures could lead investors to weigh the opinions differently, whether it be because the auditor is inexperienced with auditing the client or has a long-standing relationship with the client. Having the information publicly available through the form AP but not presented along with the pass/fail opinion allows those investors who seek such information to obtain it.

29. Would critical audit matters be useful in assessing company financial performance? If so, how?

> Identifying which account balances or disclosures are "especially challenging, subjective, or [require] complex auditor judgment" would aid in making investment decisions across industries which might have different CAMs. However, we believe it is likely that most audit reports within an industry would include the same CAMs both due to the nature of the operations and the evidence available to auditors. In addition, the fear of litigation will likely result in auditors "mirroring" their CAMs to other audit reports of different companies in the same industry.

Thank you for the opportunity to comment and contribute.

Sincerely,

Cherry Bekaert LLP

**Re: PCAOB Rulemaking Docket Matter No. 34 – Release No. 2016-003**

Chevron Corporation (Chevron) appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) update to the proposed auditing standards (the "Update") and related amendments to current standards addressing the auditor's reports on audited financial statements – Rulemaking Docket Matter No. 34: *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Position; And Related Amendments to PCAOB Standards.*

Chevron is one of the world's leading integrated energy companies. Through its subsidiaries that conduct business worldwide, the company is involved in virtually every facet of the energy industry. Chevron explores for, produces and transports crude oil and natural gas; refines, markets and distributes transportation fuels and lubricants; manufactures and sells petrochemicals and additives; generates power and produces geothermal energy; and develops and deploys technologies that enhance business value in every aspect of the company's operations.

We support the PCAOB's efforts to develop audit standards that enhance the usefulness of corporate reporting to the investor. As communicated in our comment letters of September 21, 2011 and December 12, 2013 regarding the two previous releases on this matter, we continue to strongly believe in the core principle that it is management's, not the auditor's, responsibility to provide investors with financial and other company-specific information. We believe that the Update requiring the audit report to include Critical Audit Matters (CAMs) does not support that core principle and would not provide value-added information to the investor. We do, however, appreciate the PCAOB removing the proposal to include the evaluation of other information such as the Management Discussion & Analysis and hope it is not required in the future since evaluation of strategies, forward looking statements, and risks and litigation, are difficult and time consuming to audit and would add substantial audit costs that would be borne by the shareholder.

## Critical Accounting Matters

We believe that the current requirements regarding the auditor's reporting of material items are functioning effectively. While we acknowledge the Board's efforts to narrow the scope of the Update based on feedback received on the earlier proposals, we do not believe the auditor's report should be expanded to include CAMs, when the opinion overall is unqualified for the following reasons.

The proposed structure for the CAMs would mean that the auditor's report would contain discussion on matters that were fully resolved through the established channels of internal control including internal and external audit, disclosure committee discussions, management certifications, and the Board Audit Committee. We do not believe that calling out key events and difficult judgments separately in the auditor's report would serve to clarify the technical and subjective matters to the investor.

We also believe the company-specific factors proposed to be communicated via the CAMs are already adequately covered in both the Management's Discussion and Analysis portion and in the Notes to the Consolidated Financial Statement section of annual report, including discussions of Critical Accounting Estimates and Assumptions, Summary of Significant Accounting Policies, New Accounting Standards, and in the Results of Operations. We do not believe that this proposed format will provide new or meaningful information to the investor. In addition, we believe that including CAMs in the auditor's report will contribute to disclosure overload and conflict with the expressed opinion by both the FASB and SEC for companies to produce annual reports with more concise and meaningful content.

We are also concerned that the additional processes to determine and fully document which of the matters should be included as a CAM and why each was, or was not, included in the auditor's report would require significant additional effort by the external audit staff, the company's management and the Board Audit Committee. The Update calls for even more documentation by requiring the auditor to describe, in detail, how the CAM was addressed in the audit as well as refer to relevant financial statement accounts and disclosures. This could not be accomplished within the window for filing without reducing the time available to assure the quality of preparing the core financial report and performing the external financial audit. We also expect these proposals would result in significant additional costs to the company's shareholders given the extra time and resources required to meet the requirements from both external audit and corporate staffs.

While we do not believe CAMs should be introduced in the auditor's report, we appreciate that the Update introduces materiality to the scope of CAMs. However, the present wording in the Update suggests CAMs related to material accounts or disclosures should be included in the auditor's report. Rather, we believe the intent of the Update is to only disclose material CAMs.

Regarding any possible implementation of the Update, we feel the effective date should be no sooner than two years after final approval by the SEC.

If you have any questions on the content of this letter, please contact Al Ziarnik, Assistant Comptroller, at (925) 842-5031.

Sincerely,

Jeanette Ourada

Re: **Comments to PCAOB Release No. 2016-003, *The Auditor's Report***

Dear Chairman Doty and Distinguished Board Members:

Our firm appreciates this opportunity to comment on the proposed auditing standard. Our comments speak to the overall standard and its objective of changing the auditor's report. Our comments:

**The new Auditor's Report**

We agree that the auditor's report should continue to exist as a pass/fail model. To offer varying degrees of an opinion would input unneeded and confusing contrasts into the report.

We urge such pass/fail model continue.

Our agreement with the Board for a new audit report may end there. The reproposal, similar to the original proposal, endeavors to change the principal purpose of the auditor report: to give an opinion of financial statements presented by management. Since the audit report was conceived, its existence has always been to confirm (or not confirm by qualifying the report) management's presentation of the numbers. Simply stated, are the items fairly presented, yes or no? [Pass or fail.]

The Board's initiative is to now change that quest to offer a separate report to management's presentation in hope that an adversarial vetting of issues and matters may bring more clarity to the investor and financial statement user. This approach offers contrary views which never provides clarity in any matter presented. The reader is only left with, who's right? Could be the auditor, but then again, the Company is always more of an expert of its business than the auditor.

Along with such unresolved conflicts the reader may face, who is responsible to reconcile the differences? Again, the financial statement user can only be left more confused. Such a reconciliation has always been implied by what is presented in the financial statements. Management has presented the financial information and the auditor has opined on the presentation.

We also note, financial reporting is distinctly different from the audit process. The mixing of such apples and oranges indicates the same objective. The two outcomes, financial statements and an audit opinion, are quite different.

We fundamentally disagree with the approach to change the principal purpose of the auditor's report.

We do agree that the clarity the financial statement user may be missing is an understanding of what information the auditor is responsible to oversee. Our report speaks only to the financial statements, however, we all read the entire filing, agreeing the numbers, as well as, analyzing and substantiating many amounts presented throughout the document. We are also responsible for understanding the client's business, reading material documents, such as loan documents and purchase agreements, critiquing the MD&A and other Items. All these parts of the filing are within our purview. Auditors also review 8-Ks, proxies, and other filings, but no mention is ever made.

We suggest that the auditor report be tailored to better define auditor responsibilities, so that the financial statement user knows he can rely on other parts of the filing in addition to the financial statements.

Lastly, the disclosure of all items that were disclosed to the audit committee. The PCAOB has for years moved to have qualified, well-functioning, audit committees to oversee the audit process. Now that the investor is reaping the fruits of the PCAOB's commendable push for good audit committees, why the change in course to discount the audit committee's mission and go directly to the shareholders and investors?

We say stay the course with the current approach to audit committees in allowing the audit committee to fulfill the role of representative of the investor. The PCAOB's work has been validated in this area.

In closing our general comments about the audit report itself, we note that the PCAOB made reference to the use of such audit reports as reproposed outside the United States. The PCAOB has resisted placing full reliance on the work of independent audit regulators in other countries, requiring the PCAOB to inspect such firms. The SEC has also resisted converging or changing to IFRS because the SEC considers current GAAP and auditing standards supreme. We are humored that the PCAOB now points to such audit reports outside the United States to support its position. The PCAOB has always been the leader in setting auditing standards. No reason for the Board to now look elsewhere.

**Critical Audit Matters**

We have read the Board's argument for the disclosure of critical audit matters (CAMs) in the auditor's report. We reiterate the same above comments to address the need for CAMs.

August 15, 2016

Two critical points: 1) Management runs the Company, so management will emphasize its course of action to lead the Company. The auditor has no authority, nor plays any role in corporate governance, in order to effect any outcome of any action taken by Company management. Absent such authority to change the course of the Company, the auditor's assertion of what is important and what is not important is arbitrary. The Company leadership will give significance to important items. 2) The Board is reproposing that the auditor identify in their report the challenging, subjective, or complex matters affecting auditor judgments, and how the auditor responded to those matters. What is important is the information presented to the shareholders and investors, not the process of assessing such information. So if the auditor does opine to the Company's assertions to the information presented, then the investor only needs to read the information. The awareness of audit procedures performed does not add value to the investor. And CAMs will not assist investors and analysts engaging management with targeted questions about Company information.

In addition, to now have the auditor state each and every challenging, subjective, or complex judgment serves no purpose when the reader is only looking for one number. For example, did the issuer meet the financial covenant or not? [Pass or fail?] Audit procedures can vary in complexity, but still be very important. For example, cash and debt confirmations are routine audit procedures, but just as critical as assessment of fair value calculations which can be challenging, subjective and complex. By stating such audit procedures implies to the reader the importance of those procedures, thus, routine procedures which may not be mentioned, may not be considered critical to the process. The reader making such an inference would be misled and not fully understand the process or financial information.

Lastly, the comparison of audit procedures between companies in the same industry may be done, but also lead to a wrong conclusion. For example, if there are six different companies in an industry being auditing and five firms use sampling techniques, but one firm uses big data, is the audit procedure of that firm now in question and thus the financial statements less reliable? Of course not! But such a conclusion can be drawn by comparing disclosed procedures. [If the objective of the PCAOB is to have standard audit procedures performed only one way of companies in a particular industry, then publish an audit standard. Having a financial statement reader compare procedures amongst firms may detract to their understanding of the financial statements.] No incremental increase in the quality of financial information is gained by the user of the financial statement. And the auditor's report will certainly not be easier to read.

We disagree with the Board that the presentation of CAMs adds value to the investor in reading the financial information.

In each financial statement, significant accounting policies are disclosed. In an annual filing, the issuer also discloses in its MD&A trends, ratios, comparables, non-GAAP indicators, critical accounting estimates, capital resources and liquidity, and other presentations. The reading of the MD&A provides much information for the investor. And the SEC has issued excellent interpretative guidance to write MD&As.

The auditor is responsible to review the MD&A and other Items in filings to assure the consistency with other financial information. The auditor's report can be expanded to include such responsibility.

Defining such responsibility in the audit report will assure the investor that such areas are also covered by the auditor. Consideration can also be given to an auditor's report in quarterly and other filings that such information was reviewed.

We reiterate that the responsibilities of the auditor should be better defined in the auditor report.

In lieu of CAMs, renumbering footnotes in order of critical matters may accomplish a similar objective. Since the investor has to read the footnotes to glean information, having the footnotes in order of critical disclosures versus balance sheet and income statement order may provide the significance in matters that the investor is seeking.

In closing, we are not moved by the term "investor asymmetry". Regulation FD provides rules and procedures for disclosing information which assures the public information to all stakeholders is in the same time frame. For this reason, no additional regulation is needed to meet a wrongly perceived circumstance.

**Additional Improvements**

*Clarifications of existing auditor responsibilities:*

Independence – we note the title to the audit report already contains the word "Independent". We agree that independence and objectivity are critical to the audit process. Without belaboring the point, could independence be given any more prominence than being included in the title to the report?

Auditor tenure – we note the PCAOB now requires the disclosure of audit partners. This disclosure may be more important than the firm's tenure. We agree that the change in auditor, as well as a first-year auditor, may face challenges already overcome by an auditor retained for years. We agree that this disclosure does serve the financial statement reader. The PCAOB should require such disclosure on the same form as the audit partner.

Addressee – we understand that at times, firm individual offices may not all be the same. We agree that specific addresses identifying the office which performed the work should be disclosed. Again, the PCAOB should require such disclosure on the same form as the audit partner.

Enhancements to basic elements – as stated in our above comments, we agree wholeheartedly that auditor responsibilities should be better defined in the report. We do concede that the profession has danced around the phrase, "whether due to error or fraud" for decades. We agree that such wording will more exactly define the auditor's responsibilities. We also urge, as above noted, that the auditor's report better define the auditor's responsibilities.

Standardized form of auditor's report – we close our comments smiling that the Board is suggesting the opinion paragraph now be first and all parts subtitled to add clarity to the audit report since the reproposal has added cumbersome and confusing additions to the report. The reader of a reproposed audit report can no longer navigate his way to understanding like he could with the previous three-paragraph report.

**Other Notes**

Our last comment - we believe that there should be some consideration or exemption for smaller reporting companies. The documentation required, as well as, the increase in audit fees may be burdensome to such companies. Although the PCAOB may not want to have small-company auditing standards and big-company auditing standards, this reproposed standard begs for such a consideration.

We urge that if the standard is implemented, smaller reporting companies be given relief from some of the documentation and disclosure requirements of this standard.

We wish to thank the Chairman and Board Members for this opportunity to comment on the reproposed standard. Although we have taken different positions than the Board on some of the standard's provisions, we trust through dialog and the vetting of the standard within the profession will yield an even better standard to implement.

Very truly yours,

Ciro E. Adams, CPA, LLC

Re: PCAOB Release No. 2016-003; Rulemaking Docket Matter No. 034; *Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and the Related Auditor's Report; and Related Amendments to PCAOB Standards*

Ladies and Gentlemen:

The Public Company Accounting Oversight Board (the "Board" or "PCAOB") has solicited public comment on the reproposed auditing standard and other matters discussed in PCAOB Release No. 2016-003 (the "Reproposal") dated May 11, 2016. We appreciate the opportunity to comment on the Reproposal and the important issues it raises.

## I. Introduction

We continue to welcome the Board's efforts to make the financial statements and the related auditor's report more relevant to investors. As we discussed in our prior comment letters in respect of PCAOB Release No. 2011-003, *Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (June 21, 2011) (the "2011 Release")[1] and PCAOB Release No. 2013-005, *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* (August 13, 2013) (the 2013

[1] Comment letter of Cleary Gottlieb Steen & Hamilton (Oct. 14, 2011) (the "2011 Comment Letter"), available at http://pcaobus.org/Rules/Rulemaking/Docket034/149_Cleary_Gottlieb.pdf.

Release")[2], our perspective on these matters is informed by our role as legal advisers who are intimately familiar with both the fundamentals and the nuances of the federal securities laws, including how they apply to financial and other disclosures, and who represent issuers and others in connection with a wide variety of matters. These matters include advising issuers on their reporting obligations (including financial disclosures); advising audit committees on their responsibilities and best practices; and advising issuers and underwriters in connection with a wide variety of capital markets transactions to which the federal securities laws apply. Financial reporting, including its reliability and relevance, is often a critical element of these matters.

In drafting the Reproposal, the Board attempted to contour the reproposed auditing standard to the concerns raised by various constituencies in comment letters related to the 2013 Release. However, the Reproposal does not adequately respond to two main concerns raised by us and others. First, under the Reproposal, the auditor can be required to provide original disclosure about an issuer, a concern we raised in our 2011 Comment Letter and reiterated in our 2013 Comment Letter. Second, the auditor will be required to report critical audit matters in a manner that raises a significant likelihood, which neither the Board nor the Commission should find acceptable, that communications will be chilled between the audit committee and management, on the one hand, and the auditor, on the other.

As we stated in our 2011 Comment Letter and our 2013 Comment Letter, we are and remain dedicated to full and fair disclosure under federal securities laws, particularly when that disclosure relates to financial reporting and transparency to investors and markets, including improvements in financial reporting that are fostered by the application of robust auditing standards. However, we believe fair disclosure, transparency and the interests of investors must be considered against the backdrop of legitimate issuer concerns, including the commercial sensitivity of disclosing certain matters. We also believe disclosure requirements regarding issuer information, and the consideration of interests they entail, should remain the province of the Securities and Exchange Commission (the "Commission") in its application of the federal securities laws.

While we commend the Board for undertaking to refine the 2013 Release to address concerns raised through the comment letter process, including concerns contained in our 2013 Comment Letter, and recognize there are improvements when comparing the Reproposal to the 2013 Release and 2011 Release, we believe the Reproposal inadequately addresses some key concerns. We describe our concerns in greater detail in Section II below.[3]

---

[2] Comment letter of Cleary Gottlieb Steen & Hamilton (Dec. 23, 2013) (the "2013 Comment Letter"), available at https://pcaobus.org/Rulemaking/Docket034/231b_CGSH.pdf.

[3] We also reiterate several important principles noted in our 2013 Comment Letter and our 2011 Comment Letter that the Board should keep in mind as it continues to refine the Reproposal and when considering any changes to the auditor's report and the processes and interactions that may result from those changes. These principles include: i) original disclosure about an issuer should be the responsibility of, and come from, the issuer and not any third party, including the auditor; ii) there should be no adverse impact on the relationship or structure of interactions between management, the audit committee and the auditors as a result of any changes to the auditor's report or role; iii) the pass/fail model should not be undermined; and iv) a cost/benefit analysis should be undertaken rigorously, in which the costs of any change, including the adverse impact on the foregoing principles, must be justified by the benefit of significantly improving financial reporting that would result from any change to the auditor's report or role.

## II. The Reproposed Auditing Standard Raises Two Significant Concerns

The Board's auditing standard, as reproposed, continues to be highly problematic in two significant respects: it will require auditors to provide additional original information about the issuer, even if such information is commercially sensitive and not required to be disclosed by the federal securities laws or the Commission's rules and regulations thereunder; and it will chill communication between the audit committee and management, on the one hand, and the auditors, on the other. Failing to address these concerns in a more meaningful way than reflected in the Reproposal will impose a cost on the disclosure process that in our view outweighs any benefit provided by the additional information proposed to be required in the auditor's report.

### *A. The Reproposed Auditing Standard Provides an Obligation that Auditors Expand the Scope of Existing Disclosure Regarding Issuers in a Manner that Supersedes Management's Responsibility for Disclosure, Ignores Valid Concerns Surrounding Commercial Sensitivity and Sidesteps the Commission's Authority to Determine Disclosure Requirements.*

One of our most significant concerns, dating back to the 2011 Release and the 2013 Release, and continuing in the Reproposal, is that the Reproposal, if adopted as proposed, would require the auditor to disclose, and to be the source of, additional original information about an issuer. The intention of the Reproposal is to "respond to investor requests for additional information about the financial statement audit by increasing the relevance and usefulness of the auditor's report, without imposing requirements beyond the auditor's experience or mandate,"[4] and the PCAOB believes it has "not change[d] the auditor's current role of attesting to information prepared by management."[5] However, the requirement for auditors to be the authors of original disclosure of issuer information still exists in important, explicitly specified respects, where "such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit."[6] It is counter-factual to believe disclosure in those specified circumstances will be limited to a description of audit-related matters that will not involve substantial disclosures of original issuer information. This will change the role of the auditor from its role as attester to management disclosure, and introduces a role that will influence the direction and content of disclosure, even though the Reproposal requires fewer instances in which auditors will be obligated to disclose original information about an issuer compared to the 2013 Release.

Any change to the auditor reporting model should keep the responsibility for disclosure about an issuer where it belongs, with the issuer.[7] The Commission agrees that

---

[4] Reproposal, p. 2.
[5] Reproposal, p. 5.
[6] Reproposal, p. 35.
[7] As we noted in the 2011 Comment Letter and the 2013 Comment Letter, the Treadway Commission's 1987 report squarely placed the primary responsibility for an issuer's financial statements on management, and made clear that independent public accountants play a secondary role. In addition, it is clear from the Reproposal that other commenters felt similarly uncomfortable with the concept of auditor authored-original disclosure about an issuer, as the Reproposal notes that "[generally] preparers, audit committee members and auditors were not supportive of adding company-specific information to the auditor's report" and felt that management should be the primary source of disclosure. See Reproposal, p. 6.

oversight of issuer disclosure is a Commission responsibility and not the province of the PCAOB. In discussing PCAOB Release No. 2013-009, *Improving Transparency Through Disclosure of Engagement Partner and Certain Other Participants in Audits* (Dec. 4, 2013), the Commission opposed disclosure of auditor information anywhere other than the auditor's report, stating that "requiring any disclosure by the audit committee would require [Commission] action because the PCAOB does not have authority over issuer disclosures."[8] While the Reproposal does not purport to require an auditor to author disclosure anywhere outside the auditor's report, it is clear, as discussed below, that the Reproposal would require auditors to provide information about an issuer that the issuer had not previously made public, and whether that is part of or outside the auditor's report seems irrelevant to whether the Commission rather than the PCAOB has the authority to require it.

The Commission is the more appropriate body to consider and weigh the costs and benefits of requiring sensitive disclosure about an issuer and to judge the circumstances under which disclosure that may be contrary to an issuer's self-interest is required nonetheless. In the recent Commission release, "*Business and Financial Disclosure Required by Regulation S-K*,"[9] the Commission describes the costs and benefits of requiring disclosure, weighing the interests of investors and issuers. The benefits of additional disclosure, such as reducing information asymmetries between management and investors that results in more efficient investments and voting decisions and increases integrity of the securities markets, must be weighed carefully against the costs to issuers, including the incremental costs of producing the additional information, subject to appropriate controls, and the competitive harm that can result from such disclosure. The PCAOB has in many respects responded to the concerns raised by different constituencies throughout the comment process, but the Reproposal does not adequately consider the costs to issuers and the potential resulting harm as a result of requiring disclosure that issuers do not control and is not otherwise required by the Commission. Although the Reproposal undertook efforts to mitigate the extent of original disclosure of issuer information by auditors, the Reproposal does not address the key issues of superseding management control over the company's disclosure and the Commission's primary role in overseeing disclosure regulation.

The Reproposal argues that improvements it makes from the 2013 Release limit the amount of original disclosure of issuer information an auditor may be required to disclose; however, they by no means ensure that the auditor's responsibility ends where management's responsibility begins. While the Reproposal states that "the auditor is not expected to provide information about the company that has not been made publicly available by the company,"[10] the Reproposal countermands that statement by continuing, as noted above, "unless such information is necessary to describe the principal considerations that led an auditor to determine a matter is a critical audit matter or how the matter was addressed in the audit."[11] To illustrate the possibility, the Reproposal provides, "[f]or example, in describing the principal considerations that led the auditor to determine that revenue recognition is a critical audit matter, it is possible that the auditor could provide more information than is provided in management's disclosures."[12] The

[10] Reproposal, p. 35.
[11] *Id*.
[12] *Id*.

Reproposal makes clear that the auditors are bound by this obligation, stating, "management's decision about whether to disclose additional information does not affect the auditor's responsibility to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit."[13] As a result, auditors are potentially required to disclose original information about the issuer related to two elements of the critical audit matter process. The PCAOB justifies its decision to retain this disclosure requirement by concluding that the benefits of providing additional disclosure to investors are always greater than the issuer's interest in preserving confidentiality. The Reproposal thus ignores the potential harm to an issuer that may result from this original disclosure of issuer information by failing to consider the differing levels of commercial sensitivity against the relative importance of the additional information to investors (a determination, as we point out above, for the Commission and not the PCAOB to make).

In instances where an auditor would be required to provide original disclosure of issuer information, the Reproposal suggests management would have the opportunity to choose to address such disclosure[14] by authoring separate disclosure that would, presumably, permit management control over the tone and presentation of the matter. Providing an opportunity for management to author disclosure does not solve the issue of the auditor driving disclosure in the absence of any federal securities law or Commission requirement that the issuer provide such disclosure. If the audit committee or management chooses to disclose the information, it is doing so to restore control over disclosure, not because the audit committee or management believes the disclosure is required under existing securities laws or Commission regulations or otherwise is important as a matter of investor relations. That is no "choice" at all.

One of the rebuttals to criticism regarding undermining the audit committee or management is that "the communication of critical audit matters should not diminish the governance role of the audit committee and management's responsibility for a company's disclosure of financial information," noting that "communicating critical audit matters is not a substitute for [disclosure]."[15] However, this argument fails to acknowledge that when auditors drive the decision-making regarding the threshold decision about what is appropriate disclosure for an issuer, the auditor necessarily diminishes the governance role of both the audit committee and management in this respect.

### *B. The Requirement to Disclose Critical Audit Matters, as Reproposed, Will Chill Auditor Communications with the Audit Committee and Management.*

As described in greater detail above, the proposed auditor reporting standard potentially requires the auditor to disclose original information about an issuer that management has affirmatively chosen not to disclose and is not otherwise required to be disclosed under the federal securities laws or Commission regulations. Any requirement that risks interfering with open and robust communications between audit committees and management, on the one hand, and auditors, on the other, undermines the relationship between issuers and auditors and, ultimately, the safeguards to investors provided by the important gatekeeping role played by the

[13] Reproposal, p. 36.
[14] Reproposal, p. 35.
[15] Reproposal, p. 35.

auditor. Maximizing the openness of communications between audit committees and management, on the one hand, and auditors, on the other, is far more likely to produce better financial reporting than the questionable benefits of additional disclosure provided by the Reproposal.

The Reproposal acknowledged the risk in the 2013 Release that communications between the auditors and the audit committee could be chilled. As a result, in an attempt to mitigate the risk, the Reproposal limits potential critical audit matter topics to those matters that are the subject of "auditor communication requirements under [Auditing Standard] 1301, other PCAOB rules and standards, applicable law… and communications made to the audit committee that were not required."[16] Thus, the Reproposal states that "any chilling effect would relate to matters that are not explicitly required to be communicated to the audit committee" and argues that, because Auditing Standard 1301 is so broad, "there should be few communications affected by that possibility."[17]

However, this effort at mitigating the risk of chilled communications ignores the reality that a willingness to engage in candid discussion can be affected by the realization that it could form the basis for a conclusion regarding a critical audit matter and disclosed accordingly. Put another way, the concern we have about chilling communication is *not* so much about how often the audit committee and the auditors will engage but what will be said when they do.

We would also note that chilled communication is by no means entirely a speculative risk. The Reproposal acknowledges that, in a study of audit committee behavior, study participants assuming the role of management chose to be less forthcoming with information when they were aware that auditors could use the information as the basis for a critical audit matter.[18]

## III. Suggested Improvements to the Reproposal.

Despite our concerns, we reiterate that we welcome the PCAOB's commitment to improving the usefulness of the auditor's report to investors and believe in improving transparency between issuers and investors in a balanced fashion that considers the interests of both constituencies. We agree with the PCAOB that there is a salutary purpose in requiring auditors to identify critical audit matters to arm investors and analysts with information needed to "engage management with targeted questions about critical audit matters,"[19] which the PCAOB believes may "also lead to an incremental increase in audit quality of information presented in financial statements and related disclosures."[20]

That result can be accomplished, however, without requiring auditors to explain why they identified those matters as critical audit matters or how they addressed them in the audit. Limiting the incremental requirement to identifying critical audit matters will meaningfully address our two principal concerns – leaving disclosure judgments about issuer

[16] Reproposal, p. 18.
[17] Reproposal, p. 19.
[18] Reproposal, p. 87.
[19] Reproposal, p. 2.
[20] Reproposal, p. 3.

information to management and audit committees, consistent of course with Commission disclosure requirements, and preserving open communication between them and the auditors. Equally important, it will serve not only to highlight issues for investors and analysts to explore with management, but will also serve as an effective check by the auditors on management's response to the Commission's requirement that companies disclose in the management disclosure and analysis section of annual and quarterly reports critical accounting estimates and assumptions that "may be material due to the levels of subjectivity and judgment necessary to account for highly uncertain matters or the susceptibility of such matters to change, and that have a material impact on financial condition or operating performance,"[21] a standard that, in many ways, is similar to the standard for critical audit matter disclosure under the Reproposal.

In formulating our proposal, we considered eliminating the requirement to describe why auditors identified matters as critical audit matters but not how they addressed them in the audit. Although the risks of forcing disclosure not required by the Commission – for example, whether a matter was deemed a critical audit matter because of the control environment (short of a material weakness) or the uncertainty over a litigation matter not ultimately deemed to require disclosure under Regulation S-K 103 or ASC 450 – and the chilling of communication are more clearly present in the "why" requirement than the "how" requirement, we ultimately concluded that the latter should be dropped as well for a number of reasons. First, we expect this description of audit procedures to become boilerplate both to limit auditor liability and to reduce audit costs and management time in discussing the description with the auditors. Second, while the two principal concerns we have expressed regarding the Reproposal are more clearly eliminated or mitigated by striking the "why" requirement, there would remain uncertainty regarding the content of the description of audit procedures to address critical audit matters that may lead to unwanted disclosure and the concomitant chill on communication we fear. Finally, we believe the judgment regarding whether the incremental disclosures of audit steps to address critical audit matters provide sufficiently useful information for investors so as to outweigh the costs to issuers of forcing disclosure of issuer information not otherwise required by the Commission or the federal securities laws is, as we have noted, one for the Commission and not the PCAOB to make. Should the PCAOB continue to conclude that the disclosure of how auditors address critical audit matters is warranted, we urge the PCAOB to permit that requirement to be limited insofar as it would otherwise require disclosure of issuer information that has not been made publicly available by the issuer.

By implementing our proposed version of critical audit matter disclosure, the PCAOB can achieve the objective of reducing asymmetries in information between management, on the one hand, and analysts and investors, on the other, while deferring to the Commission's role as overseer of issuer disclosure and maintaining open and robust communication between the audit committee and management, on the one hand, and the auditors, on the other.

[21] SEC Release No. 33-8350 (Dec. 29, 2003).

***IV. Critical Audit Matter Disclosure and the Pass/Fail Nature of the Current Auditor's Report.***

Much has been said in the course of this standard-setting process about "undermining" the pass/fail nature of the current auditor's report and whether and how such undermining can be avoided. In fact, the negative implications of the reproposed new critical audit matters disclosure will necessarily and unavoidably weaken, or undermine, the standalone pass/fail nature of the current auditor's report. Indeed, we venture to say that, while in the Reproposal the Board has gone to considerable lengths to seek to ensure that the critical audit matter communications do not affect the standalone opinion on the financial statements taken as a whole, both the Board and the proponents of critical audit matters disclosure are willingly trading away the apparent certainty of the standalone existing formulation for the elaboration of the critical audit matter disclosure, with the expectation or at least hope that the elaboration of the critical audit matter disclosure will, when taken together with the pass-fail opinion, provide a more useful aggregate communication. We are also prepared to be hopeful, but we believe there is some risk that once the new reports begin to appear, the focus will be on superficial distinctions (five critical audit matters vs. three; four additional audit steps rather than two) that are not necessarily meaningful differences. We believe our suggestions above will have the salutary effect of focusing attention on what the critical audit matters are and possibly (if constrained as we have proposed) how they are addressed and therefore will lead to more focused and useful reports.

*     *     *     *     *

We thank you for the opportunity to submit this comment letter. Please do not hesitate to contact Leslie N. Silverman, Nicolas Grabar or Sandra L. Flow (212-225-2000) if you would like to discuss these matters further.

Very truly yours,

**RE:** PCAOB Rulemaking Docket Matter No. 034

***PCAOB Release No. 2016-03 "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion"***

We appreciate the opportunity to comment on PCAOB Release No. 2016-003 "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion" (the Proposal), issued by the Public Company Accounting Oversight Board (the PCAOB). We support the PCAOB's objective of addressing the asymmetry between information communicated by auditors to the audit committee as compared to the information communicated by auditors to investors.

Overall, we believe the Proposal would reduce the information asymmetry between investors and management. However, we recommend that the PCAOB consider certain modifications to the Proposal in order to mitigate the impact of unintended consequences and uncertainty in application associated with the scope of those items identified as critical audit matters, as discussed in the Appendix to this letter.

While we support the Proposal, we believe the PCAOB should continue to refine the definition of what it means to be deemed a critical audit matter. As the Proposal is currently written, auditors are being placed in the position to resolve the information gap between investors and management through more expansive disclosures within the audit report. We believe that these disclosures would have the following consequences:

- Draw undue attention to matters that are not material and potentially be a disservice to outside users of financial statements;
- Possibly lead to increased meritless litigation exposure;
- Place the auditor in the position of being the source of the disclosure; and
- Applied in an inconsistent manner.

Our position, however, is that management's financial statements and accompanying disclosures are the primary tool by which to effectively resolve information asymmetry, thereby keeping the onus on management for determining the sufficiency of disclosures to investors.

We would be happy to share our thoughts on possible next steps with the PCAOB staff. The Appendix to this letter contains our thoughts relative to certain aspects of the Proposal.

We would be pleased to discuss our comments with the PCAOB or its staff at your convenience.

Very truly yours,

John Pietrowicz
*Chief Financial Officer*

Jack Tobin
*Chief Accounting Officer*

## Appendix

The re-proposed standard would include the following significant changes to the existing auditor's report:

- *Critical audit matters (CAM)*—would require communication in the auditor's report of any critical audit matters arising from the audit of the current period's financial statements.

- *Definition of a critical audit matter*—any matter that was communicated or required to be communicated to the audit committee and that:

  - Relates to accounts or disclosures that are material to the financial statements, and

  - Involved especially challenging, subjective, or complex auditor judgment.

We believe that the scope of the revised CAM definition is still expansive and would more effectively accomplish the disclosure objective if it were more narrowly defined. Currently, CAMs must relate to an account or disclosure that is "material" to the financial statements. However, the proposed definition does not require the communication itself to involve a material issue. This can result in the disclosure of immaterial items in the audit report, thereby cluttering the audit report with items that do not have a significant impact to the readers of the financial statements. Disclosing immaterial items in the audit report could confuse and mislead readers to make investor decisions based on such information. Consider the following example:

- A material account on the balance sheet of a bank is Loan Receivables. In connection with the year-end audit, the audit team discovers that there was a change in the method used by management to value the Loan Receivables. The audit team determined that this change in approach was not unreasonable and did not result in a significant change to the valuation. This matter was communicated to the audit committee and is required under the Proposal to be included in the audit report.

We believe that, in this example, disclosure of the change in valuation approach draws undue attention to a matter that is not material to the overall financial statements. Further, additional disclosure within the audit report would cause the audit report to expand beyond just one concise page to multiple pages. This could be counterproductive to readers as they sift through potentially voluminous disclosures. This level of detail within the audit report shifts the auditor responsibility from providing a pass/fail rating on management's financial statements to effectively providing a grade on the financial statements on a relative basis. This grading system, as it is more complex than pass/fail, is less useful and could be a disservice to outside users of financial statements.

Also, inclusion of CAMs in public disclosures will possibly lead to increase meritless litigation exposure. Plaintiffs could use CAMs to allege error or wrongdoing. The identification of specific matters raised to the audit committee may be misconstrued by plaintiffs as acts of negligence or carelessness on the part of the company. Also, as litigation costs are one of the drivers of audit fees, audit fees are expected to increase due to the litigation exposure of audit firms as a result of the expanded disclosure requirements under the Proposal. We expect that, based on CAMs in the audit report, plaintiffs will seek to hold an audit firm liable for certain issues of the company, thereby increasing litigation costs.

We also believe that the Proposal has the potential to place the auditor in the position of being the source of the disclosure, rather than management, which has not previously been the intent of the audit report. The purpose of the audit report is to opine on the completeness and accuracy of the financial information as prepared by management. The financial statements and accompanying disclosures are management's responsibility. The onus is on management to prepare financial statements and disclosures that are not misleading to investors. The role of the auditor, on the other hand, is to opine on management's assertions. However, under the Proposal, the role of the auditor expands to become an actual source of disclosure. The auditor is not merely attesting to the sufficiency of management's financial information, but is also a mechanism for disclosure. The consequence of having the auditor bear responsibility to disclose CAMs is that such disclosure by the auditor would compel management to also disclose the item, which would not have been otherwise disclosed if it were not for the CAM requirement in the audit report. This reactionary circumstance undermines the spirit of our financial reporting model by compelling management to disclose items of an immaterial nature in the financial statements, which could be misleading to readers.

If a CAM is identified by the auditor and not disclosed by management, then readers of the financial statements might conclude that the CAM is a "finding" by the audit team. As a result, the Proposal will drive expanded disclosure both in the audit report and in management's financial statements thereby, diminishing the governance role of the audit committee as well as management's responsibility for the company's disclosure of financial information.

Our final point regarding the unintended consequences of the Proposal centers on the uncertainty in application of the requirements. Audit teams might limit their communications with the audit committee since CAMs include matters that have been voluntarily reported to the audit committee. At the risk of disclosing immaterial items in the audit report, auditors may become hesitant to raise matters to the audit committee, as it would then trigger potential CAM reporting. Alternatively, given the subjectivity in the proposed requirements, auditors may choose to over-disclose the existence of CAMs to avoid the consequences of being second-guessed regarding whether a CAM should have been disclosed.

In closing, while we agree that information asymmetry must be addressed, we believe that the current requirements under the Proposal would more effectively accomplish this objective if the scope of CAM were narrowed.

RE: PCAOB Rulemaking Docket Matter No. 034

We appreciate the opportunity to comment on Public Company Accounting Oversight Board (PCAOB) Release No. 2016-003, *Proposed Auditing Standards – The Auditor's Report On an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; and Related Amendments to PCAOB Standards* (the "reproposed standard"). This letter contains the comments of both CMS Energy Corporation and Consumers Energy Company.

CMS Energy Corporation, whose common stock is traded on the New York Stock Exchange, is a domestic energy company engaged in electric and natural gas utility services and independent power production, operating through subsidiaries in the U.S., primarily in Michigan. CMS Energy Corporation's consolidated assets are over $20 billion and annual operating revenues are over $6 billion. Consumers Energy Company, the principal subsidiary of CMS Energy Corporation, provides electricity and/or natural gas to more than 6 million of Michigan's 10 million residents and serves customers in all 68 counties of Michigan's Lower Peninsula.

We recognize that some investors and academics have suggested that the auditor's report would be more useful and relevant if it contained more information. However, we do not believe that auditor reporting of critical audit matters will achieve the PCAOB's stated objective of increasing the informational value of the auditor's report. Rather, we believe that auditor reporting of critical audit matters could:

- decrease comparability among audit reports
- misdirect investors
- confuse investors
- create doubts about the auditor's unqualified opinion as well as the company's financial statements

*Decreased Comparability:* The reproposed standard would require the auditor to communicate in the auditor's report "critical audit matters," which the proposal defines as:

> *"Any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and that relates to accounts or disclosures that are material to the financial statements and involved especially challenging, subjective, or complex auditor judgment."*

We continue to believe that determining which audit matters are "critical audit matters" would result in markedly decreased comparability among audit reports. Different auditors could reach significantly different conclusions about which audit matters are critical as well as how many such matters to communicate in the auditor's report. In many cases, whether an audit matter is considered critical will depend not on the quality or reasonableness of the company's accounting policies and practices, but rather on the level of expertise and experience of the auditor. Differences in the judgment and communication style of auditors as well as in the number of critical audit matters and depth of discussion provided might lead investors to perceive differences in investment risk where they do not exist.

*Investor Misdirection:* Our second concern with the proposal is that it could cause investors to give undue emphasis to the critical audit matters, using them as a "roadmap" to the financial statements and thereby undermining other parts of the financial statements. The rules established by the Financial Accounting Standards Board (FASB) and the Securities and Exchange Commission (SEC) are meant to provide the appropriate level of information to allow investors and financial statement users to make investment decisions. The same rules are designed to minimize information asymmetry between investors and management. Under existing rules, it is expected that management's disclosures will clearly inform investors about which areas are complex and subjective, and thus might present investment risk. Additionally, the FASB and SEC both have initiatives underway to examine the effectiveness of and framework for disclosures in an effort to improve the usefulness of the financial statements and help eliminate "disclosure overload." It should not be the intention of the PCAOB to institute a "roadmap" to guide investors to areas that might pose investment risk; rather, guidance should be provided by the standard setters to ensure that companies direct investors' attention to areas of investment risk, not audit risk.

*Investor Confusion:* Our third concern with the proposal is that it could lead to duplicative discussion of certain topics, once by company management and again by the auditor. For example, accounting estimates and assumptions that may be material due to the level of subjectivity and judgment required to account for highly uncertain matters must be discussed in the "Critical Accounting Estimates" section of Management's Discussion & Analysis. As we stated in our comment letters on the Concept Release and the 2013 Proposed Standard, we believe that commentary on a company's financial statements should come from a single source, rather than from both management and the auditor. Providing two perspectives on a single set of financial statements has the potential to confuse users and to reduce confidence in reported information. Furthermore, we believe that management is the best source of commentary on a company's business and financial statements. Though an auditor's understanding of a company's financial statements is more extensive than that of other third parties, it is still less complete than that of management. The degree to which the auditor must gain an understanding of the company's business, industry, transactions, and financial statements in order to render an audit opinion is substantially less than the depth of understanding required of the company's management. Correspondingly, the time the auditor devotes to gaining an understanding of these matters is a small fraction of the time invested by management. For these reasons, we believe that in order to provide users with clear and reliable information, management should be the sole source of commentary on a company's business and financial statements.

*Creation of Doubts:* Our final concern with the proposal is that investors could perceive the auditor's discussion of critical audit matters as "qualifying an unqualified opinion." While we understand that the PCAOB does not intend that the auditor's communication of critical audit matters be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's opinion on the financial statements, investors might nevertheless perceive the communication in such a manner. We noted that the *Illustrative Examples of Critical Audit Matters* included extensive discussion of why the auditor deemed the audit matter to be a critical audit matter as well as the additional audit procedures the auditor performed as a result. Following this extensive discussion, however, there was no clear statement of the auditor's final conclusion on the critical audit matter. The reader might be left with the basic question: Did the auditor become comfortable with the critical audit matter? We realize that, by virtue of providing an overall unqualified opinion, the auditor has reached satisfactory conclusions regarding all the critical audit matters communicated. We believe, however, that the context of the discussion could cause an investor to infer that the auditor has reservations about a particular matter or, in other words, that the auditor is, in essence, qualifying its unqualified opinion. Differences in the type or extent of audit procedures disclosed by the auditor could add additional uncertainty as to whether appropriate audit procedures were performed during the audit. For an investor, this could cast doubt over the auditor's unqualified opinion as well as over a company's financial statements.

In conclusion, we believe that the proposal to require auditor reporting of critical audit matters would not achieve the PCAOB's stated objective of increasing the informational value of the auditor's report, but would in fact have the opposite effect.

Thank you for the opportunity to comment on the Proposed Standards.

Sincerely,

Glenn P. Barba

RE: PCAOB Rulemaking Docket Matter No. 034: *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion (PCAOB Release No. 2016-003)*

Dear Madam Secretary:

We are submitting the following comments for the PCAOB's consideration in response to a request for comments on the proposed Auditor's Reporting Model (PCAOB Release No. 2016-003). These comments represent our perspective as institutional investors for a large public pension plan representing more than 500,000 current and retired members and over $45 billion in assets.

We believe the PCAOB's latest proposal on the Auditor's Reporting Model provides a good first step in increasing investor's transparency into the auditing process, while not overburdening corporations. We appreciate the opportunity for real communication between investors and auditors, even if it is a one way dialogue. We see the introduction of a modern auditor report as an opportunity to increase reciprocal dialogue between investors and management on accounting and auditing issues. This in turn, should provide auditors and audit committees more insight into investors' desired level of audit scrutiny. We look forward to increased insight into the audit process, giving us the ability to better evaluate the performance of auditors, management, and audit committees.

From our experience working alongside many buy-side and sell-side investors, there remains an expectation gap between how investors believe audits are conducted relative to what is actually being performed by auditors. The addition of "critical audit matters" to the auditor's report will be helpful in educating investors on the audit process. That said, we encourage the PCAOB to consider taking additional steps to help educate investors on the audit process and help investors understand the standards via a more user friendly format.

Below are a few potential projects that might be helpful to close the expectation gap:

- Create a framework for finance professors to help emerging financial professionals understand the role and responsibility of auditors
- Work with investor professional organizations to incorporate auditing topics into their educational programs/efforts
- Start a PCAOB education portal with video lessons on the audit process and overviews of auditing issues presented in a user friendly manner

While we are supportive of the changes and expansion of the Auditor's Reporting Model, we have reservations on the materiality standard set on the financial statements as a whole. As a user of financial statements, and the ultimate payor of auditing costs, we believe the value of increased transparency associated with a lower materiality threshold greatly outweighs the cost. In addition, materiality is an opaque topic for investors, and investors could benefit from a requirement for auditors to discuss their definition of materiality within the auditor's report.

We appreciate the PCAOB giving us the opportunity to comment on potential changes to the Auditor's Reporting Model, and would welcome additional opportunities to provide input to the PCAOB as this process continues.

Sincerely,

Jennifer Paquette

**Re: PCAOB Release No. 2016-003, Rulemaking Docket Matter No. 034: Proposed Auditing Standard – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and Related Amendments to PCAOB Standards.**

Dear Mr. Doty,

ConocoPhillips appreciates the opportunity to comment on the Public Company Accounting Oversight Board (PCAOB) Release No. 2016-003 (2016 Release), which includes the Proposed Auditing Standard – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and Related Amendments to PCAOB Standards (the 2016 Re-Proposed Standard), a standard originally proposed by the PCAOB in August 2013 (2013 Proposed Standard). ConocoPhillips is the world's largest independent exploration and production company, based on proved reserves and production of liquids and natural gas. Headquartered in Houston, Texas, we had operations and activities in 21 countries, approximately 15,600 employees worldwide and total assets of $100 billion as of March 31, 2016.

We acknowledge the PCAOB's objective to improve the relevance and usefulness of the auditor's report without imposing requirements beyond the auditor's expertise or mandate. We agree with the 2016 Re-Proposed Standard's provisions to retain the pass/fail model of the existing auditor's report. Further, we are supportive of certain proposed enhancements to the auditor's report that may help achieve the PCAOB's objective, including 1) a statement regarding auditor independence, 2) expressly permitting additional report addressees, 3) enhancements to basic elements of the report, such as adding the phrase "whether due to error or fraud," and 4) standardizing the form of the report.

However, we are concerned by the provisions in the 2016 Re-Proposed Standard regarding 1) critical audit matters (CAMs) as determined by the auditor and 2) disclosure of audit firm tenure in the auditor's report. We expressed similar concerns in our letter dated December 10, 2013 regarding the 2013 Proposed Standard (2013 Comment Letter).

We continue to believe the CAM provision would improperly shift the responsibilities of management and the audit committee to the auditor, inappropriately expanding the auditor's role and straining the relationship between the auditor, management and the audit committee. Further, the additional disclosures required by the CAM provision would likely result in an onerous, lengthy auditor's report that duplicates or conflicts with existing management disclosure and confuses financial statement users, already overwhelmed by disclosure. At best, investors will have to dig through a lengthy auditor's report to distinguish the useful information, which may be hiding in plain sight. At worst, investors may conclude there is a problem with the audit in spite of an unqualified opinion. Accordingly, this provision does not increase the usefulness of the auditor's report, and it imposes requirements beyond the auditor's mandate. Consequently, it does not achieve the PCAOB's stated objective.

While we believe CAMs are characteristically inappropriate, if the PCAOB includes a CAM provision, CAMs should be selected from the critical accounting estimates as disclosed in comprehensive detail by management, rather than from matters the auditor communicates or is required to communicate to the audit committee. This approach is consistent with the intrinsic similarities between CAMs and critical accounting estimates. It also more effectively accomplishes the PCAOB's stated objective since it eliminates both the potential for the auditor to become an initial source of disclosure about a company and the potential for duplicative, overlapping or conflicting disclosure between the auditor and management.

Regarding auditor tenure, the PCAOB concedes in the 2016 Release it is possible that investors may draw incorrect inferences between auditor tenure and audit quality that could have an adverse impact on cost of capital and could lead to inefficient conversations that are a poor use of investor, management and audit committee time. We agree with this, and accordingly, we believe required disclosure is not necessary. However, if the final conclusion is it should be disclosed, this additional information should be provided by management or the audit committee in the proxy statement rather than by the auditor in the audit opinion.

The following discussion presents our views regarding the significant elements of the 2016 Proposed Standard in greater detail.

**Critical Audit Matters**

The 2016 Re-Proposed Standard includes a revised CAM definition which narrows the scope of potential CAMs to those matters involving especially challenging, subjective or complex auditor judgment that are both communicated or required to be communicated to the audit committee and related to material accounts or disclosures. While this is a slight improvement from the 2013 Proposed Standard, CAMs as determined by the auditor are conceptually inconsistent with the existing regulatory framework in the U.S., which clearly articulates the financial statements and related disclosures are the responsibility of management. Consistent with this framework, management should be the source of disclosure regarding all matters of challenging, subjective or complex judgment. The auditor's responsibility currently is, and should continue to be, limited to expression of a pass/fail opinion.

*Previous Concerns Not Adequately Addressed by the PCAOB*

Our 2013 Comment Letter presented three significant concerns regarding CAMs:

1. Communication of CAMs by the auditor would undermine the role of management as the primary source of disclosure.
2. Communication of CAMs would result in disclosure of duplicative, conflicting and confidential or competitively sensitive information.
3. Consequently, the CAM provision would lead to investor confusion and would strain the relationship between the auditor, management and the audit committee.

These concerns were similar to those raised by several preparers and other interested parties. While we appreciate the PCAOB's attempt to address these concerns in its additional considerations related to the CAM communication requirement, we do not believe they have been adequately mitigated.

Regarding our first above concern, the PCAOB states on page 35 of the 2016 Release, "Since the auditor would be communicating information regarding the audit rather than information directly about the company and its financial statements, the communication of critical audit matters should not diminish the governance role of the audit committee and management's responsibility for the company's disclosure of financial information."

The PCAOB's conclusion appears to be predicated upon an assumption that information regarding the audit is separate from information about the company and its financial statements to which the audit directly relates. Management is responsible for disclosure of the company's financial information, as well as the challenging, subjective or complex judgments incorporated into the assumptions and estimates upon which the financial information is based. An auditor makes especially challenging, subjective or complex judgments only as necessary to opine on the same judgments already made by management. In this context, we disagree with the PCAOB's unfounded presumption that the communication of information regarding an audit is separate from the communication of information about the company and its financial statements.

Regarding our second above concern, the 2016 Re-Proposed Standard revises the definition of a CAM to include a materiality component, and adds an explanatory note to address concerns about the auditor potentially becoming the source of original information. The explanatory note stipulates the auditor is not expected to provide information about the company that has not been made publicly available, unless such information is necessary to describe the principal considerations that led the auditor to determine a matter is a critical audit matter or how the matter was addressed in the audit. However, the scope of potential CAMs as currently defined – selected from a population of all matters communicated or required to be communicated to the audit committee – inherently permits the auditor to provide information about a company that has not been made publicly available, thereby expanding the auditor's authority beyond its mandate. Additionally, we expect auditors, conscious of potential liability, will err on the side of onerous disclosure resulting in duplicative, conflicting, and confusing information that does not add value.

Our third above concern follows logically from the first two. The amplified capability assumed by the auditor oversteps into the existing disclosure responsibilities of management and oversight responsibilities of the audit committee, which we expect will result in unproductive confrontation that ineffectively strains the relationships among these parties. Further, the additional drawn-out information included in the auditor's report may lead investors to conclude there was a problem with the audit in spite of an unqualified audit opinion, particularly if the auditor goes to great lengths to explain the audit approach to CAMs. Increasing the length of the auditor's report with overlapping and conflicting information will not achieve the PCAOB's stated objective to improve the usefulness of the auditor's report, and it also runs counter to the objective of the SEC's current disclosure effectiveness initiative to lessen disclosure overload and improve disclosure for the benefit of both companies and investors.

*Proposed Alternative – Select CAMs from Management's Critical Accounting Estimates*

We strongly oppose the 2016 Re-Proposed Standard's CAM provision. If the PCAOB retains a CAM provision, the scope should be further narrowed so CAMs are selected from the critical accounting estimates management discloses, rather than from matters the auditor communicates or is required to communicate to the audit committee. The PCAOB's CAM definition aligns closely with the SEC's existing critical accounting estimates definition, which requires management to disclose estimates or assumptions when 1) the nature of the estimates or assumptions is material due to the levels of subjectivity and judgment necessary to account for highly uncertain matters or the susceptibility of such matters to change; and 2) the impact of the estimates and assumptions on financial condition or operating performance is material. Under our approach, the auditor would not be required to identify every critical accounting estimate as a CAM, but only those involving especially challenging, subjective or complex auditor judgment.

With respect to auditor communication of CAMs in our proposed approach, the auditor could state "there are none except those disclosed by management," referring to management's critical accounting estimates rather than providing a long list of duplicative information. The auditor could then describe how each CAM was addressed in the audit. Certain judgmental matters for which classification as critical accounting estimates is unclear or borderline will require additional deliberation. Under our proposed approach, the auditor would still have the opportunity for robust dialogue and healthy debate with management and the audit committee regarding the final classification of these matters, as well as the determination of other critical accounting estimates from which critical audit matters would be selected.

Our proposed approach is more consistent with the existing U.S. regulatory framework, respecting management's role as the primary source of disclosure. It would also limit disclosure of duplicative, conflicting and confidential or competitively sensitive information, thus alleviating the potential for misunderstanding among investors and other financial statement users.

**Auditor Tenure**

The PCAOB explored required disclosure of audit firm tenure in the auditor's report in its 2013 Proposed Standard, and the SEC explored similar required disclosure in the proxy statement in its 2015 Concept Release – *Possible Revisions to Audit Committee Disclosures*. We have already presented our views regarding auditor tenure in our 2013 Comment Letter to the PCAOB, as well as in our comment letter dated September 8, 2015 regarding the SEC's 2015 Concept Release.

We reiterate our views here, namely that we are aware of only a limited number of empirical studies regarding the correlation between audit firm tenure and audit quality, and the evidence regarding a positive or negative correlation is inconclusive. We note the PCAOB also continues to admit both commenters and academic research are divided on the relationship of auditor tenure and audit quality. The PCAOB acknowledges on page 91 of the 2016 Release, "it is possible that some investors may draw incorrect inferences about auditor tenure that could have an unwarranted effect on cost of capital and could also result in conversations that are an inefficient use of management and audit committee time." Accordingly, we do not believe required disclosure of audit firm tenure is necessary, and it may be misleading if not put in the proper context.

If the final conclusion is audit firm tenure should be disclosed, we believe this additional information should be provided by management or the audit committee in the proxy statement section discussing engagement of the audit firm, rather than by the auditor in the audit opinion. This approach would allow management or the audit committee to provide context so readers do not draw an inappropriate conclusion regarding a link between audit quality and audit firm tenure. Limiting this disclosure to a basic element in the auditor's report stating the year the auditor began consecutively serving the company, as the PCAOB has proposed, would lack this necessary perspective.

In the 2016 Release, the PCAOB notes a growing trend toward voluntary disclosure of auditor tenure to support its view that required disclosure is necessary. From our perspective, this voluntary disclosure appears to be occurring in response to the views of each registrant's investor group, which adds further evidence that a regulatory requirement is in fact not necessary. If investors find this information to be useful, they can and do communicate their concerns to senior management and the board of directors. We do not see a need for the PCAOB to propose rule-making for a problem for which various alternative remedies already exist.

**International Regulations**

Throughout the 2016 Release, the PCAOB highlights changes to the form and content of auditor's reports from other global standard setting agencies including the International Auditing and Assurance Standards Board (IAASB), the European Union (EU), and the Financial Reporting Council in the United Kingdom (FRC). On page 8 of the 2016 Release, the PCAOB claims that it considers the efforts taken in these other jurisdictions and their relevance to its own standard setting project, while at the same time recognizing the regulatory environments in other jurisdictions are different from the U.S.

We are disappointed in the lack of robust dialogue regarding specifically how the PCAOB considered the relevance of the standard setting efforts in other jurisdictions and how it incorporated the differences in the U.S. regulatory environment when drafting the 2016 Re-Proposed Standard. The result is a series of discussions throughout the 2016 Release of the ways in which the 2016 Re-Proposed Standard is analogous to standards from the IAASB, EU, and FRC, as if these similarities justify the provisions set forth in the 2016 Re-Proposed Standard. No conclusions can yet be drawn regarding whether the other jurisdictional changes have achieved the desired objectives, and at what cost or consequence.

**Summary and Conclusion**

We recognize the PCAOB's objective to improve the relevance and usefulness of the auditor's report without imposing requirements beyond the auditor's expertise or mandate. We believe the provisions regarding CAMs and auditor tenure do not achieve this objective.

While we decisively oppose CAMs, if the PCAOB retains a CAM provision, we believe CAMs should be selected from critical accounting estimates disclosed by management, rather than from matters the auditor communicates or is required to communicate to the audit committee. Further, while we believe required disclosure of auditor tenure is not necessary, if the final conclusion is it should be disclosed, this additional information should be provided by management or the audit committee in the proxy statement rather than by the auditor in the audit opinion.

We agree with the 2016 Re-Proposed Standard's provisions to retain the pass/fail model of the existing auditor's report. Further, we are supportive of certain proposed enhancements to the auditor's report that may help achieve the PCAOB's objective, including 1) a statement regarding auditor independence, 2) expressly permitting additional addressees, 3) enhancements to basic elements of the report, such as adding the phrase "whether due to error or fraud," and 4) standardizing the form of the report.

Thank you for the opportunity to offer our comments on the 2016 Re-Proposed Standard. We hope you find our comments helpful.

Sincerely,

Glenda M. Schwarz

**Re: Rulemaking Docket Matter No. 034 – Proposed Auditing Standard – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and Related Amendments to PCAOB Standards**

Dear Mr. Doty,

The Audit and Finance Committee of ConocoPhillips (Committee) appreciates the opportunity to comment on the Rulemaking Docket Matter No. 034 as discussed in PCAOB Release No. 2016-003 dated May 11, 2016 (2016 Proposed Standard). Our Committee is comprised of four distinguished members – Charles E. Bunch, James E. Copeland, Jr., Arjun N. Murti and myself. As a team, we have a unique depth of experience regarding business and financial reporting matters, including executive leadership roles and directorships at large, international companies in various industries. Our Committee plays a vital role in investor protection through oversight of ConocoPhillips' financial reporting function, as well as its internal and external audit processes. Accordingly, the 2016 Proposed Standard is of the utmost importance to us.

We recognize the PCAOB's efforts to increase the informational value of the auditor's report in order to promote its relevance and usefulness without imposing requirements beyond the auditor's expertise or mandate. To the extent that standardizing the form of the auditor's report, enhancing certain basic elements of the report, adding a statement regarding auditor independence, and permitting additional report addressees uphold this objective, we are supportive. We also agree with the PCAOB's decision to preserve the existing pass/fail auditor reporting model.

However, we have significant reservations regarding the provisions in the 2016 Proposed Standard requiring 1) additional disclosures with respect to critical audit matters as determined by the auditor (CAMs), and 2) disclosure of audit firm tenure. These provisions have been retained, although slightly modified, from the original standards as proposed by the PCAOB in 2013 (2013 Proposed Standard). We believe these provisions continue to have the potential to result in disclosure of lengthy and potentially inconsistent information, blur the roles of the auditor with those of the audit committee and management, and cause considerable misunderstanding among financial statement users already overloaded by disclosure. These provisions impose requirements beyond the auditor's mandate and do not achieve the PCAOB's objective as currently drafted.

The following paragraphs outline our views on certain key elements of the 2016 Proposed Standard in greater detail.

**Critical Audit Matters**

The 2016 Proposed Standard includes a revised definition of CAMs, referring to those matters involving especially challenging, subjective or complex auditor judgment that are both communicated or required to be communicated to the audit committee and related to material financial statement accounts or disclosures. This narrower scope is an improvement from the CAM scope contained in the 2013 Proposed Standard, which not only included matters communicated to the audit committee, but also matters reviewed by the audit team's engagement quality reviewer or included in the audit engagement completion documents. However, we do not believe this enhancement sufficiently alleviates the risk of blurring the role of the auditor with those of the audit committee and management or for disclosure of lengthy and potentially inconsistent information.

The regulatory framework in the U.S. contemplates an effective balance in the responsibilities of the audit committee, the auditor, and management. Management is responsible for the fair presentation and disclosure of financial information, including the complex assumptions and judgments underlying that information. The auditor is responsible for independent attestation and corroboration regarding the information presented by management. The audit committee is responsible for assisting the board of directors with its oversight responsibilities of both management and the auditor on behalf of a company's shareholders, and disclosing certain matters related to its role in the company's proxy statement.

Requiring the auditor to disclose CAMs, as determined by the auditor, autonomously in the auditor's report inappropriately magnifies the role of the auditor, expanding the auditor's responsibility into independently reporting on accounting policies, estimates, transactions and other matters, rather than purely attesting to a company's financial information through a pass/fail audit opinion. It inherently undermines the governance role of the audit committee and the disclosure role of management. It is also inconsistent with the principles underpinning our regulatory framework that an auditor should not be the source of disclosure about a company.

We question whether the PCAOB's inclusion of an explanatory note, that an auditor is not expected to provide information about a company that has not been made publicly available, is substantive. CAMs intrinsically allow the auditor to provide information about a company that has not been made publicly available, improperly increasing the auditor's role and influence, and providing the auditor an unsuitable level of oversight ability. This additional oversight capability assumed by the auditor infringes on the audit committee's responsibility, which will add ineffective tension to the relationship between the auditor, management and the audit committee.

We prefer the CAM provision be removed from the 2016 Proposed Standard in its entirety. At the very least, an additional improvement would be to further narrow the scope of potential CAMs to those critical accounting estimates already disclosed by management. This solution would better maintain the existing roles of the audit committee, management and the auditor, and preserve the delicate balance needed in these relationships. It is also more consistent with the principles of the U.S. regulatory framework.

**Auditor Tenure**

We question the value of a requirement for disclosure of audit firm tenure. The PCAOB has proposed disclosure in the auditor's report of the year in which the auditor began serving consecutively as the company's auditor. This approach provides no additional perspective. There is contradictory evidence regarding the correlation between audit quality and audit firm tenure. Some academic studies conclude that longer audit firm tenure leads to higher audit quality, while others conclude the opposite, and still others conclude no relationship exists. Further, any correlation may vary depending on specific facts and circumstances.

We do not believe a requirement to disclose audit firm tenure is needed. However, if audit firm tenure is disclosed, it should be disclosed by either management or the audit committee with the appropriate perspective included so readers do not draw improper conclusions regarding any link between audit quality and audit firm tenure.

**Conclusion**

We recognize the PCAOB's efforts to increase the informational value of the auditor's report in order to promote its relevance and usefulness. To the extent that standardizing the form of the auditor's report, enhancing certain basic elements of the report, adding a statement regarding auditor independence, and permitting additional report addressees uphold this objective, we are supportive. We also agree with the PCAOB's decision to preserve the existing pass/fail auditor reporting model.

We appreciate your consideration of our concerns regarding the provisions in the 2016 Proposed Standard requiring 1) additional disclosures with respect to CAMs as determined by the auditor, and 2) disclosure of audit firm tenure. We believe these provisions still have the potential to result in disclosure of lengthy and potentially inconsistent information, blur the roles of the auditor with those of the audit committee and management, and cause considerable misunderstanding among financial statement users. In our view, the PCAOB's proposed expansion of the auditor's role into a preparer of information regarding accounting policies, estimates, transactions and other matters provides no clear additional comparability of reports, no apparent improvements to corporate governance and no significant reduction of investor risk. Therefore, these provisions impose requirements beyond the auditor's mandate and do not achieve the PCAOB's objective as currently drafted.

Thank you for the opportunity to offer our comments on the 2016 Proposed Standard.

Sincerely,

John V. Faraci

*Re: PCAOB Rulemaking Docket Matter No. 034*

Dear Madam Secretary:

The purpose of this letter is to provide you with the Council of Institutional Investors' ("CII" or "Council") comments in response to the Public Company Accounting Oversight Board's ("PCAOB" or "board") Proposed Auditing Standard entitled "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards" ("reproposal").[1]

The Council is a non-profit nonpartisan association of public, corporate, and union pension funds, and other employee benefit plans, foundations and endowments with combined assets that exceed $3 trillion. Our member funds are major, long-term investors committed to protecting the retirement savings of millions of American workers. CII also has associate members, including asset managers with more than $20 trillion in assets under management.[2]

We thank the board for continuing to pursue one of the most important recommendations contained in the U.S. Department of Treasury's 2008 *Final Report of the Advisory Committee on the Auditing Profession* – "to consider improvements to the auditor's standard reporting model."[3] We strongly support most of the key provisions of the reproposal and offer several suggested modifications for your consideration.

[1] PCAOB Release No. 2016-003 (May 11, 2016), *available at* https://pcaobus.org/Rulemaking/Docket034/Release-2016-003-ARM.pdf.
[2] For more information about the Council of Institutional Investors ("CII"), please visit CII's website at http://www.cii.org/about_us.
[3] U.S. Department of the Treasury, Final Report of the Advisory Committee on the Auditing Profession to the U.S. Department of the Treasury VII:13 (Oct. 6, 2008), *available at* http://www.treasury.gov/about/organizational-structure/offices/Documents/final-report.pdf.

The views we express in this letter are generally consistent with those CII provided in letters to the PCAOB in 2011[4] and 2013.[5]

As the leading U.S. voice for effective corporate governance and strong shareholder rights, CII believes that accurate and reliable audited financial statements are critical to investors in making informed decisions, and vital to the overall well-being of our capital markets.[6] That strong belief is reflected in the following CII membership-approved policy on the "Independence of Accounting and Auditing Standard Setters":

> Audited financial statements including related disclosures are a critical source of information to institutional investors making investment decisions. The efficiency of global markets—and the well-being of the investors who entrust their financial present and future to those markets—depends, in significant part, on the quality, comparability and reliability of the information provided by audited financial statements and disclosures. The quality, comparability and reliability of that information, in turn, depends directly on the quality of the . . . standards that . . . auditors use in providing assurance that the preparers' recognition, measurement and disclosures are free of material misstatements or omissions.[7]

This policy establishes the principle that "investors are the key customer of audited financial reports and, therefore, the primary role of audited financial reports should be to satisfy in a timely manner investors' information needs."[8] Our membership reaffirmed that principle in 2013 when it approved substantial revisions to our existing policy on "auditor independence."[9] That policy, as revised, includes the following provisions that we believe are relevant to issues raised by the reproposal:

> **2.13a Audit Committee Responsibilities Regarding Independent Auditors:** The audit committee should fully exercise its authority to hire, compensate, oversee and, if necessary, terminate the company's independent auditor. In doing so, the committee should take proactive steps to promote auditor independence and audit quality. Even in the absence of egregious reasons, the committee should consider

Summary of CII Views on Reproposal

*Critical Audit Matters (CAMs)*

We generally support the reproposed auditor reporting model that requires the independent auditor to communicate CAMs in the auditor's report. However, we would revise the reproposed model in several ways to better achieve the board's stated goal to making "the auditor's report more informative and relevant to investors and financial statement users."[11]

First, the definition of CAMs as interpreted in the reproposal is too narrow and unnecessarily excludes relevant information from investors. More specifically, we would not limit CAMs to any matter that "relates to accounts or disclosures that are *material* to the financial statements" as that phrase is interpreted in the reproposal.[12] We note that the reproposal provides an example indicating that the phrase would exclude from the definition of CAMs a "loss contingency that was communicated to the audit committee but that was determined by management to be remote."[13] We believe that such a narrow interpretation of the phrase would unnecessarily exclude relevant information from investors.

In addition, we would revise the reproposal's provisions on the determination of CAMs to clarify that in most audits, the auditor would determine that CAMs include those matters that involved significant accounting judgment or estimation by management. This revision would better ensure that CAMs include what we continue to believe is perhaps the most relevant information for investors.

[10] *Id.*

[11] PCAOB Release No. 2016-003 at 16.

[12] *Id*. at A1 – 7 (emphasis added).

[13] *Id.* at 20.

Finally, and for the same reasons, we would revise the reproposal's provisions on the communication of CAMs to clarify that in the auditor's report, when describing CAMs that involve significant accounting judgment or estimation by management, the auditor would be expected to include information about its findings. Such information should include the independent auditor's insights or assessments about whether management's significant accounting judgments or estimations were balanced, mildly optimistic, or mildly pessimistic, or equivalent language.

*Other Proposed Changes to the Auditor's Report*
We also generally support the reproposal's other improvements to the auditor's report. Specifically, we agree with the board that an "independence statement in the auditor's report could both enhance investors' and other financial statement users' understanding of the auditor's existing obligations to be independent, and serve as a reminder to auditors of these obligations."[14]

We also continue to believe that information on auditor tenure in the auditor's report would be useful to investors. We generally agree with the board that "requiring the disclosure of auditor tenure in the auditor's report would ensure that the disclosure is in a consistent location—the auditor's report—for all companies and would reduce search costs for investors . . . ."[15]

Finally, while we are generally supportive of promoting greater uniformity in the addressee of the auditor's report, we would revise the reproposed standard to limit the required addressees to the shareowners of corporations or equivalents for companies not organized as corporations. We believe this approach is more aligned with our policies and the underlying principle that investors are the key customers of the auditor's report.

A more detailed discussion of our views in response to select questions contained in the reproposal follows:

***Questions:***

1. **Is the definition of "critical audit matter" appropriate for purposes of achieving the Board's objective of providing relevant and useful information in the auditor's report for investors and other financial statement users? Is the definition sufficiently clear to enable auditors to apply it consistently? If not, describe why the definition may not be clear, including examples demonstrating your concern.**
   a. **Are matters communicated or required to be communicated to the audit committee the appropriate source for critical audit matters? Why or why not?**
   b. **Are there any audit committee communications that should be specifically excluded from consideration as a source of potential**

[14] *Id.* at 43-44.
[15] *Id.* at 49.

**critical audit matters? If so, identify and explain the reason for the exclusion.**

c. **Is the "relates to accounts or disclosures that are material to the statements" component of the definition of a critical audit matter appropriate and clear? Why or why not?**

d. **Is the "involved especially challenging, subjective, or complex auditor judgment" component of the definition of the critical audit matter appropriate and clear? Why or why not?**[16]

CII generally believes that the reproposed definition of CAMs would be *more appropriate* for purposes of achieving the board's stated objective of providing relevant and useful information in the auditor's report if the definition were revised to: (1) eliminate the clause that narrows critical audit matters to accounts and disclosures that are *material* to the financial statements;[17] and (2) add clarifying language to the definition's existing "Note" indicating that it is expected that in most audits, financial statement matters involving the application of significant judgment or estimation by management would involve especially challenging, subjective, or complex auditor judgment.[18]

We generally agree with the comments of Capital Strategy and Research Inc. that establishing a materiality requirement for CAMs creates "a serious deficiency in the proposal . . . [because] investors would only hear about critical audit matters after suffering large losses which is the current disclosure regime."[19] That concern is only heightened by the example contained in the reproposal indicating that "a loss contingency that was communicated to the audit committee, but that was determined to be remote and thus not to warrant disclosure under the applicable financial reporting framework, *would not* meet the definition of a critical audit matter even if it involved especially challenging auditor judgment."[20] In our view, if the remote determination by management involved significant judgment or estimation, the loss contingency should meet the definition of CAMs because the resulting account or disclosure (or lack thereof) would likely be viewed as material and relevant to investors.[21]

Finally, we note that the materiality consideration in the proposed definition of CAMs has not been adopted in the analogous Standards of the International Auditing and Assurance Standards Board or other jurisdictions that have adopted requirements for

expanded auditor reports.[22] We believe this is one area where those international standards may provide investors more useful information.

In addition, we generally continue to believe that from an investor perspective, perhaps the most relevant and useful expanded audit report disclosure would provide the auditor's assessments or insights on management's significant accounting estimates and judgments,[23] including the auditor's findings as to whether management's significant accounting estimates and judgments were balanced, mildly optimist, or mildly pessimistic, or equivalent language.[24] We, believe, therefore, the reproposal should include clarifying language to the definition's existing "Note" indicating that it is expected, that in most audits, financial statement matters involving the application of significant judgment or estimation by management would involve especially challenging, subjective, or complex auditor judgment. In that regard, we share concerns raised by PCAOB Member Steven B. Harris that the "especially challenging, subjective, or complex auditor judgment" component of the definition of CAMs "grants [auditors] . . . too much discretion . . .''[25] We believe our proposed revision to the CAMs Note would assist in establishing a more objective floor for the determination of CAMs to better ensure that the information that is perhaps most relevant and useful to investors would be contained in the expanded auditor's report.

**6. Do the reproposed communication requirements appropriately address commenter concerns regarding auditor communication of critical audit matters, such as:**

**a. The auditor providing original information in describing the principal considerations for the determination that the matter is a**

[23] *See, e.g.,* 2013 Letter, *supra* note 5, at 3 ("we would revise the proposed model to provide that the auditor is required to communicate, at a minimum, an assessment of management's critical accounting judgments and estimates based on the audit procedures the auditor performed").

[24] *See* Letter from Jeff Mahoney, General Counsel, CII, to Phoebe Brown, Office of Secretary, PCAOB 1 (Apr. 10, 2014) (Attachment) ("For management's significant accounting judgments, communication of those critical audit matters in the auditor's report also must describe the auditor's insight's on, and assessments of, management's significant accounting judgments and estimates, including the degree of aggressiveness or conservatism of those judgments and estimates, and whether the related reported amounts are, in the auditor's judgment, within a reasonable range.") [hereinafter 2014 Letter], *available at* http://www.cii.org/files/issues_and_advocacy/correspondence/2014/04_10_14_PCAOB_letter_Rulemaking_Docket_Matter_34.pdf; *see also* FRC, Extended Auditor's Reports, A Further Review of Experience 22-23 (Jan. 2016) (describing those auditor reports of United Kingdom companies "which included commentary on findings against key audit matters . . ."), *available at* https://www.frc.org.uk/Our-Work/Publications/Audit-and-Assurance-Team/Report-on-the-Second-Year-Experience-of-Extended-A.pdf.

[25] Steven B. Harris, Board Member, Statement on Reproposed Auditing Standard on Auditor's Report 4 (May 11, 2016), *available at* https://pcaobus.org/News/Speech/Pages/Harris-statement-ARM-051116.aspx.

**critical audit matter or describing how the matter was addressed in the audit, and**

**b. Investors and other financial statement users misinterpreting critical audit matters as undermining the auditor's pass/fail opinion or providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate?**

**Are there other steps the Board could take to address these concerns? If so, what are they?[26]**

CII generally believes that the reproposed communication requirements *inappropriately* respond to commenter concerns about the auditor providing "original information." As indicated, we believe that in order for the board to fully achieve its objective of providing relevant and useful information in the auditor's report for investors and other financial statement users, the communication should include the auditor's assessments or insights on management's significant accounting estimates and judgments, including the auditor's findings as to whether management's significant accounting estimates and judgments were balanced, mildly optimist, or mildly pessimistic, or equivalent language. That type of communication should not be limited by "original information;" a term that we understand is undefined in auditing literature.

Therefore, we would revise "Note 2" to the reproposal's provisions on communication of CAMs to clarify that among information "necessary to describe the principle considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit"[27] are the auditor's assessments or insights on management's significant accounting estimates and judgments.[28] We note that our view on this issue is generally consistent with recent findings of the United Kingdom ("UK") Financial Reporting Council that observed: "[i]nvestors feel that more could still be done to enhance [the expanded UK] auditor's reports, including . . . the auditor's view on the appropriateness of management estimates."[29]

We generally believe that the reproposed communication requirements does appropriately respond to commenter concerns about misinterpreting CAMs. We are unaware of any institutional investors that are likely to misinterpret CAMs. To the extent, however, that some preparers might be correct in their view that some other investors or other financial statement users might misinterpret CAMs, we generally support the reproposal's: (1) modification of the introductory language in the CAMs section of the

auditor's report "to expressly state that the auditor is providing a separate opinion on the critical audit matters or on the accounts or disclosures to which they relate;"[30] and (2) clarifying in a note "that the language used to communicate a CAM should not imply that the auditor is providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates."[31]

**13. Is the reproposed requirement relating to auditor independence clear? Would this information improve investors' and other financial statement users' understanding of the auditor's independence responsibilities? Why or why not?[32]**

Our members ascribe great weight to the independence of the external auditor, and CII agrees with the board that the reproposed "independence statement in the auditor's report could both enhance investors' and other financial statement users' understanding of the auditor's existing obligations to be independent, and serve as a reminder to auditors of these obligations."[33]

**14. Is it appropriate to limit the required addressees to the shareholders and the board of directors, or equivalents for companies not organized as corporations? Are there other parties to whom the auditor's report should be required to be addressed, and if so, who are they?[34]**

CII generally believes it would be appropriate to limit the required addressees to the shareowners,' or equivalents for companies not organized as corporations. It is our understanding that our proposed approach is generally consistent with the approach taken in the UK auditor's reports which "are typically addressed to either the members or other shareholders of the company."[35]

As we explained in our comment letter in response to the 2013 proposal:

> CII generally believes that the final auditor reporting standard should require that the auditor's report be addressed to investors in the company. We note that our membership approved corporate governance policies have long reflected the principle that "investors are the key customer of audited financial reports and, therefore, the primary role of audited financial reports should be to satisfy in [a] timely manner investors' information needs."[36]

[36] 2013 Letter, *supra* note 5, at 1 (Attachment).
[36] *Id.*

**19. Would requiring disclosure of auditor tenure in the auditor's report reduce investor search costs? Why or why not? Should the Board require a specific location for disclosure of auditor tenure in the auditor's report? If so, where and why?[37]**

CII generally believes that requiring disclosure of auditor tenure in the auditor's report would reduce investor search costs. We generally agree with the board that "[r]equiring the disclosure of auditor tenure in the auditor's report would ensure the disclosure is in a consistent location—the auditor's report—for all companies and would reduce search costs for investors and other financial statement users who are interested in this piece of information."[38] As explained in our comment letter in response to the 2013 proposal, "[s]ince the auditor's report 'is the primary means by which the auditor communicates to investors and other financial statement users,' it seems entirely appropriate to us that certain information about the auditor that investors and other financial statement users find particularly useful, including information about auditor tenure, should be disclosed in the auditor's report."[39]

Finally, we would not object to disclosure of auditor tenure on Form AP rather than in the auditor's report if the timeliness, accessibility, search ability, and overall functionality of the information disclosed on Form AP is at least equivalent to having the information disclosed in the auditor's report.[40]

**27. How would investors use the information communicated in critical audit matters? Would the communication of critical audit matters help reduce information asymmetry between investors and management? Investors and the auditor?[41]**

CII agrees with the board that "having the auditor provide investors and other financial statement users with additional information about especially challenging, subjective, or complex auditor judgments should help reduce the information asymmetry that exists between investors and management by providing a new perspective on the financial statements."[42]

We continue to believe that information asymmetry between investors and management, and investors and auditors, is more likely to be reduced if the information provides the independent auditor's assessments or insights on management's significant accounting

[42] *Id.* at 64.

estimates and judgments, including the auditor's findings as to whether management's significant accounting estimates and judgments were balanced, mildly optimist, or mildly pessimistic, or equivalent language.[43]

We also agree with the board that "[r]eporting critical audit matters would add to the mix of information that could be used in investor capital allocation decisions."[44] The board's conclusion is consistent with our long-standing view that many investors would use the information communicated in an improved auditor's report to "analyz[e] and pric[e] risks and mak[e] informed investment decisions because . . . the auditor is an independent third party that could provide an unbiased view of the company's financial statements . . . ."[45]

We also agree with the board that an improved auditor's report could be used by investors to "engage management with targeted questions and support investors' decisions on ratification of the auditor."[46] We note that our membership-approved policies explicitly reference "insights provided in the auditor's report" as a factor that an audit committee should consider when evaluating whether to retain an external auditor.[47] Moreover, the basis for that policy indicates that our members may use the information contained in an improved auditor's report as an additional data point in which to: (1) oversee the audit committee and management, and (2) cast a more informed shareowner vote on proposals to ratify the selection of the external auditor.[48]

The potential relevance of such information for those, and other purposes, is illustrated in a current print advertisement by one of the large U.S. audit firms.[49] The ad touts the firm's view that an important component of the value of an audit is the auditor's "insight into your organization's financial condition and performance."[50] As a key customer and end user of the audited financial statements and related disclosures, we continue to believe that at least some of that value should be shared with investors through the auditor's report.[51]

**31. Would the communication of critical audit matters enhance attention by auditors, audit committees, and management to the matters identified as critical audit matters? If not, why not? Would such**

[49] J. Acct. 2 (July 2016) (on file with CII).
[50] *Id.*
[51] 2011 Letter, *supra* note 4, at 10 (citing multiple sources of support for the view that additional information from the auditor could "enhance the value of the audit to investors"); s*ee also* Office of the Investor Advocate, U.S. SEC, Report on Objectives, Fiscal Year 2017 at 13 (indicating that enhancements to the auditor's report "would be of major significance to investors"), *available at* https://www.sec.gov/advocate/reportspubs/annual-reports/sec-office-investor-advocate-report-on-objectives-fy2017.pdf.

**changes enhance audit quality, improve management's disclosures, or otherwise be beneficial to investors? Why or why not?[52]**

CII continues to believe that changes to enhance the auditor's report would improve both audit quality[53] and management disclosures to the benefit of investors.[54] On the latter point, we note that at least one prominent corporate law firm has opined that one implication of an anticipated final standard is that management should consider "revis[ing] or supplement[ing] its own disclosures, in light of the auditor's discussion, in order to ensure that the totality of the disclosure reflects an accurate and complete picture."[55]

**41. Should the reproposed requirement regarding communication of critical audit matters be applicable for the audits of EGCs [emerging growth companies]? Should the other elements of the reproposed standard and amendments be applicable for the audits of EGCs? Should the reproposed requirements be modified to make their application to EGCs more appropriate? Would excluding audits of EGCs benefit or harm EGCs or their investors? Why or why not?[56]**

CII generally continues to believe that excluding audits of EGC's from enhancements to the auditor's report *would not* benefit investors.[57] More specifically, we generally agree with the comments of those accounting firms that have argued "EGCs exhibit characteristics similar to other public companies and that financial statement users would benefit from similar auditor reporting requirements."[58]

Finally, we also find compelling the recent academic research cited by the board indicating that enhanced audit reporting may produce "greater benefits" for investor's in EGC's relative to the broader population of issuers.[59]

Re: PCAOB Rulemaking Docket Matter No. 034, Proposed Auditing Standard, "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards"

Office of the Secretary:

Crowe Horwath LLP appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or Board) Proposed Auditing Standard, "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards" (Proposed Standard or Proposed Amendments, as applicable).

As described in our letter to the Board, dated December 11, 2013, regarding the initial PCAOB Rulemaking Docket Matter No. 034, we support the Board's efforts to improve audit quality by enhancing existing auditing standards, and to provide additional information to investors for decision-making. We are pleased to provide our observations where the Proposed Standard could be modified to provide more clarity for investors and other users, and to address other matters.

**Proposed Standard**

*Critical Audit Matters Definition*

Appendix A of the Proposed Standard defines a critical audit matter as any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective or complex auditor judgment. We believe the definition of critical audit matters should be modified to avoid unintentional consequences.

The definition of critical audit matters continues to be broad and we recommend limiting it to only those matters which are material to the financial statements taken as a whole as opposed to **any** matter that relates to accounts or disclosures that are material. As defined, it is likely the auditor will be responsible for disclosing original information which is not required to be disclosed by management. For example, a schedule of uncorrected misstatements, which is other than clearly trivial but determined to be immaterial to the financial statements taken as a whole, is required to be communicated to the audit committee but are not required to be disclosed by management. Because the schedule of uncorrected misstatements can relate to accounts and disclosures which are material to the financial statements and can involve especially challenging, subjective, or complex auditor judgment, it would be considered a critical audit matter and would require disclosure. A second example relates to significant deficiencies. Significant deficiencies are required to be communicated to the audit committee but are not required to be disclosed by management.

Because significant deficiencies can relate to accounts and disclosures which are material to the financial statements and can involve especially challenging, subjective, or complex auditor judgment, it would also require disclosure. In both of these examples, the auditor would be required to report critical audit matters, but neither example would have been material to the financial statements taken as a whole.

To address the risk of the auditor disclosing original information or matters that are not thought to be critical audit matters, we recommend a two part solution. First, revise part one of the critical audit matter definition (noted below, new text in bold and deleted text in strikethrough), as follows:

> 11. The auditor must determine whether there are any critical audit matters in the audit of the current period's financial statements. A critical audit matter is any matter arising from the audit of the financial statements that was ~~communicated or~~ required to be communicated to the audit committee and that: (1) ~~relates to accounts or disclosures that are~~ **is** material to the financial statements **taken as a whole** and (2) involved especially challenging, subjective or complex auditor judgment.

The suggested edits above would reduce the risk of the auditor being required to disclose original information and align with management's requirement to disclose only matters that are material to the financial statements. We believe the revised definition will still capture those matters that are critical to the audit including those matters that require especially challenging, subjective, or complex auditor judgment.

Second, we recommend excluding the required auditor communication for uncorrected misstatements and significant deficiencies from evaluation as a critical audit matter. These exceptions would further mitigate the risk of the auditor disclosing original information. Limiting the critical audit matters to items required to be communicated, except for immaterial audit adjustments and significant deficiencies, will reduce inconsequential documentation in an audit file and is the basis for our suggestion to delete "communicated or" from paragraph 11.

It appears the Board's intent is to prevent the auditor from being required to provide original information about an entity. We strongly agree with this concept. It also appears it is the Board's intent to allow for the auditor to provide original information to be included in the description of the principle considerations that led the auditor to determine that a matter is a critical audit matter, if the situation arises. We agree, but this position should be an exception to the rule. To clarify the Board's intent, we propose the following revision (see deleted text in strikethrough) to Note 2 in paragraph 14 of the Proposed Standard:

> Note 2: When describing critical audit matters in the auditor's report the auditor is not expected to provide information about the company that has not been made publicly available by the company ~~unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit~~.

*Critical Audit Matters Documentation Requirements*

Paragraph 17 of the Proposed Standard requires "the auditor to document the basis for the auditor's determination whether each matter that both a) was communicated or required to be communicated to the audit committee and b) relates to accounts or disclosures that are material to the financial statements involved especially challenging, subjective, or complex auditor judgment." We believe comparable changes are needed to this paragraph should the Board agree with our previous recommendation to paragraph 11.

Notwithstanding our prior recommendation, the broad definition of critical audit matters will result in a significant increase in audit documentation to capture any audit committee communication that relates to accounts or disclosures that are material. That documentation requirement will lead to describing all matters discussed at the audit committee, without regard to the significance of the matter, that relate to accounts and disclosures that are material, in order to have an appropriate starting point for evaluation of potential critical audit matters. We believe this requirement will be more prevalent at smaller issuers resulting in disproportionate costs. In our experience, it is more common for audit committees of smaller issuers to request that the auditor provide information not currently required by PCAOB standards, for example: a list of all internal control deficiencies identified during the audit, regardless of the issuer's reporting requirements. These deficiencies, since communicated to the audit committee, will result in the auditor needing to evaluate each one as a potential critical audit matter since each deficiency might relate to an account or disclosure that is material to the financial statements. Additionally, in many smaller issuers, it is not uncommon for the auditor to discuss with the audit committee matters related to the audit of material accounts and disclosures. For example, a common matter discussed with the audit committee of a financial institution are the audit procedures performed on the growth of a loan portfolio. While loans are almost always considered to be an account that is material to the financial statements, audit procedures on a loan portfolio's existence generally does not involve especially challenging, subjective, or complex auditor judgment. These communications are not required nor are the specific matters required to be documented currently by PCAOB Auditing Standards, however, auditors would nevertheless be required to maintain a listing of these types of discussions and related matters and evaluate whether these matters involved especially challenging, subjective or complex auditor judgment.

We believe the cost of evaluating all matters discussed with the audit committee is an unintended consequences of paragraph 17 and can be significantly mitigated if corresponding changes are made to this paragraph consistent with our proposed change to paragraph 11.

With respect to the documentation requirements, limiting the identification of critical audit matters to only required communications, as well as our other proposed definitional changes, would:

- Likely remove the need to maintain a laundry list of any matter communicated to the audit committee that relates to a material account or disclosure, thus eliminating the documentation of inconsequential matters
- Better balance the effort and cost for smaller issuers
- Allow auditors to focus on other responsibilities during the critical wrap up stages of the audit
- Capture matters which required especially challenging, subjective, or complex auditor judgment.

*Communication of Critical Audit Matters*

Similar to the note in AS 1301, paragraph 9 that indicates "Note: This overview is intended to provide information about the audit, but not specific details that would compromise the effectiveness of the audit procedures." We suggest incorporating a note to paragraph 14c to indicate the purpose of the auditor describing audit responses to critical audit matters is intended to provide information about the audit but not specific details that would compromise the effectiveness of the audit procedures.

*Auditor Tenure*

As we have previously communicated, we continue to believe an unintended consequence of including auditor tenure in the auditor's report is incorrectly implying a correlation between auditor tenure and audit quality. The PCAOB's previous Concept Release on Auditor Independence and Audit Firm Rotation acknowledges that there is not a demonstrated relationship between the auditor's objectivity and professional skepticism and the tenure of the audit engagement. Further, the Proposed Standard acknowledges there continues to be a divided view on auditor tenure and audit quality. Accordingly, we believe that auditor tenure should not be included in the auditor's report. If deemed important by the audit committee, we suggest the audit committee to disclose auditor tenure.

Alternatively, if the Board continues to believe auditor tenure is a useful disclosure and the source of that disclosure should come from the auditor, Form AP, "Auditor Reporting of Certain Audit Participants," would be a more appropriate location.

The concept in paragraph 10 (page A1-6) provides data to the investor for which the relevance is unclear. The requirement is to report the year the auditor began serving consecutively as the company's auditor. The note below paragraph 10 requires the year to include situations in which a firm is acquired by another firm. We believe this confuses investors. If the Board believes there is a correlation between audit quality and a firm's tenure, then the tenure disclosure should be that of the firm currently signing the opinion. For example, Company A was audited by Firm 1 beginning in year 2000, and Firm 1 was acquired by Firm 2 in 2010 and Firm 2 was acquired by Firm 3 in 2015, therefore Firm 3 would report 15 consecutive years as the auditor for Company A. It is not clear how the investor should interpret the information as there is likely no correlation in audit quality or tenure by Firm 3. The auditor's relationship by Firms 1, 2 and 3 with Company A could be substantially different as each firm has its own audit methodology, quality control processes, etc. resulting in likely different audit quality. We believe the Board should reconsider this requirement on tenure.

*Cost*

The Board acknowledges a lack of specific quantitative data regarding costs. The Board also acknowledges recurring costs, such as drafting and documenting critical audit matters, and suggests senior members of engagements teams, such as partners and senior managers, would be involved in developing the language. In addition, other senior members, such as an engagement quality reviewer and national office partners, would be involved. We agree the aforementioned individuals would be involved in the reporting of the critical audit matters. We also envision these individuals will be reviewing the report multiple times, with costs increasing with each additional touch of the report. While the Board anticipates critical audit matters would be scalable based on the size, nature, and complexity of the audit, we believe there is limited scalability to the reporting requirement and the costs will be heavily disproportionate to smaller issuers. We expect the number of hours to report one critical audit matter will represent a larger percentage of the overall audit hours on a smaller issuer, as compared to the overall audit hours on a larger issuer. As such, we expect the costs would be disproportionate to smaller issuers. In addition to our recommendation in the effective date section below, we encourage the Board to study the disproportionate cost effect on smaller issuers and evaluate the cost benefit of reporting critical audit matters on smaller issuers.

*Effective Date*

The Proposed Standard does not include an effective date. Based on the need for audit firms to develop appropriate methodologies and training, we suggest the effective date should be a minimum of two years after a final Auditing Standard is adopted by the SEC. Also, in order to help manage the cost to smaller issuers, we encourage the PCAOB to delay the reporting requirement of critical audit matters for non-accelerated filers and smaller reporting companies until the SEC, PCAOB and industry can study the results of the initial implementation and evaluate whether the standard should apply more broadly.

* * * * *

Crowe Horwath LLP supports the Board's efforts to improve its audit standards for the benefit of investors and other stakeholders. We appreciate the opportunity to comment, and would be pleased to respond to any questions. Should you have any questions, please contact Michael G. Yates at (574) 236-7644.

Sincerely,

Crowe Horwath LLP

**Re: PCAOB Rulemaking Docket Matter No. 034**

Deloitte & Touche LLP (D&T) is pleased to respond to the request for comments from the Public Company Accounting Oversight Board (the PCAOB or the Board) on its *Proposed Auditing Standard — The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the reproposed standard or AS 3101) and *Related Amendments to PCAOB Standards* (the proposed amendments) (collectively, the reproposal); PCAOB Release No. 2016-003; and PCAOB Rulemaking Docket Matter No. 034 (May 11, 2016).

**Overall Comments**

As stated in our prior comment letter to the Board,[1] we support the Board's efforts to increase the informational value, usefulness, and relevance of the auditor's report. We appreciate the substantive efforts of the PCAOB to address concerns and suggestions raised in previous comment letters related to auditor reporting, which we believe have led to substantial enhancements in the reproposed standard. In addition, we commend the PCAOB's consideration of similar auditor reporting efforts undertaken by several international and non-U.S. standard setters and regulators while also recognizing that the regulatory environments in other jurisdictions are different from the United States.

We are supportive of the revised requirements the Board has put forward in its reproposed standard. We believe the revised requirements result in achieving the overall objective of providing meaningful and useful information about the audit to investors and other financial statement users, while alleviating certain concerns of potentially being at odds with the long-standing, historical reporting model of management being responsible for the company's financial statements and disclosures and the auditor attesting to the information within financial statements. In particular, we are supportive of the following changes to the auditor's report:

- Including a statement that the auditor is required to be independent with respect to the company in accordance with U.S. federal securities laws and the applicable rules and regulations of the U.S. Securities and Exchange Commission (SEC) and the PCAOB.

- Including additional language regarding the auditor's responsibilities with respect to the detection of error or fraud and performing procedures to assess the risks of material misstatement.

- Clarifying that an audit encompasses the financial statements and the related notes.

Each of the above changes will help to clarify the role and resonsibilities of the auditor.

[1] See D&T's letter to the PCAOB in response to the PCAOB's *Proposed Auditing Standards — The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*; *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*; and *Related Amendments to PCAOB Standards* filed with the PCAOB on December 12, 2013.

In addition, we are supportive of the revised requirements with respect to critical audit matters (CAMs) as discussed further below. Based on our review of the reproposal, we believe that there are certain limited implementation and other issues that should be further considered by the PCAOB as it moves to finalize the reproposal. We discuss our observations and additional items for consideration below and in Appendix A.

**Critical Audit Matters**

***Determination of CAMs***. We believe the revised requirements for determining CAMs will simplify the process while still resulting in the auditor identifying those matters that would be of most interest and importance to investors. In particular, we are supportive of the following:

- Narrowing the population of potential CAMs to those matters that were communicated or required to be communicated to the audit committee and to matters that relate to accounts or disclosures that are material to the financial statements. Also, further defining CAMs as those matters that involve especially challenging, subjective, or complex auditor judgment.

- Revising the factors to be used in determining whether a matter involved especially challenging, subjective, or complex auditor judgment.

- Retaining the requirement to communicate CAMs only for the current audit period, while providing the option for the auditor to include CAMs related to prior periods in cases of initial public offerings or reaudits.

***Describing the Principal Considerations.*** We agree with the clarification included in the reproposal that the auditor would be required to describe the principal considerations that led to the determination of a CAM. Describing all considerations that led the auditor to determine that each matter was a CAM could make the auditor's report quite lengthy, especially when there are multiple CAMs. Limiting the description of each CAM to the principal considerations that are specific to the circumstances of the matter and providing a clear description of why the matter involved especially challenging, subjective, or complex auditor judgment will be more efficient for auditors while still maintaining the usefulness of the information to investors and other users of the financial statements.

***Describing How CAMs Were Addressed in the Audit.*** While we do have some level of practical concern as to the ability of an auditor to succinctly summarize the myriad of audit procedures that are often performed with respect to complex matters, we understand the value to financial statement users and, therefore, support the proposed requirement to include a description of how each CAM was addressed in the audit. Users will benefit from an appreciation of the rigor that underlies the audit procedures performed related to CAMs. We also appreciate and recognize the objective that the Board is attempting to achieve in allowing the auditor flexibility to exercise professional judgement when describing particular procedures performed as discussed in the release.[2] We note that the release indicates that the auditor may describe "(1) the auditor's response or approach that was most relevant to the matter; (2) a brief overview of procedures performed; (3) an indication of the outcome of the auditor's procedures; and (4) key observations with respect to the matter, or some combination of these elements."[3] We agree with this guidance and believe that auditors will find it useful in making judgments when developing descriptions of how CAMs were addressed in the audit. We suggest that the Board include this guidance directly within the body of the final standard instead of in the release where it might be overlooked.

***Provision of Original Information About the Company.*** We support the PCAOB's acknowledgment that the auditor should generally not be expected to provide original information about the company in the auditor's report.[4] We appreciate the PCAOB's efforts to revise the definition of CAM as relating only to those accounts or disclosures that are material to the financial statements. We also support the

---

[2] The release accompanying the reproposal states that "the reproposed standard does not prescribe the specific way to meet [the requirement for the auditor to describe how each CAM was addressed in the audit]." See page 31 of the release.
[3] See page 31 of the release.
[4] See page 35 of the release.

inclusion of Note 2, which has been added to paragraph 14 of the reproposed standard and indicates that "the auditor is not expected to be the source of original information about the company when describing CAMs in the auditor's report, unless such information is necessary to describe the principal considerations that led to the determination of a CAM or how the CAM was addressed in the audit." As this Note acknowledges that circumstances could arise in which the auditor is in the position of communicating original information about the company in the description of a CAM, we believe it would be helpful for the final standard to provide an illustrative example that can be looked to by auditors and preparers.

***Documentation Considerations.*** We believe it is appropriate for audit documentation related to determination of CAMs to be focused on why matters considered were determined of such importance that they are included in the auditor's report (i.e., auditors efforts should be focused on documenting how the determination of actual CAMs was made from the population of matters communicated or required to be communicated to the audit committee that related to accounts or disclosures that are material to the financial statements, as opposed to being overly focused on documenting why potential CAMs were determined not to be CAMs). To provide additional clarity to the documentation requirements, we suggest paragraph 17 be reworded as follows:

*For each matter that:*

*a. Was communicated or required to be communicated to the audit committee; and*

*b. Relates to accounts or disclosures that are material to the financial statements;*

*the auditor must document whether or not the matter was concluded to be a critical audit matter (i.e., document whether the matter involved especially challenging, subjective, or complex auditor judgment) and the basis for such determination.*

**Other Matters**

***Auditor Tenure.*** We understand the calls from investors and other financial statement users for auditor tenure information to be made available in the spirit of transparency. We are, however, concerned about the potential implications and practical challenges of providing auditor tenure information in the auditor's report. Below we discuss our concerns and suggest an alternative method of disclosure that we believe meets the Board's transparency objectives in a form that will be more meaningful to investors and others.

Our review of academic literature in connection with our previous letters to the PCAOB[5] and most recently in our letter to the SEC,[6] found evidence that, if audit quality problems do occur, they are less likely to occur later in the auditor's term; the literature, however, does not support a demonstrable link between auditor tenure and audit quality or independence.[7] We are concerned, therefore, that while auditor tenure is a matter of fact, requiring its inclusion in the auditor's report suggests or implies that tenure has a direct effect on the conduct and quality of the audit, and may lead to misperceptions regarding auditor independence. We are also concerned about including language in the auditor's report that "...the auditor is uncertain as to the year the auditor became the company's auditors..." in cases in which there might be uncertainty due to firm or company mergers, as we believe such language could be misinterpreted by investors and others.[8]

To address these concerns, we believe the most feasible alternative is for the PCAOB to require auditor tenure information be included in the PCAOB's new form, *Auditor Reporting of Certain Audit Participants*

---

[5] See D&T letters to the PCAOB dated December 8, 2011 and April 20, 2012 in response to PCAOB Release No. 2011-006, *Concept Release on Auditor Independence and Audit Firm Rotation.*

[6] See our comment letter to the SEC dated September 2, 2015 in response to SEC Release No. 33-9862, *Concept Release on Possible Revisions to Audit Committee Disclosures.*

[7] As highlighted by Board member Hanson in his May 11, 2016 statement on the reproposed standard, "the evidence about the impact of auditor tenure on audit quality continues to be mixed, at best."

[8] See Release, pages A1-6 and A1-7.

(Form AP)[9] and that Form AP also provide for the ability to provide supplementary contextual information regarding auditor tenure, if needed. This approach would have the following benefits:

- Provides an opportunity for the auditor to explain or provide context in relation to any uncertainty as to the year the auditor became the company's auditor (e.g., in cases of firm or company restructurings).

- Would be similar in form to voluntary disclosures provided by audit committees regarding auditor tenure in company proxy statements, in which audit committees can and do provide additional commentary.[10]

- Would result in another factual disclosure being available for inclusion in the PCAOB's searchable Form AP database (i.e., along with the name of the engagement partner and information regarding the involvement of other accounting firms in the audit[11]).

***Addressee of the Accountant's Review Report.*** The reproposal includes a revision to paragraph 37 of Auditing Standard 4105, *Reviews of Interim Financial Information* (currently AU sec. 722, *Interim Financial Information*) to require the accountant's review report be addressed to "the shareholders and the board of directors, or equivalents for companies not organized as corporations."[12] From our experience, review reports are not always issued, and when they are, they are often not included with the interim financial information filed with the SEC. Therefore, the reports are not readily available to the shareholders. We suggest the Board revise its proposed requirement to provide for the exclusion of shareholders from the required addressees of the interim review report if such report will not be included in a filing with the SEC.

***Amendments to Auditing Standard 3305,* Special Reports*.*** The reproposal does not include specific revisions to the auditor's reports in Auditing Standard 3305, *Special Reports* (AS 3305) (currently AU sec. 623, *Special Reports*) but instead provides direction to the auditor to include the basic elements of the reproposed standard in situations in which the auditor's report is filed with the SEC. We acknowledge that auditor's reports in connection with the circumstances described in AS 3305 are rarely filed with the SEC. However, we suggest the Board revise AS 3305 to reflect the concepts included in the reproposed standard for clarity and consistency (which would also be consistent with the approach taken by the IAASB in relation to its analogous standards.[13]) We note, however, that these changes may follow in a separate project once the reproposal has been finalized.

***Effective Date Considerations.*** We encourage the PCAOB to finalize the reproposed standard quickly. Internationally, new auditor reporting standards are already or will soon become effective.[14] Finalizing the PCAOB standard will provide necessary clarity to all stakeholders as to how the U.S. auditing standards compare to others being implemented elsewhere. However, we also believe that when deciding on the effective date of the auditor reporting standard other changes in the financial

---

[9]Effective for audit reports issued on or after January 31, 2017, registered public accounting firms will be required to disclose the engagement partner name on Form AP, which will be publicly available on the PCAOB's website.
[10] Our analysis of the 2015 corporate proxy statements filed by the companies included in the S&P 100 index has found that 64 of the companies disclose either the tenure of the incumbent external audit firm, or otherwise gave an indication of how long the firm had been the company's auditor.
[11] Disclosures regarding certain other participants in the audit will be required for the auditor's reports issued on or after June 30, 2017.
[12] See page A2-70 of the release.
[13] Refer to International Standards on Auditing (ISA) 800, *Special Considerations—Audits of Financial Statements Prepared in Accordance with Special Purpose Frameworks,* and ISA 805, *Special Considerations—Audits of Single Financial Statements and Specific Elements, Accounts or Items of a Financial Statement.*
[14] New and revised auditor reporting standards issued in January 2015 by the International Auditing and Assurance Standards Board (IAASB) will be effective for audits of financial statements for periods ending on or after December 15, 2016; European Union (EU) legislation related to audits of public interest entities, including expanded auditor reporting requirements was adopted in April 2014; and revised standards of the Financial Reporting Council (FRC) in the United Kingdom which enhance transparency of the auditor's report and communication to investors is effective for audits of financial statements for periods beginning on or after June 17, 2016.

reporting process such as the timing of the new requirements regarding revenue recognition,[15] leasing,[16] and expected credit losses[17] need to be acknowledged. In addition, we believe that some period of time will be necessary to develop guidance, train our professionals, create appropriate processes, and implement the related system of quality control to support reporting of CAMs in our auditor's reports.

Because of the significance of the effort that will be involved to effectively implement the revised reporting standard, we believe a phased implementation process should be considered by the PCAOB. Phasing in the changes would permit a targeted focus in the first year, and allow the lessons learned and experience gained in the first year to be applied in successive years. For example, the effective date could be phased such that new auditor reporting requirements would first be effective for audits of the largest companies (i.e., Phase 1 could require application to large accelerated filers only. Phase 2 could apply to accelerated filers and Phase 3 to non-acclerated filers.)

***Applicability.*** We agree that communication of CAMs should not be required for audits of brokers and dealers reporting under Exchange Act Rule 17a-5, investment companies, other than business development companies, and benefit plans while allowing for voluntary inclusion of CAMs in the auditor's report for such entities.

Consistent with our prior commentary, we do not believe there is a basis for exempting audits of emerging growth companies from the requirements of the final reporting standards. We believe investors of these companies will benefit from the additional information communicated in the auditor's report in the same way that investors of larger companies will.

***Auditor Liability.*** While some of the revised requirements discussed in the reproposal address certain concerns that have been raised about auditor liability, the reproposed standard does, of course, present some potential for increased litigation. However, we believe that concerns over auditor liability should not stand in the way of moving forward. Rather, auditor liability concerns should be recognized as the Board moves forward with finalizing the standard. As discussed in our previous comment letter, the reproposed new auditor statements — with respect to CAMs — could lead to new claims under Section 10(b) of the Exchange Act, Section 11 of the Securities Act of 1933, and various state laws. For example, if the reproposed standard is adopted, auditors will be subject to challenge based on the selection of matters considered to be CAMs and those that they do not consider to be CAMs. As also mentioned in our 2013 letter to the PCAOB, another area of concern is the possible effect that disclosing CAMs may have on undermining efforts by Congress, which imposed the stringent pleading standards of the Private Securities Litigation Reform Act of 1995 (PSLRA), to curtail non-meritorious claims against auditors and avoid the costs and burdens associated with them. Plaintiffs may use descriptions of an auditor's procedures in its CAM disclosures to try to plead around the strict requirements of the PSLRA and federal jurisprudence that has interpreted it.

* * *

[15] FASB Accounting Standards Update No. 2014-09, *Revenue From Contracts With Customers* (Topic 606) — unless early adoption is elected, public entities reporting under U.S. GAAP are required to implement the provisions of the new revenue standard for annual reporting periods beginning after December 15, 2017 and interim periods therein.
[16]FASB Accounting Standard Update No 2016-02, *Leases* (Topic 842) — public entities reporting under U.S. GAAP are required to implement the provisions of the new leasing standard for annual reporting periods beginning after December 15, 2018 and interim periods therein.
[17] FASB Accounting Standard Update No 2016-13, *Measurement of Credit Losses on Financial Instruments* (Topic 326) — unless early adoption is elected, public entities reporting under U.S. GAAP are required to implement the provisions of the expected credit losses standard for annual reporting periods beginning after December 15, 2019 and interim periods therein.

D&T appreciates the opportunity to provide our perspectives on these important topics. Our comments are intended to assist the PCAOB in analyzing the relevant issues and potential effects of the reproposal. We encourage the PCAOB to engage in active and transparent dialogue with commenters as the reproposed standard is evaluated and changes are considered. If you have any questions or would like to discuss these issues further, please contact Dave Sullivan at 714-436-7788 or Megan Zietsman at 203-761-3142.

Very truly yours,

Deloitte & Touche LLP

## APPENDIX A — DETAILED OBSERVATIONS AND RECOMMENDATIONS

Based on our analysis of the reproposal, we have identified several technical modifications that could be made to improve or provide additional clarity in the requirements and which would address certain implementation challenges that would otherwise arise. We describe our recommendations below.

<table>
<tr><th>Reference</th><th>Recommendation</th></tr>
<tr><td colspan="2">Requirements and guidance in Appendix 1 and 2 of the reproposal:</td></tr>
<tr><td>Appendix 1, paragraph 05(b) of AS 3101</td><td>Clarify the note in paragraph 05(b) of AS 3101 such that it is clear that the requirements relating to the communication of CAMs would not apply to audits of nonissuers that are performed in accordance with the standards of the PCAOB.[18]</td></tr>
<tr><td>Appendix 1 and 2, paragraph 59 of AS 3105[19] and AS 3101</td><td>Move the requirement regarding how to modify the second paragraph under “Basis for Opinion” of the auditor’s report when the auditor is performing a nonintegrated audit from paragraph 59 of AS 3105 to AS 3101. We believe this guidance should be in the standard related to expressing an unqualified opinion, rather than in the standard regarding departures from unqualified opinions.</td></tr>
<tr><td>Appendix 2, paragraph 46 of AS 3105</td><td>Paragraph 46 should include specific requirements regarding how to modify the basic elements included in an unqualified auditor’s report when the auditor is disclaiming an opinion on the financial statements. For example:<br>• Modify the first section of the auditor’s report to include the title “Disclaimer of Opinion on the Financial Statements.”<br>• Modify the first sentence of the first paragraph under Disclaimer of Opinion on the Financial Statements to include a statement identifying each financial statement and any related schedule(s) that the auditor was engaged to audit.<br>• Modify the title of the second section to be “Basis for Disclaimer of Opinion.”<br>• Modify element b of paragraph 09 of AS 3101 to include a statement that the auditor’s responsibility is to express an opinion on the financial statements based on conducting the audit in accordance with the standards of the PCAOB.<br>• Add a statement that because of the matter described in the Disclaimer of Opinion on the Financial Statements section of the auditor’s report, the auditor was not able to obtain sufficient appropriate audit evidence to provide a basis for an audit opinion on the financial statements.<br>• Remove elements c-e of paragraph 09 of Section 310.<br>We also recommend that the Basis for Disclaimer of Opinion section read as follows:<br>These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on conducting our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"). We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.<br>Because of the matter described in the Disclaimer of Opinion on the Financial Statements section of our report, however, we were not able to obtain sufficient appropriate audit evidence to provide a basis for an audit opinion on these financial statements.</td></tr>
</table>

[18] Although the PCAOB is only responsible for establishing auditing standards for issuers and brokers and dealers registered with the SEC, in certain situations the SEC requires audits of nonissuers to be performed in accordance with the standards of the PCAOB (e.g., a nonissuer subsidiary, division, branch, component or investment for which an audit report is filed under Rule 2-05 of Regulation S-X, a voluntary filer).

We acknowledge the following funding sources that supported this project: the University of Wisconsin School of Business Andersen Center for Financial Reporting, EY's professorship for Karla Johnstone, the AICPA Foundation through the Accounting Doctoral Scholars Program, a Mendoza College of Business Summer Research Grant, and the Von Allmen School of Accountancy. We express our appreciation to Eric Condie for diligent assistance in data coding and PhD students at the University of Wisconsin-Madison for assistance in pilot-testing the experimental materials.

# THE VALUE RELEVANCE OF MANAGERS' AND AUDITORS' DISCLOSURES ABOUT MATERIAL MEASUREMENT UNCERTAINTY

## ABSTRACT

Regulators seek to provide financial statement users with more information about how auditors evaluate complex estimates. Because users encounter auditor-provided information alongside management-provided information about these estimates, we jointly examine the value relevance of this information. We also examine whether visual cues in auditor disclosures influence the way nonprofessional investors use this information. While disclosures from managers and auditors provide *different* value-relevant information about the *same* underlying issue, we find that users do not weight information about the audit when it is presented in a fully-narrative format. Specifically, users weight management disclosures and fully-narrative auditor disclosures as substitutes in valuation judgments. However, visual cues facilitate their weighting of information about the audit, which also changes how they weight management disclosures. Consistent with market signaling theory, users reward robust supplemental management disclosures when audit reports provide visual cues. This suggests visual cues in auditor reports can promote increased transparency from managers.

# THE VALUE RELEVANCE OF MANAGERS' AND AUDITORS' DISCLOSURES ABOUT MATERIAL MEASUREMENT UNCERTAINTY

## I. INTRODUCTION

When accounting standards allow managers discretion in measuring complex financial statement estimates, reported amounts represent a point estimate among a range of reasonable values (e.g., Bratten, Gaynor, McDaniel, Montague, and Sierra 2013). The range of reasonable values for an estimate often includes amounts that, if recorded, would likely influence financial statement users' ("users") decisions (e.g., Christensen, Glover, and Wood 2012; Bell and Griffin 2012). Such instances result in material measurement uncertainty, which likely leads users to discount security prices (i.e., take price protection) (e.g., Diamond and Verrecchia 1991; Song, Thomas, and Yi 2010). However, users must rely on reported information to identify this uncertainty and impound it into security prices. Accounting regulators encourage managers to provide supplemental disclosures regarding material measurement uncertainty (SEC 2003; FASB 2010a). The PCAOB now also seeks to provide users with information about how auditors evaluate estimates that reflect material measurement uncertainty (e.g., PCAOB 2014, 2016). Because users encounter auditor-provided information alongside management-provided information about these estimates, we jointly examine the value relevance of management and auditor disclosures regarding material measurement uncertainty. We also examine whether visual cues in auditor disclosures influence the way nonprofessional investors use this information.

Issuers contend, and auditors agree, that only management should provide original information about an entity (e.g., PCAOB 2013a, 2013b, 2013c, 2013d). Under the current financial reporting model, management bears primary responsibility for providing users with original information about a company through assertions (i.e., about contracts and accounting measurement processes). On the other hand, auditors bear primary responsibility for providing users with information about the production of attestations (i.e., assurance). While assertions relate directly to contracts and the underlying economics, attestations relate only to assertions (and not underlying economics). Information about attestations therefore has a relatively weaker causal link to underlying economics than information in management's assertions. Material measurement uncertainty creates potential information asymmetry with respect to both *first-order* information in management's assertions and *second-order* information about auditors' attestations.[1] Notably, the existence of underlying material measurement uncertainty represents "bad news", which both management and auditors can communicate credibly (Skinner 1994).

Understanding users' valuation judgments related to material measurement uncertainty is important to standard setters as they consider approaches to reducing the information asymmetry this uncertainty creates. The current financial reporting environment provides issuers with significant discretion in determining specific disclosure practices (e.g., SEC 2003, 2008).[2] Understanding these judgments can help calibrate disclosure requirements around material measurement uncertainty. Additionally, the PCAOB proposes that auditors provide information about the production of assurance over high-uncertainty estimates using critical auditing matter disclosures in the audit report (PCAOB 2016). Our study can inform conversations among financial reporting stakeholders (e.g., regulators, auditors, management, and users) about potential upcoming implementation decisions related to format these disclosures.

We address two fundamental issues related to material measurement uncertainty and

---

[1] *Second-order* refers to information about information, while *first-order* refers to information about an underlying phenomenon (see, e.g., Silverstein 2001). Gershon (2010, 18) notes "*Second-order information* refers to the information that can guide you into understanding how particular words and statements should be interpreted" (emphasis in original). While management assertions provide first-order information about underlying economics of contracts, auditor attestations provide only second-order information about this first-order information.

[2] SEC comment letters highlight significant and pervasive room for improvement in these disclosures in practice (e.g., Ernst & Young 2014). Additionally, research finds considerable variation in compliance with disclosure requirements, even for disclosures that do *not* involve complex judgments (Ettredge, Johnstone, Stone, and Wang 2011). This suggests that variation in the quality of supplemental disclosures about material measurement uncertainty will be particularly pronounced in practice.

information asymmetry. First, we jointly examine the value relevance of first-order and second-order information about material measurement uncertainty. Financial reporting stakeholders anticipate that many critical auditing matter disclosures will relate to issues about which management already provides robust supplemental disclosures (e.g., PCAOB 2013a, 2013b, 2013c, 2013d). Additionally, observations of expanded audit reports in the U.K. reveal instances where the auditor provides "key audit matter" disclosures with second-order information, but management *does not* provide supplemental disclosures with corresponding first-order information (e.g., Heineken 2015). Our study provides insights regarding the valuation implications of material measurement uncertainty under these different information scenarios.

Second, we examine whether visual cues in auditor reports influence the way nonprofessional investors use information about material measurement uncertainty. Research suggests that visual linkages between recognized amounts and disclosed information reduce information processing costs, as compared to narrative linkages (e.g., Einhorn and Hogarth 1981, 1986; Maines and McDaniel 2000; Clor-Proell, Proell, and Warfield 2014). Interestingly, while audit reports that reference specific amounts in financial statements do so *narratively*, reports in certain assurance settings do so *visually* (e.g., "comfort letters"; see Appendix A).[3] We examine whether users impound information about material measurement uncertainty differently when auditors identify amounts visually versus narratively in critical auditing matter disclosures.

Using a sample of 102 nonprofessional investors, we examine how supplemental management disclosures and auditor disclosures interactively affect users' valuation judgments. Participants in all conditions receive required, standardized ASC 820 disclosures that indicate Level 3 inputs reflect management's assumptions and learn that the auditors issued an

[3] AU 634, *Letters for Underwriters and Certain Other Requesting Parties* (PCAOB 2003), describes a presentation format whereby auditors place labels adjacent to amounts on financial reports to indicate the results of procedures applied to the respective amounts (par. 58). AU-C 920 (AICPA 2013) describes the same presentation format.

unqualified ("clean") opinion. First, we manipulate management disclosure through a series of statements about the material measurement uncertainty of a Level 3 fair value estimate and the related investment gain. Second, we manipulate auditor disclosure at three levels: absent, auditor narrative disclosure, and auditor visual disclosure. Participants receiving the auditor narrative disclosure manipulation view a fully-narrative critical auditing matter disclosure related to material measurement uncertainty in a Level 3 investment gain. Participants receiving the auditor visual disclosure manipulation view a critical auditing matter disclosure that visually identifies the Level 3 investment gain with a label on the face of the income statement. We measure participants' valuation judgments (our dependent variable) using assessed P/E multiples.

We predict and find that management disclosure and auditor narrative disclosure function as substitutes in reducing information asymmetry for nonprofessional investors (i.e., these users discount P/E multiples nearly equivalently in response to either or both). Auditor disclosures must incidentally indicate the existence of first-order information in order to communicate second-order information. While nonprofessional investors appear to weight the existence of this first-order information when auditor narrative disclosure is present, they do not incrementally weight the second-order information in their P/E multiple assessments.

We also predict and find that visual cues change the way nonprofessional investors use information about material measurement uncertainty in their valuation judgments. When management disclosure is absent, nonprofessional investors discount P/E multiples more in response to auditor visual disclosure than auditor narrative disclosure. Consistent with market signaling theory (e.g., Spence 1973; Healy and Palepu 1993), we also find that nonprofessional investors appear to reward management disclosure when auditor visual disclosure is present (i.e., assess *higher* P/E multiples when management disclosure is present than absent).

Our findings suggest that nonprofessional investors find both first-order and second-order information about material measurement uncertainty to be value-relevant. This is consistent with supplemental management disclosures and critical auditing matter disclosures providing *different* information about the *same* underlying measurement uncertainty. Our findings also demonstrate that nonprofessional investors use information about material measurement uncertainty differently when auditor reports provide visual, versus narrative disclosures. These users appear do not appear to weight second-order information when audit reports present it in a fully-narrative format. However, when audit reports visually identify the related amounts, nonprofessional investors appear to weight both first-order and second-order information in a manner consistent with market signaling theory (e.g., Spence 1973). Specifically, these users assess higher P/E multiples when management provides robust supplemental disclosures alongside auditor visual disclosures than when management fails to do so. This suggests that visual cues in auditor reports can promote increased transparency from managers.

Our study contributes to prior research on several dimensions. First, we draw the critical distinction between first-order information that GAAP requires managers to provide regarding material measurement uncertainty and second-order information about the related attestations. Our findings suggest that the valuation implications of auditor disclosures are conditional on whether management provides robust supplemental disclosures. Second, our findings demonstrate the importance of presentation format and visual cues in communicating second-order information about material measurement uncertainty. In doing so, we extend emerging research on implications of critical auditing matter disclosures (e.g., Brown, Majors, and Peecher 2015; Christensen, Glover, and Wolfe 2014; Kachelmeier, Schmidt, and Valentine 2014; Lennox, Schmidt, and Thompson 2015).

Third, we identify visual cues currently used by auditors in practice that appear to facilitate nonprofessional investors' weighting of disclosed information. Prior literature documents differences in the way users process recognized versus disclosed amounts (Davis-Friday, Folami, Liu, and Mittelstaedt 1999; Davis-Friday, Liu, and Mittelstaedt 2004). However, our findings suggest these visual cues can help bridge the documented gap in the decision usefulness of recognized versus disclosed accounting information. The remainder of this paper proceeds as follows. Section 2 presents background information, theory, and hypotheses. We discuss our experimental method in Section 3. Section 4 reports results and Section 5 concludes.

## II. BACKGROUND, THEORY, AND HYPOTHESES

### Standard Setting and Regulation

The SEC asserts that "management has a unique perspective on its business that only it can present" (SEC 2003). Accordingly, FASB standards and SEC interpretive guidance require managers to disclose information related to important accounting issues, including critical accounting policies and critical accounting estimates (SEC 2003; FASB 2010a, 2010b). We use the term "critical accounting matters" (hereafter, C*Acct*Ms) to describe these policies and estimates. C*Acct*Ms represent *first-order* information about amounts recognized and disclosed in financial reports (e.g., management disclosures around material measurement uncertainty).

FASB standards and SEC interpretive guidance provide managers with significant discretion in implementing disclosure practices (e.g., SEC 2003, 2008; FASB 2010a). ASC 235 *Notes to Financial Statements* provides flexibility in identifying significant accounting policies and provides only general guidance for developing the related disclosures (FASB 2010a). While the SEC requires issuers to discuss assumptions underlying critical accounting estimates, it encourages (but does not require) supplemental disclosure related to the sensitivity of estimates to changes in key inputs (SEC 2003, 2008). Correspondingly, SEC comment letters indicate significant variation in the quality of both required and supplemental C*Acct*M disclosures about material measurement uncertainty (e.g., Ernst & Young 2014). This is consistent with research that reports strategic variation in compliance with disclosure requirements (Ettredge et al. 2011).

The PCAOB currently proposes that auditors communicate *second-order* information from auditors about material measurement uncertainty as critical auditing matters (hereafter, C*Aud*Ms) in audit reports (PCAOB 2016). When material measurement uncertainty exists, auditors can only obtain assurance over a range of reasonable values (Christensen et al. 2012; Bell and Griffin 2012). The PCAOB's proposed standard requires auditors to identify such situations when they arise and provide information about the production of assurance over the related amounts in C*Aud*M disclosures (PCAOB 2016, A1-7 – A1-9). Importantly, the PCAOB does not propose that auditors provide any first-order information about material measurement uncertainty in C*Aud*Ms (e.g., assertions about the underlying contract or measurement process). Rather, the PCAOB proposes that auditors provide only factual second-order information about the assurance production process (e.g., audit procedures, audit effort, audit evidence, and risk assessments). Thus, although C*Aud*Ms and C*Acct*Ms can relate to the same amounts and/or disclosures (see, e.g., PCAOB 2013a, 2013b, 2013c), C*Aud*M information fundamentally differs C*Acct*M information. Only auditors can produce C*Aud*M information; relatedly, issuers contend that only management should provide C*Acct*M information (e.g., PCAOB 2013a, 2013b, 2013c).

Financial reporting stakeholders anticipate that many C*Aud*M disclosures will relate to issues about which management already provides robust C*Acct*M disclosures (e.g., PCAOB 2013a, 2013b, 2013c, 2013d). However, observations from recently expanded audit reports in the U.K. reveal instances where auditors identify "key audit matters" about underlying issues that management does not address through supplemental disclosure. For example, Deloitte's audit report on Heineken's 2015 financial statements identifies a key audit matter regarding the valuation of a deposit liability on returnable packaging (Heineken 2015, 143) (see Appendix C, Panel A). While Heineken reports a €606 million payable for "Returnable packaging deposits" in a table (Heineken 2014, 114), management provides no narrative explanation of this amount (see Appendix C, panel B). This suggests that robust supplemental C*Acct*M disclosures might not necessarily accompany proposed C*Aud*M disclosures in the U.S.

**Theory and Research on Users' Valuation Judgments**

Research reveals that first-order information about material measurement uncertainty is value relevant (e.g., Song et al. 2010, Clor-Proell et al. 2014). Research also shows that users understand and value information in auditor reports (for recent reviews, see Carson, Fargher, Geiger, Lennox, Raghunandan, and Willikens 2013; Mock, Bedard, Coram, Davis, Espahbodi, and Warne 2013). Specifically, users attend to negative signals in auditor reports (e.g., Libby 1979; Schneider and Church 2008; Shelton and Whittington 2008) and incorporate these signals in valuation decisions (e.g., Bamber and Stratton 1997; Taffler, Lu, and Kausar 2004; Citron, Taffler, and Uang 2008; Menon and Williams 2010). However, inferences from this research relate to first-order, rather than second-order, information. Namely, report modifications under the current auditor reporting model emphasize first-order information about a client's financial condition (i.e., going concern assumption) or accounting practices (e.g., changes in accounting principles). Second-order information about the production of assurance (e.g., as in PCAOB-proposed C*Aud*M disclosures) provides relatively weaker causal linkages to the underlying economic activity than this first-order information.

Individuals organize events in terms of cause and effect relations and therefore weight information to a greater extent when it is more causally linked to a judgment (e.g. Ajzen 1977; Einhorn and Hogarth 1986; Kim and Ahn 2002). This implies that users will experience more difficulty weighting second-order information in proposed C*Aud*M disclosures in their valuation judgments (as compared to first-order information in C*Acct*M disclosures) because that information is less causally linked to the economics that underlie the valuation. Consistent with this implication, emerging research reveals that assurance report users have difficulty processing information about the production of assurance (i.e., second-order information). In a sustainability reporting setting, Vera-Munoz, Gaynor, McDaniel, and Kinney (2015) find that non-expert users do not differentiate the level of assurance achieved based on descriptions of the verification procedures performed. Similarly, Kachelmeier et al. (2014) demonstrate that optional descriptions of audit procedures in C*Aud*M disclosures do not influence users' perceptions.

However, in communicating second-order information, C*Aud*M disclosures also incidentally indicate that first-order information about the underlying accounting issue exists.[4] Although Vera-Munoz et al. (2015) and Kachelmeier et al. (2014) show that users do not react to certain second-order information in C*Aud*M disclosures, other studies reveal that a variety of user groups do react to overall C*Aud*M disclosures. Using an instrument similar to our own and to that in Clor-Proell et al. (2014), Christensen et al. (2014) find that C*Aud*M disclosures reduce nonprofessional investors' willingness to invest in a company. Emerging research also reveals that C*Aud*M disclosures influence nonprofessional investors' confidence in financial statements, nonprofessional investors' and jurors' perceptions of auditor responsibility/ liability, and jurors' assessments of auditor negligence (e.g., Backof, Bowlin, and Goodson 2014; Kachelmeier et al. 2014; Brasel, Doxey, Grenier, and Reffett 2016; Gimbar, Hansen, and Ozlanski 2016).[5]

However, two studies that examine market reactions to expanded audit report disclosures in the U.K. provide mixed evidence regarding the joint informativeness of C*Acct*M disclosures

---

[4] For example, auditors cannot provide C*Aud*M disclosures about the *auditing implications* of material measurement uncertainty in an estimate without also indicating that material measurement uncertainty *exists* in the estimate.
[5] Notably, these studies demonstrate that users view information in C*Aud*Ms as "bad news" about the underlying accounting issue, which both management and auditors can communicate credibly (Skinner 1994). Additionally, the operationalization of management disclosure and auditor disclosure in the current study (i.e., each treatment is presented on its own separate screen in Qualtrics) creates nearly equivalent salience between these two treatments. These features of our experimental design control for source credibility and salience across the management disclosure and auditor disclosure treatments.

(i.e., first-order information) and C*Aud*M disclosures (i.e., second-order information). Reid, Carcello, Li, and Neal (2015) find that the expanded disclosures in these reports incrementally reduce information asymmetry (i.e., increased abnormal trading volume, especially for companies with weaker information environments). Lennox et al. (2015) similarly find that information in expanded U.K. audit reports reliably reflects financial reporting risks (e.g., measurement uncertainty). However, they do not find these expanded audit report disclosures to be incrementally informative to the disclosures already contained in annual reports; they also report insignificant market reactions to these expanded disclosures. Collectively, these studies suggest that while users seem to understand information in proposed C*Aud*M disclosures, they experience difficulty weighting second-order information in their valuation judgments.

Based upon this discussion, we expect that both C*Acct*M disclosures and C*Aud*M disclosures will communicate first-order information about material measurement uncertainty (i.e., whereas C*Acct*M disclosures provide this information directly, C*Aud*M disclosures incidentally indicate this information exists). We further expect that users will weight first-order information in their valuation judgments similarly, regardless of whether they receive it through a C*Acct*M disclosure or fully-narrative C*Aud*M disclosure. We also expect that users will not weight second-order information when C*Aud*M disclosures present it in a fully-narrative format (i.e., the only information that users will weight from fully-narrative C*Aud*M disclosures is first-order information about the existence of the underlying issue). We therefore expect that, fully-narrative C*Aud*M disclosures will not incrementally influence users' valuation judgments when management provides supplemental C*Acct*M disclosures. Figure 1 illustrates these expectations.

INSERT FIGURE 1 HERE

In Figure 1, Point A represents the situation where management does not provide a supplemental C*Acct*M disclosure and the audit report does not provide a C*Aud*M disclosure. In this situation, we predict users will assess a P/E multiple of *n*, which reflects the perceived firm value in the absence of both first-order and second-order information about material measurement uncertainty. At Point B, management provides a supplemental C*Acct*M disclosure, but the auditor does not provide a C*Aud*M disclosure. Here, we predict users will assess a P/E multiple of $n - x$, where $x$ represents the discount attributable to first-order information about material measurement uncertainty. At Point C, the auditor provides a fully-narrative C*Aud*M disclosure, but management does not provide a supplemental C*Acct*M disclosure. Here, we predict users will also assess a P/E multiple of $n - x$, as they will weight the first-order information conveyed (incidentally) in the C*Aud*M disclosure, but not the second-order information. At Point D management provides a supplemental C*Acct*M disclosure and the auditor provides a fully-narrative C*Aud*M disclosure. Here, we predict that users will still only weight first-order information in their valuation judgments, resulting in a P/E assessment of $n - x$. This leads to our first hypothesis:

**H1: Nonprofessional investors will weight fully-narrative C*Aud*M disclosures and supplemental C*Acct*M disclosures as substitutes in their valuation judgments.**

Linking this theoretical discussion to the Heineken example in Appendix C, H1 predicts that users will treat the key audit matter disclosure in the Deloitte audit report as a substitute for robust supplemental C*Acct*M disclosures from Heineken management when making valuation judgments (Heineken management did not provide such disclosures in the annual report). The last sentence of the key audit matter in the Heineken audit report includes second-order information that proposed C*Aud*M disclosures would require (see PCAOB 2016): “As a response to this risk, we performed, amongst others, substantive procedures on the Company’s calculation of the returnable packaging liability, focusing on the valuation and completeness of the liability”

(Heineken 2015, 143). In communicating this second-order information, Deloitte's disclosure also incidentally reveals that first-order information about measurement uncertainty exists.

**Theory and Research on Presentation Format**

Research reveals that financial statement format affects users' judgments. For example, Maines and McDaniel (2000) find that users' weighting of the volatility of unrealized gains varies depending on the format of the financial statement where the gains are reported. Clor-Proell et al. (2014) find nonprofessional investors better decipher the reliability implications of measurement subjectivity when fair value gains appear in a separate column in the income statement. They further find that reliability judgments partially mediate the effect of this increased salience on valuation judgments. Research also reports that users place relatively greater weight on recognized versus disclosed amounts in their valuation judgments (e.g., Davis-Friday et al. 1999; Ahmed, Kilic, and Lobo 2006).[6] We extend this research by examining whether visual cues in auditor reports influence the way nonprofessional investors weight disclosed information about material measurement uncertainty in valuation judgments.

Research in psychology consistently demonstrates that visual cues orient attention to stimuli (see, e.g., Posner 1980; Posner and Cohen 1984). This suggests auditors can use visual cues to draw users' attention to financial statement amounts when the audit report contains second-order information about those amounts. In order to weight this second-order information, users must store the information in working memory while they analyze the related amounts and disclosures in the financial statements and footnotes. Research demonstrates limitations of working memory (see, e.g., Baddeley and Hitch 1974; Luck and Vogel 1997) and suggests that higher working memory loads interfere with information processing (e.g., de Fockert, Rees,

[6] Contemporaneous research also finds that visual representations help auditors themselves to understand complex estimates (Backof, Carpenter, and Thayer 2015) and accounting firms encourage the use of visualization to interpret data (e.g., Davenport 2013; KPMG 2015).

Frith, and Lavie 2001). Visual cues that identify specific financial statement amounts eliminate the need for users to remember which amounts relate to second-order information, thereby reducing the volume of information of users must hold in working memory when analyzing financial statements. Collectively, this suggests that visual cues will both orient users' attention to specific amounts and reduce the cognitive costs that users must incur to incorporate the related second-order information in their valuation judgments (see, e.g., Maines and McDaniel 2000).

AU 634, *Letters for Underwriters and Certain Other Requesting Parties*, describes visual cues available for auditors to use when reporting procedures and results in "comfort letters" (PCAOB 2003, par. 58). This standard specifically allows auditors to place labels adjacent to amounts on copies of financial reports (e.g., 10-Ks, 10-Qs, and prospectuses) that indicate second-order information about the respective amounts. Under this format, auditors use the body of the comfort letter to define "tick-marks" that indicate the results of procedures applied to reported amounts. Auditors then write or type these tick-marks directly on copies of financial reports (i.e., adjacent to the respective amounts) and attach these copies to the comfort letter (see an example in Appendix A).[7] We refer to this practice as auditor visual disclosure.

Tick marks on the face of the financial statements provide visual cues about second-order information in the auditor's report regarding the respective amounts (see, e.g., Lipe 1998). Following Maines and McDaniel (2000), we expect these visual cues to aggregate second-order information with the respective amounts and thereby facilitate users' weighting of this information in their valuation judgments. Additionally, research shows that users view first-order information about material measurement uncertainty as "bad news" for investors (e.g., Diamond and Verrecchia 1991; Song et al. 2010). Research also suggests that many user groups view second-order information in C*Aud*M disclosures as "bad news" for investors (e.g., Backof et al.

---

[7] Copies of financial reports with tick-marks attached to comfort letters are referred to as "circle-ups" in practice.

2014; Christensen et al. 2014; Kachelmeier et al. 2014; Brasel et al. 2016). Following this, our second hypothesis predicts second-order information will have a stronger effect on users' valuation judgments in the presence of visual cues (i.e., auditor visual disclosure) than in the absence of these cues (i.e., auditor narrative disclosure):

**H2: Visual cues facilitate nonprofessional investors' use of second-order information about material measurement uncertainty in valuation judgments.**

In Figure 1, Point E represents the situation where the auditor's report provides a C*Aud*M disclosure with visual cues and management does not provide a supplemental C*Acct*M disclosure. In this situation, we predict that users will assess a P/E multiple of $n - x - y$, where $y$ represents the discount attributable to second-order information when management does not provide supplemental C*Acct*M disclosures. Linking this theoretical discussion to the Heineken example in Appendix C, the Deloitte report does not provide visual cues and Heineken management does not provide supplemental disclosures. H2 predicts that if Deloitte provides visual cues in the audit report, then nonprofessional investors will weight the second-order information in the key audit matter disclosure in their valuation judgments and incrementally reduce their assessments of firm value.

Our third hypothesis extends H2 and predicts that nonprofessional investors will weight first-order information differently in their valuation judgments when they also weight second-order information in these judgments. Consistent with market signaling theory (e.g., Spence 1973), Healy and Palepu (1993) suggest that management can mitigate threats to the credibility of financial reports by providing expanded disclosures. Thus, if auditor disclosures threaten the credibility of reported amounts, then managers can mitigate users' concerns by voluntarily providing robust supplemental disclosures. However, if auditor disclosures threaten the credibility of reported amounts and management provides only limited disclosures that do not mitigate users' concerns, then users will weight these credibility threats in their valuation judgments (e.g., Holthausen and Watts 2001). Following this, we expect that when users weight second-order information in their valuation decisions, they will take less (more) price protection in this second-order information when management voluntarily provides (does not provide) robust supplemental disclosures.

Research consistently demonstrates that users attend to negative information in audit reports (e.g., Libby 1979; Schneider and Church 2008; Shelton and Whittington 2008). This suggests that second-order information about material measurement uncertainty will threaten the credibility of the related amounts. In H2, we predict that visual cues will facilitate nonprofessional investors' use of second-order information about material measurement uncertainty. Following this discussion, our third hypothesis predicts the following:

**H3: Robust supplemental management disclosures will mitigate the predicted negative valuation effects of second-order information that is accompanied by visual cues.**

In Figure 1, Point F represents the situation where the auditor's report provides a C*Aud*M disclosure with visual cues and management provides a supplemental C*Acct*M disclosure. In this situation, we predict that users will assess a P/E multiple of $n - x - z$, where $z$ represents the discount attributable to second-order information when management provides robust supplemental C*Acct*M disclosures. That is, $z$ represents (1) the discount attributable to the second-order information about material measurement uncertainty (i.e., $k$) plus (2) the premium attributable to the signaling effect of robust supplemental C*Acct*M disclosures (i.e., $t$) (e.g., Spence 1973; Healy and Palepu 1993). Thus, $z = k + t$. Additionally, $y$ represents (1) the discount $k$ plus (2) the discount attributable to the lack of supplemental C*Acct*M disclosures (i.e., $s$). Thus, $y = k +$ s. H3 predicts that the premium, $t$, is numerically greater than the discount, $s$ (i.e., $z > y$).

H3 has hypothetical implications in the context of the Heineken example in Appendix C. Recall that the Deloitte report does not provide visual cues and Heineken management does not provide supplemental disclosures. H2 predicts that if Deloitte provides visual cues in the audit report, nonprofessional investors will weight the second-order information (i.e., as well as the first-order information) in their valuation judgments. H3 predicts that Heineken management can mitigate the predicted effect of this second-order information on these valuation judgments by providing robust supplemental disclosures.

## III. EXPERIMENTAL METHOD

### Participants

Participants are 102 Masters of Business Administration (MBA) students from a required financial accounting course at a large public university in the United States. Participants completed the experiment near the end of the course after covering standard financial statement analysis material.[8] All participants received course credit and cash compensation of $20 for completing the experiment. We present descriptive statistics for participants' education, work, and investing experience in Table 1. Participants have a mean of 5.86 years of work experience, have taken 1.84 accounting courses and 1.70 finance courses, and are 28.91 years old. Participants have a mean of 3.35 years of investing experience and a mean GMAT score of 643.02. Forty-seven percent of participants have made personal investments in the stock market. Sixty-five percent of participants had previously evaluated a company's performance using

[8] Participants had the requisite coursework necessary to qualify as proxies for nonprofessional investors (e.g., Clor-Proell et al. 2014; Elliott, Hodge, Kennedy, and Pronk 2007). We obtained institutional review approval for the study and gave all participants the option to complete an alternative task (two students chose this option). The faculty member that instructed this course had no other involvement with this study.

financial statements. Thirty percent of participants are female and 86 percent of participants speak English at home.[9]

INSERT TABLE 1 HERE

**Materials and Procedures**

The instrument has five parts: instructions (Part I), pre-experiment information (Part II), company information (Part III), experimental manipulations (Part IV), and manipulation/ attention checks and demographics (Part V). See Appendix D for experimental materials.[10] Figure 2 summarizes the information provided, manipulations introduced, and data collected in each part. Participants must complete these five parts in order and cannot return back to a completed part. However, participants can navigate between screens within each of five parts. Part II provides participants with a brief overview of the fair value hierarchy in ASC 820 and lists representative examples of measurement inputs for each level in the hierarchy. Part II also provides definitions and formulas for the financial statement ratios presented in the experiment.

INSERT FIGURE 2 HERE

Part III provides information from the Investor Relations department of Trans-Global, Ltd, a publicly-traded mid-sized specialty manufacturer of tools. This information includes a company description, a press release for its 2011 annual results, comparative industry information, the company's 2011 income statement, and fair value disclosures from the company's 2011 earnings release. The information indicates the company is generally performing well and compares favorably to industry averages. Additionally, the income statement indicates the company earned net income of approximately $182 million, which

[9] We use a series of *t*-tests for each of these descriptive variables to test the random assignment performed by Qualtrics. We find differences in some of these variables across cells (i.e., investing experience, personal investments in the stock market, evaluating a company's performance using financial statements, and full-time work experience). We discuss this further in the Methods section; our results are robust to controlling for these variables.
[10] We adapted the instrument used in Clor-Proell et al. (2014) and thank those authors for sharing the instrument.

includes an investment gain of $60.4 million. The fair value disclosures contain boilerplate descriptions of the input levels in the fair value hierarchy and specifically state: "The entire amount of the $60,400,000 investment gain relates to Level 3 investment securities".

Part III also presents a series of six questions. The first question solicits participants' assessments of Trans-Global's P/E multiple using a continuous scale from 10 to 20.[11] The next two questions ask participants to rate Trans-Global's potential for future earnings growth and the risk of an investment in Trans-Global's common stock, respectively, on a continuous scale from 1 to 10. The following three questions ask participants to rate the degrees of relevance, reliability, and faithful representation, respectively, of Trans-Global's financial statements, on a continuous scale from 1 to 10.[12] We use these pre-treatment measurements to control for idiosyncratic differences in post-treatment measurements of our dependent variables in Part IV.

Part IV contains all experimental manipulations.[13] In all cells, we provide information from the auditor's report that indicates the auditor issued an unqualified opinion (see Appendix D, Panels A and B). We also provide all participants with the company's fair value footnote, which contains required ASC 820 disclosures (Appendix D, Panel C, Section 1). Participants that receive the management disclosure treatment view information that describes the material measurement uncertainty inherent in the company's Level 3 Trading Securities and the related gain (Appendix D, Panel D).[14]

---

[11] Following Clor-Proell et al. (2014) and Barton and Mercer (2005), the instrument conveys that (1) companies in this industry have historically had trailing P/E multiples ranging from 10 to 20, (2) a P/E multiple takes into account company and economy-wide factors, and (3) all else equal, higher P/E multiples result in higher stock prices.
[12] In these questions, we provide brief definitions of relevance and faithful representation derived from the joint FASB/International Accounting Standards Board (IASB) conceptual framework and a brief definition of reliability derived from the superseded FASB conceptual framework.
[13] We counter-balance manipulations to control for ordering effects.
[14] SEC guidance directs companies to "consider enhanced discussion and analysis of… critical accounting estimates and assumptions that… provides greater insight into the quality and variability of information regarding financial condition and operating performance" (SEC 2003). We adapted the wording for this manipulation from C*Acct*M discussions about Level 3 fair value measurements using annual reports for various public and private entities. Based on our own review of various C*Acct*M disclosures, the wording in these disclosures was particularly

We also administer the two auditor disclosure treatments in Part IV: auditor narrative disclosure and auditor visual disclosure. The information communicated in both of these treatments is identical. Both of these treatments indicate that the auditor's report contains a modification related to the reasonable assurance obtained over the company's "Investment gains" and "Level 3 trading securities". Both treatments indicate that the auditors audited these amounts by testing the processes that management used in developing the estimate. Both treatments also indicate that the auditors obtained reasonable assurance over a range of acceptable values and, although the reported amounts fall within a range of acceptable values, that range contains amounts that are materially different than the reported amount. Neither treatment mentions where the recorded point estimate falls within the acceptable range.

The auditor narrative disclosure and auditor visual disclosure treatments differ only in terms of presentation format. While auditor visual disclosure provides visual cues that identify the amounts in the financial statements to which this second-order information relates, auditor narrative disclosure does not. The auditor narrative disclosure treatment provides this second-order information and identifies the related amounts narratively in the body of the audit opinion (see Appendix D, Panel E). The auditor visual disclosure treatment includes a marked-up copy of the annual report as an attachment to the audit report (Appendix D, Panel F). In this marked-up copy, the auditor has labeled each amount with a letter (i.e., either an "A" or a "B"). The label "A" indicates the audit report does not contain specific second-order information about the respective amount. The label "B" indicates that the second-order information about material

transparent and forthcoming about (1) the judgment and uncertainty inherent in predicting future events, (2) the related measurement uncertainty and sensitivity of measurements to changes in assumptions, and (3) the possibility that estimates could change materially in the near-term. See Appendix B for examples of management disclosures about material measurement uncertainty.

measurement uncertainty in the body of the audit opinion relates to the respective amount. "B" appears next to the $60.4 million investment gain; "A" appears next to all other amounts.[15]

We designed both auditor disclosure treatments to operationalize a C*Aud*M disclosure in accordance with the PCAOB's proposed auditing standard for the auditor's reporting model (PCAOB 2016). Both treatments fulfill the proposed requirements that C*Aud*M disclosures: (1) identify the C*Aud*M, (2) describe the principal considerations that led the auditor to determine the matter is a C*Aud*M, (3) describe how the C*Aud*M was addressed in the audit, and (4) refer to the relevant financial statement accounts and disclosures that relate to the C*Aud*M (see PCAOB 2016, A1-9). The auditor narrative disclosure and auditor visual disclosure treatments differ only with respect to requirement (4).

Following the experimental manipulations in Part IV, participants complete the same six questions they responded to in Part III. Following Clor-Proell et al. (2014), we use participants' assessed P/E multiples from Part IV (i.e., post-treatment measures) as our dependent variable and control for participants' assessed P/E multiples from Part III (i.e., pre-treatment measures) in our models. Participants then complete an attention check question and a series of manipulation check questions in Part V. Following the experiment, we collect demographic information.

## IV. RESULTS

### Attention and Manipulation Checks

We include two questions to determine whether participants attended to the material measurement uncertainty inherent in the $60.4 million investment gain. Four of the 102 participants incorrectly answered a true/false question about whether the investment gain reflects

---

[15] Providing participants with the marked-up income statement and marked-up summary of fair value disclosures in the auditor visual disclosure treatment re-exposed those participants to financial information. We therefore provided non-marked-up copies of both the income statement and the fair value disclosures to all participants that did not receive the auditor visual disclosure treatment to avoid a potential procedural confound.

significant management assumptions; we exclude these responses from the analyses. We also ask participants to rate the precision of the investment gain on a scale from one ("Not Precise at All") to seven ("Very Precise"). The mean response of 2.80 indicates that participants attended to the material measurement uncertainty construct.[16]

We also include closed-ended and open-ended manipulation check questions. In closed-ended questions, 18 of the remaining 98 did not correctly indicate the specific mechanism(s) used to communicate material measurement uncertainty.[17] We use open-ended questions to allow participants to demonstrate an understanding of how management and the auditor communicated material measurement uncertainty. Twelve of the 18 participants that missed a closed-ended question indicated a correct understanding of the respective disclosure mechanisms in the related open-ended question.[18] We exclude responses from the six participants who failed both the open- and closed- ended manipulation check questions, resulting in a final sample of 92.[19]

**Hypothesis Tests**

We present descriptive statistics on P/E judgments in Table 2. Table 3 presents results from our hypothesis-testing 2 X 3 ANCOVA model, which uses post-treatment P/E multiple assessments

[16] Measurement uncertainty is a component of estimation uncertainty, which is characterized by the distinct constructs of subjectivity and imprecision (e.g., Nelson, Smith, and Palmrose 2005; Bratten et al. 2013; Griffin 2014). Our attention check results show participants attended to both constructs.
[17] Four participants that did not receive either of the auditor disclosure treatments failed to indicate that the auditor's report contained no modifications to the standard wording. Four participants that received the management disclosure treatment failed to indicate that management communicated the material measurement uncertainty associated with the investment gain. Eight (two) participants that received the auditor narrative disclosure (auditor visual disclosure) treatment failed to indicate that the audit report communicated the material measurement uncertainty through an explanatory paragraph (labels in copies of financial statements).
[18] A second-year PhD student not associated with this project made these determinations. This individual was blind to the research questions and to experimental conditions. This individual has twelve years of public accounting experience and held the title of "Senior Manager" at a Big Four firm prior to entering a PhD program.
[19] Inferences are unchanged when we exclude all 18 participants that answered one or more closed-ended manipulation check questions incorrectly.

as the dependent variable and pre-treatment P/E multiple assessments as a covariate.[20] We present graphical illustrations of our results in Figure 3.

With respect to the random assignment performed by Qualtrics, we perform a series of *t*-tests to examine whether means of any descriptive variables differ between cells. Compared to participants in other conditions, participants that receive only the auditor visual disclosure treatment (i.e., Cell "E" in Table 2) less commonly made personal investments in the stock market and have less investing experience, less experience evaluating a company by analyzing its financial statements, and less full-time work experience. Similarly, participants that receive only the auditor narrative disclosure treatment (i.e., Cell "C") more commonly made personal investments in the stock market and have more investing experience and more experience evaluating a company by analyzing its financial statements. Our results are similar when we control for all possible combinations of these four variables and only full-time work experience approaches marginal significance when we include it in our 2 X 3 ANCOVA model ($F = 2.58$, $p = 0.11$, two-tailed). We therefore control full-time work experience in our hypothesis-tests.[21]

INSERT TABLES 2 AND 3 HERE

In our 2 X 3 hypothesis-testing ANCOVA model, we find a significant interaction between management disclosure and auditor communication ($F = 4.12$, $p < 0.01$, one-tailed). This is consistent with our predictions of conditional effects in H1, H2, and H3 and indicates that main effects in this model cannot be sensibly interpreted (Keppel and Wickens 2004, 197). We test H1 using the planned contrast in Table 3, Panel B (i.e., Cell A > [Cell B + Cell C + Cell D]/3). Consistent with H1, this contrast is significant ($F = 7.50$, $p < 0.01$). Additional pairwise

[20] This ANCOVA design enables us to use each participant as his/her own control when analyzing treatment effects (i.e., a pretest posttest design). Clor-Proell et al. (2014) note that controlling for pre-treatment measures is preferable to analyzing changes. We obtain similar results when analyzing changes in participants' P/E multiple assessments.
[21] Results are essentially the same, and inferences are unchanged, when we exclude this control from the model.

comparisons show that the effect of auditor narrative disclosure is negative when management disclosure is absent ($F = 4.05$, $p = 0.02$, one-tailed) and the effect of management disclosure is negative when auditor narrative disclosure is absent ($F = 6.07$, $p < 0.01$, one-tailed). Further consistent with H1, pairwise comparisons indicate that the effect of auditor narrative disclosure is insignificant when management disclosure is present ($F = 0.02$, $p = 0.89$, two-tailed) and that the effect of management disclosure is insignificant when auditor narrative disclosure is present ($F = 0.20$, $p = 0.65$, two-tailed).[22] This pattern of results suggests a substitution effect, whereby fully-narrative C*Aud*M disclosures do not influence nonprofessional investors' valuation judgments when management provides robust supplemental C*Acct*M disclosures.

H2 predicts that visual cues will facilitate nonprofessional investors' weighting of second-order information in valuation decisions. Research shows that several user groups consider second-order information in C*Aud*M disclosures to be "bad news" (e.g., Backof et al. 2014; Christensen et al. 2014; Kachelmeier et al. 2014; Brasel et al. 2016). Therefore, in conditions where management disclosure is absent, we expect participants who weight second-order information to assess lower P/E multiples than those who do not. We test this prediction using the planned pairwise comparisons in Table 3, Panel C. Consistent with H2, participants assess marginally lower P/E multiples when only auditor visual disclosure is present (Cell E) than when only auditor narrative disclosure is present (Cell C) ($F = 2.30$, $p = 0.07$, one-tailed). P/E multiple assessments in Cell E are also lower than those across Cell C and Cell D (i.e., both conditions with the auditor narrative disclosure treatment) ($F = 97.53$, $p < 0.01$). Collectively, our H1 and H2 results suggest that while second-order information is value-relevant,

[22] We also use the "two one-way significance tests" approach to test whether adjusted P/E multiple assessments in Cell D are statistically equivalent to those in Cell C and Cell B. Consistent with H1, mean adjusted P/E multiple assessment in Cell D are lower than the upper limit and higher than the lower limit of the 95% confidence interval of the adjusted mean for both Cell B ($F = 3.56$, $p = 0.03$ and $F = 2.38$, $p = 0.06$, respectively) and Cell C ($F = 6.44$, $p = 0.01$ and $F = 1.67$, $p = 0.10$, respectively) (see Table 3, Panel B; all $p$-values are one-tailed).

nonprofessional investors do not weight this information when it is presented in a fully-narrative format. Additionally, visual cues facilitate this weighting.

INSERT TABLE 3 HERE

Our third hypothesis predicts that participants will incorporate management disclosure in their valuation judgments differently under an auditor narrative disclosure regime versus an auditor visual disclosure regime. Following market signaling theory (e.g., Spence 1973; Healy and Palepu 1993), we predict that robust supplemental first-order information (i.e., in the management disclosure treatment) will mitigate potential negative effects of second-order information (i.e., in the auditor communication treatments) on P/E multiple assessments. Following H1 and H2, we further predict the mitigating effect of management disclosure will exist in an auditor visual disclosure regime, but not in an auditor narrative disclosure regime. We test H3 using the planned pairwise comparisons in Table 3, Panel D. Consistent with H3, participants assess P/E multiples higher in response to the management disclosure treatment when auditor visual disclosure is present (i.e., Cell F > Cell E; $F = 2.80$, $p < 0.05$), but not when auditor narrative disclosure is present (i.e., Cell C vs. Cell D; $F = 0.20$, $p = 0.65$). Further, the effect of management disclosure is different (i.e., less negative or more positive) in the auditor visual disclosure regime than in the auditor narrative disclosure regime (i.e., [Cell F - Cell E] > [Cell D - Cell C]; $F = 2.30$, $p = 0.07$). If managers attend to this signaling potential, these results suggest that visual cues in auditor reports may promote transparency around material measurement uncertainty through enhanced supplemental C*Acct*M disclosures.

INSERT FIGURE 3 HERE

**Additional Analyses**

While we ran our experiment using a fully factorial 2 X 2 X 2 design, we omit from our empirical analyses certain cells that reflect situations we would not expect to see in practice.

Including cells where auditor narrative disclosure and auditor visual disclosure interact introduces noise and reduces model power. However, results using a fully factorial 2 X 2 X 2 ANCOVA model (untabulated) yield inferences that are identical to those from our hypothesis-testing model. We further analyze our data using a two separate 2 X 2 ANCOVA models to test the respective auditor narrative disclosure and auditor visual disclosure regimes. Results from a 2 X 2 ANCOVA with management disclosure (absent versus present) and auditor narrative disclosure (absent versus present) yield the same inferences with respect to H1 as our hypothesis-testing model. Additionally, comparing results from this 2 X 2 ANCOVA model with results from a 2 X 2 ANCOVA model with management disclosure and auditor visual disclosure (absent versus present) yields the same inferences with respect to H3 as our hypothesis-testing model.

## V. CONCLUSION

We jointly examine the value relevance of first-order and second-order information about material measurement uncertainty. We also examine whether visual cues in auditor reports influence the way nonprofessional investors weight both first-order and second-order information about material measurement uncertainty in their valuation judgments. Our results reveal that robust supplemental management disclosures and fully-narrative auditor disclosures are substitutes in communicating information about underlying material measurement uncertainty to nonprofessional investors. This is consistent with research that does not find an effect of auditor disclosures on security prices (e.g., Lennox et al. 2015) and suggests that auditor disclosures become more important when management does not provide robust supplemental disclosures. Our results also reveal that nonprofessional investors react more strongly to second-order information when auditor disclosures provide visual cues. Collectively, these results suggest that nonprofessional investors weight second-order information when auditor disclosures include visual cues, but not when audit reports present disclosures in a fully-narrative format.

Our results also reveal that visual cues change the way nonprofessional investors weight both first-order and second-order information about material measurement uncertainty. Consistent with market signaling theory (e.g., Spence 1973), nonprofessional investors assess *higher* P/E multiples in response to robust supplemental management disclosures when audit reports communicate second-order information using visual cues. These results suggest that visual cues in auditor reports will incentivize managers to provide robust supplemental C*Acct*M disclosures. Future research might examine how managers respond to these incentives.

Our findings incrementally contribute to prior research on three dimensions. First, we jointly examine the value relevance of first-order and second-order information about material measurement uncertainty. We draw the critical distinction between first-order C*Acct*M information and second-order C*Aud*M information. We also clarify that both C*Acct*M disclosures and C*Aud*M disclosures provide *different* information about the *same* underlying issues. Second, we demonstrate the importance of presentation format and visual cues in communicating second-order information about material measurement uncertainty. Collectively, our findings suggest that the valuation implications of C*Aud*M disclosures are conditional on the presentation format of these disclosures and the quality of management's C*Acct*M disclosures.

Third, we identify visual cues currently used by auditors in practice that appear to facilitate users' weighting of disclosed information. In doing so, we contribute to research on recognition versus disclosure (e.g., Bernard and Schipper 1994; Davis-Friday et al. 1999; Hirshleifer and Teoh 2003; Davis-Friday et al. 2004; Ahmed et al. 2006; Müller, Reidl, and Sellhorn 2015). Namely, our findings suggest visual cues can help bridge the documented gap in the decision usefulness of recognized versus disclosed accounting information.

Our findings have interesting implications for regulation, practice, and future research. Visual cues can be readily used in the context of the proposed PCAOB requirement that C*Aud*M disclosures "identify the relevant financial statement accounts and disclosures that relate to critical auditing matters" (PCAOB 2016, A1-9). C*Aud*M disclosures can relate to many amounts in different places throughout an annual report. Our findings suggest that effective implementation of this requirement will directly influence whether users can process the second-order information in these disclosures. The PCAOB has not yet addressed the potential implementation of this proposed requirement; our findings can inform conversations among financial reporting stakeholders about potential upcoming implementation decisions.

Additionally, the FASB and SEC allow issuers significant discretion in implementing disclosure practices related to material measurement uncertainty (SEC 2003; FASB 2010a). Research, in turn, suggests significant (and sometimes strategic) variation exists in these disclosure practices (e.g., Ettredge et al. 2011; Ernst and Young 2014). Our findings highlight the importance of robust supplemental disclosures in reducing information asymmetry around material measurement uncertainty. Our findings also imply that managers can use robust supplemental disclosures to mitigate potentially detrimental valuation effects of C*Aud*M disclosures. If managers attend to this signaling potential, visual cues in auditor reports may promote transparency from management. Future research can continue to examine how changes to the auditors' reporting model might influence managers' discretionary disclosure practices. Future research might also examine management's use of visual cues to link recognized amounts to disclosed information.

Our experimental materials reflect two design choices that we made to maximize consistency with practice and facilitate valid theoretical inferences using our sample of MBA student participants. First, based on feedback during pilot testing, we used the following wording to introduce the auditor narrative disclosure and auditor visual disclosure treatments "The auditor's report contains the following **one modification** to the standard wording of a **clean**

**opinion**" (emphasis in instrument). It is possible that some participants incorrectly inferred that the auditor issued a qualified opinion. However, we would expect participants that draw such an inference to take incremental price protection and we do not observe this response to either treatment in our results. Second, due to the format in the auditor narrative disclosure and auditor visual disclosure treatments, the ordering of information differs, by necessity, between these treatments. To control for potential recency effects, we designed our instrument such that the last piece of information that we convey in both conditions is the amounts that relate (and do not relate) to the C*Aud*M. We communicate this information narratively (visually) in the auditor narrative disclosure (auditor visual disclosure) treatment. Additionally, it is difficult to predict whether and how primacy or recency effects would influence our results.

Our study is subject to certain limitations. We explore only specific types of management and auditor disclosures and only one level of material measurement uncertainty. Unexplored levels of each of these three independent variables could have a different effect on investor decision making than those we document in the present study. We focus on those possibilities that seem most feasible given the current state of financial accounting and auditor regulation. We also acknowledge that the effects of our treatments likely depend on the significance of the account in question. Future research can examine management and auditor disclosures related to ranges of acceptable values for estimates that reflect material measurement uncertainty. Future research can also examine whether the effects of auditor disclosures differ for aggressive versus conservative (or neutral) estimates. Further, this study measures investors' reaction to a novel new disclosure (C*Aud*Ms) and novel visual cues. It is possible that the effects we detect will change over repeated exposures that act to reduce this novelty.

## APPENDIX A
## Excerpts from a Recent Letter to an Underwriter

Note: Below are excerpts from an actual recent Agreed Upon Procedures Letter issued by a large international accounting firm. These excerpts illustrate auditor visual disclosure. Omitted wording is indicated by an "..." and redacted identifying information has been replaced with a string of "X"s.

***Panel A: Wording in Body of Comfort Letter***

"...We have not audited any financial statements of XXXXX as of any date or for any period subsequent to XXX 3X, 20XX. Although we have conducted an audit for the year ended XXX 3X, 20XX, the purpose (and therefore the scope) of the audit was to enable us to express our opinion on the consolidated financial statements as of XXX 3X, 20XX and for the year then ended, but not on the consolidated financial statements for any interim period within that year. Therefore, we are unable to and do not express any opinion on the unaudited consolidated financial information as of and for the four-month periods ended XXX 3X, 20XX and 20XX, included in the Preliminary Official Statement, or on the financial position, results of operations, or cash flows as of any date or for any period subsequent to XXX 3X, 20XX...

At your request, we have read the items identified by you on the attached pages of the Preliminary Offering Statement and have performed the procedures indicated in Attachment A, which were applied as indicated with respect to the letters explained therein...

**Attachment A to the Letter Dated XXX XX, 20XX**
**XXXXX, Inc.**

*In all instances where we compared amounts, percentages or ratios and found such amounts, percentages or ratios to be in agreement, such agreement is after rounding or truncating as deemed appropriate by XXXXX, Inc. and Affiliates ("XXXXX"). In addition, we make no comment as to reasons for any increase or decrease, or as to the specific components of the amount or percentage or the definitions of certain terms.*

Letter key to certain procedures:

(A) Compared or agreed to amount or amount derived from the audited consolidated financial statements of XXXXX as of XXX 3X, 20XX and 20XX, and for the years then ended... and found them to be in agreement after giving effect to rounding, if applicable...

(B) Compared the amount to XXXXX's internally generated accounting records and related schedules and found it to be in agreement after giving effect to rounding, if applicable.

(C) Recalculated based on amounts in XXXXX's audited consolidated financial statements noted in (A) above and found the amounts to be in agreement after giving effect to rounding, if applicable. However, we make no comment with respect to any indicated causal relationship.

(D) Recalculated based on amounts from XXXXX's internally generated accounting records and related schedules and found them to be in agreement after giving effect to rounding, if applicable. However, we make no representation as to the completeness of these analyses or to any indicated causal relationships..."

**APPENDIX A**
**Excerpts from a Recent Letter to an Underwriter (continued)**

***Panel B (continued): Excerpts from Preliminary Offering Statement referenced in letter in Panel A ("Circle-ups")***

Note: The Preliminary Offering Statement contains several sections. The excerpts below are from the "Selected Statistical and Financial Information" section and the "Management's Discussion and Analysis" section.

## MANAGEMENT'S DISCUSSION AND ANALYSIS

**Four Months Ended January 31, 2012** D

B

For the four months ended XXX 3X, 20XX ("*Fiscal Period 20XX*"), income from operations of $22.7 million was $0.4 million better than the prior fiscal year ("*Fiscal Period 20XX*"). Operating cash flow approximated Fiscal Period 20XX.

B D D

XXXXX at most XXXXX locations were down slightly and, in total, were 1.1% lower than Fiscal Period 20XX. Management had planned for flat XXXXX compared to the prior year. Gross XXXXXX and XXXXX revenue in Fiscal Period 20XX was $20.0 million higher than Fiscal Period 20XX as a result of increased XXXXX volumes and XXXXX intensity. The XXXXX and XXXXX mix was somewhat higher in Fiscal Period 20XX compared to Fiscal Period 20XX, resulting in an increased XXXXX ratio. This has been a continued trend. Other Operating Revenue was $1.2 million higher than Fiscal Period 20XX, which was primarily driven by $1.5 million of revenue recorded in relation to XXXXX payment from XXXXX.

## APPENDIX B
## Example management disclosures of material measurement uncertainty

Below are excerpts from recent audited annual reports and practitioner guidance that we used in developing the Management Disclosure treatment.

***Company A (privately held technology company): Goodwill Footnote***

"It is at least reasonably possible that management's estimate resulting in an impairment not being recorded will change in the near term and the effects of the change could be material to the financial statements."

***Company B (RDK 10/1/2013 10-K): Critical Accounting Policy disclosures in MD&A***

"The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions about future events that affect the reported amounts of assets, liabilities, revenues and expenses and the disclosures of contingent assets and liabilities. Future events and their effects cannot be determined with absolute certainty. Therefore, management's determination of estimates and judgments about the carrying values of assets and liabilities requires the exercise of judgment in the selection and application of assumptions based on various factors including historical experience, current and expected economic conditions and other factors believed to be reasonable under the circumstances. Actual results could differ from those estimates. The Company constantly reviews the relevant, significant factors and makes adjustments where the facts and circumstances dictate.

Management has identified the following accounting policies as the most critical in the preparation of the Company's financial statements because they involve the most difficult, subjective or complex judgments about the effect of matters that are inherently uncertain."

***Guide to annual financial statements - Illustrative disclosures for banks (KPMG 2013): Fair Value Footnote***

"For more complex instruments, the Group uses proprietary valuation models, which are usually developed from recognized valuation models. Some or all of the significant inputs into these models may not be observable in the market, and are derived from market prices or rates or are estimated based on assumptions. Examples of instruments involving significant unobservable inputs include certain over-the-counter (OTC) structured derivatives, certain loans and securities for which there is no active market and retained interests in securitizations (as discussed below). Valuation models that employ significant unobservable inputs require a higher degree of management judgment and estimation in the determination of fair value. Management judgment and estimation are usually required for selection of the appropriate valuation model to be used, determination of expected future cash flows on the financial instrument being valued, determination of the probability of counterparty default and prepayments and selection of appropriate discount rates."

**Appendix C**
**Example of Auditor Disclosure of Material Measurement Uncertainty without Accompanying Supplemental Management Disclosure**

**Note**: Panel A and Panel B below contain excerpts from the 2015 Heineken N. V. Annual Report (Heineken 2015). Panel A includes all of the first-order information about returnable packaging deposits that management provided in the Annual Report (i.e., only the reported amount of the related liability). Panel B includes the excerpt from Deloitte's opinion that identifies a "key audit matter" around the valuation of the liability for returnable packaging deposits.

**Panel A: Management disclosure of liability (page 114)**

**31. Trade and other payables**

| In millions of EUR | Note | 2015 | 2014 |
|---|---|---|---|
| Trade payables | | 2,797 | 2,339 |
| Accruals and deferred income | | 1,270 | 1,211 |
| Taxation and social security contributions | | 806 | 802 |
| Returnable packaging deposits | | 606 | 580 |
| Interest | | 131 | 132 |
| Derivatives | | 89 | 104 |
| Dividends | | 46 | 45 |
| Other payables | | 268 | 320 |
| | 32 | 6,013 | 5,533 |

<u>**Note**</u>: Management does not provide a narrative explanation of these returnable packaging deposits anywhere in the annual report.

**Panel B: Auditor disclosure of material measurement uncertainty in liability (page 143)**

*Returnable packaging – valuation of deposit liability*
During the course of business the Company provides returnable packaging to its customers. In most instances the Company collects deposits for returnable packaging. A particular area of judgement is involved in assessing the value of the deposit liability. There is a risk that the assumptions used in the calculation of the liability for returnable packaging are unreasonable, which could result in an incorrect valuation of the liability for returnable packaging. As a response to this risk we performed, amongst others, substantive procedures on the Company's calculation of the returnable packaging liability, focusing on the valuation and completeness of the deposit liability.

**APPENDIX D**
**Experimental materials**

***Panel A: Default audit report information***

Note: Participants that did not receive either the Auditor Narrative Disclosure or Auditor Visual Disclosure Treatments (i.e., Cell A and Cell B) viewed the following information related to the company's audit report in Part IV.

**INFORMATION ON THE INDEPENDENT AUDITOR'S REPORT**

The company's auditors issued a **clean opinion**[1] on the 2011 and 2010 financial statements and footnotes. The auditor's report contains **no modification** to the standard wording of a **clean opinion**.

[1] A **clean opinion** is issued when the independent auditor believes that the company's financial statements are sound; that is, the statements are fairly and appropriately presented, and in accordance with GAAP. A **clean opinion** is the most common type of auditor's report and is referred to in auditor vernacular as an **"unqualified opinion."**

***Panel B: Audit report information when modifications are present***

Note: Participants that received either the Auditor Narrative Disclosure treatment (i.e., Cell C and Cell D) or the Auditor Visual Disclosure treatment (i.e., Cell E and Cell F) viewed a screen with the following information related to the company's audit report in Part IV.

**INFORMATION ON THE INDEPENDENT AUDITOR'S REPORT**

The company's auditors issued a **clean opinion**[1] on the 2011 and 2010 financial statements and footnotes. The auditor's report contains the following **one modification** to the standard wording of a **clean opinion (click ahead to view the modification)**:

[1] A **clean opinion** is issued when the independent auditor believes that the company's financial statements are sound; that is, the statements are fairly and appropriately presented, and in accordance with GAAP. A **clean opinion** is the most common type of auditor's report and is referred to in auditor vernacular as an **"unqualified opinion."**

**APPENDIX D**
**Experimental materials (continued)**

***Panel C: Default annual report information***

*Section 1: Baseline measurement uncertainty information*

Note: Participants that did not receive the Auditor Visual Disclosure treatment viewed this information, exactly as presented below, in Part IV (i.e., Cell A, Cell B, Cell C, and Cell D). Participants that received the Auditor Visual Disclosure treatment viewed this information, as presented in Panel F, Section 3 of this appendix, in Part IV (i.e., Cell E and Cell F). Because the Auditor Visual Disclosure treatment contains this information by design, we also provided this information to participants that did not receive the Auditor Visual Disclosure treatment to avoid an information confound.

The Fair Value Accounting Footnote from TransGlobal's 2011 annual report provides additional information on the "Investment gains" of $60,400,000 reported in its 2011 income statement. The footnote states the following:

> "The Company uses fair value accounting for its trading securities. Fair value is measured based upon observable and unobservable inputs. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect the Company's assumptions. These two types of inputs create the following hierarchy:
>
> - Level 1 – Quoted prices for identical instruments in active markets
> - Level 2 – Quoted prices for similar instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations whose inputs are observable
> - Level 3 – Model-derived valuations that reflect the Company's own assumptions and projections"

Additionally, the footnote contains standard disclosures that show the following:

- The entire amount of the $60,400,000 investment gain relates to "Level 3 investment securities."

| Shares Outstanding | 100,000 |

**APPENDIX D**
**Experimental materials (continued)**

***Panel D: Management Disclosure treatment***

**INFORMATION ON THE NOTES TO THE AUDITED FINANCIAL STATEMENTS AND MANAGEMENT'S DISCUSSION AND ANALYSIS**

The company has included disclosures in the notes to the audited financial statements (**"Footnotes"**) and management's discussion and analysis (**"MD&A"**) sections of its annual report that indicate the following:

- Management made assumptions about future events in estimating the fair value of the Level 3 Trading securities and the related gains on these investments. Future events and their effects cannot be determined with absolute certainty. Therefore, the measurement of these amounts required significant judgment.
- Management calculated the fair value of the Level 3 Trading securities and the related gains on these investments using a proprietary model, i.e., one that was developed "in-house" and by using company-specific assumptions.
- Management considered reasonable alternative assumptions in making these estimates, and these alternative assumptions yielded amounts that are materially different than the amounts ultimately reported in the financial statements.
- **It is at least reasonably possible that management's estimate resulting in an Investment Gain will change in the near term and the effects of the change could be material to the financial statements. (A change is material if it is important enough to influence decisions of financial statement users.)**

***Panel E: Auditor Narrative Disclosure treatment***

Note: Participants that received the Auditor Narrative Disclosure treatment viewed the information below (i.e., Cell C and Cell D).

**Modification # 1: The auditor's report includes an explanatory paragraph, which states that the amounts reported as "Investment gains" and "Level 3 trading securities" in the financial statements and footnotes are materially imprecise estimates**. This explanatory paragraph further indicates the following information:

- The auditors evaluated the reasonableness of these amounts by reviewing and testing the process used by management to develop the estimate.
- For these materially imprecise estimates, the auditors obtained reasonable assurance over a range of acceptable values. Although the amounts reported in the financial statements are each within a range of acceptable values, that range contains amounts that are materially different than the amount ultimately reported in the financial statements.
- For all amounts reported in the financial statements, other than the amounts reported as "Investment gains" and "Level 3 trading securities," the auditors obtained reasonable assurance that the reported amount is free from material misstatement.

**APPENDIX D**
**Experimental materials (continued)**

***Panel F: Auditor Visual Disclosure treatment***

Note: Participants that received the Auditor Visual Disclosure treatment viewed the information in Section 1, Section 2, and Section 3 of this panel (i.e., Cell E and Cell F). Participants that did not receive the Auditor Visual Disclosure treatment did not view this information.

*Section 1: Language in auditor's report*

**Modification # 1: The auditor's report contains language that describes the nature of the audit procedures performed over different amounts in the financial statements. The auditor has indicated the nature of the procedures performed for each amount in the financial statements by placing a letter (i.e., either "A" or "B") next to each reported amount.** The language in the auditor's report indicates the following:

A. For amounts labeled with an "A," the auditors obtained reasonable assurance that the reported amount is free from material misstatement.

B. The amounts labeled with a "B" are materially imprecise estimates. The auditors evaluated the reasonableness of these amounts by reviewing and testing the process used by management to develop the estimate, and the auditors obtained reasonable assurance over a range of acceptable values. Although the amounts reported in the financial statements are each within a range of acceptable values, that range contains amounts that are materially different than the amount ultimately reported in the financial statements.

**APPENDIX D**
**Experimental materials (continued)**

***Panel F: Auditor Visual Disclosure treatment (continued)***

*Section 2: Audit report attachments (Income Statement)*

Note: The following information appeared below the image in Appendix D, Panel F, Section 1. Participants that did not receive the Auditor Visual Disclosure treatment (i.e., Cell A, Call B, Cell C, and Cell D) viewed the information in Appendix D, Panel C, Section 1 in Part IV to avoid an information confound.

**SELECTED ANNUAL REPORT INFORMATION FROM AUDITOR'S REPORT**

Below is a copy of the income statement included in the auditor's report (**Note**: The amounts are identical to those in the Earnings Release in Part A.)

***Panel F: Auditor Visual Disclosure treatment (continued)***

*Section 3: Audit report attachments (Fair Value Footnote)*

Note: The following information appeared below the image in Appendix D, Panel F, Section 2. Participants that did not receive the Auditor Visual Disclosure treatment (i.e., Cell A, Call B, Cell C, and Cell D) viewed the image in Appendix D, Panel C, Section 2 in Part IV to avoid an information confound.

**SELECTED ANNUAL REPORT INFORMATION FROM THE AUDITOR'S REPORT**

Below is a summary of the Fair Value Disclosures included in the Auditor's Report. (**Note**: The amounts are identical to those in the Earnings Release in Part A.)

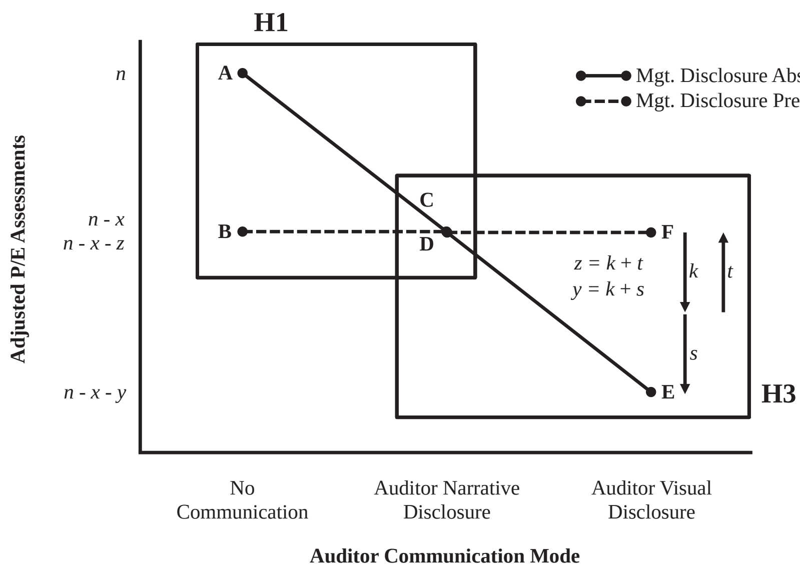
The Fair Value Accounting Footnote from TransGlobal's 2011 annual report provides additional information on the "Investment gains" of $60,400,000 B reported in its 2011 income statement. The footnote states the following:

> "The Company uses fair value accounting for its trading securities. Fair value is measured based upon observable and unobservable inputs. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect the Company's assumptions. These two types of inputs create the following hierarchy:
>
> - Level 1 – Quoted prices for identical instruments in active markets
> - Level 2 – Quoted prices for similar instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations whose inputs are observable
> - Level 3 – Model-derived valuations that reflect the Company's own assumptions and projections"

Additionally, the footnote contains standard disclosures that show the following:

- The entire amount of the $60,400,000 (B) investment gain relates to "Level 3 investment securities." This amount is labeled with a "B."

**FIGURE 1**
**Illustration of Hypotheses**



**<u>HYPOTHESES</u>**

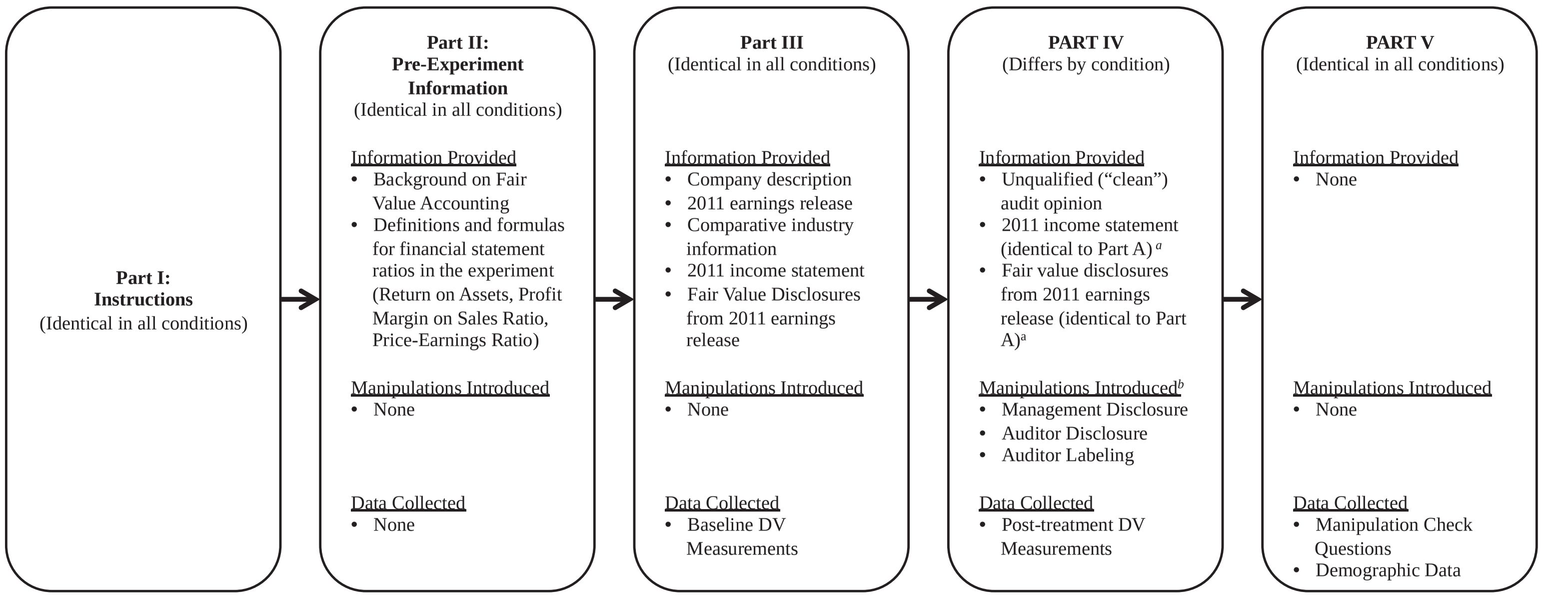
**H1:** D = B
D = C
A > (B + C + D) / 3

**H2:** E < C

**H3:** (F – E) > (D – C)

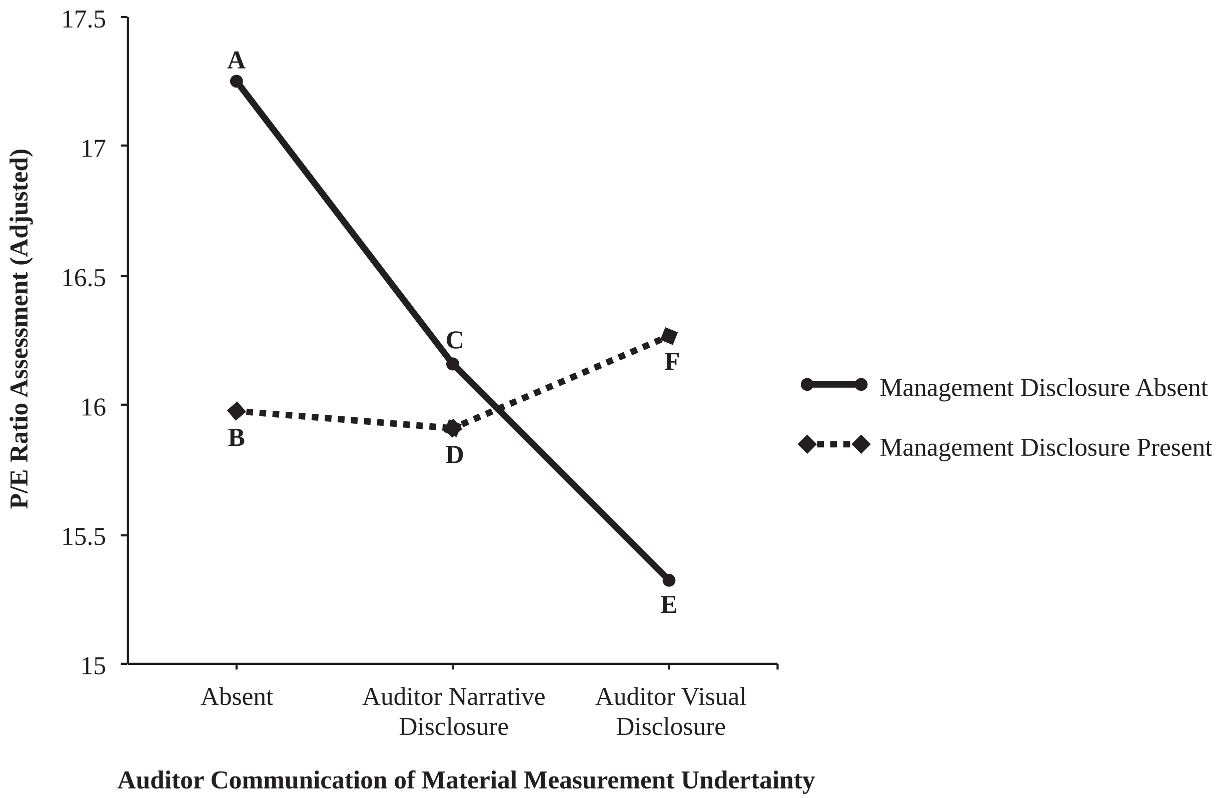
**Note:** The labels on this graph represent our operational dependent and independent variables, which differ slightly from the terms we use when developing theoretical predictions. Management disclosure corresponds to robust supplemental C*Acct*M disclosures from management. Auditor narrative disclosure corresponds to fully-narrative C*Aud*M disclosures. Auditor visual disclosure corresponds to C*Aud*M disclosures with visual cues. The mapping of cells A through F in this figure corresponds to the mapping in Table 2 (i.e., Management Disclosure is absent in Cell C and present in Cell D). With respect to H2 and H3, $y$ represents the valuation effect of second-order information when management does not provide supplemental C*Acct*M disclosures. This is comprised of 1) the discount attributable to the second-order information about material measurement uncertainty (i.e., $k$) plus 2) the discount attributable to the lack of supplemental C*Acct*M disclosures (i.e., $s$). Thus, $y = k +$ s. Additionally, $z$ represents the discount attributable to second-order information when management does provide supplemental C*Acct*M disclosures. This is comprised of 1) the discount attributable to the second-order information about material measurement uncertainty (i.e., $k$) plus 2) the premium attributable to the signaling effect of robust supplemental C*Acct*M disclosures (i.e., $t$). Thus, $z = k + t$.

**FIGURE 2**
**Overview of Experimental Instrument and Procedures**



Notes: Participants can navigate between screens within each of the five parts of the experiment. Participants must complete the experiment in order and must complete each part before navigating to the next part. Participants cannot navigate back to a completed part of the experiment. [a] We provide these items to participants in conditions where the Auditor Visual Disclosure treatment is absent only. The Auditor Visual Disclosure treatment includes versions of these materials that include auditor-defined labels and that are presented as part of the auditor's report. We include copies of both the 2011 income statement and the fair value disclosures from the 2011 earnings release in conditions where the Auditor Visual Disclosure treatment is absent to avoid a potential procedural confound. [b] We counter balance all manipulations to control for order effects. We utilize all potential treatment orderings, except for [Auditor Narrative Disclosure – Management Disclosure – Auditor Visual Disclosure] and [Auditor Visual Disclosure – Manager Disclosure – Auditor Narrative Disclosure], which interrupt the presentation of the auditor's report.

**FIGURE 3**
**Valuation Judgment Results**
**(2 X 3 ANOVA with Management Disclosure and Auditor Communication)**



**Notes**: The *dependent variable* is participants' P/E multiple assessments on a scale from 10 to 20 after viewing any experimental manipulations, adjusted for variation in participants' P/E multiple assessments prior to viewing manipulations. We manipulate *Management Disclosure* at two levels (present or absent), between participants. Participants that receive the *Management Disclosure* treatment view robust supplemental C*Acct*M disclosures related to measurement uncertainty inherent in a Level 3 investment. There is no reference to these C*Acct*M disclosures in conditions where *Management Disclosure* is absent. We manipulate *Auditor Communication* at three levels, between participants. Participants in all conditions learn that the auditor issued an unqualified opinion. Participants in the *Auditor Disclosure Absent* condition learn that there are no modifications to the standard wording of an unqualified opinion. Participants that receive the *Auditor Narrative Disclosure* treatment view information from a C*Aud*M disclosure in the audit report that narratively identifies the related amounts. Participants that receive the *Auditor Visual Disclosure* treatment view information from a C*Aud*M disclosure in the audit report that visually identifies the related amounts. The mapping of cells A through F in this figure corresponds to the mapping in Figure 1 and Table 2.

**TABLE 1**

**TABLE 2**
**P/E Multiple Assessment Descriptive Results**

***Panel B: Adjusted P/E Multiple Assessments from 2 X 3 ANOVA with Management Disclosure and Auditor Communication (absent vs. auditor narrative disclosure vs. auditor visual disclosure): Adjusted Mean (SE) [n] Cell***

| | | **Management Disclosure:** | |
|---|---|---|---|
| | | Absent | Present |
| **Auditor Communication:** | Absent | 17.25<br>(0.39)<br>[15]<br>A | 15.98<br>(0.34)<br>[19]<br>B |
| | Auditor Narrative Disclosure | 16.16<br>(0.38)<br>[15]<br>C | 15.91<br>(0.40)<br>[14]<br>D |
| | Auditor Visual Disclosure | 15.32<br>(0.39)<br>[15]<br>E | 16.27<br>(0.40)<br>[14]<br>F |

**Note**: This table presents *Adjusted P/E Multiple Assessment*, which represent participants' P/E multiple assessments after viewing any experimental manipulations, adjusted for variation in participants' P/E multiple assessments prior to viewing any experimental manipulations. A lower *Adjusted P/E Multiple Assessment* indicates a stronger effect of the manipulation(s) on participants' judgments. Participants assess P/E multiples on an 11-point scale anchored by 10 and 20.

**TABLE 3**
**Hypothesis Testing Models**

***Panel A: 2 X 3 ANOVA – Management Disclosure × Auditor Communication (Model 1)***

| Source | Sum of Squares | df | *F* | *p > F* |
|---|---|---|---|---|
| Management Disclosure | 0.85 | 1 | 0.38 | 0.27 |
| Auditor Communication | 11.23 | 2 | 2.53 | 0.04 |
| Management Disclosure × Auditor Communication **(Test of H1)** (one-tailed *p*-value) | 18.29 | 2 | 4.12 | 0.01 |
| Pre-treatment P/E assessment | 228.21 | 1 | 102.82 | 0.00 |
| Full-time work experience | 5.73 | 1 | 2.58 | 0.11 |
| Error | 186.44 | 84 | | |

***Panel B: Tests of H1***

| Test | *F* | *p > F* |
|---|---|---|
| **Planned Contrast** | | |
| Cell A > (Cell B + Cell C + Cell D)/3 (one-tailed *p*-value) | 7.50 | 0.00 |
| **Planned Pairwise Comparisons** | | |
| Cell A > Cell C (one-tailed *p*-value) | 4.05 | 0.02 |
| Cell A > Cell B (one-tailed *p*-value) | 6.07 | 0.01 |
| Cell B = Cell D | 0.02 | 0.89 |
| Cell C = Cell D | 0.20 | 0.65 |
| **Equivalence Tests (two one-way significance tests approach)**[a] | | |
| Cell $D_{MEAN}$ < Cell $B_{UL}$ (one-tailed *p*-value)[a] | 3.56 | 0.03 |
| Cell $D_{MEAN}$ > Cell $B_{LL}$ (one-tailed *p*-value)[a] | 2.38 | 0.06 |
| Cell $D_{MEAN}$ < Cell $C_{UL}$ (one-tailed *p*-value)[a] | 6.44 | 0.01 |
| Cell $D_{MEAN}$ > Cell $C_{LL}$ (one-tailed *p*-value)[a] | 1.67 | 0.10 |

***Panel C: Tests of H2***

| Planned Pairwise Comparisons | *F* | *p > F* |
|---|---|---|
| Cell E < Cell C (one-tailed *p*-value) | 2.30 | 0.07 |
| Cell E < (Cell C + Cell D) (one-tailed *p*-value) | 97.50 | 0.01 |

***Panel D: Tests of H3***

| Planned Pairwise Comparisons | *F* | *p > F* |
|---|---|---|
| Cell F > Cell E (one-tailed *p*-value) | 2.80 | 0.05 |
| (Cell F - Cell E) > (Cell D - Cell C) (one-tailed *p*-value) | 2.30 | 0.07 |

[a] Two one-way significance tests ("TOSTs") test the equivalence of two samples by testing the joint hypothesis that the mean of one sample is less than the upper bound and greater than the lower bound of a specified confidence interval around the mean of the other sample. Following Schuirmann (1987), we test the equivalence of Cell D to Cell B (Cell C) by testing whether the mean of Cell D is less than [greater than] the upper limit [lower limit] of the 95% confidence interval of the adjusted mean for Cell B (Cell C).

**Note: See notes on next page.**

**TABLE 3**
**Hypothesis Testing Models (continued)**

**Notes:** The *dependent variable* is participants' P/E multiple assessments on a scale from 10 to 20 after viewing any experimental manipulations, adjusted for variation in participants' P/E multiple assessments prior to viewing manipulations. We manipulate *Management Disclosure* at two levels (present or absent), between participants. Participants that receive the *Management Disclosure* treatment view robust supplemental C*Acct*M disclosures related to measurement uncertainty inherent in a Level 3 investment. There is no reference to these C*Acct*M disclosures in conditions where *Management Disclosure* is absent. We manipulate *Auditor Communication* at three levels, between participants. Participants in all conditions learn that the auditor issued an unqualified opinion. Participants in the *Auditor Disclosure Absent* condition (*Auditor Communication* = 0) learn that there are no modifications to the standard wording of an unqualified opinion. Participants that receive the *Auditor Narrative Disclosure* treatment (*Auditor Communication* = 1) view information from a C*Aud*M disclosure in the audit report that narratively identifies the related amounts. Participants that receive the *Auditor Visual Disclosure* treatment (*Auditor Communication* = 2) view information from a C*Aud*M disclosure in the audit report that visually identifies the related amounts. *Full-time work experience* is measured as the number of years of full-time work experience reported by the participant. *Pre-treatment P/E assessment* represents the P/E multiple assessed by the participant prior to viewing any manipulations. See a mapping of cell references in Table 2. *p*-values for tests of hypotheses with directional predictions are one-tailed, as noted; other *p*-values are two-tailed.

Public Company Accounting Oversight Board
Attention: Office of the Secretary
1666 K Street N.W.
Washington, D.C. 20006-2803

**RE: PCAOB Rulemaking Docket Matter No. 034**

Dear Members of the Board and Staff:

Dixon Hughes Goodman LLP (DHG) welcomes the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or the Board) Release No. 2016-003, *Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* (Proposed Standard). Headquartered in Charlotte, NC, DHG ranks among the top 20 public accounting firms in the nation, with more than 2,000 professionals and staff in 12 states, and is a member of Praxity, a global alliance of independent firms.

DHG is supportive of the PCAOB's efforts in modernizing the auditor's report to provide information that is of critical need to stakeholders, while maintaining the value of the 'pass-fail' opinion. We also commend the PCAOB for their significant outreach efforts in developing a balanced approach that considers the views of numerous stakeholders, as well as developments within the international markets. We believe the enhancements within the Proposed Standard generally align with those of the International Auditing and Assurance Standards Board (IAASB); in particular, the concept of Critical Audit Matters (CAM) with the IAASB's concept of Key Audit Matters.

This letter includes our views, observations, and recommendations on the Proposed Standard. Our responses are framed by our experiences serving middle-market public issuers and non-issuer brokers and dealers, and include our concerns regarding the potential implications the Proposed Standard could have for smaller to medium-sized accounting firms.

## Overview

Overall, DHG is supportive of enhancing the CAM definition towards material issues discussed with the audit committee. We also support the Board's non-prescriptive approach to the auditor describing how a CAM was addressed in the audit, including providing certain elements for the auditor's consideration[1] that generally align with similar elements included within International Standard on Auditing 701, *Communicating Key Audit Matters in the Independent Auditor's Report* (ISA 701).[2] Further, we believe the language preceding the description of the CAM clearly articulates that the communication of CAMs should not be interpreted as altering the level of assurance on any aspect of the auditor's report, including

[1] Page 31, Proposed Standard.
[2] Paragraph A46, ISA 701.

the identified CAMs. In addition, given the level of professional judgment inherent in CAMs, we believe the profession will greatly benefit from the illustrative examples depicting CAM communications.

Outside of CAMs, we are supportive of enhancing the wording of the auditor's report in relation to independence and the auditor's responsibilities regarding financial statement notes and obtaining reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. We also support moving the opinion paragraph to the beginning of the auditor's report, which more closely aligns with the auditing standards of the IAASB.

Despite these numerous enhancements, we believe there are certain areas within the Proposed Standard that could negatively affect the profession; in particular the potential litigation risk of the audit firm being the source of original (and potentially confidential) information about a company.[3] As the auditor is responsible for opining on the information that comprises the financial statements, we believe any information communicated within the auditor's report should be limited to information opined upon, and not include information that is of original (or confidential) nature. Furthermore, appreciating the Board's interest, we continue to question the value of including auditor tenure in the auditor's report. Evidence about the impact of audit tenure on audit quality continues to be inconclusive, and there is a concern that disclosing tenure could imply there is negative correlation between auditor tenure and audit quality.

We have provided certain comments and recommendations below regarding these points as well as other matters detailed within the Proposed Standard.

## Source of Original Information

*Determination of Potential CAMs*

DHG supports limiting the source of potential CAMs to those matters communicated or required to be communicated to the audit committee, adding a materiality component that directly relates accounts and disclosures to the CAM definition, and focusing on matters that involve especially challenging, subjective, or complex auditor judgment in the audit. We believe, in totality, these enhancements would allow the auditor to emphasize the most important matters to users of the financial statements, and limit the inclusion of an overabundance of CAMs within the auditor's report that could deemphasize their importance. However, despite these advancements in narrowing the CAM definition, there is still risk, in certain situations, that the auditor could divulge original (and potentially confidential) information about the company, whether through the identified CAM or within the practical considerations in determining the CAM.

For instance, a significant deficiency within a company's system of internal control over financial reporting (ICFR) by itself is not a material matter to the financial statements. However, a significant deficiency is a required communication to the audit committee that typically relates to one or more accounts or disclosures that are material to the financial statements, and could meet the proposed CAM definition, if the matter involved especially challenging, subjective or complex auditor judgment. There also may be situations where accounts or disclosures, by themselves, would not likely be considered CAMs, but due to a related significant deficiency in the company's ICFR, could lead the auditor to identify these accounts

[3] For the purpose of our response, original information is information about a company's financial statements and other financial information or its system of internal control over financial reporting that is the responsibility of the company's management to consider for disclosure.

DIXON HUGHES GOODMAN LLP

or disclosures as CAMs, and therefore would require communication of the significant deficiency as a principal consideration that led to the CAM determination.

Under both scenarios, management has no similar requirement to disclose a significant deficiency under the SEC rules, and it is unclear, if such information is communicated in the auditor's report, whether this could result in a breach of client confidentiality and expose the auditor to related litigation or disciplinary action under contract and state law.[4] Regardless, we do not believe auditors should publicly communicate information, which is the responsibility of management, particularly in instances where the auditor could be at risk of potentially violating certain laws and regulation.

*Communication in the Auditor's Report*

In considering the potential risk of communicating original information about a company, the Proposed Standard includes a note that indicates that when describing a CAM, the auditor is not expected to provide information that has not been made publicly available. However, the same note also includes a statement that allows the auditor to provide such information if it was necessary to describe the principal considerations that led the auditor to determine that a matter is a CAM or how the matter was addressed in the audit.[5] Although we support the inclusion of a statement that explains the expectations of the auditor not providing original (and potentially confidential) information about a company, it is inappropriate to include a seemingly contradictive statement that allows for communication of such information in certain circumstances.

Allowing for the inclusion of original information (regardless of the situation) within the auditor's report could possibly expose the auditor to certain ethic codes and other regulatory violations, and effectively impose disclosure thresholds on management that go beyond the applicable financial reporting framework or SEC reporting requirements. Therefore, we strongly encourage the Board to consider removing this statement from Note 2 of the Proposed Standard.

Furthermore, the Board should specifically describe in the Proposed Standard that the auditor is not responsible for providing original information about the company in the auditor's report; and we recommend the Board revise Note 2 of the Proposed Standard as follows:

> "When describing critical audit matters in the auditor's report the auditor ~~is not expected to~~ **should not** provide information about the company that has not been made publically available by the company ~~unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit~~."

*CAM Communication Illustrations*

In considering potential challenges audit firms may face in implementing the Proposed Standard, we commend the Board for recognizing the need for application guidance by providing illustrative CAM communications examples.[6] We believe such illustrations could be a valuable resource to audit firms in guiding their expanded communications, and we strongly encourage the Board to include similar illustrations in the final standard.

---

[4] For instance, the Supreme Court has ruled in the past that persons cannot be held liable under Section 10(b) and Rule 10b-5 unless they actually "make" a statement (Janus Capital Group v. First Derivative Traders 131 S. Ct. 2296 - 2011).

[5] Note 2, paragraph 14, Proposed Standard.

[6] Pages 32 – 35, Proposed Standard.

DHG
DIXON HUGHES GOODMAN LLP

In providing such guidance, however, it is important to clearly articulate the purpose of the illustrations (e.g., illustrate how the auditor may describe the principal considerations that led the auditor to determine that the matter is a CAM), how they correlate with the minimum requirements of the standards, and not imply the need for additional disclosures outside those requirements. For instance, the illustrations within the Proposed Standard appear to include context associated with management's processes[7] and strategies,[8] and audit information[9] that are beyond the scope of the auditor's communication requirements.[10] We believe this is inconsistent with the Board's intention of providing a non-prescriptive approach to describing how a CAM was addressed in the audit,[11] and we encourage the PCAOB to revise the illustrations to correlate with, and limit any suggested disclosures outside of, the auditor's communication requirements.

*Legal Liability Implications*

The advancements made within the Proposed Standard, in particular narrowing CAMs to matters communicated to the audit committee and incorporating the concept of materiality, mitigates the increased legal liability associated with expanding auditor reporting, as compared to past proposals.[12] However, despite these advancements, there is still an increased level of litigation risk under both federal and state law, particularly in disclosing original (and potentially confidential) client information. We believe our recommendations above provide a basis for diminishing these concerns and strongly encourage the Board to consider these revisions within the final standard.

## Additional Considerations in Determining CAMs

Appreciating the Board's efforts to limit the potential number of CAMs as compared to prior proposals, we believe determining whether a matter is a CAM will still require significant auditor judgment. The Proposed Standard provides additional guidance in the form of factors auditors should take into account in determining whether a matter involves especially challenging, subjective, or complex auditor judgment.[13]

Although we support the inclusion of these factors, we believe there are opportunities to clarify the linkage of procedures performed by the auditor and sufficient appropriate audit evidence obtained in performing those procedures. For instance, in considering the degree of auditor subjectivity in paragraph 12b of the Proposed Standard, we believe the auditor should focus on procedures executed to obtain sufficient and appropriate audit evidence related to the matter under consideration, as opposed to focusing on overall audit strategy decisions in designing audit procedures to obtain sufficient appropriate evidence. Therefore, we recommend removing 'determining' from paragraph 12b of the Proposed Standard, and focus the auditor on procedures applied to address the matter under consideration or in evaluating the results of those procedures.

---

[8] For instance, details related to management's strategies included within the *Accounting for Acquisition* illustration (Pages 33 – 35, Proposed Standard).
[9] For instance, details related to testing of the company's system of internal control over financial reporting within both illustrations (Pages 32 – 35, Proposed Standard).
[10] Paragraphs 13 and 14, Proposed Standard.
[11] Page 31, Proposed Standard.
[12] See PCAOB Rulemaking Docket Matter No. 34: Release No. 2011-003 – Concept Release, Release No. 2013-005 – Proposed Rule.
[13] Paragraph 12, Proposed Standard.

DIXON HUGHES GOODMAN LLP

Additionally, paragraph 12f of the Proposed Standard focuses on the 'nature of audit evidence,' which is a component in obtaining sufficient appropriate audit evidence. However, paragraph 12c of the Proposed Standard references to the 'nature and extent of audit effort required in addressing the matter,' which may also have a general correlation to sufficient appropriate audit evidence.

To limit any potential application concerns, we encourage the PCAOB to link the factors within paragraph 12 to PCAOB Auditing Standard No 15, *Audit Evidence*, which explains what constitutes audit evidence and establishes requirements regarding designing and performing audit procedures to obtain sufficient appropriate audit evidence. This could be accomplished by removing paragraph 12f and revising paragraph 12c, to provide enhanced linkage between the nature and extent of audit effort to sufficient appropriate audit evidence obtained.

## Auditor Tenure

Appreciating the Board's efforts in this area, DHG does not support inclusion in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor (i.e., audit firm tenure). There is no empirical evidence supporting a correlation between audit tenure and audit quality, and the inclusion of such information in the auditor's report could imply such a correlation exists. If the PCAOB continues to believe this information is of relevance, as audit committees are responsible for the oversight of external auditors, they may be in the best position to consider providing this information.

The Securities and Exchange Commission (SEC) issued a concept release[14] seeking stakeholder input on potential enhancements to disclosures for audit committees, specifically requesting comment on a number of possible changes to existing SEC disclosure requirements regarding the audit committee's oversight of the external auditor, including information about the length of the audit relationship in the audit committee's report. Therefore, we encourage the PCAOB, in considering a potential alternative location, to collaborate with the SEC to determine whether audit committees should consider disclosing this information within the proxy statement or the audit committee report.

## Effective Date Considerations

In considering an appropriate effective date, careful consideration should be given to the anticipated costs and efforts expected to be incurred by audit firms in ensuring appropriate processes are in place to comply with the Proposed Standard. For instance, audit firms would need to develop quality control processes and staff training programs to ensure auditors are appropriately identifying and documenting the consideration of CAMs. We would also anticipate substantially expanded communications between auditors, preparers and audit committees, particularly in evaluating the potential effect of the additional auditor communications in the auditor's report.

We believe that these extensive implementation efforts could place a significant and possibly disproportionate burden on smaller and medium-size accounting firms (and their clients). Therefore, in considering an effective date that provides an ample implementation period for audit firms of all sizes, while providing timely, reliable information to financial statement users, we strongly encourage the Board to consider a phased-in implementation approach, as follows:

- Phase 1 – Applicable to large accelerated filers for audit periods ending at least two years subsequent to the SEC's approval of the final rule.

[14] See Concept Release No. 33-9862, Possible Revisions to Audit Committee Disclosures.

DHG
DIXON HUGHES GOODMAN LLP

- Phase 2 – Applicable to accelerated and non-accelerated filers one year after the Phase 1 effective date.

We believe such an approach would also allow the Board, possibly through its Post-Implementation Review Process, to evaluate whether the Proposed Standard is accomplishing its intended purpose. As part of this evaluation, the PCAOB should solicit feedback from stakeholders (e.g., preparers, investors, audit committees) to identify, wherever possible, costs and benefits, and potential unanticipated consequences associated with the Proposed Standard.

## Applicability

DHG is supportive of not requiring the identification, communication, and documentation of CAMs in the auditor's report for non-issuer brokers and dealers, investment companies (that are not business development companies), and employee benefit plans (i.e., employee stock purchase, savings, and similar plans). However, we believe the requirements of the Proposed Standard, in its entirety, should apply to audits of emerging growth companies, as they exhibit characteristics similar to other public companies and financial statement users would benefit from similar reporting requirements.

* * * *

DHG is supportive of providing financial statement users additional transparency into the audit and believes the Proposed Standard provides a general basis for expanding auditor disclosure. We appreciate the opportunity to comment on the Proposed Standard and are pleased to discuss any questions the Board and its Staff may have concerning our comments. Please direct any questions to Dave Hinshaw, Managing Partner, Professional Standards Group (dave.hinshaw@dhgllp.com) and Jeffrey Rapaglia, Partner, Professional Standards Group (jeff.rapaglia@dhgllp.com).

Sincerely,

*Dixon Hughes Goodman LLP*

Phoebe W. Brown, Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, DC 20006-2803

**File Reference: PCAOB Rulemaking Docket Matter No. 034**

Dear Ms. Brown:

The Edison Electric Institute (EEI) and American Gas Association (AGA) respectfully submit our comments on the Public Company Accounting Oversight Board's (Board) reproposed auditing standard – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* ("reproposed standard"), PCAOB Rulemaking Docket Matter No. 034.

EEI is the association that represents all U.S. investor-owned electric companies. EEI members provide electricity for 220 million Americans, operate in all 50 states and the District of Columbia, and directly and indirectly create jobs for more than one million Americans. With more than $100 billion in annual capital expenditures, the electric power industry is responsible for millions of additional jobs. EEI has dozens of international electric companies as International Members and hundreds of industry suppliers and related organizations as Associate Members. Organized in 1933, EEI provides public policy leadership, strategic business intelligence, and essential conferences and forums.

AGA, founded in 1918, represents 202 local energy companies that deliver clean natural gas throughout the U.S. There are more than 70 million residential, commercial and industrial natural gas customers in the U.S., of which almost 93 percent – more than 65 million customers – receive their gas from AGA members. AGA is an advocate for natural gas utility companies and their customers and provides a broad range of programs and services for member natural gas pipelines, marketers, gatherers, international gas companies and industry associates. Today, natural gas meets almost one-fourth of the energy needs in the U.S.

EEI and AGA appreciate the Board's efforts to enhance the form and content of the auditor's report to make it more relevant and informative to investors and other financial

statement users. We agree that financial statement users should have access to timely, accurate, objective and relevant information for purposes of making investment decisions.

We understand the Board has taken into consideration the comments and additional feedback received from the original 2013 proposal and modified the definition of what would be included as critical audit matters ("CAMs"), including limiting the sources of potential CAMs, and adding a materiality component. However, we continue to have significant concerns with certain aspects of the reproposed standard, specifically, the disclosure of CAMs and auditor tenure in the auditor's report, as described in our response below.

We are aware that some regulators outside the U.S. are also considering or have made changes to the independent auditor's report. Should the PCAOB proceed with some version of this reproposal, we urge the Board to adopt a more principles-based approach to the definition of a CAM, similar to the IAASB. The IAASB defines Key Audit Matters "as those matters that, in the auditor's professional judgment, were of most significance to the audit of the financial statements in the current period. Key audit matters are selected from matters communicated with those charged with governance."

Notwithstanding these considerations, we continue to believe that it is inappropriate to include such a disclosure in the auditor's report for the reasons we describe in detail below.

**Critical Audit Matters**

The reproposed standard states that it is intended to respond to investor requests for additional information about the financial statement audit by increasing the relevance and usefulness of the auditor's report, without imposing requirements beyond the auditor's expertise or mandate. However, we believe that CAM disclosure would result in the imposition of requirements beyond the auditor's mandate as the independent auditor in that it would require the auditor to become a primary source of a company's financial information.

The reproposal asserts that the current form of the auditor's report does little to address the information asymmetry between investors and auditors brought on by the increased complexity of financial reporting. While we respect the Board's efforts to reduce this information asymmetry, we believe that it is inappropriate to address this concern through mandating disclosures by the auditor. Accordingly, as discussed further below, we do not believe that the disclosure of CAMs in the auditor's report provides investors with useful and relevant information on which to make investment decisions. In addition, we do not believe it is the role of the auditor to determine or highlight specific areas of the financial statements for increased investor focus.

*The Role of the Auditor*

The auditor's role is to express an opinion on the financial statements taken as a whole, which assists an investor's decision by stating whether the financial statements are in conformity with GAAP. The auditor's principal considerations that led to the determination that a matter is a CAM, and how the CAM was addressed in the audit, would only provide the reader insight into the *audit process*, not insight into the quality of the financial statements and, therefore, would provide little benefit to investors in making their decisions.

Regardless of the language included in the proposed auditor's report, inclusion of CAMs could be interpreted by some as the auditor expressing reservations in their report, or providing a "piecemeal" opinion. This could undermine the value of the auditor's opinion concerning whether the financial statements are presented in accordance with GAAP.

*The Role of the Audit Committee*

If CAMs are required to be disclosed in the auditor's report, the auditor may become the source of original and confidential information, which would diminish both the governance role of the audit committee as well as management's responsibility for the company's disclosure of financial information. We believe the audit committee is uniquely qualified to ensure that a company's various risks and issues have been adequately addressed during the audit and disclosed in a company's periodic filings, as considered necessary, because it has access to the full Board of Directors, company management and the auditors. The role of the auditor is to verify that the audit committee has adequately performed this responsibility.

*Purpose of the Financial Statements and the Auditor's Report*

GAAP and SEC rules have been designed to help companies determine what information should be provided to financial statement readers. These rules already require disclosure of critical accounting estimates, assumptions, risks and uncertainties, as well as an issuer's significant accounting policies. Given the volume of disclosures required for complex or subjective areas of accounting, we believe that financial statement users can already determine for themselves which areas are likely to be subject to a higher level of audit scrutiny.

In addition, we do not believe that directing a financial statement user's attention to specific areas of the financial statements and related note disclosures adds value. All disclosures in the financial statements and notes are included because they are material to the financial statements. It is the responsibility of the investor to review a company's periodic filing in its entirety. Providing a "roadmap" to direct financial statement users' attention to specific areas of the filing undermines the relevance of other areas that are not referred to in the auditor's report. Those areas may contain the same level of investment risk as a CAM but may not be required to be disclosed as such in the auditor's report.

*FASB and SEC Procedures Govern Financial Report Disclosures*

If stakeholders believe that better "roadmaps" are needed to guide investors to high risk areas in the financial statements, the most appropriate means for doing so is for the FASB and the SEC to provide guidance through their respective disclosure projects. The FASB and the SEC continue to update and refine disclosure requirements, and the issue of information asymmetry between a company and its investors should be addressed through those projects, which are intended to improve the effectiveness of information provided to investors.

The FASB's Disclosure Framework initiative is designed to assist investors in determining which financial statement items are significant to the company by allowing companies to provide disclosures that focus on those areas that are most relevant and important and eliminating those disclosures that are of less significance, thereby reducing "disclosure overload." The SEC's Disclosure Effectiveness initiative is seeking feedback on whether the current business and financial requirements in Regulation S-K provide useful information to readers and whether specific disclosure requirements in Regulation S-X could be changed or eliminated to avoid redundancy with GAAP and improve disclosure effectiveness.

Guidance provided through these FASB and SEC disclosure projects, rather than through an unprecedented expansion of the independent auditor's report, will ensure that users' attention is directed to areas of investment risk, *not audit risk*, as those risks by definition may not be the same.

*Supporting Research*

Section VI. C. 1. a. of the proposal notes that *"Overall, the results from research analyzing whether the information provided in expanded auditor reporting is useful to investors are limited. Collectively the results are ambiguous as to whether the expanded auditors' reports have provided investors with new information beyond what is contained in the financial statements."* Because the current research is inconclusive, we recommend that the Board obtain more thorough and conclusive evidence that CAMs provide investors with additional information that could influence investment decisions before including these additional auditor disclosure requirements in a final standard.

**Auditor Tenure**

We do not believe that the proposal adequately substantiates why auditor tenure information is important and useful to financial statement readers. Without a clear understanding of that importance and usefulness, we believe readers may misinterpret the information. Specifically, and as discussed further below, we believe that the inclusion of auditor tenure in the auditor's report could lead to incorrect and even erroneous inferences about possible correlations between auditor tenure, auditor independence, and audit quality. If the Board believes that information on auditor tenure is important and relevant to readers, we believe that the Board should provide additional, more conclusive research and information as to what readers should infer from a shorter or longer tenure, in order to avoid misinterpretation of the data.

For example, does longer auditor tenure indicate that the independence of the auditor or the quality of the audit performed might be compromised or of lower quality than those performed by an auditor with a shorter auditor tenure? Or might it indicate that the auditor has more experience with and insight into the complexities of the company it is auditing? Likewise, should investors consider not ratifying the appointment of an auditor if that auditor has a longer tenure? Or conversely, should investors be more likely to ratify an auditor with a longer tenure?

*Tenure and Audit Quality*

We believe that the disclosure of auditor tenure in the auditor's report could lead to readers making erroneous conclusions about the correlation between audit quality and auditor tenure. As stated in the reproposed standard, academic research on the relationship between auditor tenure and audit quality has produced inconsistent conclusions. Many readers of the auditor's report and financial statements are likely unaware of the range and potentially conflicting implications of these research conclusions.

Contrary to the presumption that long auditor tenure leads to reduced audit quality, some research shows that audit engagements with short-term auditor tenure are relatively *riskier* and that audit quality is *improved* when auditors have time to gain expertise in the company under audit and in the related industry. Therefore, we believe it is inappropriate to imply that there is a correlation between shorter tenure and improved audit quality, which could lead to incorrect inferences about that correlation. This, in turn, could result in investor inquiries or requests that are an inefficient use of management and audit committee time. It could also lead to faulty investor decisions based upon a presumed correlation that is not accurate.

*Tenure and Auditor Independence*

We also believe that the disclosure of auditor tenure in the auditor's report could incorrectly imply that there is a relevant relationship between auditor independence and auditor tenure. The feedback received on the Board's Release No. 2011-006 *Concept Release on Auditor Independence and Audit Firm Rotation* indicated that constituents did not agree that requiring audit firm rotation would lead to an increase in audit quality. We believe that required audit partner rotation sufficiently addresses any potential independence issues, and implying that there is a link between auditor independence and audit firm tenure is inconsistent with the feedback received on Release No. 2011-006.

In addition, we believe that there may actually be a higher risk that a new audit firm has not acquired the level of expertise and knowledge necessary in specialized industries to provide an audit of at least the same quality as a longer-tenured audit firm. Therefore, even if one assumes that a new audit firm may have a higher degree of independence, audit quality may be lower as a result of an auditor change.

*Cost-Benefit Analysis*

The release does not provide definitive research as to the benefit of this information to readers, other than to provide an example that information on auditor tenure could be used in "*understanding the audit committee's oversight of the auditor or in deciding whether to ratify the appointment of the auditor.*" The Board also indicates that one of the benefits of the proposal is reduced search costs related to readers searching for auditor tenure information.

However, the Board has not provided any information showing that significant costs are currently being incurred by users seeking this information. Our industry would be disadvantaged if readers began to correlate a longer audit tenure with reduced audit quality or reduced auditor independence because many of the audit committees of companies in our industry believe that the quality of our audits and audit firms are top-notch and, therefore, have not changed auditors in many years.

We believe that there are a limited number of audit firms with strong knowledge, experience and expertise in our specialized industry, and therefore changing auditors could result in ratification of a new auditor that would require significantly higher costs and effort to assure that it had the necessary expertise to provide a high-quality audit. As such, if our investors made incorrect assumptions about tenure and quality, and accordingly did not vote to ratify the appointment of the existing auditor simply because of a longer tenure, the risk of a lower-quality audit being performed would be higher, and significant additional costs of changing auditors would be incurred, thereby not justifying any perceived benefits.

If the Board decides to require disclosure of auditor tenure, we strongly believe such information should be included outside of the auditor's report to avoid misconceptions about the relationship between tenure and quality, and tenure and independence. For example, the Board could consider including this information in Form AP or in a consistent location within the proxy statement. The proxy statement may be more appropriate if research indicates that one of the main uses of this information would be to help investors decide whether to ratify the appointment of the auditor.

**Conclusion**

As discussed above, we do not support the inclusion of CAMs or auditor tenure in the auditor's report. We urge the Board to reconsider these proposals. We believe that auditor reporting of CAMs could decrease the relevance of the audit report and diminish the role of the audit committee. We also believe that disclosure of auditor tenure is unnecessary and, because of inconclusive and contradictory evidence about correlations with audit quality and independence, could result in misinterpretation by readers. If such disclosure is required, we believe it should be required elsewhere, such as within Form AP or the annual proxy statement.

**Re: PCAOB Rulemaking Docket Matter Number 034**

Dear Madam Secretary:

We are pleased to submit our comments on the *Proposed Auditing Standard, PCAOB Release No. 2016-003 on Rulemaking Docket Matter #034 ("Re-Proposal")*. We serve as the Audit Committees ("Committee") for Edison International (NYSE:EIX) and Southern California Edison Company. Edison International ("Edison" or the "Company"), an integrated energy company, generates and distributes power, primarily through its wholly owned subsidiary, Southern California Edison Company, serving 14 million people across a 50,000 square mile area in Southern California. Our following comments are based not only on our experience serving Edison, but also from our experiences as senior leaders in business, academia and government.

**Auditor's Report**

Our corporate governance system consists of shareholders electing the Board of Directors ("Board"), as their representatives, to provide management oversight. The Board, in turn, delegates to the Audit Committee oversight of financial reporting, including the system of internal controls and risk management. The Audit Committee has sole authority to retain the independent auditor ("Auditor") and, therefore, primary responsibility for the assessment and approval of those services. Management is responsible for the financial statements and disclosures in accordance with the United States' Generally Accepted Accounting Principles ("GAAP") and Securities and Exchange Commission ("SEC") rules and regulations.

The Public Company Accounting Oversight Board's ("PCAOB") states that the Re-Proposal is attempting to resolve the information asymmetry that exists between consumers of financial reports and preparers of those reports, including third parties such as the independent accountants. We have a fundamental belief that consumers of financial reports desire information about the subject of the report, the company itself. This includes the risks and issues facing the company, the company's financial results and the critical judgments and estimates that are made in preparing the financial results. Moreover, experienced and knowledgeable consumers read management's financial reports as a whole, including the Risk Factors and Management's Discussion and Analysis as required by the SEC. We believe the audit committee has the requisite knowledge, perspective and authority to oversee that the

P.O. Box 976
2244 Walnut Grove Ave.
Rosemead, CA 91770

reporting entity's management discloses these matters in a manner commensurate with their materiality and relevance to investors. Any information asymmetry should be dealt with by revisions to GAAP and SEC disclosure rules and not through the PCAOB. Nevertheless, we recognize that some Independent Auditor Regulators outside the U.S. have or will be requiring changes to the Independent Auditor's Report. As a result, the remainder of our comments will focus on two aspects of the Re-Proposal—Critical Audit Matters and Auditor Tenure.

We commend the PCAOB efforts to consider comments made to the Proposal Release No. 2013-005 and make improvements in this Re-Proposal to the Auditor's Report, such as its decision to retain the current "pass/fail" model of the Auditor's report and the introduction of the concept of materiality.

The Re-Proposal defines a Critical Audit Matter ("CAM") as any matter that was communicated or required to be communicated to the Audit Committee that involves audit specific information which is determined to be either challenging, subjective or complex and is material to the financial statements and related disclosures. The SEC requires management to disclose matters for which information is incomplete and the financial impact is not known but which might develop into a significant or material matter. The Audit Committee and often, even the Board, are informed promptly of these matters. The Audit Committee oversees management's financial reporting and disclosure process and the Auditor provides an independent assessment of the disclosures. The timing of when a matter rises to the level of materiality varies. The introduction of materiality in deciding what constitutes a CAM could cause the Auditor to include a matter whose level of materiality has not yet been determined for fear of being second-guessed by a PCAOB inspector.

Materiality is both a quantitative and qualitative assessment. The Audit Committee approves the Auditor's audit plan which includes quantitative materiality levels. These quantitative materiality levels can increase or decrease as the financial year progresses due to different business conditions, and the Auditor informs the Audit Committee of such quantitative changes. A matter might meet the quantitative materiality level as presented in the audit plan but may not meet both the quantitative and qualitative materiality assessment relative to the business and the financial statements, taken as a whole.

The Auditor's Report reader could place inappropriate weight on the CAM instead of disclosures provided by management in the financial statements and Management Discussion and Analysis of Financial Condition and Results of Operations (including critical accounting policies and estimates.) CAMs could also duplicate Management's disclosures. Conversely, if a matter is excluded from the Auditor's Report and later develops into a material matter and a CAM, both the Auditor and the Audit Committee could be subject to criticism and litigation. Finally, the likely expansion of the Auditor's Report from the inclusion of CAMs could be very confusing to many of its readers.

We encourage the PCAOB to adopt a more principled-based approach to the definition of a CAM, similar to the IAASB. The IAASB defines Key Audit Matters "as those matters, that in the Auditor's professional judgment were of most significance to the audit of the financial statements in the current period. Key Audit Matters are selected from matters communicated with those charged with governance."

We have additional, significant concerns because the CAMs:

- May result in boilerplate language covering a number of generic audit topics relating to the issuer's industry (e.g. rate regulated matters);
- May result in a "first mover" disadvantage because CAMs reported by later filers in the same industry were omitted;
- May cause increased costs and filing deadline pressures because there would need to be close collaboration and communication between management, the Auditor and the Audit Committee as matters that might rise to the level of a CAM are not always known well in advance of the filing deadline;
- May cause the Auditor's Report to become a laundry list of matters over time because the Auditor may be reluctant to remove a CAM in subsequent reporting periods. The Re-Proposal provides no guidance for the removal of a CAM;
- Appear to contradict the SEC's disclosure effectiveness to be more meaningful to users of financial reporting. The Auditor might prefer to err on "more is better" concept in their Report detracting from the truly important matters with descriptions of the less important for fear of criticism and litigation.

The Re-Proposal requires the Auditor to disclose the firm's tenure with the company. We believe this disclosure is unnecessary. We believe that it is important that consumers of financial reports understand how the Audit Committee determines its recommended appointment of the audit firm. Required disclosures, such as what is being proposed, can detract from what the Audit Committee views as the most critical considerations. In the case of EIX, the Audit Committee discloses the tenure of the audit firm in our Proxy report to shareholders and describes pertinent factors considered when recommending appointment of the audit firm. Research has not concluded definitively that the tenure of the audit firm is correlated with audit quality and/or independence. Our appointment recommendation considers whether there is frequent and sufficient change in personnel who are responsible for preparation, attestation and oversight of the financial reporting process. The PCAOB requires mandatory rotation of the engagement audit partner every five years, the EIX Audit Committee Chair rotates every four years, Audit Committee members change, and Chief Executive Officers, Chief Financial Officers, Chief Accounting Officers, Controllers also regularly change as part of EIX's succession planning.

Thank you for considering our views.

Yours truly,

The Audit Committees of Edison International and Southern California Edison.

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Board Members:

Eli Lilly and Company ("Lilly") appreciates the opportunity to comment to the Public Company Accounting Oversight Board ("PCAOB") on the PCAOB Release No. 2016-003, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; and Related Amendments to PCAOB Standards* (the Reproposal). Lilly is a multinational pharmaceutical and animal health company, with more than 200 legal entities in over 80 jurisdictions.

Lilly understands the PCAOB's objective is to revamp the existing Auditor's Reporting Model in an effort to "increase the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report." Lilly provided comments in 2013 for the original proposal. Lilly appreciates the PCAOB's consideration of comments provided on the original proposal and recognizes the Reproposal addresses some of the concerns shared. For example, we appreciate that the PCAOB has taken into consideration the comments raised by stakeholders and has limited the Critical Audit Matters ("CAMs") scope.

**Critical Audit Matters**

While the Reproposal limits the CAMs scope, we believe it remains inconsistent with the US regulatory reporting framework. According to the framework, management is responsible for financial statement and related disclosures. According to the Reproposal, CAMs should be selected from "any matter that was communicated or required to be communicated to the audit committee." This sets the auditor up to be responsible for disclosing information about the company that is not previously disclosed. Many companies, us included, are concerned that the auditor's report would disclose information not otherwise disclosed about the company. The explanatory note in the Reproposal articulates the auditor is "not expected to provide information about the company that has not been made publicly available". But, the significant caveat "unless such information is necessary to describe the principal considerations that led the auditor to determine a matter is a CAM" instructs the auditor to do exactly that.

We are most concerned about the potential for the auditor to disclose information in their report that the company is not required to disclose, by the SEC or FASB, making the auditor the original source of the information. The auditor could identify a CAM around a transaction that has not yet been recorded in the financial statements by management due to timing or facts and circumstances of the item (e.g., restructuring, product returns reserve, impairment, etc.). Based on the facts and circumstances, restructuring charges may not be required, under accounting standards, to be recorded until the following year; however, the auditor may disclose this item as a CAM in the prior year audit report if it meets the CAM criteria. Disclosing this as a CAM would make it public information before the company discloses the information to those affected and the public. Additionally, even though the company may disclose information about product returns reserves, for example, the auditor's report may disclose details that are currently not required to be disclosed like specific products and liability balances.

It seems counterintuitive that a company would need to disclose information not because of the accounting standards but because of the potential to appear as a CAM. The Reproposal could lead to tension from the auditor pushing the company to disclose information because the auditor will include it in the auditor's report. The company should not be burdened with de facto disclosure rules arising from the auditor's report. We suggest that SEC and FASB disclosure rules be used to determine specific information that should be shared about CAMs.

We believe CAMs should be limited to only matters already disclosed in the critical accounting policies section of the MD&A (Management's Discussion and Analysis). There is already a robust process that exists between management and the auditors as to the identification of, and reporting on critical accounting policies and estimates. CAMs by their definition should not differ from those items. This allows the majority of information disclosed to be provided by management.

If the PCAOB requires a broader scope for CAMs than matters already disclosed in the critical accounting policies, CAMs should be limited to matters that are material to the financial statements. We believe that certain proposed changes that have remained in the Reproposal, in particular the requirement that any matter that "relates to accounts or disclosures that are material to the financial statements" be included in the definition of CAMs, could have an adverse impact on companies, auditors and financial statement users. It is not sufficiently clear how an entity would make an assessment of whether a matter is included in this definition. The Reproposal attempts to clarify the meaning through explanation and example. In our opinion this attempt does not provide sufficient clarity. We suggest, at a minimum, simply limiting CAMs to matters that are material to the financial statements.

The addition of CAMs will significantly increase the length of the auditor's report. At our request, our auditor developed an example of the auditor's report including CAMs per the original proposal. Even though the Reproposal attempts to limit the scope of CAMs, the same CAMs would be included considering the Reproposal. In addition, the auditor report grew from one page to four pages and includes items already disclosed in the company report. It is difficult to see the value of having the auditor's report repeat information already disclosed. Duplication should be avoided. We suggest "refer to the relevant financial statement accounts" be removed. The auditor's report should reference relevant disclosures to avoid duplication. At a minimum, the auditor should be encouraged to coordinate descriptions of overlapping topics with management and to avoid duplication in reporting.

Auditors have no obligation to disclose significant deficiencies. They are reported to the audit committee, but not publicly disclosed. We believe current standards for communicating control deficiencies are clear and would like the Reproposal to avoid confusion. We appreciate there were modifications to the 2013 proposal to address this concern but think more clarity would be good. We suggest the following: "the auditors have no obligation to disclose significant deficiencies."

**<u>Auditor Tenure</u>**
We recognize the change to disclose the firm tenure rather than the engagement partner tenure is an improvement. However, we believe that including this type of information within the audit report could be misleading to investors as there is no substantiated evidence to support that audit tenure has an impact on the quality of the audit. The inclusion of this information could lead investors to infer that if the company has a new auditor or if a company and auditor have a longstanding relationship that the audit opinion is not as reliable. Auditor tenure is more appropriately considered a corporate governance matter.

**Conclusion**

Again, Lilly appreciates PCAOB's changes in the Reproposal that reflect consideration of comments provided. However, we still have significant concerns that the auditor is being asked to share with management the responsibility for disclosing company information.

We believe there is still a significant opportunity to clarify definitions which should lead to an efficient, consistent application. Additionally, the Reproposal's guidance remains unclear and will be confusing to implement. We again urge the PCAOB to carefully consider and evaluate the impact that these proposals would have on the companies and the auditors who would be required to comply with any new standards issued and the related implications. We also urge the PCAOB to carefully consider the cost/benefit of all of the proposed alternatives prior to implementing any new standards.

We appreciate the opportunity to express our views and concerns regarding the concept release.
If you have any questions regarding our response, or would like to discuss our comments further, please call me at (317) 651-2310.

Sincerely,

ELI LILLY AND COMPANY

**File Reference:** PCAOB Rulemaking Docket Matter No. 034

Dear Members of the Board:

I appreciate the opportunity to comment on the PCAOB's reproposed audit standards included in Release No. 2016-003, *The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "reproposed auditor reporting standard"). I have served on the Board of Directors of Entergy Corporation since 2015 and currently chair its Audit Committee. I have also served on the audit and other committees of the boards of other public companies. Previously, I was an audit partner with Arthur Andersen LLP and Deloitte & Touche LLP.

My comments are limited to the reproposal as it relates to independent auditor reporting of critical audit matters (hereinafter, "CAMs") and the inclusion of the auditor's tenure within the auditor's report. These comments are solely mine and should not be ascribed to any other entity.

As has been described in the reproposal, I understand that

- the reproposed standard is intended to respond to investor requests for additional information about the financial statement audit by increasing the relevance and usefulness of the auditor's report, without imposing requirements beyond the auditor's expertise or mandate; and

- the Board has taken into consideration the comments and additional feedback received from the original 2013 proposal and modified the definition of what would be included as a CAM, including limiting the sources of potential CAMs and adding a materiality component.

I consider the independent audit process to be critical to assuring that companies present information that is accurate, compliant and meaningful to users of their financial statements. I am supportive of endeavors by the PCAOB to advance the goals of audit firms providing high quality audits and companies producing relevant and reliable financial statements. However, since I strongly believe that the primary source of a company's financial information should be the company itself, I find that the current reproposal (still) results in the imposition of requirements beyond the independent auditor's mandate as the independent auditor's report becomes a primary source of a company's financial information. A company's areas of high risk should be clear to investors from the disclosures included in its financial statements pursuant to FASB and SEC requirements. If the related standards are not deemed adequate in that (or any other) regard, the perceived inadequacies should be addressed through disclosure framework projects being undertaken by those regulatory bodies.

The SEC has enacted regulations, including designation of the FASB as the organization responsible for promulgating US GAAP, defining *what* financial information needs to be disclosed. These rules designate management as the responsible party to determine *how* to communicate this information to most accurately reflect a company's financial results and position. The role of the independent auditor is to express an opinion indicating that reasonable assurance has been obtained that the financial statements prepared by management are free from material misstatement, whether due to fraud or error, and that they are fairly presented in compliance with the applicable SEC and FASB requirements in all material respects. The audit committee of a company's board of directors is charged with oversight of both management's financial reporting and the independent external audit process. If management, the external auditors, and the audit committee fulfill their respective responsibilities, I believe the additional communications and requirements outlined in the PCAOB's reproposed auditor reporting standard are unnecessary. Furthermore, I believe the additional communications and requirements are likely to result in disclosure overload, confusion regarding the roles of the various parties in the process and perhaps even less perceived quality of company-prepared financial statements.

Additionally, all disclosures included in the financial statements are presumably included because they are material to the financial statements. I also believe the disclosure of CAMs has the potential to undermine the relevance of those areas that are not referred to in the auditor's report. Financial statement users should not look to the auditor's report to determine their areas of focus while making investment decisions. Given the volume of disclosures currently required by US GAAP and SEC rules for complex matters and/or areas that contain estimates and management judgment, it should be clear to a financial statement user which areas contain more inherent risk. If those rules are inadequate to serve investor needs, any such inadequacies should be addressed by the FASB and/or SEC.

In addition to CAMs, the reproposal includes other changes to the existing auditor's report including the addition of the independent auditor's tenure to the auditor's report. The reproposal states that the intent of disclosing auditor tenure is to require consistent reporting of the duration of the auditor's relationship with the company and have this information in a consistent location. The inclusion of the independent auditor's tenure is a fact based statement subject to verification and is not my primary concern. However, I am concerned that the basis behind the recommendation for the change in the auditor's report is an inference that long tenure equates to less objectivity in the audit process. I believe that an independent audit with a high level of objectivity and professional skepticism is a critical part of each company's overall risk management and governance structure around compliance with GAAP and reporting requirements, and I believe that experience with entities, particularly those which are complex and heavily regulated, such as Entergy, enhances the ability of the independent auditor to have a deeper understanding of risk and actually enhances the audit process and the ability to place sufficient focus on areas that require additional investigation.

I appreciate the Board's efforts to understand and incorporate investor and user feedback related to disclosure into consideration of how to improve the audit process and appreciate the opportunity to comment on the reproposal. I believe that issues associated with sufficiency of disclosure are more appropriately addressed by the current SEC and FASB disclosure projects rather than through an unprecedented expansion of the independent auditor's role and responsibilities.

I thank the Board for its effort on this important matter and for your consideration of this letter.

Sincerely,

/s/ Patrick J. Condon

**Re: Reproposed Auditing Standard on the Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments, PCAOB Rulemaking Docket Matter No. 034**

Dear Ms. Brown:

Ernst & Young LLP (EY) is pleased to submit these comments to the Public Company Accounting Oversight Board (PCAOB or Board) on its Reproposed Auditing Standard — *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and the related amendments to other PCAOB standards (collectively, the Reproposal). We support the PCAOB's efforts to make the auditor's report more informative and relevant for investors and other users of the financial statements.

We appreciate the Board's efforts in considering the work in this area of other standard setters such as the International Auditing and Assurance Standards Board and the United Kingdom's Financial Reporting Council. We also support the Board's decision not to repropose, at this time, the auditor's responsibilities for other information in documents containing the audited financial statements, which was included in the 2013 proposal.

**Overall observations**

We recognize and appreciate the Board's efforts to address many of the comments and questions raised by stakeholders in response to its 2013 proposal to revise the auditor's reporting model, including concerns about the definition of a critical audit matter (CAM), what the auditor should communicate about CAMs and convergence with international standards. We believe the addition of certain clarifications and refinements will allow the standard to strike a balance between the needs and interests of investors and other users of the financial statements and the limitations under the securities laws and existing regulations around disclosure obligations of public companies and their independent auditors.

In the sections below, we recommend clarifications to the proposed definition of a CAM and the proposed communication requirements to reduce instances where the auditor will provide original information. We recommend that the PCAOB strengthen the language in the auditor's report to make clear to investors and other users of the financial statements that a discussion of a CAM is not a piecemeal audit opinion. We also discuss our concerns about increased liability for auditors and our perspective about associated legal issues.

We also refer the Board to the comment letter on the Reproposal from the Center for Audit Quality (CAQ), which identifies certain similar concerns and provides similar suggestions of how to address them.

**Critical audit matters**

Overview

We agree with the underlying objectives of the proposed requirements for determining, communicating and documenting CAMs. We also agree that the communication of CAMs would provide useful information to investors as focusing attention on CAMs could help investors better understand and analyze information available in a company's financial statements.

We support the objectives that the Reproposal is not intended to:

- Undermine management's role as the primary, if not the sole source of original information about the company
- Create a chilling effect on communications between the auditor and the audit committee
- Result in the auditor providing a separate opinion on the CAM or on the accounts or disclosures to which it relates

We believe that the Reproposal takes positive steps toward satisfying these objectives. To fully achieve these objectives, however, we suggest clarifying and refining the:

- Definition of a CAM
- Factors for determining whether a matter is a CAM
- CAM communication requirements

We discuss these suggestions and others in more detail below. We believe these changes, if adopted, would focus the discussion of CAMs on information that is most useful to investors.

Definition of a CAM

Paragraph 11 of the Reproposal defines a CAM as follows:

> *A critical audit matter is any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex auditor judgment.*

We recognize and appreciate that the Board's efforts to incorporate many of the suggestions raised by stakeholders about the CAM definition it proposed in 2013, including scoping in matters that were required to be communicated to the audit committee and also introducing the concept of materiality.

We have concerns that the Reproposal's definition of a CAM, when taken in conjunction with the factors listed in paragraph 12 of the Reproposal, could result in the auditor disclosing original information about a company, such as the existence of a significant deficiency. We continue to believe that the standard should not impose obligations that result in auditors serving as the original source of information about a company. We believe that any auditor reporting requirement that causes an auditor to report such original information would blur the roles of management and the auditor and may undermine the audit committee's role in governance of the company. We also note that any requirement that resulted in auditors being the original source of information about a company would be inconsistent with management's disclosure obligations under the Securities and Exchange Commission (SEC) rules and regulations, federal securities laws and applicable state laws to the extent they place strict limits on the ability of auditors to make disclosures of company-confidential information.

As an example of this concern, under the Reproposal, the auditor may be required to disclose original information if the auditor identifies a significant deficiency in information technology general controls (ITGC) supporting a material account. The following analysis illustrates how this situation could result in the auditor communicating original information:

- **Step 1** — Is the matter something that is communicated or required to be communicated to the audit committee?

  Yes. In accordance with Auditing Standard (AS) 1301, *Communications with Audit Committees*, a significant deficiency is a matter required to be communicated to the audit committee.

- **Step 2** — Does the matter relate to an account or disclosure that is material to the financial statements?

  This example assumes the significant deficiency relates to an account that is material because, based on our experience, most if not all significant deficiencies relate to material accounts.

- **Step 3** — Did the matter involve especially challenging, subjective or complex auditor judgment?

  In light of the importance of ITGCs to most internal control environments, it's likely these matters would involve the auditor's application of especially challenging, subjective or complex judgments, for example when determining a strategy to (1) test mitigating controls and (2) perform substantive audit procedures.

In this example, when describing the principal considerations that led the auditor to determine that the matter is a critical audit matter, the auditor would likely be required under the Reproposal to describe the existence of the significant deficiency. By contrast, Item 308(a)(3) of Regulation S-K does not include a requirement that registrants publicly disclose significant deficiencies.

As noted in our comment letter to the 2013 proposal, we believe the final standard should stress that the auditor should avoid identifying and describing a CAM that was principally due to a control deficiency because that would require the auditor to describe a matter that the company would not be required to disclose under SEC's rules and regulations.

Another example is in the context of the auditor's responsibilities when potential illegal acts come to the auditor's attention. Under Section 10A of the 1934 Act, the auditor has specific obligations to evaluate the matter and if the auditor detects or becomes aware of information indicating that an illegal act has or may have occurred and is not clearly inconsequential, the matter must be elevated within the company and ultimately must be reported to the company's audit committee or Board of Directors. If the company and the Board of Directors fail to take timely and appropriate to remediate a material matter, the auditor has obligations under Section 10A to notify the SEC about the matter. Notably, the auditor is neither required nor permitted to make a public disclosure of the nature of the auditor's findings. Also, as discussed further below, AS 2405 recognizes that "such disclosure [of an illegal act] would be precluded by the auditor's ethical or legal obligation of confidentiality, unless the matter affects his opinion on the financial statements." By contrast, we believe many matters leading to an auditor carrying out its obligations under Section 10A would, under the Reproposal, trigger public reporting by the auditor as a CAM, irrespective of the company's disclosing the matter first.

The contrast between the absence of a disclosure obligation for the registrant (e.g., for significant deficiencies) or the auditor (e.g., under Section 10A) and the creation of disclosure obligations for the auditor under the Reproposal (even if the company has not made its own disclosures first) raises important policy and related considerations with respect to the respective roles of the auditor, the company, and the applicable legal and regulatory disclosure frameworks that we respectfully urge be further considered.

To address these concerns, we believe several matters should be addressed in the PCAOB's final rule in this area: (a) narrowing the definition of a CAM to those that are material and therefore would require the company's disclosure; (b) limiting the auditor's disclosure obligation to those matters that are required to be disclosed to the audit committee and (c) eliminating any requirement that the auditor make disclosures relating to CAMs that have not previously been disclosed by the company. We address those matters in additional detail below.

We urge the definition of a CAM be clarified to state clearly that a CAM is a *material* matter arising from the audit of the financial statements taken as a whole. We believe such a clarification would eliminate the possibility of the auditor disclosing a significant deficiency, which by definition is not material, and would reduce the likelihood that the auditor would be the source of original information. If the definition of a CAM required a matter to be material to the financial statements taken as a whole, then the possibility the auditor might have to disclose original information about matters other than significant deficiencies (e.g., critical accounting estimates and to a certain extent illegal acts) should be mitigated as well. We offer other suggestions to guard against the risk of an auditor being the source of original information about the company in the *Communicating CAMs* section below.

We believe that the proposed requirement to consider all matters communicated to the audit committee in determining CAMs is overly broad and could have unintended consequences related to the nature of the communications between the auditor and audit committee as well as overall audit effort. In the Reproposal, the Board expressed the view that "it seems likely that especially challenging, subjective, or complex auditor judgments would relate to areas that are required to be communicated to the audit committee, either under a specific requirement or more broadly as a matter that is significant to the audit committee oversight of the financial reporting process."

We agree with this statement. Consistent with this view, we believe that required communications to the audit committee communication under AS 1301 provide the appropriate source for potential CAMs. Required communications under AS 1301 are appropriately broad and include significant and critical accounting policies, practices and estimates, significant unusual transactions, and other matters arising from the audit that are significant to the oversight of the company's financial reporting process.

Without limiting the source of potential CAMs to the communication requirements in AS 1301, a standard risks creating a need for auditors to consider and document every communication with the audit committee, which we believe could result in less dialogue with the audit committee, which would not be in investors' interests.

We believe robust and open conversation between auditors and audit committees is critical to audit quality and protecting investors' interests and should not be curbed. As a result, we believe investor interests will be best served if the standard narrows the source of CAMs to matters that are required to be communicated to the audit committee, rather than including any matter communicated.

Recommendation

We recommend that the proposed definition of a CAM be refined as follows:

- A critical audit matter is any matter arising from the audit of the financial statements that ~~was~~ is ~~communicated or~~ required to be communicated to the audit committee and that: (1) ~~relates to accounts or disclosures that are~~ **is** material to the financial statements **taken as a whole** and (2) involved especially challenging, subjective, or complex auditor judgment.

When incorporating "material" into the definition above, we recommend that it reference the Supreme Court's definition of materiality, consistent with the release to the Reproposal. Similarly, we believe it would be appropriate for an additional clarification that the matter be material to the financial statements "taken as a whole" given the nature of the materiality assessment articulated by the Supreme Court and the PCAOB's standards.

**Determining whether a matter involved especially challenging, subjective or complex auditor judgment**

Paragraph 12 of the proposed standard lists factors that the auditor should consider, in addition to other factors specific to the audit, in determining whether a matter involved especially challenging, subjective or complex auditor judgment. While we agree that most of these are appropriate factors auditors should consider when making this determination, we have some concerns with the following two factors:

- The degree of auditor subjectivity in determining or applying audit procedures to address the matter or in evaluating the results of those procedures [paragraph 12.b]

- The nature of audit evidence obtained regarding the matter [paragraph 12.f]

We believe that a discussion of CAMs would be most useful to investors if it helps them understand and derive value from a company's financial statements and disclosures. In our view, communicating matters that would rise to the level of a CAM because of the especially challenging, subjective or complex auditor judgment required in determining audit strategy or applying audit procedures would not necessarily accomplish this goal.

For example, in a multilocation engagement, the auditor often is required to use especially challenging, subjective or complex judgment in determining the locations or business units at which to perform audit procedures, as well as the nature, timing and extent of the procedures to be performed at individual locations or business units under AS 2101.11, *Audit Planning*. This complexity of judgment on the part of the auditor, however, may not be matched by a complex judgment made by management in the preparation of the financial statements and disclosures.

In general, we believe CAMs that focus on such matters (i.e., when the CAM definition is met due primarily to audit strategy considerations) would not provide investors with insights on matters that would be most relevant to their understanding of the financial statements. In addition, we believe auditors would be more likely to have to discuss original information in situations like this since in these situations, the underlying complexity related to the audit strategy judgments would be derived from underlying complexities in the company's system of internal control.

Similarly, in certain instances, an auditor might be required to comment on the company's process for making critical accounting estimates to the extent the auditor observed challenges in a company's method for making the estimate, but determined that the result of the method was reasonable based on the audit procedures employed to assess its reasonableness.

In contrast, we do agree that the degree of auditor subjectivity used in *evaluating* the results of audit procedures applied to address an accounting and reporting matter would be a factor to consider when evaluating whether a matter arising from the audit of the financial statements is a CAM.

Recommendation

We propose that the factor in paragraph 12.b of the proposed standard be modified as follows:

- The degree of auditor subjectivity in ~~determining or applying audit procedures to address the matter or in~~ evaluating the results of ~~those~~ **audit** procedures **applied to address the matter arising from the audit of the financial statements**

Paragraph 12.f indicates that the auditor should consider the nature of audit evidence obtained regarding a matter in determining whether a matter is a CAM. The auditor is required to consider the relevance and reliability of evidence when evaluating whether sufficient appropriate audit evidence has been obtained.

When evaluating the reliability of evidence, AS 1105, *Audit Evidence,* notes that the auditor must consider both its nature and source. Given the number of considerations the auditor must evaluate when deciding whether he or she has obtained sufficient appropriate evidence, it wasn't clear to us how this factor was intended to be used when evaluating whether potential matters should be CAMs. Additionally, potentially requiring the auditor to disclose the nature of audit evidence obtained (as part of describing how the matter was addressed in the audit) might require the auditor to disclose original information about the company under audit.

Recommendation

We believe these auditor considerations could be more effectively captured by eliminating paragraph 12.f and amending paragraph 12.c of the Reproposal as follows:

- The nature and extent of audit effort required to **obtain sufficient appropriate audit evidence to** address the matter, including the extent of specialized skill or knowledge needed or the nature of consultations outside the engagement team regarding the matter

When combined with the remaining factors, we believe these proposed revisions to paragraph 12.c provide an appropriate framework for evaluating CAMs and as a result, would obviate the need for paragraph 12.f.

**Communicating CAMs**

We agree with the proposed requirement to describe the principal considerations that led the auditor to determine that the matter is a CAM. However, we found the statement included in Note 2 to paragraph 14 regarding the auditor being the source of original information to be a bit circular. While the auditor is not expected to provide original information, the Reproposal indicates that the auditor may need to do so in order to describe the principal considerations that led it to determine the item was a critical audit matter. As previously discussed, we do not believe that the standard should create obligations whereby the auditor would be the source of original information about the company.

Recommendation

We recommend the language in paragraph 14 (Note 2) of the proposed standard be modified as follows:

- When describing critical audit matters in the auditor's report the auditor **should** ~~is~~ not ~~expected to~~ provide information about the company that has not **previously** been made publicly available by the company ~~unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit~~.

At a minimum, we believe any final standard should also include a statement that the auditor should not communicate original information about the company if law, regulation or applicable generally accepted accounting principles do not permit or otherwise require such disclosure. Auditors are required by their legal, ethical and contractual obligations to maintain client confidences. Some state confidentiality laws may not permit the auditor to breach confidentiality in order to comply with PCAOB standards. Additionally, some states recognize accountant-client privileges, which are held by the client. These privileges may preclude the auditor from disclosing privileged communications, in contradiction to what the Reproposal may require.

Some stakeholders, including the CAQ, have noted that the examples in the proposal appear to include communications of original information. If examples are included in the adopting release, we suggest that original information should not be included in the examples.

The Reproposal would also introduce a requirement to describe how the CAM was addressed in the audit. We agree that this information would be of interest to users and provide additional transparency about the audit. Similar to our concern about the auditor being the original source of information in describing the CAM, we also believe that the auditor should not be the original source of information in describing how the critical audit matter was discussed in the audit. We also respectfully request in its analysis of the costs and benefits of this information the Board consider that this additional information may increase the auditor's liability to investors.

**Piecemeal opinions and CAM introductory language in the auditor's report**

We agree with the Board that CAMs should not be considered piecemeal opinions. The Board's inclusion of the statement in paragraph 15 of the proposed standard is helpful in making the point more transparent to users of the financial statements, but we believe it could and should be strengthened.

Recommendation

The following modifications of the CAM introductory language reflect our recommendations that (1) the source of CAMs be limited to those matters that are required to be communicated to the audit committee and (2) a CAM should be a material matter arising from the audit of the financial statements. In addition, we believe these revisions further clarify the nature of CAM communications in relation to the auditor's opinion on the financial statements taken as a whole:

- The critical audit matters communicated below are matters arising from the current period audit that were ~~communicated or~~ required to be communicated to the audit committee and that (1) ~~relate to accounts or disclosures that~~ are material to the financial statements **taken as a whole** and (2) involved our especially challenging, subjective, or complex judgments. ~~Critical~~ **The discussion of critical** audit matters ~~do~~ **does** not alter in any way **the meaning of** our opinion on the financial statements taken as a whole, and we ~~do not provide~~ **are not, by communicating the critical audit matters below or otherwise, providing** separate opinions **or other audit conclusions beyond the information specifically communicated** on ~~the~~ critical audit matters ~~or on the accounts or disclosures to which they relate~~.

Recommendation

We also believe that the Board should reconsider the requirement to place the opinion paragraph first as well as the section headings in the auditor's report (i.e., Opinion on the Financial Statements, Basis for Opinion and Critical Audit Matters [if applicable]). While we agree that headings may help users navigate the expanded auditor report, the current ordering of the components of the opinion and the heading of the CAM section of the report may be misunderstood to imply that CAM communications are separate and distinct from the auditor's opinion, which could be misinterpreted as a piecemeal opinion.

**Documentation**

The Reproposal observes that the auditor's basis for the determination of a CAM may be so clear for some matters that a single sentence would be sufficient, while other matters may require more extensive documentation. Given this potential for a wide range of documentation, we believe that further clarity with respect to the Board's expectations regarding the application of the requirements of AS 1215, *Audit Documentation*, to the documentation of CAMs would be helpful.

Recommendation

We encourage the Board to consider providing additional guidance about when more extensive documentation would be necessary and provide some examples illustrating what this more extensive documentation might include. This additional guidance should help clarify the Board's requirements and hopefully lead to more consistent application of the standard by auditors.

**Auditor tenure**

The Reproposal observes that commenters' views and academic research are divided about whether there is a link between audit quality and auditor tenure. We have concerns that requiring the disclosure of auditor tenure in the auditor's report may inappropriately imply that such a correlation exists.

We believe that consideration of auditor tenure is most relevant and useful as one of multiple factors in the audit committee's assessment of the auditor's qualifications and retention considerations. We observe that companies increasingly voluntarily are disclosing information in their annual proxy statements about tenure and other factors impacting auditor retention considerations, indicating that boards are recognizing and responding to investor interest in this topic.[1]

We also note that the SEC has sought input on issue through its *Concept Release on Possible Revisions to Audit Committee Disclosures*, which asked questions about whether information about auditor tenure should be disclosed in the audit committee report. The SEC is currently monitoring such audit committee related disclosures, which we believe is the right approach at this time.

Recommendation

We believe the Board should not require audit tenure to be disclosed in the auditor's report. If the Board decides to require disclosure of auditor tenure, we believe it should be made in Form AP. Disclosure in Form AP would be a logical extension of the information already required within the form and would allow for explanatory discussion when necessary (for example, when the start date of tenure is not known). If the intent of the reproposed requirement is to require consistent reporting of auditor tenure in a consistent location, we believe that goal could still be achieved through disclosure in Form AP.

**Other considerations**

Liability concerns

We appreciate that the PCAOB has considered the potential costs of increased auditor liability in making the Reproposal and view the Reproposal as an improvement upon the 2013 proposal in this regard. However, auditor liability concerns will remain if the Reproposal is adopted as written.

First, we are concerned that an unintended consequence of the Reproposal could be to increase the auditor's exposure to non-meritorious claims under the federal securities laws, specifically claims alleging strict liability under Section 11 of the Securities Act of 1933. Current federal case law recognizes that an audit opinion contained in a registration statement — because it is an "opinion" — is not actionably false unless the auditor did not believe the opinion. Under the Reproposal, the audit opinion will include much more information than the current form of report. While we are generally

---

[1] The CAQ's *2015 Audit Committee Transparency Barometer* showed that 54% of the S&P 500 companies disclosed information about auditor tenure in 2015, up from 47% in 2014. In addition, the EY Center for Board Matters has conducted an annual survey of audit-related proxy disclosures of Fortune 100 companies over the past five years and found that 62% of those companies now disclose tenure, up from 24% in 2012.

supportive of providing additional information, there needs to be a balance between what is provided and potential increased cost. Additional information may serve as fodder for plaintiffs seeking to misapply the securities laws and bring non-meritorious actions. Increased claims will lead to increased costs to firms because it may be more difficult to obtain early dismissal of these claims, which plaintiffs may try to present as based on facts imbedded in the descriptions of CAMs even though the auditor's opinion is not actionable. If this comes to pass, audit firms will be forced to choose between settling non-meritorious claims and costly litigation. These costs, and the cost of expanded audit procedures to comply with the standard, will in all likelihood inevitably be passed onto registrants.

Second, the Reproposal may also expose auditors to liability to their own clients, to the extent it requires auditors to disclose original information about the audit client. Auditors are required to comply with professional obligations of confidentiality, state confidentiality laws, accountant-client privileges, as well as the auditor's responsibilities under Section 10A. For example, Section 10A does not authorize the auditor to publicly disclose an illegal act. Indeed, AS 2405.23 recognizes that "such disclosure [of an illegal act] would be precluded by the auditor's ethical or legal obligation of confidentiality, unless the matter affects his opinion on the financial statements."[2] If the auditor discloses original client information in the course of describing a CAM, the auditor may be exposed to additional liability from its client for breaching these confidentiality obligations.

If the PCAOB were to adopt the recommendations set out in our letter we believe these liability concerns would be significantly ameliorated.

## Scope and exemptions from CAM communications

### *Communication of CAMs*

We agree with the Board's proposal to exempt non-issuer brokers and dealers, investment companies (that are not business development companies) and employee benefit plans (i.e., employee stock purchase and savings and similar plans) from the proposed requirement to identify and communicate CAMs. Based on the ownership and reporting characteristics of these entities, communication of CAMs would be less beneficial to the primary users of these financial statements and would not justify the additional costs associated with such requirements.

### *Auditor tenure*

The Reproposal observes that brokers and dealers are often controlled by an individual or entity that has direct access to the auditor. As a result, disclosure of auditor tenure arguably would not provide additional information to these users. Therefore, we believe that the Board should exclude non-issuer broker dealers from any such requirements for the same reasons they would be exempted from the proposed CAM communications.

---

[2] Appendix B to AS 1301: Communications with Audit Committees recognizes that AS 2405, Illegal Acts by Clients, also requires communications with audit committees. Thus, communications of illegal acts to the audit committee would presumably be included in the definition of a CAM.

**Effective date**

As discussed in the CAQ letter, audit firms would need to develop and implement effective quality control processes and conduct training of their professionals. As such, we believe that any final standard should be effective for audits of financial statements of large accelerated filers with fiscal years beginning no earlier than 12 months after the date of final SEC approval. All other filers should have an additional 12 months before being required to adopt the new standard. This phased approach would make implementation more manageable for even the largest audit firms while allowing smaller firms to benefit from lessons learned during the initial phase of implementation.

**Conforming amendments**

We have also included in Appendix comments on the conforming amendments included in the Reproposal.

* * * * *

We would be pleased to discuss our comments with the Board or the PCAOB staff at your convenience.

Very truly yours,

Ernst & Young LLP

**Appendix — Comments on conforming amendments included in the Reproposal**

| Comment number | Reference | Observation |
|---|---|---|
| 1 | A1-8<br>AS 1301 12.d | The term *significant unusual transaction* is defined in paragraph 12.d of AS 1301. We recommend adding a footnote at the end of paragraph 12.e of the Reproposal that states:<br>The term *significant unusual transaction* in this paragraph has the same meaning as the term *significant unusual transaction* in paragraph 12.d of AS 1301. |
| 2 | A1-11<br>AS 3101 paragraph 18 | Existing AS 3101.10 specifies that the addition of an explanatory paragraph does not affect the auditor's unqualified opinion on the financial statements. We recommend that the Board include similar language in any final standard. |
| 3 | A1-17<br>AS 3101 Appendix B | Include the statement of comprehensive income in the example report. |
| 4 | A2-16<br>AS 3105 paragraph .9<br>A2-22<br>AS 3105 paragraph .22<br>A2-24<br>AS 3105 paragraph .25<br>A2-25<br>AS 3105 paragraph .27<br>A2-28<br>AS 3105 paragraph .34<br>A2-31<br>AS 3105 paragraph .43<br>A2-33<br>AS 3105 paragraph .47<br>A2-(36-37)<br>AS 3105 paragraph .51<br>A2-39<br>AS 3105 paragraph .53<br>A2-42<br>AS 3105 paragraph .58<br>A2-46<br>AS 1205 paragraph .09 | Include the statement of comprehensive income in the example report. |

| Comment number | Reference | Observation |
|---|---|---|
| | A2-75<br>AS 3315 paragraph .06<br>A2-78<br>AS 3315 paragraph .10<br>A2-82<br>AS 4105 paragraph .39<br>A2-92<br>AI 23 paragraph .36 | |
| 5 | A2-19<br>AS 3105 paragraph 16 | We recommend this paragraph be modified as follows:<br>***Limited reporting engagements.*** *The auditor may be asked to report on one basic financial statement and not on the others. For example, he or she may be asked to report on the balance sheet and not on the statements of income,* ***comprehensive income,*** *retained earnings or cash flows. These engagements do not involve scope limitations if the auditor's access to information underlying the basic financial statements is not limited and if the auditor applies all the procedures he considers necessary in the circumstances; rather, such engagements involve limited reporting objectives.* |
| 6 | A2-25<br>AS 3105 paragraph 26 | We recommend this paragraph be modified as follows:<br>*If a company issues financial statements that purport to present financial position and results of operations but omits the related statement****s*** *of* ***comprehensive income and*** *cash flows, the auditor will normally conclude that the omission requires qualification of his opinion.* |
| 7 | A2-18<br>AS 3105 paragraph .12<br>A2-27<br>AS 3105 paragraph .31<br>A2-85<br>AS 4105 paragraph.43 | We recommend the Board update the references in these paragraphs to the current ASC guidance. |
| 8 | A2-35<br>AS 3105 footnote 13 (to .49) | The footnote references state and local governments and not-for-profit entities. As these entities are not issuers or broker-dealers required to comply with PCAOB standards, we recommend revising the examples provided in the footnote. |

| Comment number | Reference | Observation |
|---|---|---|
| 9 | A2-45<br>AS 3105 paragraph .62 | We suggest removing the reference to "explanatory" as uncertainties are not required to be disclosed in an explanatory paragraph. |
| 10 | A2-53<br>AS 2201 paragraph .85Eb | We recommend the Board remove the requirement to disclose auditor tenure in the auditor's report on ICFR for the reasons discussed above. If the PCAOB decides to require disclosure of auditor tenure either in the auditor's report or Form AP, we also recommend the Board remove the requirement to discuss tenure in the auditor's report on ICFR as it would be redundant with the disclosure to disclose it elsewhere. |
| 11 | A2-57<br>AS 2201 paragraph .B16 | We suggest the references to "explanatory" paragraphs be removed from this paragraph as these would not be explanatory paragraphs as required by AS 3101.18. |
| 12 | A2-62<br>AS 2705 paragraph .08 | The requirements in this paragraph for when an explanatory paragraph would be necessary are not consistent with the requirements in AS 3105.18j. |
| 13 | A2-73<br>AS 3305 paragraph .31d | It isn't clear why "explanatory" is deleted from this paragraph given it is an example of a matter that would require the use of explanatory language or an explanatory paragraph. |

Federation of European Accountants

Brussels, 26 July 2016

**Subject: Reproposal of the standard ‘’The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion’’**

Dear Sir or Madam,

The Federation of European Accountants (the Federation) is pleased to provide you with its comments on the Public Company Accounting Oversight Board’s ("PCAOB") reproposal of the standard *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion.*

(1) The Federation welcomes the reproposed auditing standard and fully supports an auditor’s report that is more informative, user friendly and easy to understand.

(2) It is encouraging that the IAASB and the PCAOB are engaged in a similar approach to improving the auditor’s report. This is particularly helpful for investors who are interested in an entity that is required to issue an auditor’s report both under IAASB and PCAOB standards. In particular, we note that the PCAOB’s concept of Critical Audit Matters (CAM) has now been more closely aligned to the IAASB’s concept of Key Audit Matters (KAM), as set out in ISA 701 *Communicating Key Audit Matters in the Independent Auditor’s Report* than originally proposed. We advocate for alignment of auditing standards globally to the maximum extent possible. In general, there should be no differences between CAM and KAM except where jurisdictional particulars dictate the necessity for specific clearly identifiable differences. This enhances both quality of audits and acceptance of audit reports beyond home jurisdictions, whereas differences between CAM and KAM reporting for a particular entity would likely impinge on users’ perceptions as to the decision usefulness of the new auditor reporting model.

(3) The constructive relationship between the PCAOB and the IAASB also provides further transparency to informed users about audit related matters and enhances the dialogue of users with those charged with governance (TCWG) (e.g. audit committee). As the PCAOB will be aware, the new European audit legislation comprises updated European Union (EU) provisions regarding the improvement of the quality of statutory audit across the EU. Key measures comprise strengthening the independence of statutory auditors and making the audit report more explanatory. Member States were required to adopt, publish and apply the measures necessary to comply with the Directive2014/56/EU[1] from 17 June 2016. Most provisions of the Regulation[2] also came into force from 17 June 2016. The main impact on auditor reporting in Europe will come from the Regulation and not the Directive. ISAs have not yet been adopted by the EU Commission and it currently seems unlikely that this will happen in the near future.

(4) Moreover, we support the reproposal in that it addresses the needs of users to receive information that is entity-specific. For the new auditor's report to bring the maximum added value to users, technical or standardised language needs to be avoided.

(5) The main threat to enhanced transparency is that CAM disclosed will be irrelevant to investor needs, or will degenerate into boilerplate. Extended auditor reporting should be seen as a journey; behavioural changes are needed among all stakeholders, and the PCAOB should not lose sight of the fact that to make CAM effective, investors, audit committees and auditors need to step up their level of engagement with each other.

(6) We do not comment on all the questions raised in the reproposal. In particular, we have not responded to:

- Questions 3, 12 and 14 to 20 on Section IV. Discussion of the Reproposal
- Question 26 on Section V. Other Amendments to PCAOB Standards;
- Questions 37 to 40 on section VII. Exclusions from Critical Audit Matter Requirements;
- Questions 41 to 43 on section VIII. Considerations for Audits of Emerging Growth Companies;
- Question 44 on section IX. Considerations Related to Effective Date.

[2] http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32014R0537&from=EN

Our detailed responses to the questions included in the Proposal are set out in the Annex below. For further information on the Federation's letter, please contact Hilde Blomme on +32 (0)2 893 33 77 or via email at hilde.blomme@fee.be or Eleni Ashioti on +32 (0)2 893 33 87 or via email at eleni.ashioti@fee.be from the Federation's team.

Kind regards,

On behalf of the Federation of European Accountants,

Petr Kriz
President

Olivier Boutellis-Taft
Chief Executive

## About the Federation of European Accountants

The Federation of European Accountants represents 50 professional institutes of accountants and auditors from 37 European countries, with a combined membership of over 875,000 professional accountants working in different capacities. As the voice of the European profession, the Federation recognises the public interest.

The Federation is in the EU Transparency Register (No 4713568401-18).

# Annex 1

## IV. Discussion of the Reproposal

**Auditor Communication of Critical Audit Matters - Questions 1-12**

1. *Is the definition of "critical audit matter" appropriate for purposes of achieving the Board's objective of providing relevant and useful information in the auditor's report for investors and other financial statement users? Is the definition sufficiently clear to enable auditors to apply it consistently? If not, describe why the definition may not be clear, including examples demonstrating your concern.*

   *a. Are matters communicated or required to be communicated to the audit committee the appropriate source for critical audit matters? Why or why not?*

   *b. Are there any audit committee communications that should be specifically excluded from consideration as a source of potential critical audit matters? If so, identify and explain the reason for the exclusion.*

   *c. Is the "relates to accounts or disclosures that are material to the financial statements" component of the definition of a critical audit matter appropriate and clear? Why or why not?*

   *d. Is the "involved especially challenging, subjective, or complex auditor judgment" component of the definition of a critical audit matter appropriate and clear? Why or why not?*

(1) The reproposal to the definition of CAM is achieving the PCAOB's objective. Whilst it is also quite closely aligned to the IAASB'S terminology, we question the need to use different terminology without good reason and unless differences are genuine and significant.

(2) The auditor's communication of CAM will be relevant and useful to investors and other financial statement users if:

- investors continue to engage with the audit committees' and auditors' communities, and are clear about what they want as pieces of information;
- auditors avoid boilerplate where possible; and
- regulators, companies and investors do not drive auditors into the defensive reporting of boilerplate with threats of sanctions and litigation.

(3) We agree that the matters communicated or required to be communicated to the audit committee are the appropriate source for CAMs.

(4) We have not identified any audit committee communications that should be specifically excluded from consideration as a source of potential CAMs.

(5) The component ''relates to accounts or disclosures that are material to the financial statements'' of the definition is appropriate and clear. The requirement is similar to the one included in ISA 701; despite the fact that this component is not included in the definition of KAM in ISA 701, the standard considers materiality in paragraph A29 as one of the relevant considerations to determine a KAM, i.e. ''The importance of the matter to intended users' understanding of the financial statements as a whole, in particular, its materiality to the financial statements.''

(6) We consider that the following component of the CAM definition "[…] involved especially challenging, subjective, or complex auditor judgment" is appropriate and clear.

> 2. *Are factors helpful in assisting the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? Why or why not?*

(7) We welcome the reproposal listing a number of factors to determine CAMs, considering matters involved in areas which require judgement, or are challenging and subjective, such as the auditor's assessment of the risks of material misstatement, including significant risks.

(8) The fact that the PCAOB reproposal is, in general, now more aligned to the IAASB's approach than was the original proposal should limit the confusion to auditors who may need to apply both sets of standards and to investors receiving both auditor's reports under the IAASB standards and the PCAOB standards for the same entity.

(9) The PCAOB could go further to allow for and encourage the use of judgement in this area as well.

> 4. *Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, rather than only the current period? For example, should communication be required in an IPO or in a reaudit? Why or why not?*

(10) The auditor should first and foremost concentrate on those CAMs arising from the audit of the current period, even in the case of comparative financial statements, when the auditor is required to report on both the current period financial statements and the prior period financial statements in connection with the current year's audit.

(11) We agree with the PCAOB's Reproposal indicating that the auditor might communicate CAM with regard to a prior period in particular situations. There may be circumstances, in the situation of an IPO for instance, where it might be relevant to include CAMs on other periods. The normal usage should be to report on the current year only. IPOs could be given as an example whereas re-audits are rare and should therefore not be used as an example.

> 5. *Are the reproposed requirements regarding the description of critical audit matters in the auditor's report, including the principal considerations and how the matter was addressed in the audit, sufficiently clear for consistent implementation by auditors? Why or why not? If not, how could the requirements be clarified?*

(12) Notwithstanding our remarks as to the importance of global consistency, the reproposed requirements in relation to the description of CAMs in the auditor's report, including the principal considerations and how the matter was addressed in the audit are sufficiently clear for consistent implementation by auditors.

(13) The reproposal narrows the auditor to describe only the principal considerations. This should result in providing more useful information to investors and other users and avoid boilerplate language in this section of the auditor's report as well as potential overload with insignificant information.

(14) We welcome the fact that the PCAOB allows for flexibility on the level of detail in the description of each CAM. This should encourage the development of tailor-made reports. The guidance on page 31, which provides some examples that the auditor could use to describe how CAMs were addressed in the audit, will certainly benefit auditors in preparing the auditor's report and will help financial statement users better understand these matters.

> 6. *Do the reproposed communication requirements appropriately address commenter concerns regarding auditor communication of critical audit matters, such as:*
>
> a) *The auditor providing original information in describing the principal considerations for the determination that the matter is a critical audit matter or describing how the matter was addressed in the audit, and*
>
> b) *Investors and other financial statement users misinterpreting critical audit matters as undermining the auditor's pass/fail opinion or providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate?*
>
> *Are there other steps the Board could take to address these concerns? If so, what are they?*

(15) Yes, the reproposed communication requirements appropriately address the above mentioned commenter concerns. It is beneficial that the proposed requirements are very likely to enhance the way in which auditors and audit committees work together.

(16) The reproposed standard specifies that the auditor's communication of CAMs does not change by any means the auditor's opinion on the financial statements, taken as a whole. We consider this reproposal to respond to commenter concerns on the misinterpretations indicated in the question 6 (b).

> 7. *In addition to referring to the relevant financial statement accounts and disclosures, would it be appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating a critical audit matter? Why or why not?*

(17) No, we do not consider it appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating CAM. The CAM definition refers to information that is included in the financial statements.

(18) Also, our concern with referencing information outside of the financial statements is that the reader may infer that such information has been subject to audit, which will not be the case. This could lead to an expectation gap between what the reader thinks is done by the auditor and what the auditor has actually done.

> 8. *Is it appropriate for the reproposed standard to retain the possibility of the auditor determining that there are no critical audit matters and, if so, require a statement to that effect in the auditor's report? Why or why not?*

(19) Yes, it would be appropriate to retain the possibility for the auditor to determine that there are no CAMs, and require a statement to that effect in the auditor's report.

(20) We agree with the PCAOB approach that while it is anticipated that at least one CAM will be communicated in the auditor's report, there are still cases where the auditor may identify a matter but not consider it so important as to merit disclosure in the auditor's report. Requiring such a statement is also consistent with the IAASB approach.

> 9. *Is the reproposed documentation requirement clear and appropriate? Why or why not? If not, how should the documentation requirement be formulated?*

(21) We support the reproposal of narrowing the source of CAMs to matters communicated or required to be communicated to the audit committee and also in adding a materiality component.

(22) The IAASB's requirements for documentation focus on why a KAM is a KAM, with an option to describe why other potential KAMs were not reported as KAMs. The PCAOB's requirements have more focus on documenting why possible CAMs are not considered to be CAMs, which seems to be more about preparing audit files for inspection purposes than communicating useful information to investors. The requirements are clear, but do not go in the right direction.

*10. What effect, if any, could the auditor's communication of critical audit matters under the reproposed standard have on private litigation? Would this communication lead to an unwarranted increase in private liability?*

(23) The legal framework and litigation culture in many EU member states often still differ from the situation in the USA and the extent of private litigation is not necessarily a phenomenon of the same magnitude as it is in the US and some other jurisdictions.

*11. Do the changes from the 2013 proposal address concerns that have been raised about private liability? If not, what additional changes would you suggest should be made?*

(24) We recognise the PCAOB's effort to address the concerns that have been raised from the 2013 proposal about private liability. This is evident from various aspects of the reproposal such as changing the source of CAMs, adding a materiality component, redefining the factors and modifying the communication requirement.

**Additional Improvements to the Auditor's Report – Questions 13-20**

*13. Is the reproposed requirement relating to auditor independence clear? Would this information improve investors' and other financial statement users' understanding of the auditor's independence responsibilities? Why or why not?*

(25) The fact that the word ''independent" already appears in the audit report means that the bold statement to the effect that auditors are independent, a little further down in the report, manages to say very little and looks repetitive at the same time. The statement does not add much to the word in the title and we have doubts as to whether it will in fact improve confidence in auditor independence. Merely stating that auditors are required to be independent does not make them so. The auditors' report should not be cluttered with poor quality information, particularly if it is repetitive. Requiring auditors to include a statement on their independence will not result in any significant changes to their behaviour. Confidence in the independence of auditors is important and a statement in the auditors' report to this effect is unobjectionable, if superfluous.

**Explanatory Language and Emphasis of a Matter – Questions 21-24**

*21. Is the interaction between the communication of critical audit matters and required explanatory paragraphs clear and appropriate? Why or why not?*

(26) Yes, the interaction between the communication of CAMs and required explanatory paragraphs is clear and appropriate. Clarifying that a CAM is not a substitute for required explanatory paragraphs as well as considering that ''there could be situations in which a matter meets the definition of a critical matter and also requires an explanatory paragraph, such as going concern'' could be very useful in the preparation of the auditor's report, and ultimately may increase the confidence that investors and other users have in the audit and in the financial statements.

(27) Furthermore, we acknowledge that the PCAOB requires auditors in AS 2415 to include an explanatory paragraph in the auditor's report when there is substantial doubt about the company's ability to continue as going concern. Further clarification is needed to explain the linkage between CAMs and the going concern basis of accounting in the auditor reporting standard. We would very much welcome a clear requirement that going concern issues should be included as a CAM if the definition is met. A similar requirement is included in ISA 701.

(28) We very much welcome the fact that the next action under consideration in the PCAOB's agenda relates to a project on 'Going Concern'.

> 22. *Should auditors be permitted to include the critical audit matter communications in the required explanatory paragraph? Would integrating explanatory paragraphs and critical audit matters be helpful to investors? Alternatively, would it decrease the impact of the explanatory paragraph? Why or why not?*

(29) Yes, the auditors should be permitted to include the CAM communications in the required explanatory paragraph. It would be helpful to investors since they will have access to additional information such as how the matter was addressed in the audit.

> 23. *Should the Board's requirement to include an explanatory paragraph in the auditor's report when the auditor did not perform an audit of ICFR apply not only if company's management is required to report on ICFR, but also if management is not required to report, such as for investment companies?*

(30) We support transparency as to the scope of the audit. Such requirement should be included in all audit reports where an audit of ICFR was not performed to avoid any potential misunderstanding.

> 24. *Is the interaction between the communication of critical audit matters and emphasis paragraphs clear and appropriate? Why or why not?*

(31) Yes. The interaction between the communication of CAMs and emphasis paragraphs is clear and appropriate. We recognise the PCAOB's effort to do so by clarifying that emphasis paragraphs are not a substitute for required CAMs. We also find useful for the auditor the list of examples provided of matters that may be emphasized in relation to the financial statements.

(32) We agree that an emphasis paragraph would not be included in the auditor's report concerning a matter that meets the definition of a CAM, as in this case that matter should be communicated as CAM.

**Form of the Auditor's Report – Question 25**

> 25. *Would the reproposed requirements for a specific order of certain sections in the auditor's report and for section titles make the auditor's report easier to use? Should the standard allow more or less flexibility in the presentation of the auditor's report?*

(33) We support requiring the report to include obligatory subheadings and also to require the ordering of paragraphs to mirror the auditor's reporting model under ISAs. The 'global standardisation' of the auditor's report would help:

- Direct users to specific areas of interest such as CAM within the auditor's report; and
- Facilitate a comparison between auditor's reports.

(34) We note, however, that flexibility might be needed in some jurisdictions and/or in the circumstances of a particular engagement. To this end, even if the paragraph order differs between jurisdictions, as a result of national laws or regulations, the reader can use those subheadings to navigate the report more easily. It would be most helpful if the PCAOB report uses the same headings as the ISA equivalent, the comparison between auditor's reports will then be more straightforward.

## VI. Economic Considerations - Questions 27-36

(35) It is worth noting that the CAM proposals should initially be viewed as an experiment, and that time will be needed to adapt and develop best practice. The definitions and requirements included in the proposals cannot currently respond to all possible questions which are bound to arise upon application of this new form of auditor reporting.

RE: PCAOB Rulemaking Docket Matter No. 034

FedEx Corporation has reviewed the Public Company Accounting Oversight Board ("PCAOB") proposed auditing standards Release No. 2016-003 dated May 11, 2016, and we appreciate the opportunity to comment on the proposal. We previously commented on the August 13, 2013 auditing standard Release No. 2013-005 on the same subject.

FedEx Corporation is a global company that provides customers and businesses worldwide with a broad portfolio of transportation, e-commerce and business services. Our annual revenues total approximately $58 billion, we have more than 400,000 team members, and we serve customers in more than 220 countries and territories. Our financial statements are prepared under U.S. GAAP, filed with the Securities and Exchange Commission (SEC) and we are registered with the New York Stock Exchange. We present our views from the perspective of a financial statement preparer, and we support the PCAOB's mission to oversee the auditing profession and improve audit quality. We are pleased that the PCAOB revised the 2013 proposal to address matters raised by us and others; however, we still do not support the proposal with respect to the auditor's report and have set forth below our views on this issue.

**Summary**

Our December 2013 letter took issue with the proposals to include critical audit matters in the auditor's report and to extend the auditor's report to cover "other information" outside of the financial statements. Although the PCAOB revised and narrowed the scope of the critical audit matters that would be included within the auditor's report, we remain unconvinced that the inclusion of these matters will be useful to investors and other users of the financial statements. We are pleased that the Board has deferred consideration of the reporting on other information and has removed that topic from the new Release.

**Critical audit maters**

We remain skeptical that the inclusion of explicit discussion of critical audit matters within the auditor's report will add value to the investor/reader. We continue to believe that this will add costs and issues for a company as discussed further below.

As we stated in our prior letter, the financial statements of a public company are the responsibility of its management and the oversight of that responsibility lies with the company's Board of Directors through its Audit Committee. In our view, the PCAOB's original proposal and the current reproposal seek to supplant management's responsibility for disclosure of critical accounting matters with a company's auditor and publicize aspects of the audit process that may not be useful to investors and other users of financial statements. We strongly disagree with this concept and believe that auditors should not be disclosing editorial details of any nature about the audit process publicly and that their role is to opine on the fair presentation of the totality of the information provided by management and the internal control over financial reporting.

While some investors may desire improvements in disclosures, we continue to believe that the proper source of this information is a company's management and not the auditor. If the PCAOB believes that companies have overall deficiencies in their financial statement disclosures on critical accounting policies and estimates, then the proper venue for this issue is with the FASB and the SEC.

Beyond our fundamental disagreement with the basic principle of the PCAOB proposal, we believe a separate listing of critical audit matters in an auditor's report is redundant to the disclosure of a company's significant accounting policies and critical accounting estimates required in its Annual Report. If a company falls short of the transparency required under the disclosure standards outlined by the FASB and the SEC in its audited financial statements, then the auditor has the duty to communicate that to the company's audit committee and if necessary, issue a qualified opinion on the financial statements, which will carry significantly more weight to investors than lengthy, duplicative statements on critical accounting matters.

We believe that inherent in the PCAOB's proposal is a presumption that critical accounting matters have a bias towards being areas that are "questionable." However, in many cases these matters are simply complex accounting areas. As a result, a list provided by an auditor could be viewed externally as an indicator of a poorly run company or risky investment. Further, the proposal could have the unintended, and in our view, unfortunate effect of discouraging the candid discussion of accounting matters between issuers and auditors due to concerns that such discussions would be required to be referenced in the auditor's report. Finally, even with the revised definition of a critical audit matter, significant auditor judgment will need to be used in order to determine what qualifies as a critical audit matter. We expect judgment will be subject to second guessing, which will put pressure on auditors to report more critical audit matters, ultimately increasing audit costs.

We believe the issues that the PCAOB is seeking to address with this proposal can be addressed without the auditor's report including a discussion of critical audit matters. After reading the original proposal and the reproposal, we stand by our original comments and do not believe that narrowing the definition of a critical audit matter and adding a materiality component fully addresses or alleviates our concerns. First, we encourage the PCAOB to take the lead on providing observations on disclosure failures noted in its audit reviews to the SEC, and have the SEC seek enhanced disclosures from companies, where necessary. Second, we believe that an acceptable alternative to the PCAOB's proposal would be for the auditor's report to explicitly acknowledge the auditor's concurrence with the critical accounting policies and estimates disclosed by the company. Finally, we believe that the audit process is effective, and that auditors should continue to leverage the well-defined process for required communications with audit committees for discussion of critical audit matters. The matters described in the proposal should be discussed in the boardroom, not in the auditor's report. The auditor required communications to the audit committee provide ample opportunities for the auditor to engage in discussions on critical audit matters and the auditor's report could also include an explicit statement that these candid discussions were held.

**Tenure of the Auditor**

The proposed auditing standard in 2013 and the reproposal in 2016 require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor. While we do not have a strong view on this proposal, we do not believe it adds any value to the report and think this statement may imply a correlation between the auditor's tenure and the audit quality, which is not the case. Longer tenure can develop an audit team with deep understanding of a company's complex accounting judgments and estimates. A decision of whether or not the auditor provides a quality audit should be left up to the audit committee of the board of directors since they are the most knowledgeable on the matter. Therefore, we do not believe this disclosure in the audit report is needed. Additionally, the mandatory partner rotation rules address any independence concerns that could be associated with the tenure of the auditor, and we believe that such rules are adequate and are operating as intended in practice.

**Form of the Auditor's Report**

The reproposed standard will require the "Opinion on the Financial Statements" section to be the first section of the auditor's report, immediately followed by the "Basis for Opinion" section. This allows for consistency in the location of the opinion and the basis for opinion section across all auditors reports. We agree with this proposal as this is the main intent of the report and consistency in placement will allow ease of use for readers/investors.

We appreciate the opportunity to comment on these proposed changes and thank you for your consideration of our comments. If you have any questions, please contact Jennifer Johnson at 901-818-7828.

Sincerely,

John L. Merino

Subject: PCAOB Rulemaking Docket Matter No. 34

Submitted via comments@pcaobus.org

Dear Board Members:

Financial Executives International (FEI) is a leading international organization of more than 10,000 members, including Chief Financial Officers, Controllers, Treasurers, Tax Executives and other senior-level financial executives. The Committee on Corporate Reporting (CCR) is a technical committee of FEI, which reviews and responds to research studies, statements, pronouncements, pending legislation, proposals and other documents issued by domestic and international agencies and organizations. CCR member companies represent approximately $5 trillion in market capitalization and actively monitor standard setting activities of the Public Committee Accounting Oversight Board (PCAOB). This document represents the views of CCR and not necessarily the views of FEI or its members individually.

**CCR Response**

We appreciate the opportunity to respond to PCAOB's reproposal of the auditor reporting standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*. Although the revised standard is responsive to certain of the concerns we raised in our December 2013 letter, we have significant concerns over the potential impact of the proposed standard as outlined further below.

As we have discussed with members of the PCAOB in other venues, regulation and inspection of audit firms can have direct and indirect implications for the issuers they audit. This has proven to be the case with the results of inspections of the firms in the area of Internal Control over Financial Reporting (ICFR). In this revised proposed standard we see the potential for reporting of information by the auditor for which management is the original source (original information) including potential disclosure of significant deficiencies, even though existing guidance would not require them to be disclosed. As this could affect public company reporting of matters related to ICFR and other areas, we believe changes in disclosure requirements are within the purview of the Securities and Exchange Commission (SEC) to promulgate.

As outlined further below, the concerns we have over the impact of this proposal are significant, as the standard, if approved, will have a lasting impact on the scope of the auditor's responsibility and the role of the PCAOB and SEC in addressing financial disclosure by registrants. In addition, this new standard could significantly increase the cost of the audit and/or delay or place additional pressure on the timing of key audit procedures. It is also unclear to us what identifiable benefits the additional information provides to investors. There is also potential, if these issues are not properly addressed through additional changes (e.g., introduction of safe harbors), that this proposal could create new avenues for baseless litigation to the detriment of the audit profession and/or issuers.

Original Information

While the revised proposed standard moves a step closer to acknowledging what we consider to be the appropriate roles of management and the auditors, we continue to have concerns around the scope and the definition of a critical audit matters (CAM). We believe that if a final standard is issued, it should make clear that:

> (a) Auditors should not be the original source of information about the registrant, and
>
> (b) Auditors have no obligation to disclose significant deficiencies in their audit report, consistent with the framework for ICFR, as such matters are required to be reported to the audit committee, but not publicly disclosed[1].

Note 2, paragraph 14, of the revised proposed standard states:

> "*When describing critical audit matters in the auditor's report the auditor is not expected to provide information about the company that has not been made publicly available by the company* ***unless such information*** [emphasis added] *is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit.*"

We believe that the above language has potential to lead the auditor to disclose original information pertaining to the issuer that it has not disclosed and is not required to disclose. We disagree with this outcome and believe that auditors and management should directly resolve any such differences in views as to the adequacy and completeness of a registrant's disclosures. In today's reporting environment, there are substantial interactions between auditors and registrants related to disclosures contained in drafts of quarterly and annual SEC filings and differences are resolved in the normal course of this work. In unusual situations, where there is an unresolved difference on an important matter, the auditors may need to report such a difference to the audit committee for resolution. However, the revised proposed standard should make clear that it is not appropriate for the auditor to be the original source of information unless a matter continues to be unresolved with management and the audit committee. Communication to the audit committee of unresolved differences will be sufficient to drive appropriate resolution and adequately protect investors.

[1] Management is also not required to disclose such information.

A significant consequence of the proposal is that registrants may be compelled to add additional disclosures as a result of this proposal, which is inconsistent with the general disclosure framework for registrants who are governed by SEC guidance when determining what to disclose, rather than PCAOB standards.

Definition of a CAM

If the Board votes to move forward with the revised proposed standard, we recommend the Board consider revisions to the definition of a CAM. As drafted, the definition includes matters that were "*communicated or required to be communicated to the audit committee that: (1) relates to* ***accounts or disclosures*** [emphasis added] *that are material to the financial statements, and (2) involved especially challenging, subjective or complex auditor judgment.*" In order to address the issues discussed above, we believe that the Board should revise the above proposed guidance as follows:

> *"communicated or required to be communicated to the audit committee that: (1)* ***relates to any issue that is material*** [emphasis added] ~~*to accounts or disclosures that are material*~~ *to the financial statements, and (2) involved especially challenging, subjective or complex auditor judgment."*

In addition to concerns this proposed guidance raises discussed above (i.e., original information and disclosure of significant deficiencies), such language could cause other matters that are immaterial to the financial statements to be brought within scope even though such matters were adequately addressed and resolved by the auditor during its audit. We observe that the terminology used to define a CAM (i.e., "especially challenging, subjective or complex auditor judgment") is extremely broad and subjective, which has the potential to generate inconsistency in application, as it will inevitably depend upon individual judgments and/or biases regarding what matters qualify. For example, the same set of facts and circumstances are likely to be interpreted differently because even qualified and knowledgeable individuals applying reasonable professional judgment may reach different conclusions on the meaning and application of such a broad and subjective set of criteria. While we understand that the Board wishes this to be principles-based, we believe that there needs to be some objective components to the definition that are based on observable facts.

For context, we observe that an audit of a global entity is complex, involving a large number of individual audit and accounting issues. As currently drafted, and depending on the professional judgments applied, many issues that are considered in the normal course for a complex organization may nevertheless fall within the definition of a CAM (e.g., determining fair value measures based on hypothetical market participants, determining fair value of contingent consideration; and judgments and estimates for variable considerations). As such issues are regularly considered as part of the accounting issue resolution process of a global organization, we believe that the potential list of items meeting the overly broad definition of a CAM could indeed be voluminous.

In addition, we recommend that the Board consider, as an alternative, limiting the identification of a CAM to those matters already disclosed by management as critical accounting estimates, which we believe provides a more appropriate anchor for matters that the auditor should consider for inclusion in its audit report. Critical accounting estimates must be discussed with the audit committee, so this would also have a logical tie-in to the recommendation above.

Implementation Learning Period and Value Assessment

We have concerns that, as a natural consequence of the PCAOB's regulatory process, auditors will have a natural tendency to identify more CAMs than is necessary to meet the goals of the proposed standard. For example, auditors may choose to include disclosure of matters that are otherwise immaterial to users of the financial statements in order to avoid PCAOB audit findings from inspection teams. This concern is supported by recent findings from internal surveys conducted within our membership around how audits of ICFR are being conducted by auditors and the effects of PCAOB inspection findings on audits of our member companies. These concerns have also been raised and discussed recently in numerous meetings, conferences, and other discussions with preparers, investors, and regulators and are not unique to CCR member companies.

Application of the new standard will require significant auditor judgment, and therefore it is imperative the PCAOB have a robust plan that allows appropriate time to monitor and understand how auditors are interpreting and applying the new standard, recognizing that there may be differences in professional judgment or interpretation of the standard as written. As evidenced in other situations, auditor behavior is likely to be shaped by inspection findings over the long run which will have a lasting impact on the market overall.

Absent the benefits of adequate field testing on the revised proposed standard, we recommend that the PCAOB consider the first year of implementation as an opportunity for auditors to implement the new standard, and for the PCAOB to monitor implementation with the goal of learning how the standard is being interpreted and applied across audit firms, and to identify issues arising during implementation. This could include a type of "safe harbor" of at least one year, along with a robust post-implementation evaluation process to discuss findings and possible revisions that may need to be made to ensure the standard is achieving its objectives. This post-implementation review should include key stakeholder feedback including, for example, investor feedback to understand how the additional information is being utilized, as well as preparer and auditor feedback to understand the additional costs and time associated with implementation of the new standard. A robust post-implementation review and evaluation, and key stakeholder discussion, would not only allow auditors to develop and possibly make improvements in their process prior to formal PCAOB inspection findings, but would also allow appropriate time for the PCAOB to react to what it learns and to make revisions, where necessary, to improve the application of the new standard.

Filing Deadline Implications

In addition, we have operational concerns that audit procedures to address the new standard are likely to come at a critical time during the audit process, and may distract auditors and management from completing other critical parts of the financial statement preparation and audit process. This may involve partner and manager time, as well as national office resources, including input from the registrant's senior management team including inside and outside legal counsel, and audit committee members. In some cases, this could result in a delay in filing for certain companies and should be appropriately considered during implementation.

Cost / Benefit

We observe that as a general rule, certain investors are always willing to say yes to additional disclosure; however, as evidenced during the original and subsequent drafts of this proposal, investors have not explained how they would use this information to make better investment decisions and thereby improve the overall functioning of our capital markets. We observe that this type of information has potential to skew or mislead investors and, as noted in the revised proposed standard, inclusion of this type of information could result in a decrease in audit quality.[2] It is clear that investors understand and utilize the existing pass/fail model but unclear how the revised proposed standard enhances their understanding.

In addition to identification of a CAM in the audit report, the revised proposed standard will require auditors to "*describe the principal considerations that led the auditor to determine that the matter is a critical audit matter, describe how it was addressed in the audit, and refer to the relevant financial statement accounts and disclosures.*" Given that we are not clear on how reporting of CAMs will realistically assist investors in understanding or analyzing a company's financial position and results, we do not see how a description of related audit procedures will benefit or provide additional value to investors and users of the financial statements. In addition, there is a risk that providing such information could, in some instances, cause an auditor to disclose original information about a registrant. We are also concerned that providing this level of detail could also result in boilerplate language over the long run, or auditors reporting a lengthy list of all procedures performed in order to avoid inspection findings.

As previously mentioned, we believe there will be a significant increase to cost overall as a result of this new standard and it doesn't appear that a compelling case has been made on how the benefits of this change exceed its costs.[3] If the PCAOB proceeds to a final standard based on this proposal, we recommend, as noted above, that a robust post-implementation review be conducted to identify the benefits and understand whether, and to what extent, investors and users of the financial statements are utilizing this additional information, along with an evaluation of the related costs.

As previously communicated to members of the Board, in areas where the work of the PCAOB directly or indirectly affects the reporting of issuers, we believe that all stakeholders (including preparers, investors, and auditors) would benefit from a more open dialogue on these issues or the creation of a mechanism for key stakeholders to come together and discuss proposals and practice issues with the goal of improving application of the standards.

---

[2] Refer to section VI. Economic Considerations, section D. Costs and Potential Unintended Consequences, FN 178.
[3] Refer to section VI. Economic Considerations, sections C. Benefits and D. Costs and Potential Unintended Consequences.

Documentation

We do not believe that the documentation requirements by the auditor (which are significant and will add substantial cost to an audit) are likely to improve the quality of the audit, as we perceive the benefit to be limited to those involved in the PCAOB inspection. Specifically, this would require a process that enhances the ability of inspectors to determine that every item was considered and definitively adjudicated as a CAM or not. Having to document the "negative" of why something is not challenging, subjective or requires complex auditor judgment is cumbersome and is unlikely to be meaningful to investors. We believe that documenting only the reasons why something is a CAM is a more appropriate and efficient process. Given all that needs to be completed for the audit before meeting with the audit committee, we believe that having an auditor focus on creating contemporaneous documentation related to items that were deemed to be unimportant inevitably takes away time and resources during a critical phase of the audit. We fail to see how this resource intensive process will add to the quality of audits. On the other hand, we can certainly understand concerns that such diversions of resources raises the risk that audit quality will suffer as a result.

Litigation

The litigious nature of the US environment is well documented and requires little in the way of further explanation or support. It is not uncommon for lawsuits, brought by plaintiffs related to matters such as these, to be settled in order to avoid further litigation expenses even in the absence of any wrongdoing. It is important to remember that qualified knowledgeable professionals can disagree, particularly when it relates to assumptions or estimates which are not black and white, or when an issue relates to areas that are so complex that they require multiple discussions between the auditor, preparer and, sometimes, the auditor's national office in order to fully understand and evaluate the accounting requirements which may be applicable. We believe that the Board and the SEC need to be cognizant of this reality and take care to ensure that requirements of their standards do not inappropriately subject audit firms and issuers to litigation. As discussed above, introducing safe harbor rules during the implementation phase of this proposed standard may be a reasonable way to avoid such outcomes.

Auditor Tenure

We don't believe that there is any meaningful link between auditor tenure and audit quality (whether that is to say that longer tenure results in better or worse audit quality) and therefore, recommend that this disclosure should not be required in the auditor's opinion. Including this information in Form AP would be preferable to inclusion in the audit report.

Independence

We support inclusion of a statement that the auditor is required to be independent and the added language clarifying "whether due to error or fraud" when describing the auditor's responsibilities.

Opinion Paragraph

We support the PCAOB decision to move the opinion paragraph earlier in the auditor's report.

Concluding Remarks

As financial officers of public companies, we recognize the responsibility we have to the financial markets to produce accurate and reliable financial information, along with the importance of an independent audit as a signal to investors about their ability to rely on the information we provide.

While we are supportive of the efforts of the PCAOB to regulate the audit profession and to provide meaningful audit standards, we have significant concerns about the revised proposed standard and would object to a final standard that does not address the issues raised in this letter. If the Board votes to move forward after addressing these concerns, we recommend the PCAOB design a robust review process during implementation to adequately collect the information necessary to learn how the standard is being interpreted and applied in practice. We believe this process should be completed prior to any formal audit findings from PCAOB inspections.

We appreciate the Board's consideration of these matters and would be glad to answer any questions you may have.

Sincerely,

Richard Levy

Re: PCAOB Release No. 2016-003
*The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, and Related Amendments to PCAOB Standards.*

Dear Board Members:

The Accounting Principles and Auditing Standards Committee (the Committee) of the Florida Institute of Certified Public Accountants (FICPA) respectfully submits its comments on the referenced proposal. The Committee is a technical committee of the FICPA and has reviewed and discussed the above referenced proposed auditing Standard, including the questions posed in the proposal. The FICPA has more than 20,000 members, with its membership comprised primarily of CPAs in public practice and industry. The Committee is comprised of 20 members, of whom about 65% are either sole practitioners, or are from local or regional firms, and about 35% are from large multi-office and international firms. We are addressing this proposed auditing standard both from the viewpoint of preparers of financial statements as well as those performing attest services on them. The Committee has the following comments related to the standard, and the questions posed, in its entirety.

The Committee discussed the above referenced proposed Auditing Standard, and the questions included therein. The Committee has a fundamental disagreement with the premise that incorporating Critical Audit Matters (CAMs) and auditor tenure in the audit report will provide useful information to investors or improve audit quality. On the contrary, there may be a net loss in useful information to the investors, and a compromise in audit quality. Therefore, we did not address individual questions, since many of them presume inclusion of the CAMs. Our general disagreement with the proposed standard is based on the following reasoning:

1. Inclusion of the CAMs in the audit report may necessitate revealing audit processes and procedures while discussing how the CAMs were eventually resolved. That would make the audit more predictable, and therefore compromise on the overall audit quality.

2. There is a wide diversity among auditors in making audit risk assessments, planning and procedures, even if the resulting conclusion may be the same. Much of this diversity is attributable to differences in the audit firm's knowledge and experience in a specific industry. Hence the CAMs would not be comparable across companies even in the same industry. Therefore, this will aggravate, rather than mitigate the information asymmetry among the investors that the proposed auditing standard hopes to accomplish.

3. The Committee continues to be concerned about liability issues, despite the narrowed definition of CAMs in the re-proposed standard. It may be difficult to avoid violating certain confidential matters, and still be in compliance with disclosure of CAMs. While the re-proposed standard does allow for excluding matters that violate confidential information, it nevertheless imposes the additional burden of making such a judgment upon the auditor.

4. The Committee was concerned that revealing the CAMs may influence investors' decisions in ways that were not intended by the proposed Standard. That is, especially in the case of the less informed investor, a discussion of the risk assessment might have a dilutive effect on the audit opinion as issued under the current "Pass/Fail" model.

5. In a similar vein, including the CAMs in the audit report may introduce a bias against certain types of companies, such as smaller companies, or those in a new industry. Such companies are inherently subject to more audit procedures and communications with the Audit Committees, even if that is not reflective of the final audit conclusion. This may create a higher perception of riskiness in the minds of the investors than is warranted by the actual audit conclusion.

6. The Committee also disagrees with the inclusion of information on auditor tenure in the report since tenure is not reflective of audit quality, and will not provide useful information to the investors.

The Committee appreciates the opportunity to respond to this proposed auditing standard. Members of the Committee are available to discuss any questions you may have regarding this communication.

Respectfully submitted,

Edward Cranford, CPA
Chair, FICPA Accounting Principles and Auditing Standards Committee

Dear Members of the Board:

Please find attached a study I hope you will find relevant to:

Docket 034: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments

For your convenience, following is an abstract of the study:

ABSTRACT:

Motivated by the current PCAOB proposed standard regarding expansion of the auditor's reporting model, this study investigates the effect of auditor reporting choice on management disclosure decisions. The proposed standard would require auditors to identify and provide information about the most significant audit and financial reporting issues encountered during the audit in a new section of the audit report on Critical Audit Matters (CAMs). I explore how auditor choices about reporting on CAMs might affect manager disclosure decisions. In addition, the study investigates whether this effect depends on a very important governance structure, the audit committee. I find that management reacts to the auditor shining a spotlight on a highly uncertain critical accounting estimate by increasing their own disclosure of the matter and that this effect varies directly with the strength of the audit committee's oversight. In addition, I find that as auditors increase the level of detail provided in their CAM reporting, management responds with increased disclosure. Finally, when the auditor provides a detailed CAM discussion, it appears that managers are likely to increase disclosure of quantitative information that would enhance the financial statement user's ability to quantify the risk in a critical accounting estimate. The study provides ex ante insights on how a mandated change in the auditor's reporting model might affect the level of information provided by management and received by investors.

Best Regards,

Stephen H. Fuller

# The Effect of Auditor Reporting Choice and Audit Committee Oversight Strength on Management Financial Disclosure Decisions

Stephen H. Fuller
Visiting Assistant Professor
Lehigh University

This study is based on my dissertation and I express my deep gratitude to the members of my dissertation committee: Jennifer Joe (Chair), Kathryn Kadous, Lisa Lambert, Benjamin Luippold and Ivo Tafkov. My study benefited greatly from their patient guidance and commitment to excellence in research. In addition, I gratefully acknowledge the many parties who have provided assistance and feedback over the course of my dissertation including Christopher Agoglia, Ellen Best, Carol Bishop, Nerissa Brown, Dana Hermanson, Yoon Ju Kang, Siva Nathan, Usha Ramachandran, Kerri-Ann Sanderson, Galen Sevcik, Doug Stevens, Han Stice, Laura Swenson, Roger White, and all of the Georgia State University faculty, staff and doctoral students. I am especially grateful to the many professionals who kindly shared their valuable time and experience for my study.

# The Effect of Auditor Reporting Choice and Audit Committee Oversight Strength on Management Financial Disclosure Decisions

ABSTRACT:

Motivated by the current PCAOB proposed standard regarding expansion of the auditor's reporting model, this study investigates the effect of auditor reporting choice on management disclosure decisions. The proposed standard would require auditors to identify and provide information about the most significant audit and financial reporting issues encountered during the audit in a new section of the audit report on Critical Audit Matters (CAMs). I explore how auditor choices about reporting on CAMs might affect manager disclosure decisions. In addition, the study investigates whether this effect depends on a very important governance structure, the audit committee. I find that management reacts to the auditor shining a spotlight on a highly uncertain critical accounting estimate by increasing their own disclosure of the matter and that this effect varies directly with the strength of the audit committee's oversight. In addition, I find that as auditors increase the level of detail provided in their CAM reporting, management responds with increased disclosure. Finally, when the auditor provides a detailed CAM discussion, it appears that managers are likely to increase disclosure of quantitative information that would enhance the financial statement user's ability to quantify the risk in a critical accounting estimate. The study provides *ex ante* insights on how a mandated change in the auditor's reporting model might affect the level of information provided by management and received by investors.

**Keywords: Auditor Reporting, Critical Audit Matters, Audit Committee Oversight, management disclosure**

# I. INTRODUCTION

This study examines how managers' decisions to disclose information about critical accounting estimates might be sensitive to whether auditors bring attention to the estimates with their reporting choices. Investors and regulators contend that auditors have information about their clients' financial reporting that investors are demanding (PCAOB 2011b), but that management is choosing not to disclose (SEC 2003, PCAOB 2011b). The importance of this issue to investors was highlighted by the failure of financial sector companies to make adequate disclosure regarding the uncertainty surrounding fair value estimates, which some contend was a major contributing factor to the global financial crisis experienced in the late 2000s (PCAOB 2011a). To explore the issue, the Public Company Accounting Oversight Board (PCAOB) initiated a project in 2011 addressing how the current auditor's reporting model might be modified to provide information of greater value to investors (PCAOB 2011a). Highly debated changes to the auditor's reporting model have been proposed that would require auditors to bring heightened attention to key areas of uncertainty in the financial statements. It is important to shed light on how managers might respond to differing levels of attention brought by auditors to critical accounting estimates by adjusting their own voluntary disclosure decisions.

Effects of the proposed auditing standard are likely to be influenced by the corporate governance environment of the firm. Audit committees are a key element of corporate governance by virtue of their role in the monitoring of financial reporting (Blue Ribbon Committee 1999; Agoglia, Doupnik, and Tsakumis 2011). Prior research has consistently found that stronger audit committees are associated with higher quality financial reporting (Agoglia et al. 2011; Abbott, Parker and Peters 2004; Bédard et al. 2004). In the course of the debate over the PCAOB auditor's reporting model project, many audit committee members voiced concerns that expanding the auditor's reporting model might usurp the audit committee's responsibility for investor protection (PCAOB 2011b). However, audit committee oversight is likely to play a pivotal role in determining how changes to the auditor's report translate to changes in management's financial disclosure. Audit committees review financial statements and the auditor's report prior to their release (Beasley, Carcello, Hermanson, and Neal 2009), and management must consider the audit committee's reaction to the content of the auditor's report. Management's sensitivity to the auditor's reporting choices likely depends on the level of accountability felt by management to the audit committee. Therefore, I also examine whether the impact of the proposed standard on management disclosure choice is conditional on the strength of the audit committee's oversight.

The financial reporting and auditing of critical accounting estimates is an area that has received widespread attention in recent years due to the importance of these estimates to the financial statements and to the decisions of investors (Griffith, Hammersley, and Kadous 2015). The use of critical accounting estimates is pervasive in many financial reporting settings including fair value, asset impairment, product warranty and liability reserves and post-employment benefits (Griffith et al. 2015). Due to the uncertainty and subjectivity surrounding critical accounting estimates, there has been a consistent call by regulators and the markets for management to provide more extensive disclosure regarding the risk inherent in critical accounting estimates (e.g., SEC 2003, PCAOB 2011b). Unfortunately, such disclosure has not been broadly provided by issuers (SEC 2003; PCAOB 2011b).

The audit process represents an avenue for improving issuers' compliance with SEC regulations regarding disclosure of critical accounting estimates for several reasons. First, auditors interact with their clients on financial reporting issues as a matter of routine, allowing auditors to keep abreast of developments in the critical accounting areas of their clients. Next, some stakeholders feel that the proposed expansion of the audit report will provide auditors with greater leverage to compel clients to provide improved disclosure of critical accounting issues (PCAOB 2011b). Finally, the PCAOB, by virtue of their inspection powers over audit firms, can motivate audit firms to appropriately identify which client issues are most important to cover in the expanded audit report (Carcello, Hollingsworth, and Mastrolia 2011).

In August 2013, the PCAOB released a proposed auditing standard dealing with the auditor's reporting model which requires that auditors include in their audit report a section dealing with "Critical Audit Matters" (CAMs) which "involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence or forming an opinion on the financial statements" (PCAOB 2013, 6). Under the proposed standard, the auditor would be required to disclose information about each CAM in a new section of the audit report or to state that there are no CAMs (PCAOB 2013). Importantly, auditors would still have broad discretion over the level of detailed information reported. In the course of the debate over expansion of the audit report, auditors have indicated they would only be supportive of providing factual and objective information in a CAM (PCAOB 2011b). Other constituencies in the debate argued that if auditors provide only limited information and mainly refer to management disclosure, the change would not provide investors with the information they are demanding (PCAOB 2011b). Therefore, I explore whether the level of detail provided in the auditor's reporting on the CAM impacts the manager's decision regarding how much information to disclose.

To address my research questions, I conducted an experiment with highly experienced public company financial executives, primarily chief financial officers. This high caliber group of participants was vital given the importance of obtaining reliable *ex ante* insights on the proposal from managers that will be directly impacted by the proposed standard. Participants rated the extent of disclosure they would choose to make related to a critical accounting estimate made by a hypothetical company as well as the importance of a variety of specific disclosure elements. I manipulated the auditor reporting choice regarding an accounting estimate made by the company at three levels: (i) No CAM (control); (ii) Short CAM with a brief description in the audit report; or (iii) Long CAM with a detailed description in the audit report. I also manipulated the strength of the audit committee's oversight at two levels, moderate and strong. Based on economic theory regarding the incentives surrounding disclosure as well as accountability theory, I predicted increases in the level of detail provided in the auditor's CAM reporting of an issue would lead to increased disclosure by managers, with the strongest effect coming in the presence of strong audit committee oversight.

Consistent with expectations, I found a joint effect of auditor CAM reporting choice and audit committee oversight strength on manager disclosure decisions. The increase in the manager's disclosure resulting from the auditor providing detailed discussion of a CAM was greatest in the presence of strong audit committee oversight, thus highlighting the continued importance of the audit committee to the quality of financial reporting. Further, I found that managers did not increase their disclosure when the auditor included only cursory discussion of the CAM in its audit report providing support for this concern voiced by some stakeholders in the debate. I also investigated the specific elements of disclosure a manager considers when making financial disclosure. I found that elements of disclosure that enhance the ability of financial statement users to quantify the level of risk in a critical accounting estimate (e.g., range of, key assumptions in, and sensitivity analysis of the estimate) are more likely to be disclosed when the auditor heightens the attention on a critical accounting estimate through its CAM reporting, and that this effect depends on the strength of the audit committee's oversight.

The study makes several contributions to regulators, practitioners and accounting researchers. First, the study provides timely feedback to regulators and stakeholders on the potential effects of the proposed standard that will inform regulator decision-making. Several important topics under debate are addressed in the study including the appropriate level of detail that should be required in the auditor's CAM reporting and the role of the audit committee. Next, the study answers the call for experimental research on how proposed policy changes might impact the nature and quality of financial reporting (Maines 1994; Beresford 1997). Archival information in the U.S. is not available to analyze the impact of the proposed change. Experimental research provides the advantage of seeing *ex ante* what might happen in a setting "as if" the change had been implemented (Maines 1994). While several concurrent experimental studies have begun to address the implications of the proposed standard, to my knowledge, this is the first experimental study dealing directly with the effect of auditor reporting choices on manager disclosure decisions. Finally, the study extends the accounting literature on the impact of audit committee oversight on the quality of financial reporting and disclosure.

The remainder of this paper is organized as follows. Section II provides theory and hypothesis development, Section III describes the research design, Section IV presents the results of the study, and Section V concludes.

## II. BACKGROUND AND THEORY

### PCAOB Project

In June 2011, the PCAOB initiated a project to explore how the current auditor's reporting model might be modified to provide information of greater value to investors (PCAOB

2011a). To many, the current auditor's reporting model is primarily seen as a "pass/fail" model that simply provides reasonable assurance as to whether or not the financial statements are presented free of material misstatement (PCAOB 2011b). Many investors have argued that auditors could provide much more useful reporting to investors if their reporting was expanded to provide additional information on a wide array of areas including critical accounting estimates and their impact on the financial statements (PCAOB 2011b, 2012).[1]

The PCAOB conducted extensive debate related to the auditor's reporting model project including all the major stakeholders – auditors, management, investors and audit committees. Auditors, management and the audit committee expressed many concerns about the project, chief among them that auditors should not be the source of "original information" about the company, which should remain the responsibility of management (PCAOB 2011b).[2] Additional concerns raised included the potential cost and administrative burdens (PCAOB 2011b). Investors, however, expressed significant support for the prospect of expanding the content provided by auditors in their reports. Eventually, the proposal to expand and mandate the use of emphasis of matter (EOM) paragraphs was the option that received the greatest support on both sides of the debate (PCAOB 2011b, 2012).

[1] The PCAOB issued a concept release on the project proposing three different methods by which expanded auditor reporting might be pursued: (i) the requirement of an "Auditor's Discussion and Analysis" (ADA) related to the audit; (ii) extension of the audit report to cover certain "information outside the financial statements"; or (iii) "required and expanded use of emphasis paragraphs" (PCAOB 2011a, 12).

[2] Current SEC regulations require firms to make supplemental disclosure in Management's Discussion and Analysis (MDA) regarding critical accounting estimates if they are material due to their subjectivity and impact on the financial statements (SEC 2003). However, despite these regulations, investors and regulators continue to assert that the appropriate level of disclosure is not being made (PCAOB 2011b). At present, auditors are not generally required to provide assurance regarding their clients' MDA and, accordingly, do not opine on the adequacy of the critical accounting estimates disclosure contained in MDA. Instead, they are merely required in the current model to read the client's MDA and resolve any inconsistencies between the MDA and the audited financial statements (PCAOB 2003).

In August 2013, the PCAOB released a proposed auditing standard dealing with the auditor's reporting model similar to the EOM paragraph approach in the concept release. Specifically, the proposed standard would require auditors to include in their audit report a section dealing with "Critical Audit Matters." Pursuant to the proposed standard, CAMs consist of matters which "involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence or forming an opinion on the financial statements" (PCAOB 2013, 6). The auditor is required to disclose certain information about each CAM in the audit report or to state that there were no CAMs. For each CAM, the auditor must (i) "identify the critical audit matter"; (ii) "describe the considerations that led the auditor to determine that the matter is a critical audit matter"; and (iii) "refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable" (PCAOB 2013, 16).

In the debate surrounding the audit reporting model project, auditors generally took the position that any expansion of the auditor report should be limited to objective factual information for which auditors are <u>not</u> the original source and make reference to where the issue is discussed by management (PCAOB 2011b). They further argued that merely identifying an uncertain issue in the audit report would likely lead to disclosures by management that were among the most complete in the financial statements (PCAOB 2011b). Other stakeholders (e.g., investors) took the position that such a limited approach by the auditor provided little or no benefit and amounted to "roadmapping" for financial reporting (PCAOB 2011b). They called for greater information content such as discussion of *why* the auditor felt it was important to emphasize the matter and what uncertainties applied to the area (PCAOB 2011b). This study seeks to examine what impact reporting on CAMs might have at varying levels of detail.

Several concurrent studies explore the effect of the proposed auditing standard on various stakeholders in the financial reporting process. Several of these studies in a variety of specific contexts have found that auditor reporting of a CAM may alternatively lead to a reduced level of legal liability for auditors (Kachelmeier, Schmidt, and Valentine 2014 WP; Brasel, Doxey, Grenier, and Reffett 2016; Brown, Majors, and Peecher 2014 WP) or higher auditor liability assessments (Backof, Bowlin, and Goodson 2016 WP; Gimbar, Hansen, and Ozlanski 2016).

Other studies address the impact of auditor CAM reporting on investor decisions. Christensen, Glover, and Wolfe (2014) find that reporting of a CAM concerning fair value decreased the likelihood that non-professional investors would invest in the target firm. Sirois, Bedard, and Bera (2015 WP) found that discussion of a "key audit matter" in the audit report led to greater "information search" about the matter by non-professional investors. Interestingly, they also found that participants indicated "lower perceived audit quality" in the areas of the audit corresponding with the key audit matter (Sirois et al. 2015 WP). The relevance of these studies to my study lies in the many different factors that bear on the auditor's decision whether or not to report an audit issue as a CAM, suggesting that there might be significant variance in that decision.

One concurrent study addresses the influence of auditor key audit matter reporting requirements on auditor judgments. Gay and Ng (2015 WP) study whether a key audit matter reporting requirement influences the auditor's willingness to discuss an aggressive accounting estimate with the audit committee and/or accept the aggressive estimate, presumably to avoid discussion of the estimate with the audit committee. They also address whether the proactivity/reactivity of the audit committee plays a role in the decision. They find that when auditors face a reactive audit committee and a key audit matter reporting requirement, auditors are less likely to discuss the aggressive estimate with the audit committee and more likely to accept the estimate than if there is no key audit matter reporting requirement.

To my knowledge, there is no concurrent study that specifically addresses the effect of the proposed standard on management financial disclosure decisions. However, there is one study that addresses the "communication openness" of non-financial management toward auditors in the presence of a CAM reporting requirement (Cade and Hodge 2014 WP). The authors find that non-financial managers that have private information that the auditor is unaware of concerning "key accounting estimates" are less likely to openly communicate with their auditors when the auditor is required to report on the client's key accounting estimates than when they are not (Cade and Hodge 2014 WP). Their study is a valuable complement to this study in the sense that it addresses an important precursor to the auditor's CAM reporting decision – the ability of the auditor to obtain all the relevant knowledge of the issue needed to make an informed decision with regard to CAM reporting.

**Prior Research on Management Disclosure Choice**

Prior research has identified several factors affecting management's choice to make disclosure including a variety of offsetting incentives. On one hand, managers have a number of positive incentives to make greater disclosure. Managers might provide higher quality disclosure to establish a reputation for credibility with investors (Stocken 2000; Beyer, Cohen, Lys, and Walther 2010) for both themselves and the firm. Such a reputation can grant a number of economic benefits such as higher firm valuation and lower cost of capital (Beyer et al. 2010), and a reduction in litigation risk (Skinner 1997; Field, Lowry, and Shu 2005; Beyer et al. 2010).

On the other hand, managers also have incentives discouraging greater disclosure. First, since management compensation is frequently sensitive to stock price performance, managers might desire to avoid, or at least postpone, disclosure of bad news to avoid negative stock price impacts (Beyer et al. 2010). Second, greater disclosure has the potential for proprietary costs to the firm as competitors could derive information from disclosure that is detrimental to the firm's interests (Fischer and Verrecchia 2004; Arya, Frimor, and Mittendorf 2010; Beyer et al. 2010).

These offsetting incentives likely motivate management to seek a level of disclosure that secures the greatest net benefit after considering costs of the disclosure. Importantly, managers are influenced in this judgment by whether investors know that management has private information (Beyer et al. 2010). If investors are thought to know less about management's possession of private information, management would likely provide less voluntary disclosure of bad news (Dye 1985; Jung and Kwon 1988; Penno 1997; Pae 2002; Beyer et al. 2010).

An auditor's decision to report a matter as a CAM effectively shines a spotlight on the issue. As a result, managers are more likely to perceive a higher level of investor attention to and knowledge about the issue. Management would thus be more likely to increase the level of disclosure for the subject of the CAM due to a shift in its incentives. Management would derive less benefit from lack of disclosure because they would expect investors to "fill in the blanks."[3] In addition, if the matter was spotlighted by the auditor, management's concern would shift to its reputation and litigation risk, both of which call for increased disclosure. Furthermore, if the auditor's reporting on the CAM was more expansive and included a detailed discussion of *why* the auditor was emphasizing the matter, the perceived level of investor knowledge would be

[3] Prior accounting research (Hammersley 2006) has found that experts in a domain (e.g., industry expert auditors) are adept at elaborating full "cognitive representations" of a problem from partial information sets. In the context of this study, expert financial statement users such as industry analysts could be expected to assimilate information in an auditor's CAM reporting, even if it is incomplete, to identify areas of undisclosed risk in the financial statements.

even higher and should lead to even greater level of disclosure. Based on the foregoing discussion, primarily of economic incentives to disclose, I propose the following hypothesis:

> *H1: As the auditor increases the level of detailed reporting given a critical audit matter in its audit report, the manager will increase the level of disclosure made about the matter.*

**Audit Committee's Role in Financial Reporting**

Audit Committees provide a critical oversight role over financial reporting (Agoglia et al. 2011; Blue Ribbon Committee 1999; Beasley et al. 2009) which has only increased subsequent to the passage of the Sarbanes Oxley Act of 2002 (SOX). Among its provisions, SOX emphasized the importance of audit committee member independence and financial expertise (U.S. House of Representatives 2002; Agoglia et al. 2011). Prior research has characterized stronger audit committees as being more independent, having greater financial expertise, and meeting more frequently (Bédard et al. 2004; Agoglia et al. 2011). These audit committee characteristics have been found to lead to improvements in financial reporting quality (Agoglia et al. 2011; Abbot et al. 2004; Bedard, Chtourou, and Courteau 2004). Of particular significance to this study, Agoglia et al. (2011) found evidence that stronger audit committees constrain "opportuntistic reporting" by management via exploitation of "bright-line" rules-based accounting standards.

Prior research on audit committee oversight has also identified variance in audit committees' approach to their oversight responsibilities. For example, two different survey studies (Beasley et al. 2009; Cohen, Krishnamoorthy, and Wright 2010) addressed the audit committee process and explored how audit committees executed their oversight responsibilities. Beasley et al. (2009) surveyed 42 audit committee members and found evidence that some audit committee members felt that oversight of the financial reporting process by the audit committee was somewhat "ceremonial" while others felt that the audit committee was deeply involved. Cohen et al. (2010) surveyed 30 audit partners and managers about their perceptions of audit committee oversight. In their survey, only 52% of the respondents indicated that the audit committee impacted the "resolution of contentious" accounting and reporting matters between management and auditors.

The relationship between audit committee oversight strength and financial reporting quality can be explained by management's accountability to the audit committee. The psychology literature identifies accountability as an effective motivator of human behavior. According to Kang (2014 WP) under accountability theory (Tetlock, Skitka, and Boettger 1989), people adopt "social and cognitive strategies … to obtain acceptance from, or avoid conflict with" parties to whom they are accountable (Kang et al. 2014 WP; Tetlock et al. 1989). In the context of financial reporting, managers are accountable to many different parties, including investors, regulators, their own bosses, and audit committees (Cohen, Krishnamoorthy, and Wright 2004; U.S. House of Representatives 2002). Audit committees consist of a subset of the firm's board of directors, who oversee the firm's management and have the authority to terminate management. Accordingly, audit committees represent a high stakes source of accountability to management.

As part of their duties, audit committees communicate with both management and auditors and review the company's financial statements, disclosures and audit report (Beasley et al. 2009). Since management has incentives to avoid disclosure, one purpose for the audit committee's oversight of financial reporting is to constrain management's opportunistic disclosure decisions (Agoglia et al. 2011). I contend that such audit committee constraint on management opportunism is inconsistent with the preferences of management.

Prior research streams in psychology and accounting identify the concept of "motivated sensitivity" (Ditto, Scepansky, Munro, Apanovich, and Lockhart 1998; Hales, Kuang and Venkataraman et al. 2011; Hales 2007) and its impact on the processing of "preference-inconsistent information" (Ditto et al. 1998). In motivated sensitivity, people are expected to asymmetrically process information that is preference-consistent versus preference-inconsistent. Similar to motivated reasoning theory (Kunda 1990; Kadous, Kennedy and Peecher 2003; Hales 2007; Hales et al. 2011), information that is preference-consistent is expected to be shallowly processed and readily accepted. However, in motivated sensitivity, preference-inconsistent information is expected to be processed more deeply and have a greater influence on the final judgment (Ditto et al. 1998). Preference-inconsistent information is likely to signal some type of potential harm and so it is in the best interest of the individual to consider the information deeply (Ditto et al. 1998). In the context of this study, an auditor's reporting of a critical accounting estimate as a CAM is inconsistent with management's preference because it increases the audit committee's scrutiny of management's disclosure decision. Furthermore, the strength of the audit committee should impact the sensitivity of the manager to the information conveyed by the CAM reporting due to the differing level of accountability felt by the manager to the audit committee. Accordingly, managers facing stronger audit committee oversight should be expected to process more deeply and be more influenced in their disclosure by the content of CAM reporting than managers facing only moderate audit committee oversight.

Prior accounting research on accountability identifies various strategies accountable parties employ to avoid conflict with parties to whom they are accountable (Gibbins and Newton 1994; Peecher, Solomon, and Trotman 2013; Kang 2014 WP). For example, accountable parties may "shift their attitude toward" the attitudes of their evaluators, may become defensive and try to justify their contrary attitudes, or may "expend cognitive effort" to devise a strategy to avoid conflict with the evaluator (Gibbins and Newton 1994). One determining factor for the strategy used is whether the attitudes of the evaluator are known (Gibbins and Newton 1994; Peecher et al. 2013). When such attitudes are known, Gibbins and Newton (1994) identify "attitude shift" as a potentially effective strategy. Managers confronted with strong audit committee oversight are very likely to perceive that high quality financial reporting is a key mandate of the audit committee (Kang 2014 WP). Accordingly, they are likely to adopt strategies to provide higher quality financial reporting in order to avoid conflict with the audit committee. Agoglia et al. (2011) find evidence of this for managers who face strong audit committees. Managers in the study indicated that concern over "second-guessing" of their accounting decisions by the audit committee was greater when the audit committee was strong than when it was weak leading managers to make more conservative accounting treatment decisions (Agoglia et al. 2011).

Recall that H1 predicts that as the spotlight on a critical accounting estimate increases, managers will increase the level of disclosure made regarding the critical accounting estimate. Based on the foregoing discussion, I predict that this effect will be moderated by the strength of audit committee oversight and therefore propose the following hypothesis:

> *H2: Managers will increase the level of disclosure made regarding a critical audit matter <u>more</u> in response to increased level of detail given the matter in the audit report when the audit committee's oversight is strong than when it is moderate.*

The pattern of results predicted in H1 and H2 is presented in Figure 1.

[Insert Figure 1 here]

## III. METHOD

### Participants

Given the high degree of professional judgment required for the experimental task, it was important to ensure that participants had strong task-relevant experience (Trotman 2005). Accordingly, participants are seasoned public company financial executives, primarily CFOs, as they are the most likely to make the key financial disclosure decisions for their organizations. I identified potential participants in the Audit Analytics database of officer changes. I collected recent CFO appointments for public companies between 2007 and mid-2014 with positive revenues up to $2 billion.[4,5] Potential participants were invited to participate in the study via a recruitment cover letter which described the study and its importance. The mailing also included the experimental materials and a stamped return envelope. I mailed a total of 1,889 packages[6], 123 of which were returned as undeliverable, for a net total of 1,766. A total of 145 participants completed the experiment, for a response rate of 8.2%.[7]

Table 1 presents the demographics of participants in the study.[8] The participants' experience is a strong match for the demands of the experimental task. Participants had a mean

---

[4] In the vast majority of cases, mailings were only sent to one CFO per company. In five cases, mailings were inadvertently sent to two different individuals who had been appointed to CFO for the same company at different times. In addition, in one case, two mailings were sent to one individual who was concurrently CFO of two different companies. In total, these mailings comprise less than 1% of the population to which mailings were sent.

[5] I followed the approach of Bishop, Hermanson, and DeZoort (2014) in choosing to recruit participants from companies with positive revenues up to $2 billion for several reasons. First, the positive revenue requirement was to focus on operational companies. Next, I reasoned that companies under $2 billion would be both more likely to respond and have CFOs more likely to be deeply involved in the financial reporting of their firms.

[6] The packages were sent out in a series of four mailings over a four-month period. The first mailing was sent in equal proportions to the six treatment conditions in the study. In order to achieve adequate sample size in each treatment condition, subsequent mailings were sent in proportions which emphasized cells which had previously received fewer responses from participants. To test for differences between mailings, I added MAILING as a covariate to all the ANOVAs in Tables 2-4. In all cases, MAILING was not significant (all p's > .29, two-tailed).

[7] The response rate of 8.2% falls within the range of response rates in recent studies involving accounting and finance professionals including Agoglia et al. 2011 (11.3%); Bennett, Hatfield, and Stefaniak 2015 (5.6%); and Bishop et al. 2014 WP (20%). To address whether non-response bias had any effect on my primary dependent variable, *Extent of Disclosure*, I added an early/late (EARLYLATE) response indicator as a covariate to all ANOVAs reported in Tables 2-4. In all cases, EARLYLATE was not significant in the analyses (all p's > .51, two-tailed).

[8] Demographic information excludes six participants that failed a key manipulation check and were excluded from results reported for this study. See note 20 for further discussion.

work experience of 29.2 years[9]. A total of 133 (95.7%) of the participants indicated their current title was CFO and all participants have had significant responsibility for their firm's financial reporting at some point. Approximately 73.4% of the participants were current or former CPAs, 71.2% had experience as an auditor, and 24.5% were current or former audit committee members. Mean age of the participants was 54.0 and 89.1% were male.[10,11]

[Insert Table 1 here]

**Design**

***Independent Variables***

I utilized a 2X3 full factorial between subjects design. My first independent variable, *Audit Committee Oversight Strength* (hereafter "*AC Strength*"), was varied at two levels, moderate and strong. My manipulation of *AC Strength* focused on the expertise of the audit committee members (Agoglia et al. 2011) as well as the audit committee's oversight of financial reporting. Prior research has found that while most audit committees have at least one financial expert as defined by SEC rules, a majority of all audit committee members do not have expertise in accounting (Cohen, Hoitash, Krishnamoorthy, and Wright et al. 2014; Badolato, Donelson and Ege 2014). Thus, in the strong *AC Strength* condition, all three members of the audit committee were described as accounting experts with direct accounting or financial reporting experience

---

[9] Eleven of the 139 participants (7.9%) did not give precise years of work experience. Rather, they inserted a"+" after the given number (e.g., 30+). In the interest of conservatively estimating work experience, I coded these as the given number (e.g., 30 for "30+").

[10] One participant failed to indicate gender and two participants failed to indicate age. These participants are excluded from the reported demographic information for age and gender.

[11] I tested for systematic differences between experimental cells for all key demographic variables across all ANOVAs which I report as primary results. Only one variable, GENDER, yielded a significant difference between cells in any of the comparisons ($X^2_3$=8.481, p=.037, two-tailed when only No CAM and Short CAM conditions were analyzed). To determine whether GENDER had any effect on my primary dependent variable, *Extent of Disclosure*, I added GENDER as a covariate to an ANCOVA for the No CAM vs Short CAM comparison. GENDER was not significant in the ANCOVA ($F_{1,86}$=.173, p=.68, two-tailed). Accordingly, I did not include GENDER in the reported ANOVA results.

(Agoglia et al. 2011). In the moderate *AC Strength* condition, only 1 of the three audit committee members was described as a finance expert and none of the members had direct accounting or financial reporting expertise (Agoglia et al. 2011).[12] Prior research has also identified significant variance in the intensity of audit committees' approach to their oversight responsibilities (Beasley et al. 2009; Cohen et al. 2010). Therefore, in the strong *AC Strength* condition, the audit committee played an active role in resolution of challenging accounting and reporting issues including asking many questions about these issues. In the moderate *AC Strength* condition, the audit committee played a limited role in resolution of challenging accounting and reporting issues and occasionally asked questions about these issues. Excerpts of the *AC Strength* manipulations are presented in Appendix A.

My second independent variable, *Auditor Reporting Choice*, was varied at three levels in order to investigate whether the amount of detail provided in the auditor's CAM discussion had an effect on managers' disclosure decisions beyond the identification of the issue as a CAM. In the No CAM (control) condition, participants were told that the auditor had decided not to treat the critical accounting estimate as a CAM. The Short CAM and Long CAM conditions were designed to address the concern raised by some stakeholders that if auditors provided only minimal CAM reporting, the proposed standard would have limited impact (PCAOB 2011b). In the Short CAM condition, participants were provided with the auditor's brief discussion of the CAM in the audit report. The discussion was limited to the minimum information necessary to comply with the proposed standard -- identification of the matter and a brief discussion of why the matter was selected as a CAM. In the Long CAM condition, participants were provided with

[12] The manipulation of audit committee expertise within the *AC Strength* manipulation is borrowed with permission directly from Agoglia et al. 2011, for which I am grateful.

the auditor's detailed discussion of the CAM in the audit report. The Long CAM condition included the information in the Short CAM condition plus a richer qualitative description of the uncertainties encompassed in the matter and the potential future implications. [13]

***Experimental Materials and Task***

The experimental materials involved a financial reporting disclosure scenario. Participants were asked to assume the role of CFO for a hypothetical public company named Andarex Corp. which has traditionally manufactured high-end consumer products. Andarex has been public for 10 years and has consistently met its revenue and earnings growth targets. Andarex has a history of unqualified opinions on financial reporting and internal controls. Participants were informed that Andarex's auditors will be following a new PCAOB regulation that requires them to report on critical audit matters to highlight the audit and financial reporting issues of greatest significance. Participants were then told they would be asked to consider only one audit issue -- warranty exposure Andarex has for a newly launched product -- for which the auditor was considering treatment as a CAM.[14]

In the most recent year, Andarex launched a new product to a completely different, cost-conscious consumer segment. As a result, Andarex management was confronted with the difficult task of estimating its warranty exposure for the new product given its different warranty terms and customer base for the product. Participants received a detailed warranty calculation setting forth various assumptions including a significant element of uncertainty in the estimate related to what percentage of customers would likely file a claim in the event of a defective

[13] In order to hold information constant across all conditions, the qualitative information included in the Long CAM condition was included for all conditions within a discussion of the auditor's decision.
[14] I selected a warranty task as it is a fundamental accounting task that is widely understood by professionals with accounting experience and education (Perreault and Kida 2011).

product. The warranty estimate ranged from a minimum of $520,000 before taxes to a maximum of $1.56 million, the difference of which is material to Andarex's earnings. Andarex decided to record the minimum amount of the range until such time as it has more history with regard to the assumptions in the estimate.

After reviewing the case materials including a detailed discussion of the warranty estimate as well as the auditor's decision whether or not to treat the warranty issue as a CAM, participants rated the extent of disclosure they would choose to make about the warranty estimate as well as the likelihood that they would disclose different elements of information related to the warranty issue in Andarex's financial reporting. [15]

***Dependent Variables***

I collected one primary dependent variable and six secondary dependent variables from participants in the study. The primary dependent variable was a measurement of the *Extent of Disclosure* that the participant would provide for the warranty estimate on a 10-point Likert scale where 1 = minimal disclosure and 10 = extensive disclosure. I interpret increases in *Extent of Disclosure* as increases in the *amount* of information participants would communicate in their financial disclosure. I contend that increases in *Extent of Disclosure* correspond with increases in disclosure quality as users have more information on which to base their decisions. I treat *Extent of Disclosure* as my primary dependent variable as it is important to obtain an overall measure of participants' intention with regard to how much information will be disclosed.

[15] As part of instrument development, I met with three current or former chief financial officers to review all aspects of the case materials and post-experimental questionnaire. In each meeting, I had the professional read the instrument from beginning to end stopping between sections to discuss comprehensibility and realism of the materials, language used and questions. Prior to finalizing the instrument, I made revisions based on feedback received from the professionals to ensure the maximum comprehensibility and realism of the instrument.

Participants next considered six individual disclosure elements that could be included in the disclosure of Andarex's warranty exposure issue. I collect these ratings in order to perform further analysis of the different elements of information that managers might be more likely to include as *Extent of Disclosure* increases. Each disclosure element was rated on a 10-point Likert scale where 1 = Definitely Not Disclose and 10 = Definitely Disclose.[16] Certain of the disclosure elements represent quantitative information that could enhance the financial statement user's ability to quantify the risk in a critical accounting estimate. These elements include (i) the range of the warranty estimate (*RANGE*); a description of the key uncertain assumption in the estimate (*KEY ASSUMPTION*); and (iii) a sensitivity analysis of the warranty estimate (*SENSITIVITY*). While disclosures of this type are generally required by current SEC regulations, many stakeholders have pointed to a lack of compliance in this area (PCAOB 2011b). Other disclosure elements collected are more commonplace in current practice including (i) the amounts reported in the financial statements (*FS AMOUNT*); (ii) the rationale for the recorded amount (*RATIONALE*); and (iii) a description of uncertainty in the estimate (*UNCERTAINTY*). [17] A concrete example of each disclosure element (see Appendix C) was provided before the rating was elicited.

***Procedures***

[16] Since I contend that each of the disclosure elements I measure is necessary for a complete disclosure of the critical accounting estimate (see note 17), I interpret an increase in the likelihood of management disclosure of each element as an increase in the quality of the firm's overall disclosure of the critical accounting estimate.

[17] Taken together, I contend that disclosure of all six elements would result in a rich disclosure of the critical accounting estimate more in line with the SEC regulations (SEC 2003). It is likely that management has differing sensitivities to disclosure of these elements. For example, management is likely to be highly sensitive to the disclosure of the range of the warranty estimate, description of the key assumptions in the estimate and sensitivity analysis of the estimate. Disclosure of the amount of warranty expense and warranty accrual in the financial statements or the qualitative uncertainty surrounding the estimate is commonplace and managers are less likely to be sensitive to disclosure of these elements.

The experimental materials were divided into two packets. [18] Packet 1 included an introduction to the experiment and information regarding the company, its audit committee and the audit currently underway. Participants were then informed of the auditor's decision whether or not to report Andarex's warranty issue as a CAM. Finally, a detailed discussion of the warranty reserve issue was provided. Participants then provided their disclosure ratings, based on their knowledge of the case materials including the auditor's decision regarding the level of CAM reporting, if any, they intend to provide for the warranty reserve. Participants were instructed to complete Packet 1 before proceeding to Packet 2. Packet 2 was a post-experimental questionnaire which included manipulation checks, questions about the experiment and participant judgments, and demographic information. Participants were told not to refer back to Packet 1. The flow of the experiment is summarized in Figure 2.

[Insert Figure 2 here]

## IV. RESULTS

### Manipulation Checks

To test whether the *AC Strength* manipulation was effective, I collected participant ratings of the audit committee's accounting/financial expertise (Agoglia et al. 2011) and its involvement in financial reporting decisions. Participants rated each measure on a 7-point Likert scale where 1 = Low and 7 = High (Agoglia et al. 2011).[19] Participants in the strong *AC Strength* condition rated the audit committee's accounting/financial expertise as significantly higher than

[18] Approval of the experimental design and materials was received from the Institutional Review Board of my university prior to conducting the experiment.
[19] Two of the 139 participants failed to provide one or both of the *AC Strength* ratings and are excluded from the manipulation check tests.

participants in the moderate *AC Strength* condition (6.04 versus 2.97, $t_{136}$=15.06, p<.001, two-tailed). Participants in the strong *AC Strength* condition also rated the audit committee's involvement in financial reporting issues as significantly higher than participants in the moderate *AC Strength* condition (5.80 versus 3.15, $t_{135}$=10.89, p<.001, two-tailed). These ratings provide evidence of an effective manipulation of *AC Strength*.

To test the effectiveness of my *Auditor Reporting Choice* manipulation, I performed two tests. First, all participants were asked whether the auditor decided to report Andarex's warranty issue as a CAM. Of the 145 participants, 139 (95.9%) correctly recalled the auditor's choice regarding the CAM.[20] Next, I tested the effectiveness of the manipulation of *Auditor Reporting Choice* between the short CAM and Long CAM conditions by comparing how participants rated the informativeness of the CAM discussion provided by the auditor. Participants in the No CAM condition are excluded from this test since there was no CAM discussion provided by the auditor. Participants rated how informative the auditor's CAM reporting was on a 7-point Likert scale where 1 = Not at all Informative and 7 = Very Informative. Participants in the Long CAM condition rated the auditor's CAM reporting as significantly more informative[21] than in the Short CAM condition (4.67 versus 3.89, $t_{91}$=2.78, p<.01, two-tailed). Collectively, these results provide evidence of an effective manipulation of *Auditor Reporting Choice*.

**Primary Results**

---

[20] Of the six remaining participants, four answered the question incorrectly and two failed to answer the question. Given the importance of the *Auditor Reporting Choice* manipulation, these six participants are excluded from the results reported in the remainder of this study. Including these participants in the results, in limited cases, would have minor impacts on the level of statistical significance of findings but would not qualitatively change the inferences drawn in the study.
[21] Of the 95 participants in the Short CAM and Long CAM conditions, 3 failed to answer the question and are excluded from the manipulation check tests.

In order to test my hypotheses, I conducted a series of ANOVAs of *AC Strength* and *Auditor Reporting Choice* on *Extent of Disclosure*. Each ANOVA is a comparison of two levels of *Auditor Reporting Choice* in order to determine specific effects of the various levels of detail in CAM reporting.[22] For each of the comparisons, I first test the interaction predicted in H2. Since the main effect of *Auditor Reporting Choice* predicted in H1 is dependent on *AC Strength*, I then test H1 using simple effects analysis. I first compared the No CAM control and Long CAM conditions. This is the starkest comparison which allows me to investigate the maximum effect of a Long CAM discussion by the auditor on management's disclosure decisions. The results for this comparison are presented in Figure 3 and Table 2. The ANOVA reveals a significant interaction of *Auditor Reporting Choice* and *AC Strength* ($F_{1, 88}$=2.829, p=.048, one-tailed).[23] The ANOVA also reveals a significant main effect of *AC Strength* on *Extent of Disclosure* ($F_{1,88}$=9.521, p=.002). Simple effects analysis reveals that when *AC Strength* is strong, the *Extent of Disclosure* provided by the manager is significantly greater ($F_{1, 46}$=5.279, p=.026) in the Long CAM condition ($\bar{x}$ =8.08) than in the No CAM condition ($\bar{x}$ =6.95). When *AC Strength* is only moderate, the *Extent of Disclosure* provided by the manager is no greater ($F_{1, 42}$=.078, p=.782) in the Long CAM condition ($\bar{x}$ =6.25) than in the No CAM condition ($\bar{x}$ =6.42). These results provide evidence that managers will respond to the auditor shining a spotlight on a highly uncertain critical accounting estimate by increasing their own disclosure of the matter and that this effect is strongest when audit committee oversight is strong.

[Insert Table 2 and Figure 3 here]

---

[22] One of the 139 participants did not provide an *Extent of Disclosure* rating, the primary dependent variable. This participant is excluded from all results for *Extent of Disclosure*.

[23] To provide further evidence of the predicted interaction, I conducted a planned contrast of the effect of *Auditor Reporting Choice* and *AC Strength* on *Extent of Disclosure* (Buckless and Ravenscroft 1990). As expected, results of the planned contrast reported in Table 3, Panel C were significant ($t_{88}$=3.62, p<.001, one-tailed).

Next, I compared the Short CAM and long CAM conditions to investigate whether the *level of detail* in the discussion provided for the CAM affects the manager's *Extent of Disclosure* decision. Results of the comparison are presented in Figure 4 and Table 3. The interaction of *Auditor Reporting Choice* and *AC Strength* is significant ($F_{1, 88}$=11.771, p=.001, one-tailed).[24] Simple effects analysis reveals that when *AC Strength* is strong, the *Extent of Disclosure* provided by the manager is significantly greater ($F_{1, 47}$=8.005, p=.007) in the Long CAM condition ($\bar{x}$ =8.08) than in the Short CAM condition ($\bar{x}$ =6.70). When *AC Strength* is only moderate, the *Extent of Disclosure* provided by the manager in the Long CAM condition ($\bar{x}$ =6.25) is actually significantly lower ($F_{1, 41}$=4.311, p=.044) than in the Short CAM condition ($\bar{x}$ =7.48).[25] Collectively, these results suggest that the *level of detail* provided in the auditor's CAM discussion is an important determinant of the manager's disclosure choice regarding the matter and, when audit committee oversight is strong, greater detail in the auditor's CAM discussion is likely to lead to greater disclosure by management.

[Insert Table 3 and Figure 4 here]

Finally, I compared the No CAM control and Short CAM conditions to determine whether the auditor *merely identifying* the warranty estimate issue as a CAM and providing a brief discussion in the audit report would impact manager disclosure decisions. Results of the

[24] To provide further evidence of the predicted interaction, I conducted a planned contrast of the effect of *Auditor Reporting Choice* and *AC Strength* on *Extent of Disclosure*. As expected, results of the planned contrast reported in Table 3, Panel C were significant ($t_{88}$=2.00, p=.024, one-tailed).

[25] This result should be interpreted with caution as it may be an anomaly. Recall that along with this *Extent of Disclosure* rating, I also collected individual ratings for six disclosure elements. Comparison between the Short CAM and Long CAM conditions for these disclosure element ratings as well as the mean of all disclosure element ratings is presented in Table 5. The decrease in *Extent of Disclosure* between the Short CAM and Long CAM conditions when audit committee oversight is only moderate is not seen in the *likelihood to disclose* ratings for any of the disclosure elements or the mean of all ratings. So, it would seem that while participants in the Short CAM/ Moderate AC condition favored a higher *Extent of Disclosure* than participants in the Long CAM/Moderate AC condition, this did not translate to them being more likely to disclose any of the individual elements.

comparison are reported in Figure 5 and Table 4. The interaction of *Auditor Reporting Choice* and *AC Strength* was marginally significant ($F_{1, 88}$=3.321, p=.072, two-tailed) but not in the pattern predicted by theory.[26, 27] Simple effects analysis reveals that when *AC Strength* is strong, the *Extent of Disclosure* provided by the manager is no different ($F_{1, 43}$=.239, p=.628) in the Short CAM condition ($\bar{x}$ =6.79) from the No CAM condition ($\bar{x}$ =6.95). When *AC Strength* is only moderate, the *Extent of Disclosure* provided by the manager in the Short CAM condition ( $\bar{x}$ =7.48) is significantly greater ($F_{1, 45}$=4.597, p=.037) than in the No CAM condition ($\bar{x}$ =6.42).[28] Collectively, these results suggest that if the auditor only provides minimal detail in its CAM reporting, disclosure by the manager might not be affected.

[Insert Table 4 and Figure 5 here]

**Supplemental Analysis**

Management has to make a wide variety of decisions regarding what they feel is important to disclose. Recall that I identified six disclosure elements that collectively would make up a comprehensive disclosure of the critical accounting estimate. To gain further insight on management disclosure choices, I analyzed participant ratings of the likelihood that they would choose to disclose each item. Results of the disclosure element ratings are reported in

---

[26] I used two-tailed tests for this ANOVA because the pattern of results was inconsistent with my theory.
[27] As an additional test of the predicted interaction, I conducted a planned contrast of the effect of *Auditor Reporting Choice* and *AC Strength* on *Extent of Disclosure*. Results of the planned contrast reported in Table 5, Panel C were not significant ($t_{88}$=-.238, p=.812, two-tailed).
[28] Once again, this result should be interpreted with caution as it may be an anomaly related to the same participant ratings of *Extent of Disclosure* for the Short CAM/Moderate AC condition discussed in footnote 25. As before, I compared the individual disclosure element ratings as well as the mean of all disclosure element ratings between the Short CAM and No CAM conditions presented in Table 5. The increase in *Extent of Disclosure* between the No CAM and Short CAM conditions when audit committee oversight is only moderate is not seen in the *likelihood to disclose* ratings for any of the disclosure elements or the mean of all ratings. So, it would seem that while participants in the Short CAM/ Moderate AC condition favored a higher *Extent of Disclosure* than participants in the No CAM/Moderate AC condition, this did not translate to them being more likely to disclose any of the individual elements.

Table 5[29]. For each disclosure element in each comparison (No CAM vs Long CAM, Short CAM vs Long CAM, and No CAM vs Short CAM), I conducted planned contrasts with weightings identical to the planned contrasts for *Extent of Disclosure* described in the primary analysis. In other words, I am testing whether participants increase the likelihood that they would disclose the element in response to an increase in the level of the auditor's CAM reporting and whether that increase in likelihood is greater in the presence of stronger audit committee oversight.

Several elements of disclosure stand out in the analysis. Most notable are three elements of disclosure, each of which provide quantitative information that would enhance the financial statement user's ability to quantify the risk in the warranty estimate. Specifically, participants' ratings of the likelihood that they would disclose the *RANGE* of the warranty estimate, the *KEY ASSUMPTION* used in the estimate, and a *SENSITIVITY* analysis of the warranty estimate each followed the general pattern of results predicted.[30]

In the comparison of the No CAM and Long CAM conditions, *RANGE*, *KEY ASSUMPTION*, and *SENSITIVITY* were all significant (all p's<.05, one-tailed). In the comparison of the Short CAM and Long CAM conditions, *KEY ASSUMPTION* and *SENSITIVITY* were significant (all p's<.05, one-tailed). In each of these CAM comparisons, the

---

[29] As discussed in Note 11, despite random assignment of potential participants to treatment conditions, there were differences in gender by cell. To assess these differences, I analyzed the proportion of each gender by cell for each of the CAM comparisons used throughout the study. GENDER was only significantly different for the No CAM vs Short CAM comparison ($X^2_3$ = 8.481, p=.037). GENDER was not significantly different in the No CAM vs Long CAM comparison ($X^2_3$ = 5.079, p=.166) or the Short CAM vs Long CAM comparison ($X^2_3$ = 4.250, p=.236). To determine whether GENDER had an effect on the No CAM vs Short CAM disclosure element ratings reported in Table 5, I ran ANCOVAs of *Auditor Reporting Choice* and *AC Strength* on each of the disclosure element ratings with GENDER as a covariate. In all ANCOVAs, the GENDER term was not significant (all p's > .133).

[30] This is particularly noteworthy in light of the fact that even in the Long CAM condition, the auditor's discussion did not include any specific quantitative information regarding the warranty estimate. This was an intentional design choice to avoid the manager's decision to disclose being a foregone conclusion if the auditor provided such information in their own CAM discussion of the warranty estimate.

quantitative disclosure elements were rated as most likely to be disclosed in the Long CAM/Strong AC condition. This finding is of particular importance as these quantitative disclosure elements are the type of information frequently cited as lacking in management disclosure (PCAOB 2011b) and is consistent with participants increasing the *Extent of Disclosure* as discussed in the primary results.

In the comparison of the No CAM and Short CAM conditions, none of the planned contrasts for *RANGE*, *KEY ASSUMPTION*, or *SENSITIVITY* disclosure elements were found to be significant (all p's >.63, two-tailed.). A closer review of the results reveals that there is no discernible pattern wherein minimal auditor CAM reporting leads to greater manager disclosure than if the auditor chooses not to report the matter as a CAM, regardless of the audit committee oversight strength. Importantly, this finding provides support for investor and regulator concerns that minimal CAM reporting will not lead to meaningful improvement in manager disclosure.

In all of the comparisons, Elements of disclosure that do not reveal quantitative risk in the warranty estimate do not follow the pattern of results predicted in Hypothesis 2. Specifically, participant ratings of the likelihood that they would disclose (i) the *FS AMOUNT* of the warranty estimate actually recorded in the financial statements; and (ii) a qualitative description of UNCERTAINTY in the estimate each did not conform to the predicted pattern of results (all p's > .32, one-tailed except the comparison of No CAM and Short CAM which is two-tailed). This finding is not unexpected because disclosure of this type of information is already commonplace. There was also no significant result for *RATIONALE*, which might be due to the fact that it did not communicate much incremental information beyond that in the other disclosure elements.

[Insert Table 5 here]

## V. CONCLUSION

This study investigates whether the current changes proposed by the PCAOB to the auditor's reporting model are likely to spur management to provide enhanced disclosure that investors are demanding about areas of uncertainty in the financial statements. According to Martin Baumann, Chief Auditor of the PCAOB, the proposed standard is among initiatives that "would make very significant changes to the auditor's report for the first time in some 75 years" (PCAOB 2014). Thus, it is important to all stakeholders in the financial reporting process to develop an *ex ante* understanding of how proposed changes might affect financial reporting and disclosure quality (Maines 1994; Beresford 1997).

To study the effects of the proposed standard, I conducted an experiment involving highly experienced public company financial executives, primarily chief financial officers. The extensive experience of the participant group was critical given the importance of obtaining reliable insights on the proposal. Participants rated the extent of disclosure they would be likely to give for a highly uncertain critical accounting estimate. In addition, they rated the likelihood that they would disclose a variety of disclosure elements related to the critical accounting estimate. The experiment varied how the auditor treated the critical accounting estimate in their audit report as well as the strength of the audit committee's oversight over financial reporting.

Results of the experiment provide a number of important insights into the potential effect of the proposed change to the auditor's reporting model. I find that managers will react to detailed auditor reporting of a CAM by increasing their own disclosure of the matter including quantitative information which could enhance the financial statement user's ability to quantify the risk in a critical accounting estimate. In addition, I find that the level of detail provided by the auditor in its CAM reporting plays an important role in determining the extent of disclosure the manager chooses to make. Finally, despite concerns about the diminished role of the audit committee should the proposed standard be adopted, I find that the audit committee is likely to continue to be a key source of accountability playing a pivotal role in the effectiveness of the auditor's reporting model changes.

There are limitations to the study which represent opportunities for future research. In order to gain initial insights on the effect of the proposed standard on manager disclosure decisions, my experimental setting was an intentionally simple one in which the auditor makes an independent decision whether or not to report a CAM and what level of detail to provide. Furthermore, my design intentionally avoided the prospect of the auditor discussing specific quantitative information about the critical accounting estimate in its CAM reporting in order to allow managers to make unconstrained decisions whether or not to disclose the information themselves. In reality, the process is likely to follow a more iterative structure akin to the auditor-client negotiation process of resolving audit adjustments (Gibbins, Salterio, and Webb 2001, Sanchez, Agoglia, and Hatfield 2007). On one hand, auditors are likely to signal their preferences for disclosure to clients in the hopes that disclosure will meet their preferences. On the other hand, clients are likely to seek compromise with auditors on the minimum level of disclosure the auditor will accept without needing to disclose original information about the company in its CAM reporting. This auditor-client interaction represents a fruitful area for future research.

The study has important implications for the various stakeholders to the PCAOB project on the auditor's reporting model as well as academic research. First, in order to pursue their objective of providing greater information to the markets, it is critical for regulators to continue to emphasize the importance of auditors providing more than cursory discussion of CAMs in their audit report. The study confirms fears raised by many that minimal discussion of CAMs by auditors in their report is unlikely to lead managers to provide disclosure about uncertainty in the financial statements that investors are demanding. Next, the quality of audit committee oversight is likely to have an effect on how managers react to enhancements of the auditor report under the proposed standard. Strong audit committee oversight will be needed for the full benefits of the proposed standard to be reaped by investors. Finally, the study extends the accounting literature regarding the effect of regulatory changes on financial reporting quality. Most of the concurrent studies on the proposed standard focus on financial stakeholders other than management such as auditors and investors. Many of these studies, as a necessary part of their design, presume that the manager does not react to enhancements in the audit report. The results of this study suggest that if proposed regulatory change is implemented correctly and corporate governance is strong, higher quality financial reporting by management will more likely be forthcoming.

## Appendix A – Audit Committee Description[31]

All conditions received the following general information regarding the Audit Committee:

> Andarex's audit committee is responsible for overseeing the financial reporting process, including a review of the company's financial statements and disclosures. The audit committee meets about eight times a year and is made up of three members, all of whom satisfy the independence criteria for audit committee members. In addition:

The following additional information about the audit committee and its oversight constitute the *AC Strength* manipulation:

*Moderate Audit Committee Oversight condition*

- **Only one of the members qualifies as an "audit committee financial expert,"** as prescribed by the SEC, and is viewed as a supervisory financial expert. That is, this is an individual with an understanding of financial reporting but no direct accounting or financial reporting experience. While this individual qualifies as an audit committee financial expert, **none of the members has any direct accounting or financial reporting experience.**
- The audit committee **is somewhat involved** in the resolution of key accounting and disclosure issues. Audit committee members **are reactive;** they **follow discussions of the issues** during meetings **but they do not ask too many questions** regarding these issues.

*Strong Audit Committee Oversight condition*

- **All of the members qualify as "audit committee financial experts,"** as prescribed by the SEC, and are viewed as accounting financial experts. That is, these are individuals with an understanding of financial reporting and direct accounting or financial reporting experience.
- The audit committee **is actively involved** in the resolution of key accounting and disclosure issues. Audit committee members **are proactive**; they **lead discussion of issues** during meetings, **often ask probing questions,** and **debate the appropriate accounting treatment** regarding key transactions/issues.

## Appendix B – Auditor Reporting Choice[32]

[31] Significant portions of the Audit Committee Description in my instrument, most importantly the description of the audit committee's expertise and part of the introduction, are borrowed with permission directly from Agoglia et al. 2011, for which I am grateful.

No CAM condition (received the following paragraph and no CAM excerpt of the audit report)

After careful consideration, in their best judgment, the auditors have decided **it is not necessary** to include a discussion of the warranty exposure related to its new product offering as a Critical Audit Matter in its audit report.

Short CAM and Long CAM Conditions (received the following paragraph plus the applicable excerpt of the audit report)

After careful consideration, in their best judgment**,** the auditors have decided **it is necessary** to include a discussion of the warranty exposure related to Andarex's new product offering as a Critical Audit Matter in its audit report. Following is the language that the auditor intends to use to address the warranty exposure issue in its audit report**:**

Excerpt of Audit Report

*Critical Audit Matter (Long CAM condition)*

> *The Company has potential warranty obligations associated with a new product launched during 2012. The Company is required to estimate the exposure and record a Warranty Liability and associated Warranty Expense in the Consolidated Balance Sheet and Income Statement as of and for the year ended December 31, 2012, respectively. Management's estimate of the warranty exposure incorporates subjective assumptions that have a high degree of uncertainty. In particular, the percentage of Andarex's customers with a defective unit that will actually file a warranty claim could be much higher than the Company estimated. The Company recorded the warranty liability at the lower end of the estimate range. Consequently, actual warranty expenses to be incurred could be significantly higher and earnings could be significantly lower than the amount recorded.*

*Critical Audit Matter (Short CAM condition)*

> *The Company has potential warranty obligations associated with a new product launched during 2012. The Company is required to estimate the exposure and record a Warranty Liability and associated Warranty Expense in the Consolidated Balance Sheet and Income Statement as of and for the year ended December 31, 2012, respectively. Management's estimate of the warranty exposure incorporates several subjective assumptions that have a high degree of uncertainty.*

---

[32] In order to hold information constant across all conditions, the qualitative information included in the Long CAM audit report excerpt was included for all conditions within a discussion of the auditor's decision.

## Appendix C – Examples of Disclosure Elements

*FS AMOUNT*

*The Company has recorded a warranty accrual and related warranty expense of $520,000 for Product B in the Consolidated Balance Sheet and Statement of Income as of and for the year ended December 31, 2012, respectively.*

*RANGE*

*The Company calculated the potential warranty exposure associated with Product B and estimates that the exposure is between a minimum of $520,000 and a maximum of $1,560,000 as of December 31, 2012. The Company recorded warranty expense and reserve for the minimum amount of the potential exposure range ($520,000) as of December 31, 2012.*

*RATIONALE*

*The Company has decided to record warranty expense and reserve for the minimum amount of the potential exposure range ($520,000) as of December 31, 2012 until the Company has more experience with actual claims and costs.*

*KEY ASSUMPTION*

*The Company's estimate of warranty exposure is based on a key assumption. Specifically, the Company has estimated a range for the likelihood that a customer with a defective unit will actually file a warranty claim of between 20% and 60%.*

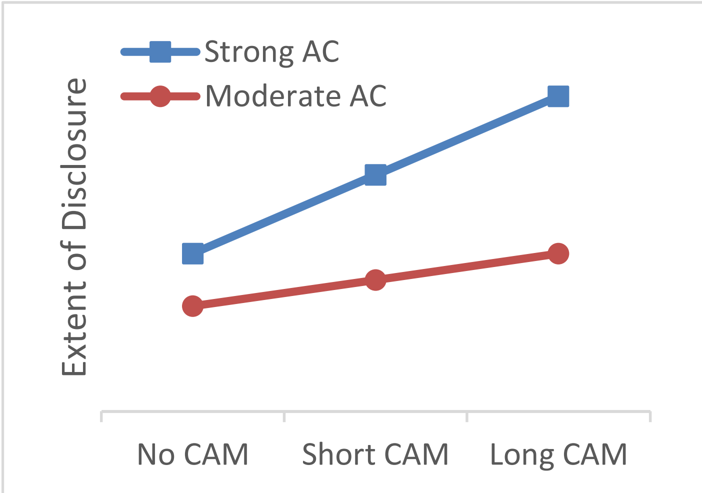
*UNCERTAINTY*

*The Company's estimate of warranty exposure for Product B incorporates a subjective assumption that has a high degree of uncertainty. Specifically, the customer segment for Product B is new to the Company and it is difficult to estimate the likelihood that a customer with a defective unit will actually file a warranty claim. Actual warranty expenses to be incurred could be significantly higher than the amount recorded in the financial statements.*

*SENSITIVITY*

*The estimate of warranty exposure depends on the Company's estimate of the likelihood that a customer with a defective unit will actually file a warranty claim, which ranges from 20% to 60%. The warranty accrual recorded by the Company is based on a 20% claims rate. Each increase of 10% in the claims rate would result in additional warranty expense of $260,000 before income taxes.*

**Figure 1 – Predicted Pattern of Results – Rating of Extent of Disclosure[a] by Audit Committee Oversight Strength[b] and Auditor Reporting Choice[c]**



[a]Extent of Disclosure was rated on a 10-point scale where 1=minimal disclosure and 10=extensive disclosure.
[b]Audit Committee Oversight Strength was varied at two levels, moderate and strong. See Appendix A for excerpts for each condition.
[c]Auditor Reporting Choice was varied at three levels. The auditor provided either no CAM discussion (No CAM), a short CAM discussion (Short CAM), or a long CAM discussion (Long CAM) of a critical accounting estimate with significant uncertainty. See Appendix B for excerpts for each condition.

**DATE:** July 19, 2016

**SUBJECT:** Comments on PCAOB Rulemaking Docket Matter No. 034, *Proposed Auditing Standard – The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards*

---

We appreciate the opportunity to submit comments regarding the Board's Proposed Auditing Standard on the Auditor's Report (hereafter referred to as the Proposed Standard). We are pleased to see the Board's continued efforts to improve the transparency of the audit process. We applaud the Board's efforts to increase and enhance the information provided in the audit report to provide investors and others important information about the audit. Our comments below are in response to question 26 in the Proposed Standard and are based on our research.[1] We believe there is an effective and efficient way to include an important audit quality indicator in the auditor's report.

**Additional Improvements to the Auditor's Report**
*Question 26. Are the reproposed amendments to the PCAOB standards appropriate? If not, why not? Are there additional amendments related to the reproposed standard that the Board should consider? If so, what are they?*

We believe there is an additional amendment that should be considered regarding the date when the auditor completed fieldwork to convey to users the level of deadline imposed time pressure the auditor may have faced. The listing requirements for publicly traded companies impose deadlines for the filing of audited financial statements with the Securities and Exchange Commission (SEC). In a 2014 speech, PCAOB board member, Jay Hanson, stated:

> "One of the biggest impediments to auditor skepticism…is the calendar. Public companies have filing deadlines to meet, and they are rarely missed. When they are missed, the consequences can be serious, including declining share prices and harm to investors. If potential issues are discovered late in the audit process, or an issue is not resolved in a timely manner, auditors may feel pressure to cut corners. We have seen it in inspections and enforcement matters: Auditors recognize that there may be a problem with management's estimates or conclusions but allow themselves to be talked out of doing anything about it. Staying organized and proactively dealing with problems far ahead of filing deadlines will

Seidel (2016), "*The Informational Value of the Audit Report Date and the Effect of SFAS No. 165.*" Working paper, Brigham Young University and Weber State University. Available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2561713.

help the auditor avoid running out of time as well as the pressure to accept insufficient audit evidence."[2]

Additionally, PCAOB Staff Audit Practice Alert No. 10, issued in December 2012, states that "scheduling and workload demands can put pressure on partners and other engagement team members to complete their assignments too quickly, which might lead auditors to seek audit evidence that is easier to obtain rather than evidence that is more relevant and reliable, to obtain less evidence than is necessary, or to give undue weight to confirming evidence."[3]

Recent research by Christensen, Glover, Omer and Shelley (2015) finds that the timeliness of completing audit fieldwork is an important attribute of audit quality.[4]

In 2009, the Financial Accounting Standards Board (FASB) issued SFAS No. 165, *Subsequent Events* (SFAS 165) (now codified in ASC 855). Although SFAS 165 contains no auditor related requirements, the standard, which requires public companies to evaluate subsequent events through the financial statement filing date, resulted in a change in practice regarding the dating of the audit report. Before the issuance of SFAS 165, auditors would date their report at the *end of audit fieldwork* when they had obtained sufficient audit evidence to support the audit opinion. As such, in many instances prior to SFAS 165, auditors dated the audit opinion well before the filing of the financial statements. In response to SFAS 165, auditors of public companies began dating their opinions on or very close to the date the financial statements are filed with the SEC.[5] In our research study (Glover, Hansen and Seidel, 2016) we examine companies with fiscal years ending between December 2003 and May 2014. Companies with fiscal years ending prior to June 2009 are considered pre-SFAS 165 observations. We find that the mean (median) number of days between the audit report date and the filing of the 10-K with the SEC has decreased significantly from 9.75 (3.00) days in the pre-SFAS 165 period to 1.00 (0.00) day following the passage of SFAS 165.

The histograms below present the difference in days between the audit report date and the filing date. The histograms reveal that although the distribution *of the days between dates* varies widely in the pre-SFAS 165 period, in the post-SFAS 165 period, the entire distribution is close to zero. The tight distribution in the post-SFAS 165 period provides support for the practice of dating the audit report close to or on the date of filing.

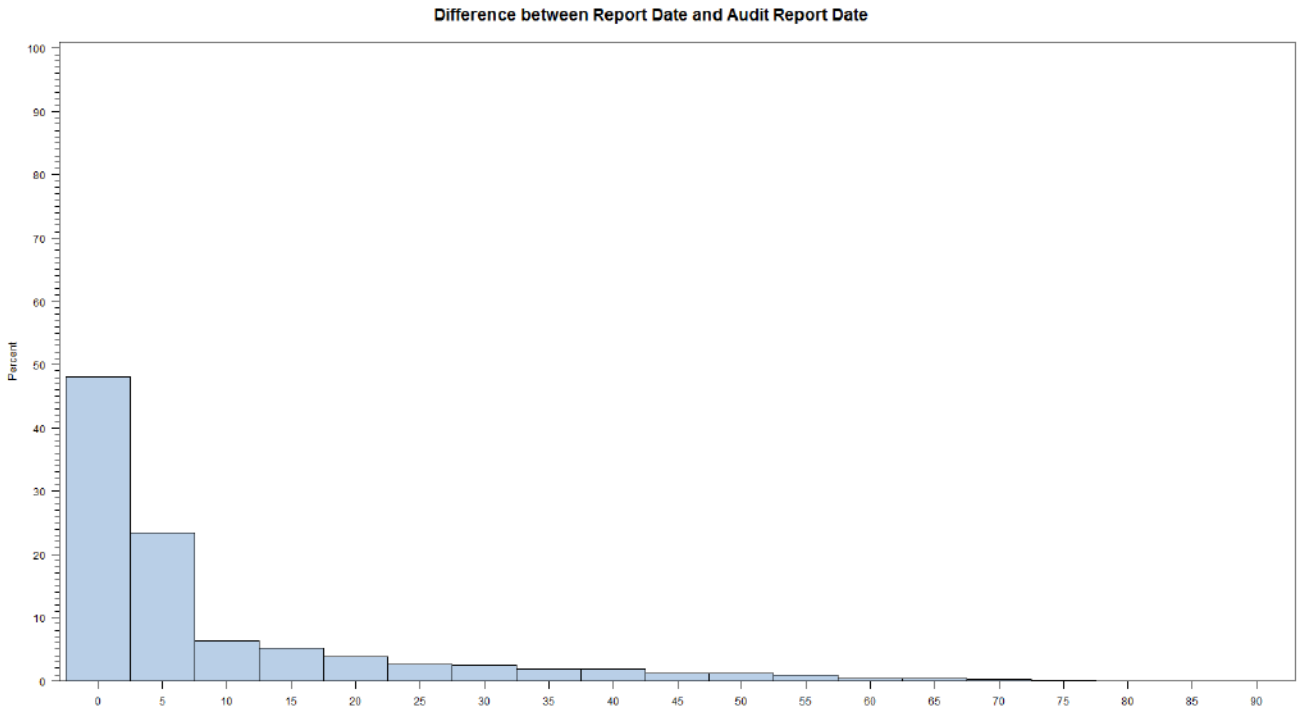
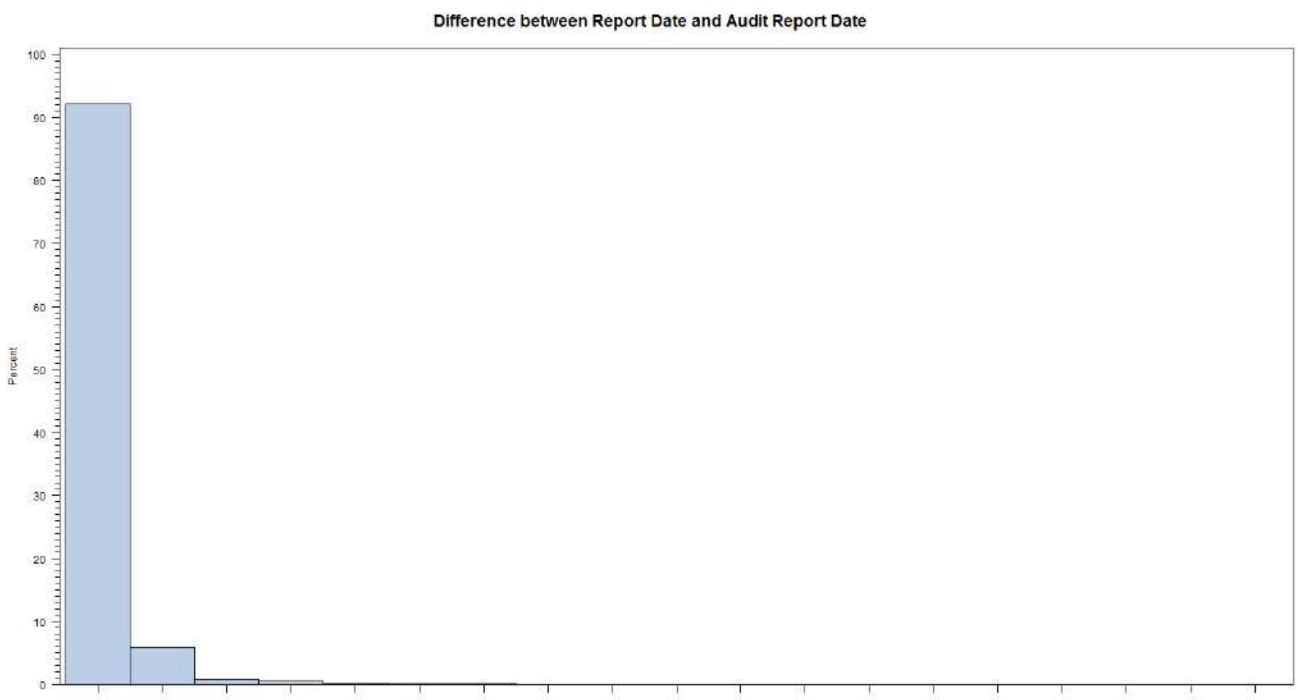
[5] In Session 3 of the July 15, 2010, PCAOB SAG meeting it was noted that auditors began dating their opinions on the date the financial statements are filed with the SEC in response to SFAS 165.

Pre-SFAS 165:



Post-SFAS 165:



The majority of companies (~ 60 percent) file their annual report within one week of the required filing deadline. While the proportion of companies filing within the last week has remained stable pre- and post-SFAS 165, when we examine this set of companies we find that the proportion of companies with an *audit report dat*e within a week of or on the required filing deadline increased significantly from 64.5 percent in the pre-SFAS 165 period to 96.5 percent in the post-SFAS period.

The change in practice in dating the audit report limits the ability of financial statement users to identify auditors facing heightened deadline imposed time pressure. We find in our research that the ability of users to identify auditors under heightened deadline pressure provides a potentially important indicator of audit quality.

In our study we find that the nearness of the audit report date to the client's required filing deadline provided a useful signal of reduced audit quality (as measured by financial statement misstatements). However, after SFAS 165, there is no longer any observable association between an audit report date close to the required filing deadline and audit quality. In other words, the financial statement users lost a potentially important signal of audit quality due to the change in practice post SFAS 165.

The Board currently has audit quality indicators on its agenda.[6] We believe the findings in our study and Christensen et al. (2015) have important implications for auditor reporting and the ability of the audit report date to provide a signal of variation in audit quality. Although statements from the Board suggest a concern with the potential negative effect of deadline imposed time pressure, the Proposed Standard does not include a measure of the timeliness of the completion of audit fieldwork. We believe that an additional amendment to the Proposed Standard to help investors and users of the financial statements identify auditors under heightened deadline pressure would be the inclusion of the date the auditors completed fieldwork in the audit report. This could be accomplished in the form of dual-dating of the audit opinion to clearly convey the date of the end of audit fieldwork (first date) as well as the date through which subsequent events were considered (second date).

We appreciate the opportunity to provide the Board with our research findings and offer suggestions regarding the proposed Auditor's Reporting Standard.

**Re: PCAOB Rulemaking Docket Matter No. 034 – Proposed Auditing Standard on the Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards**

Dear Board Members and Staff:

Grant Thornton LLP appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or Board) reproposed auditing standard, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* (Reproposal), and we respectfully submit our comments and recommendations thereon.

We continue to support the Board's efforts to enhance the relevancy and transparency of the auditor's report and commend the Board for their thoughtful consideration of comments received from various stakeholders on the original proposal in 2013. We are pleased to see many of the revisions contained in the Reproposal. We also note certain of the revisions tend to align with the model adopted by the International Auditing and Assurance Standards Board (IAASB), which we support from a global consistency perspective. However, we continue to have concerns with certain aspects of the Reproposal, which we discuss in greater detail below.

## Critical audit matters (CAM)

### Definition

We are supportive of limiting the population of potential CAM to matters communicated or required to be communicated to the audit committee. We believe this provides a better, narrower starting point for auditors in their determination of CAM and communication of matters that may be most meaningful to the users of the financial statements. We also agree with including matters required to be communicated as well as matters actually communicated to the audit committee.

We also appreciate the inclusion of the notion of materiality in the definition of CAM. We believe this will better enhance practical application of the reproposed standard. We also recognize the Board's intentions when using the phrase "relates to" as described on page 20 of the Reproposal.

However, we are concerned about unintended consequences in utilizing materiality in this specific fashion. We are concerned that specifically relating to "accounts or disclosures" could give the reader of the auditor's report the impression that piecemeal opinions are being provided despite the revisions made to the introductory language, as discussed further below. We are further concerned that, in retrospect, any audit matter relating to a material account or disclosure would have been expected to be considered a de facto CAM, in spite of the other considerations and factors. In order to minimize unintended consequences and better align the determination with the auditor's overall objective of expressing an opinion on the financial statements taken as a whole, we recommend the Board consider the following revisions (marked from the Reproposal) to paragraph 11 of Proposed AS 3101 to better integrate materiality into the definition.

> A critical audit matter is any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) ~~**relates to accounts or disclosures that are**~~ **is** material to the financial statements **taken as a whole** and (2) involved especially challenging, subjective, or complex auditor judgment.

We believe this language still sufficiently provides for the scenarios laid out on page 20 of the Reproposal, including goodwill impairment, evaluation of the company's ability to continue as a going concern or the risk of management's override of internal controls.

### Factors

We are supportive of the revisions made to the factors an auditor would consider in the determination of CAM. Most notably, we believe the direct linkage to the auditor's risk assessment provides a meaningful starting point on the path of determining those matters that involved especially challenging, subjective or complex auditor judgment. We further support that the reproposed standard does not include circumstances or matters that, if present, would always constitute critical audit matters. We commend the Board on recognizing that significant risks, including fraud risks, may not always involve especially challenging, subjective, or complex auditor judgment and appreciate the Board maintaining a principles-based approach in this area.

### Communication

We are supportive of the revisions made to the standard introductory language that would precede the specific CAM discussion. We believe clearly stating that the auditor is not providing a separate opinion on CAM could minimize users' potential misunderstanding of the CAM communications. However, we do recommend the Board revise the introductory language to align with our proposed revision to the CAM definition described above; the following provides suggested revisions (marked from the Reproposal) to better clarify the introductory language.

> The critical audit matters communicated below are matters arising from the current period audit that were communicated or required to be communicated to the audit committee and that: (1) ~~**relates to accounts or disclosures that**~~ are material to the financial statements **taken as a whole** and (2) involved our especially challenging, subjective, or complex auditor judgment. **The communication of critical** ~~**Critical**~~ audit matters ~~**do**~~ **does** not alter in any way our opinion on the financial statements, taken as a whole, and we do not provide

separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

In our 2013 letter, we supported providing the auditor the option to include the audit procedures performed if, in the auditor's judgment, conveying those procedures provides a better understanding regarding the significance of the matter. We note in the Reproposal, however, that the Board has made it a requirement to describe how the CAM was addressed in the audit for each CAM communicated in the auditor's report. We continue to believe that this information should be optional in reporting CAM since circumstances will vary and information surrounding how the matter was addressed may not be relevant in all situations. However, we recognize the Board provided additional commentary on its intentions for this requirement on page 31 of the Reproposal. If the Board retains the requirement to describe how the CAM was addressed in the audit for each CAM communicated in the auditor's report, we ask the Board to consider including the language after "For example" in the third paragraph of page 31 as a "Note" in the final standard. This information more clearly conveys the Board's intention and will be valuable to auditors in operationalizing this requirement.

## Documentation

We appreciate that the scope of required documentation was revised due to the Board's proposed changes to the definition of CAM, but we continue to have concerns regarding the nature and extent of the documentation the reproposed requirement would seem to require. Our view of the requirement is that it leads the auditor to documenting why each matter communicated to the audit committee was or was not deemed to be a CAM. We are concerned that this approach is inconsistent with current audit documentation requirements as it requires documenting what the auditor considered but did not act on. We note that application material adopted by the IAASB in International Standards on Auditing 701, *Communicating Key Audit Matters in the Independent Auditor's Report* (paragraph .A39) also is helpful in providing guidance on documentation to the auditor with a focus on matters that were concluded to be key audit matters.

In order to address this anomaly, we considered the Board's related comments on pages 39-40 of the Reproposal and our previous comments related to the definition of CAM, and accordingly we submit the following edits to proposed paragraph .17 for the Board's consideration.

> The auditor must document the basis for the auditor's determination for each matter that both:
>
> a. Was communicated or required to be communicated to the audit committee; and
>
> b. ~~**Relates to accounts or disclosures that are**~~ **is** material to the financial statements **taken as a whole**
>
> involved especially challenging, subjective, or complex auditor judgment.
>
> **Note: This documentation may be prepared as an extension to the audit committee documentation or the auditor may prepare separate documentation. The amount of**

> **documentation could vary with the circumstances. This standard does not require the documentation of why other matters communicated to the audit committee were not matters that involved especially challenging, subjective, or complex auditor judgment.**

We believe this "Note" is important guidance to clarify expectations for focusing documentation on those matters that were ultimately communicated as CAM.

### Proposed AS 3105

While we support reporting CAM in instances where the auditor expresses a qualified opinion, it is unclear how such qualification(s) interacts with the CAM reporting. While we understand the circumstances resulting in a qualified opinion for an issuer is limited (due to the fact that those opinions do not meet the general reporting requirements of the Securities and Exchange Commission) there may be other reporting circumstances where such interactions may occur. The IAASB approach, as described on page 61 of the Reproposal, is clear that the matter that gives rise to the qualified opinion is not described in the key audit matter section; rather, a reference to the basis for modified opinion section is made in the key audit matters section. We encourage the Board to clarify the interaction between CAM and matters resulting in report qualifications by including additional guidance. We submit the following language for the Board's consideration for inclusion in proposed AS 3105.

> If the auditor determines that the matter for which the auditor qualified his or her opinion is also a critical audit matter, (1) the matter should not be described in the critical audit matter section of the auditor's report, (2) the auditor should report on the matter in accordance with applicable standards, and (3) the auditor should include a reference in the critical audit matter section to the basis for qualified opinion section where the matter is reported.

We believe this approach provides clarity to the readers of the financial statements and reduces potential redundancy in reporting a matter in two different sections of the auditor's report if/when the auditor determines the matter is also a CAM.

### Exclusions from CAM requirements

We support excluding non-issuer broker-dealers, investment companies other than business development companies, and benefit plans from the required CAM communications for the reasons enumerated by the staff in the Reproposal.

### Areas for further guidance

In light of the reproposed requirements, we have identified certain other areas where the profession may benefit from further guidance on how CAM reporting applies. These areas include:

- AS 3305, *Special Reports* – we note the proposed amendments to this standard included in Appendix 2 of the Reproposal and believe more guidance could be given around how or whether CAM determination may differ in instances where the auditor is reporting on the topics covered by this standard.

- AS 1205, *Part of the Audit Preformed by Other Independent Auditors* – recognizing the Board is currently in the proposal process to revise this standard, it is unclear whether the enhanced reporting in the Reproposal would change any requirements related to communications between the lead auditor and the referred-to auditor or the other auditor. It is also unclear whether the other auditor would be expected to communicate CAM to the lead auditor in the reporting requirement set forth in the Board's proposal. We encourage the Board to consider, in conjunction with moving forward on the Supervision of Other Auditors project, its intentions or current views as to the determination and communication of CAM in those circumstances.

## Additional improvements to the auditor's report

### Independence

We are supportive of the reproposed requirement to include a statement regarding the auditor's independence and status as a firm registered with the PCAOB. We believe this clarity will be beneficial to users of the financial statements. While we believe the requirement is sufficiently clear for those audits required to be performed under PCAOB standards, we encourage the Board to develop and provide robust guidance with regard to audits voluntarily performed under PCAOB standards, as acknowledged in footnote 68 on page 43 of the Reproposal. We believe guidance in this area is essential considering the potential confusion that may arise in this area.

### Auditor tenure

While we support greater transparency to users of the financial statements, we continue to have significant reservations regarding the requirement to disclose auditor tenure in the auditor's report. As noted in our comment letter to the original proposal dated December 11, 2013 (2013 letter), we believe the auditor's report is not the appropriate place to convey this information. It would be a data point without appropriate context and could lead to inappropriate inferences being made by users regarding the auditor. We further note that an audit firm has little to no control over its tenure with a client. The audit committee selects and retains the audit firm as part of executing its duties. Therefore, the most appropriate location for this information is in the audit committee's report in the company's proxy statement or other filing, where appropriate context can be provided by the decision-makers themselves.

### Addressees

We are pleased to see the reproposed requirement regarding report addressees. We believe limiting the addressees to shareholders and the board of directors or equivalents is appropriate and will create consistency in practice.

### Enhancements to basic elements

We continue to support the enhancements to the basic elements of the auditor's report regarding financial statement footnotes, error or fraud, and nature of the audit. However, as we noted in our 2013 letter, we recommend the Board consider aligning those requirements with the IAASB model to further enhance the benefits to financial statement users. Specifically, we recommend also including the following:

- Definition of "reasonable assurance"

- Auditor's responsibility related to obtaining an understanding of internal control relevant to the audit (for non-integrated audits)
- Auditor's responsibility to communicate with the audit committee

While we recognize the concern that adding these elements will unnecessarily lengthen the auditor's report, we believe they are important concepts for financial statement users to understand and would promote consistency in global reporting conventions.

### Standardized form of auditor's report

We also support the form of the auditor's report as reproposed. We believe requiring a specific order for the Opinion and Basis for Opinion sections as well as requiring section titles for all sections will make the auditor's report easier to use. We commend the Board on finding a reasonable "middle ground" that provides the appropriate level of flexibility to promote consistency and ease of use without being overly prescriptive.

## Considerations related to effective date

While we don't believe a significant amount of effort would be required for most of the other enhancements to the auditor's report, we believe a considerable amount of time will be necessary for firms to formulate firm policies and quality control procedures around the determination and communication of CAM. Recognizing that CAM reporting should not be or become boiler-plate, we believe it will be essential to audit quality for firm to establish the proper protocol around this new reporting requirement. Therefore, we encourage the Board to consider an effective date of fiscal years ending on or after December 15, 2018, assuming the Reproposal is adopted by the Board and approved by the SEC in late 2016 or early 2017. Since CAM will likely require incremental effort on the part of firms, we would not be opposed to an earlier effective date for the additional improvements to the auditor's report described in the Reproposal. We would also encourage the Board to consider whether early adoption would be permitted. Although this may create reporting differences among firms for a short period of time, it would provide an opportunity to begin reporting under the new standards for firms that wish to move forward on an accelerated schedule.

*Re: PCAOB Rulemaking Docket Matter No. 034*

**Proposed Auditing Standard – "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards" ("reproposal")**

Hermes EOS welcomes the opportunity to provide our comments on this consultation on PCAOB's reproposal of the auditor reporting standard.

By way of background, Hermes is an asset manager in the City of London, and is wholly owned by the BTPS, one of the UK's largest corporate pension schemes. As part of our Equity Ownership Service (Hermes EOS), we also respond to consultations on behalf of many clients from around Europe and the world, including PNO Media (the Netherlands), and VicSuper (Australia). In all, Hermes EOS advises over 40 clients with regard to assets worth a total of over $252.5 billion (as at 30 June 2016).

We welcome the PCAOB's reproposal of the auditor reporting standard, which would retain the pass/fail opinion of the existing auditor's report but would make significant changes to the existing auditor's report, including the communication of critical audit matters arising from the audit and new elements related to auditor independence and tenure.

The auditor's report is the primary means by which the auditor communicates information regarding the audit of the financial statements to investors and other financial users. As currently designed, however, the auditor's report conveys almost no information obtained and evaluated by the auditor as part of the audit. The report features boilerplate language, that largely remains the same regardless of the risks a particular company might be dealing with or the specific problems that auditors encountered in performing the audit.

The reproposal will certainly enhance the form and content of the Auditor's Report, by making it more relevant and informative to investors and other financial statement users. In the UK[1], investors (like ourselves) have welcomed extended auditor reporting, and greatly value the enhanced information it provides.

[1] In June 2013, the Financial Reporting Council ('FRC') revised its auditor reporting requirements for entities that apply the UK Corporate Governance Code. In April 2016, the FRC adopted a final rule updating its 2013 auditor reporting requirements to incorporate the EU and the IAASB requirements, including the IAASB's definition of key audit matters.

In addition, the reproposed standard does not impose new performance requirements other than the determination, communication, and documentation of critical audit matters, which would be based on work the auditor has already performed.

## Critical Audit Matters

Board of directors and audit committee oversight of the financial reporting process can further reduce the information asymmetry by enhancing the quality of the information disclosed. The communication of critical audit matters would inform investors and other financial statement users about areas of the audit that required especially challenging, subjective, or complex auditor judgement, including the principal considerations for determining the matters and how the matters were addressed in the audit.

The communication of critical audit matters in the auditor's report would also help investors and analysts who were interested in doing so engage management with targeted questions about these issues. In the UK, we increasingly use the information provided in the expanded auditor's report to engage with audit committees.

In its latest report on this issue[2], the FRC notes that investors greatly value the information provided in expanded auditor reporting. It adds to the mix of information that can be used in investor's capital allocation and engagement decisions. We would endorse the following findings:

"In the second year of expanded auditor reporting in the UK, the discussion of risks has improved relative to the first year of implementation and that the majority of auditor's report provided discussion of significant risks that were more tailored to the company under audit, thus avoiding generic or standardized wording."

## Determination of Critical Audit Matters

*Definition of Critical Audit Matter*

*..any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and that relates to accounts and disclosures that are material to the financial statements and involved especially challenging, subjective, or complex auditor judgement.*

Under the reproposal, critical audit matters would be drawn from matters required to be communicated to the audit committee (even if not actually communicated) and matters actually communicated (even if not required). Investors are interested in matters of this nature that are resolved directly with management, without necessarily being communicated to the audit committee.

Therefore, we would prefer disclosure of matters communicated with management and non-executive directors, beyond the audit committee members. The IAASB's standard requires the auditor to communicate key audit matters selected from matters communicated with those charged with governance[3].

---

[2] FRC - Extended auditor's reports – A further review of experience – January 2016

[3] Role of persons entrusted with the supervision, control and direction of an entity: highest level of management including the executive and non-executive directors and the audit committee.

*Factors*

A factor based on the extent of interaction with the audit committee can be a meaningful indicator and be useful information for the investor.

Because the determination of critical audit matters is principles-based, the standard does not contemplate circumstances or matters that, if present, would always constitute critical audit matters. To illustrate, revenue recognition is presumed to be a fraud risk and all fraud risks are significant risks; however, if a matter related to revenue recognition does not involve especially challenging, subjective, or complex auditor judgement, it would not be a critical audit matter.

Although differences in critical audit matters from period to period and across companies may make auditor's reports less uniform, the information provided is useful in evaluating financial performance and highlighting these differences is informative. Prior period critical audit matters are important information for investors, so we would prefer to keep the 'should consider' requirement in reproposed standard.

**Communication of Critical Audit Matters**

The communication of critical audit matters may help focus the audit committee's oversight efforts. By assessing what is critical and therefore required to be communicated there is likely to be a debate, allowing the audit committee to engage more effectively with the auditor and management about the matters identified as possibly critical audit matters and the adequacy of the company's related disclosures.

The introductory language is clear that the auditor is not providing a separate opinion on the critical audit matters or on the accounts or disclosures to which they relate.

Elsewhere, including audit procedures in the description of a critical audit matter would definitively make the auditor's report more informative and useful.

Given the experience in the UK, having no critical audit matters should be extremely rare.

**Liability Considerations Related to Critical Audit Matters**

The communication of critical audit matters is about disclosure of risks and challenges. We believe that non-communication of such matters would be more problematic from a litigation point of view.

We trust that our comments are useful and we are very happy to discuss any of the points that we have raised with the PCAOB further. Please contact roland.bosch@hermes-investment.com should you wish to do so.

Yours faithfully

Roland Bosh

Re: PCAOB Rulemaking Docket No. 34 – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion

Dear Board Members:

Hess Corporation (Hess or the Corporation) appreciates the opportunity to respond to the request for comments from the Public Company Accounting Oversight Board (PCAOB) on the proposed auditing standard, *Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the Proposed Standard). Hess is a leading global independent energy company primarily engaged in the exploration and production of crude oil and natural gas. The Corporation is a registrant with the U.S. Securities and Exchange Commission and is classified as a large accelerated filer.

The primary issue addressed in the Proposed Standard is the requirement for auditors to disclose critical audit matters (CAMs) in an unqualified opinion. We believe the requirements as proposed are unnecessary, will reduce the effectiveness and relevance of other disclosures, and will undermine the reliability of an unqualified opinion despite whatever qualifying language to the contrary is added. The concerns raised by the PCAOB regarding CAMs are largely covered by disclosures already provided by registrants in their annual reports (e.g. critical accounting policies and related sensitivities, risk factors, fair value measurements, contingencies, material known trends in MD&A, and significant or unusual transactions). We believe investors understand the key risks of our business based on the totality of our disclosures and other information available. As a result, the addition of CAMs will unnecessarily increase cost and generate redundant disclosures. We also believe disclosure of audit procedures performed on CAMs is inappropriate as readers will not have enough information to understand the nature of the procedures performed or whether the extent of the procedures performed was adequate. As a result, a reader could make an incorrect conclusion regarding risk in relation to the unqualified opinion.

The Proposed Standard suggests the identification and disclosure of CAMs is meant to be guided on a principles-based framework, which by its nature requires judgment. We note in the proposal that if the auditor's report were determined to contain errors or misstatements, it is expected the registrant's SEC filing(s) would need to be amended. We are concerned the PCAOB, in applying its oversight authority, will assess the adequacy of CAM disclosures in an audit opinion and potentially trigger amendments to SEC filings due to differences in judgment regarding relevance of what needs to be disclosed by the auditor. If PCAOB imposed amendments to SEC filings resulting from changes in CAM disclosures is a potential outcome of adopting the Proposed Standard, we believe the confidence in the pass/fail model for unqualified opinions will be significantly undermined.

The Proposed Standard also suggests an indirect benefit will be "expanded auditor reporting may serve as a potential means of greater differentiation among accounting firms and engagement partners." This sentiment reinforces our concerns that disclosure of CAMs will undermine the reliability of an unqualified opinion, as well as potentially introduce a risk accounting firms and engagement partners view audit opinions as marketing documents via differentiating disclosures. This tone in the Proposed Standard is inconsistent with what you are trying to accomplish.

We believe the current regulatory framework sufficiently meets the needs of investors with the desired oversight protections in place for ensuring accurate, timely, and relevant information about financial performance, risks, and significant judgments. For the reasons cited above, we do not believe there is sufficient justification for the inclusion of CAMs in an audit opinion, nor do we believe there is clear evidence that this requirement would improve audit quality given the strength of the U.S. regulatory system over SEC registrants and independent registered public accounting firms. Instead, the Corporation believes continued evolution of auditing standards in response to changing market, business, technology, and other changes, as well as open dialogue between auditors, audit committees and management, is a better means to ensure ongoing high quality audits.

Our interpretation of the key objective the PCAOB is trying to achieve with the disclosure of CAMs is to address the information asymmetry between investors and auditors. While we do not agree with the proposal to disclose CAMs, if the PCAOB moves forward with this requirement, we recommend the disclosures be limited to simply identifying CAMs with a cross-reference to the related disclosure within a registrant's filed document, including sections outside the audited financial statements. We believe this recommendation will allow readers to understand the material transactions, disclosures, and judgements that were discussed between the auditor and the audit committee without the cost of developing repetitious disclosures. This more objective approach would also significantly reduce the potential for differences in judgment between auditors and the PCAOB on the adequacy of CAM disclosures.

In the attached appendix, we have provided responses to specific questions on topics other than CAMs included in the request for comments where we have a view. Thank you for the opportunity to provide feedback on this proposal. I would be pleased to discuss our views with you at your convenience.

Sincerely yours,

John P. Rielly

Chief Financial Officer

Appendix

## Responses to Questions in the Proposed Standard

**Question 13:**

**Is the reproposed requirement relating to auditor independence clear? Would this information improve investors' and other financial statement users' understanding of the auditor's independence responsibilities? Why or why not?**

Response: We agree with the proposal to add language in the body of the auditor's report to clarify requirements with respect to independence to the company.

**Question 18:**

**Should disclosure of auditor tenure be made on Form AP rather than the auditor's report? Why or why not?**

Response: We do not believe auditor tenure is useful information in the auditor's report. We believe including such information in the auditor's report would be an indication the PCAOB views audit tenure as a distinctive factor in determining the quality of an audit. This can lead to baseless conclusions by readers as there is no definitive evidence of linkage between tenure and audit quality. The Proposed Standard states the disclosure of auditor tenure is intended to add to the mix of information that investors can use. Based on that desired objective, our view is auditor tenure, if provided, should be reported on Form AP.

**Question 25:**

**Would the reproposed requirements for a specific order of certain sections in the auditor's report and for section titles make the auditor's report easier to use? Should the standard allow more or less flexibility in the presentation of the auditor's report?**

Response: We agree with the proposal to require the "Opinion on the Financial Statements" section be the first section of the auditor's report immediately followed by the "Basis for Opinion" section, as well as, the requirement to use titles for all sections of the auditor's report.

Re: PCAOB Rulemaking Docket No. 034

Dear Board Members:

The Illinois CPA Society ("ICPAS") is a statewide membership organization, with over 23,000 professionals, dedicated to enhancing the value of the CPA profession. Founded in 1903, ICPAS is one of the largest state CPA societies in the nation. ICPAS represents Illinois CPAs in public accounting and consulting, corporate accounting and finance, not-for-profit, government and education organizations, as well as affiliate member groups for students, educators, international professionals and related non-CPA finance professionals. The organization and operating procedures of the Committee are reflected in the attached Appendix A to this letter.

The Audit and Assurance Services Committee of the Illinois CPA Society (the "Committee") is pleased to comment on the PCAOB's reproposal of the Proposed Auditing Standard on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (Rulemaking Docket Matter No. 34) dated May 11, 2016 (the "Reproposal"). These comments and recommendations represent the position of the Illinois CPA Society rather than any members of the Committee or of the organizations with which such members are associated.

The stated purpose of the Reproposal is to increase the relevancy and usefulness of auditor reports (*i.e.*, to "address the information asymmetry between investors and auditors"). Consistent with our responses to the previous Releases dated September 30, 2011 and December 11, 2013, our Committee is in favor of adding clarity to the auditor's report so that the responsibilities of the auditor, management, and the audit committee are better understood by the users of the financial statements. We appreciate the Board's efforts on this undertaking and the opportunity to comment on the Reproposal. Our comment letter divides our response to the Reproposal into two sections: 1) *Critical Audit Matters*; and 2) *Additional Improvements to the Auditor's Report*.

## Critical Audit Matters

### Determination of Critical Audit Matters

We believe that the modifications to the definition of a critical audit matter provide additional clarity for auditors, and we agree that the incorporation of materiality judgements will aid in limiting over disclosure of matters not actionable by the financial statement users. However, our Committee is still not convinced that the additional information would necessarily be useful to investors. Investors would presumably be more interested in identification and understanding of business risks (e.g., environmental, legal, regulatory, etc.) facing the issuer. Such information should be provided by management, not auditors, and is, at least in part, already required to be disclosed pursuant to non-financial reporting regulations.

ILLINOIS CPA SOCIETY

**Communication of Critical Audit Matters**

We strongly support not permitting disclosure of even an indication of the outcome of the auditor's procedures, or any specific audit procedures, related to a specific critical audit matter. Permitting an indication of the outcome of auditor procedures related to a specific matter undermines the auditor's opinion on the financial statements taken as a whole.

Although the description of critical audit matters is not intended to provide a list of all audit procedures performed, permitting disclosure of specific audit procedures could lead to more investor confusion and uncertainty, as it would be almost impossible for such disclosures to completely convey the range of relevant procedures performed and why they were selected. Such disclosures could also add to confusion over audit concepts such as sampling and materiality. Commentary and recommendations, such as to refrain from use of highly technical accounting and auditing terms, suggests the Board is aware of the risk that the disclosure requirements provided in this Reproposal may cause additional misunderstanding by financial statement users.

An auditor's unqualified opinion on the financial statements indicates that the auditor was sufficiently able to overcome the challenges associated with the disclosed critical audit matter(s) in order to provide the unqualified opinion and that the audited financial statements are fairly stated in accordance with the applicable financial reporting framework. As such, the reporting of critical audit matters may unduly raise investors' and other financial statement users' concerns over the quality of the audited financial statements. Communication requirements of the Reproposal may not only prompt a user, who generally is not a trained auditor, to suspect the veracity of the financial statement opinion, and potentially question the internal control opinion if one is provided (and/or of management's report on internal controls).

While the auditor's report will indicate that no critical audit matters alter the auditor's opinion on the financial statements, users may nonetheless consider the disclosed critical audit matters as somehow qualifying that financial statement opinion. Also, as indicated above, investors that mistakenly over rely on critical audit matter disclosures to highlight areas of concern, may not be properly informed or consider items that were *not* included as a critical audit matter, such as business risks. In an effort to potentially minimize these concerns, we suggest expanding the final sentence of the standard language preceding critical audit matters in the auditor's report as follows:

> "The determination of critical audit matters is highly subjective. The critical audit matters communicated below may not represent all or even the most important elements of the accompanying financial statements and should not be considered as such. The critical audit matters communicated below were adequately addressed by our audit procedures. The disclosure of critical audit matters does not alter, in any way, our opinion on the financial statements, taken as a whole, and we do not provide separate opinions on the critical audit matters or on the accounts or disclosures to which they relate."

Initially, due to the subjective nature of critical audit matters, different auditors, both within and amongst audit firms, will select different places along the 'challenging' continuum where a matter becomes a reportable critical audit matter. Companies then may - over time and likely with the aid of media or other reports that will evolve to track such things - start to consider which audit firms disclose more or fewer critical audit matters and how those disclosures are made when those companies choose which audit firm to engage. As a result, several years after implementation, it is more likely than not that industry standard disclosures will be utilized and audit reports within certain industries will once again become uniform and diminish the value-added objective to the users of the financial statements that the Reproposal intends.

ILLINOIS CPA SOCIETY

**Documentation of Critical Audit Matters**

We believe the reproposed documentation requirements are sufficiently clear.

**Other Considerations for Critical Audit Matters**

We believe the Reproposal will have a material impact on the required additional effort, cost, and litigation risk, for both auditors and companies, to which we commented on in our December 11, 2013 response.

**Additional Improvements to the Auditor's Report**

**Auditor Independence**

We believe the reproposed requirement is clear. However, consistent with our December 11, 2013 response, we do not believe the reproposed requirement will improve financial statement users' understanding of auditors' independence responsibilities, but rather lengthen the report with unnecessary reference to technical standards. In addition, we do not believe that including the statement in the auditor's report is necessary to "serve as a reminder to auditors" of their independence obligations, as independence is a basic tenet of the audit profession.[1]

**Addressee**

While we agree that the reproposed standard will promote consistency in the addressing of the auditor's report, consistent with our December 11, 2013 response, the Committee does not believe that adding required addressees is significant to the financial statements or will appreciably serve the purpose of better informing financial statement users. We do not believe inclusion of the reproposed requirement in the final standard is worth the effort by any involved party.

Should the proposed standard be finalized, it would be helpful to include practical examples (similar to, and expanded upon, as provided in footnote 74 of the Reproposal and/or in illustrative auditor reports) to ensure clear guidance and consistent implementation.

**Auditor Tenure**

As noted in our December 11, 2013 response, the Committee does not object to the underlying principle of disclosing auditor tenure, but we do not believe it should be included in the auditor's report. The Committee believes that the disclosure would be more appropriate in the Form AP, *Auditor Reporting of Certain Audit Participants*. We believe disclosure in Form AP would sufficiently address the issue of consistent disclosure placement, provide a place for (likely) lengthy explanation of tenure calculations, reduce over reliance on inferences regarding the correlation and misunderstanding of audit tenure disclosed and audit quality, and would also limit investor search costs.

As mentioned in the Reproposal discussion and Board member comments, the calculation of tenure will often be complex and easily misleading (as in the cited case of group investment companies). We do not foresee any auditor disclosing their uncertainty as to their tenure in the audit report, nor do we believe the option should be permitted, as it discredits the perceived competence of the auditor to a user that is not familiar with the calculation requirements and complexities.

[1] Reproposal, §VI.C.2., p. 80.

ILLINOIS CPA SOCIETY

Should the proposed inclusion of auditor tenure in the auditor's report be finalized, we believe the most applicable location would be immediately following the reference to the applicable independence rules and regulations (end of the first paragraph in the Basis for Opinion section). In order to ensure consistency, we do not believe the auditor should have preferential options in terms of the disclosure's location. For the reasons mentioned and referenced above, we do not believe the disclosure merits its own section title.

**Enhancements to Basic Elements and Standardized Form of the Auditor's Report**

The Committee agrees that clarification and amendment of the standard auditor's report is appropriate if the information enhances financial statement users' understanding of the roles and responsibilities of the auditor, management, and the audit committee in regards to the audited financial statements. With the exception of adding section titles and providing limited flexibility in the positioning of the sections within the auditor's report, we do not believe the enhancements to the basic elements of the auditor's reports will improve upon the relevancy, usefulness, or information asymmetry between financial statement users and the auditor.

We strongly object to the addition of the phrase "whether due to error or fraud" without the addition of corresponding language regarding management's responsibilities with respect to fraud. We suggest language to be required in the *Basis for Opinion* section of the auditor's report describing management's various responsibilities beyond just the financial statements. An example disclosure is as follows:

> "Company's management is also responsible for designing and implementing controls to prevent and detect fraud, and to inform us about all known or suspected fraudulent activity that could have a material effect on the Company's financial statements."

As noted in our responses to the previous proposed standards, the Committee recognizes that the auditor's report, as reproposed, is approaching a potentially unreadable length and that a thorough description of everyone's roles and responsibilities with respect to the related financial statements and disclosures would further add to repetitive "boilerplate" verbiage across each auditor report for infinite periods, which is both inefficient and contrary to the principles of this Reproposal. Accordingly, we remind the Board of the supplemental alternative we provided as a part of our response to the Concept Release dated September 30, 2011, for the auditor's report to provide a cross reference to a more complete description of what a public company auditor's, management's, and audit committee's roles and responsibilities are, and a general discussion on the risk assessment, professional judgment, materiality, and sampling concepts that a compliant audit might provide. The referenced materials would be described in "plain English" and could be available to the general public on a free basis from a named website. We believe that the cost of creating this singularly referenced guidance statement would significantly outweigh repetitive and truncated statements of responsibility in each audit report and would potentially be perceived as adding more value from an independent governing body providing outreach as compared to an audit firm disclaiming responsibility.

**Considerations Related to Effective Date**

As indicated in our previous response, our Committee would be in favor of limiting the requirement to disclose critical audit matters to reports on financial statements of accelerated and large accelerated filers. If the requirement is to be retained as reproposed, we suggest delaying the compliance date related to critical audit matters for smaller reporting companies.

ILLINOIS CPA SOCIETY

The Illinois CPA Society appreciates the opportunity to express its opinion on this matter. We would be pleased to discuss our comments in greater detail if requested.

Sincerely,

**James R. Javorcic, CPA**

Chair, Audit and Assurance Services Committee

**Scott Cosentine**

Vice Chair, Audit and Assurance Services Committee

ILLINOIS CPA SOCIETY

APPENDIX A

AUDIT AND ASSURANCE SERVICES COMMITTEE

ORGANIZATION AND OPERATING PROCEDURES

2016 – 2017

The Audit and Assurance Services Committee of the Illinois CPA Society (Committee) is composed of the following technically qualified, experienced members. The Committee seeks representation from members within industry, education and public practice. These members have Committee service ranging from newly appointed to almost 20 years. The Committee is an appointed senior technical committee of the Society and has been delegated the authority to issue written positions representing the Society on matters regarding the setting of audit and attestation standards. The Committee's comments reflect solely the views of the Committee, and do not purport to represent the views of their business affiliations.

The Committee usually operates by assigning Subcommittees of its members to study and discuss fully exposure documents proposing additions to or revisions of audit and attestation standards. The Subcommittee develops a proposed response that is considered, discussed and voted on by the full Committee. Support by the full Committee then results in the issuance of a formal response, which at times includes a minority viewpoint. Current members of the Committee and their business affiliations are as follows:

**Public Accounting Firms:**

**National:**

Ms. Phoebe W. Brown
Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, DC 20006-2803

Re: Proposed Auditing Standard on the Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; Docket Matter No. 34

Dear Ms. Brown:

The Independent Directors Council and the Investment Company Institute[1] appreciate the opportunity to comment on the Public Company Accounting Oversight Board's proposed changes to the auditor's reporting model.[2] The Proposed Auditor Reporting Standard would make several changes to the auditor's report intended to make it more informative to investors. In particular the Proposal would, among other things: require communication of critical audit matters (CAMs), which would provide audit-specific information about especially challenging, subjective, or complex aspects of the audit; require disclosure of auditor tenure in the auditor's report; and clarify the auditor's existing responsibility to obtain reasonable assurance about whether the financial statements are free of material misstatement.

---

[1] The Investment Company Institute (ICI) is a leading global association of regulated funds, including mutual funds, exchange-traded funds (ETFs), closed-end funds, and unit investment trusts (UITs) in the United States, and similar funds offered to investors in jurisdictions worldwide. ICI seeks to encourage adherence to high ethical standards, promote public understanding, and otherwise advance the interests of funds, their shareholders, directors, and advisers. ICI's U.S. fund members manage total assets of $17.9 trillion and serve more than 90 million U.S. shareholders. IDC serves the U.S.-registered fund independent director community by advancing the education, communication, and policy positions of fund independent directors, and promoting public understanding of their role. IDC's activities are led by a Governing Council of independent directors of ICI member funds. The views expressed by IDC in this letter do not purport to reflect the views of all fund independent directors.

[2] *See* The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, PCAOB Release No. 2016-003 (May 11, 2016) (Release). The Release includes a proposed audit standard, which we refer to as the "Proposed Auditor Reporting Standard" or the "Proposal" and proposes certain changes to other audit standards.

The Proposal is a reproposal of a 2013 proposal on which we commented.[3] We are pleased to see that the Board has made several changes to the 2013 proposal relating to audits of investment company financial statements that address comments raised by us and others. Specifically, the Proposed Auditor Reporting Standard indicates that communication of CAMs is not required for audits of investment companies registered under the Investment Company Act of 1940 (Investment Company Act). The Proposal would also specify how auditor tenure should be measured in the context of a group of investment companies.

We strongly support the Board's decision to exclude audits of registered investment companies from CAM reporting. We believe there would be little, if any, benefit of CAM reporting to fund shareholders in light of the purpose and structure of funds, and disclosures that they currently provide in their prospectus and shareholder report. We are concerned, however, that the disclosure of auditor tenure in the auditor's report may imply a relationship between auditor tenure and audit quality and recommend that tenure instead be disclosed in PCAOB Form AP. We elaborate on these and other comments below.

*CAM Reporting*

Investment companies are designed to provide investors with access to a professionally managed portfolio of investment securities. Funds can invest in a variety of stocks, bonds, and other securities, providing investors with pro-rata ownership of a diversified portfolio with a modest initial investment. The Investment Company Act includes specific requirements intended to reduce investors' risks in areas such as portfolio diversification, liquidity, leverage, and custody of securities. Funds provide extensive disclosure to investors that describes their investment objectives and policies, risks, fees, expenses, and performance. Unlike operating companies whose business models can change over time, investment companies have specific investment mandates that are disclosed in the prospectus and rarely change. Any material changes must be approved in advance by a vote of fund shareholders. Because of the purpose and structure of investment companies, we believe that CAM disclosure would provide little if any benefit to fund investors and would have the potential to become repetitive, making it uninformative.

For investment companies, the audit matters most likely to be deemed critical under the Proposal would involve the auditing of security values. Generally accepted accounting principles currently require extensive disclosure regarding valuation of investments, with particular emphasis on securities for which observable prices are not available (*i.e.*, Level 2 and Level 3 securities).[4] The SEC's

---

[3] *See* Letter from Amy B.R. Lancellotta, IDC Managing Director, and Gregory M. Smith, ICI Senior Director, to Phoebe W. Brown, PCAOB Secretary, dated December 11, 2013.

[4] *See* FASB ASC 820-10-50.

investment company registration forms require disclosure of the fund's valuation policies, including the use of "fair value pricing" and the effects of fair value pricing.[5] Because of these disclosure requirements, we believe investors are well informed about the extent of the fund's investments in securities that present difficult or subjective fair value measurements. We believe that requiring the auditor to describe the difficulty associated with auditing these fair value measurements would not add meaningfully to the mix of information already provided to investors. Indeed, CAM disclosure indicating that certain securities trade less frequently and were valued through reference to unobservable inputs would be repetitive of information already provided by management.

Funds in an investment company complex that have the same fiscal year end often issue a combined shareholder report that covers several different funds. In these instances the auditor typically issues one auditor report that covers all of the funds included in the shareholder report. If the Board were to require investment company auditor reports to include CAMs, we believe it may be confusing to shareholders if an auditor report covering multiple funds included CAMs for some, but not all of the funds covered by the auditor report. Alternatively, if auditors were to prepare separate auditor reports for each fund in the shareholder report, then the shareholder report would include multiple auditor reports, likely increasing the fund's costs to print and mail the shareholder report. Such costs would be borne by the fund and its shareholders.

For the reasons described above, we support the Board's decision to exclude auditor reports for investment companies registered under the Investment Company Act from CAM reporting.

*Auditor Tenure*

We are concerned that disclosure of auditor tenure in the auditor's report may cause investors to infer a relationship between auditor tenure and audit quality. As the Release recognizes, academic research on the relationship between tenure and audit quality has varied conclusions.[6] Some research indicates that engagements with short-term tenure are relatively riskier or that quality improves when auditors have time to gain expertise in the company under audit and in the related industry. Other research indicates that investors are more likely to vote against, or abstain from, auditor ratification as auditor tenure increases, which may suggest that investors view long-term auditor-company relationships as adversely affecting audit quality. The Board's 2013 proposal on the auditor's reporting model indicates that the Board has not reached a conclusion regarding the relationship between audit quality and auditor tenure.[7]

---

[5] *See e.g.,* Item 11 and Item 23 of SEC Form N-1A.

[6] *See* Release at 91.

[7] *See* PCAOB Release No. 2013-005 (August 13, 2013) at page A5-16.

In order to reduce the likelihood of any inappropriate conclusions being drawn from the relationship between auditor tenure and audit quality, we recommend that auditor tenure be disclosed in recently adopted PCAOB Form AP, *Auditor Reporting of Certain Audit Participants*. Form AP, when implemented, will provide investors with the name of the engagement partner for each audit in a single searchable database. We believe disclosure in Form AP will provide investors with easy access to tenure information while reducing the likelihood of inappropriate conclusions being drawn from the relationship between auditor tenure and audit quality.

*Tenure Measurement for Investment Companies*

The Proposal specifies that for an investment company that is part of a group of investment companies, the auditor's tenure would be measured from the year the auditor began serving consecutively as the auditor of any investment company in the group of investment companies. "Group of investment companies" for this purpose means any two or more registered investment companies that hold themselves out to investors as related companies for purposes of investment and investor services, consistent with Section 12(d)(1)(G)(ii) of the Investment Company Act. This term would exclude other entities in the investment company complex, such as the investment adviser, any private funds, or entities that provide services to investment companies.

We support the Proposal's methodology for measuring tenure. The proposed methodology is appropriate given that all of the funds within a complex are on the same accounting system and are subject to the same system of internal control over financial reporting. Furthermore, many fund complexes have one board of directors that oversees all the funds in the complex and it is the board's responsibility, by statute, to select a fund's auditor.[8]

*Explanatory Language Regarding Audits of Internal Control Over Financial Reporting*

Unlike many operating companies, investment companies registered under the Investment Company Act are not required to engage an auditor to perform an audit of their internal control over financial reporting (ICFR).[9] Under current audit standards, auditors may, at their discretion, include a statement in the auditor's report indicating that they were not engaged to perform an audit of ICFR. For example, an investment company auditor's report may state:

---

[8] *See* Section 32 of the Investment Company Act.

[9] *See* Section 405 of the Sarbanes-Oxley Act of 2002. Investment companies are, however, required to file with the SEC an auditor's report on the fund's internal control based on the results of procedures performed in obtaining an understanding of internal control over financial reporting and assessing control risk in connection with the audit of the fund's financial statements. This report must describe any material weaknesses identified. *See* Item 77B of SEC Form N-SAR.

> The Fund is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the fund's internal control over financial reporting. Accordingly, we express no such opinion.

The Release requests comment on whether auditor's reports for investment companies should be required to include an explanatory statement indicating that the auditor was not engaged to perform an audit of ICFR. We observe that certain audit firms routinely include such a statement in their auditor's reports for investment companies and that others do not. In order to better inform investors that rely on auditor's reports, and to increase consistency in auditor's reports, we recommend that the Board require an explanatory statement.

*Auditor's Responsibility to Obtain Reasonable Assurance*

The Proposed Auditor Reporting Standard would revise the auditor's report to better recognize the auditor's responsibility, under existing audit standards, to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether due to error or fraud. Specifically, the phrase "whether due to error or fraud" would be added to the report when describing the auditor's responsibility to obtain reasonable assurance that the financial statements are free of material misstatement. The Board has proposed this change to clarify the auditor's role in detecting fraud, as the current report makes no explicit reference to fraud. We believe the proposed disclosure better informs investors of the auditor's responsibility and we support adding it to the auditor's report.

Office of the Secretary

Deputy Chief Auditor

Public Company Accounting Oversight Board (PCAOB)

1666 K Street, NW

Washington D.C. 20006, USA

Dear Sir/Madam

**PCAOB RULEMAKING DOCKET MATTER NO. 034: COMMENTS ON THE PCAOB PROPOSED STANDARD – THE AUDITOR'S REPORT ON AN AUDIT OF FINANCIAL STATEMENTS WHEN THE AUDITOR EXPRESSES AN UNQUALIFIED OPINION AND RELATED AMENDMENTS TO PCAOB STANDARDS**

The Independent Regulatory Board for Auditors (IRBA) is a statutory body of the South African government, and it is both the audit regulator and national auditing standard-setter in the country. The IRBA's statutory objectives include the protection of the public by regulating audits performed by registered auditors and the promotion of investment and employment in South Africa.

The IRBA has a keen interest in the scope, requirements and impact of the proposed standards specifically relating to disclosure of auditor tenure. We have recently issued a similar rule requiring the disclosure of auditor tenure. Thus, our comments below have been limited to the sections of the proposed standards dealing with auditor tenure. We appreciate this opportunity to comment on the draft *Proposed Auditing Standards*, developed by the Public Company Accounting Oversight Board (PCAOB), and remain available to discuss our comments with you. Our comments are presented under the following sections:

1. General Comments
2. Specific Comments
3. Disclosure of Auditor Tenure in South Africa
4. Annexures

Yours faithfully

***Signed electronically***

Bernard Peter Agulhas

**Chief Executive Officer**

## 1. GENERAL COMMENTS

1.1. We welcome the PCAOB's efforts in enhancing the transparency of the relationship between the audit firm and the audit client. The requirement to disclose auditor tenure is an important step towards having a robust conversation about audit firm independence. Our position is informed by our experience with implementing disclosure of auditor tenure in South Africa, which is discussed in further detail below.

1.2. We support steps designed to protect the public, and we commend the objective of the proposed standards to inform users of financial statements and to allow for educated decisions when appointing auditors.

1.3. The growing trend in USA to voluntarily disclose auditor tenure is indicative of investors' needs and the growing interest in the relationship between the audit firm and the audit client.

1.4. While we understand the concern to potentially misunderstand the correlation between auditor tenure and audit quality, the rewards for an informed reader would outweigh any potential temporary misunderstanding.

1.5. The key element to enhancing auditor independence is an evaluation of the oversight of the audit committee (body charged with appointing the auditor). Disclosure of auditor tenure will allow shareholders to ask the correct questions of the audit committees and make informed decisions when appointing auditors.

1.6. Disclosure of auditor tenure would be most appropriate in the auditor's report as it allows the user to locate information easily. Additionally, users of the financial statements who are unaware of this required disclosure will also have access to it.

1.7. The transparency about auditor tenure will generate a heightened interest in the audit process and attention to audit matters.

## 2. SPECIFIC COMMENTS

2.1. We have only responded to questions dealing with disclosure of auditor tenure.

*16. Are the reproposed requirements for information regarding auditor tenure appropriate and clear? Why or why not? Are there any specific circumstances that could affect a firm's ability to include tenure information in the auditor's report which the Board should consider? If so, what are they?*

2.2. The requirements in the proposed standard are appropriate and clear. However, practical questions may require further guidance. We have provided examples in the annexure under "Frequently Asked Questions on Disclosure of Audit Tenure"

*17. Is it appropriate to disclose the earliest period the auditor began auditing any company in the group of investment companies even if the auditor has not audited all of the companies in the group for the same period of time? Why or why not?*

2.3. It would depend on the significance and the role that the company plays in the group of investment companies. In South Africa we did not follow this approach as we did not want to overcomplicate the rule. The cost benefit of such an approach should be evaluated.

*18. Should disclosure of auditor tenure be made on Form AP rather than in the auditor's report? Why or why not?*

2.4. No. The Auditor's Report is the most commonly known output referred to by users. If the rule is intended to start a conversation on independence, then the auditor's report would be more appropriate.

*19. Would requiring disclosure of auditor tenure in the auditor's report reduce investor search costs? Why or why not? Should the Board require a specific location for disclosure of auditor tenure in the auditor's report? If so, where and why?*

2.5. Yes. If the reader requires this type of information, it would be reasonable to expect to find this disclosure in the auditor's report. In South Africa, we have specified a location for disclosure to ensure uniformity of auditor's reports. Further information is available in the annexure under the communiqué dated 4 December 2015.

## 3. DISCLOSURE OF AUDITOR TENURE IN SOUTH AFRICA

3.1. One of the IRBA's strategic pillars and priority is the "Strengthening of Auditor Independence". We are currently researching mandatory audit firm rotation, mandatory tendering and joint audits. We recently issued a rule similar to the proposed PCAOB rule, requiring disclosure of auditor tenure in auditor's reports.

3.2. Our rule requires the disclosure of the number of years of tenure on the auditor's report rather than the appointment date. We introduced an illustration of the wording of the disclosure which helped with keeping the format of the audit report consistent.

3.3. Practical questions were raised regarding the determination of auditor tenure and the scope of the disclosure. The IRBA issued Frequently Asked Questions (FAQs) on Auditor Tenure to facilitate the implementation of the new requirement and contribute to a consistent application of the rule across the country. The FAQs cover practical questions raised by professionals, the industry, investors, academics and other stakeholders on the implementation of the rule.

3.4. The IRBA Communiqués and FAQs relating to auditor tenure have been attached below for your consideration.

3.5. While it is too soon to assess the full impact of this requirement in South Africa, the initial response has been a heightened interest in the audit process and independence. We are starting to see changes of auditors who have been associated with clients over extensive periods. We look forward to sharing further information when it is available. The information gleaned has also played a part in our thinking as we consider measures to strengthen auditor independence.

3.6. The following links provide examples of disclosure of audit tenure in South Africa:

## 4. ANNEXURES

**INDEPENDENT REGULATORY BOARD FOR AUDITORS**

### IRBA STRENGTHENS AUDITOR INDEPENDENCE BY MANDATING DISCLOSURE OF AUDIT TENURE

Johannesburg / 04 December 2015

The Regulatory Board, in terms of Section 9 and 10 read with sections 1, 2 and 3 of the Auditing Profession Act, Act 26 of 2005, published a Rule in the Government Gazette Nr 39475 of 04 December 2015 which makes it mandatory that all auditor's reports on Annual Financial Statements shall disclose the number of years which the audit firm / sole practitioner has been the auditor of the entity (audit tenure). A predecessor audit firm in this context refers to an audit firm where there has been mergers/de-mergers or other combinations in the audit firm and an audit firm shall therefore include a predecessor audit firm.

Audit tenure refers to the length of the auditor-client relationship. Thus tenure includes the period that the predecessor audit firms (where there has been mergers/de-mergers or other combinations in the audit firm) issued audit reports on the entity.

This rule applies to audit reports issued on the Annual Financial Statements of all public interest entities, as defined in the Companies Act of 2008 and prescribed by the Regulatory Board from time to time, for periods ending on or after 31 December 2015.

The Regulatory Board made the decision to require the mandatory disclosure of audit tenure in the context of strengthening auditor independence which is consistent with measures implemented in other jurisdictions. This disclosure of audit tenure will lead to transparency of association between audit firms and audit clients.

The IRBA will monitor compliance with the above rule for auditor's reports on all Annual Financial Statements of public interest entities for periods ending on or after 31 December 2015.

**Additional Guidance:**

- All audit firms and sole practitioners are required to comply with the new disclosure requirement.
- The audit tenure should reflect the number of years the audit firm/sole practitioner continuously served as auditor.
- In the case of audit firm mergers/ de-mergers or change in name, the longest length of tenure should be disclosed.
- Where the client is a company, information on the appointment and changes in auditors can be obtained from the Companies and Intellectual Property Commission (CIPC) or company secretarial records.
- In the case of companies, as the appointment and continuation of auditors is the responsibility of the audit committee, auditors are advised to bring the requirement of this rule to the attention of the audit committee.

An illustrative example of this requirement in terms of SAAPS 3 *Illustrative Reports*, (Revised November 2013), is provided below:

**Independent Auditor's Report**

*To the Shareholders of ABC Limited*

**Report on the Financial Statements**

We have audited the financial statements of ABC Limited set out on pages ...to ..., which comprise the statement of financial position as at 31 December 20X1, and the statement of comprehensive income, statement of changes in equity and statement of cash flows for the year then ended, and the notes, comprising a summary of significant accounting policies and other explanatory information.

*Directors' Responsibility for the Financial Statements*

The company's directors are responsible for the preparation and fair presentation of these financial statements in accordance with International Financial Reporting Standards and the requirements of the Companies Act of South Africa, and for such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

*Auditor's Responsibility*

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with International Standards on Auditing. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

*Opinion*

In our opinion, the financial statements present fairly, in all material respects, the financial position of ABC Limited as at 31 December 20X1, and its financial performance and cash flows for the year then ended in accordance with International Financial Reporting Standards and the requirements of the Companies Act of South Africa.

*Other reports required by the Companies Act*

As part of our audit of the financial statements for the year ended 31 December 20X1, we have read the Directors' Report, the Audit Committee's Report and the Company Secretary's Certificate for the purpose of identifying whether there are material inconsistencies between these reports and the audited financial statements. These reports are the responsibility of the respective preparers. Based on reading these reports we have not identified material inconsistencies between these reports and the audited financial statements. However, we have not audited these reports and accordingly do not express an opinion on these reports.

**Report on Other Legal and Regulatory Requirements**

In terms of the IRBA Rule published in Government Gazette Number 39475 dated 04 December 2015, we report that XX firm/ sole practitioner has been the auditor of XX client for X years.

*Auditor's Signature*
Name of individual registered auditor
Capacity if not a sole practitioner: e.g. Director or Partner
Registered Auditor
Date of the auditor's report
Auditor's address

**Bernard Peter Agulhas**

**Chief Executive Officer**

***About the IRBA***

*The objective of the IRBA is to endeavour to protect the financial interests of the South African public and international investors in South Africa through the effective and appropriate regulation of audits conducted by registered auditors, in accordance with internationally recognised standards and processes.*

## Further Clarification: IRBA Strengthens Auditor Independence By Mandating Disclosure Of Audit Tenure

Johannesburg / 10 December 2015

Reference is made to the communiqué titled "*IRBA Strengthens Auditor Independence by Mandating Disclosure of Audit Tenure*" issued on 4 December 2015, regarding the publication of a Rule in the Government Gazette Nr 39475 of 4 December 2015.

We clarify that this rule applies to audit reports issued on the Annual Financial Statements of all public companies – as defined in the Companies Act of 2008 – that meet the definition of a public interest entity as per the IRBA Code of Professional Conduct for Registered Auditors.

**Bernard Peter Agulhas**
**Chief Executive Officer**

***About the IRBA***
*The objective of the IRBA is to endeavour to protect the financial interests of the South African public and international investors in South Africa through the effective and appropriate regulation of audits conducted by registered auditors, in accordance with internationally recognised standards and processes.*

# IMPORTANT NOTICE ON DISCLOSURE OF AUDIT TENURE AND FREQUENTLY ASKED QUESTIONS ON AUDIT TENURE

Johannesburg / 29 February 2016

Reference is made to the communiqué titled '*IRBA Strengthens Auditor Independence by Mandating Disclosure of Audit Tenure*' issued on 4 December 2015, regarding the publication of a Rule in the Government Gazette Nr 39475 of 4 December 2015, and the further clarification issued on 10 December 2015.

To further assist auditors with the application of the Rule, the IRBA developed a set of Frequently Asked Questions (FAQ), as attached. The communiqués referred to above have been attached to the FAQ for ease of reference.

Registered Auditors' attention are drawn to the following important matters:

1. The objective of the above Rule is to disclose the length of time which the audit firm had been involved with the client. It is therefore irrelevant whether the client had changed the format through which it traded, and the substance over form principle should be applied.
2. Auditors are strongly discouraged from disclosing any information which would detract from the reader's understanding of the length of time the firm had been involved with the client, for example by disclosing the details of the firm's partner rotation policy and current engagement partner's tenure on the engagement. The objective of the above Rule is to raise transparency regarding the firm's tenure and not that of the individual auditor.
3. The IRBA will monitor compliance with the above Rule through inspections, and will consider any disclosure which could mislead the public in a serious light.
4. Auditors should draw the Rule and the guidance issued by the IRBA to the attention of the chair of the audit committee.
5. Auditors are encouraged to disclose audit tenure in their reports even if the Rule does not apply to the client.

**Bernard Peter Agulhas**
**Chief Executive Officer**

***About the IRBA***

*The objective of the IRBA is to endeavour to protect the financial interests of the South African public and international investors in South Africa through the effective and appropriate regulation of audits conducted by registered auditors, in accordance with internationally recognised standards and processes.*

## Frequently Asked Questions on Disclosure of Audit Tenure

| **Relevant Definitions** | |
|---|---|
| **As per Section 1 of the South African Companies Act 2008 (Act 71 of 2008)** | |
| **Public Company** | means a profit company that is not a state-owned company, a private company or a personal liability company. |
| **State-owned Company** | means an enterprise that is registered in terms of this Act as a company, and either—<br>(a) falls within the meaning of ''state-owned enterprise'' in terms of the Public Finance Management Act, 1999 (Act No. 1 of 1999); or<br>(b) is owned by a municipality, as contemplated in the Local Government: Municipal Systems Act, 2000 (Act No. 32 of 2000), and is otherwise similar to an enterprise referred to in paragraph (a)." |
| **Definitions per the IRBA Code of Professional Conduct for Registered Auditors** | |
| **Public Interest Entity (PIE)** | (a) A listed entity;<br>(b) An entity<br>(i) defined by regulation or legislation as a public interest entity; or<br>(ii) for which the audit is required by regulation or legislation to be conducted in compliance with the same independence requirements that apply to the audit of listed entities. Such regulation may be promulgated by any relevant regulator, including an audit regulator.<br>This definition should be read with Paragraph 290.26 of the IRBA Code of Professional Conduct.<br>Please note that a revised definition of public interest entity will be effective on or after 1 July 2016. |

| **Relevant IRBA Communiqués** | |

|---|---|---|
| 1.6 | Please advise where in the Companies Act of 2008 one would find the definition of public interest entities? | Please refer to the IRBA clarification communiqué issued on 10 December 2015, (attached for ease of reference) and the definitions above. |
| 1.7 | Will this mandatory disclosure apply to:<br>i. listed entity;<br>ii. Entities with a PI Score >350, requiring an audit in terms of the Act;<br>iii. Voluntary audits in terms of the MOI; and<br>iv. Voluntary audits in terms of shareholder resolution? | In line with the IRBA clarification communiqué issued on 10 December 2015:<br>i. Yes. A listed company is a public company and meets the definition of a PIE.<br>ii. It depends. See question 1.8 below.<br>iii. No<br>iv. No |
| 1.8 | Does the requirement to disclose audit tenure apply to entities that have a PI score above 350? | No, not automatically.<br>If the entity is a public company which also meet the definition of a public interest entity as per paragraphs 290.25 and 290.26 of the IRBA Code of Professional Conduct for Registered Auditors, then disclosure of audit tenure will be required. |
| 1.9 | Is disclosure of audit tenure required only of audit clients that are companies? | Yes. All public companies – as defined in the Companies Act of 2008 – that meet the definition of a public interest entity as per the IRBA Code of Professional Conduct for Registered Auditors are required to disclose audit tenure.<br>Thus disclosure of audit tenure does not apply to partnerships, trusts or joint ventures, etc. |
| 1.10 | Does the domicile of the company have an impact on audit tenure disclosure? | No. The rule applies to audit reports issued on the annual financial statements of all public companies – as defined in Section 1 of the Companies Act of 2008 – which also meet the definition of a public interest entity as per paragraphs 290.25 and 290.26 of the IRBA Code of Professional Conduct for Registered Auditors.<br>If the company meets the requirement above, audit tenure will be required. |
| 1.11 | Does audit tenure disclosure apply to debt issuers? | The rule applies to audit reports issued on the annual financial statements of all public companies – as defined in Section 1 of the Companies Act of 2008 – which also meet the definition of a public interest entity as per paragraphs 290.25 and 290.26 of the IRBA Code of Professional Conduct for Registered |

| No. | Question | Suggested Answer |
|---|---|---|
| | | Auditors.<br>If the debt issuer meets the requirement above, audit tenure will be required. |
| 1.12 | Does the rule apply if the debt issuer is also an SOE/SOC? | No.<br>As per the Companies Act 2008, public company means a profit company that is not a state-owned company, a private company or a personal liability company.<br>State-owned companies do not meet the definition of public companies in the Companies Act.<br>The Rule applies to audit reports issued on the Annual Financial Statements of all public companies – as defined in Section 1 of the Companies Act of 2008 – which also meet the definition of a public interest entity as per paragraphs 290.25 and 290.26 of the IRBA Code of Professional Conduct for Registered Auditors.<br>Auditors are encouraged to disclose audit tenure even if they do not meet the above criteria. |
| 1.13 | Does audit tenure apply to AGSA audits? | No.<br>As per the Companies Act 2008, public company means a profit company that is not a state-owned company, a private company or a personal liability company.<br>State-owned companies do not meet the definition of public companies in the Companies Act.<br>The Rule applies to audit reports issued on the Annual Financial Statements of all public companies – as defined in Section 1 of the Companies Act of 2008 – which also meet the definition of a public interest entity as per paragraphs 290.25 and 290.26 of the IRBA Code of Professional Conduct for Registered Auditors. |
| **2.** | **Questions Regarding Counting the Years of the Tenure Period** | |
| 2.1 | How would a change in the activities the audit client engages in affect the counting of the years relating to audit tenure? | The registered auditor should apply the application guidance provided in the IRBA communiqué issued on 4 December 2015 (attached for ease of reference), i.e. the longest length of tenure should be disclosed. The change of activities the audit client engages in will have no effect on the length of audit tenure |

| No. | Question | Suggested Answer |
|---|---|---|
| | | disclosed. |
| 2.2 | Would a change in the name of the entity have a bearing on the audit tenure? | No. The spirit of the guidance provided in the IRBA communiqué issued on 4 December 2015 should be considered, i.e. the longest length of tenure should be disclosed. |
| 2.3 | Would a change in the management of the audit client have a bearing on the audit tenure? | No. The spirit of the guidance provided in the IRBA communiqué issued on 4 December 2015 should be considered, i.e. the longest length of tenure should be disclosed. |
| 2.4 | How would a change in the format through which an entity trades affect the disclosure of the tenure? | According to the IRBA communiqué issued on 4 December 2015, the longest length of time of the tenure should be disclosed.<br><br>For example, the fact that the Co A was only incorporated 20 years ago but traded as a partnership previously does not mean that Audit Firm X was auditor firm for those 20 years, if it was also the auditors of the partnership.<br><br>The audit tenure counting will go back to when Audit Firm X was appointed to be the auditors. |
| 2.5 | It is listed under "Additional guidance" in the communication that "in the case of audit firm mergers/de-mergers or change in name, the longest length of tenure should be disclosed." How is the longest length determined?<br><br>The question can be illustrated by the following example: Client X has been audited by the audit firm for 20 years. However, the audit firm used to be firm ABC but merged five years ago with firm DEF and signs the audit report as DEF. So, does this imply that the disclosed longest tenure in the audit report should read that "DEF has been the auditor of client X for 20 years" or should it read that "ABC has been the auditor of client X for 15 years and DEF has been the auditor of client X for five years"? | According to the IRBA communiqué issued on 4 December 2015, the longest length of time of the tenure should be disclosed. Thus 20 years should be disclosed. It would not be permissible to disclose the year in which the audit firm was appointed, without also disclosing the number of years which the firm had been the auditor (audit tenure). |

| No. | Question | Suggested Answer |
|---|---|---|
| 2.6 | Can the registered auditor offer an explanation on the length of tenure in the audit report? | The registered auditor should disclose audit tenure in accordance with the wording in the IRBA communiqué issued on 4 December 2015 and in compliance with the rule.<br><br>Auditors should not dilute the impact of the disclosure by offering additional information that could confuse the reader. Therefore, auditors should not include details of the firm's partner rotation policy and current engagement partner's tenure on the engagement, as this will defeat the objective the rule is intended to achieve.<br><br>The objective of the Rule is to raise transparency regarding the firm's tenure and not that of the individual auditor. |
| 2.7 | What should an audit firm do if there is a difficulty in obtaining evidence of the accuracy of audit tenure? | The registered auditor will have to be diligent and use his/her professional judgment. Information on the appointment and changes in auditors can be obtained from the Companies and Intellectual Property Commission (CIPC) or company secretarial records.<br><br>It is not acceptable for "no disclosure" to be made. |
| 2.8 | How do short breaks of service (<1 year) affect the disclosure of audit tenure? | This will depend on the circumstances. According to the IRBA Communiqué issued on 4 December 2016, the audit tenure should reflect the number of years the audit firm/sole practitioner continuously served as the auditor.<br><br>However, if there were changes in statutory appointments of auditors during a period but the firm continued to sign off on the financial statements for consecutive years, then any break in service should be ignored, otherwise it would be misleading to the reader. |
| **3.** | **Questions on which Reports a Registered Auditor is Required to Disclose Audit Tenure** | |
| 3.1 | Can voluntary disclosure be made? | Yes. The registered auditor is encouraged to consider voluntary disclosure of audit tenure. |
| 3.2 | Is the disclosure of audit tenure required for ISA 800/805/810/ISRE 2410 (interim), provisional, preliminary/ proforma/abridged reports? | No. According to the IRBA communiqué issued on 4 December 2015, the rule applies to audit reports issued on the annual financial statements. |
| 3.3 | Is disclosure required in an integrated report <IR>, where the <IR> does not contain the statutory financial statements? | No. According to the IRBA communiqué issued on 4 December 2015, the rule applies to audit reports issued on the annual financial statements. |

| No. | Question | Suggested Answer |
|---|---|---|
| **4.** | **Monitoring of Compliance with the IRBA Rule** | |
| 4.1 | How will the IRBA be monitoring the disclosure of audit tenure? | The IRBA will monitor compliance with the disclosure of audit tenure rule in the same manner it monitors compliance to standards, the IRBA Code of Professional Conduct for Registered Auditors and compliance with Section 90(2) of the Companies Act.<br><br>It will also be alert to complaints received by its Investigations Department. |

**PCAOB Release No. 2016-003, PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements when the Auditor expresses an Unqualified Opinion and Related Amendments to PCAOB Standards**

Dear Sirs,

The IDW appreciates the opportunity to comment on the above mentioned Release, hereinafter referred to as "the Release".

The IDW also commented on the related Concept Release issued in 2011 and the draft standard proposed in 2013. We continue to support this initiative and refer to our two previous letters in this regard.

In this letter we include comments of a general nature before addressing specific issues or specific aspects of the proposals. We have not responded specifically to the 44 questions posed throughout the Release. However, certain of our comments may be directly relevant to one or more of these questions.

## General matters

### *Support for maximum alignment with the international standards*

As the Board will be aware, new audit policy legislation came into force throughout the European Union in June 2016. Amongst other things, this legislation will require enhanced auditor reporting for entities defined as Public Interest Entities (PIEs). The IAASB finalized the revision of its auditor reporting standards in January 2015, with the revised standards effective for audits of

Dr. Daniela Kelm, RA LL.M.

INSTITUT DER WIRTSCHAFTSPRÜFER

financial statements for periods ending on or after December 15, 2016. On the global stage, the PCAOB's proposal thus represents a third major initiative in this area.

The IDW is currently in the process of revising the equivalent IDW Auditing Standards so as to transpose the revised auditor reporting ISAs for application within the German legal environment. The first "new style" auditor's report has recently been issued in Germany on the basis of ISA 701.

In previous letters to the PCAOB, the IDW has consistently urged the Board to align its auditing standards to those issued by the IAASB to the maximum extent possible. Consequently, we are pleased to note the Board's acknowledgement that several commenters have urged the Board to work together with other regulators and standard setters to improve the auditor's report. As discussed below, we note significant improvement in this regard, and continue to believe that maximum possible global consistency in auditor reporting is highly desirable.

The IDW appreciates the current proposed standard is a significant improvement in comparison to the 2013 proposal. In particular, the Board has achieved far closer alignment of critical audit matters (CAM) with the IAASB's concept of key audit matters (KAM) than was previously the case. However, elsewhere in this letter, we express our concerns as to an apparent lack of conviction by the Board as to the importance of ensuring that auditor reporting, and reporting of CAM/KAM in particular, will be comparable internationally.

We trust that the Board will give careful consideration to our comments concerning the need for international comparability, and that in pursuing its stated intention to continue monitoring developments of expanded auditor reporting in other jurisdictions throughout the rulemaking process (page 11 of the Release) will seek to achieve maximum comparability going forward.

***Implied potential for differences in the matters reported***

Enhancing the "pass/fail" auditor reporting model by having auditors report on certain matters arising from an individual audit is the most significant change in auditor reporting in decades. The auditor's report is the main output of an audit that is available to external stakeholders, including investors. In the global environment of today it is increasingly in the interests of both the investor community and the audit profession for there to be as few differences as possible between the content of auditor's reports when different auditing standards are applicable. Consequently, in order to achieve maximum

IDW

INSTITUT DER WIRTSCHAFTSPRÜFER

comparability standard setters need to consciously limit differences in auditor reporting requirements to those differences that result from jurisdictional particulars. In our view, this is especially important in respect of this "new" area.

The IDW's main concern relates to the PCAOB's implied stance in regard to the potential for there to be differences in the matters reported as CAM and KAM, respectively. Firstly, the paper "A Comparison between the ISAs and the US PCAOB Reproposal" prepared by the IAASB's Auditor Reporting Implementation Working Group points out many similarities, but also refers to the PCAOB's view that the processes for identifying these matters *would* vary across jurisdictions, and further that the commonalities in the underlying criteria *could* result in the communication of many of the same matters (see pages 10 and 11 of the Release). We believe it extremely unfortunate that this statement equally implies that the Board accepts that its proposals may result in the communication of different matters than would be reported under the ISAs. Secondly, as we discuss below in this letter, in ISA 701.15, the IAASB has determined specific matters that by nature would be KAM, but shall be reported upon differently from other KAMs, whereas the PCAOB proposes a different treatment in terms of their classification and placement of reporting.

We appreciate the Board's recognition of the potential for differences between the regulatory environment in the United States and other jurisdictions (page 8 of the Release). However, we have not identified discussions within the Release to justify any difference in regard to the nature or number of matters to be reported under CAM and KAM respectively.

In our view, the desire for comparability in terms of matters to be reported is a serious issue that deserves further consideration by all concerned.

### *Support for not reproposing a standard on "other information"*

The IDW agrees with the Board's decision not to repropose a standard on "other information" at this point in time.

We refer to the response to question 6 in the appendix to the IDW's letter dated December 11, 2013 in this regard, which detailed certain concerns, including the following:

"However, we believe that actually expanding the responsibility of the auditor to additional procedures or other form of evaluation is not just an auditor reporting matter and therefore requires deliberation in a project that is entirely separate from a project on auditor reporting." and "Furthermore, we believe that this is a matter that needs

INSTITUT DER WIRTSCHAFTSPRÜFER

consideration at statutory (i.e., Congressional) level, if not at least at SEC level that should not be dealt with by auditing standards setting alone."

We appreciate that these concerns remain to be addressed in a future PCAOB project.

**Specific issues**

***Scope of matters that may be reported by the auditor (Question 7)***

We agree that the definition of CAM as well as the detail to be reported concerning CAM should not extend beyond matters in the financial statements. Any reference by the auditor to relevant disclosures outside the financial statements is likely to cause confusion, outweighing any potential benefit. Readers of the auditor's report would likely assume that a disclosure mentioned by the auditor had also been subject to audit procedures when, in fact, it may not have been subject to audit.

***Ability to communicate no critical audit matters (Question 8)***

We agree that, whilst probably rare, auditors may encounter audit circumstances in which they determine that no matters meet the definition of critical audit matter.

We also agree that in such cases it is appropriate for the auditor to report this fact.

***Clarification of auditor independence (Question 13)***

We agree with the proposals relating to the proposed title of the auditor's report as well as the proposed auditor's statement on auditor independence.

In our opinion the proposed statement is sufficiently succinct as to clarify to readers of the auditor's report which independence requirements were applicable to the audit.

***Basic elements of the auditor's report (Question 20)***

We note the discussions on page 53 of the Release concerning whether the disclosure of materiality and its application in the audit should be included in the auditor's report.

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

As the following excerpt illustrates, the IDW expressed strong disagreement in its letter to the IAASB (November 29, 2013) when this issue was discussed during that Board's auditor reporting project:

"We ... strongly disagree with the inclusion of the example in paragraph A8 referring to "the application of materiality in the context of the audit". This would encourage auditors to consider the inclusion of a treatment of materiality in the auditor's report, and may in fact encourage the disclosure of quantitative materiality levels. Although we are aware that one jurisdiction has required this, we believe this to be ill-conceived because it ignores the qualitative aspects of materiality – both in terms of ISA 320 and especially in relation to ISA 450 – which cannot be described in any meaningful way in a short-form audit report."

We continue not to support this inclusion, for the reasons explained above.

### *Other amendments to PCAOB standards (Question 26)*

The PCAOB proposals differ from those of the IAASB in one further key respect.

In ISA 701.15, the IAASB determined that 1) a material uncertainty related to events or conditions that may cast significant doubt on the entity's ability to continue as a going concern or 2) a matter giving rise to a qualified opinion or 3) an adverse opinion, would by their nature constitute key audit matters. However, ISA 701.15 also prescribes that these matters shall not be reported as KAM. The section on KAM shall instead include a reference to the appropriate section in the auditor's report that deals with the matter (i.e., sections entitled, or "Material uncertainty related to going concern", "Basis for qualified opinion" or "Basis for adverse opinion").

In contrast, when the auditor expresses a qualified opinion proposed AS 3105.02, would require the same communication of CAM as would be required in an unqualified auditor's report under AS 3101. The note following AS 3105.04 directs the auditor to refer to AS 3101 to determine if the matter for which the auditor qualified his or her opinion is also a critical audit matter. These requirements are in addition to the requirement for the auditor to disclose the substantive reasons for the qualified opinion.

In respect of adverse opinions, the PCAOB proposals stipulate that the requirements as to CAM do not apply (see Note following AS 3105.40). Thus there is no equivalent to the reference within the KAM section of the auditor's report as required under ISAs.

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

We are concerned that these differences in placement of information and potential differences in classification impact comparability of auditor's reports, and may be particularly confusing for those readers who will read auditor's reports prepared under the ISAs and the PCAOB standards, especially where statistics e.g., on number of (CAM/ KAM) matters reported are collated.

If you have any questions relating to our comments in this letter, we should be pleased to discuss matters further with you.

Yours truly,

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Board Members:

This letter reflects the comments of the Financial Reporting Committee (FRC) of the Institute of Management Accountants (IMA) on the May 11, 2016 Proposed Auditing Standard (Exposure Draft or ED), *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*. We previously commented on the August 13, 2013 ED (FRC letter dated November 12, 2013) and the earlier Concepts Release (FRC letter dated September 22, 2011) on the same subject. We continue to appreciate the Board's objective of seeking "to enhance the form and content of the report to make it more relevant and informative to investors and other financial statement users." We are pleased that the Board has made a number of changes to its 2013 proposal to address matters raised by us and many others. However, we are concerned that the most significant aspects of the new proposal will not meet the aforementioned objectives but will cause operational and other issues for companies and their auditors.

The IMA is a global association representing over 80,000 accountants and finance team professionals. Our members work inside organizations of various sizes, industries and types, including manufacturing and services, public and private enterprises, not-for-profit organizations, academic institutions, government entities and multinational corporations. The FRC is the financial reporting technical committee of the IMA. The committee includes preparers of financial statements for some of the largest companies in the world, representatives from the world's largest accounting firms, valuation experts, accounting consultants, academics and analysts. The FRC reviews and responds to research studies, statements, pronouncements, pending legislation, proposals and other documents issued by domestic and international agencies and organizations. Additional information on the FRC can be found at www.imanet.org (About IMA, Advocacy Activity, Areas of Advocacy, Financial Reporting Committee).

**Summary**

Our November 2013 letter principally took issue with the proposals to (1) include Critical Audit Matters (CAM) in the auditor's report, (2) extend the auditor's report to cover "other information" outside of the financial statements, and (3) require disclosure in the report of the auditor's tenure. We are pleased that the Board has deferred consideration of the reporting on other information and has removed that topic from the new ED. The Board has also made a number of changes in what would be classified as CAMs and how they would be reported. However, we remain unconvinced that inclusion of CAMs in auditor's reports will add value relevant information for readers of those reports while such inclusion will almost certainly add cost to the audit, create operational issues, and cause problems in the management/auditor relationship.

The Association of Accountants and Financial Professionals in Business

The Board has suggested an alternative location (Form AP) as a possibility for auditor tenure information. We continue to believe this is a corporate governance matter that should be dealt with by the SEC. But including the information in Form AP would certainly be better than in the auditor's report.

In short, as spelled out in our following comments, we believe the principal components of the new ED – Critical Audit Matters and auditor tenure – would provide mainly irrelevant information to users, add unnecessary cost to the audit process, create operational issues, and create unnecessary tension in the preparation of the financial statements between management and auditors. We strongly recommend that the PCAOB convene a public roundtable with auditors, preparers and users before finalizing any auditing standard. This would provide an opportunity for a face-to-face discussion of exactly how CAMs might be used by investors as well as the identification of at least some of what we believe are apt to be numerous operational issues in application.

The remainder of this letter provides our reasoning for these positions.

**Critical Audit Matters**

As originally stated in our September 2011 letter responding to the Concepts Release on this subject, and as repeated in our November 2013 letter, we believe that the overall framework for the auditor reporting model should be consistent with the following principles (wording slightly revised from the original for clarity).

1. The objective of an audit should remain as we know it today. It should provide an opinion on the financial statements, not management's discussion and analysis (MD&A) or other areas of financial reporting
2. Auditors should not disclose information for which they are the original source. Rather they should opine on information provided by management.
3. The auditor's report should provide transparency for investors as to what the audit provides in terms of assurance (what it is) as well as what it does not address (what it is not).
4. Auditor involvement and attestation should be limited to areas for which they have the appropriate expertise.

The existing "pass/fail" model, carried forward in the new ED, is consistent with this framework and we continue to strongly support it. One aspect of the ED that we particularly support is the proposal to move the opinion paragraph to the beginning of the report. We believe that most readers of auditor's reports are mainly interested in whether a company has received an unqualified opinion from its auditor and putting that right up front makes sense to us.

Further, the decision to remove reporting on other information from this project, at least for now, is consistent with the first item in our suggested framework and removes concerns about some issues that would arise under the last item. And we appreciate that changes have been made that greatly reduce the incidence of disclosing information for which auditors are not the original source. However, the ED would still require the auditor to make such disclosure when necessary to describe a CAM or how it was addressed and that would violate our framework.

The Association of Accountants and Financial Professionals in Business

Notwithstanding that the ED is somewhat more consistent with our suggested framework than the approach in the 2013 proposal, it is clear to us, through the discussions in the ED and otherwise that a compelling case for the inclusion of CAMs in auditor's reports has not been made. The PCAOB argues that certain users have requested this information and certain other audit regulators have required its presentation in other jurisdictions. However, the ED simply does not provide a convincing case that investors and other users would gain valuable information about company financial reporting as a result of including CAMs in auditor's reports.

CAMs will not help in the analysis of financial statements

We noted on page 2 of the ED, "… additional reporting by the auditor could[1] facilitate analysis of the financial statements..." This theme seems to be fundamental to the Board's support for the presentation of CAMs as indicated on page 64 under Economic Considerations, "The Board believes that the communication of critical audit matters should help focus investors' and other financial statement users' attention on these matters by making them more prominent, which could facilitate their analysis of the financial statements and other relevant disclosures (emphasis added)." Further, although the ED cites user interest in CAMs (e.g., footnote 119), nowhere in the document does the Board describe how CAMs would actually be used to help "analyze financial statements."

Our 2013 letter expressed support for the Board's encouragement for companies and auditors to field test how the CAM provision would be applied in practice. Based on our reading of the new ED, the only such test was the limited implementation trial performed under the auspices of the Center for Audit Quality (see footnote 36). We commend the CAQ field test as it led to changes in the approach to CAMs, particularly limiting them to those matters reported to audit committees and including a materiality consideration. However, it appears that no other field testing was performed by the Board itself. And, most importantly, the CAQ field test apparently did not include any discussions with investors as to how they might make use of the reported CAMs.

We note that in his statement at the meeting when the 2013 ED was approved by the PCAOB, Board member Hanson stated, "I would like to encourage a dialog among audit firms, management, audit committees and investors to discuss our proposals and to foster better understanding among everyone about potential benefits and costs (emphasis added)." And in encouraging auditors to work with companies to develop example CAMs based on the then proposal he added, "Perhaps even share them with investors to obtain their views on the usefulness of the information." That critical component of field testing was absent from the CAQ study and we are not aware of any other work the Board has done to determine what investors and other users of auditor's reports would actually do with reported CAMs. We note that the FASB has worked closely with users in recent years to test how new proposals would enable more decision useful information. Without some specific evidence of how CAMs could possibly be used to help analyze financial statements, similar to an FASB field test, we believe this proposal is problematic.

[1] While we did not count, we note that the ED is replete with the use of such conditional words as “could,” “might,” and “may.” This choice of words indicates a lack of solid evidence to support the usefulness of CAMs to investors and other readers of auditor’s reports.

The Association of Accountants and Financial Professionals in Business

Based on statements made at the meeting approving the ED and otherwise, at least some Board members are anxious to complete the auditor's report project as soon as possible – perhaps as early as year-end 2016. We recognize that a great deal of research and public consideration has already gone into this project. But we believe that public roundtables at which auditors, preparers, and users (investors and analysts) would discuss exactly how CAMs would be developed and used in practice are necessary.

The Economic Considerations section of the ED does not, in our view, provide a true economic analysis of the pros and cons of mandating presentation of CAMs in auditor's reports. Rather, it consists largely of references to academic studies on the purported benefits of such presentation. And the most important point is captured well on page 74 in the following words, "Overall the results from research analyzing whether the information provided in expanded auditor reporting is useful to investors <u>are limited</u>. <u>Collectively, the results are ambiguous</u> as to whether the expanded auditors' reports have provided investors with new information beyond what is contained in the financial statements (emphasis added)."

The two illustrative examples of communication of critical audit matters included on pages 32-35 of the ED demonstrate the lack of value relevant information that would be provided. These examples do include references to important accounting policies and/or estimates, which matters presumably have been thoroughly reported in the financial statements, footnotes, or MD&A. Those references may indeed "… help focus investors' and other financial statement users' attention on these matters by making them more prominent..." But the company already will have highlighted most, if not all, of these same matters by including them in the critical accounting policies and estimates section of MD&A. It is not clear to us that an additional notification in the auditor's report will cause investors to pay more attention to these matters.

More importantly, based on both the proposed auditing standard and the illustrative examples, we believe the remaining content of CAMs is likely to give only very generalized descriptions of auditing procedures. No information that would actually allow investors to analyze financial statements will be included. Further, we expect that the information would become boilerplate as it is overseen and managed by the accounting firms' national offices based on the respective risk areas – income taxes, fair value estimates, various accruals, etc.

For example, the following are some of the descriptions of audit procedures from the two illustrations included in the ED.

- "We tested the accuracy and evaluated the relevance of the historical loss data as an input to the new model.
- … we evaluated the incorporation of the applicable assumptions into the model and tested the model's computational accuracy.
- ...we assessed whether … the significant assumptions, including discount rates, estimated useful lives, revenue growth rates, projected profit margins, and the expected rate of return, used in valuing these intangibles were reasonable.
- … we assessed the terms of the arrangements and the conditions that must be met for the arrangements to become payable."

Those descriptions might lead a reader to conclude that the auditor has found the related accounting matter to be "fairly stated," although the Board warns against such piecemeal conclusions by way of the required introductory paragraph to the presentation of CAMs in the auditor's report. Beyond that, we cannot find anything in those and the other descriptions from the illustrative examples that could possibly help readers analyze financial statements.

In speeches and at open meetings, PCAOB representatives have cited some of the auditor's reports under relatively recent UK regulations as examples of how investors would be more informed with the inclusion of CAMs. In particular, the auditor's report for Rolls-Royce Holdings plc has been mentioned as an excellent example[2]. The 2015 report on Rolls-Royce by KPMG includes the following subjective assessments.

- We found the degree of caution/optimism adopted in estimates (re: revenue and profit guidance) to be slightly less cautious than in the previous year, but balanced overall.
- Overall the findings from across the whole audit are that the financial statements have been prepared on the basis of appropriate accounting policies, reflect balanced estimates compared to the mildly cautious estimates made last year resulting in slightly favourable current year profit recognition, and provide appropriate disclosure.

These assessments, which of course go well beyond what is called for in the ED, could conceivably help investors and other users analyze financial statements. But we understand that it is relatively rare for U.K. auditors to make these kinds of judgments. More importantly, in the heavily regulated and litigious environment in which the U.S. auditing profession operates, we expect that no firm would want to expose itself to challenges when such assessments are inevitably second guessed. In other words, what might seem like a good idea in other parts of the world is not operational in our culture and legal environment.

Rather than continuing to call for presentation of lengthy CAMs in auditor's report that have no demonstrated analytic value to investors or other users of the financial statements, the Board should take one of two steps. Our preference would be for this proposal to be eliminated from any final standard. An alternative would be to recognize one meritorious aspect of the CAMs proposal – to draw greater attention to the company's critical accounting policies and estimates. The proposed report now calls for a statement that the audit included evaluation of accounting policies and significant estimates. A single sentence could be added to state that such significant accounting policies and estimates are presented by the company on page so and so of the document in which the auditor's report is included.

We also note that investors in the larger U.S. public companies receive the benefit of an auditor’s report on internal control over financial reporting. This secondary reporting provides further comfort to investors about the quality of the application of the company’s accounting policies and estimates. As you know, this is not presently a common practice in many other parts of the world.

[2] In his remarks at a financial reporting conference sponsored by the University of Southern California on June 9, 2016, Board member Hanson stated something to the effect that the auditor's report for Rolls-Royce Holdings was the "Rolls-Royce" of auditor's reports, implying it was the best quality report he had seen.

Further, we question whether the PCAOB's concern for providing analytic information to investors exceeds the jurisdiction of the Board. We believe the PCAOB's role should be limited to oversight of auditors and should not directly involve the provision of company information or the analysis thereof to investors.

Auditor's reports should not be the original source for company information

As noted in the second point of our framework, auditors should not disclose information for which they are the original source. Rather they should opine on information provided by management. The Board has addressed this concern raised by us and others with respect to the earlier ED by proposing Note 2 to paragraph .14: "When describing critical audit matters in the auditor's report the auditor is not expected to provide information about the company that has not been made publicly available by the company unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit."

We are concerned, however, that the "unless such information" exception may lead to many cases of company information being initially reported by the auditor or at least disagreements between companies and auditors about how certain matters should be described in auditor's reports. For example, it is quite possible to read the two illustrative examples provided in the ED and conclude that much of the information about the accounting matters in question was initiated by the auditor and would not have been required to be disclosed except for the Note 2 exception mentioned above[3]. We, of course, do not have complete context for these illustrations but they do raise concerns among our preparer members about which party has the principal responsibility for financial reporting including disclosures.

As we have considered this issue we have concluded that the "unless such information" exception is not necessary and should be eliminated if CAMs are included in a final standard. In any situation where an auditor has major reservations about a company's disclosures for a critical accounting policy or estimate, the auditor can always threaten a qualified opinion if the company does not improve the disclosures. In the experience of our members as both auditors and preparers, such situations are fairly rare and are always resolved relatively amicably. Thus, we urge deletion of the exception language in that Note 2 to paragraph .14 if CAMs are included in a final audit standard.

Determining which items qualify as CAMs is likely to present many operational problems

As noted earlier, we applaud the Board for making a number of changes to the earlier proposal to address comments concerning the definition and application of CAMs. In particular, limiting such matters to those reported to the audit committee and introducing a materiality consideration should help limit the number of items potentially reported and provide reasonable guidelines for includable items. However, while we have only had preliminary discussions about how the ED would be applied in practice, we are already aware of certain issues. Consider the following example.

---

[3] A final auditing standard could address this concern by eliminating much of introductory language in the two examples and reducing it to a short reference to the company's financial statements where the matter is discussed. Or, if the PCAOB retains the Note 2 exception and wishes to include an example, it should explicitly describe such illustration as providing the information pursuant to the Note 2 exception.

> The auditor for Company A has reported a significant deficiency in internal control over inventory to the audit committee. However, a compensating control exists and there is no material weakness. Inventory is material to the company. Is this item required to be reported as a CAM? The PCAOB might clarify that a significant deficiency in and of itself should not result in a CAM.

A public roundtable as suggested earlier in this letter would be a good opportunity to surface these kinds of operational issues with the ED and determine whether the proposal can be applied effectively in practice.

<u>Requiring CAMs will distract attention of both the auditor and company during the important closing process</u>

We repeat the following paragraph that we believe is still relevant from our 2013 letter.

"We also are concerned that the time and effort devoted to fulfilling these particular requirements could distract attention from what we consider the core deliverables of the audit and divert valuable resources of audit firms, management, and audit committees. At present, companies present their financial statements and other information for final review and signoff by the audit engagement partner, concurring partner, and often, national office SEC reviewing partner – all of this under very tight SEC filing deadlines. With a CAM requirement, the process would become more like a "simultaneous equation" as the company would have its information and the auditors would have their own version and each party would then have to enter into negotiations on which version of the description of certain significant estimates, etc. is in the CAM vs. the MD&A, footnotes, etc. This would require discussions among financial management, audit committees, internal and external legal advisors, local and possibly regional and national office audit personnel, and so on. It's hard to understand how this can possibly be a productive use of senior audit executive time at the critical audit closing juncture."

This concern was proven to be valid during the CAQ field test. Included in the report on that work are the following statements.

> "Two additional observations related to the additional time and effort considerations are as follows:
>
> - A majority of the additional time is likely to be incurred during the wrap-up phase of the audit, (i.e., once most of the audit work has been finalized, so that the auditor can determine what the actual CAMs are), despite efforts to start the process earlier in the audit. This could occur at a time when auditors, management and audit committees are focused on a number of other issues in connection with a particular filing, and the finalization of CAM communications may delay, or cause distractions in, the resolution of these issues.
>
> - CAM related discussions with management and the audit committee are likely to involve senior members of the audit engagement team and may require national office consultations, thus requiring additional effort by key audit resources at the end of the audit.

> Finally, many of the accounting firms expressed the view that the incremental time required may not decrease significantly in future years, given (1) that one of the stated objectives of the proposed auditor reporting standard is to avoid boilerplate descriptions and (2) the need to address new potential CAMs each year as a result of transactions or other changing business or financial reporting dynamics."

We recognize that the CAQ study was based on the definition of a CAM and other CAM related guidance from the earlier ED. Nevertheless, we believe that the findings from the CAQ study reinforce our belief that CAM related discussions are likely to result in inefficiencies in both company and auditor time during the final stages of year end reporting. Requiring auditors and companies to report on the same items albeit in a different manner inevitably will lead to greater tension between the parties.

In summary, we do not believe that CAMs would provide value relevant information for investors and other readers of auditor's reports. We are concerned that requiring CAMs to be included in such reports would increase audit costs and create operational issues and unnecessary auditor/company conflict in many cases at a crucial time of the audit. Finally, we simply do not see any support in the ED for the statement on page 3 that the identification and communications of CAMs "… may also lead to an incremental increase in audit quality…" The mission of the PCAOB is to maintain and improve audit quality but simply asserting that something could occur is inappropriate without supporting evidence or rationale.

**Auditor Tenure**

Our 2013 letter did not support inclusion of tenure information in the auditor's report. We briefly noted at that time the lack of association of auditor tenure with audit quality. The new ED brings forward this proposal but with little evidence to support that it would provide valuable information to investors or somehow improve audit quality. Perhaps the most telling comments in the ED are the sentences on page 91, "Academic research on the relationship of audit tenure to audit quality has varied conclusions. Some academic research concludes that engagements with short-term tenure are relatively riskier or that audit quality is improved when auditors have time to gain expertise in the company under audit and in the related industry. Other academic research indicates that investors are more likely to vote against, or abstain from, auditor ratification as auditor tenure increases, which may suggest that investors view long-term auditor-company relationships as adversely affecting audit quality."

We also note and concur with concerns expressed in another sentence on page 91, "… it is possible that some investors may draw incorrect inferences about auditor tenure that could have an unwarranted effect on cost of capital and could also result in conversation that are an inefficient use of management and audit committee time."

FRC members' experience as preparers for or auditors of large, complex companies for the most part, leads us to believe that there is a significant learning process involved for those assigned as key audit personnel. So a reasonable amount of continuity is important for an audit firm to perform an effective audit. However, the mandatory partner rotation rules mean that not just one but several partners are bringing fresh looks to a major company's audit frequently. Even for the smallest public company, there

The Association of
Accountants and
Financial Professionals
in Business

is required rotation of both the engagement partner and concurring review partner. We think this provides an appropriate balance between continuity of audit firm understanding of company operations, etc. and independence of thought from new personnel.

Given the above, we continue to believe that auditor tenure information does not give investors any real insights about auditor quality. We do note from the ED the increased voluntary disclosure of this information in proxy statements and we expect this will continue as such disclosure becomes best practice. At some point the SEC may feel it is a matter that should be reviewed as a possible requirement for proxy statement disclosures.

In the meantime, the PCAOB should drop this part of its proposal. The suggested alternative of including the information in Form AP is certainly less objectionable than including it in the auditor's report. But even that alternative should not be adopted unless the Board can demonstrate that tenure has some audit-related value rather than being connected only to the governance/auditor ratification proxy process.

**In Conclusion**

We support the other wording changes to the auditor's report. However, we continue to believe that a case has not been made to require inclusion of CAMs or tenure information in the auditor's report and we do not support those matters. We appreciate the opportunity to express our views on the exposure draft. Please let me know if you would like us to further explain these views or provide added information.

Sincerely,

Nancy J. Schroeder, CPA

12 August 2016

To: **Public Accounting Oversight Board**

Re: **Comment letter on PCAOB's The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion proposal**

Via email: comments@pcaobus.org

The International Corporate Governance Network (ICGN) welcomes the opportunity to comment on the PCAOB's The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion proposal.

ICGN was founded 20 years ago and is an investor-led membership organisation of more than 650 individuals based in 46 countries from around the world. Our mission is to inspire and promote effective standards of corporate governance and investor stewardship to support the sustainable value creation of companies and to advance efficient markets and economies world-wide. Our members represent institutional investors with global assets under management in excess of US$26 trillion. Accordingly, ICGN's members offer a source of practical knowledge and experience with regard to governance and investment issues. ICGN's Accounting and Auditing Practices Committee supports ICGN's policy positioning in matters relating to financial reporting, accounting matters and audit quality. For more information on the ICGN, please visit www.icgn.org.

ICGN fully supports the PCAOB's efforts to enhance the relevance and value of the audit for users and the public by stimulating greater transparency about the work carried out by auditors in the course of auditing financial statements. We believe extending auditor reporting is a key objective that will further strengthen investor protection when using financial statements in making informed investment decisions.

ICGN supports the retention of the current "pass/fail" model which provides investors valuable insight into the small percentage of companies with a qualified opinion. However, ICGN believes the current model can be improved upon for the vast majority of companies with an unqualified opinion by extending the auditor's report to include more audit-specific information for investors. The ICGN believes the new critical audit matters format will provide investors with relevant information related to the independent audit of a company's financial statements.

ICGN is encouraged by enhancements to the auditor's report globally. We would highlight in particular as a positive example the UK's independent auditor's report that requires auditors to provide an overview of "those risks of material misstatement that were identified by the auditor, and which had the greatest impact on the audit strategy, resources required and the work of the engagement team; the application of materiality; and the scope of the audit, including how it responded to the risks of material misstatement and the application of materiality". We believe this report has led to meaningful information disclosure, and has relevance to companies globally.

ICGN is supportive of the enhanced audit report, complemented by enhanced reporting by the audit committee - which is required to report on "the significant issues that the committee considered in relation to the financial statements, and how these issues were addressed." Auditors are required to report by exception if the section in the annual report describing the work of the audit committee "does not appropriately address matters communicated by the

@ICGNCorpGov
in ICGN

auditor to the audit committee." We believe this mitigates the duplicate or dueling information that might arise in disclosures by the audit committee and the auditor's report and maintains important distinctions between their respective roles and responsibilities. In addition, we anticipate the IAASB's new requirement for the auditor to discuss Key Audit Matters will be a positive for investors and look forward to seeing how the new requirements are received in the marketplace.

**Critical Audit Matters**

ICGN supports the rationale for determining and communicating critical audit matters (CAMs).

The key to determining the right number of CAMs is the balance between too little and too much information. ICGN believes the definition of a CAM as a matter communicated or required to be communicated to the audit committee that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex auditor judgment is appropriate and aligns the scope and definition with the Key Audit Matters under the UK and IAASB models.

From ICGN's perspective the expanded UK auditor's report has found the right balance in the amount of information that the auditor provides. According to the PCAOB staff study cited in the PCAOB Proposal, "on average, the auditor's reports in the first year of implementation included descriptions of four risk topics, with total risk topics ranging from one to eight." In many UK auditors' reports, the new requirements generally have resulted in meaningful and targeted information for investors while avoiding information overload.

Given that the determination of the CAMs is based on a principles-based framework, we believe the "accounts or disclosures that are material to the financial statements" hurdle is appropriate. Given the US legal system, if the hurdle to determine what CAMs are communicated is too low, for example to include immaterial matters, then there is a high probability the auditor's report could result in too many topics communicated as non-critical audit matters. If that were to occur, the CAMs disclosed in the auditor's report could become a repeat of the excessive boilerplate risk factor disclosures that are included in some US company annual reports. Maintaining a principles-based framework that allows for auditor judgment for reporting CAMs also is important to avoid descriptions of CAMs from becoming boilerplate over time and avoids impeding innovative improvements in auditor reporting.

**Auditor Tenure**

The ICGN believes the reporting of auditor tenure could be beneficial for investors. Although the proposal notes some observers contend the information may lead to inaccurate assumptions that tenure is related to audit quality, we do not share that opinion. Consistently disclosed information on auditor tenure may be viewed as relevant by some investors in their analysis of a company.

The release also notes a growing trend towards voluntary disclosure of auditor tenure and cites a study by the Center for Audit Quality, together with Audit Analytics, that reviewed corporate proxies and which "identified that in 2015 and 2014 auditor tenure was disclosed in the annual proxy statements of 54% and 47% of the S&P 500 companies, respectively" (page 48-49). Moreover, the ICGN's Global Governance Principles (section 7.7) calls for companies to publish their policy on auditor rotation.

@ICGNCorpGov
ICGN

**Auditor Independence**

ICGN questions whether the proposed statement on auditor independence will yield any incremental benefits or insight to investors. The proposal notes, "the proposed standard would require the auditor to include a statement in the auditor's report that the auditor is a public accounting firm registered with the PCAOB and is required to be independent with respect to the company in accordance with U.S. federal securities laws and the applicable rules and regulations of the SEC and the PCAOB."

As the proposal notes, the UK FRC "requires the auditor to state that the auditor is required to comply with the UK's ethical standards for auditors, which include requirements regarding auditor independence". An example of an independence statement from the auditor's report disclosed in Tesco's 2016 annual report is shown below:

*Independence. We are required to comply with the Financial Reporting Council's Ethical Standards for Auditors and we confirm that we are independent of the Group and we have fulfilled our other ethical responsibilities in accordance with those standards. We also confirm we have not provided any of the prohibited non-audit services referred to in those standards.*

In our opinion, there is little decision useful information in the Tesco independence attestation, though ICGN members see the benefits of the underlying process that supports this form of disclosure. We would recommend the PCAOB review UK company independence statements to determine how these statements may better include decision-useful information for investors. It is logical to assume that most if not all auditors will claim they abide by the FRC requirements; if that is the case then boilerplate disclosure of this nature may not be informative.

If the PCAOB decides to move forward with proposed changes to enhance the wording of the auditor's report in relation to independence, we encourage the PCAOB to consider aligning the required communication with IAASB standards. These would include expanded descriptions of the responsibilities of management and those charged with governance, as well as the auditor's responsibilities, in separate sections of the report. We believe these changes could enhance users' understanding of the auditor's role and responsibilities, the audit process, and the responsibilities of others in the financial reporting supply chain, and would promote consistency of auditor reporting globally.

We hope that these comments are useful in your deliberations and the ICGN Policy Director, George Dallas (george.dallas@icgn.org), would be happy to elaborate on any of the points raised in this letter. Thank you for your consideration.

Yours truly,

Erik Breen

This paper is based on my dissertation at the University of Illinois at Urbana-Champaign. I thank members of my dissertation committee: Brooke Elliott, Mark Peecher (Chair), Bradley Pomeroy (Director of Research), Ken Trotman, and Madhu Viswanathan for their guidance, support, and helpful comments. I also thank participants at the 2013 Accounting, Behavior and Organizations (ABO) Midyear Meeting and the 2016 International Symposium on Audit Research for their comments. This paper also benefited from the workshops at Cornell University, Georgia State University, Iowa State University, Lehigh University, University of Illinois at Urbana-Champaign, and University of Massachusetts, Amherst.

# Are Audit Committees More Challenging Given a Sophisticated Investor Base? Does the Answer Change Given Anticipation of Additional Mandatory Audit Report Disclosure?

**Abstract**

This study examines the effect of investor sophistication on experienced audit committee (AC) members' propensity to ask challenging questions about management's significant accounting estimates. Findings indicate AC members are more challenging given a sophisticated vs. unsophisticated investor base. This difference, however, narrows in the presence of anticipated additional audit report disclosure regarding such estimates where AC members tend to *decrease* their overall questioning behavior. Further analysis indicates this pattern is driven by those who are designated financial experts and that the effects are likely below the level of AC members' conscious awareness. The finding that AC members ask fewer challenging questions given unsophisticated investors is potentially disconcerting given the SEC's traditional emphasis on protecting unsophisticated investors. Moreover, the finding that anticipation of mandated audit report disclosure decreases AC member's propensity to ask challenging questions has potential implications for both research and practice, especially given recent regulatory and standard-setting activities designed to increase audit report disclosure.

Keywords: Audit committee effectiveness, investor sophistication, mandatory audit report disclosure

## Introduction

As fiduciaries of shareholders, audit committee (AC) members form part of the "three-legged stool" who, along with management and auditors, are responsible for public company's financial reporting. AC members are charged with overseeing the external audit process (NYSE & NASD, 1999; AS 16). One of the most significant ways in which AC members can fulfill their duties and help protect shareholder interests is to ask challenging questions of the auditor or of management about significant accounting estimates (NACD, 2012; Beasley et al., 2009; Gendron & Bedard, 2006; Gendron et al., 2004). Prior research, however, provides little theory or empirical evidence on the factors that influence whether and the degree to which AC members actually ask such questions.[1] This study provides theory and empirical evidence of how two institutionally important factors jointly influence AC member's propensity to ask such questions. In particular, it examines the influence of *investor sophistication* (i.e., more versus less sophisticated investor base) and *anticipation of additional mandatory audit report disclosure* (i.e., presence versus absence of a new regulation requiring additional disclosure on management's significant accounting estimates in the audit report).

The protection of investors, especially those who are unsophisticated, has long been of interest to regulators and standard setters, as evident in various historic rules imposing fiduciary duties on accounting professionals and AC members to protect investors who are unable to sufficiently protect their own interests (e.g., SEC, 1969). Despite their fiduciary duty to protect shareholder interests, however, it is not clear whether and to what extent the characteristics of a firm's investor base affects AC members' oversight process. Melding institutional knowledge about the financial

[1] Some anecdotal evidence alleges that some AC members failed to ask challenging questions during the financial crisis and in the midst of corporate fraud (Deloitte, 2010; Ernst & Young, 2008). WorldCom board members, for example, were sanctioned up to 20% of their net worth for their passiveness in not asking critical questions, allowing for the fraud to sustain (Kaplan & Kiron, 2004).

reporting context with accountability theory from social psychology (Lerner & Tetlock, 1999), this study provides insight on this issue by examining how investor sophistication influences the extent to which AC members engage in questioning behavior.

Theory holds that individuals develop different social and cognitive strategies for coping with accountability to obtain acceptance from, or avoid conflict with, important interpersonal or institutional audiences (Tetlock, 1983; Tetlock et al., 1989). This implies that the extent to which differences in investor sophistication will influence AC members' questioning behaviors likely depends on whom AC members perceive greater accountability pressure from. Being fiduciaries, investor protection (especially of those that are more vulnerable and unsophisticated) may be the key motive underlying AC members' behavior, leading them to feel greater accountability pressure in the presence of unsophisticated investors. Simultaneously, however, AC members face significant reputational and liability risks. AC members are likely to be aware that sophisticated investors are more likely than unsophisticated investors to scrutinize discretionary accruals in financial statements (e.g., Balsam et al., 2002) and engage in aggressive actions such as shareholder activism if earnings disappoint (e.g., Ryan & Schneider, 2002). Hence, I expect AC members to perceive greater accountability pressure in the presence of sophisticated investors, leading their inclination towards pre-emptive criticism to be geared to protecting themselves from such negative consequences, instead of being geared to the fiduciary protection of unsophisticated investors. Therefore, I predict that AC members will be more questioning of significant accounting estimates in their oversight process given sophisticated as opposed to unsophisticated investors.

The study further investigates how and whether anticipation of additional mandatory audit report disclosure moderates the effect of investor sophistication on AC members' questioning behavior. Recently, regulators and standard setters have begun to contemplate requiring additional disclosure in the audit report as a way of providing more information to investors regarding the financial reporting and auditing process. Proponents of such change generally argue that greater disclosure will improve the frankness of communications among the AC, management, and auditors and thereby, help increase investor confidence (Ernst & Young, 2012; PCAOB, 2011, 2013; PwC, 2012).[2] These movements accentuate the importance of research questions related to whether and how additional mandatory audit report disclosure likely will affect AC members' oversight process.

Greater disclosure of significant accounting estimates in the audit report would subject these estimates to additional scrutiny by investors, especially those who are sophisticated. Proponents of increased audit report disclosure believe that greater disclosure requirements will make preparers (i.e., management) as well as overseers (auditors and ACs) of the financial statements exert greater effort (e.g., more questioning behavior from the AC) resulting in better financial reporting quality (Ernst & Young, 2012; PCAOB, 2013; PwC, 2012). However, the exposure to various reputational and litigation risks may cause AC members to choose a more defensive strategy when they anticipate greater disclosure in the audit report. One way AC members can reduce potential risk exposure is to strategically avoid asking challenging questions about the significant accounting estimate predicted to be disclosed in the forthcoming audit report. Such a tactic would enable AC members to create a portrayal that there was no reason for them to doubt the overall appropriateness of the estimate and hence, avoid being subject to additional scrutiny from sophisticated investors. Moreover, it may even cause the external auditors to believe less extensive disclosure about the estimate is necessary. Therefore, I predict AC members will

[2] Some of the changes that recently have been discussed by US standard setters and regulators, such as including more information about management's significant accounting estimates and communication of such matters to the AC, are already in new audit standards issued in some jurisdictions (e.g., ISA 700 in the UK and Ireland).

decrease their questioning behavior when they anticipate additional mandatory audit report disclosure. Further, given that sophisticated investors compared to unsophisticated investors are likely to be of greater concern, AC members' questioning behaviors will likely decrease more given sophisticated, as opposed to unsophisticated, investors in anticipation of additional mandatory audit report disclosure.

I test these predictions in an experiment using a 2 x 2 design, with investor sophistication and anticipation of additional mandatory audit report disclosure as between-subject factors. Participants are predominantly experienced AC members who first receive information about a significant accounting estimate related to potentially obsolete inventory that management has favorably revised late in the audit process. Participants who are in the anticipation of additional disclosure present conditions are then alerted of a new regulation that requires auditors to disclose additional information about significant accounting estimates in the audit report, while no such regulation is in the anticipation of additional disclosure absent conditions. The main task is to develop questions about the significant inventory obsolescence estimate after viewing the following: management's justifications for favorably revising it, the auditor's communication about the estimate to the AC, and a draft of the anticipated audit report under the regulatory regime where the requirement of additional audit report disclosure is either present (anticipation of additional disclosure present conditions) or absent (anticipation of additional disclosure absent conditions).

Overall, the findings support the hypothesized predictions. AC members ask a higher number of challenging questions given a sophisticated, as opposed to an unsophisticated, investor base. Moreover, AC members' questioning behavior drops to a significantly greater extent given sophisticated, as opposed to unsophisticated, investors when they anticipate additional mandatory audit report disclosure. Additional analysis shows that designated financial experts are more responsible than at-large AC members for driving this ordinal interaction pattern of findings. Because designated experts likely face greater accountability risk than those who are not so designated (Rupley et al., 2011; Vera-Munoz, 2005), the fact that they drive the results provides further support for the assumption that, on average, AC members are more concerned about avoiding potential scrutiny from sophisticated investors and protecting themselves than protecting the more vulnerable, unsophisticated investors.

Despite these main findings, analysis of post experimental questions shows that AC members believe that investor sophistication would *not* significantly affect their propensity to ask challenging questions and that they would ask *more* challenging questions when they anticipate additional mandatory audit report disclosure. Notably, neither belief is validated by actual AC questioning behaviors, and the latter belief runs exactly opposite to what actually occurs in my experiment. This indicates that the observed joint effects of investor sophistication and anticipation of additional mandatory audit report disclosure on AC members' questioning behavior likely is below the level of AC members' conscious awareness.

This study makes several contributions. One, it enhances our understanding of factors that influence AC members' questioning behaviors by identifying investor sophistication and anticipation of additional mandatory audit report disclosure as joint determinants of AC members' propensity to ask challenging questions. Two, the finding that AC members tend to ask significantly more probing questions given sophisticated as opposed to unsophisticated investors under the historic auditor's reporting model, is particularly interesting given the consistent historic and topical emphasis on investor protection by regulators and standard setters (SEC, 1969; PCAOB, 2012). Three, this study addresses the call for research on "unintended (behavioral) consequences" of attempts to regulate AC members (Turley & Zaman, 2004) by providing theory-consistent evidence on how mandating greater disclosure in the audit report can actually reduce AC members' oversight behavior. Four, this study suggests that AC members are unlikely aware of how investor sophistication and, especially, anticipated increase in mandatory audit report disclosure actually affect their propensity to ask challenging questions of management or auditors. Finally, the study adds to the expertise and corporate governance literatures by demonstrating that, despite having greater capacity to challenge management's estimates, designated financial experts do not act on this advantage when the investor base is predominantly unsophisticated, a potentially troubling outcome for these users' investment choices and for regulators and standard setters hoping to ensure adequate investor protection.

The remainder of this paper is organized as follows. Section II provides background and theoretical development. Section III outlines the experimental method and section IV provides the results. Section V presents supplemental analyses and section VI concludes.

## Background and Theoretical Development

### Background

The objective to protect investors is regaining attention from regulators and standard setters such as the PCAOB who recently announced investor protection as their new strategic mission (PCAOB, 2012). Given their fiduciary duty towards protecting investors, the AC members' role in the financial reporting process and the importance of enhancing their effectiveness are also being emphasized. The implementation of AS No. 16 *Communication with Audit Committees*, which encourages two-way communications between AC members and auditors, highlights the regulators' recognition of the vital role ACs play in ensuring the integrity of the financial reporting process.

Prior studies have examined AC effectiveness in terms of the extent to which AC members support auditors versus management given auditor-management disagreements (Knapp, 1987; DeZoort & Salterio, 2001; DeZoort et al., 2003a; DeZoort et al., 2003b; DeZoort et al., 2008). More recently, however, studies indicate ACs are rarely involved in resolving auditor-client negotiations (Gibbins et al., 2001; Cohen et al., 2002, 2010; Gibbins et al., 2007) and suggest measuring AC effectiveness in terms of the extent to which AC members ask probing questions related to negotiated accounting decisions (Kang et al., 2015; Pomeroy, 2010). This is consistent with the NACD's belief that "AC members should pay particular attention to the issues identified by management and … question assumptions that underlie critical accounting estimates" in fulfilling their oversight duty and protecting shareholder interests (NACD 2010, p. 8). However, little is known with respect to factors that actually influence AC's questioning behavior due to the paucity of empirical research in this area. This study sheds light on this important issue by melding institutional knowledge of the financial reporting and audit context with accountability theory from social psychology (Lerner & Tetlock, 1999) to predict and examine how two factors – investor sophistication and anticipation of additional mandatory audit report disclosure – jointly affect AC's propensity to challenge management's significant accounting estimates.

## Theoretical Development

### The Effect of Investor Sophistication

The social psychology theory of accountability concerns how individuals cope with different socio-economic pressures (Gibbins & Newton, 1994; Hoffman & Patton, 1997; Lerner & Tetlock, 1994, 1999; Peecher, 1996; Tetlock, 1983; Tetlock et al., 1989). Specifically, it predicts that individuals develop different social and cognitive strategies for coping with accountability to obtain acceptance from, or avoid conflict with, important interpersonal or institutional audiences.

This implies that AC members' questioning behavior in overseeing the financial reporting and audit process will be influenced by who they perceive greater accountability pressure from.

Within the financial reporting context, AC members are accountable for protecting shareholder interests and overseeing the external audit process (NYSE & NASD, 1999; AS 16). To the extent AC members take on this fiduciary duty, investor protection (especially those that are more vulnerable and unsophisticated) is likely to be a key motive underlying their behaviors. In addition, AC members arguably self-select into their fiduciary role because they desire to help protect others with integrity.

Along with their fiduciary duty to protect investors, however, AC members simultaneously face significant reputation and liability risks. These risks are more salient in contentious corporate governance environments, such as those subject to increased shareholder scrutiny and shareholder activism.[3] Relative to unsophisticated investors, sophisticated investors who hold greater analytical skills (Bartov et al., 2000; Walther, 1997) are more likely to question management's accounting (Balsam et al., 2002) as well as engage in shareholder activism, which often results in negative consequences such as a change in board composition (Carleton et al., 1998; Del Guercio & Hawkins, 1999; Karpoff et al., 1996; Ryan & Schneider, 2002; Smith, 1996).[4] These institutional aspects of the financial reporting context suggest that AC members will likely perceive greater accountability pressure in the presence of sophisticated, as opposed to unsophisticated, investors and act more as strategic agents to protect their self-interests, rather than as fiduciaries. Accordingly, I predict that AC members will ask more probing questions given a

[3] Shareholder activism refers to the use of power by an investor to bring about significant changes in the strategy or organizational structure of firms and include implementing confidential voting, creating shareholder advisory committees, and altering board composition.
[4] Change in board composition is one outcome of activist shareholders, who sometimes themselves join the board. For example, on August 30, 2013, Microsoft signed a pact with ValueAct Capital, an activist shareholder that gives the President of ValueAct Capital an option to join as a director (see http://wp.me/p3pFEk-2h1).

predominately sophisticated investor base to reduce their chance of being scrutinized by sophisticated investors and of facing negative consequences due to shareholder activism.

> **H1:** AC members' propensity to ask challenging questions about management's significant estimates is greater when the primary shareholders are sophisticated versus unsophisticated.

**The Moderating Effect of Anticipating Additional Mandatory Audit Report Disclosure**

Increasing information regarding the audit process by modifying the auditor's reporting model has been a longstanding issue which is gaining momentum with the project launched by the PCAOB Standing Advisory Group (SAG) on revising the current audit report to disclose additional information (PCAOB, 2010). Most recently, this project led to a proposed new standard from the PCAOB that would require auditors to disclose additional information about critical matters that have been communicated with AC members (PCAOB, 2013). Proponents of requiring additional audit report disclosure suggest that it will increase the effectiveness of the interaction between AC, management, and auditors NYSE & NASD, 1999; Ernst & Young, 2012; PCAOB, 2013; PwC, 2012). Notably, the PCAOB holds that new disclosures in the audit report should not diminish the governance role of the AC over public company's financial statement information but rather lead the AC to spend more time reviewing and discussing the critical audit matters (PCAOB, 2013, p. A5-41). Under this view, the hopeful expectation is that requiring greater audit report disclosure will lead AC members to not change or to ask even more probing questions of management or of auditors during their oversight process.

Greater audit report disclosure on the financial reporting and audit process, however, increases the possibility of sophisticated investors challenging the appropriateness of the firm's financial accounting or engaging in shareholder activism activities. Hence, when AC members are predicted to act more as strategic agents to protect their self-interests (e.g., trying to reduce facing reputational and liability risk), more than fiduciaries, AC members likely will choose a more defensive strategy that allows them to escape potential censure from such events. One way to achieve this objective is to ask fewer questions about management's estimates to create a portrayal that there are no unusual reasons for them to question the appropriateness of the financial reporting and auditing process.[5] The tactic would make it appear to the investor base that there are no unusual reasons for them to further question the appropriateness of the financial reporting and auditing process and protect the AC from any additional shareholder scrutiny that may result from greater disclosure regarding management's significant estimates in the audit report. Moreover, it may also lead to less extensive disclosure regarding the estimate deemed necessary by the auditors. Given that sophisticated investors compared to unsophisticated investors are likely to be of greater concern, AC members' questioning behaviors will likely decrease more given sophisticated, as opposed to, unsophisticated investors in anticipation of additional mandatory audit report disclosure. This prediction is hypothesized below and illustrated in Figure 1.

> **H2:** AC members' propensity to ask challenging questions about management's significant estimates is greatest when the primary shareholders are sophisticated and there is no anticipated additional mandatory audit report disclosure, lower when the primary shareholders are unsophisticated and there is no anticipated additional mandatory audit report disclosure, and lowest when additional mandatory audit report disclosure is anticipated.

[Insert Figure 1 Here]

---

[5] Such a tactic is similar to what the accountability literature calls *defensive bolstering*, which is a self-serving strategy employed to cope with greater accountability pressure typically after a noncompliant action (Gibbins & Emby, 1984; Gibbins & Newton, 1994; Lerner & Tetlock, 1999; Messier & Quilliam, 1992). Prior auditing studies have found auditors that engage in defensive bolstering by "stylizing" documentation in audit working papers so as to create a desired portrayal of what happened such as the appropriateness of the work prepared and conclusions reached (Gibbins, 1984; Rich et al., 1997).

## Method

### Participants & Experimental Design

#### Participants

As AC members are high fidelity participants that are not easily accessed, I ensured complete anonymity and targeted individuals who either possess AC experience or are considered eligible to serve on an AC. [6] Individuals were invited via e-mail through the alumni association of the college of business at a Big 10 university and also through professional networks asking them to voluntarily participate in a study about the decision making process of ACs and were randomly assigned to experimental conditions.[7]

A total of 81 participants completed the online experiment, 73 (90.1%) of whom have some prior AC experience.[8] Specifically, they have 7.4 years of AC experience on average (st. dev. = 6.3; min = 0; max = 25), with no significant difference across the four different experimental conditions.[9] Approximately half (52.1%) of the participants with AC experience reported being designated financial experts. These participants also have significantly greater amount of AC experience (9.53 vs. 5.10 years, $t_{79} = 3.24$, $p < 0.01$, one-tailed) and have served on a significantly greater number of public company ACs (2.03 vs. 0.83, $t_{79} = 2.54$, $p < 0.01$, one-tailed) compared to those who are not so designated.

---

[6] Eligibility is determined based on their year of earning their bachelor's degree in business and their current career standing. Specifically, their graduation year must be before 1996 (i.e., have at least 15 years of professional experience) and they must either be professors or hold or have held corporate positions in or near the C-suite.
[7] The survey software ensured complete anonymity (i.e., no IP addresses were collected). Hence, an analysis of the differences between the responses obtained from the two different recruitment methods could not be conducted.
[8] While I cannot calculate response rates because I do not know the number of participants recruited via professional networks, I can infer that a consistent response rate exists across experimental conditions given there was random assignment to experimental conditions and a similar number of observations manifested across conditions.
[9] Eight participants reported to have no AC experience but met qualifications to serve as AC members. The analysis result excluding these 8 participants are not significantly different from the results including all 81 participants. Hence, I include all 81 participants in my analysis.

As one would expect given random assignment, participants assigned to different experimental conditions are similar in terms of their prior propensity to ask questions at AC meetings and task-relevant knowledge. Specifically, the reported propensity to ask questions in AC meetings is moderately high with a mean of 1.33 on a scale of -3 (extremely low) to +3 (extremely high), with no significant difference across conditions (p = 0.157, two-tailed). Further, as Table 1 shows, the mean (median) values for participants' self-reported relative knowledge of financial accounting, financial statement analysis, auditing, AC best practices, and the industry used in the case materials are 80.8% (82.7%), 81.7% (85.0%), 79.2% (82.7%), 77.5% (81.3%), and 50.7% (50.0%), respectively, again with no significant difference across conditions (lowest p = 0.187, two-tailed).

[Insert Table 1 Here]

**Independent Variables**

I employ a full factorial 2 x 2 between-subjects online experiment, with investor sophistication and anticipation of additional mandatory audit report disclosure as manipulated independent variables. Investor sophistication is manipulated at two levels (lower vs. higher) using information regarding the firm's primary shareholders. Specifically, participants are informed either that 85% of the investor base consists of unsophisticated or sophisticated investors.

Anticipation of additional mandatory audit report disclosure is also manipulated at two levels (absent vs. present). In the present conditions, participants are informed of a new regulation that requires additional disclosure on management's significant accounting estimates in the audit report. They are also provided with a draft of an audit report, including a preliminary version of the likely additional disclosure regarding the significant accounting estimate described in the case. In the anticipation of additional disclosure absent conditions, there is no new regulation regarding audit report disclosure and the draft audit report is characterized as a standard unqualified audit report with no additional disclosures regarding the financial reporting and audit process.

**Dependent Variables**

The primary dependent variable, AC members' propensity to challenge management's significant estimates, is examined in terms of the level and nature of questions AC members ask. Specifically, I use the number of *probing* questions AC members ask after receiving information related to a significant accounting estimate as the primary measure of their questioning behavior. There is no generally accepted list of probing questions AC members should ask. Hence the coding scheme is developed based on AC best practices set out by the NACD, Center for Audit Quality (CAQ), and The Audit Committee Handbook. Specifically, probing questions are questions that are difficult to answer by challenging the respondent to justify the decision or questions that directly probe into the process of resolving the decision (Kang et al., 2015; Pomeroy, 2010). Therefore, if by answering the question, the question recipient would have to justify or provide important additional information about their decision or disclose how the accounting treatment was agreed upon, then the question is considered probing. The full coding scheme is shown in Appendix A.

The coding was performed independently by two manager-level auditors of two different Big 4 accounting firms who were blind to the experimental conditions and hypotheses. The coders were first provided with the previously described coding scheme that defines what probing questions are. The coders were then asked to evaluate the list of questions for every participant to determine whether or not each question was probing in nature (i.e., binary coding with 1 = probing, 0 = not probing). The coders initially obtained a high level agreement of 89.6%. Any disagreements were resolved through a conference call.

**Case Material and Procedures**

Participants who agreed to participate in the study clicked on a link to a website provided in the invitation e-mail that randomly directed them to one of the four experimental conditions. The experiment began by asking participants to assume they are a member of an AC of a manufacturing company and are preparing for an upcoming board meeting.

As illustrated in Figure 2, the participants first read background information about the firm, including a brief overview of its operations and information regarding its primary investor base (unsophisticated vs. sophisticated). Participants in the anticipation of additional disclosure present conditions were further alerted of a new regulation requiring additional commentary on significant accounting estimates in the audit report. After reading the background information about the firm, all participants read a document developed by the external auditor regarding a significant accounting issue related to obsolete inventory. The document included information about the nature of the accounting issue, management's initial and revised (more favorable) estimate, and the auditor's assessment of management's final estimate. The document was followed by an income statement and balance sheet that reflects the initial and revised estimate. Finally, participants in the anticipation of additional disclosure absent conditions previewed a preliminary draft of the anticipated standard audit report with no additional commentary. Participants in the anticipation of additional disclosure present conditions previewed a preliminary draft of the anticipated audit report under the new regulation that includes likely commentary about the accounting estimate.[10] Such operationalization of additional audit report disclosure is based on the

[10]It is important to note that the additional commentary provided in the additional disclosure present conditions does not include additional information regarding the significant accounting estimate that is not provided in the additional disclosure absent conditions. The additional commentary is simply a high-level summary of the information provided in the case materials to all participants. Hence, the information content regarding the significant accounting estimate is held constant across the different experimental conditions.

long-form reporting model, which is one of the possible forms of the modified audit report being considered by the PCAOB.

Although the eventually implemented, new form of the audit report may differ from the one used in the study, this is a realistic option and, more importantly, is well suited for testing my theory. In addition, the long-form reporting model is similar to how emphasis-of-matter is disclosed in current reports. Hence, the use of a long-form reporting model allows the study findings to have implications with respect to possible effects that emphasis-of-matter disclosures under the current reporting model may have. Appendix B presents the additional commentary provided in the additional disclosure conditions.

[Insert Figure 2 Here]

After previewing a preliminary form of the anticipated audit report, the participants were asked about their comfort level on the final estimate as well as the degree to which they would like to ask questions about the issue. I further asked them to develop questions they would like to ask the external auditors and/or management regarding the significant accounting issue. The experiment concluded by asking several debriefing and demographic questionnaires.

## Results

### Manipulation Checks

Analysis results indicate my manipulations of investor sophistication and anticipation of additional mandatory audit report disclosure were successful. Specifically, participants in the higher sophistication conditions perceive investor sophistication to be significantly higher than those in the lower sophistication conditions (1.79 vs. -1.43; $t_{79} = 14.60$, $p < 0.001$, one-tailed). Participants in the higher sophistication conditions also perceive the investor base to have a significantly higher level of expertise compared to the participants in the lower sophistication conditions (1.51 vs. -1.42; $t_{79} = 14.21$; $p < 0.001$, one-tailed). Moreover, participants in the higher sophistication conditions perceived the investor base to be significantly less vulnerable compared to the participants in the lower sophistication conditions (0.86 vs. 1.41; $t_{79} = -2.03$; $p = 0.023$, one-tailed).[11] Participants in the anticipation of additional disclosure present conditions also were found to believe the preliminary version of the anticipated audit report they saw would alert the financial users to a greater extent (0.09 vs. -1.5) than those in the additional disclosure absent conditions ($t_{79} = 4.45$, $p < 0.001$, one-tailed).[12]

To ensure that my manipulation of investor sophistication did not lead to a difference in AC members' risk assessment, I also conduct a post-test survey using a small panel of 13 participants.[13] Using a shorter version of the original experiment in which investor sophistication is manipulated within subjects, I ask the panel to indicate the level of risk of material misstatement and fraud.[14] Results suggest that my manipulation of investor sophistication does not lead to significantly different levels of assessed risk of fraud or material misstatement (lowest $p = 0.190$, two-tailed). Further, to examine the difference in accountability pressure activated by a more versus less sophisticated investor base, I ask the panel to indicate the likelihood they believe the investor base would 1) require them to justify their judgments and decisions, 2) evaluate the quality of their decision process, and 3) require them to explain the process they followed when making their judgments and decisions. Consistent with my predictions, I

[11] The responses regarding the extent to which they believe the investor base is vulnerable, sophisticated, as well as their perceived level of investor expertise were on a scale of -3 (extremely not vulnerable/unsophisticated/low) to +3 (extremely vulnerable/sophisticated/ high).

[12] The responses regarding the extent to which they believe the preliminary version of the anticipated audit report for the hypothetical firm would alert the financial statement users of the significant accounting issue were on a scale of -3 (extremely low) to +3 (extremely high).

[13] The panel members had an average of 7.88 years of experience serving on public company ACs. Six of them were designated as financial experts in the ACs they serve on while 7 of them were former audit partners who are eligible to serve as financial experts. It is important that the post-test panel consists of AC members who currently are designated financial experts or are eligible to serve as one given the significant effect of designated financial experts in my main findings (see Supplemental Analysis for details).

[14] The order of high vs. low investor sophistication was counter-balanced.

find that AC members feel greater accountability pressure given a more sophisticated, as opposed to a less sophisticated, investor base (highest $p < 0.001$, two-tailed).

**Test of Hypotheses**

AC members' propensity to question management's significant accounting estimates is examined using the number of probing questions asked by the participants. Panel A of Table 2 tabulates the average and standard deviation of the number of probing questions participants developed by experimental conditions, and Panel B of Table 2 presents the analysis of variance (ANOVA). Figure 3 also presents the observed pattern of results. Results show that AC members show greater questioning when the primary shareholders are sophisticated compared to unsophisticated ($3.74 > 2.11$; $F_{1, 77} = 4.66$; $p = 0.034$, two-tailed). Therefore, H1 is supported. Moreover, when AC members anticipate additional disclosure in the audit report, their level of questioning significantly decreases ($3.82 > 2.02$; $F_{1, 77} = 5.65$; $p = 0.020$, two-tailed). Results also show a significant interaction between investor sophistication and the anticipation of additional disclosure in the audit report on AC members' questioning behavior, in which the decrease in questioning behavior due to anticipation of additional disclosure is greater given a sophisticated, as opposed to, unsophisticated investor base ($F_{1, 77} = 4.40$; $p = 0.039$, two-tailed).[15]

As I predict an ordinal interaction (i.e., a non-symmetric pattern of cell means) of investor sophistication and anticipation of additional mandatory audit report disclosure on AC members' questioning behavior, I use contrast codes to test H2. Such analysis allows me to obtain greater statistical power in examining interactions compared to the conventional ANOVA tests (Buckless & Ravenscroft, 1990). Panel C of Table 2 presents the results of the planned contrast tests as well

[15] Analysis results of the participants' preference on questioning the accounting issue and their likelihood of questioning on behalf of investors are also directionally consistent with the findings based on the level and nature of questions developed by the participants.

as follow-up simple effect tests. Consistent with my prediction, I apply contrast weights as follows: +3 in the anticipation of additional disclosure absent/higher sophistication condition, +1 in the anticipation of additional disclosure absent/lower sophistication condition, and -2 in the anticipation of additional disclosure present conditions. Consistent with the predicted interaction in H2, results show that the planned contrast is statistically significant ($F_{1, 77} = 10.76$, $p = 0.001$, one-tailed).[16] These findings, combined with the post-test panel survey results where I find AC members perceive greater accountability pressure from sophisticated versus unsophisticated investors, suggest that AC members' concern in protecting themselves from potential scrutiny of sophisticated investors, rather than their fiduciary responsibility to protect unsophisticated investors has a greater influence on their oversight behavior.

[Insert Table 2 and Figure 3 Here]

Given the findings, some may argue that greater mandatory audit report disclosure levels the playing field between sophisticated and unsophisticated investors. However, the findings are potentially disconcerting as the "leveling of the playing field" is obtained by a *decrease* in questioning behavior given *sophisticated* investors, not an *increase* in questioning behavior given *unsophisticated* investors when there is anticipation of additional mandatory audit report disclosure. Moreover, the fact that the questioning behavior is lower for unsophisticated investors under the current regime where there is no additional disclosure in the audit report is also potentially troubling as unsophisticated investors are the ones who would most likely benefit from

[16] I examined the semi-omnibus F-test related to my planned contrast (see, e.g., Buckless & Ravescroft, 1990). The semi-omnibus F-test is statistically insignificant ($F_{2, 78} = 2.01$, $p = 0.142$), indicating that once the between-subject sum of squares accounted by the contrast is taken out, investor sophistication and anticipated additional mandatory audit report disclosure do not explain a significant amount of variation of the dependent variable (i.e., number of probing questions).

additional questioning from the AC, especially under financial reporting environments with less disclosure regarding the financial reporting and auditing process.

## Supplemental Analyses

### Effect of Designated Financial Experts

Being designated as an AC financial expert is likely to increase an AC member's perceived accountability risk (Paskell-Mede & Jackson, 1999; Rupley et al., 2011; Vera-Munoz, 2005; Zacharias, 2000). In fact, many of the comment letters to the SEC regarding the rule on financial experts proposed under Section 407 of SOX expressed concern that such rule would increase the perceived liability of AC members, decreasing their willingness to serve as financial experts or as AC members at all.[17] If this is true, the main findings of decreased questioning behavior when there is anticipated increase in mandatory audit report disclosure, especially given sophisticated investors, are likely to be stronger for participants who are designated financial experts. I conduct a supplemental analysis to test this prediction.

Table 3 summarizes the analysis based on the number of probing questions participants asked by groups. Panel A tabulates the descriptive statistics and Panel B presents the three-way analysis of variance (ANOVA), while Panel C primarily tests my prediction.[18] The observed pattern of the results by groups is shown in Figure 4.

[Insert Table 3 and Figure 4 Here]

Results suggest the findings documented in the previous section are mainly driven by participants who are designated as financial experts. Specifically, the +3, +1, -2, -2 planned

[17] See http://www.sec.gov/rules/proposed/s74002.shtml for the full list of comment letters.

[18] As participants were randomly assigned, I did not balance how many designated financial experts ended up in different experimental conditions. As it turns out, the four conditions have an unbalanced number of designated financial experts. Some statisticians recommend using Type II instead of Type III sums of squares in such situations (e.g., Maxwell & Delaney, 1990). Analysis results using the Type II sums of squares is not significantly different that that using the Type III sums of squares.

contrast is statistically significant ($F_{1, 34} = 14.85$, $p < 0.001$, one-tailed) for designated financial experts while it is not significant ($F_{1, 39} = 0.76$, $p = 0.194$, one-tailed) for non-financial experts.[19] In addition, the results of the follow-up simple effect tests for designated financial experts show that when the AC does not anticipate additional mandatory disclosure in the forthcoming audit report, there is a significant effect of investor sophistication ($F_{1, 34} = 13.93$, $p = 0.001$, one-tailed). The results also show that anticipated increase in mandatory audit report disclosure significantly influences the propensity to challenge management's estimates given sophisticated investors ($F_{1, 34} = 16.53$, $p < 0.001$, one-tailed), while having no significant effect given unsophisticated investors ($F_{1, 34} = 0.17$, $p = 0.343$, one-tailed). I also confirm that there is no statistically significant effect of investor sophistication given anticipated increase in mandatory audit report disclosure for designated financial experts ($F_{1, 34} = 0.02$, $p = 0.879$, two-tailed).

Such findings provide further evidence in support of the assumption that AC members are more concerned about reducing accountability risk than acting as fiduciaries for investors. The fact that the main findings were driven by AC members who are likely to be more concerned about liability or other forms of accountability risk (i.e., those designated as financial experts) also provides indirect evidence that anticipated increase in mandatory audit report disclosure leads AC members to behave more as strategic agents. Moreover, the findings suggest that despite their greater capacity to ask challenging questions, designated financial experts will challenge auditors and/or management to a greater extent only when they perceive a strong cognitive need to do so (e.g., when the primary shareholders are sophisticated and no additional mandatory disclosure is anticipated in the audit report).

[19] I also examined the semi-omnibus F-test for financial experts alone (e.g., Buckless & Ravenscroft, 1990). This test is once again statistically insignificant ($F_{2, 35} = 1.73$, $p = 0.192$), similar to my results for all participants (see footnote 15).

**AC's Self-Awareness of Their Decision Processes**

I conduct additional analysis to gain further insight on AC members' self-awareness regarding the effect of investor sophistication and additional mandatory audit report disclosure on their oversight processes. As part of my post-experimental questions, I asked AC members to assess how they think greater investor sophistication and anticipation of additional mandatory audit report disclosure would affect their questioning behavior on a scale that ranged from -3 (substantially decrease questioning) to +3 (substantially increase questioning).

The mean response for the effect of investor sophistication on their questioning behavior was 0.12 which is significantly greater than 0 "no effect" ($t_{80} = 2.16$; $p = 0.034$, two-tailed) but also significantly less than +1 "slightly increase questioning" ($t_{80} = -15.30$; $p < 0.001$, two-tailed). This suggests that AC members believe that investor sophistication has little qualitative effect on their questioning behaviors and that their propensity to ask challenging questions does not qualitatively drop when the investor base is unsophisticated. These results are inconsistent with the main findings where the predominance of unsophisticated investors caused a significant drop in their questioning behavior. This implies that the heightened questioning behavior observed in the presence of sophisticated investors is likely below the level of AC members' conscious awareness.

Moreover, participants believe they tend to increase their level of questioning when they anticipate additional mandatory audit report disclosure (mean = 1.24, $t_{80} = 9.15$, $p < 0.001$, two-tailed).[20] Only 8.64% said they would decrease their questioning behavior when they anticipate additional mandatory audit report disclosure. Recall, however, that the main results show that AC members' questioning behavior actually significantly *drops* when they anticipate additional

[20] Designated financial experts, compared to those who are not so designated, are not more aware of the effect of greater investor sophistication (mean = 0.12 vs. 0.13; $t_{79} = 0.13$ $p = 0.901$, two-tailed) and additional mandatory audit report disclosure (mean = 1.14 vs. 1.33; $t_{79} = 0.70$, $p = 0.486$, two-tailed) on their questioning behavior.

mandatory audit report disclosure. This provides evidence that the manner in which AC members react to anticipation of additional mandatory audit report disclosure is likely below their level of conscious awareness.

Together, the findings suggest that the motivational climate (i.e., incentive to avoid potential shareholder scrutiny or activism from sophisticated investors) triggers AC members to *subconsciously* increase their questioning behavior in the presence of sophisticated investors and when they do not anticipate additional mandatory audit report disclosure.

**Mediation Effects of Perceived Investor Vulnerability and Perceived Comfort Level**

To gain further understanding of the judgment processes underlying the effect of anticipating additional mandatory audit disclosure on AC members' questioning behavior, I examine the mediation effects of perceived investor vulnerability and perceived comfort level. If AC members are primarily concerned about reducing accountability risk and protecting their self-interests, an increase in anticipated additional mandatory audit report disclosure will likely lead AC members to rationalize not asking probing questions by convincing themselves that they already are comfortable with management's estimate. By contrast, if AC members' primary concern is to adhere to their fiduciary duty to protect investors (especially those who are more vulnerable and unsophisticated), an increase in anticipated mandatory audit report disclosure would likely lead to a perception of more information being available to investors. This would cause a decrease in perceived investor vulnerability, especially given unsophisticated investors.

Results show that anticipation of additional mandatory audit report disclosure does not significantly affect perceived investor vulnerability ($F_{1, 77} = 0.01$, $p = 0.933$, two-tailed) and there is no significant interaction between anticipation of additional disclosure and investor sophistication ($F_{1, 77} = 0.22$, $p = 0.637$, two-tailed). This implies that the observed decrease in AC members' questioning given the anticipation of additional mandatory audit report disclosure is not driven by a decrease in perceived investor vulnerability, as would have been expected if AC members were primarily concerned about adhering their duty as fiduciaries to protect investors.

If AC members were primarily concerned about reducing their accountability risk as predicted in my main hypotheses, AC members likely will respond to greater anticipated mandatory audit report disclosure by questioning less to rationalize that they are not directly responsible for management's estimate or that management's estimate is meritorious. One way to do this would be for the AC members to convince themselves that they are already relatively comfortable with management's estimate. To examine if this is the process in which anticipation of additional mandatory audit disclosure affects AC members' questioning behavior, I conduct a mediation analysis using the participants' comfort regarding the accounting decision.

I first develop a variable of AC's overall comfort regarding the accounting issue based on a factor analysis on the participants' perceived comfort regarding 1) management's change in estimate, 2) auditor's decision to allow management's updated, smaller write-down of inventory, and 3) the difference in the net income that results from the different write-down amounts. Using this new variable, I conduct a mediation analysis according to the four-step procedure specified by Baron & Kenny (1986). The analysis is only conducted on the responses provided by designated financial experts given sophisticated investors as these are the conditions that drive my overall findings. Figure 5 summarizes the results of the analysis.

Consistent with my main findings, step 1 indicates anticipation of additional mandatory audit report disclosure negatively affects participants' propensity to challenge management's estimates ($b = -6.10$, $p = 0.001$, one-tailed). Step 2 indicates that anticipation of additional mandatory audit report disclosure positively affects participants' perceived level of comfort regarding the accounting decision (b = 2.02, p = 0.041, one-tailed). Step 3 shows that the perceived comfort level about the accounting decision negatively impacts the participants' propensity to challenge management's estimate (b = -3.73, p = 0.003, one-tailed). Finally, step 4 indicates that participants' comfort with respect to the accounting decision fully mediates the influence of anticipating additional mandatory audit report disclosure on their propensity to challenge management's accounting estimate (b = -2.72, p = 0.166, two-tailed). Such results are consistent with the drop in AC members' questioning behavior with anticipation of additional mandatory audit report disclosure being rationalized by stating that they are more comfortable with, and thus, have less of a reason to question management's estimate.[21]

[Insert Figure 5 Here]

## Conclusion

This study provides theory and empirical evidence on how investor sophistication affects AC members' degree of questioning during their oversight process and how anticipation of additional mandatory audit report disclosure moderates such an effect. Overall, the findings suggest that when there is no anticipation of additional mandatory audit report disclosure, AC members challenge management's estimate at a significantly greater level given a primarily sophisticated, as opposed to unsophisticated, investor base. The evidence also indicates that AC members significantly decrease their level of questioning when additional mandatory audit report disclosure is anticipated,

[21] The increased comfort level found with anticipation of additional mandatory disclosure could be due to participants reasoning that auditors likely would provide more competent and impartial audits under such conditions, perhaps especially for sophisticated investors. While I did not design my case materials to test whether such reasoning occurred or mediated my hypothesized effects, analysis of two post-test questions on participants' assessment of auditor's competence and integrity are of some relevance. Specifically, participants were asked to assess the auditor's competence and integrity in light of the favorable revision in management's inventory obsolescence estimate. Neither anticipation of additional disclosure nor investor sophistication nor their interaction (lowest p=0.642) significantly affects participant's assessment of the auditor's competence or integrity. Future research can ask more pointed questions about whether perceived auditor effort on estimates separately disclosed and discussed in the audit report changes with investor sophistication and anticipation of additional disclosure in the audit report.

especially given a primarily sophisticated investor base. Overall these findings suggest AC members are more concerned about reducing their accountability risk and protecting their self-interests rather than acting as fiduciaries to protect investors (especially those who are more vulnerable and unsophisticated).

Supplemental analysis shows that my main findings are more pronounced for designated financial experts, whose incentives are more likely to depend on sophisticated investors' scrutiny of and reactions to management estimates that are described in an audit report. Further analysis also indicates that how AC members actually respond to investor sophistication and anticipation of additional mandatory audit report disclosure is quite different than how they think they behave. Thus, the joint influence of these two factors likely falls outside of the AC members' level of conscious awareness. Finally, I also find that a tendency to find more comfort in management's estimate fully mediates the effect of anticipating additional mandatory audit report disclosure on AC members' questioning behavior.

There are various ways future research can extend this study. One, this study identifies situations where the incentive to reduce accountability risk and protect self-interest outweighs the AC members' accountability towards protecting investors, especially those who are more vulnerable and unsophisticated. However, the two motivations are not mutually exclusive. Hence, identifying circumstances where the AC members' accountability towards investors outweighs their incentive to reduce accountability risk may be of interest for future research. Two, while this study's manipulation of anticipated additional mandatory audit report disclosure entails additional language describing one of management's key accounting estimates that is similar to the proposed standard in which auditors would identify critical audit matters, it does not use an approach that is identical to that currently being proposed by the PCAOB (e.g., no description of what a "critical audit matter" appears in the draft report). Although I am unaware of a theory that would predict it, it is possible that describing what critical audit matters are within a draft audit report could dampen or otherwise moderate the ordinal interaction I observe. Future research can examine this issue, which will help further our understanding of whether ACs react differently to otherwise identical descriptive information about significant accounting estimates in the audit report depending on whether or not it is also couched as being a "critical audit matter."

Overall, the theory and findings of the study provide some of the first theory-based empirical evidence regarding two factors that jointly determine AC members' propensity to ask challenging questions of management's key financial statement estimates. In doing so, it answers a call for research that provides ex ante evidence on how and why ACs could *decrease* their vigilance with greater audit report disclosure (Carcello et al., 2011). In short, my study shows that AC members' reaction to additional mandatory audit report disclosure can cause what Sterman (2002) calls 'policy resistance,' even though AC members themselves are unaware that their reaction is creating policy resistance. [22] Finally, the theory and findings herein also demonstrate that, while designated financial experts have greater capacity to challenge management's estimates, they are significantly less likely to draw upon this capacity to protect vulnerable unsophisticated investors than to protect themselves from scrutiny by sophisticated investors.

[22] Policy resistance is defined as "the tendency for interventions to be defeated by the response of the system to the intervention itself" and is used in the systems dynamics literature to refer to the occurrence of unintended consequences of well-intended efforts to solve pressing problems (Sterman, 2002).

## APPENDIX A

### Coding Scheme for Qualitative Analysis

Please code the questions in terms of 1) who the question was directed to and 2) whether the question is probing or not based on the coding scheme described below. *(Note: I do not make any predictions with respect to who the target of the questions will be. This is simply to obtain insight on the proportion of questions directed to management vs. auditors)*

1. Who is the question directed to?
   a. (0) none
   b. (1) management (CFO/COO/CEO)
   c. (2) auditor
   d. (3) both

2. Is the question probing?
   a. (0) No
   b. (1) Yes

- To be considered probing, questions must be directly related to the inventory valuation decision and must challenge the auditor and/or CFO to justify the decision.

  Specifically, probing questions are questions that are difficult to answer by challenging the respondent to justify the decision; or questions that directly probe into the process of resolving the decision. Therefore, if by answering the question, the question recipient would have to justify the inventory valuation decision, provide important additional information about the decision or disclose how the accounting treatment was agreed upon, then the question is considered probing.

  - Any question that asks about the *appropriateness of the accounting treatment* is considered challenging or probing.
    - Ex: Justify the difference between the two estimates.
    - Ex: How confident are the auditors about management's estimates?
    - Ex: What is the fair value of this inventory?
    - Ex: If given a choice, what method would you choose to value the inventory?
    - Ex: How would regulatory bodies view manipulation of this kind?

  - Any question that asks about the *internal or external influences or pressures* that could affect the estimate is considered challenging or probing.
    - Ex: Does the new estimate affect the company's ability to be in compliance with debt covenants?
    - Ex: What are the implications for going concern?
    - Ex: Does the new estimate affect management's compensation in any way?

- Any question that asks about *disagreements* between the management and auditors is considered challenging or probing.
  - Ex: Were there any disagreements with the management on the estimate, and if so, how did they respond to your disagreement?

- *Note: The list above is not conclusive. Any other question that challenges the respondent to justify the inventory valuation or provide important additional information about the decision or disclose how the accounting treatment was agreed upon is considered probing.*

- Non-probing questions: does not challenge the respondent to provide information or justification about how the issue was resolved with the other party.
  - Ex: How much additional investment does the company need to spend in order to make those products related to the old strategy to be sold?
  - Ex: What does the company plan to do with obsolete inventory? – Business strategy question that is not directly related to the accounting decision.
  - Are there any accounts receivables outstanding related to sales of the old strategy inventory?

## APPENDIX B

**Commentary Added in the Anticipation of Additional Disclosure Present Conditions**

**Justification of Assessments**
In accordance with the professional standards applicable in the Unites States, we bring to your attention the following matters:

SCA's management adjusted its inventory by writing it down to its estimated net realizable value. This write down was necessary when a portion of its inventory became unsalable after implementation of a new marketing strategy as described in note 3.2 to the consolidated financial statements. The portion of on-hand inventory that management estimated to be unsalable had a carrying value of $970,000, and so management took a write down of inventory in this amount, materially decreasing SCA's net income.

As part of our audit of significant accounting estimates, we assessed the assumptions made and the approach taken by management regarding this estimate for compliance, in all material respects, with U.S. GAAP. In addition, we communicated this issue to the AC in accordance with PCAOB Auditing Standards (AU 380). These procedures were performed in the context of our audit of the consolidated financial statements as a whole, and therefore contributed to the opinion expressed above.

Note: Panel A and C present descriptive statistics and the planned contrast coding and follow-up simple effect test results based on whether the participants are designated financial experts in the ACs they serve on. Panel B presents the three-way ANOVA to examine whether financial expertise influence the joint effect of investor sophistication and anticipated additional mandatory audit report disclosure on the participants' propensity to ask probing questions. Reported *p*-values are two-tailed for the simple effect of investor sophistication given anticipation of additional mandatory audit report disclosure, and one-tailed equivalent for all other tests given my directional predictions.

# Does the reporting of key audit matters affect the auditor's report's communicative value? Experimental evidence from investment professionals

## ABSTRACT

This paper investigates the communication of key audit matters (KAM) in the auditor's report as required by the new International Standard on Auditing (ISA) 701. We conduct an experiment with investment professionals to test the communicative value of a KAM section relating to goodwill impairment. Our main results show that in the condition in which the KAM section suggests that *already small* changes in the key assumptions could eventually lead to a goodwill impairment (referred to as KAM negative), participants assess the economic situation of the company to be significantly better as compared to the condition in which the KAM section suggests that *only large* changes in the key assumptions could eventually lead to a goodwill impairment (referred to as KAM positive). We interpret our findings in light of a model of trust and conclude that the specific informational content of the KAM section triggers different factors in the model in different ways. Overall, our findings suggest that neither preparers nor audit committees or auditors need to fear that the disclosure of critical entity-related information leads to negative implications; rather, financial statement users value this information positively.

**Keywords:** improved auditor's report, key audit matters, communicative value, trust model

# I. INTRODUCTION

Since the 1970s, there have been numerous discussions about the need for improving the auditor's report as the auditor's primary means of communication with a company's stakeholders (see, for instance, regarding the history PCAOB 2011). The financial crisis has further spurred financial statement users (in the following referred to as users), but also regulators and national standard setters to address the auditor's role in early warning signaling and in the provision of additional insights into audited financial statements. Very recently, various institutions and regulators, such as the Center of Audit Quality (CAQ), the European Commission (EC), the International Auditing and Assurance Standards Board (IAASB), the Public Company Accounting Oversight Board (PCAOB), and the United Kingdom Financial Reporting Council (FRC), have started initiatives to improve the auditor's reporting model – also with respect to further insights into the auditor's work. Given the IAASB's position as a global standard setter whose auditing standards have been adopted in over 100 countries, the IAASB initiative is of particular interest. A promising way to provide users with more information about the auditor's work and, thus, to enhance the communicative value of the auditor's report, is a separate section in this report that communicates so-called key audit matters (KAM), i.e., "matters that, in the auditor's professional judgment, were of most significance in the audit […]" (IAASB 2015b, paragraph 11, a)). This concept is reflected by the new IAASB audit standard ISA 701 '*Communicating Key Audit Matters in the Independent Auditor's Report*', which was published in January 2015 and is effective for audits of financial statements ending on or after December 15, 2016.

There is scarce evidence on whether the inclusion of a separate KAM section in the auditor's report as required by ISA 701 will meet the IAASB's objective to enhance the communicative value of the auditor's report for users.[1] Prior auditor reporting research has primarily examined the effect of additional or amended content in the auditor's report on the expectation gap, i.e., "the difference between what users expect from the auditor and the financial statement audit, and the reality of what an audit is" (IAASB 2011, 7) and/or the potential narrowing thereof. One stream within this research uses revisions or draft revisions of relevant auditor reporting standards and their potential impact on the expectation gap (e.g., Bailey, Bylinski, and Shield 1983; Kelly and Moorweis 1989; Houghton and Messier 1991; Miller, Reed, and Strawser 1993; Monroe and Woodliff 1994; Kneer, Reckers, and Jennings 1996; Innes, Brown, and Hatherly 1997; Gold, Gronewold, and Pott 2012). Another stream examines different designs of auditor's reports (such as 'plain English' report format with the opinion at the end or at the beginning, e.g., Chong and Pflugrath 2008). A third stream examines additional – at least at the time of the respective study not required – information in the auditor's report such as materiality (e.g., Fisher 1990; Davis 2007) or corporate governance information (e.g., Manson and Zaman 2001).

The overarching purpose of the current IAASB initiative with respect to the communication of KAM is to provide information about the auditor's work and, therefore, to enhance the communicative value of the auditor's report for users (IAASB

[1] We are aware of one working paper (Sirois, Bédard, and Bera 2014) that uses eye-tracking technology to examine whether and how additional information on KAM affects how users navigate through and integrate the information presented in the related financial statements. However, Sirois et al. (2014) use post-graduate accounting students as surrogates for the users of financial statements, while we are able to capture users more directly by conducting our experiment with investment professionals. Sirois et al. (2014) find that the communication of additional information is associated with lower perceived audit quality and a perception that the level of assurance varies across components of the financial statements – a result that is contrary to the standard setters' expectation. Christensen, Glover, and Wolfe (2014) also do not use real investment professionals in their study about critical audit matter (CAM) paragraphs, but business school graduates. They find that participants who receive a CAM paragraph emphasizing the audit issue related to the audit of uncertain fair value estimates are more likely to stop investing in the company than participants who receive an auditor's report without a CAM paragraph or who receive the information from the CAM paragraph as part of management's footnotes. However, the effect of the CAM paragraph is mitigated when it is followed by a paragraph offering resolution of the CAM. There are few other working papers that examine the effect of CAM paragraphs on auditor liability (Backof, Bowlin, and Goodson 2014; Brasel, Doxey, Grenier, and Reffett 2015; Gimbar, Hansen, and Ozlanski 2015).

2013, paragraph 7). The objective of this study is to experimentally examine the potential effect of a separate KAM section in the auditor's report as required by ISA 701 on the auditor's report's communicative value for users.

Using a between-subjects experimental design among 89 investment professionals from Germany (82.28 percent), US, UK or Canada (10.12 percent), and other countries around the world (7.60 percent), we test whether the new KAM section in the auditor's report is associated with communicative value for investment professionals. In doing so, we capture the auditor's report's communicative value by two dimensions, the potential to change the user's assessment of the company's economic situation and the user's confidence in making that assessment. With these two dimensions, we capture the main assessments within investment professionals' analyses and/or investment decisions. We therefore assume that the communicative value of the auditor's report changes if user's assessments in either of these two dimensions change.

In our experiment, we manipulate the auditor's report by including a KAM section that relates to goodwill impairment, whereby we refer to the KAM goodwill example in the illustrative auditor's report outlined by the IAASB in its exposure draft '*Reporting on Audited Financial Statements: Proposed New and Revised International Standards on Auditing (ISAs)*' (IAASB 2013). Assuming that the specific informational content of the KAM section triggers the different factors in a model of trust in different ways – which in turn has the potential to affect our results – we differentiate between two content-related[2] manipulations: (1) A KAM section suggesting that *already small changes* in the key assumptions could eventually lead to a goodwill impairment. We refer to this manipulation as a KAM section with a negative tendency regarding the

[2] Consequently, the focus of our research differs from other studies where presentation format is manipulated but information content stays the same (see literature review in section 3 for auditor reporting related studies and Libby and Emett (2014) for a recent review of the effects of earnings presentation attributes on manager and user behavior).

company's economic situation, or, in short, KAM negative. (2) A KAM section suggesting that *only large changes* in the key assumptions could eventually lead to a goodwill impairment. We refer to this manipulation as a KAM section with a positive tendency regarding the company's economic situation, or, in short, KAM positive.[3] The control group is provided with the former ISA 700 auditor's report (without separate KAM section).

Intuitively, it seems reasonable to expect the users' assessment of an entity's economic situation to be more negative if the auditor's report includes a KAM section with a rather negative tendency as compared to a KAM section with a rather positive tendency. Regarding our second dimension of communicative value, i.e., the user's confidence in the assessment of the company's economic situation, users should be more confident in their assessment of the company's economic situation if the auditor's report includes a KAM section at all – regardless of the specific KAM tendency. That is because the informational basis for users' assessment becomes larger by the provision of KAM and hence, information asymmetry is reduced in both conditions.

[3] Literally, if the auditor outlines that already small changes in the key assumptions could eventually lead to a goodwill impairment, he or she signals a high risk that an impairment will occur in the future which then would negatively affect net income and hence, the economic situation of the company. On the contrary, if the auditor outlines that only large changes in the key assumptions could eventually lead to a goodwill impairment, he or she signals a low risk that an impairment will occur in the future and hence, a low risk that net income/the economic situation of the company will be affected. Therefore, we refer to the former as KAM negative and to the latter as KAM positive. Furthermore, IASs are silent on specific tendencies of KAM sections. Hence, the communication of KAM does not necessarily imply a negative tendency. In the UK, the reporting of risks of material misstatement, which are considered to be conceptually equivalent to KAM, is required for auditor's reports with effect for periods commencing on or after 1 October 2012. A review of the experience with the new requirements reveals that "goodwill impairment" ranks on the third position among the most reported instances of risks (FRC 2015). Furthermore, an in-depth analysis reveals that the sections on goodwill impairment and other risks within the auditor's reports are not generally conveying negative tendencies (see for example section on risks due to capital restructuring in the auditor's report for New World Resources plc; New World Resources 2014), but also positive tendencies (see for example section on goodwill impairment risks in the auditor's reports for Pearson plc and Greggs plc; Pearson 2014; Greggs 2014). These findings do not only underline the relevance of the goodwill impairment setting we chose for our experiment, but also provide initial anecdotal evidence for the relevance of considering KAM sections with negative and positive tendencies.

However, based on the implications of trust literature and a model of trust, which we propose to applicate in our study in order to explain the potential effect of a new KAM section in the auditor's report on the communicative value for users, expectations change. In line with this theoretical framework, we find that in the KAM negative condition, participants assess the economic situation of the company to be significantly *better* as compared to the KAM positive condition. Correspondingly, the descriptive results indicate that participants' confidence in their assessment is higher in the KAM negative condition. Thus, based on a model of trust we conclude that the specific informational content of the KAM section triggers different factors in the model to different degrees, eventually leading to unequal levels of trust which the investment professionals associate with the auditor's report. This divergence in perceived trustworthiness of the auditor's report will then also alter the perceived trustworthiness of the financial statements and hence, the user's assessments of the company's economic situation and the user's confidence in making that decision. These results suggest that from a users' perspective the KAM section with a positive tendency is rather ill-perceived as a kind of appeasement given the challenges the auditor had faced during the audit, while the KAM section with a negative tendency is rather well-perceived as a helpful signal that draws the users' attention to issues that they had not been aware of before. Thus, neither preparers nor audit committees or auditors need to fear that the disclosure of critical entity-related information leads to negative implications; in contrast, users value this information positively.

This study contributes to the auditor reporting literature in at least three ways. First, it extends the very scarce literature on the potential effect of the KAM section in the auditor's report on the communicative value for users by using real investment professionals. The participants of our experiment are investment professionals from more than one country which has two main advantages. One, we do not have to refer to surrogates for users, such as graduate accounting students; we rather directly examine the assessment of one of the most important user groups. Two, given that our investment professionals are from more than one country, we believe that our findings are not restricted to a certain jurisdiction. Second, to the best of our knowledge, this is the first study that examines the potential effect of the additional information about KAM in the auditor's report by considering different tendencies of KAM on the communicative value for investment professionals. Our findings are useful for standard setters and auditors by highlighting the importance of carefully phrasing a KAM section, also considering how users' perceive the message conveyed with the KAM section. This aspect is highly relevant because the identification and communication of KAM are subject to the auditor's professional judgment. Third, by referring to a model of trust that theoretically explains why different tendencies of KAM potentially lead to different user's assessments of aspects related to the communicative value, we employ an innovative approach in the auditor reporting literature not used thus far.

The remainder of this study is structured as follows. Section 2 provides background information on the IAASB's initiative to improve the auditor reporting model. Section 3 reports prior research and in section 4, we develop the paper's hypotheses. Section 5 describes the experimental design as well as the participants. Section 6 reports the results as well as robustness checks, and section 7 concludes.

## II. BACKGROUND

Starting point for the IAASB's initiative to enhance the value of auditor reporting is the fact that the auditor's report per se is valued (e.g., Mock, Turner, Gray, and Coram 2009; MARC 2010), but that the message conveyed by the auditor's report beyond the 'pass-fail-conclusion' has been questioned by both regulators and researchers since decades (e.g., Commission on Auditor's Responsibilities 1978; Geiger

1993; Church, Davis, and McCracken 2008; Smieliauskas, Craig, and Amernic 2008; Mock, Bédard, Coram, Davis, Espahbodi, and Warne 2013). A major concern is the little communicative value of the auditor's report and related to that a call for more information primarily on insights into the auditor's work (IAASB 2013). The exposure draft '*Reporting on Audited Financial Statements: Proposed New and Revised International Standards on Auditing (ISAs)*' published by the IAASB in July 2013 is a culmination of IAASB's considerations regarding the auditor reporting topic, to which international research, public consultation, and stakeholder outreach undertaken by the IAASB contributed. Preceding projects in this process are the jointly commissioned international research on user perception of the standard auditor's report, the May 2011 Consultation Paper '*Enhancing the Value of Auditor Reporting: Exploring Options for Change*' (IAASB 2011), the June 2012 Invitation to Comment (ITC) '*Improving the Auditor's Report'* (IAASB 2012), global roundtables and additional outreach to solicit feedback on the indicative direction outlined in the June 2012 ITC, as well as continued monitoring of, and interaction with, policymakers and national standard setters with auditor reporting initiatives (IAASB 2013, 6). One of the key enhancements to auditor reporting suggested is the communication of KAM. After the issuance of an exposure draft in 2013, the final auditing standard ISA 701 '*Communicating Key Audit Matters in the Independent Auditor's Report*' was published in January 2015 and will be effective for audits of financial statements for periods ending on or after December 15, 2016. This standard includes requirements and guidance for the auditor's determination and communication of KAM. KAM have to be communicated in a separate section in the auditor's report for audits of full sets of general purpose financial statements of listed entities. Each KAM has to be described in the KAM section headed "Key Audit Matters" whereby appropriate subheadings have to be used for each individual KAM (IAASB 2015b, paragraph 11). Examples for KAM include for instance: Goodwill, valuation of financial instruments, and effects of new accounting standards (IAASB 2013, IAASB 2015b; see also IAASB 2015a).

In our experiment we use one of the IAASB (2013) KAM examples and refer to goodwill impairments. We only manipulate the KAM section and do not consider the other amendments of the auditor's report resulting from the new Auditor Reporting Model in order to isolate the effect the separate KAM section potentially has on the communicative value of the auditor's report for users. Following this approach, we do not consider any re-ordering of the individual auditor's report sections. Hence, the KAM section in the manipulated report is placed at the end of the auditor's report.

## III. PRIOR RESEARCH

Prior experimental/questionnaire auditor reporting research has primarily focused on the effect of amendments of the auditor's report on the expectation gap or the potential reduction thereof. One stream within this research uses revisions or draft revisions of relevant auditor reporting standards. Bailey et al. (1983) demonstrate that users perceive a shift of financial statement-related responsibilities from the auditor towards management in the desired way due to the suggested wording changes in the auditor's report as proposed by the American Institute of Certified Public Accountants (AICPA). They also find that more experienced and knowledgeable users are better aware of auditor's versus management's responsibilities. In line with the former Bailey et al. (1983) finding, the at that time new Statement on Auditing Standards (SAS) No. 58 '*Reports on Audited Financial Statements*' enhanced the understandability in terms of the audit objective and the responsibilities of management for financial statements (Kelly and Moorweis 1989; Miller et al. 1993). Houghton's and Messier's findings (1991) are also related to SAS No. 58 by showing that the exposure draft auditor's report under SAS No. 58 leads to a better alignment of CPAs' and bankers' assessment of the report. Kneer et al. (1996) support that changed wording in the auditor's report under SAS No. 58 can affect users' perceptions of auditor's responsibilities whereby SAS No. 58 has "achieved modest success" (p. 25). Australia followed the US example of SAS No. 58: The suggested changes to their standard on auditor's reports are content of Statement of Auditing Practice (AUP) No. 3 issued by the Australian Accounting Research Foundation (AARF). While the proposed new version of the auditor's report eliminated some differences between auditors' and various other users' perceptions, for instance in terms of auditors' responsibilities, the changed wording gave also room for new differences in areas not subject of the report, for instance fraud (Monroe and Woodliff 1994). The British analogue to SAS No. 58, Statement of Auditing Standards No. 600 '*Auditor's Reports on Audited Financial Statements*', led to a reduction of the expectation gap (Innes et al. 1997; Manson and Zaman 2001). Gold et al. (2012) use the revised ISA 700 at that time and test whether the related additional explanations in the revised auditor's report reduce the expectation gap. One of their main findings is that the revised ISA 700 does not lead to a reduced expectation gap. Based on that they conclude that the audit opinion alone "may signal sufficient relevant information to users" (p. 286).

Another stream of prior auditor reporting research examines auditor's report format changes on stakeholders' and auditors' perceptions. Chong and Pflugrath (2008) derive three different report formats from the Guidance Note Report to Australian Standard AUS702, namely, an expanded report, a 'plain language' expanded report with the opinion at the end, and a 'plain language' report with the opinion at the beginning. The questionnaire-based findings suggest that both more detailed explanation versions of auditor's reports, for instance regarding responsibilities for the audit, and 'plain language' versions appear unsuccessful attempts to narrow the expectation gap. However, re-ordering of report sections may be beneficial.

A third stream of more recent research examines additional – at the time of the respective study not required – information in the auditor's report. Manson and Zaman (2001) find in their questionnaire-based study that the communication of additional matters in the auditor's report, for instance corporate governance, is useful for users. They also recommend the disclosure of materiality. Consistent with this recommendation are the findings of the experimental economics studies by Fisher (1990) and Davis (2007). Fisher (1990) documents that materiality disclosure leads to greater market efficiency, with public disclosure being more beneficial than private disclosure. Davis (2007) findings show that the disclosure of materiality enhances investor perception accuracy and, thus, has a positive impact on market efficiency. However, market outcomes are not affected by materiality levels. An international survey of members of the CFA Institute (2010) underpins that materiality information would be useful. In addition, the vast majority of the participants want information on the method of determining materiality. The Houghton et al.'s (2011) findings regarding materiality disclosure are more restrained. They also examine the disclosure of materiality levels by conducting face-to-face office interviews with stakeholder groups. However, there are no conclusive findings whether the actual level of tolerable error, as one aspect of materiality, should be disclosed, because such a disclosure might be misleading. In contrast to the other studies, the CFA Institute (2010) survey also examines stakeholders' desires for additional information from the auditor. The participants agree that the audit report should contain more information, in particular on the audit process; auditor independence; and the actual level on assurance achieved in the audit. Another survey of the investor members of the Audit Quality Forum working group (2007) supports that additional auditor disclosures would be useful; areas identified in this survey are: more information about emphases of matter, and references to uncertainty and future risk; discussion of material issues identified in the audit and their resolution; tailored company reports rather than standardized reports; alternative accounting treatments considered and the reasons for adopting the treatment chosen, where material; and more information on material areas of judgment and difficult or sensitive issues. Mock et al. (2013) and Vanstraelen, Schelleman, Meuwissen, and Hofmann (2012) give an overview of the current audit reporting debate and provide insights on users' information needs. One very recent study by Christensen et al. (2014) examines nonprofessional investors' reactions – whereby business school graduates are surrogates for nonprofessional investors – to a CAM paragraph[4] related to the audit of fair value estimates. Their findings show that participants who receive a CAM paragraph are more likely to change their investment decision than participants who receive an auditor's report without a CAM paragraph or who receive the information from the CAM paragraph as part of management's footnote. Moreover, the effect of the KAM paragraph is mitigated when it is followed by a resolution paragraph containing auditor's assurance for the CAM.

Taken together there are only few studies that refer to additional – at the time of the respective study not required – disclosures in the auditor's report whereby the focus is on materiality (Fisher 1990; Manson and Zaman 2001; Davis 2007; CFA Institute 2010; Houghton et al. 2011). Only one very recent study explicitly examines the effect of a CAM paragraph (Christensen et al. 2014). Theoretical work in this area delivers an explanation for that: Previous changes in the auditor's report – may it be due to the provision of additional information or simply due to wording changes – put the main emphasis on providing more information on generalized audit responsibilities rather

[4] CAM are those matters addressed during the audit that (1) involve the most difficult, subjective, or complex auditor judgments; and/or (2) pose the most difficulty to the auditor in obtaining sufficient appropriate audit evidence; and/or (3) pose the most difficulty to the auditor in forming an opinion on the financial statements (PCAOB 2013). CAM paragraphs reflect the Public Company Accounting Oversight Board's (PCAOB) implementation of enhancing the auditor's reporting model in terms of communicating auditor insights to investors about critical audit issues. CAM paragraphs are considered to be conceptually equivalent to KAM paragraphs.

than on audit-specific information, e.g., in terms of auditors' work and, therefore, on findings of the company which has been audited (Humphrey, Moizer, and Turley 1992; Humphrey, Loft, and Woods 2009). Hence, researchers have no basis for an examination of the potential effect of more information about the auditor's work on users' perception. However, researchers argue that additional disclosures in the auditor's report related to audit findings have the potential to enhance the communicative value of the auditor's report and, therefore, recommend such disclosures (Manson and Zaman 2001; Church et al. 2008). Surveys of users' information needs underpin that additional information in the auditor's report would be useful. The concept of communicating KAM in the auditor's report implements this thinking as under the new auditor reporting model matters of most significance in the audit have to be disclosed. The identification of the individual KAM and also the communication of KAM, however, are subject to auditor's professional judgment. Therefore, the disclosure of KAM relates to additional insights into matters that required in particular auditor's effort – information that is very relevant for users. Thus, the communication of KAM should also be linked to the communicative value of the auditor's report for the users.

## IV. HYPOTHESES DEVELOPMENT

To capture the communicative value of the auditor's report for users we refer to two dimensions which constitute our dependent variables: the potential to change the user's assessment of the company's economic situation, and the user's confidence in making that assessment. We consider these two dimensions as they directly reflect the main assessments within investment professionals' analyses and/or investment decisions. We therefore assume that the communicative value of the auditor's report changes if user's assessments in either of these two dimensions change. There is scarce evidence yet on whether the inclusion of a separate KAM section in the auditor's report is linked to the communicative value of the auditor's report for users. Beyond the effect that KAM per se potentially have on the communicative value, we believe that the specific tendency of the KAM section has to be addressed, in order to understand how users' perceive the message conveyed with the KAM section.

This is of particular interest for two reasons. First, the communication of KAM is not standardized, but subject to the circumstances of the audit and the auditor's professional judgment. This implies differences among KAM sections, e.g. in informational content. Second, as we outline in the following, differences in informational content are likely to trigger different factors in a model of trust in different ways which in turn has the potential to affect our results. Consequently, we differentiate between two manipulations of a KAM section relating to goodwill impairment (derived from an IAASB illustrative auditor's report). In a first manipulation, we generate a KAM section with a negative tendency regarding the company's economic situation by formulating the last sentence as follows: "*Already small changes in the key assumptions used could give rise to an impairment of the goodwill balance in the future*"; referred to as KAM negative. In a second manipulation, we generate a KAM section with a positive tendency regarding the company's economic situation by formulating the last sentence as follows: "*Only large changes in the key assumptions used could give rise to an impairment of the goodwill balance in the future*"; referred to as KAM positive.[5]

[5] We stay as close as possible to the IAASB wording (IAASB 2013) in phrasing our manipulations (compare original wording in Appendix 1 to the wording of our manipulations in Appendix 2). As compared to the original, we only adjust the last sentence of the KAM section for our manipulations. In order to create a KAM section with a relatively strong negative tendency regarding the company's economic situation (KAM negative), we add the word "already" to the beginning of the original sentence. As outlined above, in comparison to the KAM negative condition we replace "already small" by "only large" in the KAM positive condition. In order to gain access to the investment professionals, we were compelled to keep the experimental materials as compact as possible, i.e., to minimize the time effort for

In many auditor reporting studies, hypotheses are derived from communications literature and communication models (e.g., Hasan, Roebuck, and Simnett 2003), or from a compilation of prior findings (e.g., Gold et al. 2012). Those studies often argue that changes in wording of a report affect the addressees' informational basis and thus alter the respective perceptions. Based on prior literature and in line with the IAASB's implicit objective, with respect to our first dimension of communicative value, we expect that users' assessment of the company's economic situation is affected by the specific informational content of the KAM section.

Intuitively, it seems reasonable to expect the users' assessment of an entity's economic situation to be more negative if the auditor's report includes a KAM section with a rather negative tendency as compared to a KAM section with a rather positive tendency.[6] Regarding the second dimension of communicative value, i.e. the user's confidence in the assessment of the company's economic situation, users should be more confident in their assessment of the company's economic situation if the auditor's report includes a KAM section at all – regardless of the specific KAM tendency. That is because the informational basis for users' assessment becomes larger by the provision of KAM and hence, information asymmetry is reduced in both conditions. However, the provision of directional predictions based on changes of wording is challenging, because the transformation of words into a message is an extremely complex cognitive process (see for example, Fiske 1990).

participants. We therefore could not include manipulation check questions in our main experiment. Instead, we validate our manipulations with individuals from Amazon Mechanical Turk as described in the robustness check section later.

[6] Even if the case of no communication of KAM in the auditor's reports of audits of complete sets of general purpose financial statements for listed entities in the new auditor reporting model should be extremely rare, we need that case as reference case for our analysis. In order to isolate the effect of the specific informational content of the KAM section in our experiment, we further include only one KAM in the auditor's report.

However, based on the implications of trust literature and a model of trust, which we propose to applicate in our study in order to explain the potential effect of a new KAM section in the auditor's report on the communicative value for users, expectations change. Lewicki, McAllister, and Bies (1998) outline that the understanding why people trust and how trust shapes (social) relations has been a major field of research for disciplines like psychology, sociology, political science, anthropology and economics (see also Worchel 1979; Gambetta 1988; Barber 1983; Ekeh 1974; Axelrod 1984). Furthermore, it is argued that trust is essential for a healthy personality (e. g., Shaver and Hazan 1994), provides a foundation for interpersonal relationships as well as for cooperation (e. g., Rempel, Holmes, and Zanna 1985), and constitutes the basis for stability in social institutions and markets (e. g. Williamson 1974). Definitions of trust are manifold. Earlier definitions focus on individuals' confidence in other person's intentions and motives (Mellinger 1956, Read 1962), while more recent research focuses on behavior (Hosmer 1995; Lewicki et al. 1998). Mayer, Davis, and Schoorman (1995, 712) define trust as the "willingness of a party to be vulnerable to the actions of another party based on the expectation that the other will perform a particular action important to the trustor, irrespective of the ability to monitor or control that other party". Similarly, Currall and Judge (1995, 151) define trust as "an individual's behavioral reliance on another person under a condition of risk". Johnson-George and Swap (1982, 1306) suggest that "willingness to take risks may be one of the few characteristics common to all trust situations" and hence, that "there is something of importance to be lost" (Mayer et al. 1995, 712).

An own body of research focuses on understanding and measuring of trust (e. g., Currall and Judge 1995; Cummings and Bromiley 1996; Kramer 1999). Butler (1991) derives a conditions of trust inventory based on a compilation of factors utilized in prior studies (see also Mishra 1996, Sitkin and Roth 1993, who use very similar factors in their studies). Drawing from those studies, Mayer et al. (1995) propose a model of (organizational) trust which is outlined in Figure 1.

[Insert Figure 1 here]

Based on their model, the authors make three propositions all of which are of importance for our study. First, it is argued that trust for a trustee will be a function of the trustee's perceived ability, benevolence, and integrity (and also of the trustor's propensity to trust, which is of minor relevance for our approach). *Ability* captures the trustee's competence, *benevolence*, his or her loyalty, openness, receptivity and availability, and *integrity* aspects like his or her discreetness and fairness (see Figure 1). Thereby, each factor captures unique elements of trustworthiness. Second, it is proposed that the effect of integrity on trust will be most salient early in the relationship prior to the development of meaningful benevolence data. And third, the effect of perceived benevolence on trust will increase over time as the relationship between parties develops.

According to the model, the level of trust in the trustee will – in combination with the perceived risk of the situation – drive the trustor's attitude towards risk taking in the relationship with the trustee. Finally, the observation of outcomes in the specific situation of trust (was the trustor in fact trustworthy?) will influence the perceived trustworthiness and might alter the level of trust and consequently the trustor's attitude towards risk taking in the relationship with the trustee. Trustworthiness also affects, monitors, and guides individuals' actions and attitudes in their interactions (Kasper-Fuehrera and Ashkanasy 2001). Specifically, perceived trustworthiness reduces suspicion and increases openness toward the trustor (Shinners 2009; Szulanski, Cappetta, and Jensen 2004). Jones (1996, 5) argues, that "to trust someone is to have an attitude of optimism about" that person. Other studies find that trust has a positive effect on perceived accuracy of information provided (Benton, Gelber, Kelley, and Liebling 1969; Roberts and O'Reilly 1974) and a negative effect on the perceived probability of loss (Nooteboom, Berger, and Noorderhaven 1997). To summarize, "the effects of trust on attitudes and perceptions have been found to be fairly consistent and positive" (Langfred 2004, 385).

Drawing from the outlined conceptions of trust, we argue that the communication between auditor and user based on the auditor's report constitutes a situation of trust. The users base their investment decisions (in case of investors) or their analyses (in case of financial analysts/investment professionals) on financial statements and auditor's reports. Users rely on the trustworthiness of financial statement providers and auditors, with their money or reputation being at stake. Decisions and analyses will be driven by perceived assurance provided by the auditor and the (resulting) perceived credibility of the financial statement, or – in other words – by their trustworthiness. Consequently, differences in perceived trustworthiness related to the auditor's report will also alter the perceived trustworthiness of the financial statements.

In this study, we apply the outlined model of trust to our experimental setting. We argue that the two different KAM sections applied in this study (KAM positive vs. KAM negative) trigger different factors in the model to different degrees and hence lead to unequal levels of trust which the investment professionals associate with the auditor's report. Furthermore, we argue that this in turn leads to different levels of trust in, i.e., credibility of, the financial statements and, therefore, to a different user's assessment of the company's economic situation and different user's confidence in making that assessment.

Appendix 2 outlines the wording of the KAM section with positive and negative tendency. We expect that the specific differences in informational content mainly trigger the following drivers of perceived trustworthiness of the trustee (see Figure 1): competence, loyalty, openness, fairness and promise fulfillment. The other drivers being part of the model of trust (receptivity, availability, consistency and discreetness) rather imply direct and/or repetitive *interaction* between trustee and trustor and therefore do not match our setting very well. However, although we expect differences in the user's assessment of the company's economic situation, as well as in the user's confidence in making that assessment, due to different levels of trust, directional prediction based on theoretical deliberations seem ambitious, not least because the model of trust has not been used in auditor reporting literature.

Therefore, in order to validate our argumentation and the application of the model of trust in the context of our study, as well as to derive directional hypotheses, we conduct an online pioneer experiment with 81 participants (21 accounting students and 60 individuals from Amazon Mechanical Turk).[7] As we expect that the average participant can finish the pioneer experiment within about five minutes, we exclude those participants who worked on the experiment less than 120 seconds, as they clearly did not invest due effort, and end up with a final sample of 52 observations.[8] In this pioneer experiment, we instruct participants to assume that they work as an investment professionals and that their task is to assess the economic situation of a fictitious group – the Alpha Group. We provide participants with background information about the goodwill recognized by the group. The information is very similar to the information

[7] We were compelled to keep the experimental materials as compact as possible, i.e., to minimize the time effort for participants, in order to gain access to the investment professionals. Hence, validating the application of the model of trust with the participants of our main experiment, for example through an additional post experimental questionnaire, was not an option. Instead, we argue that the utilization of accounting students and individuals from Amazon Mechanical Turk was adequate for validation purposes, as the pioneer experiment does not necessarily rely on context-specific knowledge of the participants. The designs of all experiments in this paper meet the requirements for using human subjects in the experimental laboratory at the university where the lead author is located. The use of human subjects was also approved by the institutions where the main experiment with investment professionals was conducted, i.e. German Association of Financial Analysts and CFA Institute.

[8] Excluding more participants by setting higher duration thresholds does not change the results of the pioneer experiment substantially.

that we provide in our main experiment which we will describe in detail below (goodwill paragraph within the notes). In comparison to the main experiment, we include further basic explanations related to goodwill impairment in order to facilitate comprehension of the information provided. Participants are then instructed to read additional information which is made available by the auditor ("information provider") of the Alpha Group. Applying a between-subjects design, participants are thereby randomly either provided with the KAM section with negative or positive tendency (see Appendix 2). Finally, participants are asked to answer a set of 12 questions: 11 questions relate to different drivers of perceived trustworthiness within the model of trust (see Table 1 for details), while we capture the overall level of trust between the information provider and the participant with a final question. We utilize a structural equation model which mirrors the structure of the model of trust (see Figure 1) and analyze our data with smart PLS software (all constructs in the model are specified reflectively).

[Insert Table 1 here]

In a first step, we estimate the structural equation model for the full sample (KAM with negative *and* KAM with positive tendency) in order to show that the application of the model of trust in the context of KAM communication is adequate. In a second step, in order to carve out the moderating effect of the two different KAM sections on the overall level of trust, we apply a two-step approach. In a first step, we oppose model estimation results for the KAM section with negative (24 observations) and KAM section with positive (28 observations) tendency sample, respectively (group comparison approach in line with, for example, Rigdon, Schumacker, and Wothke 1998). In a second step, we explicitly include moderating effects as product terms into the (full sample) structural equation model (Henseler and Fassott 2010). Table 2 outlines the model estimation results. The explanatory power of the structural equation model is high for all estimations, as we yield an $R^2$ of 0.814/0.891/0.781/0.830/0.829 for the endogenous latent variable "trust" with the full sample/KAM with negative tendency sample/KAM with positive tendency sample/inclusion of moderator tendency of KAM*ability/inclusion of moderator tendency of KAM*integrity. The structural equation and measurement model quality criteria are generally met for all estimations (untabulated).

[Insert Table 2 here]

For the full sample, effects from the exogenous constructs "ability" and "integrity" on "trust" are positive and significant (path coefficients of 0.179 and 0.626, respectively). Furthermore, we yield higher positive path coefficients from "ability" and "integrity" on "trust" for the KAM with negative tendency sample as compared to the KAM with positive tendency sample. This suggests that the KAM section with negative tendency leads to a significantly higher level of trust in the trustee (auditor) as compared to the KAM section with positive tendency. The inclusion of moderating effects as product terms between a binary variable "tendency of KAM" (KAM with negative tendency = 0; KAM with positive tendency = 1) and the indicators associated with "ability" and "integrity" (the exogenous constructs with significant impact on "trust") confirms this conclusion, as we yield significantly negative path coefficients for both moderators. Overall, the results of our pioneer experiment confirm our assumption that potential effects of including KAM sections with different informational content into the auditor's report on the communicative value for users can be explained in light of implications of trust literature and a model of trust. In particular, we have shown that informational content of KAM is relevant. The KAM section indicating a negative tendency regarding the company's economic situation (KAM negative) leads to a significantly higher level of trust in the trustee (auditor) as compared to the KAM section indicating a positive tendency regarding the company's economic situation (KAM positive).

We argue that the KAM section with positive tendency might in fact be ill-perceived as a kind of appeasement given the challenges the auditor had faced during the audit. This would imply, inter alia, *lower* levels of perceived openness and fairness. On the contrary, a KAM section with negative tendency might be well-perceived as a helpful signal that draws the users' attention to issues that they had not been aware of before. This would imply, inter alia, *higher* levels of perceived openness and fairness (and possibly also competence). Consequently, a KAM section with negative tendency leads to a significantly higher level of trust in the trustee (auditor) as compared to a KAM section with positive tendency. Hence, in line with the implications of trust literature, the trustor (user) is less sensitive to risk, less suspicious and more open toward the auditor and associates higher levels of trust with the auditor's report (see for example, Kim, Ferrin, and Rao 2008; Klein and Shtudiner 2015; Guiso, Sapienza, and Zingales 2008). This leads (1) to a higher perceived trustworthiness of the financial statements and, consequently, (2) in line with the positive effect of trust on attitudes and perceptions of the trustor consistently found in the other mentioned studies, to a better assessment of the company's economic situation. In addition, it seems reasonable to assume that the user has more confidence in the assessment when he or she is less sensitive to risk, less suspicious, more open, and perceives the KAM section as an information sign that draws the attention to issues that he or she has not been aware of before.

Based on the outlined theoretical implications and the empirical validation of our argumentation, we formally state the following hypotheses:

*H1: Users assess the company's economic situation more positively if the auditor's report includes a KAM section with a negative tendency compared to a KAM section with a positive tendency.*

*H2: Users' confidence in their assessment of the company's economic situation is higher if the auditor's report includes a KAM section with a negative tendency compared to a KAM section with a positive tendency.*

## V. RESEARCH DESIGN

### Research Instrument

In order to make our experiment most accessible for participants and to increase the number of participations, we develop a web-based and a paper-and-pencil version of our research instrument. The web-based participants receive an invitation email with a link which opens a browser window with the first page of the experiment. On the first page, participants are instructed to carefully read the introduction on this page before working on the case study. Participants learn that they will be provided with information concerning the Alpha Group and that they will be asked for their assessments related to different economic issues and also for more general questions. Participants are also instructed to base their assessments only on information provided within the case study, that there is no possibility to receive further information concerning the Alpha Group, to work on the case study by themselves and in the given order, and to provide all required answers. Finally, we assure that responses will be analyzed on an aggregate basis and that individual answers and personal information will be treated confidentially and only used for research purposes. By clicking the button “Continue”, participants then access the case itself.

On the second page, all participants receive short background information about the Alpha Group and comprehensive excerpts of the group’s annual report which consist of a consolidated income statement, statement of cash flow, balance sheet, other financial data (for financial years 2011 and 2012, respectively) and notes according to International Financial Reporting Standards (IFRS). In addition, participants receive a full auditor’s report. All information elements are arranged one below the other and participants can scroll up and down to process the excerpts of the Alpha Group’s annual report.

While the Alpha Group itself is fictitious, we are guided by the financial statements of a real German medium-sized group within solar industry in setting up the experimental case. To avoid that our participants recognize the Alpha Group's real counterpart, we multiply all (balance sheet etc.) items with the same factor and change the industry in which the Alpha Group operates from solar to industrial machinery. In order to allow for meaningful variation in the assessment of the economic situation of the company and the confidence in that assessment, i.e., in order to avoid large proportions of answers on either end of the scales, we decided that the Alpha Group should neither be in financial distress nor economically booming. Therefore, the Alpha Group (as well as its real counterpart) is a financially stable group with a significant decline in profits from 2011 to 2012 (changes in operating income/profit for financial year -93.16 percent/-104.26 percent) driven by, among other things, declining sales revenue (-21.80 percent). We also believe that the decline in profits generally motivates participants to assess the provided information about the Alpha Group in more detail.

As we manipulate a goodwill-related KAM section in the auditor's report, the goodwill recognized by the Alpha Group as well as the related note is of particular interest for our study. By analyzing the respective balance sheet item and note, participants learn that the Alpha Group recognizes a goodwill with a carrying amount of 5,107 T Euro (26.01 percent of non-current assets/7.32 percent of total assets) and that the goodwill arose when the Beta AG (public limited company) and the Gamma GmbH (limited liability company) were purchased and merged with the Alpha Group. Furthermore, the note contains information about the impairment test procedure in general and states that the findings of the impairment test indicate no need for any impairment (in 2012).

Finally, the auditor's report is presented to the participants below the other information as part of the extracts of the Alpha Group's annual report. We apply a between-subjects experimental design in which we manipulate the informational content of a KAM section in the auditor's report. In the experimental groups we oppose two auditor's reports with different tendencies of the KAM section (as explained above) based on the goodwill-related KAM example provided in IAASB (2013) (see Appendix 1 for original wording and Appendix 2 for wording of our manipulations). In the control group, participants are presented with the former standard IAS 700 auditor's report (without KAM section).

At the end of the described second page of the web-based experiment (below the auditor's report), participants are instructed to click the "Continue" button and to answer the then following questions. They are also informed that they have the possibility to return to the excerpts of the annual report after reading the respective questions by using a "Back" button. The two questions on the third page of the experiment capture our dependent variables and constitute the experimental task. We ask participants to assess the Alpha Group's economic situation and the confidence in making that assessment on 11-points Likert scales (see Table 3 for questions and endpoints of the scales) – with these two dimensions we capture the communicative value of the auditor's report as they directly reflect the main assessments within investment professionals' analyses and/or investment decisions. We therefore assume that the communicative value of the auditor's report changes if user's assessments in either of these two dimensions change.

[Insert Table 3 here]

After answering the questions on the third page of the experiment, participants click on "Continue" and open the fourth page, where they are informed that it is not possible to return to the excerpts of the annual report anymore. Participants are then instructed to rate the relevance of each element of the provided excerpts of the Alpha Group's annual report (including auditor's report) for the assessment of the economic situation and to indicate how each of the elements changed their confidence in their assessment on five-points Likert scales (from "not relevant at all"/"high decrease in confidence" to "extremely relevant"/"high increase in confidence"). Finally, we gather demographic information on the fifth page and thank the participants for their participation on the sixth page.

Procedures, instructions and case materials for the paper-and-pencil version of the experiment are identical to the above described (analogously adapted where necessary). While we ensured technically that participants work on the experiment in the described sequence and that revisions of given answers are not possible in the web-based experiment, we split up the case material to two envelopes which have to be opened and sealed in a specific sequence for the paper-and-pencil experiment to implement similar controls.

**Participants**

We gained access to the CFA Institute (CFA – Certified Financial Analyst) with more than 123,000 members in 145 countries and to the DVFA (German Association of Financial Analysts) with more than 1,400 members in Germany. For the web-based experiment, the invitation email is sent out to a CFA Institute survey pool (with members from all over the world) and to all DVFA members. The paper-and-pencil experiment is conducted during several training sessions at the DVFA headquarters with investment professionals by one of the authors in turn.

We derive 14 participants from the CFA Institute (web-based) and 24/51 participants from the DVFA (web-based/paper-and-pencil) subjects pool (7 more web-based observations were deleted due to discontinuation of participation), yielding the final sample of 89 participants analyzed below (we do not identify further need to exclude individual observations from the analysis). As outlined in Table 4, the average age of our participants is 37.66 years. 79.75 percent of the participants are male, 82.28 percent of the participants come from Germany, 10.12 percent from the USA, UK or Canada (decreasing order) and 7.60 percent from other countries around the world. 81.40 percent of the participants work as investment professionals for on average 10.53 years. Of those participants working as investment professionals, 26.67 percent are bankers, 21.33 percent are (sell- or buy-side) financial analysts, 18.67 percent are asset managers, 5.33 percent are investment bankers, 5.33 percent are consultants, 4.00 percent are funds managers and 18.67 percent work in none of the outlined professions. Most participants mainly work with equity investments (35.92 percent), corporate bonds (21.36 percent) or sovereign bonds (12.62 percent). Our participants' experience with personal capital market investments is moderate to considerable (with an average of 3.45 on a 5-points Likert scale, see Table 4 for endpoints).

[Insert Table 4 here]

## VI. RESULTS

### Descriptive Analysis

Figure 2 outlines the results of our descriptive analysis for the two dependent variables. The excerpts of the annual report of the Alpha Group in combination with the former ISA 700 auditor's report (control group) lead to a mean user's assessment of the economic situation of 4.32 and to a mean user's confidence in this assessment of 6.20 (on 11-points Likert scales; see Table 3 for the respective endpoints of the scales). Hence, participants tend to assess the economic situation of the Alpha Group to be slightly negative and tend to be relatively confident in their assessment. In the KAM negative experimental group, participants' assessments of the economic situation are more positive with higher associated confidence in comparison to the control group, leading to means of 5.16 and 6.48, respectively. On the contrary, for the KAM positive experimental group, we find more negative assessments of the economic situation (4.03) with lower associated confidence (6.00) in comparison to the control group. Summarizing, the descriptive analysis suggests that there is a considerable difference in means for both dependent variables between the experimental groups. Furthermore, especially the KAM negative manipulation leads to considerable reactions to that information (see also Table 5).

[Insert Figure 2 and Table 5 here]

For all other variables outlined in Table 5 (relevance of individual elements of the annual report for the assessment of the economic situation and change in confidence due to individual elements) differences in means between groups are small and there is no obvious pattern. In general, the income statement seems to be the most relevant source of information for our participants, followed by the cash flow statement and the balance sheet (across-groups). The relevance of the auditor's report for the assessment of the economic situation is fairly low for all groups. Interestingly, although not statistically significant, mean assessments for the relevance of the auditor's report follow the pattern we observe for our dependent variables: the relevance is lowest for the KAM positive and highest for the KAM negative group. This makes sense in light of the theoretical framework we apply, because information can only be *relevant* if it is *trustworthy*.

**Analysis of Variance**

Table 6 outlines the results of the ANOVA applied to analyze the data for the assessment of the company's economic situation. First, group means for the former ISA

700/KAM positive/KAM negative condition differ significantly (p = 0.0529). A post-hoc mean comparison test reveals that the mean user's assessment of the economic situation of the Alpha Group is significantly more positive in the KAM section with a negative tendency as compared to the KAM section with a positive tendency condition (p = 0.057/0.063/0.056 based on Bonferroni/Scheffe/Sidak adjustment of confidence intervals). Hence, we can support our first hypothesis $H_1$. While the descriptive analysis revealed that the user's confidence in the assessment of the economic situation in the KAM section with a negative tendency as compared to the KAM section with a positive tendency condition is considerably higher – which is in line with our second hypothesis $H_2$ – the difference is non-significant in an ANOVA analysis (untabulated). Hence, the ANOVA does not support the descriptive result.

[Insert Table 6 here]

**Robustness Check**

To validate our findings, we utilize ANCOVA and regression techniques and include diverse covariates and control variables (relevance of/change in confidence due to individual items and demographic variables) for which theory or prior studies suggest an influence. While those analyses confirm the reported findings, we do not yield significant interactions or other results.

Furthermore, we validate our manipulations with 79 individuals from Amazon Mechanical Turk. All considered 79 individuals answered a simple accounting-related question correctly, with which we assure that the participants have a very basic knowledge of the matter.[9] We utilize the design of our pioneer experiment described

[9] We asked participants to choose the correct ending to the sentence "A company's equity is equivalent to…" out of three provided options: "…assets minus liabilities" (correct answer), "…current assets plus non-current assets" and "…profit before tax (EBT) minus operating income (EBIT)". Of originally 100 participants, 21 failed to indicate the correct answer.

above. Instead of the questions outlined there, we ask a set of questions in both KAM conditions (between subjects) which relate to the understanding/perception of the manipulation (random order of questions; see Table 7 for the questions). As can be seen in Table 7, participants' response pattern suggest that our manipulations were successful. In particular, as intended, the message conveyed with the last sentence of the KAM section (our manipulation) is perceived to be a significantly negative (positive) signal concerning the economic situation of the Alpha Group in the KAM negative (positive) condition. Furthermore, participants' assessment of the risk that a goodwill impairment will occur is high in the KAM negative and low in the KAM positive condition (means differ significantly from the midpoint "4" of the scale). The results for two other questions (see Table 7 for details) confirm that the manipulations were successful, but are less distinct. Overall, participants' reaction seems to be more intense in case of the KAM negative as compared to the KAM positive manipulation. This could provide an explanation for the dissimilar magnitude of effects described in the main experiment, but does not harm our findings in any way.

[Insert Table 7 here]

## VII. CONCLUSION

With the new auditing standard ISA 701, the IAASB has recently introduced a separate section in the auditor's report of audits of full sets of general purpose financial statements that communicates so-called key audit matters (KAM), i.e., matters that were of most significance in the audit. The intention thereby is to provide users with more information about the auditor's work and, thus, to enhance the communicative value of the auditor's report. In this study, we experimentally examine the potential effect of a separate KAM section in the auditor's report on its communicative value for users. In doing so, we capture the auditor's report's communicative value by two dimensions, the potential different user's assessment of the company's economic situation and the user's confidence in making that assessment as these two dimensions directly reflect the main assessments within investment professionals' analyses and/or investment decisions. We therefore assume that the communicative value of the auditor's report changes if user's assessments in either of these two dimensions change.

Assuming that the specific informational content of the KAM section triggers different factors in a model of trust in different ways – which in turn has the potential to affect our results – we differentiate between two content-related manipulations: (1) A KAM section suggesting that *already small* changes in the key assumptions could eventually lead to a goodwill impairment (KAM negative). (2) A KAM section suggesting that *only large* changes in the key assumptions could eventually lead to a goodwill impairment (KAM positive). The control group is provided with the former ISA 700 auditor's report (without separate KAM section).

We find that in the KAM negative condition, participants assess the economic situation of the company to be significantly better as compared to the KAM positive condition. Correspondingly, the descriptive results indicate that participants' confidence in their assessment is higher in the KAM negative condition. We interpret the results in the light of a model of trust and conclude that the specific informational content of the KAM section triggers different factors in the model to different degrees, eventually leading to unequal levels of trust which the investment professionals associate with the auditor's report. This divergence in perceived trustworthiness related to the auditor's report will then also alter the perceived trustworthiness of the financial statements and hence user's assessments of the company's economic situation and the user's confidence in making that decision. These results suggest that the KAM section with a positive tendency is rather ill-perceived by users as a kind of appeasement given the challenges the auditor had faced during the audit, while the KAM section with a negative tendency is rather well-perceived as a helpful signal that draws the users' attention to issues that they had not been aware of before. Thus, neither preparers nor audit committees or auditors need to fear that the disclosure of critical entity-related information leads to negative implications; in contrast, users value this information positively.

This study contributes to the auditor reporting literature in at least three ways. First, it extends the very scarce literature on the potential effect of the KAM section in the auditor's report on the communicative value for users by using real investment professionals. The participants of our experiment are investment professionals from more than one country which has two main advantages. One, we do not have to refer to surrogates for users, such as graduate accounting students; we rather directly examine the assessment of one of the most important user groups. Two, given that our investment professionals are from more than one country, we believe that our findings are not restricted to a certain jurisdiction. Second, to the best of our knowledge, this is the first study that examines the potential effect of the additional information about KAM in the auditor's report by considering different tendencies of KAM on the communicative value for investment professionals. Our findings are useful for standard setters and auditors by highlighting the importance of carefully phrasing a KAM section, also considering how users' perceive the message conveyed with the KAM section. This aspect is highly relevant because the identification and communication of KAM are subject to the auditor's professional judgment. Third, by referring to a model of trust that theoretically explains why different tendencies of KAM potentially lead to different user's assessments of aspects related to the communicative value, we employ an innovative approach in the auditor reporting literature not used thus far.

Our study is of course not without limitations. We employ an experimental approach in which we manipulate the informational content of one KAM example in a specific setting. Consequently, our findings mainly depend on our manipulations and the setting. However, it seems reasonable to assume that the KAM example in the IAASB illustrative auditor's report, from which we carefully derive our manipulations, is of significant practical relevance and may also be used by auditors as a general pattern. Furthermore, based on the implications of the model of trust, it seems reasonable to assume that *any* KAM section with a (strong) positive or negative tendency bears the risk of possibly unexpected users' perceptions. Also, unlike many other studies, our study relies on real investment professionals as participants. Accordingly, our findings reflect expert knowledge and experience applied in a relatively realistic scenario. The generalizability of our results might therefore be greater in comparison to many other experimental studies.

**Appendix 1: Illustrative Auditor's Report (IAASB 2013)**

## INDEPENDENT AUDITOR'S REPORT

**To the Shareholders of ABC Company [or Other Appropriate Addressee]**

**Report on the Audit of the Consolidated Financial Statements[3]**

**Opinion**

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, (*or give a true and fair view of*) the consolidated financial position of ABC Company and its subsidiaries (the Group) as at December 31, 20X1, and (*of*) their consolidated financial performance and their consolidated cash flows for the year then ended in accordance with International Financial Reporting Standards (IFRSs).

We have audited the consolidated financial statements of the Group, which comprise the consolidated statement of financial position as at December 31, 20X1, and the consolidated statement of comprehensive income, consolidated statement of changes in equity and consolidated statement of cash flows for the year then ended, and notes to the consolidated financial statements, including a summary of significant accounting policies.

**Basis for Opinion**

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's Responsibilities for the Audit of the Consolidated Financial Statements* section of our report. We are independent of the Group within the meaning of [*indicate relevant ethical requirements or applicable law or regulation*] and have fulfilled our other responsibilities under those ethical requirements. (see Question 11) We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

**Key Audit Matters** (see Questions 1-8)

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated financial statements. Key audit matters are selected from the matters communicated with [*those charged with governance*], but are not intended to represent all matters that were discussed with them. Our audit procedures relating to these matters were designed in the context of our audit of the consolidated financial statements as a whole. Our opinion on the consolidated financial statements is not modified with respect to any of the key audit matters described below, and we do not express an opinion on these individual matters.

*The four specific topics and content presented below are purely for illustrative purposes. This section would be tailored to the facts and circumstances of the individual audit engagement and the entity. Accordingly, the IAASB has intentionally drafted these examples in a manner that illustrates that Key Audit Matters will vary in terms of the number and selection of topics addressed and the nature in which they may be described, and are intended to be consistent with the disclosures in the entity's consolidated financial statements.*

*Goodwill*

Under IFRSs, the Group is required to annually test the amount of goodwill for impairment. This annual impairment test was significant to our audit because the assessment process is complex and highly judgmental and is based on assumptions that are affected by expected future market or economic conditions, particularly those in [*Countries X and Y*]. As a result, our audit procedures included, among others, using a valuation expert to assist us in evaluating the assumptions and methodologies used by the Group, in particular those relating to the

[3] The sub-title "Report on the Audit of the Consolidated Financial Statements" is unnecessary in circumstances when the second sub-title "Report on Other Legal and Regulatory Requirements" is not applicable.

forecasted revenue growth and profit margins for [*name of business lines*]. We also focused on the adequacy of the Group's disclosures about those assumptions to which the outcome of the impairment test is most sensitive, that is, those that have the most significant effect on the determination of the recoverable amount of goodwill. The Group's disclosures about goodwill are included in Note 3, which specifically explains that small changes in the key assumptions used could give rise to an impairment of the goodwill balance in the future.

*Valuation of Financial Instruments*

The Group's disclosures about its structured financial instruments are included in Note 5. The Group's investments in structured financial instruments represent [*x%*] of the total amount of its financial instruments. Because the valuation of the Group's structured financial instruments is not based on quoted prices in active markets, there is significant measurement uncertainty involved in this valuation. As a result, the valuation of these instruments was significant to our audit. The Group has determined it is necessary to use an entity-developed model to value these instruments, due to their unique structure and terms. We challenged management's rationale for using an entity-developed model, and discussed this with [*those charged with governance*], and we concluded the use of such a model was appropriate. Our audit procedures also included, among others, testing management's controls related to the development and calibration of the model and confirming that management had determined it was not necessary to make any adjustments to the output of the model to reflect the assumptions that marketplace participants would use in similar circumstances.

*Acquisition of XYZ Business*

As described in Note 2, in December 20X1, the Group completed the acquisition of XYZ Business. XYZ Business was a division of a large private company. As of December 31, 20X1, the Group has completed the initial acquisition accounting on a preliminary basis. The Group will finalize the initial acquisition accounting during 20X2, and the amounts recorded as of December 31, 20X1 could change. We focused on this transaction because it is material to the consolidated financial statements as a whole and the fact that values had not previously been assigned to the division as a standalone operation. In addition, determining the assumptions that underlie the initial acquisition accounting and the useful lives associated with the acquired intangible assets involves significant management judgment given the nature of the [*name of industry*].

*Revenue Recognition Relating to Long-Term Contracts*

The terms and conditions of the Group's long-term contracts in its [*name of segment*] affect the revenue that the Group recognizes in a period, and the revenue from such contracts represents a material amount of the Group's total revenue. The process to measure the amount of revenue to recognize in the [*name of industry*], including the determination of the appropriate timing of recognition, involves significant management judgment. We identified revenue recognition of long-term contracts as a significant risk requiring special audit consideration. This is because side agreements may exist that effectively amend the original contracts, and such side agreements may be inadvertently unrecorded or deliberately concealed and therefore present a risk of material misstatement due to fraud. In addition to testing the controls the Group has put in place over its process to enter into and record long-term contracts and other audit procedures, we considered it necessary to confirm the terms of these contracts directly with customers and testing journal entries made by management related to revenue recognition. Based on the audit procedures performed, we did not find evidence of the existence of side agreements. The Group's disclosures about revenue recognition are included in the summary of significant accounting policies in Note 1, as well as Note 4.

**Going Concern** (see Questions 9-10)

The consolidated financial statements of the Group have been prepared using the going concern basis of accounting. The use of this basis of accounting is appropriate unless management either intends to liquidate the Group or to cease operations, or has no realistic alternative but to do so. As part of our audit of the consolidated financial statements, we have concluded that management's use of the going concern basis of accounting in the preparation of the Group's consolidated financial statements is appropriate.

Management has not identified a material uncertainty that may cast significant doubt on the Group's ability to continue as a going concern, and accordingly none is disclosed in the consolidated financial statements of the Group. Based on our audit of the consolidated financial statements of the Group, we also have not identified such a material uncertainty. However, neither management nor the auditor can guarantee the Group's ability to continue as a going concern.

**Other Information**

*[The illustrative wording for this section is subject to the IAASB's finalization of proposed ISA 720 (Revised). The content of this section may include, among other matters: (a) a description of the auditor's responsibilities with respect to other information; (b) identification of the document(s) available at the date of the auditor's report that contain the other information to which the auditor's responsibilities apply; (c) a statement addressing the outcome of the auditor's work on the other information; and (d) a statement that the auditor has not audited or reviewed the other information and, accordingly, does not express an audit opinion or a review conclusion on it.]*

**Responsibilities of [Management[4] and Those Charged with Governance or other appropriate terms] for the Consolidated Financial Statements**

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with IFRSs,[5] and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error. [*Those charged with governance*] are responsible for overseeing the Group's financial reporting process. (see Question 13)

**Auditor's Responsibilities for the Audit of the Consolidated Financial Statements** (see Question 13)

The objectives of our audit are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

*The remaining material in this section can be located in an Appendix to the auditor's report (see paragraph 39 of proposed ISA 700 (Revised)). When law, regulation or national auditing standards expressly permits, reference can be made to a website of an appropriate authority that contains the description of the auditor's responsibilities, rather than including this material in the auditor's report (see paragraph 40 of proposed ISA 700 (Revised)).*

[4] Throughout the illustrative auditor's reports in the Proposed ISAs, the term management may need to be replaced by another term that is appropriate in the context of the legal framework in the particular jurisdiction. For example, those charged with governance, rather than management, may have these responsibilities.

[5] Where management's responsibility is to prepare financial statements that give a true and fair view, this may read: "Management is responsible for the preparation of consolidated financial statements that give a true and fair view in accordance with IFRSs, and for such ..."

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional skepticism throughout the planning and performance of the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.[6]
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Evaluate the overall presentation, structure and content of the consolidated financial statements, including the disclosures, and whether the consolidated financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities and business activities within the group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We are required to communicate with [*those charged with governance*] regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We are also required to provide [*those charged with governance*] with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

**Report on Other Legal and Regulatory Requirements**

[*The form and content of this section of the auditor's report would vary depending on the nature of the auditor's other reporting responsibilities prescribed by local law, regulation, or national auditing standards. Depending on the matters addressed by other law, regulation or national auditing standards, national standard setters may choose to combine reporting on these matters with reporting as required by the ISAs (shown in the Report on the Audit of the Consolidated Financial Statements section), with wording in the auditor's report that clearly distinguishes between reporting required by the ISAs and other reporting required by law or regulation.* (see Question 13)]

The engagement partner responsible for the audit resulting in this independent auditor's report is [*name*]. (see Question 12)

[*Signature in the name of the audit firm, the personal name of the auditor, or both, as appropriate for the particular jurisdiction*]

[*Auditor Address*]

[*Date*]

[6] This sentence would be modified, as appropriate, in circumstances when the auditor also has responsibility to issue an opinion on the effectiveness of internal control in conjunction with the audit of the consolidated financial statements.

**Appendix 2**

Wording of the auditor's report used for the ISA 700
[*KAM negative/KAM positive*] group
[Format differs from case material; accentuation for illustration purposes only]

INDEPENDENT AUDITOR'S REPORT

[Appropriate Addressee]

Report on the Financial Statements
We have audited the accompanying financial statements of the Alpha Group, which comprise the statement of financial position as at December 31, 2012, and the statement of comprehensive income, statement of changes in equity and statement of cash flows for the year then ended, and a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Financial Statements
Management is responsible for the preparation and fair presentation of these financial statements in accordance with International Financial Reporting Standards, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility
Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with International Standards on Auditing. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion
In our opinion, the financial statements present fairly, in all material respects, the financial position of Alpha Group as at December 31, 2012, and its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards.

*Key Audit Matters*
*Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated financial statements. Key audit matters are selected from the matters communicated with those charged with governance, but are not intended to represent all matters that were discussed with them. Our audit procedures relating to these matters were designed in the context of our audit of the consolidated financial statements as a whole. Our opinion on the consolidated financial statements is not modified with respect to any of the key audit matters described below, and we do not express an opinion on these individual matters.*

*Goodwill*
*Under IFRSs, the Alpha Group is required to annually test the amount of goodwill for impairment. This annual impairment test was significant to our audit because the assessment process is complex and highly judgmental and is based on assumptions that are affected by expected future market or economic conditions, particularly those in Europe. As a result, our audit procedures included, among others, using a valuation expert to assist us in evaluating the assumptions and methodologies used by the Alpha Group, in particular those relating to the forecasted revenue growth and profit margins for the cash generating units Beta AG and Gamma GmbH. We also focused on the adequacy of the Alpha Group's disclosures about those assumptions to which the outcome of the impairment test is most sensitive, that is, those that have the most significant effect on the determination of the recoverable amount of goodwill.*

*[KAM negative]*
*Already small changes in the key assumptions used (see Alpha Group's disclosures about goodwill in Note 1) could give rise to an impairment of the goodwill balance in the future.*

*[KAM positive]*
*Only large changes in the key assumptions used (see Alpha Group's disclosures about goodwill in Note 1) could give rise to an impairment of the goodwill balance in the future.*

**PCAOB Rulemaking Docket Matter No. 034:** ***Proposed Auditing Standard - The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards***

Dear Ms. Secretary:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or the "Board") Release No. 2016-003, *Proposed Auditing Standard - The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* (the "Proposed Standard" and "Proposed Amendments," respectively, and collectively the "Reproposal").

The Board has requested public comment on the Reproposal, which is intended to improve the auditor's report. Overall, we support the Board's initiatives to increase the relevance and usefulness of the auditor's report and reduce the information asymmetry between investors and auditors.

**Overview**

We continue to support the PCAOB's objectives of enhancing the form and content of the auditor's report to make it more relevant and informative to investors and other financial statement users. Consistent with our comment letter dated December 11, 2013 on PCAOB Release No. 2013-005, *Proposed Auditing Standards - The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* (the "Prior Proposal"), we remain in agreement with the Board that requiring communication of critical audit matters ("CAMs") in the auditor's report would be an effective way to inform investors and other financial statement users of the matters arising from the audit that are of most interest to them, specifically those matters involving especially challenging, subjective, or complex auditor judgment.

In addition, we commend the PCAOB for many of the revisions it made to the Prior Proposal that are now reflected in the Reproposal. Specifically, we concur with the following requirements of the Reproposal:

- Limiting the source of potential CAMs (see additional recommendations below under "Additional Guidance");
- Adding a materiality component to the definition of CAMs;
- Narrowing the definition of CAMs to only those matters that involved especially challenging, subjective, or complex auditor judgment; and
- Clarifying that CAMs would not be expected to provide original information about the company (see additional recommendation below under "Original Information").

We also believe that there are additional enhancements the PCAOB should consider to improve investors' knowledge and understanding of the auditor's report. Therefore, we request the PCAOB consider revisions to the Reproposal related to (1) how the CAM was addressed in the audit, and (2) adding clarifying language to the auditor's report. Furthermore, we believe these proposed enhancements would have the added benefit of reducing the risk of unwarranted litigation.

We continue to disagree with the Board's view that disclosure of auditor tenure within the auditor's report provides meaningful or relevant information to investors and other users of the financial statements.

Lastly, we offer our views with respect to applicability and the effective date of a final standard, as well as an editorial comment.

**Communication in the Auditor's Report**

***How the CAM was Addressed in the Audit***

We agree with the PCAOB's revisions to include a requirement that auditors must describe how the CAM was addressed in the audit, and we support the overall non-prescriptive nature of the requirement. In our comment letter on the Prior Proposal, we recommended that the PCAOB develop guidance concerning the auditor's communication about how the CAM was addressed in the audit (the language used in our prior comment letter was "the CAM's effect on the audit").[1] We had suggested that the guidance should indicate that the description of the effect on the audit should be: (1) a brief, high-level summary of the key audit procedures performed (e.g., the auditor's response to the risk of material misstatement identified in the CAM) to address the principal considerations that led the auditor to conclude that a matter is a CAM; (2) focused only on those assertions (e.g., completeness, valuation) that resulted in the matter being communicated as a CAM; and (3) focused on the most significant assumptions or estimates, if applicable, affecting such assertions.

The Board included the following on page 31 of the Reproposal, which we believe is relatively consistent with the recommendation in our prior comment letter:

---

[1] KPMG comment letter on the Prior Proposal, December 11, 2013, at 7.

> [I]n describing how the critical audit matter was addressed in the audit, the auditor may describe: (1) the auditor's response or approach that was most relevant to the matter; (2) a brief overview of procedures performed; (3) an indication of the outcome of the auditor's procedures; and (4) key observations with respect to the matter, or some combination of these elements.

While these elements would not be required, they do provide specific guidance on what type of information the Board is seeking for auditors to disclose regarding the CAM in order to meet the requirement of describing how the CAM was addressed in the audit. We therefore recommend that the Board include such guidance directly in the final standard, as opposed to it being in the release text.

***Clarifying Language in the Auditor's Report***

We agree with the Board with respect to the need to make clear that the disclosure of a CAM and the related audit procedures does not provide any assurance as to any particular line item in the company's financial statements. In the Prior Proposal, the Board raised a concern that investors would read the disclosure of a CAM and related audit procedures as providing such assurance. While we appreciate the Board's efforts to respond to this concern, we believe the risk of misunderstanding still exists.

Supporting the concern that investors may misinterpret the auditor's report and indicating the need for such clarifying language are the results of a study that surveyed professional and nonprofessional investors. The study found that "professionals are more likely than nonprofessionals to correctly identify which 10-K components are audited," and, further, that many investors in both groups believe that unaudited information is, in fact, audited.[2] While the study focused on understanding the level of assurance investors believe exists on various forms of financial information, including the Form 10-K and company websites, it indicates the average investor (nonprofessional) may not be fully knowledgeable of the extent and nature of the content of the auditor's report, including the auditor's responsibilities. This is demonstrated by the fact that participants believed information outside of the financial statements was audited, despite the fact that the auditor's report (detailing the scope of the audit) was provided to and accessed (via online tracking) by the participants in the study. The intent of the study was not to suggest that auditor responsibilities should be expanded to include providing assurance on Management's Discussion and Analysis of Financial Condition and Results of Operations or financial information on a company's website, but rather the study illustrates that more information is required to educate investors on the roles and responsibilities of the auditor as it relates to a company's financial information. We believe including additional clarifying language in the auditor's report is the most efficient and effective approach to address this issue.

---

[2] Jean C. Bedard, Steve G. Sutton, Vicky Arnold, and Jillian R. Phillips, *Another Piece of the "Expectations Gap": What Do Investors Know About Auditor Involvement with Information in the Annual Report?*, American Accounting Association, January 2012, at A17.

For these reasons, we continue to have a concern that the description of audit procedures will be read by investors as a form of assurance about the results of the auditor's procedures. While the auditor's report appropriately disclaims any line-item opinion, an investor may well read the description of audit procedures as an implicit assertion that all of the audit evidence obtained from each of these procedures supported the reported amount. In fact, some procedures might have produced results that varied from the company's judgments, or even disconfirming evidence, that the auditor considered. As evidenced in the research study cited above, investors' understanding of language and concepts within an auditor's report is not always consistent with the auditor's intent. We believe this risk of misunderstanding can be mitigated, however, by including an explicit statement that the description of such procedures should not be taken as being indicative of the results of any individual procedure, but instead the auditor considered the totality of audit evidence provided by all such procedures.

Further, as mentioned in our comment letter on the Prior Proposal, we continue to believe the following previously suggested elements should be included in the auditor's report in order to narrow the expectation gap of investors:

- Stating in the basis of opinion paragraph that the procedures performed and the audit evidence obtained provide a reasonable basis for the opinion;
- Highlighting that references to the financial statements throughout the auditor's report relate to the financial statements taken as a whole;
- Providing an expanded discussion of the responsibilities of management and the audit committee with respect to the financial statements;
- Describing the meaning of reasonable assurance in the context of the basis for the auditor's opinion; and
- Highlighting the necessity of using professional judgment in making audit risk assessments and in the selection of audit procedures, and the consideration the auditor gives to the company's internal control over financial reporting when making such determinations, as well as highlighting the auditor's use of professional skepticism throughout the audit.

As noted in another research paper, in order for the auditor's report "to have optimal value it is important that auditors and users have a shared meaning of the responsibilities and limitations of the audit function ... and of technical terms used in the report such as … 'reasonable assurance' ...."[3] This research paper noted that readers may interpret the same text differently due to their individual backgrounds, motives, wishes, etc., and because of that there is "room to misunderstand, ignore, or selectively interpret the intentions of standard setters who prescribed the language in the [standard auditor's report]."[4] This was supported by the results of the

[3] Stephen K. Asare and Arnold Wright, *Investors', Auditors', and Lenders' Understanding of the Message Conveyed by the Standard Audit Report*, American Accounting Association, September 2009, at 22.

[4] *Id*. at 8.

research performed, which found that the "objectives and limitations of the [standard auditor's report] are not well understood or alternatively users and issuers have little shared meaning."[5] The study suggests the gap between users (e.g., lenders and investors) and auditors could be reduced through clarifying language in the auditor's report, which supports our recommendation above to expand the auditor's report to include additional clarifying language.

In addition, we encourage the PCAOB to work with other regulators to educate investors concerning the audit committee's responsibilities with respect to the financial statements by way of an expanded auditor's report. Expanding the discussion of the responsibilities of auditors versus management and the audit committee in the auditor's report would be beneficial, since evidence exists that investors do not fully understand the role of those charged with governance. This is also supported by a survey of investment professionals that found "[m]any interviewees [investment professionals] have never talked with an audit committee member and don't fully understand what they do."[6] A similar theme was also present at the Audit Committee Leadership Summit that was held in March 2013, where it was recognized that "…many investors would benefit from a more robust understanding of what the public company audit committee does and how it oversees the external audit firm and performs its other responsibilities."[7] This insufficient level of understanding may diminish investor confidence concerning audit committees, which serve as an important element in the financial reporting process (along with management and the auditors). Expanding the auditor's report to include a description of the responsibilities of the audit committee (and management) with respect to the financial statements may contribute to a greater understanding of the role of the audit committees and thereby benefit investors in their investment decisions. Such action would also align with the Securities and Exchange Commission's ("SEC") current exploratory project to increase investor knowledge through additional required audit committee disclosures,[8] with such disclosures focusing on an audit committee's oversight of the work of the external auditor, among other responsibilities, and which may include discussion and review by the audit committee of CAMs disclosed in the auditor's report. Further, while it seems any potential additional audit committee disclosures required by the SEC would be aimed at informing investors about *how* the audit committee carries out its responsibilities, such disclosures, coupled with an expansion of the auditor's report that describes the audit committee's responsibilities with respect to the financial statements, would significantly increase an investor's understanding and ability to make informed investment decisions.

We disagree with the Board's statement on page 52 of the Reproposal that "[s]ince it may not be practical to describe these elements concisely, adding these to the auditor's report would

[8] Securities and Exchange Commission Release No. 33-9862, *Possible Revisions to Audit Committee Disclosures*, July 1, 2015.

unnecessarily lengthen it without providing additional useful information to investors." Investors are responsible for understanding the financial statements and the notes therein when making investment decisions. We believe that our suggestions will help investors better understand the financial statements.

As evidenced above, the additional suggested elements are demonstrably relevant and informative to investors. The additional length to the auditor's report that would result from incorporating these elements is insignificant when compared to the value gained by the investment community, and therefore we strongly encourage the Board to reconsider its position.

***Original Information***

As noted in our comment letter on the Prior Proposal, one of the overarching principles for consideration when developing possible areas of the auditor's reporting model for further evaluation was that auditors should not be the original source of information about the company. We stated in that comment letter that we believe the auditor should be precluded from communicating any original information, except in those rare (emphasis added) situations where, in the auditor's judgment, the communication of such original information is necessary to the auditor's description of the CAM. We continue to believe that this is the appropriate approach, as management is the party that should be responsible – in almost all situations – for assessing and determining what information should be disclosed in accordance with the applicable rules and regulations.

We observed that Note 2 of paragraph 14 of the Proposed Standard states that "the auditor is not expected to provide information about the company that has not been made publicly available by the company unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit." We are concerned that the phrasing used in the Proposed Standard may lead auditors to disclose original information in situations not intended by the Board. For example, it is not unusual for allegations of misconduct to be made against an officer or director, reported to the audit committee, and investigated. Such allegations may prove unsubstantiated. Under the Proposed Standard, an auditor might nonetheless feel compelled to disclose the investigation as a CAM. We believe that such disclosure is likely to create confusion for investors and embarrassment for the parties involved, and was not the result intended by the Board. Furthermore, as it relates to this specific example, the SEC has issued rules that govern when such matters should be disclosed by the auditor, such as under Section 10A of the Securities Exchange Act of 1934, and no evidence exists that would indicate that the SEC's rules are ineffective or should be expanded (implicitly or explicitly) by the PCAOB. We imagine there are other situations where the auditor may feel compelled to disclose a matter as a CAM even though the company has no legal or regulatory obligation to do so. Accordingly, we request that the Board provide additional guidance to make clear that situations where the auditor would be expected to convey original information would be rare.

**Additional Guidance**

The Board's Reproposal makes strides toward reducing undue litigation risk, and we appreciate the Board's efforts in that regard. While we support the efforts thus far, we continue to believe that some of the language in the Reproposal could be misused in a litigation context. A matter may appear critical to investors in hindsight merely because it resulted in losses. In such a circumstance, the claim that the matter should have been a CAM, or that a CAM should have had more disclosure, is easily made, whether it is sincere or merely an effort to seek damages not justified by the circumstances. We believe clarification of the Reproposal as suggested below would help reduce the potential for abuse, while at the same time clarifying the intent of the Reproposal and furthering the goals of the Board.

The Reproposal includes in the definition of a CAM matters actually communicated to the audit committee, even if not required. As currently written, the Reproposal is unclear as to what kind of communication would fall into that category. For example, if a matter is included on a slide as background or mentioned in response to a question, is that sufficient to include the matter in the universe of possible CAMs? If simply mentioning a subject to the audit committee could potentially trigger the disclosure requirement, thus exposing the auditor to liability, the Reproposal may act as an incentive to limit discussion to required matters. Moreover, the Reproposal is not clear what benefit investors gain from such matters being included as CAMs, since they are (by definition) those that are not considered necessary to communicate. Therefore, we believe that CAMs should only be drawn from those matters *required* to be communicated to the audit committee.

Additional illustrative guidance about what constitutes a CAM, and what *does not* constitute a CAM, would be helpful in a number of ways. Given a similar fact pattern involving challenging, subjective, or complex auditor judgment, auditors may reach disparate conclusions about whether a CAM exists and is required to be communicated. In this context, it would also be helpful to have illustrative guidance about the number of CAMs auditors should typically expect to communicate. We do not suggest that the Reproposal be modified to set a fixed minimum or maximum, but such guidance would help set expectations for both investors and auditors. Additionally, the examples provided in the Reproposal only pertain to the communication of CAMs that relate to financial statement accounts and not to disclosures. Additional guidance as to what a communication of a CAM related to disclosures would look like would be beneficial to investors and auditors. This guidance also would be helpful to courts and other tribunals trying to distinguish those matters that involved the "most" difficult or complex issues from those that appear critical only in hindsight.

Further, we have some uncertainty about what the Board means by a matter that "relates to" accounts or disclosures that are material to the financial statements. In other contexts, such as civil litigation, the phrase "relates to" can be read broadly. For example, revenue presumably will be a material account in a financial statement. Any matter that is tangentially related to revenue therefore "relates to" a material account, no matter how small the individual matter. Indeed, it may prove difficult to identify anything that would not "relate to" a material account or disclosure. Our belief is that the matter itself should have significance. Therefore, to remove the potential for misinterpretation or misuse, particularly in the context of litigation, we propose the Board remove the phrase "relates to accounts or disclosure matters that" from paragraph 11 of the Proposed Standard.

When reviewing the recommendations above, we request the Board consider the result of an academic research project that studied the impact on an auditor's litigation exposure when the disclosure of an issue is more subjective versus more objective. That study looked at increased disclosures similar to the Reproposal, although related to the auditor's report on internal control.[9] It found that when a disclosure proved to be in error, auditors are attributed more blame when the situation is subjective. Moreover, that result was seen despite warnings about the risks and uncertainties of the matter. This result suggests that "in subjective situations, auditors must consider that their liability exposure is heightened solely due to the characteristics of the situation itself (not necessarily their actions)."[10] This result provides support for the clarifications discussed above, and the Board should continue to consider the potential for significant liability exposure when finalizing the standard.

**Tenure**

As discussed on page 49 of the Reproposal, academic research is mixed as to the relationship, if any, between auditor tenure and audit quality. In addition, neither the International Auditing and Assurance Standards Board nor the Financial Reporting Council in the United Kingdom require auditor tenure disclosures. As such, we continue to disagree with the Board's proposed requirement to disclose auditor tenure in the auditor's report, since including it may give a false impression to a reader of the auditor's report that there is a correlation between auditor tenure and audit quality. If the Board believes this information is necessary to meet its objective of assisting investors to make better-informed investment decisions, then we would recommend that the Board modify its Form AP to provide for the disclosure of such information.

**Applicability and Effective Date**

***Applicability***

We agree with the Board's decision to exclude the auditors of certain entities (specifically, broker dealers, investment companies other than business development companies, and benefit plans) from the requirements to determine, communicate, and document CAMs. As noted in our comment letter on the Prior Proposal, benefit plans and investment companies are: (1) designed

---

[9] Jillian Phillips, *Do Audit Report Disclosures Lead to Increased Liability Exposure? An Investigation of Jurors' Consideration of Auditors' Disclosure of Significant Deficiencies in Internal Control*, March 27, 2015, at 3, http://ssrn.com/abstract=2586128.

[10] *Id*. at 23.

for a specific purpose and, as a result, would likely have similar CAMs; and (2) inherently less complex and entail fewer estimates and judgments. In addition, the ownership of broker dealers is primarily closely held, and the direct owners are generally part of the entity's management. Therefore, the information needs of these individuals would typically be different from those of an investor. With respect to emerging growth companies ("EGCs"), we continue to believe that the requirements related to CAMs should be applicable to the auditors of EGCs, and therefore recommend that no exemption from the final standard be provided.

***Effective Date***

With respect to implementing a final standard, auditing firms will need to ensure that their professional staff are adequately trained on the standard. An even more time consuming task will be the implementation of effective quality control processes, so that an auditing firm has a high degree of assurance that the determination and communication of CAMs are: (1) being done in a manner that is useful and meaningful to the users of the financial statements; and (2) in compliance with the requirements of the final standard. To provide adequate time for auditing firms to train their professionals and put in place the necessary processes to meet the above objectives, we would recommend that the effective date of the final standard be no earlier than two years after final approval of the standard by the SEC. In addition, we believe a phased implementation approach would benefit not only auditing firms but investors, so that they can become accustomed to the changes in the auditor's report. Therefore, we recommend that the final standard be applicable to large accelerated filers in the first year that it is effective, followed by all other filers in subsequent years.

**Editorial Comment**

Paragraph .01 of AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances*, on page A2-7 of the Proposed Amendments, reflects various revisions. In the second sentence of that paragraph, the word "section" was replaced by "standard"; however a similar revision was not made in the third sentence.

* * * * * * * * *

We appreciate the Board's careful consideration of our comments and observations, and support the Board's efforts to update current standards for the auditor's report by enhancing its form and content to make the information it provides more relevant and informative to investors and other financial statement users. If you have any questions regarding our comments included in this letter, please do not hesitate to contact George Herrmann ((212) 909-5779 or gherrmann@kpmg.com) or Rob Chevalier ((212) 909-5067 or rchevalier@kpmg.com).

Very truly yours,

KPMG LLP

MFS Investment Management (MFS) and the Audit Committee of the MFS Funds Board appreciate the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or the "Board") Proposed Auditing Standard entitled *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* (the "Proposed Standard"). Our comments relate to the Proposed Standard's application to U.S. Securities & Exchange Commission (SEC) registered investment companies as issuers of financial statements and are consistent with our comments on PCAOB Release No. 2013-005[1] (the "2013 Comment Letter").

Background on MFS and the Industry[2]

MFS is a global asset management firm registered under the Investment Advisers Act of 1940, as amended, that provides investment management services to clients. MFS provides investment advisory and administrative services to 135 investment companies (the "MFS Funds") registered under the Investment Company Act of 1940, as amended (the “1940 Act”), and supervised by the MFS Funds Board, which in total represent approximately $207 billion in assets. MFS is a majority owned subsidiary of Sun Life Canada (U.S.) Financial Services Holdings, Inc., which in turn is an indirect majority owned subsidiary of Sun Life Financial, Inc. (a diversified financial services organization). MFS has been a subsidiary of Sun Life since 1982. As of June 30, 2016, MFS managed approximately $425 billion in assets.

From an industry perspective, U.S. investment companies are responsible for the investment of over $18.1 trillion; open-end investment companies ("mutual funds"), which are owned by an estimated 93 million shareholders, represent approximately 90% of those assets. There are roughly 9,500 mutual funds, 600 closed-end funds and 1,600 exchange-traded funds, each of which is subject to an annual audit requirement and oversight by the PCAOB and SEC. As is the case with most registered investment companies, the MFS Funds have no employees of their own and their operations are carried out by various affiliated entities (e.g., the investment advisor, the administrator, the transfer agent and the distributor) and unaffiliated service providers (e.g., the custodian and the fund accounting agent) under the oversight of the MFS Funds' Board of Trustees.

1 MFS and the Audit Committee of the MFS Funds Board filed a joint comment letter dated December 10, 2013 on the PCAOB Release No. 2013-005, *Proposed Auditing Standards on The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*.

2 Industry statistics as of December 31, 2015 per the *2016 Investment Company Institute Industry Fact Book*.

Overview of the Proposed Standard
A follow-up to PCAOB Release No. 2013-005 (the "2013 Proposal"), the Proposed Standard seeks to increase the relevance, usefulness and informational value of the auditor's report by:

- Standardizing the format and required elements of the auditor's report, including the reporting of audit firm tenure;
- Clarifying the auditor's responsibility with respect to fraud, independence, and the notes to the financial statements; and
- Requiring the auditor to include more information in the form of "critical audit matters" (CAM) on areas of the audit that were especially challenging, subjective or complex.

As discussed below, MFS and the MFS Funds Board Audit Committee understand and support the PCAOB's intent to increase the value of the auditor's report. We applaud the PCAOB's decision to exempt registered investment companies[3] (other than business development companies) from the requirement to report CAM and, with the notable exception of audit firm tenure reporting, we strongly support the proposed clarifications and changes to the auditor's report outlined in the Proposed Standard. Although we continue to express strong reservations with regard to the reporting of audit firm tenure in the auditor's report, we are encouraged by the PCAOB's willingness to consider other alternatives, such as disclosing tenure on PCAOB Form AP[4], if tenure reporting is ultimately required.

Format of the Auditor's Report
The Proposed Standard establishes a standard format for the auditor's report in an effort to more effectively communicate key messages and enhance comparability between entities. Under that standard format, the opinion paragraph would be the first paragraph of the report and standard headers would be required for each of the report's various sections. The Proposed Standard also would require the use of standard addressees, in that the auditor's report must be addressed to the entity's investors and its board of directors or equivalent body in addition to any additional, optional addressees. We believe that investors would benefit from these changes and we fully support these efforts to standardize the format of the auditor's report.

Independence, Fraud and the Financial Statement Notes
Under the Proposed Standard, the auditor's report would be modified to include a statement that the auditor is registered with the PCAOB and is required to be independent. The language in the auditor's report also would be enhanced to better articulate the auditor's responsibility for fraud and the notes to the financial statements. We believe that these enhancements to the auditor's report will clarify existing auditor requirements and responsibilities in these areas for investors and, as such, we fully support the PCAOB's proposed clarifications.

Critical Audit Matters (CAM)
CAM as defined by the Proposed Standard would be any matter arising from an audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex auditor judgment. Under the Proposed Standard, the auditor would be required to communicate in a separate section of the auditor's report any CAM that it identified during the audit of the current period's financial statements.

[3] Investment companies registered under the 1940 Act.
[4] PCAOB Form AP, *Auditor Reporting of Certain Audit Participants*.

Based on the feedback received on the 2013 Proposal, the Proposed Standard would exempt certain industries, including registered investment companies (other than business development companies) from the requirement to report CAM in their auditor's report. We strongly support the proposed exemption of registered investment companies and, in response to question #37 of the Proposed Standard, we believe that this exemption is entirely appropriate. As discussed in the Proposed Standard and expanded upon below, there are a number of factors unique to registered investment companies in terms of their structure, their purpose, and their regulatory reporting requirements that render the concept of CAM disclosure unnecessary for the industry.

*Structure and Purpose*

Pursuant to Section 3(a)(1) of the 1940 Act, an investment company refers, in pertinent part, to any issue that “is or holds itself out as being engaged primarily, or proposes to engage primarily, in the business of investing, reinvesting or trading in securities”. Given that an investment company's primary business is investing, investment valuation would presumably meet the definition of a CAM in that it is an audit area for which the results are generally communicated to the audit committee and the related amounts are both material to the financial statements and likely to be subject to auditor judgment. Generally a registered investment company's investments represent almost 100% of its net assets, so in most circumstances it is likely that investment valuation would be the only CAM identified in a registered investment company audit. Given that a registered investment company's investment objective - and the types and the relative mix of investments held by the fund – generally would not change significantly from one reporting period to another, it is unlikely that the details of an investment valuation CAM would change much from audit to audit. As such, information conveyed in the valuation CAM would become boilerplate over time with the result that any investment decision-making relevance it might have to investors would be greatly diminished.

Additionally, we believe that by calling out investment valuation as a CAM, the auditor would be signaling to investors that there is a valuation issue with the fund, when in fact no problem exists and where significant disclosure is already available for the investor within the notes to the financial statements. Although an auditor in certain circumstances may need to engage the help of a valuation specialist, an auditor who is rendering an unqualified opinion is able to obtain sufficient audit evidence to support management's investment valuations. Furthermore, over the past decade the Financial Accounting Standards Board (FASB) has been very focused on standard setting around fair valuation, with the result that financial statement disclosures for registered investment companies with respect to investment valuation, especially with regard to the assumptions (i.e., valuation approaches, techniques and inputs) used in valuing Level 3 securities[5], are very robust[6]. In an industry where such robust disclosures already exist, we believe that the concept of a CAM is uninformative and unnecessary.

*Regulatory Reporting Requirements*

Conceptually, a CAM is intended to provide more information about the audit, thus making the auditor's report more informative and relevant to investors, presumably with the end result of those investors being able to make better-informed investment decisions. However, as noted by several commenters on the 2013 Proposal, an investor's decision on whether or not to invest in a registered investment company is likely based primarily on a fund's investment objectives, its principal investment strategies and risks, its past performance and its fees and expenses – none of which would normally meet the definition of a

---

[5] One of three levels under the fair value hierarchy prescribed by the Topic 820 *Fair Value Measurement* of the Financial Accounting Standards Board's Accounting Standards Codification.

[6] In 2006 the FASB issued Statement on Financial Accounting Standard No. 157 (FAS 157), *Fair Value Measurement,* which defined “fair value”, established a framework for measuring fair value, and required the disclosure of information related to fair value determinations. A number of related FASB Staff Positions (FSP) were also issued to provide clarifications on FAS 157. Subsequently, the FASB issued Accounting Standards Update (ASU) 2010-06, *Fair Value Measurements and Disclosures (Topic 820)* provides more robust disclosures about (1) the different classes of assets and liabilities measured at fair value, (2) the valuation techniques and inputs used, (3) the activity in Level 3 fair value measurements, and (4) the transfers between Levels 1, 2, and 3. The FASB also issued ASU 2011-04, *Fair Value Measurement (Topic 820)* in which the FASB provided common principles and requirements for measuring fair value and for disclosing information about fair value measurements in accordance with U.S. GAAP and IFRS. Most recently, the FASB has issued Proposed ASU 2015-350, *Fair Value Measurement (Topic 820) – Disclosure Framework – Changes to the Disclosure Requirements for Fair Value Measurement* which would clarify and improve existing fair value disclosure requirements.

CAM. Those data elements which are key to a fund investor's investment decision-making process are all required to be disclosed by a registered investment company in its prospectus, which is updated at least annually. In fact, the SEC advises an investor to request and read a fund's prospectus before investing in a fund[7] and requires funds to provide investors with a prospectus either prior to or upon their purchase of shares. As such, we believe that it is the information in a fund's prospectus, and not CAM, that is integral to a registered investment company investor's decision-making process.

In addition to the requirement of a prospectus that is updated annually, there are a number of other industry-specific regulations – existing and proposed - intended to provide investment company investors with the information necessary to make more informed investment decisions and to reduce the risks of investing in investment companies. The 1940 Act sets forth requirements with respect to an investment company's portfolio diversification, liquidity, leverage and custody of securities with the intent of reducing an investor's risk. We note that registered investment companies are required to file with the SEC their quarterly portfolio holdings. In addition, the SEC's Proposed Rule on *Investment Company Reporting Modernization* would enhance portfolio holding reporting and would require investment companies to report additional information, such as information about their use of securities lending and more information about their investments in derivatives and debt securities. The SEC has also issued another proposed rule to promote effective liquidity risk management and enhance fund liquidity disclosures for open-end registered investment companies[8]. In an industry where a wealth of information is already required to be reported under existing regulations with more inevitably to come from proposed rules, we believe the concept of a CAM is unnecessary for an investment company investor.

*Subjectivity and Costs*

In addition to the arguments expressed above, there are two other reasons why we support the PCAOB's proposal to exempt investment companies from the requirement to report CAM in their auditor's report; those reasons being subjectivity and costs.

As discussed more fully in our 2013 Comment Letter, we believe that the CAM identified in the auditor's report may differ among very similar entities based on the subjective decisions made by different audit teams or firms, with the unintended consequence of negatively impacting the comparability of the entities. This issue of auditor subjectivity is particularly problematic for the investment company industry where, for most of the larger fund complexes, a portion of the funds in the complex are audited by one audit firm while the remainder are audited by a second firm (i.e., a "two audit provider model"). Because each audit firm under the two audit provider model may have different interpretations as to what constitutes CAM, two funds with substantially similar investment objectives and investment strategies, portfolio holdings and investment performance may have differing disclosures regarding CAM. For example, one fund may report more CAM or more reasons for CAM. We believe that such a result may confuse investors in the funds. This concern is magnified when looked at in the context of the auditor's reports for the industry's full universe of competing funds, many of which are audited by different audit teams and firms.

In addition to the increase in audit cost that would inevitably result from the drafting, documentation and review of CAM, the Proposed Standard mentions that investment companies might bear additional costs of applying the CAM requirements as compared to other types of companies. Consistent with other investment company complexes (ICC)[9], the shareholder reports and financial statements for certain MFS Funds (e.g., the MFS target date funds-of-funds) are compiled in one document that contains a single auditor's report covering the audits for that group of MFS Funds. If investment companies were not exempted from the requirement to report CAM, our auditors would have to prepare separate auditor's reports for each of the MFS Funds, thus increasing the typesetting and printing costs borne by the funds' shareholders.

[8] The SEC's proposed rule on *Open-End Fund Liquidity Risk Management Programs; Swing Pricing; Re-Opening of Comment Period for Investment Company Reporting Modernization Release*
[9] SEC Rule 2-01(f)(14)(i) of Regulation S-X defines an investment company complex.

Audit Firm Tenure
Under the Proposed Standard, the auditor's report would be modified to include a statement containing the year that the audit firm began serving consecutively as the entity's auditor. The Proposed Standard clarifies that tenure, with respect to an investment company within an ICC, would be the year that the auditor began serving consecutively as the auditor of any investment company in the ICC. While we appreciate this clarification, we continue to adamantly oppose the requirement to disclose audit firm tenure in the auditor's report.

We believe that disclosing tenure in the auditor's report implies that tenure plays a role in the auditor rendering its opinion on the financial statements. However, as discussed in the Proposed Standard, despite extensive research, no conclusive link has been established between auditor tenure and the quality of the audit in terms of auditor independence, objectivity and professional skepticism. More alarming is the suggestion made in the Proposed Standard that some investors may draw incorrect conclusions about tenure, resulting in negative impacts to a fund in terms of its cost of capital and the time spent by management and the audit committee to dispel these investor misperceptions. Our opposition to the PCAOB's required disclosure of tenure is bolstered by the fact that neither the International Auditing and Assurance Standards Board (IAASB) or the UK's Financial Reporting Council (FRC) has been concerned with establishing a link between audit firm tenure and auditor independence and that neither standard setter requires tenure to be disclosed in the auditor's report.

In the Proposed Standard, the PCAOB asks a number of questions around audit firm tenure including whether it would be more appropriate to disclose auditor tenure in Form AP than in the auditor's report[10]. The PCAOB's recently adopted Form AP is intended to provide investors and financial statement users with information about the partners serving on the audit engagement and about the other accounting firms, if any, involved in the audit. If the PCAOB believes that audit firm tenure must be consistently disclosed for all companies in one publicly-available document, then we would submit that tenure disclosure in Form AP would meet that objective.

Conclusion
MFS and the Audit Committee of the MFS Funds Board appreciate the opportunity to provide comments on the Proposed Standard. We support the PCAOB's overall objectives and its efforts to standardize the format of the auditor's report as well as its proposed clarifications with regard to auditor independence, fraud and the notes to the financial statements. As detailed above, the bulk of our comments are focused on (1) the proposed exemption of registered investment companies (other than business development companies) from the requirement to report CAM in the auditor's report and (2) the proposed requirement to disclose audit firm tenure in the auditor's report. In closing we would like to reiterate that:

- We strongly support the PCAOB's proposed exemption of registered investment companies from the requirement to report CAM in the auditor's report. In addition to our concerns around auditor subjectivity and industry-specific costs, we believe that there are a number of factors unique to registered investment companies in terms of their structure, their purpose, and their regulatory reporting requirements that render the concept of CAM uninformative and unnecessary for the industry.

- We adamantly oppose the PCAOB's proposed requirement to disclose audit firm tenure in the auditor's report and we encourage the PCAOB to consider using public documents (e.g., Form AP) other than the auditor's report for any required disclosure of audit firm tenure, as there is no evidence that tenure has a bearing on the auditor's ability to render an opinion.

Should you have any questions about our comments regarding the Proposed Standard, please feel free to call Bob Uek or Dave DiLorenzo at 617-954-5000.

Many estimates require complex algorithms. Will the auditor have say what analytic approach the used in addressing a critical matter? Just saying "we used a machine learning approach to address..." or "we used a robust statistical approach to address..." is meaningless if we do not know exactly what the auditor did.

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Members and Staff of the PCAOB,

I welcome the opportunity to comment on the Board's Proposing Release No. 2016-003 regarding the standard form audit report (Docket Matter No. 034). The topic is vitally important to the quality of auditing and the utility of financial reporting. In my view, it is the most important standard setting initiative the Board has undertaken.

My views of the subject arise from a career of legal and executive responsibility for varied aspects of financial reporting and auditing, including 23 years as global Chief Legal Officer of major accounting networks and 15 years as Chairman or C-suite officer of the principal insurers of accountancy, legal practice and corporate directors. I was an active participant in the Cohen, Treadway and early COSO commissions, and in the counterpart initiatives conducted in Europe from 1990 to 2010. I was a member of ACAP and currently serve on the PCAOB Standing Advisory Group. The views I express are my own, free of constituency influence or known bias.

A brief look back is needed to see the importance of the Board's proposal in the context of capital market conditions and policy debates. The US capital markets, and financial reporting by US companies, were relatively calm and orderly following World War II, until storms of financial fraud and the emergence of class actions put legal liability into the forefront of driving factors. Those events of fifty years ago shook confidence in the capital markets, triggered the formation of what has become the FASB, launched SEC enforcement actions as the de facto audit regulator and introduced securities liability litigation as a strategic force in investment management and regulatory policy.

The turmoil of the time was addressed collegially (as measured by current conditions) through the public-private collaborations of the Cohen and Treadway Commissions of the 1970s and 1980s. The Cohen Commission Report was admirably comprehensive and perceptive, articulating the fact that liability litigation was the new elephant in the marketplace and endorsing auditing as the principle resource for taming it. The report identified fraud as the central regulatory challenge and anointed "the expectations gap" as the most difficult reporting and auditing challenge. Under the heading REGULATING THE PROFESSION TO MAINTAIN THE QUALITY OF AUDIT PRACTICE the Cohen report framed the issues, identified the challenges and outlined the regulatory options that have guided securities law and regulation since 1977.

We are forty years on, however, and still seeking the fix for the expectations gap and the keys to sustainable market stability. Fraud is still the driver of trouble, and audit is still the best tool in the kit. But, despite admirable efforts that have added disciplines to financial reporting and improved audit quality, the underlying challenges remain while the collegiality of the effort and the quality of discourse has deteriorated. Those were the realities that prompted Treasury Secretary Paulson to convene the Advisory Committee on the Audit Profession (ACAP) as the most ambitious and collaborative search for solutions yet undertaken.

ACAP's 2008 Final Report made many valuable contributions on important aspects of audit capabilities and regulatory objectives. But with regard to the vexing issues of the expectations gap and audit liability it was only partly successful. The Committee gathered the deepest resource of public and non-public information ever assembled about liability conditions and consequences. But its intense deliberations over the appropriate professional and regulatory responses produced a passionate division that could not be bridged within the Committee's mandate and timetable. Consequently, ACAP recommended by consensus that the PCAOB take over the effort. Its report provided a carefully detailed roadmap of the agreements and the conflicting conclusions it had reached.

Release No. 2016-003, and the PCAOB's initial proposal of 2013, is the first PCAOB initiative to date that deals with ACAP recommendations concerning audit capabilities and liability as a regulatory issue. It is thus an important step directly on the subject, and of broader consequence because several pending audit standard setting proposals take a position on the effect of litigation without having studied its properties.

The Release declares that the Board is responding to the ACAP Recommendation, and also to the Cohen and Treadway reports. It suggests that the Proposal is directly and fully responsive to ACAP, whose position the Board describes as follows:

> "ACAP recommended that the PCAOB consider improvements to the auditor's report, noting that the increasing complexity of global business operations compels a growing use of judgments and estimates, including those related to fair value measurements, and also contributes to greater complexity in global financial reporting." (Release No. 2016-003, at page 6)

While that is the head note of Recommendation 5, the essence of the Recommendation and ACAP's reasoning are summarized at the conclusion of that section of the report:

> "The Committee therefore recommends that the PCAOB address these issues, both long-debated and increasingly important given the use of judgments and 2. estimates, by undertaking a standard setting initiative to consider improvements to the auditor's reporting model. With regards to this initiative, the PCAOB should consult with investors, other financial statement users, auditing firms, public companies, academics, other market participants, and other state, federal and foreign regulators. In view of the desirability of improving the quality of financial reporting and auditing on a global basis, the PCAOB should also consider the developments in foreign jurisdictions that improve the quality and content of the auditors report and should consult with international regulatory bodies as appropriate. **The PCAOB should also take cognizance of the proposal's potential legal ramifications, if any, to the auditors.**
>
> "Commentary has also suggested that the auditors must more effectively communicate their responsibility regarding fraud detection with investors and capital markets. The Committee agrees with this suggestion. Accordingly, the Committee believes that the auditor's role and limitations in detecting fraud. The Committee believes that expressly communicating to investors, other financial statement users, and the public the role of auditors in finding and reporting fraud would help narrow the "expectations gap."
>
> "In addition, the Committee recommends that the PCAOB and the SEC clarify in the auditor's report the auditor's role and limitations in detecting fraud under current auditing standards. **In addition, the Committee recommends, in light of the continuing "expectations gap," that the PCAOB review the auditing standards governing fraud detection and fraud reporting. Specifically, the Committee recommends that the PCAOB periodically review and update these standards."** (ACAP Final Report, at pp VII:17-18. Emphasis added)

I am dismayed by the narrow scope of the PCAOB's uptake of the ACAP recommendation. In 2011 the Board announced that it planned to initiate, in the near future, the collaborative fraud study recommended by ACAP. By 2013 that intention had been transformed into a plan to have the Board and staff perform the study without external participation. For the past three years there has been no sign of a continuing intention to do so. It appears that the Proposal for modification of the auditors reporting model is the extent of the Board's intended response to the ACAP Recommendation 5.

The need for attention to financial fraud, expectations gaps and liability consequences has not declined since the ACAP report. On the contrary, the data and analytic competencies that have emerged since 2008 have enabled a new landscape of audit initiatives that deserve more rather than less thoughtful regulatory attention.

Release 2016-003 proposes one fraud related change to the wording of the auditor's standard form report. Existing standard's require assurance that the examined financial statements are free of material misstatement. The Board proposes that this should be clarified by noting that the assurance applies whether material misrepresentation might have been "caused by error or fraud."

As a change of wording, but not of meaning, that must surely be appropriate. But it does not address the fundamental issues raised by Cohen and Treadway of the need to clarify what can be professionally and legally expected of auditors in relation to collusive financial fraud, nor does it attempt to deal with the expectations gap and liability consequences that were of central concern to ACAP.

Nevertheless, the proposal to add "error or fraud" generated considerable attention when it first appeared in 2013. Under the heading "Liability Considerations Related to Critical Audit Matters," Release 2016-003 provides a summary of the comments received that were concerned with the potential for adverse liability consequences of the proposed change, the five paragraphs of which begin as follows:

> "The potential for increased auditor liability was cited as a concern by a number of commentators…"
>
> "Some commenters raised more specific liability concerns about critical audit matters…"
>
> " Other commenters claimed that the fact-specific nature of critical audit matters or of certain potential elements of the description of critical audit matters, such as the audit procedures used, would make it difficult to obtain early dismissal of claims…"
>
> "Several commenters highlighted the proposed requirement to document the auditor's determination that a matter was not a critical audit matter as increasing litigation risk with respect to such matters…"
>
> "Some commenters argued that critical audit matters could also increase litigation risk for companies as well as the auditor because the new statements required of the auditor could form a basis for new legal claims, and plaintiffs may attempt to use critical audit matters as a "road map" for litigation against the company." (Release, pages 40-42. The number of concerned commenters was not disclosed.)

By contrast, the entirety of opposing views is described this way:

> "On the other hand, one commenter asserted that communicating critical audit matters conceptually could decrease auditor and company legal exposure when the accounting in the areas of the critical audit matters is

> subsequently challenged, because the communication of critical audit matters is about disclosure of risks and challenges. The commenter further stated that the communication of such matters would be more problematic from a litigation point of view."

The meaning of that comment is less than self-evident. But it does seem clear that it was the sole voice of attempted comfort.

The Release concludes that the liability commentaries did not constitute a reason to reconsider "whether through error or fraud" was appropriate because the Board had modified the proposed CAM terms of implementation. The proposal does not explain how this conclusion was reached, nor does it attempt to address the core question of fraud and its impact on auditing.

ACAP developed a comprehensive platform of information and opinions on these issues, the most extensive and candid effort to date and one not easily recreated. It is a ready resource and starting point for the PCAOB to assess audit liability risks and their public interest consequences. Despite its deep divisions of opinion, the members of ACAP (with a single dissent) agreed on much of the factual underpinnings of the liability debate, specifically including the following:

- At the 2008 report date, the six largest US audit firms were defending a combined total of 90 malpractice suits seeking in excess of $100 million. Of those, 27 claims alleged shareholder losses of more than $1 billion and 7 claimed damages in excess of $10 billion. Those are not fantasy inflated numbers. They are actual market loss consequences of public company restatements. ACAP recognized that any one of the 90 suits, if successful, would dwarf the firm's capital.

- Annual liability costs (judgments, settlements and expenses net of insurance) was more than 15% of the six firm's annual audit revenues, a proportion of income that is vastly greater than that of any other industry or profession.

- State and federal regulations in the US require auditors to function as partnerships, prohibited from raising third party capital. While limited liability partnerships protect some assets, every partner's income, capital account and retirement benefit remain exposed to the unpredictable outcomes of liability litigation. No other form of US enterprise has such a hazardous balance of risks and rewards.

- The potential for a liability induced collapse of another major firm was a consensus worry, even to the extent that ACAP recommended that Congress enact a complex scheme for the rescue and rehabilitation of firms in jeopardy, not unlike the Dodd Frank model of bank resolutions. ACAP's co-chairs, Arthur Levitt and Donald Nicholaisen, went the further step of recommending federalization of the audit profession. Both proposed remedies are dramatic.

> These extraordinary remedies would not have been recommended without collective acceptance that audit liability risk is existential and real.

The ACAP report also articulates the differences that members could not overcome, with care to preserve the contrasting perspectives for future attention. These included:

- Whether it was likely that the unresolved issues of responsibility and liability would cause another firm to collapse, as Andersen just had.

- Whether another firm collapsed would be a stand alone event or the first leg of an implosion of the traditional large firm business model due to partner flight from within or insufficient competition to meet investor needs.

- Whether the extreme risks of audit liability inhibit advancements in audit quality, or constitute a motivator of optimal audit performance.

- What forms of liability law reform, or regulatory safe havens, would be most useful in the public interest.

- Whether expansions of the auditor's role can be responsibly contemplated without careful assessment of intended or unintended liability consequences.

Release No. 2016-003 proposes to do just that—extend auditor responsibilities—with exclusive focus on whether there might be benefits in doing so. The risks of doing so have barely been considered. The forty year search for a sound platform of how financial fraud and audit responsibility should intersect, and the parallel dilemma of how liability inducing expectation gaps can be mitigated, have been bypassed.

I urge that the proposal be withdrawn for further collective study, drawing upon the information and the strategic resources that have been prepared by ACAP and preceding studies. Only by enlarging the scope of attention can changes to the auditors reporting model emerge from core perspectives about the sustainable role of auditing in the world's most litigious society.

Respectfully submitted,

/S/

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Members of the Board:

This letter reflects the views of the Board of Directors of the National Association of Corporate Directors (NACD). NACD, a 501 (c) 3 nonprofit educational organization, helps more than 17,000 directors lead with confidence. As the recognized authority on leading boardroom practices, NACD aspires to a world where businesses are sustainable, profitable, and respected, and where stakeholders trust directors to develop strategies that create long-term value and provide effective oversight. World-class boards join NACD to elevate performance, gain foresight, and instill confidence. Fostering collaboration among directors, investors, and governance stakeholders, NACD has been shaping the future of board leadership for nearly 40 years.

As part of our role in society, we comment on matters of interest to U.S. corporations. We have commented on Docket Matter 34 in an earlier letter:

> NACD believes any changes to the auditor's reporting model or expansion to the role of the auditor ***should preserve the established relationship between management and the auditors, namely, the role of management to present and assert information, and the role of the auditor to attest to that information***. We believe that any change that would require or allow the auditor to disclose original information about the company would undermine management's responsibility for the financial statements. . . . Further, such a change would significantly interfere with the well-established audit committee role in overseeing financial reporting, and could introduce the inappropriate situation of the auditor assuming principal responsibility for certain accounting and disclosures of the registrant. While NACD strongly supports effective independent auditing of financial statements, we would oppose any new standard that blurs the roles of asserting, attesting, and overseeing. These roles and their proper owners must be kept in mind when considering possible changes in reporting on such audits. (NACD, letter dated Dec. 11, 2013, attached; emphasis added)

We believe that this reproposed standard continues to conflate the roles of auditor and management. Furthermore, we do not believe that investors need the disclosures of the "critical audit matters" enumerated in the reproposed standard, as these matters are already either disclosed in management's discussion and analysis (MD&A) or, if they are not material to investors, covered in discussions between the auditor and the audit committee. NACD will continue to explore this topic with our key stakeholders, including directors and investors. We support you in your important mission of assuring and guiding audit quality.

Sincerely,

Karen Horn

Washington DC 20006-2803

Re: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments (PCAOB Rulemaking Docket Matter No. 34).

Dear Office of the Secretary:

On behalf of the board of directors of the National Association of Corporate Directors (NACD), we are pleased to submit our comments on the above-named Exposure Draft of the Public Company Accounting Oversight Board (PCAOB or Board). Founded in 1977, NACD is the only national membership organization created for and by directors. Given the close interaction between the auditor and the audit committee of a corporate board, and because many of our more than 13,500 members are audit committee members and chairs, NACD believes it is appropriate to provide our views on these issues. We commented earlier (Sept. 27, 2011) on the PCAOB's Concepts Release on the same subject.

**Primary Role of Management to Assert and Auditors to Attest**

As noted in our earlier letter, NACD believes any changes to the auditor's reporting model or expansion to the role of the auditor should preserve the established relationship between management and the auditors, namely, the role of management to *present* and *assert* information, and the role of the auditor to *attest* to that information. We believe that any change that would require or allow the auditor to disclose original information about the company would undermine management's responsibility for the financial statements (including the required certifications under the Sarbanes-Oxley Act. Further, such a change would significantly interfere with the well-established audit committee role in overseeing financial reporting, and could introduce the inappropriate situation of the auditor assuming principal responsibility for certain accounting and disclosures of the registrant. While NACD strongly supports effective independent auditing of financial statements, we would oppose any new standard that blurs the roles of asserting, attesting, and overseeing. These roles and their proper owners must be kept in mind when considering possible changes in reporting on such audits.

In our earlier letter, we expressed significant concerns about the possibility of requiring an auditor's discussion and analysis as part of the standard auditor's report. Thus, we are pleased that the Board has determined that this possibility is not being proposed for adoption.

We are also pleased to note that the Board has decided not to require "emphasis paragraphs." As we noted in our earlier letter, without a framework for defining what requires emphasis, this requirement could have resulted in overly broad disclosures intended to reduce litigation risk, rather than generating any disclosures of interest to investors.

NATIONAL ASSOCIATION OF CORPORATE DIRECTORS

**Critical Audit Matters**

The most significant change to the auditor's report proposed in the Exposure Draft would be the inclusion of critical audit matters (CAM). As described in the Exposure Draft, these could include matters already communicated to audit committees under the existing PCAOB auditing standard (No. 16, Communications with the Audit Committee, effective December 2012). In addition, CAMs could include matters that were already in the engagement review memo and/or discussed with the audit firm's executive office. Thus, in other than extremely simple businesses, multiple CAMs will be added to the standard auditor's report, lengthening it and literally burying the important "pass/fail" language that most readers key into.

Setting aside the issue of whether users will find much longer reports to be truly helpful, we return to our fundamental issue of management's vs. the auditor's role. While we have not performed a formal study, during our discussions in the development of this letter, we found that most of those who have served on audit committees believed that a very high percentage of the matters discussed with them by auditors and included in those required communications are already well disclosed in annual 10-Ks' management discussion and analysis (MD&A) and/or footnotes. Thus, requiring them to be included in the auditor's report is redundant, requiring a second or third level of highlighting for important matters in management's financial statements. Furthermore, it is not in the PCAOB's proper domain. Rather than have the PCAOB introduce such an arguably unnecessary additional financial reporting requirement, we believe it would be far more appropriate for the U.S. Securities and Exchange Commission (SEC) or the Financial Accounting Standards Board to consider whether such emphasized reporting is useful in the first place. Or, perhaps audit committee reports could be enhanced to serve such a purpose. In any event, we do not support having the auditor use its report to initiate what is essentially a management reporting function.

Furthermore, the Exposure Draft delves into the matters of significant deficiencies in internal control, certain going concern considerations, and even certain legal contingencies; all these too would have to be disclosed in the auditor's report as CAMs when present. This would be the case according to the new audit requirement even when there are other accounting rules that say the opposite and do not require management to make such disclosure.

We are also concerned about the impact of an expanded auditor's report on the preparation of year-end financial statements under tight SEC deadlines when management and auditors would be developing separate descriptions of similar matters. When financial management, legal counsel, audit committees, audit engagement partners, reviewing partners, and perhaps national office partners are all asked to provide their thoughts on identical company disclosures and auditor CAM descriptions of the same matters, a fair amount of contradiction could emerge, given the fact that these participants all have different roles and types of expertise. Having to reconcile these competing positions near the critical filing date for the annual report seems to be an unnecessary complication. It could also trigger meritless litigation focusing on discrepancies, even though these arose out of good-faith efforts to comply with this challenging new standard.

**Auditor's Responsibilities Regarding Other Information**

In our earlier letter we indicated that NACD is not opposed to having the auditor provide some level of assurance around management's assertions contained in the MD&A if—and only if—such information is *auditable* and within the *expertise* of the auditor. Nevertheless, we also noted that we believed cost and timeliness were important considerations as well, and that the benefit provided would need to outweigh the cost of the auditor performing such procedures.

According to the current Exposure Draft, the PCAOB has proposed a heightened standard of auditor responsibility for "other information." Previously, the auditor was charged with the responsibility to read the other information and "consider" whether it was consistent with the audited financial statements in material respects. The Exposure Draft changes the "consider" part of this procedure to require the auditor to "evaluate" the information, and specifies the procedures that should be followed in order to meet such a requirement. While those procedures appear on the surface to be very similar to what many auditors are doing under current practice, at least some of the major accounting firms believe that this change will trigger substantially more work in the future.

We hope that this will not become a déjà vu of the PCAOB's first attempt to mandate the auditing of internal controls. Auditing Standard No. 2 was applied in a way that required auditors to apply far too many procedures and incur far too much time than was necessary. While the Board ultimately addressed this through the issuance of Auditing Standard No. 5, many companies and audit committees continue to have a negative attitude toward their audit firm and the PCAOB because of that unfortunate experience. At a minimum, the Board should do careful testing of this aspect of the Exposure Draft to ensure that there is a clear understanding of how a final standard would actually be applied in practice.

**Auditor Tenure**

"A statement containing the year the auditor began serving consecutively as the company's auditor," would be another, major addition to the auditor's report. This matter was not in the original Concepts Release so we did not comment on it in our earlier letter. In the Exposure Draft and accompanying comments by Board members, the PCAOB explains that academic and other research is mixed as to whether audit quality is enhanced by shorter or longer auditor tenure. There apparently are also mixed views among users as to whether they would find such information to be meaningful in making investment decisions.

While disclosing this information would seem to be essentially costless, we question whether including it in the auditor's report is appropriate. We are concerned that without some additional context, simply including a year of commencing an audit relationship could be misconstrued by readers. For example, some financial press accounts could focus on a very long relationship (and imply too "cozy" a situation) without also reporting the many other factors to ensure auditor independence and objectivity such as:

- Continual change among key members of financial management of the company during the audit firm's tenure.
- Mandatory rotation of the audit firm's lead partner and other key partners, as well as other changes in the members of the audit team.

NATIONAL ASSOCIATION OF CORPORATE DIRECTORS

- Careful oversight of the relationship by the audit committee.
- Critical evaluation of audit quality by the audit committee (see the audit firm evaluation tool created by NACD as part of a broader initiative led by the Center for Audit Quality).

We are aware of certain companies that have provided auditor tenure information in proxy statements either in the audit committee report or in information provided in connection with a shareholder ratification vote on the selection of the independent auditors for the coming year. We recognize that these disclosures are presently voluntary and not required. If there is, however, truly sufficient investor interest in the auditor tenure information, we suggest the SEC should consider requiring it to be provided as part of proxy statement disclosures. We do not support including it in the auditor’s report.

**Other Proposed Changes to the Auditor’s Report**

In addition to those major changes, the Exposure Draft suggests a number of things that we consider to be “cosmetic” changes to the standard report including:

- A statement describing the audit (paragraph 6m).
- Clarifying that the statements are free of material misstatements *whether caused by error or fraud*.
- Addressing the report to both shareholders and the board.
- Referring to footnotes, as well as the financial statements.
- Stating in the report that the auditor is independent.

We have no objections to these changes.

**Summary**

As noted above, we have significant reservations about the three major changes proposed in the Exposure Draft: CAMs, Auditor’s Responsibilities Regarding Other Information, and Auditor Tenure. As noted in our earlier letter, NACD urges the PCAOB to thoroughly consider how the changes proposed in this Exposure Draft could impact how the audit committee and management—equally important parties in the financial reporting process—carry out their responsibility to investors. We note, with full agreement, that the Board has urged companies and auditors to test the application of the CAM proposal using recent experience. We believe that such testing will demonstrate that the vast majority of CAMs in practice will repeat similar disclosures by management as noted in our comments above. We also urge testing of the “other information” provisions of the Exposure Draft as we believe it will demonstrate that such a proposal is not cost beneficial.

As also mentioned in our earlier letter, we urge the Board to make special efforts to reach out to the investment community to ascertain clearly how the proposed changes to the auditor’s report would be used in their investment decisions.

NACD appreciates the opportunity to comment on this Exposure Draft, and would be pleased to respond to any questions regarding the views expressed in this letter.

Sincerely,

Ken Daly
President and CEO, NACD

**Re: PCAOB Rulemaking Docket Matter No. 034**

Dear Board Members:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) in response to the solicitation for public comment by the Public Company Accounting Oversight Board (PCAOB or Board) with respect to its *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards (PCAOB Release No. 2016-003, May 11, 2016, PCAOB Rulemaking Docket Matter No. 034)* (the Reproposal).

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate and finance income-producing real estate, as well as those firms and individuals who advise, study and service those businesses.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT All REITs Index, which covers both Equity REITs and Mortgage REITs. This Index contained 220 companies representing an equity market capitalization of $1.10 trillion at July 31, 2016. Of these companies, 179 were Equity REITs representing 94.5% of total U.S. listed REIT equity market capitalization (amounting to $1.04

trillion)[1]. The remainder, as of July 31, 2016, was 41 publicly traded Mortgage REITs with a combined equity market capitalization of $60.0 billion.

This letter has been developed by a task force of NAREIT members, including members of NAREIT's Best Financial Practices Council. Members of the task force include financial executives of both Equity and Mortgage REITs, representatives of major accounting firms, institutional investors and industry analysts.

NAREIT appreciates the PCAOB's efforts toward improving audit quality since its inception in 2002. NAREIT acknowledges the PCAOB's substantive consideration of the feedback it received on its *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, (PCAOB Release No. 2013-003, August 13, 2013, PCAOB Rulemaking Docket Matter No. 34)* (the Proposal) that discussed proposed modifications to the auditor's reporting model and the auditor's responsibilities for other information in certain documents containing audited financial statements. In particular, NAREIT supports the PCAOB's decision to retain the current pass/fail model of auditor reporting. However, NAREIT fails to see where the PCAOB has made a compelling argument for why critical audit matters are needed in the auditor's report or how such a requirement would enhance the usefulness of the audit report for financial analysis purposes. Further, NAREIT does not see where there is convincing evidence for how the disclosure of audit tenure would translate into enhanced audit quality. Therefore, NAREIT does not believe that the PCAOB should proceed with issuing the Reproposal as a final audit standard.

**NAREIT Recommendation: Suspend further work on the Reproposal**

We understand that the PCAOB is trying to add value to the audit report and enhance its decision usefulness by requiring that the auditor identify and discuss critical audit matters as a part of the annual audit report. However, we believe that a requirement to disclose critical audit matters in the audit report would potentially:

- Confuse and potentially mislead users of financial statements by giving them a basis to question whether the opinion rendered by the audit firm is truly unqualified (*i.e.*, that the financial statements are presented fairly in accordance with U.S. GAAP);

- Introduce situations when the auditor is disclosing sensitive information that is not otherwise required to be disclosed by the issuer;

- Duplicate information that is already required by the SEC of known risks and uncertainties and critical accounting estimates, and FASB requirements for disclosure of accounting policies;

- Dampen effective communication between the audit firm and the audit committee;

[1] https://www.reit.com/sites/default/files/returns/FNUSIC2016.pdf.

- Add tension between management and auditors for the topics addressed and wording utilized in critical audit matters; and,

- Result in boilerplate disclosure of critical audit matters and how these matters were addressed in the auditor's report.

Additionally, we find no evidence of a direct correlation between auditor tenure and audit quality.

Each of these concerns is further discussed below.

**NAREIT Discussion of Concerns with Disclosing Critical Audit Matters**

*Confuse and potentially mislead users of financial statements by giving them a basis to question whether the opinion rendered by the audit firm is truly unqualified (i.e., that the financial statements are presented fairly in accordance with U.S. GAAP);*

Consistent with our prior submission[2] on the Proposal, NAREIT does not support a requirement for auditors to report on "critical audit matters" (as that term is defined in the Reproposal). **In our view, a requirement to disclose critical audit matters would have the unintended consequence of audit firms effectively qualifying unqualified opinions.** Investors would be left to question the auditor's judgment that the financial statements are prepared fairly in accordance with U.S. GAAP given the list of risks that would be included in the auditor's report. This would detract from the investor's true purpose in utilizing the audited financial statements as a basis for their financial analysis. By giving auditors the opportunity to disclose the risks that "keep them up at night," analysts may be left with reduced confidence as to whether the financial information that serves as the basis for their capital allocation decisions is reliable.

Through our discussions with investors and buy-side and sell-side analysts that follow the REIT industry, investors and analysts are interested in whether the auditor has provided an unqualified opinion on the financial statements – period. When asked whether they would be interested in an auditor report like the often-cited Rolls-Royce[3] example, they questioned how they could read and interpret a six page auditor report for the 80 companies they follow regularly in the REIT industry in addition to their analysis of the audited financial statements. To reiterate, we have seen no evidence that including critical audit matters in the audit report would be useful to financial analysis. The Reproposal itself acknowledges that the results of research on this matter are "ambiguous".

---

[3] http://www.rolls-royce.com/~/media/Files/R/Rolls-Royce/documents/investors/annual-reports/2015-annual-report-v1.pdf at pages 167 - 174.

*Introduce situations when the auditor is disclosing sensitive information that is not otherwise required to be disclosed by the issuer*;

In our previous submission on the Proposal, we highlighted an issue with Hypothetical Auditing Scenario #3 that illustrates a fact pattern in which the auditor discloses a "control deficiency less severe than a material weakness noted in the Company's internal control system."[4] This information is part of the auditor's required communication to the issuer's audit committee, under current PCAOB standards, but there is nothing in securities law that requires public reporting of either significant deficiencies in internal controls or audit adjustments.

The Reproposal states that the PCAOB has addressed constituent concerns, but we continue to believe that this is an issue. The Reproposal

> …adds a note to address commenters' concerns about the auditor becoming the source of original (and potentially confidential) information about the company. The note indicates that when describing critical audit matters in the auditor's report, the auditor is not expected to provide information about the company that has not been made publicly available by the company unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit.[5]

NAREIT does not believe that the commenters' concern is addressed due to the words "unless such information is necessary." The Reproposal goes on to explain that the auditor's disclosure of a matter could trigger disclosure on the part of management. However, this would appear to have the auditors then act in the capacity of management in situations when management declines to disclose information that is not required by securities laws.

NAREIT strongly believes that an audit firm should not report sensitive information that is not required to be disclosed under existing securities laws and/or generally accepted accounting principles. We believe that existing U.S. securities laws and existing U.S. GAAP are sufficient to provide users with the appropriate amount of information to make investment decisions. Further, the expansion of existing disclosure requirements is the purview and responsibility of the SEC and the FASB. Accordingly, if the PCAOB were to go forward with this Reproposal, we believe the auditor should be prohibited from disclosing any information that is not otherwise required to be disclosed by the issuer.

*Dampen effective communication between the audit firm and the audit committee*

NAREIT believes that the Reproposal's requirement that auditors evaluate whether required communications to the audit committee represent critical audit matters, will have the unintended

---

[5] https://pcaobus.org/Rulemaking/Docket034/Release-2016-003-ARM.pdf at page 37.

consequence of dampening open communication between the audit firm and the audit committee. We believe that standard setting that serves as an impediment to open and candid dialogue between the auditor and the audit committee should be avoided at all costs.

*Duplicate information that is already required by the SEC of known risks and uncertainties and critical accounting estimates, and FASB requirements for disclosure of accounting policies*

We believe that the most difficult, subjective and complex audit matters encountered by the auditor are highly likely to be the risks and uncertainties and critical accounting estimates that the issuer is already disclosing in its Management Discussion and Analysis (MD&A). Given that the sections of MD&A that cover risks and uncertainties and critical accounting estimates and the summary of accounting policies in the notes to the financial statements provide the reader with management's assessment of the most judgmental aspects of the financial statements, NAREIT questions why the Board would require auditors to duplicate this information. If the PCAOB believes that this existing information is not sufficiently robust or transparent, NAREIT recommends that SEC or the FASB evaluate this aspect of financial reporting and provide additional guidance through formal standard setting.

*Add tension between management and auditors for the topics addressed and wording utilized in critical audit matters*

Given the litigious business environment in the United States, we believe that the wording chosen for the critical audit matters would be highly scrutinized. Management may object to the risks included if, in their view, they do not mirror disclosures already made in MD&A. Additionally, management may take exception to the wording that the auditor uses in their audit report. NAREIT believes that the Reproposal will create unnecessary tension between management and the auditor over the auditor's report, and serve as a distraction from the auditor's role in auditing the financial statements and internal controls over financial reporting.

*Result in boilerplate disclosure of critical audit matters and how these matters were addressed in the auditor's report*

Similar to our previous comment on the legal framework in the United States, wording of critical audit matters will likely be streamlined by accounting firms to address potential litigation. Thus, the value that the PCAOB is seeking to achieve will not be realized when audit staff are left to utilize templates for standardized critical audit matters. NAREIT fails to see how requiring disclosure of critical audit matters will be an improvement in financial reporting, let alone audit quality.

**NAREIT Comments on Auditor Tenure**

NAREIT understands that there is some interest amongst financial statement users about auditor tenure. We observe that for many issuers, the tenure of an audit firm can be determined by a review of the issuer's public filings. However, NAREIT does not support the part of the Proposal that requires auditors to report on their tenure because that information, placed in the audit report, infers a direct relationship between auditor tenure and the quality of the audit or the content of the audit report that may not exist. NAREIT is unaware of evidence indicating that auditor tenure has a direct correlation to audit quality.

Perhaps more importantly, NAREIT considers auditor tenure to be a corporate governance matter under the direct purview of the issuer's audit committee only.

Further, a statement regarding auditor tenure placed in the audit report would be severely out of context. There would be no information about how the audit committee assesses the quality of the audit work and determines whether or not a change in auditor is appropriate. It also would provide no information regarding the most recent tendering of the audit. Some users might incorrectly infer that longer auditor tenure indicates that the audit has not been retendered when, in fact, the audit committee's decision to retain the incumbent audit firm was made after an extensive retendering process.

The Reproposal acknowledges that views on whether auditor tenure corresponds to improved audit quality are inconclusive amongst past commenters and academic research[6]. Therefore, NAREIT recommends that information regarding auditor tenure continue to be excluded from the audit report.

If academic evidence can prove that there is a direct relationship between auditor tenure and audit quality, the SEC should consider adding relevant disclosure requirements to proxy statements that are filed coincident with audit committee reports or in connection with company shareholder ratification of auditor appointments. In our view, the proxy statement would be the better place for disclosure of auditor tenure, where proper context could be given. Companies could include a summary of the process that the audit committee completed to vet the audit firm, including whether or not the audit was out for bid.

**Summary**

NAREIT does not believe that the changes recommended by the Proposal with respect to the audit report and disclosure of auditor tenure are warranted. These requirements would add costs without improving the quality of the audit. Furthermore, these proposals would be likely to confuse and in some cases even mislead users of financial statements. Therefore, NAREIT recommends that the PCAOB suspend its efforts on the Reproposal, and instead focus its time and resources on improving aspects of the audit procedures that would enhance audit quality so as to provide investors with more confidence that the audited financial statements are, indeed, free of material misstatement.

At a time when both the Financial Accounting Standards Board and the Securities and Exchange Commission are focused on disclosure effectiveness initiatives to improve disclosure and

[6] https://pcaobus.org/Rulemaking/Docket034/Release-2016-003-ARM.pdf at page 47.

eliminate redundancy, we find it odd that the PCAOB would be exacerbating the "disclosure overload" phenomenon by expanding the auditor report. In our view, an expansion of the unqualified audit opinion to include critical audit matters would prove to be misleading to investors and would largely result in generic disclosures that are duplicative of information that is provided by management. Moreover, we do not see a direct correlation between auditor tenure and audit quality, and believe that disclosing auditor tenure could be misleading to investors as well.

In the event that the PCAOB decides to move forward with the Reproposal, NAREIT recommends that the Board consider conducting robust field testing. In our view, field testing should involve not only the preparer and auditor community, but also representatives from the investment community and related regulatory bodies like the SEC in order to fully assess both the costs and the benefits of the Reproposal. This would provide the Board with evidential matter in evaluating whether the Reproposal is operational, whether additional guidance is needed, whether the implementation costs outweigh the perceived benefits, and if the Reproposal's objectives could actually be achieved.

* * *

We thank the PCAOB for the opportunity to comment on the Proposal. If you would like to discuss our views in greater detail, please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at gyungmann@nareit.com or 1-202-739-9432, or Christopher T. Drula, NAREIT's Vice President, Financial Standards, at cdrula@nareit.com or 1-202-739-9442.

Respectfully submitted,

Re: *Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; PCAOB Rulemaking Docket Matter No. 034*

Dear Members of the Public Company Accounting Oversight Board:

We appreciate the opportunity to offer comments on the Proposed Auditing Standard referred to above. The National Association of State Boards of Accountancy's (NASBA) mission is to enhance the effectiveness and advance the common interests of the Boards of Accountancy that regulate all certified public accountants and their firms in the United States and its territories.

As stated in our December 9, 2013 response letter, we support the Board's efforts to modify the auditor's report so that it is more useful to investors. The more information of value auditors are able to provide to the users of audited financial statements, the greater the worth and relevance auditors can provide to the capital markets. We also believe the revisions that the PCAOB made, based on its requests for comments, better align the proposed standard with other international regulatory bodies' and provide a better framework for an independent auditor to serve the public interest.

**Definition of a Critical Audit Matter**

1. The Proposed Auditing Standard requires communication in the auditor's report of any critical audit matter (CAM) which "was communicated or required to be communicated" to the audit committee. We suggest deleting "communicated or" from the definition of a critical audit matter.

2. The Proposed Auditing Standard requires communication in the auditor's report of any CAM which relates to accounts or disclosures that are material to the financial statements.

We agree, but would add "and disclosed in" for the definition to require communication of CAMs which are related to accounts or disclosures that are material to as well as disclosed in the financial statements. We do have a concern that paragraph 11 of the proposed standard could require an auditor to provide information about the company that has not been made publicly available by the company.

3. We believe that illustrative examples of CAM included in the Proposed Auditing Standard should be clearer on whether a discussion of a CAM in the audit report should include the results of any findings related to the internal control over financial reporting (ICFR) that may have resulted in an adjustment to accounts or disclosures that are material to the financial statements. We suggest providing additional examples of CAM that include language describing such findings and their impact on the material accounts or disclosures.

4. The Proposed Auditing Standard currently does not outline the auditor's responsibility in respect to other information that is not currently included in the financial statements (e.g. MD&A disclosures). We understand that the PCAOB is considering additional projects in relation to such other information and we would support the PCAOB's efforts to further clarify the auditor's responsibility in respect to such other information.

**Independence**

The Proposed Auditing Standard requires that the auditor's report include the following statement:

"We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the…."

We believe that the auditor's report should state that the auditor "is independent," instead of "required to be independent."

**Auditor's Tenure**

1. The Proposed Auditing Standard requires the auditor's report to include a statement regarding the auditor's tenure. As noted in our December 9, 2013 response letter, State Boards have not found a relationship between the auditor's tenure and the auditor's independence. However if the PCAOB believes this is useful information, we would recommend that the information on the auditor's tenure be reported in Form AP, *Auditor Reporting of Certain Audit Participants*, rather than in the auditor's report.

2. There might be situations where, due to mergers, acquisitions or changes in ownership, there may be uncertainty as to the year the auditor began serving consecutively as the company's auditor. We believe that the proposed standard should provide more clarification for disclosure related to these cases.

**Additional Improvements to the Auditor's Report**

The proposed auditing standard allows the auditors to retain the option to include additional addressees in the auditor's report (page 45). The current proposal invites third parties to ask to be included as addressees. We do not believe the PCAOB should have language in the final rule that has the potential to inadvertently result in increased auditor liability and costs. The SEC requires audited financial statements be provided by public companies to protect investors, both those investors that have invested and those that may invest. We would suggest that the best solution would be to require no addressees. The title "Report of Independent Registered Public Accountant" speaks for itself without the need for an addressee.

**Explanatory Language and Emphasis of a Matter**

We understand there may be situations where an auditor may wish to combine a critical matter into an emphasis of matter paragraph based on the discussion in the proposed standard. Unfortunately this might lead to public confusion and we therefore believe that CAM and explanatory paragraphs in the auditor's report should not be integrated. However, we do believe it would be appropriate to make reference to the CAM in the explanatory paragraph.

**Conformity with International Standards**

We understand that in developing the Proposed Auditing Standard the PCAOB has considered similar auditor's reporting initiatives undertaken by international regulators. Although there are similarities between the PCAOB's and IAASB's auditor's reporting models, the use of different terms and concepts such as "Critical Audit Matter" by the PCAOB vs "Key Audit Matters" by the IAASB may create confusion and lack of consistency for users of financial statements in the international markets. Therefore we believe wherever possible, especially where the meaning is the same, consistent terminology should be used.

**Considerations Related to the Effective Date**

We think the implementation of the standard will take at least a year from the date of approval of the Final Audit Standard by the Securities and Exchange Commission. We do not believe that there should be any additional delay in the adoption of the standard related to audits of smaller companies.

* * *

Again, we appreciate the opportunity to comment on the Exposure Draft.

Re: **Proposed Auditing Standard: PCAOB Release No. 2016-003, *The Auditor's Report***
**PCAOB Rulemaking Docket Matter No. 034**

Dear Chairman Doty, Distinguished Board Members, and others whom this may concern:

The Accounting and Auditing Standards Interest Group of the New Jersey Society of Certified Public Accountants (NJCPA) appreciates this opportunity to comment on the proposed auditing standard. The NJCPA represents over 15,000 certified public accountants and prospective CPAs. The comments herein represent those of some of the individuals of our Accounting and Auditing Standards Interest Group only and do not necessarily reflect the views of all members of the NJCPA.

Our comments speak to the overall proposed changes and their objective of changing the auditor's report. Those proposed changes may be summarized as: the addition of critical audit matters (CAMs) to the auditor's report; and other changes to the auditor's report, consisting of an independence statement, an auditor tenure statement, the addressee, and other enhancements to basic elements.

**<u>Critical Audit Matters</u>**

We have read the Board's argument for the disclosure of critical audit matters (CAMs) in the auditor's report. We fundamentally disagree with the reproposal to incorporate CAMs, as we believe this will change the principal purpose of the auditor's report. We disagree that the presentation of CAMs adds value to the user or investor in reading and understanding the financial information.

The Board is reproposing that the auditor identify a CAM as any defined critical matters arising from the current audit, or include a statement that no CAMs were identified. These will include challenging, subjective, or complex matters affecting auditor judgments, and how the auditor responded to those matters. We believe that what is critically important is the total package of information presented to the shareholders and investors, not insights into the process of auditing such information. The awareness of how certain audit procedures were performed does not add value to the user or investor. We do not believe that CAMs would assist investors and analysts in engaging management with targeted questions about company information. No incremental

PHONE 973-226-4494
FAX 973-226-7425
NJCPA.ORG

increase in the quality of financial information is gained by the user of the financial statement. If the intended consequence of incorporating CAMs is to drive improvements in audit quality, we believe that current measures, such as the PCAOB's inspection program and required communications with audit committees, are better ways of achieving that objective.

We do agree that the clarity the user may be missing is an improved understanding of what information the auditor is, and is not, responsible for. Our auditor's report speaks only to the financial statements; however, those are obviously contained in a filing with much additional information. The auditor's standard report as currently promulgated does not mention the footnotes. We agree that this should be added to the auditor's report. Further, the auditor has certain limited responsibilities with respect to the other accompanying information, for example, management's discussion and analysis, but no mention is made of what those responsibilities are, and are not.

We suggest that the auditor's report should better define auditor responsibilities for the additional information, so that the financial statement user has a clear understanding. The auditor's report can be expanded to include a brief statement about this responsibility. Disclosing this information in the audit report will enhance the investor's understanding of the auditor's role and responsibilities.

**Additional Improvements**

With respect to the proposed statement on independence, certain members of our group noted that the title to the auditor's report already contains the word "Independent". While they agreed that independence and objectivity are critical to the audit process, they believe that independence could not be given any more prominence than being included in the title to the report. Other members of our group were in agreement with adding this statement in the audit report.

With respect to the proposed statement on auditor tenure, we note the PCAOB now requires the disclosure of audit partners on Form AP, filed separately with the PCAOB. We agree with the proposed requirement to disclose the audit firm's tenure; however, we believe that it is better made as part of the Form AP rather than in the auditor's report. We agree that disclosure of auditor tenure should be available to present and prospective investors.

With respect to the proposal on the addressee, we agree that specifying the addressee in the audit report is appropriate.

With respect to the other proposed enhancements to basic elements, as stated in our above comments, we recommend that auditor responsibilities are better defined. However, certain members of our group do not support the addition of the phrase "whether due to error or fraud" because they believe that this will unintentionally confuse users regarding the auditor's responsibilities concerning fraud. Others in the group support the Board's proposed addition. They believe that the addition of "whether due to error or fraud" will improve the user's understanding of the auditor's responsibilities.

With respect to the other proposed enhancements regarding the standardized form of the auditor's report, we agree with the Board's proposal to position the opinion as the first paragraph, immediately followed by the subtitle "Basis for Opinion". This will add clarity and structure to the audit report. Further, we support this enhancement even though we do not support the addition of the Critical Audit Matters section. If the CAM reproposal becomes final, we believe this geography change is also important. The CAM reproposal, if approved, may significantly lengthen the audit report with potentially cumbersome and confusing additions. The reader of a reproposed audit report (including CAM), may no longer be able to easily navigate his or her way to clearly identifying the type of auditor's opinion rendered, as with the extant report. Positioning the opinion first addresses this.

Some members of our group believe that our above comments apply to Emerging Growth Companies, as defined. However, others believe that there should be some consideration or exemption for smaller reporting companies. The documentation required, as well as the increase in audit fees to comply with the proposals, may be burdensome to such companies. Therefore, some members suggest that the Board consider whether the proposed changes to the auditor's report should take into consideration the size of the entity being reported on. Those members would like the Board to consider providing smaller reporting companies relief from some of the documentation and disclosure requirements of this proposal.

We wish to thank the PCAOB for this opportunity to comment on the reproposed standard. Although we have taken different positions than the Board on some of the proposal's provisions, we trust that a high-quality dialog and the vetting of the proposal within the profession will yield an even better standard to implement.

Very truly yours,

Elizabeth B. Harper

**Proposed Auditing Standard—*The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards***

**(Release No. 2016-003; Docket Matter No. 034)**

## General Comments

The New York State Society of Certified Public Accountants (NYSSCPA) appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or the Board) Release No. 2016-003, Proposed Auditing Standard—*The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* (Proposed Standard).

We understand that the Proposed Standard "seeks to enhance the form and content of the report to make it more relevant and informative to investors and other financial statement users. In particular, the auditor's report would include a description of 'critical audit matters' (CAMs), which would provide audit-specific information about especially challenging, subjective, or complex aspects of the audit as they relate to the relevant financial statement accounts and disclosures."

We disagreed with the incorporation of CAMs into the audit report in our previous letter to the Board regarding Release No. 2013-005**,** Docket Matter No. 034, dated December 10, 2013 (attached). While we acknowledge the additional outreach and research conducted by the Board, and we recognize certain improvements in the Proposed Standard to address concerns, our views remain unchanged. We continue to believe that the inclusion of CAMs in public reports would not help users in making investment, voting, or credit decisions or enhance transparency in a meaningful way, but would dilute the pass/fail message and diminish the value of an audit report. We note that while other regulators and standards setters (such as the IAASB, the EU and the FRC) have enacted similar audit reporting requirements for CAMs, the litigation environment in the United States is different from these other foreign jurisdictions. For details supporting our opposition to reporting CAMs, we refer you to our response to Question 10 in our December 10, 2013, letter.

The foregoing notwithstanding, assuming the Board proceeds with its proposal relative to CAMs, we have answered questions 1–8 of the Proposed Standard. In addition to our responses, we also offer this general comment about the disclosure of auditor tenure within the audit report. Although we do not believe it is relevant or appropriate to disclose information about auditor tenure in the audit report, if the Board does require public disclosure of such information, we would suggest that it be incorporated into Form AP, or a similar reporting form, instead of the audit report. Inclusion of such information in audit reports would imply a relationship between the quality of the audit or independence and auditor tenure, which we believe does not and should not be presumed to exist.

**Responses to Specific Questions from the Proposed Standard**

Presented below are our responses to selected questions from the Proposed Standard.

**1. Is the definition of "critical audit matter" appropriate for purposes of achieving the Board's objective of providing relevant and useful information in the auditor's report for investors and other financial statement users? Is the definition sufficiently clear to enable auditors to apply it consistently? If not, describe why the definition may not be clear, including examples demonstrating your concern.**

The definition by itself is sufficiently clear; however, when used in the intended context, it is apparent it is subjective. As a result, the examples presented must be viewed as simply illustrative and the Board's objective of consistent application will not likely be served. The decision as to what matters in the audit are "challenging, subjective, or complex" and will necessarily depend on the judgment, knowledge and experience of the engagement team, especially the engagement partner. An engagement partner with extensive knowledge and experience will not view certain matters as reportable CAMs, while another individual (or team) with different judgment, knowledge or experience might characterize those matters as CAMs. Any standard should provide for differences in good faith—professional judgments, specifically—as to such reporting decisions, to mitigate the risk of inquiries by regulators and adversaries.

On another level, individual firm policies could be a significant factor in the decision about CAMs. For example, if a firm maintains a policy of mandating the review of a client's accounting for beneficial conversion features ("BCF"), we believe that the involvement of a national office or other central consultation might automatically trigger the characterization of the BCF as a CAM.

**1a. Are matters communicated or required to be communicated to the audit committee the appropriate source for critical audit matters? Why or why not?**

The decision to start with communications made or required to be made to the audit committee is an appropriate source for the stated objectives. However, as a practical reality, the detailed dialogue between auditors and audit committees is not available to the investors or other users, who will, invariably want more information on matters reported as a CAM in the auditor's report.

We believe this reality will likely serve as a powerful incentive for auditors to include less detail, rather than more, when contemplating reporting a CAM. The ability to raise further questions on these matters is limited, and may affect a user's decisions. Investors and other stakeholders rely on audit committees to discuss critical accounting and audit matters with the auditor and come to appropriate conclusions regarding the registrant's financial statements. If the investment community does not have sufficient confidence in audit committees to place such reliance on them, then we believe the SEC should take appropriate action to further regulate the conduct and qualifications of the audit committee, rather than place additional public reporting burdens on auditors.

We do not believe there is a practical way to reduce the "information asymmetry," as suggested by the Board, nor do we believe that it is reasonable to expect information symmetry.

**1b. Are there any audit committee communications that should be specifically excluded from consideration as a source of potential critical audit matters? If so, identify and explain the reason for the exclusion.**

Yes, we believe matters such as independence considerations, competency issues of management or other professionals involved in the engagement, discussions with component auditors (especially regarding audit scope), and delays encountered in the current audit, should generally not be reported as CAMs. We believe that such matters are among those sensitive topics that should be reserved for extensive dialogue between the audit committee and the auditor, as it may not be understood clearly if presented in an audit report as a CAM.

**1c. Is the "relates to accounts or disclosures that are material to the financial statements" component of the definition of a critical audit matter appropriate and clear? Why or why not?**

We believe it is appropriate to include the above-quoted qualifier in the definition of CAMs, but we also believe that this question is more complicated, since its functional premise should be grounded in significant risk. Significant risks, such as going concern matters, may be mitigated by an entity that has adequately demonstrated its ability to meet liquidity requirements for at least a year. Notwithstanding how that circumstance plays out, the assumption here is that the disclosures would be adequate, the auditor would evaluate those disclosures, and the matter may be communicated in the audit report, such as in an emphasis-of-matter paragraph, thus making CAM disclosure unnecessary.

**1d. Is the "involved especially challenging, subjective, or complex auditor judgment" component of the definition of a critical audit matter appropriate and clear? Why or why not?**

See our response in Question 1.

**2. Are factors helpful in assisting the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? Why or why not?**

We support the Board's reasoning in citing the underlying factors that should be considered for an auditor in determining whether to classify a matter as a CAM.

**3. Are there any factors that the Board should consider adding or removing to better assist the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? If so, what are those factors?**

In general, we believe that the factors provided in the Proposed Standard are adequate to help auditors determine which matters qualify for treatment as CAMs.

**4. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, rather than only the current period? For example, should communication be required in an IPO or in a reaudit? Why or why not?**

The auditors' judgment should prevail as to the circumstances when CAMs should be reported, in addition to the overall requirement to provide CAMs in auditors' reports for the current year. The report on the financial statements of the entity's most current period provides the most relevant information for investors' or other users' decisions. We believe that auditors should be encouraged to use judgment as to whether to include CAMs for earlier periods when significant risks prevail in both the current and prior periods, but the final standard should be flexible in its requirements.

**5. Are the reproposed requirements regarding the description of critical audit matters in the auditor's report, including the principal considerations and how the matter was addressed in the audit, sufficiently clear for consistent implementation by auditors? Why or why not? If not, how could the requirements be clarified?**

We are concerned about the addition to the bulleted list of communication requirements in the Proposed Standard. For example, when the Proposed Standard states, "describe how the critical audit matter was addressed in the audit," we ask at what level(s), overall, is it referring to? Should the description be at the account level? At the assertion(s) level? Should the disclosure describe how the matter affected the planning, audit staffing, timing and review? The point here is that there are many decision points in the audit, and it is a process not easily described or understood. The primary purpose of the audit report should be to inform investors and provide them with reasonable assurance regarding the fair presentation of the financial statements, not to provide a reader with an avenue to speculate about auditor judgment.

For example, let us assume that the CAM relates to an estimate. Would a sufficient description be that the auditor developed its own estimate, compared it to the client's estimate, evaluated the client's estimation process (including the information gathering process), and that the entity's internal controls over the assertions related to the estimate were audited? We do not believe that such a description would serve to strengthen investors' or other users' confidence in the audit and the auditors. There are inherent uncertainties embedded in an estimate that are assessed and addressed by the auditor, and these uncertainties may not be appropriately addressed within the context of the audit report to investors.

**6. Do the reproposed communication requirements appropriately address commenter concerns regarding auditor communication of critical audit matters, such as:**

**a. The auditor providing original information in describing the principal considerations for the determination that the matter is a critical audit matter or describing how the matter was addressed in the audit…**

Commenters on the original draft proposal were concerned about confidentiality issues in situations where the auditor disclosed new information that was not previously disclosed in the entity's filings or was disclosed from a perspective differing from that of the auditor.

The Proposed Standard, which would confine required CAM disclosures to matters discussed with the audit committee, mitigates this issue. However, we believe that if the auditor would like to make further disclosure of a CAM, it should not be precluded from doing so, and to overcome the confidentiality question, we suggest that client permission be obtained.

Descriptions of how auditors addressed the CAMs can become limiting and self-serving. Many procedures that auditors use to obtain comfort as to financial statement assertions are often called "primary" procedures. In situations where significant risks are high, several primary or corroborative procedures may be needed or used. Complex interrelationships of the many audit procedures and techniques (even in addressing one CAM) would be very difficult to explain to the users in a succinct and coherent manner, especially if what are commonly called "extended" procedures are employed.

We see the discussion of audit scope as part of the proposed CAM as a throwback to the old—and similarly nonstandardized—"long-form" audit report about which auditors were cautioned in 1957 (see SAP 27) that "comments or other data contained in the long-form report lend themselves to a contention that they constitute exceptions or reservations, as distinguished from mere explanations." Apparently, largely as a result of such cautionary language which we believe remains applicable today, the long-form report gradually disappeared from use. Accordingly, when explaining the underlying complexity of performing an audit, we believe that the level of detail provided would be a source of confusion to users.

**b. Investors and other financial statement users misinterpreting critical audit matters as undermining the auditor's pass/fail opinion or providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate?**

We believe that in the first several years of use, a certain amount of misinterpretation of the content and purpose of CAMs by readers is probable. As users become acclimated to the new reporting, the risk of misinterpretation will diminish. If, in fact, CAMs become a required part of the audit report, illustrative non-authoritative examples or guidance, for example, through Staff Practice Alerts, would be helpful.

**7. In addition to referring to the relevant financial statement accounts and disclosures, would it be appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating a critical audit matter? Why or why not?**

We view the discussion of matters outside financial statements by the auditor as problematic at best and, at worst, likely to be viewed as a form of attestation. If there were no audit assurance provided on such information, the role, responsibility and objectives of the auditor would likely be unstated and misunderstood. A level of assurance on such information (on a disclosure attributable solely to the auditor) would give rise to independence concerns. Liability concerns, especially under the Federal securities laws, would be an issue, unless future regulation provides a safe harbor, and there would have to be sufficient caveats, depending on the source and content, to be able to provide this information.

We note that there is an attestation standard (PCAOB Interim Standard AT 701) under which auditors can either review or examine the content of the Management Discussion and Analysis, which is of course client-generated information and the attestation report is issued only when the auditor is engaged by the registrant. AT 701 was issued in 2001, but we believe it has been used infrequently. We surmise that there has been little or no demand for this service because the cost/benefit relationship perceived is questionable.

**8. Is it appropriate for the reproposed standard to retain the possibility of the auditor determining that there are no critical audit matters and, if so, require a statement to that effect in the auditor's report? Why or why not?**

We believe it is appropriate for the Proposed Standard to retain the possibility of the auditor determining that there are no CAMs. We believe that this is a better option than being pressured to insert one when it is not warranted, although we do not expect that there will be many reports devoid of CAMs. If, however, the auditor does come to the conclusion that there are no CAMs, it is inappropriate to require a negative statement to that effect in the auditor's report. The absence of a CAM in the auditor's report should be sufficient, without having to make a definitive statement. We would compare this to the current use of "emphasis-of-a-matter" paragraphs, the absence of which is not commented on by the reporting auditor.

**and Related Amendments to PCAOB Standards**

**(PCAOB Release No. 2013-005, Docket Matter No. 034)**

## General Comments

The New York State Society of Certified Public Accountants (NYSSCPA) is pleased to submit the following comments on the above-captioned release (the Release) issued by the Public Company Accounting Oversight Board (PCAOB or the Board). Our responses to the questions contained in Appendices 5, 6 and 7 of the release are presented below.

## Appendix 5 – Additional Discussion Related to the Proposed Auditor Reporting Standard

### Question Related to Section II

**1.** ***Do the objectives assist the auditor in* understanding *the requirements of what would be communicated in an auditor's unqualified report? Why or why not?***

We believe the first objective, as set forth in paragraph 4a of the proposed standard, has always been and continues to be implied and obvious and need not be expressly articulated. The second objective, as set forth in paragraph 4b of the proposed standard, refers to communicating critical audit matters, the benefits and advisability of which we have significant reservations that are expressed in our responses to Questions 10-28 of Section V of Appendix 5.

### Questions Related to Section IV

**2.** ***The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?***

The Board, in its discussion of the proposed standard, states that the shareholders are the auditor's "ultimate customer." It is our preference that the Board should specify shareholders or stockholders rather than "investors." We believe that in addition to the Board of Directors or equivalent body, the proposed standard should require the report be addressed to current shareholders. The basis for the "Board of Directors" inclusion is that the engagement letter is contractual and a legal obligation of the Board of Directors. The parties to the contract should be the parties issuing and receiving the report. We do not strongly oppose using "investors," because investors in short sales, option holders, debenture holders, holders of mutual funds who hold the company's securities, *etc*., are all investors.

**3. *The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?***

We believe that the proposed language in paragraphs 6(j) through 6(n) captures the spirit of the auditor's responsibility. We do not believe that every time the phrase "material misstatement" is used it needs to be followed by "whether due to error or fraud." Material misstatement can only occur intentionally or unintentionally. The inclusion of "whether due to error or fraud" is a redundant statement and is not necessary in the same section.

In addition, while paragraph 6(m) states that an audit includes among other things, examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements. The word "appropriate" may be unclear to readers. Audit evidence is required to be sufficient and appropriate with the former relating to the quantity of evidence and the latter related to the quality of evidence. Because audit evidence by definition must include elements of both characteristics, the paragraph should read "Examining on a test basis, evidence regarding the amounts and disclosures in the financial statements."

Finally, the standard should include a reference to the auditor's responsibility to consider the company's internal controls when assessing risk and designing procedures to address identified risks. Whether the company is subject to Section 404 of the Sarbanes-Oxley Act, the auditor is required at a minimum to consider the design and implementation of the company's internal controls when designing an appropriate response to identified risks of material misstatement. This insert should be part of the auditor's responsibilities section of the auditor's report.

**4. *The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?***

Because independence is the prime tenet of auditing the fact that a separate statement that the auditor is public accounting firm registered with the PCAOB (United States) and is required to be independent with respect to the company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities Exchange Commission (SEC) and PCAOB is additive. The general idea of this information is included in the title of the auditor's report. We appreciate the Board's overriding concern with independence but a boilerplate statement added to all reports will not affect or remedy concern for the quality of this matter.

**5.** ***The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.***

*a.* ***Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?***

*b.* ***Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?***

*c.* ***Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?***

As audit partners and engagement quality reviewers are required to rotate on each public company every five years (with limited exceptions for small audit firms), we do not believe that the length of time that firms have audited clients is relevant to the audit opinion on any given year's financial statements. This issue has surfaced and resurfaced from time to time. The PCAOB oversight regime and the firm's own quality controls would have more of an influence on poor audit quality than the premise that long- term tenure affects audit quality. Quality issues may be more influenced by personnel failure which we believe will always occur.

**6.** ***The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?***

Providing auditors with objectives links the procedures to what the auditor is trying to achieve; so we support this consideration.

Paragraph 2(b) should be revised as follows: When issuing an auditor's report on the other information and *when the other information includes* whether, based on relevant audit evidence obtained and conclusions reached during the audit, the other information contains a material inconsistency or material misstatement of fact, *or both to describe these in the auditor's report.* We disagree with the requirement for the auditor to make a positive statement or conclusion about the absence of any inconsistencies, material misstatements or both discussed in paragraph 13(e). Also see our response in Question 18 of Appendix IV).

**7.** ***Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?***

We believe this is not a substantive matter. If left out of the standard, firms may have more flexibility in highlighting or emphasizing specific matters for users to consider.

**8.** ***What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?***

See our response in Question 3 above. The Board's discussion of the other elements of the report is satisfactory.

**9.** ***What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.***

We are uncertain if the drafters are categorizing critical audit matters as a basic element. That section will take the most time and effort relative to any other changes being proposed.

**Section V**

**General Comment**

We commend the Board for responding to the concerns expressed by many respondents to Release No. 2011-003 dated June 21, 2011, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (the Concept Release) by proposing a discussion of "critical audit matters" in audit reports in lieu of the "Auditor's Discussion and Analysis" (or AD & A) suggested in the earlier Concept Release. We responded to the Concept Release in a letter dated September 27, 2011, and understand those concerns to be rooted in a desire to preserve the purity of the attest function by not requiring auditors to speak about financial statement matters in a way that should be reserved for management. The critical audit matters discussion currently proposed is apparently intended to be limited to matters of auditor judgment which we believe (despite our reservations set forth in our responses to Questions 10-28 of Section V of Appendix 5 of the current Release) would be far more appropriate than the broader AD & A described in the Concept Release.

**Questions Related to Section V**

**10.** ***Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?***

No, the auditor's communication of critical audit matters would not be relevant and useful to investors and other financial statement users. Our view is that the expressions of demand for this kind of information by analysts and investor groups are largely exaggerated, lack credibility and are likely attributable to the "*if you build it, they will come*" syndrome. We believe that despite the perceived demand, there is little persuasive evidence that securities analysts and other investor groups will actually find such disclosures in audit reports useful or will rely on it for making or recommending investment decisions or that it will result in more informed and better investment decisions.

We do not believe it would be productive or appropriate for auditors to provide information in audit reports that is intended to help investors or other users to assess an audit. Auditing is a highly complex, professional discipline that requires years of education and training, experience, intimate knowledge of the issuer's business and seasoned professional judgment to enable appropriate audit scope (*i.e*., the nature, timing and extent of auditing procedures) and related judgments (*e.g*., those regarding risk assessment) as necessary to support an auditor's opinion. Moreover, as we have seen historically, there are numerous opportunities for legitimate disagreements on such judgmental matters between or among experienced and knowledgeable professionals (including, for example, regulators, expert witnesses and authors of non-authoritative professional guidance).

Accordingly, we believe that public disclosure of details of critical auditor judgments would not help users make investment or credit decisions or enhance transparency in any meaningful way or serve any other useful purpose but rather would negate or dilute the pass/fail message and, therefore, diminish the value of an audit report. Without the opportunity for two-way dialogue with auditors about such matters, (which is not practicable), such details would likely not contain enough information to help users to make meaningful assessments and useful judgments and quite probably would be misunderstood by many of them. We believe that financial statement users could never reasonably and meaningfully assess the effectiveness of such professional judgments, in relation to possible alternatives, without all the factual and technical knowledge that is available to the auditor.

Should the potential for misunderstanding be partially mitigated for institutional financial statement users by employing trained experienced audit advisors to assist in their analyses, we believe the inherent limitations on the extent of detailed information that could be communicated effectively in writing is likely to prevent the realization of any meaningful potential benefit, and the costs to such users would exceed the value thereof substantially.

Therefore, it is unreasonable to create expectations that any form of written report that is inherently limited, no matter how expanded it might be from the current model, would contain communications of sufficient factual and circumstantial details so as to help otherwise uninformed users, who do not have direct access to the auditors for two-way dialogue to make meaningful judgments as to such complex matters as risk assessments, audit scope and other auditor judgments.

Assessing audit quality is not the job of investors and other financial statement users; it is the job of the engagement quality reviewer, regulators such as the PCAOB (both its standard setters and inspectors) and licensing authorities (to a lesser extent). Additionally, and perhaps most significantly, audit committees upon whom investors should be able to place their reliance as to such matters. Although not the responsibility of the PCAOB, we see regulation of audit committees as the most relevant and, therefore, the best alternative way to assure that investor needs are served effectively.

**11.** ***What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?***

We see little, if any, opportunity for user benefit from this additional verbiage in audit reports. The obvious risk to auditors of providing regulators and others, (*e.g*., litigants and regulators such as the SEC or PCAOB inspectors) with additional opportunities for second-guessing critical auditor judgments is likely to lead to excessive self-protective, obtuse and unwieldy language in audit reports (see also our response to Question 28), as well as other unintended adverse consequences. These would include (1) increased audit fees, and (2) impairment of timely financial reporting due to delays in issuing audit reports (both resulting from cautious analysis to determine reportable critical audit matters) the documentation, communications, and additional layers of review, and of draft report language by audit firms and frequently by their attorneys.

In Appendix 5 of the Release (first paragraph, page A5-29), the Board suggests that the proposed requirement to report critical audit matters "could increase the auditor's focus on critical audit matters which could result in enhancing the quality of auditing." We firmly believe that other auditing and quality control standards already in place provide maximum assurance that such matters will be adequately addressed so that the achievement of any significant incremental assurance to be obtained from this proposal is highly unlikely. Accordingly, we see this statement as pure speculation, unsupportable, and potentially misleading to investors and other users.

Nevertheless, we do believe there is considerable probability that non-standardized reporting of critical audit matters under this proposal would serve to pressure auditors to report more rather than less. At first, variability among audit reports would likely reduce their comparability and their understandability, and the added language would tend to contradict an unqualified opinion, confusing users and diluting the value of the opinion. As time goes on (if this proposed requirement were adopted), we believe a tendency for the critical audit matters language in reports would evolve to look more similar, diluting their value (if there ever were any).

We also foresee that there may be pressure on auditors to skew their procedures based on how they would affect readers' perception of the description of the critical audit matter, rather than based on their own professional judgment as to what would minimize the risk of material misstatement.

**12.** ***Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?***

As noted in our responses to the foregoing Questions, we do not believe reporting critical audit matters would contribute in any meaningful way to achieving the objectives of providing relevant and useful information to investors and other financial statement users. However, in the event that the proposal for auditors to report critical audit matters is retained in a final standard (which we oppose), we believe the definition in paragraph A2 of Appendix A of the Proposed Auditor Reporting Standard (Appendix 1 of the Release), when considered in relation to the guidance contained in paragraphs 8 and 9 of the proposed standard (Exhibit 1 of the Release) is sufficiently clear for determining what would be reportable as a critical audit matter except for the implication of a one-directional limitation in the "Note" appended to such definition (*i.e.*, that it suggests that the definition contemplates that there could be more but not less than one reportable critical audit matter). According to the Note to paragraph 7 of Appendix 1 of the Release and the examples in paragraphs 12 and 13 of Appendix 1 of (and illustrated on pages A5-68, 73 and 77 of Appendix 5), the one-directional limitation appended to the definition is not the intent of the Board. Therefore, in the event that the proposal to report critical audit matters is retained in a final standard, the Note to paragraph A2 of Appendix A should be clarified.

**13.** ***Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?***

No, the additional time incurred regarding critical audit matters could not have an effect on the quality of the audit of the financial statements. We have seen no credible evidence or suggestion that audit quality would be affected, one way or the other, by adopting this proposed requirement. Conversely, as stated in our response to Question 11, we firmly believe the utility and the quality of the typical audit report would be substantially diminished if this requirement is adopted.

**14.** ***Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?***

Should the proposal for auditors to report critical audit matters be retained in a final standard (which we oppose), we would concur with the determination criteria set forth in paragraph 13 of Appendix 1.

**15.** ***Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?***

No. See our response to Question 10.

**16.** ***Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?***

Should the proposal for auditors to report critical audit matters be retained in a final standard (which we oppose), we would concur with the determination criteria set forth in paragraphs 8 and 9 of Appendix 1 of the Release except that we believe the expression "nature and amount of available and reliable evidence" in paragraph 9c should be revised to read "nature, quality (*i.e.*, relevance and reliability) and amount of available evidence."

**17.** ***Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?***

See our response to Question 14.

**18.** ***Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?***

The documentation requirement set forth in paragraph 14 of Appendix 1 of the Release clearly reflects the applicable portion of the general documentation standard (AS No. 3). Accordingly, should the proposal for auditors to report critical audit matters be retained in a final standard, we would be in favor of retaining paragraph 14 substantially as written, with one exception. That is, so as not to overburden auditors, we believe more guidance than that afforded by Appendix 5 of the Release (Part E2, pages A5-39 to 40) is necessary as to the nature and extent of documentation necessary for "non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters."

**19.** ***Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?***

As indicated in our response to Question 18, we believe more guidance as to the nature and extent of documentation necessary for "non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters" than that afforded by Appendix 5 of the Release (Part E2, pages A5-39 to 40) is necessary. Nevertheless, we find these documentation requirements unnecessary because we are opposed to the inclusion of critical matters in an audit report and, as indicated in our response to Question 11, we believe that other auditing and quality control standards already in place provide maximum assurance that critical matters is likely to be adequately addressed in the audit scope.

**20.** ***Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?***

See our response to Question 18.

**21.** ***What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?***

See our response to Question 11.

**22.** ***What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?***

We do not perceive any incremental costs for companies (other than audit costs, as discussed in our response to Question 11) or their audit committees that is likely to be incurred if this proposal were adopted. There could be costs associated with potential litigation.

**23.** ***How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?***

See our response to Question 11.

**24.** ***Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so under what circumstances?***

As indicated in our response to Question 10 and elsewhere, we are opposed to communicating critical audit matters in audit reports. However, should the proposal for auditors to report critical audit matters be retained in a final standard, we believe audit reports on comparative financial statements should be complete and should stand alone for all periods presented in all circumstances. Therefore, all critical audit matters included in the original audit report issued on prior period financial statements should be included when the statement is presented subsequently in comparative form. In the event prior period financial statements have been restated, we believe the subject matter of the restatement should be included in the discussion of critical audit matters for that period and should not be included in an emphasis paragraph as is the current practice.

**25.** ***Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?***

The examples presented in the Exhibit to Appendix 5 of the Release appear adequately responsive to the proposed requirements of Appendix 1 if adopted in a final standard. Nevertheless, we believe these brief examples serve to illustrate the inherent lack of utility of such limited discussions as to reinforce our views set forth in response to Question 10.

In addition, the first sentence of the illustrative introductory report language that would be mandated by paragraphs 12 and 13 of Appendix 1 (and also illustrated on pages A5-68, 73 and 77 of the Exhibit to Appendix 5) is unnecessary “boilerplate” and would only overburden the proposed standard report with excessive verbiage. Consequently, we believe this sentence should be removed from all examples presented in a final standard.

**26.** ***What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.***

As previously stated and in our response to Question 11, we are opposed to the communication of critical audit matters. But should the proposal for auditors to report critical audit matters be retained in a final standard, variability among audit reports is likely to reduce their comparability and their understandability at first, and the added language is likely to tend to appear contradictory to an unqualified opinion thus confusing users and diluting the value of the opinion. The reduction in comparability, in and of itself, might not inherently be dire except that users will likely be ill-equipped to make useful assessments of the significance (or lack thereof) of the differences. We see this challenge as equally applicable, more or less, without regard to the size or type of the reporting entity. In time, we believe a tendency for the critical audit matters language in reports would likely evolve to look more similar (especially for companies in similar industries or audited by the same firm) diluting their purported value.

**27.** ***What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?***

See our response to Question 11.

**28.** ***What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?***

The following paragraph expands our response in this regard to Question 11.

While we do not see the proposal as likely to lead to additional liability, *per se*, we do see the additional language in audit reports as likely to increase the number of incidents and the costs of litigation. This is because ultimately, audit quality will be attacked and defended largely on its performance merit rather than on the content of the report but for any material omissions or statements that are deemed to be knowingly false and/or misleading. In short, these disclosures are likely to inspire and provide new opportunities for assertions of omissions and inadequacies with respect to audit reports as well as affording additional avenues for plaintiffs to pursue in discovery that will add to an auditor's defense costs.

**Questions Related to Section VI**

**29.** ***Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?***

Yes, it is appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard. It is helpful to bring the approximately ten requirements into one standard; especially for auditors who do not have significant experience in auditing issuers or investors who need a basic understanding of the purpose of such disclosures in auditor's reports.

**30.** ***Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?***

Emphasis disclosures could be valuable to users, but less so if the critical audit matters section is included in the audit report, because as noted in the Release, these types of issues would most likely qualify for inclusion in both sections. [Note: We are using critical audit matters as a default here irrespective of our comments in another section of this letter.] This duplication may not be all negative; however, because what we believe will occur is that the critical auditing matters will reference back (perhaps in a single reference) to the emphasis section without complete reiteration. The auditor should always have the ability to discuss matters that are deemed important. This standard retains that option.

**31.** ***Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?***

Certain matters should not necessarily be required to be emphasized in the auditor's report but rather left to the auditor's discretion. As to the ten matters that are now required to be included when they are evident, they should continued to be required as they are significant for the achievement of the basic objectives of reporting. Other matters to be included at the auditor's discretion should be evaluated on a client specific basis. This is a subtle but important difference, and these other issues could be included by the auditor after review and analysis as needed. The latter evaluation would include the client's presentation and disclosure of these matters (the auditor perhaps having a different perception).

Because the language in the Release is open-ended about including other matters at the auditor's discretion though an emphasis paragraph (or explanatory language in another report paragraph), we do not believe it is necessary to add any recommendations to the examples listed as matters that could be considered as well.

**32.** ***Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?***

No, see our discussion in Question 31.

**Questions Related to Section VII**

**33.** ***Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?***

See our comments with regard to inclusion of firm's registration, independence, audit tenure, and our responses on reporting on other information.

We are in agreement with changes to AS No.6 and No.7, (although we are opposed to the inclusion of critical audit matters) and the changes in AS No. 7 which presupposes this change.

We agree that it would be in the purview of the audit committee to discuss the draft auditor's report, but the auditor should be wary of changes that might dilute positions taken by the auditor.

We are not opposed to referring to the work of a specialist(s) in resolution of matters discussed in critical audit matters.

Our views on other proposed amendments would be consistent with our responses on the basic elements discussed in this comment letter.

**34.** ***What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.***

Implementation costs would likely include training and audit methodology changes on a firmwide basis; and preparation time, added review and supervision time, as well as additional time for those in corporate governance. Additional costs could also be incurred in related litigation defense.

Overall, the time and effort involved would be relatively insignificant when measured against total audit fees.

**Questions Related to Section VIII**

**35.** ***Are the proposed reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?***

We believe it is worthwhile to draw attention to the following facts as considerations (some of which have been mentioned in the pages of the Release that precede this question).

- Per the PCAOB's Office of Research and Analysis, there are no issuers among the brokers and dealers that filed annual audited financial statements with the SEC for fiscal periods ended during 2012. Approximately 9% of the 4,230 brokers and dealers that file are subsidiaries of issuers. The remainder are not owned by issuers.
- Regulators such as the SEC and Financial Regulatory Authority (FINRA) have ongoing programs to monitor and examine the books and records of registered broker-dealers.
- Broker-dealers file Financial and Operation Combined Uniform Single (FOCUS) reports at least quarterly; many file monthly if their minimum net capital is at a high level. The level of minimum net capital is a reflection of perceived operational risk. FOCUS reports include balance sheets, income statements and other operational measurements of financial condition. In addition, all brokers and dealers have been filing quarterly Statements of Supplemental Income that include more details about results of operations. It is not unusual for responsible personnel at broker-dealers to receive inquiries from

regulators about the reasons for fluctuations and unusual amounts that are disclosed in these reports.

- There is public disclosure of the regulatory records of most brokers and dealers and of most individual registered representatives that deal with the public.
- The most recent amendment to SEC Rule 17a-5 requires that broker-dealers that are carrying brokers must provide permission to the SEC to see auditors' workpapers.

As a practical matter, the great majority of brokers and dealers are not issuers and have no public investors. Therefore, members of the public, when using the annual audited financial statements, are not making investment decisions, but rather are using the annual audited financial statements in considering whether to conduct transactions using the broker-dealer, and in some fewer cases, for the broker-dealer to have custody of its funds or securities.

In addition, there is a high level of interaction between brokers and dealers and the regulators and public disclosure about businesses and individuals that deal with the public.

Upon considering the above, we believe that the additional costs involved do not justify the additional reporting requested of auditors in the Release. However we believe that if the PCAOB decides that these standards be applied to brokers and dealers, that they should only be applied to those brokers and dealers that have custody of customer funds or securities.

**36.** ***Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report critical audit matters appropriate for auditors of brokers and dealers? If not, why not.***

For the reasons explained in our response to Question 35, we believe that the additional costs involved do not justify the additional reporting requested of auditors in the Release. However we believe that if the PCAOB decides that these standards shall be applied to brokers and dealers, that they should only be applied to those brokers and dealers that have custody of customer funds or securities.

**37.** ***Since a broker or dealer may elect to file with the SEC a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?***

As we have discussed in our response to Question 35, we believe that the additional costs involved do not justify the additional reporting requested of auditors in the Release. However we believe that if the PCAOB decides that these standards shall be applied to brokers and dealers, that they should only be applied to those brokers and dealers that have custody of customer funds or securities. If the proposed reporting standard is adopted for broker-dealers, any additional reporting obligations of the auditor should be limited to the contents of the complete set of financial statements (as opposed to the separately bound balance sheet). As most users of the financial statements of brokers and dealers are primarily interested in the financial well-being of the broker or dealer, an audited statement of financial condition and notes are typically all that should be required to be made available to them.

**38.** ***Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?***

We have no response to this question at this time.

**39.** ***Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?***

We have no response to this question at this time.

**40.** ***Should audits of certain companies be exempted from being required to communicate critical audit matters in the auditor's report? Why or why not?***

As we previously stated, our position on this issue is that reporting of critical audit matters should not be required.

**Questions Related to Section IX**

**41.** ***Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?***

Although a concerted effort would be needed to make all changes that are proposed in the Release, we believe the effective date is appropriate, provided that the PCAOB's efforts and adoption (including the SEC's approval) will not be unduly delayed.

**42.** ***Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?***

If the Board decides to extend the proposed standards and amendments to brokers and dealers we believe a  year delay from the effective date used for issuers be implemented because an acclimation period for auditors of these entities using PCAOB auditing standards, and basic changes in several filing forms is now underway (under recent regulation changes).

**Appendix 6 – Additional Discussion Related to the Proposed Other Information Standard**

**Questions Related to Section I**

**1.** ***Is the scope of the proposed other information standard clear and appropriate? Why or why not? Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?***

The Board should, in consultation with the SEC, extend the reporting and procedure standard for other information to other Exchange Act forms such as Form 10. It should also extend these proposed requirements to Exchange Act filings where audited information is contained by reference, for example proxy filings under Regulation 14A.

**2.** ***Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?***

See response to Question 1 above.

**3.** ***Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?***

If the standard was applied to a filing for which an annual report was filed or incorporated by reference and was subsequently amended, but the amendment did not affect the financial statement information content, the auditor should nevertheless evaluate whether it should or should not have changed. If no changes were needed, the auditor should not reperform original procedures and update the audit report for the other information content.

**4.** ***Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are there practical issues with applying the proposed other information standard to the other entity's audited financial statements?***

For a number of practical reasons, the proposed “other information standard” should not be required for entities filing financial statements or condensed financial statements under Article 3 of Regulation S-X.

- Auditors of acquired companies may not be the same as auditor of the acquirer. The acquiree’s auditors may not be registered with the PCAOB. We believe in this circumstance the acquiree’s auditor would not be able to satisfy the proposed reporting obligations.
- The purpose of several subsections of Article 3 are designed to provide information that is specific to a specific risk or concern—for example the guarantor financial statements requirements help investors determine if a guarantor is able to meet the guarantee obligation. In this scenario, there would be little or no added value based on the reporting objective stated.

**Question Related to Section II**

**5.** ***Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?***

We are in favor of providing an objective within the proposed standard that would assist auditors in understanding what needs to be achieved through the performance of the proposed required procedures. However, we believe paragraph 2.b. should be revised as follows:

> b. When issuing an auditor's report, to communicate in the auditor's report the auditor's responsibilities for the other information and *when the other information includes* a material inconsistency, a material misstatement of fact, or *both, to describe these in the auditor's report*.

Further, we disagree with proposed requirement for auditors to make positive statements or conclusions about the absence of any inconsistencies, material misstatements of fact or both, as contained in paragraph 13(e) (see our response to Question 18 of Section VI of this Appendix).

**Questions Related to Section III**

**6.** ***Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?***

We are concerned that the use of the term "evaluate" could imply a more in-depth level of analysis than should be required to enable a determination of whether other information contains a material inconsistency with amounts or information or the manner of their presentation or a material misstatement of fact exists. We believe that auditors' responsibility should be limited to reading the other information in the context of their understanding of the entity, its environment, activities and financial performance and condition, as acquired during the audit, and to consider whether there may be a material inconsistency, misstatement of fact, or both.

**7.** ***Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?***

Notwithstanding our response to Question 6 above, we believe it is likely that that the overall quality of information available to investors and other financial statement users might improve—including an understanding and appreciation for the limitations on the auditor's procedures and responsibilities. It is important for investors and other users to understand that while overall quality of the other information may improve; little or no assurance is provided on the other information because of the limited procedures performed and responsibility taken.

**8.** ***Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information? Would applying this definition represent a change to the materiality considerations auditors currently use under AU Sec. 550?***

We agree that the appropriate standard for the auditor's responsibility to "evaluate" other information would be that afforded by the federal securities laws' definition of materiality and that this is consistent with current practice under AU Sec. 550 and Staff Accounting Bulletin 99.

**9.** ***Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?***

We agree that the procedures set forth in paragraph 4 of the proposed standard, *i.e*., to compare the amounts and qualitative statements in the other information to the financial statements and verify the mathematical accuracy of calculated amounts, are appropriate and consistent with the procedures many practitioners already perform. However, as stated in our response to Question 6 of Section III of this Appendix, we do not believe the use of the term "evaluate" is appropriate and suggest revising the requirement in paragraph 4 to delete that term and state instead that the "auditor should read the other information and perform the following procedures."

Additionally, we believe that paragraph 3 of the proposed standard, which sets out what would be the auditor's overall responsibilities, should be revised to delete the term "evaluate" so that the paragraph would state that "the auditor should read the other information and perform certain procedures to determine whether there appears to be a material inconsistency or misstatement of fact, or both."

We recommend that all references to "evaluate" be replaced with "to read" or "consider", in the standard due to all the possible interpretations of "evaluate."

**10.** ***Is it understood which amounts are in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?***

We believe that the guidance in paragraph 4.d. along with the related Note provides an appropriate explanation about which amounts in the other information the auditor would be required to recalculate.

**11.** ***Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?***

We believe the additional costs described in Appendix 6, including costs relating to (1) those incurred by some firms that might not currently be performing similar procedures as set out in paragraph 4, (2) strengthening the auditor's responsibilities from being "aware" to the performance of specific procedures relating to determining whether a material inconsistency or misstatement of fact appears to exist, and (3) one-time implementation costs that might be incurred by a few firms would, nevertheless, not likely be significant.

**12.** ***Are the proposed auditor responses under paragraph 5 appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If not why not?***

The proposed auditor responses described in paragraph 5, which consist of inquiry of management and the performance of additional procedures, are appropriate. However, we suggest recognizing that the nature and extent of the additional procedures should be sufficient to resolve the apparent discrepancy as determined based on the auditor's professional judgment.

**13.** ***Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?***

We believe the incurrence of such costs invariably would be warranted in the circumstances. See our response to Question 11 of Section III of this Appendix.

**Questions Related to Section IV**

**14.** ***Are the proposed auditor's responses under paragraphs 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?***

We believe that the proposed auditor's responses are appropriate and consistent with current practice in circumstances in which the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, misstatement of fact, or both.

**15.** ***Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? Under what circumstances would such a report be appropriate or not appropriate?***

In certain circumstances, it may be appropriate for an auditor to issue an audit report that states the auditor identified a material inconsistency or a material misstatement of fact, or both, in the other information. However, we suggest providing additional guidance that explains that in determining the appropriate action, consideration should be given to the extent to which a material misstatement of fact in the other information could reasonably be expected to influence the economic decisions of the users for whom the auditor's report is prepared and the auditor's understanding of the rationale given by management and the audit committee for not making the correction.

**16.** ***Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of***

***the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?***

The proposed auditor’s responses for those circumstances when the auditor determines that the other information that was not available prior to the issuance of the auditor’s report contains a material inconsistency, misstatement of fact, or both, are appropriate.

We believe that in this circumstance consultation with counsel is a recommendation that should be added to paragraph 11 of the proposed statement.

**Question Related to Section V**

**17.** ***Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed information standard the auditor determines there is a potential misstatement in the financial statements? Why or why not?***

We agree with the auditor’s responses set out in the proposed standard that would require reference to Auditing Standard (AS) No. 14, *Evaluating Audit Results* and AU 508 *Departures from Unqualified Opinions and Other Reporting Circumstances*, when the auditor discovers that there is a potential misstatement in the financial statements. However, we also believe that the standard should refer to AS No. 12, *Identifying and Assessing Risks of Material Misstatement*, since there may be implications related to the auditor’s understanding of the entity and its environment, indicating a need to revise the auditor’s initial risk assessment and audit scope.

**Questions Related to Section VI**

**18.** ***Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?***

We are in favor of expanding the standard audit report to include language in the discussion of auditor’s responsibilities that would better inform investors and other users regarding auditor’s limited responsibility for other information. However, we do not support requiring the auditor to make any positive statement or conclusion about the absence of any material inconsistencies or material misstatements of fact in the other information because we believe that such a statement is likely to mislead users to incorrectly believe that such information had been subjected to sufficient procedures to form a conclusion. We believe providing such a statement would have the undesired effect of widening the expectations gap.

**19.** ***Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.***

We do not believe that the auditor should identify in the auditor’s report other information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against since such a statement would imply erroneously that the auditor had an obligation to examine supporting evidence for such other information beyond what would be necessary to express an opinion on the financial statements.

**20.** ***What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?***

While we do not believe that there would be significant direct additional costs incurred related to reporting under this proposed standard, we believe that additional indirect costs (such as defense costs in disputes or litigation) might be incurred because investors misunderstand the scope and nature of the work performed by the auditor on the other information and adversely affect investment decisions.

**21.** ***Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?***

See our responses to Questions 9 of Section III and 18 of Section VI of this Appendix.

**22.** ***Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?***

We are not aware of any practical considerations except for considering whether the detected inconsistency or misstatement, even though corrected, is indicative of a weakness in the issuer's internal controls over financial reporting or other disclosure controls that might also require revisions to management's statements made about such controls.

**Question Related to Section VII**

**23.** ***Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?***

The requirements in the proposed other information standard with respect to a predecessor auditor are similar to extant guidance, and we believe the proposed responsibilities are appropriate and sufficiently clear.

**Questions Related to Section VIII**

**24.** ***What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?***

We believe that if a contentious matter were to arise subsequent to report issuance which was not discussed in critical audit matters that the matter might be the subject of litigation, especially if there were other serious matters such as significant misstatements that were not identified, it is less likely that an issue that was not identified in other information or was misstated would become part of  a securities litigation, unless it was listed as a matter that was included in a compendium of issues.

**25.** ***Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?***

We have no response to this question at this time.

**Questions Related to Section IX**

**26.** ***Are the proposed amendments to PCAOB standards, as related to the proposed other information standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed other information standard that the Board should consider?***

The proposed amendments appear appropriate.

**27.** ***In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?***

We believe that requiring the auditor to include a statement in the auditor’s report that the auditor was not engaged to examine management’s assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management’s report is appropriate. Such reporting would improve consistency between auditor reports and provide clarity to users with respect to the auditor’s responsibility.

**Question Related to Section X**

**28.** ***Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?***

Other information is not relevant to brokers and dealers that are not issuers.

**Questions Related to Section XI**

**29.** ***Is the Board's effective date appropriate for the proposed other information standard? Why or why not?***

We believe that the effective date for the proposed information standard, audits of financial statements for fiscal years beginning on or after December 15, 2015, is appropriate.

**30.** ***Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?***

We support delayed compliance dates for any proposed standard on other information to provide auditors of smaller companies with sufficient time to incorporate the guidance into their methodologies and educate their clients about the proposed standard and its impact on the nature and timing of procedures relating to other information.

**Questions Related to Section XII**

**31.** ***Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?***

Auditors have historically made a conscious attempt to have clients avoid cross-referencing content from "other information" (such as MD&A) directly into financial statements being filed. This was meant to avoid the implied direct responsibility which would attach to the integrated content. The risk increases under Securities Act filings as audited financial statements are "expertized" and the attendant liability concerns under Section 11 of this law.

One of the issues we discussed was that the report language dealing with required "supplemental" information and other language dealing with "other" information is much different in form and content. It is important that these terms be easily identified by making sure that each schedule or other supplementary information be listed, and that the same thing be done for other information.

The main issue we see is MD&A usually contains much forward looking information and does not lend itself to consistency with the underlying client financial statements on many levels. For instance, information may be based on cash flow management or budgeting analysis. Making a statement about not being inconsistent or that an omission of a material magnitude has occurred is problematical especially in a Securities Act filing.

**32.** ***Are there some elements of the proposed other information standard that the Board should consider requiring the auditor to perform related to other information contained in filings under the Securities Act, such as the auditor's responsibility to evaluate the other information? If so, which elements of the proposed other information standard should the Board consider including in the procedures currently required for Securities Act documents under AU sec. 711? If not, why not?***

See our comment in Question 31, which suggests deletion of coverage for MD&A. We do not propose to add any other content.

**33.** ***What costs or other challenges should the Board consider when assessing whether to propose extending some elements of the proposed other information standard to other information contained in documents filed under the Securities Act?***

We believe there will be time costs but we do not have estimates at this time.

**Appendix7 – Emerging Growth Companies**

**Questions**

**1.** ***Should the proposed standards and amendments be applicable for audits of EGCs? Why or why not?***

To the extent the proposed standards and amendments are retained in a final standard (which we oppose in many respects as noted above), we believe they should be applicable for audits of EGCs as a matter of consistency. As any standards, auditing standards should be consistently applied and comparable, in this case, for all audits. Although we do not believe the intended goals of the proposed standards and amendments will be achieved; excluding certain entities (other than non-issuers) from such requirements would be inconsistent and illogical.

**2.** ***Are there any other considerations related to competition, efficiency, and capital formation that the Board should take into account with respect to applying the proposed standards and amendments to audits of EGCs?***

We do not believe special consideration should be given to EGCs related to competition, efficiency, and capital formation. As we have stated in Question 1 of this Appendix, despite our opposition to the proposed standards and amendments, application of auditing standards and amendments should be consistent and comparable for audits of all issuer entities.

**3.** ***Are there any special characteristics of EGCs that the Board should consider related to the proposed auditor reporting standard, including the communication of critical audit matters?***

We do not believe special characteristics of EGCs should be considered in the applicability of such standards. As we have stated in our responses to various questions in Appendix 7 of the Release, despite our opposition to the proposed standards and amendments, application of auditing standards and amendments should be consistent and comparable for audits of all entities.

**4.** ***Would audits of EGCs be more, less, or equally likely to have critical audit matters?***

Based on the characteristics of EGCs, they are equally or more likely to have critical audit matters than non-EGCs. For example, as noted in Appendix 7 of the Release, data suggests that

"EGCs are 10 times more likely than the population of companies in the Russell 3000 Index to have a management report on internal control over financial reporting stating that the company's internal control over financial reporting was not effective."

**5.** ***Are there any special characteristics of EGCs that the Board should consider related to the proposed other information standard and amendments?***

No.

**6.** ***What costs would audit firms incur when implementing the proposed auditor reporting standard, including the communication of critical audit matters, for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?***

Related costs to prepare the necessary communications will vary and such costs could be significant. Audit firms would incur initial costs in developing new audit methodologies to address the requirements of the proposed auditor reporting standard. Costs would also be incurred to train staff regarding the new methodologies and in changing the presentation of the auditor's report. With respect to communication of critical audit matters, implementation costs for audits of EGCs would not likely vary from that of larger and more established companies.

**7.** ***What costs would audit firms incur when implementing the proposed other information standard for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?***

Should the proposed standards and amendments be retained in a final standard (which we oppose), audit firms would incur additional and unnecessary costs in developing and maintaining separate audit methodologies for EGCs as opposed to other SEC registrants. In terms of costs specifically relating to implementing the proposed other information standards for audits of EGCs, it would be minimized as a result of the provisions in the Jumpstart Our Business Startups Act (the "JOBS Act") which allow for reduced disclosure requirements in IPO registration statements and the gradual phase-in of certain post-IPO disclosures and other requirements.

***8. Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed auditor reporting standard and amendments to EGCs?***

See our response to Question 6

**9.** ***Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed other information standard and amendments to EGCs?***

See our response to Question 7

**10.** ***For auditors of both EGCs and other SEC registrants, would it be more costly not to apply the proposed standards and amendments to audits of EGCs because the firms would need to develop and maintain two audit methodologies?***

We believe the proposed standards should be applicable for audits of EGCs as a matter of consistency. As consistency is always the most efficient approach, it would be more costly to have to maintain different audit methodologies for EGCs and other SEC registrants. Costs of maintaining different audit methodologies could be significant.

**Re: PCAOB Release No. 2016-003, PCAOB Rulemaking Docket Matter No. 034**

I am Bruce Nordstrom, President and Certified Public Accountant with Nordstrom & Associates, P.C. and Chairman of the Audit Committee for Pinnacle West Capital Corporation ("Pinnacle West"). Pinnacle West is the NYSE-listed parent company of Arizona Public Service Company, the largest electric utility company in Arizona, serving more than a million customers. It is in my capacity as Audit Committee Chair for Pinnacle West that I respectfully submit comments on the Public Company Accounting Oversight Board's ("PCAOB") Release No 2016-003; *Proposed Auditing Standard - The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, and *Related Amendments to PCAOB Standards.*

I appreciate the PCAOB's efforts to address stakeholders' concerns regarding PCAOB Release No 2013-005 (the "2013 proposal") and the revisions the PCAOB has made to the 2013 proposal. Despite these revisions, I do not support Release No 2016-003. I strongly disagree with the PCAOB's proposal to include critical audit matters (CAMS) within the audit report as provided in Release No 2016-003. I believe including CAMS in the audit report undermines the role of the audit committee, will impede communications between the auditors and the audit committee, and inappropriately shifts the auditor function from that of an attest function to a management role. Furthermore, I do not support the PCAOB's proposal to disclose audit tenure within the audit report, as that information is irrelevant. The following is a detailed discussion of my concerns.

**Critical Audit Matters**

The proposed guidance requires auditors to include a discussion in the audit report of CAMS, with CAMS defined as certain matters communicated to the audit committee. The auditor will be responsible for identifying and disclosing the topics they believe qualify for CAM reporting. The PCAOB indicates the purpose of including CAMS in the audit report is to reduce information asymmetry between investors and auditors.

The audit committee is comprised of members of the shareholder-elected board of directors, and provides oversight of accounting policies, internal controls, financial reporting, and the audit process. The audit committee has access to auditors, management, and the board of directors. The audit committee has the knowledge, perspective, and authority to ensure relevant information is properly disclosed by management. This oversight role ensures key audit matters are properly addressed and communicated to investors through management's financial disclosures. The audit committee oversees the financial reporting process and audit process to ensure that matters that are material to shareholders are appropriately disclosed. The disclosure of CAMS undermines this audit committee oversight role, and effectively shifts the auditors from providing an attest function into serving in a management role. Reporting CAMS may lead to a decrease in audit quality as investors may place undue emphasis on CAMS instead of the audit opinion and related financial statements.

CAM reporting may also impede and significantly limit communications between the audit committee and auditors. Due to the proposed CAM requirement, auditors may be less inclined to discuss non-required topics with the audit committee, as discussion of any matters may require assessment for CAM reporting. Management may also attempt to limit non-necessary communications between the audit committee and the auditors. This could ultimately limit the effectiveness of the audit committee and information shared with the audit committee.

Auditors are privy to proprietary and critical company specific information. Access to this information is a necessary component of the attest function. Information asymmetry between the investor and the auditor is an inherent characteristic of an audit and the financial reporting process. The FASB and SEC are the organizations that should ensure financial statement disclosure rules provide investors with adequate information to make informed investment decisions.

**Auditor Tenure**

I do not support the PCAOB's proposal to require the disclosure of audit tenure within the audit report. In instances with long audit tenure this disclosure may imply a lack of auditor independence. Conversely, in instances with short audit tenure this disclosure may imply poor audit quality. I believe the PCAOB has taken great efforts to ensure the independence, quality, and effectiveness of all audits regardless of auditor tenure. Disclosing auditor tenure will diminish these efforts. Requiring disclosure of auditor tenure provides information that may be mistakenly misinterpreted by investors. The audit committee is in the best position to evaluate the auditor's independence, including auditor tenure and rotation.

**Conclusion**

I appreciate the opportunity to comment on the PCAOB's proposals. I strongly urge the PCAOB to eliminate the proposal to include CAMS and auditor tenor in the audit report.

I would be pleased to discuss my comments in further detail or to provide any additional information you may find helpful in addressing these important issues.

Very truly yours,

Bruce J. Nordstrom

Subject: PCAOB Rulemaking Docket No. 034

Dear Board Members:

We are pleased to comment on the PCAOB's (the Board) reproposed rule, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "reproposed Standard"). Northrop Grumman is a leading global security company with annual sales of $24 billion and approximately 65,000 employees. We provide products, systems and solutions in unmanned systems; cyber; command, control, communications and computers, intelligence, surveillance, and reconnaissance; strike aircraft; and logistics and modernization to government and commercial customers worldwide.

We appreciate the Board's efforts to incorporate feedback received from preparers, accounting firms, and other constituents into the reproposed Standard. We share the Board's desire to provide timely and relevant information to investors in the auditor's report and support the Board's proposals to retain the requirements for auditors to communicate the nature of an audit, the auditor's responsibilities, and results of the audit in the auditor's report. We also support the Board's proposals to limit the addressees of the audit report to shareholders and boards of directors as well as to require specific ordering of certain sections in the auditor's report to improve readability.

However, we do not agree with the Board's proposal that auditors be required to disclose critical audit matters (CAMs) in the auditor's report, for the following reasons:

- Information material to investors is required to be disclosed by management and key judgments and accounting assumptions (along with the related financial sensitivities) are provided for investors in the critical accounting estimates section of MD&A. Adding a requirement for auditors to communicate CAMs would likely be duplicative to management's disclosure and could be confusing to investors. As evidenced by example disclosures in the reproposed Standard, CAM disclosures could extend well beyond a page and likely would contribute to disclosure overload rather than facilitate disclosure effectiveness.

- Audit committees and the PCAOB provide oversight to preparers and auditors, respectively, which is designed to improve the quality of financial reporting. This oversight enhances investor confidence regarding management's preparation of the financial statements and the auditor's performance of the audit. We believe these governance elements support investor reliance on the information presented in the audited financial statements without the need for further elaboration by the auditor on the matters they considered in reaching their audit opinion.

- CAM disclosure in the auditor's report may result in the unintended consequence of changing the quantity and nature of information communicated by auditors to audit committees. In contemplation of the required disclosure in the auditor's report, auditor communications with audit committees may lack the depth of current communications and become more general or boilerplate in nature.

- Requiring CAMs to be included in the auditor's report will likely result in increased audit costs for companies due to the additional preparation activities for auditors and corresponding reviews by management and audit committees. We routinely communicate with investors and none have inquired about audit matters, so we question whether the benefits of this proposal outweigh these added costs.

Please contact us if you have any questions or if you would like to discuss these comments.

Respectfully,

Michael Hardesty
Corporate Vice President, Controller and Chief Accounting Officer

**RE: PCAOB No. 2016-003, Rulemaking Docket No. 34 – Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Auditing Standards**

Dear Messrs. Doty, Ferguson, Hanson, and Harris, and Ms. Franzel:

As members of the Auditor's Report Working Group (Working Group) for the 2016 annual meeting of the PCAOB's Investor Advisory Group (IAG), we are writing to provide comments on the PCAOB's May 11, 2016 Proposed Auditing Standard entitled *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Auditing Standards*. The undersigned members of the PCAOB's IAG Working Group have collaborated in drafting this comment letter to the Board.[1]

We believe that the Board's Proposed Auditing Standard (Proposal) represents a meaningful improvement from the current standard audit report. The requirement to discuss critical audit matters (CAMs), if devoid of boilerplate language, will be useful to the investment community. We encourage the Board to emphasize in any final standard, in subsequent outreach efforts and, especially through its inspection program, the need for CAMs to be highly bespoke. In our view, there will be a direct correlation between the extent of CAM company-specificity and the related value of the audit report to the investing public.

Notwithstanding our clear support for the Proposal, we ask the Board to do more. As currently drafted, the Proposal requires that the audit report: (1) identify the CAM, (2) describe why the auditor viewed the issue as a CAM, (3) indicate how the auditor addressed the CAM, and (4) refer to the financial statement line(s) and disclosure(s) that pertain to the CAM. We take no exception to these four requirements. But the Board stopped short of mandating the one item that we believe would provide the greatest value to investors – the discussion of what the auditor ***found*** when it addressed the CAM (i.e., what were the results of the auditor's procedures in these

[1] Hereafter when we refer to a position of the IAG, we are only referring to those IAG members who have chosen to sign this letter. Every member of the Auditor's Report Working Group of the PCAOB's IAG has chosen to sign this letter. Their individual views do not necessarily reflect the opinions of the companies or associations with which they are affiliated or any other officers, employees, or members thereof.

areas). We recognize that mandating the disclosure of findings at this late stage in the project may be problematic, particularly since the forthcoming IAASB standard does not mandate the disclosure of findings nor does the existing FRC standard. Given this reality, we ask the PCAOB to consider the more limited step of modifying the existing Proposal to simply add one sentence:

**"We view the inclusion of informative, company-specific findings related to each CAM as a best practice in auditor reporting, and although the inclusion of findings is not required in the Auditing Standard we strongly encourage auditors to include such findings in their audit reports."**

In the balance of this letter, we justify our position for the inclusion of informative, company-specific findings[2] related to each CAM in the auditor's report.[3] The PCAOB's Congressionally-mandated mission is "to protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports." We view including CAM-related findings as unambiguously making audit reports more informative. Therefore, our suggested modification to the Board's Proposal is clearly consonant with the Board's mission.

As the Board itself recognizes, accounts and disclosures involving significant management estimates and judgments may often be disclosed as CAMs (PCAOB 2016a, 2), and investors have previously indicated their high level of interest in significant management estimates and judgments (PCAOB 2016a, 2, 93). Moreover, the importance of estimates and judgments has become more pronounced over time as GAAP has evolved, serving to exacerbate the information asymmetry between investors and auditors (PCAOB 2016a, 1). We recognize that disclosing CAMs is useful, but believe that such disclosure will be incomplete without also revealing the related findings.

Most importantly, investors have a clear and strong interest in the disclosure of findings. Approximately 80 percent of investors believe that audit reports should include findings (KPMG 2015). Citi, in its analysis of the new audit reports being issued in the United Kingdom (UK), states, "We would like all auditors to disclose findings" (Deans 2015, 1). Finally, the FRC itself has stated, "Investors clearly valued the additional insight offered by extended auditor reporting, and have since encouraged the adoption of greater transparency, particularly in respect of auditor's judgments and their findings" (FRC 2016, 6).

[2] Just as the Proposal contemplates that CAMs will be determined "in the context of the particular audit, with the aim of providing audit-specific information rather than a discussion of generic risks" (PCAOB 2016a, 25), so too should findings provide audit-specific information.
[3] We realize that the Proposal already allows auditors to discuss the outcome of their procedures and/or to include key observations with respect to the CAM (PCAOB 2016a, 31). We fully support this language but simply encourage the Board to go further and more explicitly recognize and encourage, without necessarily mandating, the inclusion of findings.

But, in reporting findings, it is essential that the auditor provide informative and company-specific information, particularly with respect to estimates and judgments. A finding that states that an estimate is reasonable (FRC 2015, 59) or that an estimate falls within an acceptable range is already implied by the issuance of an unmodified audit report (Deans 2015, 16). Such findings lack granularity, and as a result fail to provide meaningful, incremental information. As Tony Cates, the head of audit at KPMG UK states, "Instead what is required is graduated findings that say whereabouts in a range matters sit" (FRC 2015, 25). We agree wholeheartedly with Mr. Cates.

The new audit reports in the UK have been so well received that the Investment Management Association (IMA) sponsors a yearly contest to select and recognize the best audit reports. While we admit that this competition is not quite as glamorous as the Academy Awards, it represents a giant leap from bygone years when investors only skimmed the report to see if any modification existed. In recognizing the Rolls Royce audit report, the IMA commends KPMG for including, "… what they found. The inclusion of findings was a step further than other auditors and *provided a real value add* (our emphasis), giving colour as to whether management's judgments were balanced, mildly optimistic or mildly pessimistic in the view of the auditor" (FRC 2015, 55).

In addition to the strong investor support for the inclusion of findings in the audit report, auditors in the UK are recognizing investor demand for this information and, at least in some cases, choosing to provide the information, particularly as it relates to the auditor providing his or her own commentary on management judgments (Touche 2014). We view this result as indicating that at least some audit firms view reports with findings as a superior market-responsive service. For example, PwC has committed to including findings in its reports across its entire UK portfolio (FRC 2016, 24). Moreover, to the extent that there are variations among issuers, audit firms, and even individual auditors within firms (Touche 2014), such variation creates a landscape where different parties to the financial reporting process can signal differential quality, or at least market responsiveness. Such differentiation, by definition, is what makes information useful (i.e., to the extent that all information provided is identical the usefulness of reports declines).

There is obviously some opposition to auditors disclosing findings. First, some may argue that disclosing findings would move the auditor toward providing original information and would exceed the auditor's mandate (PCAOB 2016a, 2). With all due respect, we view the extent of the auditor's mandate not as permanently engraved on tablets of stone but rather determined and defined by members of the PCAOB based on your collective judgment in fulfilling your investor protection mission.

Second, some critics, particularly in the audit committee community, have questioned what investors would do with the information in expanded auditor reports. Although we could offer many examples, we simply offer one based on TUI Travel plc's 2014 audit report. PwC, TUI's auditor, included the following in its audit report, "Management is forecasting high revenue and profit growth rates in the next five years resulting from the investment in Brazil and Asia. If these growth rates are not achieved, it could lead to impairment of the related goodwill and intangible assets" (PwC 2015, 5). If analysts do not believe that high growth rates are achievable they could quasi-impair now.

Finally, some might argue that including findings in the audit report might expose auditors to incremental legal liability (FRC 2015, 60). A decision to encourage, but not require, the reporting of findings allows each individual audit firm to weigh the benefits associated with issuing a more useful and market-responsive report against the costs of potentially increased legal liability. Notwithstanding that choice would be preserved under our recommendation, the signatories of this letter are supportive of efforts to provide auditors with a narrowly-tailored legal safe harbor. That is, we support a legal safe harbor related *only* to the inclusion of CAM-related findings in the audit report.

We close by highlighting the alignment between our recommendations for improving the Board's Proposal with recent statements by certain Board members. Lewis Ferguson has stated, "The reproposed standard is meant to better arm investors with *insight previously available to and considered by, the auditors, but not ultimately evident in the auditor's report*" (our emphasis) (PCAOB 2016b). Auditors clearly assess and consider the relative gradation in management estimates and judgments, but such knowledge and consideration is not evident in the audit report.

Jay Hanson has stated, "… proposed requirements will impose costs and burdens on auditors, preparers and audit committees …[o]ur goal, then, cannot be merely to reduce information asymmetry by requiring the disclosure of information, but *making sure that the information to be provided will be valuable to investors such that it justifies the imposition of the related costs*" (our emphasis) (PCAOB 2016b). Most of this comment letter details the investor demand for and value derived from informative, company-specific CAM-related findings.

Finally, with no disrespect intended, we pose a challenge to the Board. Board member Jeanette Franzel has stated, "Although this is *a significant step forward in auditor reporting, it is a small step*" (our emphasis) (PCAOB 2016b). We agree with Ms. Franzel, but in the spirit of vigorous debate on an important public policy matter we challenge what appears to be the implicit conclusion. Why would the Board take a small step when the preferences of the group that the Board was intended to serve, investors, are crystal clear?[4]

[4] This challenge is to the entire Board and not uniquely to Ms. Franzel. We simply use her quote to frame the issue.

In conclusion, we support the PCAOB's Proposal as a meaningful improvement in auditor reporting. We believe that the Proposal would be substantially strengthened if the Board simply encouraged, but did not require, the inclusion of informative, company-specific findings in the audit report.[5] Regardless of the Board's opinion regarding our recommendation, we encourage the Board to expeditiously adopt a final rule on auditor reporting, preferably no later than the end of 2016.

We, as members of the Auditor's Report Working Group of the PCAOB's Investor Advisory Group, jointly submit this comment letter.

Re: PCAOB Release No. 2016-003 Docket 034: Proposed Auditing Standards on the Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards

The Accounting and Auditing Procedures Committee (the committee) of the Pennsylvania Institute of Certified Public Accountants (PICPA) appreciates the opportunity to comment on the proposed auditing standards update. The PICPA is a professional association of more than 20,000 members working to improve the profession and better serve the public interest. Founded in 1897, the PICPA is the second-oldest CPA organization in the United States. Membership includes practitioners in public accounting, education, government, and industry. The committee is composed of practitioners from both regional and small public accounting firms, members serving in financial reporting positions, and accounting educators. Our general comments are included below.

The committee believes that its Dec. 10, 2013, response to the PCAOB's previously issued exposure document remain valid to the re-exposed proposal. A copy of the committee's response to the original document is attached to this correspondence.

The committee appreciates that the PCAOB has restricted the definition of critical audit matters to matters communicated or required to be communicated to the audit committee and that relate to accounts or disclosures that are material to the financial statements. However, the committee remains concerned regarding the impact of the proposed requirements on the practitioner's ability to comply with legal obligations to maintain client confidentiality and independence, the risk of increased legal exposure, and the implementation costs.

1. Confidentiality – Most state CPA laws, as well as the AICPA Code of Conduct, require CPAs to maintain the confidentiality of their clients' information in the absence of specific permission to disclose. The definition of what is confidential is broad and generally encompasses all information that is not in the public domain. As further described below, the examples and wording included in the proposed standard seems to suggest a level of communication that goes beyond what a client normally disclosures. The committee is concerned that the proposed requirements would require CPAs to share nonpublic information with third parties, presenting threats to the practitioners' compliance with the confidentiality provisions within the Code.

PICPA
Pennsylvania Institute of Certified Public Accountants

- The definition of confidentiality extends to auditors' procedures. For example, without the client's consent, CPAs would be precluded from disclosing their audit methodology for a client's reserve process. However, the example for Company A provided within the release at pages 32-33 suggests that the auditor would describe the company's loan loss model in more detail than would normally be publicly available or included within the footnotes. The comment "since management has limited historical loss data for the nine-year loans…" might not be included in the footnotes or other publicly available information. To comply with confidentiality rules, the auditor would be precluded from communicating this kind of information in the absence of the client's permission.

- Some internal control or IT issues might be identified as critical audit issues, but may not have represented a condition required to be reported in the internal control report or otherwise disclosed publicly by management.

- Note 2 on page A1-9 specifically indicates that the auditor would not be required to provide information about the company that has not been made publicly available by the company "unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit." The committee believes that this requirement is in direct conflict with a CPA's legal confidentiality requirements.

2. Independence – The Committee believes that the proposed opinion increases the likelihood of adverse interest challenges, threatening practitioners' compliance with the independence rules included within the SEC rules, state CPA statutes, PCAOB guidance, and AICPA professional standards and Code of Professional Conduct.

   Requiring public disclosure of the type of information proposed by the PCAOB could result in adversarial type challenges by clients dissatisfied with certain disclosures. The client could disagree with an auditor's judgement on the materiality of a particular issue and challenge the release of specific information. The client could also challenge the auditor's wording, leading to significant wordsmithing. Concern over challenges such as these could lead to unwarranted auditor compromise solely to secure the client's permission to provide information to company stakeholders. The committee does not believe that the risk of such compromise is in the best interest of the client/auditor relationship, and does not think it would lead to greater transparency and enhanced value to financial statement users.

3. Misunderstanding and Legal Liability – The committee is concerned regarding the potential increased liability that could result from financial statement users' misunderstanding of and overreliance on the proposed critical audit matters.

   Comments such as the following from page 71 of the proposal clearly raise the concern that financial statement users may rely more on these matters than their actual nature and

PICPA
Pennsylvania Institute of Certified Public Accountants

limitations warrant. "Some commenters stated that the communication of critical audit matters would focus the users' attention on issues that would be pertinent to understanding the financial statements for purposes of investment decisions or financial analysis." A critical audit matter may, or may not, represent an appropriate indicator upon which to make an investment decision, or predictor of the future health of the company.

Despite the revisions to the original proposal, the committee still believes that practitioners will use a lower threshold for reporting critical matters to deter the threat of litigation for failure to identify a specific matter as critical. Practitioners may also believe that adopting standardized language will provide safeguards against charges of inadequate disclosure.

4. Cost, Training, Communication – The committee questions the merit of the costs that will be incurred for outreach and communication to clients and financial statement users and for training of the staff of the public accounting firms that will result from adoption of the proposed audit reporting model. The committee does not perceive these as being value-added costs.

While the committee does not agree that the auditors should be required to publicly communicate confidential client information, there is nothing to preclude greater transparency by the audit committee. A separate communication of critical audit matters uncovered during the audit with a corresponding confirmation of these items from the external CPA is a reasonable approach. This approach would encourage improved audit committee/auditor communications and greater audit committee involvement, eliminate the threats to the CPA's compliance with the confidentiality and independence rules, reduce liability resulting from misunderstanding of the wording in the audit opinion, and reduce the overall cost of compliance over the proposed approach.

We appreciate your consideration of our comments, and members of the committee are available to discuss any of these with you at your convenience.

Sincerely,

Robert E. Williams, CPA

Re: PCAOB Release No. 2013-005 Docket 034: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments

The Accounting and Auditing Procedures Committee (the committee) of the Pennsylvania Institute of Certified Public Accountants (PICPA) appreciates the opportunity to comment on the proposed auditing standards revisions. The PICPA is a professional association of more than 20,000 members working to improve the profession and better serve the public interest. Founded in 1897, the PICPA is the second-oldest CPA organization in the United States. Membership includes practitioners in public accounting, education, government, and industry. The committee is composed of practitioners from both regional and small public accounting firms, members serving in financial reporting positions, and accounting educators.

**Section I. Require the auditor to communicate in the auditor's report critical audit matters that were addressed during the audit of the current period's financial statements.**

The committee understands that financial statement users would like greater transparency from companies and are looking to the auditors for this additional information. However, the committee disagrees with the underlying concept and role being proposed for the auditor in this proposal. The committee believes that the proposed communications are fundamentally flawed, are in direct conflict with professional ethics standards, and would not result in meaningful communication to the financial statement user.

1. As the requirement to communicate critical audit matters would likely greatly increase the auditor's practice management exposure, it is unclear which risk areas that an auditor would be willing to leave out. As a result, the audit report would likely become a lengthy document noting all risk areas material and immaterial. Standardization would likely result, as each firm looking to manage its practice risk would centralize and standardize the communication process. The value of the proposed communications is questionable, as the end result would be a lengthy document that would read like an audit textbook.

PICPA
Pennsylvania Institute of Certified Public Accountants

2. The auditor is not permitted by many state statues and the AICPA Code of Professional Conduct to release confidential client information without the client's permission. The Code defines confidential client information as follows:

**"ET Section 92 – Definitions .05 Confidential client information.** Confidential client information is any information obtained from the client that is not available to the public. Information that is available to the public includes, but is not limited to, information

- in a book, periodical, newspaper, or similar publication;
- in a client document that has been released by the client to the public or that has otherwise become a matter of public knowledge;
- on publicly accessible websites, databases, online discussion forums, or other electronic media by which members of the public can access the information;
- released or disclosed by the client or other third parties in media interviews, speeches, testimony in a public forum, presentations made at seminars or trade association meetings, panel discussions, earnings press release calls, investor calls, analyst sessions, investor conference presentations, or a similar public forum;
- maintained by, or filed with, regulatory or governmental bodies that is available to the public; or
- obtained from other public sources.

Unless the particular client information is available to the public, such information should be considered confidential client information.

Members are advised that federal, state, or local statutes, rules, or regulations concerning confidentiality of client information may be more restrictive than the requirements contained in the Code of Professional Conduct."

3. As the audit firm would be precluded from communicating any confidential client information, the client would have to approve the final wording of the audit report, including information about audit difficulties, negating the overall value of the communication. The auditors would likely involve their attorneys and the final audit opinion would result from a negotiation process involving the auditor, attorneys representing both parties, public relations specialists, and key members of a client's management. The process for issuing an audit opinion would not only be untenable, but if the process results in an adversarial situation, the auditor could lose independence and become unable to issue the opinion.

The auditor's role is to provide an opinion on the fairness of the financial statement presentation, not to provide communications regarding the overall health of the audited entity. If greater transparency is needed, the committee believes that financial statement users should look to the company's management for additional information (e.g., the "important information concerning the company, the company's environment, and the preparation of the company's financial statements" that is noted in the introduction to the proposal). If the financial statement users cannot ascertain this important information from the financial statements, then the communications included in the financial statements should be enhanced. The committee does not agree that the fundamental role of the auditor should change to correct a deficiency in financial reporting requirements.

Pennsylvania Institute of Certified Public Accountants

Ultimately, the committee is supportive of proposed changes that would better communicate to the financial statement user the nature and limitations of an audit. The committee, for example, suggests that any proposed change to the audit report seek to minimize the gap between what financial statement users expect from the audit and what the audit is designed to accomplish. For example, improvements to the opinion could focus on further explaining the roles and responsibilities of the auditor and the audited entity's management, and that the audit is not designed to detect fraud due to the nature of fraud and the scope of the audit. The committee recommends that the PCAOB consider the findings included in the 103rd American Assembly Report, "The Future of the Accounting Profession," The American Assembly, Columbia University, which included tailoring the attestation level for the nature of the financial statement to remove the "illusion of exactitude." Two specific suggestions are as follows:

- More limited attestation on subjective judgments (e.g. accounting estimates and fair value determinations) instead verify reasonableness of process used.
- A new audit opinion to permit the external auditors to adhere to different attestation standards for different parts of the financial statements.

**Section II. Add new elements to the auditor's report related to auditor independence, auditor tenure, and the auditor's responsibility for, and evaluation of, other information in annual reports containing the audited financial statements and the related auditor's report.**

The question infers that the length of the auditor's tenure has a definite and measurable impact on the quality of the audit, with the longer the tenure the less the quality. The committee disagrees with this premise and believes that audit quality is lessened with mandatory firm rotation.

**Section III. Enhance certain standardized language in the auditor's report, including the addition of the phrase "whether due to error or fraud," when describing the auditor's responsibility under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether due to error or fraud.**

The committee supports the changes included in this area.

We appreciate your consideration of our comments, and members of the committee are available to discuss any of these with you at your convenience.

**Reference: Rulemaking Docket Matter No. 34**

Board Members:

Pfizer Inc. is a research-based, global biopharmaceutical company headquartered in New York. We discover, develop, manufacture and market leading medicines and vaccines, as well as many of the world's best-known consumer healthcare products. In 2015, we reported revenues of $48.9 billion and total assets of $167.5 billion.

We appreciate the opportunity to present our comments on the Board's proposed auditing standard "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion." and we recognize the Board's efforts in service to financial statement users. We thank the Board for its consideration of comments received on the related concept release and note that the proposed standard has addressed some of the concerns raised previously by us by attempting to narrow the source of critical audit matters (CAMs). We also support the inclusion of a statement that the auditor is required to be independent, the added language clarifying "whether due to error or fraud" when describing the auditor's responsibilities and the PCAOB decision to move the opinion paragraph earlier in the auditor's report. While we agree with those aspects of the reproposal, we continue to have concerns around others as are outlined below.

## Critical Audit Matters

We believe that while using communications to audit committees as a source for CAMs appears to be a reasonable approach as those are generally the most important matters it is likely to have numerous unintended consequences including providing a potential disincentive to openness of interactions with the audit committee. As this is contrary to overall best practice and good corporate governance, we cannot support this proposed provision of the standard. Furthermore, there is a real and substantive cost to this proposal for which investors have not yet been able to articulate how they would use the information to make better investing decisions resulting in benefits which are intangible and amorphous. We are concerned that:

1. The language "involved especially challenging, subjective or complex auditor judgment" may, in fact, yield unintended consequences as described below.
    a. The language is dependent upon the audit partner's experience and biases and may result in inconsistent application and presentation of CAMs and communications to investors. For example, within the pharmaceutical industry, the rebate accrual process is complex as accruals are required at the time of sale for a rebate that is provided to an insurer who is neither the customer nor the patient. An audit firm or partner who is experienced in this, will likely not find this particularly challenging because he understands the process and the nuances involved. However, an audit firm or partner who is not experienced in this area may find this to be especially challenging and subjective. The experienced firm or partner will likely not have a CAM while the inexperienced firm or partner is likely to believe it is CAM. Another example which is more general is business combinations where the assets to be valued are intangibles that rely upon forecasted information and assumptions or where goodwill is being tested for impairment which requires forecasted information about the P&L as well as a segmented balance sheet which many companies produce manually. A firm or partner who has dealt with this subjective process may not see it as a CAM because he is comfortable with the process for validating assumptions utilized while another may find such valuations especially challenging and requiring complex auditor judgment. Investors may therefore be misled into thinking that the auditee's have significantly different issues when, in fact, they do not.
    b. The phrase "especially" challenging, subjective or complex auditor judgment" is still too broad and subjective that it will lead to inconsistent application by audit firms, PCAOB inspectors and audit partners. This is because the terms themselves are so highly subjective and dependent on the perspectives, experiences and biases of the individual applying them as to make application inoperable and subject to hindsight and second guessing by PCAOB inspectors, reviewing partners and plaintiff's attorneys. While the factors are helpful, the identification of CAMs, is fundamentally a subjective process which is prone to inconsistent application from the Board's intent. The same set of facts may be interpreted differently because even reasonable people may disagree on the application of a very subjective set of criteria. While we understand that the Board wishes this to be principles-based, we believe that there need to be some objective components to the definition that are based on specific facts, can be measured and are readily observable. We believe that the default when auditors are faced with this issue will be to include everything that is communicated to audit committees and thereby bury the important in the unimportant. An audit of a global entity is complex because a business is dynamic and ever-changing to meet current and future customer needs. Furthermore, based on the CAM definition, we can easily see that there would be many issues that would likely produce a CAM but are simply a part of the current complex accounting rules that preparers must apply, including contingent consideration must be fair valued even though the two parties in the transaction couldn't place a value on it today (hence the reason it is contingent), hypothetical market participants which are used to consider fair values in business combinations, making judgments and estimates for variable consideration in revenue is a regular part of the revenue recording process,

and litigation accruals which are inherently unpredictable and wherein the assessment process relies heavily upon estimates and assumptions that while reasonable, may prove to be incomplete or inaccurate and unanticipated events and circumstances may occur that might cause us to change those estimates and assumptions.

2. We do not believe that the proposed documentation requirements by the auditor, which are significant and will add substantial cost to an audit will improve the quality of the audit or CAMs as it seems to be mainly for the benefit of the PCAOB inspection process and the ability to determine that every item was considered, debated and reasons specifically documented as to why it is a CAM or not. Having to document the "negative" of why something is not challenging, subjective or requires complex auditor judgment is overly burdensome as it sets a presumption that everything is a CAM unless proven otherwise. We believe that documenting only the reasons why something is a CAM is a more appropriate and efficient process. Given all that needs to be completed for the audit before meeting with the audit committee, we believe that having an auditor focus on documenting unimportant items takes away from rather than adds to the audit quality.
3. Unfortunately, we live in a litigious society where lawsuits are brought by plaintiffs and often settled to avoid litigation costs even when there is no wrongdoing. Again, it is important to remember that reasonable people can disagree, particularly when it relates to assumptions or estimates which are not black and white areas, or when it relates to areas that are so complex as to need multiple discussions between the auditor, preparer and, sometimes, the auditor's professional practice group to understand and evaluate the accounting rules which may be applicable. We note that, at times, the Big 4 accounting firms offer differing interpretations or guidance of rules and that these interpretations and guidance have all been made in good faith. We believe the Board and the SEC needs to protect both audit firms and auditees from litigation brought solely in reliance on an audit report description of a CAM by introducing safe harbor rules. Otherwise, we believe that CAMs will be utilized as a source for potential litigation by enterprising plaintiff's bar as auditor workpapers are subject to discovery. We believe the situation will become analogous to securities lawsuits wherein plaintiff's bar begin actions based on negative news. We think that the Board and the SEC need to answer the question as to whether a CAM disclosure could ever result in a change in market price of the auditee's stock. If yes, then the advent of litigation is a virtual certainty.
4. Significant deficiencies are required to be reported to the audit committee; however, public disclosure is not required. The proposed statement still does not address this inconsistency and permits the auditor to disclose this as a CAM. A significant deficiency or deficiency lacks the potential to cause a material error, by definition. We cannot see how it will be helpful to investors to be presented with information about matters that have no potential to be material. As such, we recommend that the Board prohibit an auditor disclosure of significant deficiencies or other deficiencies.
5. Should the Board move forward with CAMs despite our objections, the Board should consider an implementation plan that will address the fact that no field test will be performed for this standard. Based on their experience with other PCAOB standards, auditees are very aware that PCAOB inspections will drive audit practices around the identification of CAMs. We are also aware that the PCAOB's influence on partner's compensation when there are audit failures has caused partners to be extremely cautious and conservative. In fact, we can envision that unless

a plan is enacted to understand both under and over disclosure of CAMs, the Board will not have achieved its purpose which is to provide important information to investors. Instead, taking a hard line immediately will drive auditors to be overly conservative and err on the side of caution by listing all items communicated to the audit committee as CAMs which undermines the purpose of the proposal. It is therefore important that the inspection process on this issue take into account that the evaluation of a CAM is highly subjective and influenced by the perspectives and set of experiences that the evaluator (including an inspector) has relative to an audit. Rather than issuing comments immediately, we suggest that the Board institute a "grace period" of at least two audit cycles during which practice can evolve and issues around the new standard can be better understood by all.

6. We note that the proposed standard allows for communications made to the audit committee that are not required to be a source of CAMs. We suggest that this language be eliminated so as to allow free communication between the auditor and the audit committee. Potential unintended consequences could include auditor's only communicating on required items to eliminate the risk that such an item could be considered a CAM. Because the current required items are quite extensive, we cannot see an event wherein the auditor would not be required to communicate an item which would qualify as a CAM unless process evolves in an inappropriately conservative manner.

**Other**

*Auditor Tenure:* We continue to view disclosure of auditor tenure as not meaningful as a link to audit quality has not been established. However, should the Board move forward with this proposal, we recommend that this disclosure be included in Form AP rather than required in the auditor's opinion.

*Boilerplate language:* With respect to the reporting of CAMs within the report, it is not clear to us that standardized language within firms and certainly within the Big 4 can be avoided, given the cost in both time and effort, and the risk of confusion and liability that attends the notion of "custom-tailored" report language. . PCAOB oversight will likely drive the firms to apply the broadest and most inclusive definition to these terms. Moreover, the firms themselves will quickly align with one another on that basis, leading to extensive and potentially confusing over-disclosure. We therefore believe that investors will likely find the first round of auditor's reports interesting, but not very useful in the following years as similar issues are noted by the auditor for each year and the audit report is treated like the financials whereby users will apply software to see what has changed from year to year.

* * * * *

In summary, as described above, while we support the efforts of the PCAOB to improve audit quality and provide the necessary standards, we continue to have concerns about aspects of the proposal and ask the Board to consider the recommendations provides in this letter

Once again, we appreciate this opportunity to comment on this concept release and encourage the Board to continue to engage its constituents. We would be pleased to discuss our perspective on these issues with you at any time.

Very truly yours,

Dear Board Members:

Regarding Rulemaking Docket Matter No. 034, first allow me to express my appreciation not only for the Board's willingness to reexamine one of the most critical components of a set of financial statements to ensure that its potential usefulness is maximized, but also for granting the public the opportunity to provide comments on the proposal. I believe there is great value in reexamining the most significant and enduring piece of communication between independent auditors and the governing bodies whom they serve.

In reading the proposed auditing standard, I see several individual proposals that I would consider to be useful and relevant to investors and other financial statement users, including the following:

- Independence statement: As independence between an external auditor and the company it audits is foundational to the provision of reasonable assurance over the material accuracy of the financial statements, I welcome the addition of this statement to the audit report. I think the addition of this language affirms for the readers of the financial statements that this critical aspect of the relationship between auditors and the preparers of the financial statements was and remains intact. Further, it may also serve as a meaningful reminder to both auditor and auditee the importance of maintaining this independence, which would be an added benefit.
- Report addressee: As the auditor by nature serves the company's shareholders and governing body, I think the addressee requirement is reasonable and appropriate, and a necessary addition to the requirements around the audit report. As with the independence statement, I also think it has use as a means of reminding auditors and the companies who employ them that the services provided by the auditor are ultimately acquired at the behest of the shareholders and those charged with governance.
- Enhancement to the basic elements - financial statement footnotes: Given how inseparable the notes to the financial statements are from the statements themselves in providing the reader with a complete and accurate portrait of the financial position and results of a company, I wholeheartedly support modifying the language of the audit report to make reference to the notes to the financial statements as being part of the financial statements upon which the auditor is

opining. I hope that it will also encourage and reinforce to the readers that they should spend time reviewing not only the financial statements but also the related footnotes and schedules, thereby enhancing the usefulness of the financial statements taken as a whole.

At the same time, in reading both the initial draft of the proposed rule published in 2013, as well as the reproposal published in May of this year, I concur with multiple other professionals and trade groups that have expressed tremendous concern with regards to the proposal that Critical Audit Matters ("CAMs") be disclosed within the audit report. My concerns stem from a variety of sources, notably the following:

- I definitively share the belief expressed by many professionals (in many cases via comments provided on the initial draft of the proposal) that the disclosure of such details will prompt an increase in litigation the merits of which prove to be questionable or unfounded. Speaking frankly, I strongly believe that the inclusion of CAMs in the audit report would provide a virtual roadmap for those who may be looking for underhanded ways to enrich themselves via baseless litigation at the expense of a company and/or its auditors.
- I consider it rather likely that the introduction of a new area of complexity requiring significant auditor judgment would result in measurable increases in audit fees, which would ultimately reduce amounts that may otherwise be distributed to shareholders. Additionally, these fees would be attributable not to improved audit quality driven by improvements or increases in audit testing and/or documentation, but rather to an increase in audit firm risk management procedures, involving lengthier reviews by expensive, senior-level individuals both inside and outside of the audit team.
- As the Board knows, the use of professional judgment in the preparation of financial statements—through both the accounting decisions of company personnel, as well as the auditing decisions of those independent accountants whose shareholders they serve—is, by nature, extensive. In addition to the obvious and critical role that researching the correct application of GAAP plays in making important accounting judgments, the ability to openly acknowledge these areas as being more challenging than others, as well as the ability to be transparent in related discussions and share methodology and conclusions with external auditors, is crucial to ensuring the best possible outcomes. I believe this proposal would ultimately inhibit communication with regards to these challenging areas, which in turn would decrease the quality of the accounting and reporting output on these critical issues.
- Simply put, I feel strongly that the inclusion of this highly subjective information in the audit report stands contrary to the factual and objective piece of communication that the audit report is intended to be. Further, to make such a radical change so suddenly (in the sense that the audit report would dramatically change all at once; I acknowledge with appreciation the significant amount of time that the Board has spent crafting this proposal) and without a strong sense of consensus from industry professionals and auditors seems overly ambitious. I appreciate the desire to be transformative in increasing the

PHILLIPS EDISON & COMPANY

utility of the audit report and improving the quality of communications between auditors and shareholders, but I believe a more measured approach—which I think is reflected in many of the other proposals in Docket No. 034, some of which I highlighted earlier—is the correct approach. In addition to the two specific concerns on the CAMs proposal that I mentioned above, I think the potential for unintended consequences and a failure to maximize the effectiveness of the proposal due to a lack of consensus is significant.

Finally, the Board has specifically asked for commentary as to whether or not the disclosure of audit tenure would be more appropriately done through inclusion in the audit report or through submission of Form AP. I would suggest that Form AP would be the most appropriate method of disclosure. As I have detailed previously, the purpose of the audit report—to present an independent auditor's opinion with regards to the fairness and material accuracy of a specific set of financial statements—seems to indicate that facts about the auditors themselves (e.g. the identity of the signing partner, the tenure of the audit firm with respect to an individual engagement, etc.) are better documented separately from the audit report which appears in a particular set of financial statements. My concern with the inclusion in the audit report arises not from any fear of "overdisclosure", but rather from the very real possibility that inclusion of these facts in audit reports could (1) shift focus away from the intended subject of the audit report (the accuracy of the financial statements and, for integrated audits, the effectiveness of internal control) and (2) in the absence of context, imply that there is a direct relationship between audit quality and the length of an auditor's tenure, for which I do not believe there is any compelling evidence.

Thank you again for your consideration of this matter and the opportunity to provide commentary.

Sincerely,

Courtney C. Hathaway

Re: PCAOB Rulemaking Docket Matter No. 034: Proposed Auditing Standard on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* and related amendments to PCAOB standards

Plante & Moran PLLC (Plante Moran) is the 13th largest public accounting firm in the United States and serves a wide range of public and non-public entities in multiple industries. Plante Moran supports the PCAOB's efforts in improving standards by seeking feedback and appreciates the opportunity to provide comments on the Proposed Auditing Standard referenced above.

Plante Moran Commentary on the Proposed Auditing Standard

***Definition of Critical Audit Matter (CAM).*** For the most part, we agree with the definition of CAM as proposed. We do believe, however, that it could be interpreted that a significant deficiency would qualify as a CAM in some circumstances. Given that we believe this is not the PCAOB's intent, we suggest adding some clarification that significant deficiencies, by themselves, would not be a CAM.

***Applicability***. We agree with the Proposed Standard's exclusion of CAMs in the auditor's reports for the audits of certain brokers and dealers, investment companies, and employee benefit plans. We also recommend that the requirement be excluded from the auditor's reports for the audits of emerging growth companies and smaller reporting companies, as we have not yet seen any research that indicates these audits would sufficiently benefit from the information provided by this requirement that would justify the cost of the effort.

***Effective date***. We recommend that the effective dates of the Proposed Standard be in the year or years following the respective effective date of FASB ASU No. 2014-09 *Revenue from Contracts with Customers,* assuming timely approvals from the PCAOB and SEC. We acknowledge, regretfully, that this would be a significant delay from the PCAOB's preferred time frame. However, issuers and accounting firms are entering some years of great change as a result of the multiple major accounting standards that are required to be implemented in upcoming years. We believe that implementation of the Proposed Auditing Standard subsequent to ASU 2014-09 will be of much higher quality than if required to be implemented before ASU 2014-09. In addition, we strongly recommend that the effective dates be phased in to allow the smaller accounting firms and issuers and their audit committees additional time to review and consider actual examples of CAMs from larger firms and issuers.

Thank you again for the opportunity to comment on this proposed auditing standard. We would be pleased to respond to any questions the PCAOB or its staff may have about these comments. Please direct any questions to Joan Waggoner at **joan.waggoner@plantemoran.com** or 312-980-2945.

Very truly yours,

**RE: PCAOB Rulemaking Docket Matter No. 034 - *Proposed Auditing Standard - The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards***

Dear Madam Secretary:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (the "PCAOB" or "Board") reproposed auditing standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "reproposed standard") and related amendments to PCAOB standards (collectively the "reproposal").

As we have expressed previously, we support changes to the auditor's report that will be responsive to the feedback provided by users while also maintaining or improving audit quality. We greatly appreciate the Board's consideration of comments received on the proposed auditing standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "original proposal").[1]

The following are examples of changes to the original proposal which we believe will allow for a more practical approach and mitigate certain unintended consequences:

- Limiting the population of critical audit matters to matters communicated, or required to be communicated, to the audit committee,[2]
- Incorporating an element of materiality in the definition of critical audit matter with the apparent intent of not requiring a critical audit matter itself to constitute original information communicated by the auditor (see our comments below related to this area),[3]
- Revising the definition of critical audit matter to include only those matters that involved especially challenging, subjective, or complex auditor judgment,[4]
- Requiring only the principal considerations that led the auditor to determine a matter is a critical audit matter, rather than all considerations, be communicated in the auditor's report,[5]
- Clarifying the only required addressees are the shareholders and board of directors,[6] and

[1] *See* https://pcaobus.org/Rulemaking/Docket034/Release_2013-005_ARM.pdf

[3] *See* Ibid
[4] *See* Ibid
[5] *See* reproposed standard paragraph .14b
[6] *See* reproposed standard paragraph .07

pwc

- Delaying considerations of the auditor's responsibilities regarding other information to allow each project to be properly analyzed.

We agree certain requirements and information in the reproposed standard will provide better clarity for the users of the auditor's report, including:

- Requiring certain aspects of the auditor's report, which should be easier for users to navigate,[7]
- Enhancing the description of the auditor's responsibility,[8] and
- Explicitly stating the auditor is not providing a separate opinion on critical audit matters or on the accounts or disclosures to which they relate.[9]

We appreciate the Board considering standards already established by the IAASB and other standard-setters and regulators in developing the reproposal, and agree there is much similarity between the reproposal and these standards. We also appreciate the Board's observation that adding additional information not included in the reproposal would have unnecessarily lengthened the auditor's report without providing additional useful information.[10] However, we would encourage the PCAOB to consider the additional standard language adopted by the IAASB, such as the additional language related to the auditor's responsibilities, as consistency in the standard language among different standard-setters and regulators would be beneficial to users of audits. Also, this will help considerations of form and content of the audit report when the auditor needs to report under both PCAOB standards and those of another standard-setter, such as the IAASB.

We offer herein other suggestions for the Board's consideration as it moves to the next phase of this project. Our primary observations are organized into the following topical areas:

- Critical audit matters
- Auditor tenure
- Effective date and costs
- Application to brokers and dealers, investment companies, benefit plans and emerging growth companies
- Legal considerations related to the reproposal

Finally, we have included other specific comments on the reproposal in the Appendix to this letter.

**Critical audit matters**

*Definition of critical audit matter*

Paragraph .A2 of the reproposed standard defines a critical audit matter as "any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit

---

[7] *See* reproposed standard paragraphs .08, .09, and .15
[8] *See* reproposed standard paragraph .09
[9] *See* reproposed standard paragraph .15
[10] *See* page 52

pwc

committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex auditor judgment."

As we have said before, we believe if a matter is not important enough to require communication to the audit committee, it seems very unlikely it will be important enough to merit reporting as a critical audit matter.[11] Consistent with this premise, we support the reproposed definition insofar as it limits the population of possible critical audit matters to matters communicated, or required to be communicated, to the audit committee. We believe this change[12] will result in the same critical audit matters being communicated in the auditor's report but will reduce the effort related to identifying potential critical audit matters from a larger population and documenting why certain matters were not a critical audit matter. We also agree with the narrowing that a critical audit matter should be a matter that involved especially challenging, subjective, or complex auditor judgment.

We and others previously expressed concern about the potential to require the auditor to communicate original information about the entity.[13] We believed, and continue to believe, this would blur the line between an entity's disclosure and auditor reporting, which is a fundamental distinction in our view. Part of our concern is having the auditor communicate information that otherwise would not have been required disclosure under the existing financial reporting standards or SEC reporting requirements.

While the reproposal's discussion of materiality appears to resolve much of the concern about a critical audit matter itself being original information, it does not appear to resolve all of the concern related to the auditor reporting original information about the entity. More importantly, it appears the PCAOB's intent is a critical audit matter should not be something the entity itself is not required to disclose. For example:

- Note 2 to paragraph .14 says, "When describing critical audit matters in the auditor's report the auditor is not expected to provide information about the company that has not been made publicly available by the company unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit." (See our comments on page 5 related to the second part of Note 2 discussing the principal considerations and how the matter was addressed in the audit.)
- The release text explains materiality was included in the definition of critical audit matter in response to concerns the auditor may be required to communicate information management is not required to disclose under the applicable financial reporting framework and SEC reporting requirements.[14]
- Board member Ferguson expanded on this intent stating, "Company information, both financial and otherwise, and its disclosure is the responsibility of management, not the auditor. To blur that responsibility by putting part of it on the auditor could only lead to confusion and mischief."[15]

---

[11] *See* https://pcaobus.org/Rulemaking/Docket034/143b_PwC.pdf

[12] In addition to required audit committee communications, the original proposal also discussed the source of critical audit matters could be items documented in the engagement completion document and/or reviewed by the engagement quality reviewer

[13] *See* https://pcaobus.org/Rulemaking/Docket034/143b_PwC.pdf

[14] *See* page 20

[15] *See* https://pcaobus.org/News/Speech/Pages/Ferguson-statement-ARM-051116.aspx

By including the concept of materiality - specifically by requiring a critical audit matter to "relate to accounts or disclosures that are material to the financial statements" - it appears the Board intended to be responsive to the concern. For example and as described by the PCAOB on page 20 of the release text, a loss contingency determination in which the entity appropriately concludes there is no accrual and no disclosure in accordance with the related FASB standard would not relate to a material account or a material disclosure, and so would not be a critical audit matter under the proposed definition. We agree this is appropriate. We also agree with the discussion on page 20 of the release text and other commentary, including from Board members[16], that original information would not by itself constitute critical audit matters under the reproposed definition.

However, the phrasing of the reproposed definition - specifically, that a critical audit matter "relates to accounts or disclosures that are material to the financial statements" - may still result in a critical audit matter itself being something that is not required for management to disclose resulting in the auditor communicating original information about the entity. Specifically, there may be a matter that would "relate to an account" that is material but that is not actually required to be disclosed by the entity. For example, a significant deficiency is a required audit committee communication not related to a required disclosure, but would most likely relate to a material account, and so the auditor could be in the position of disclosing the significant deficiency when management would not be required to do so. We also believe the definition should be revised to make it clear that materiality relates to the financial statements taken as a whole to be consistent with the auditor's opinion as described in paragraph .01 of the reproposed standard. Based on the above, we suggest the Board revise the definition of a critical audit matter as follows:

> A critical audit matter is any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) ~~relates to accounts or disclosures that are~~ is material to the financial statements **taken as a whole** and (2) involved especially challenging, subjective, or complex auditor judgment.

We agree a critical audit matter could relate to an element of an account or disclosure and does not necessarily need to correspond to an entire account or disclosure in the financial statements. We also agree a critical audit matter might not relate to a single account or disclosure but could have a pervasive effect on the financial statements or relate to many accounts or disclosures.[17] We believe by stating a critical audit matter is material to the financial statements taken as a whole, the entity would have disclosure regardless of whether it related to an element of an account or disclosure or was pervasive in nature. If the Board believes these concepts need to be emphasized, a note in the standard could explain a critical audit matter might not be an entire account or disclosure, could be pervasive, or relate to many accounts or disclosures.

---

[16] *See* Board member Hanson's remarks at the open meeting in which he stated, "Finally, preparers should feel more comfortable that CAM disclosures under the reproposal would start with a reference to disclosures made by management in material financial reporting areas and otherwise focus on the work of the auditor. This should generally eliminate the need for auditor's [sic] to disclose any original information about the company, except to the extent the auditor's stated reason for identifying a CAM involves reference to facts not already disclosed by the company. I would hope that such circumstances will be infrequent." https://pcaobus.org/News/Speech/Pages/Hanson-statement-ARM-051116.aspx

[17] *See* page 20

The suggested change would also seem to be consistent with Board's intent and the requirement to refer to both the relevant financial statement accounts "and" disclosures that relate to the critical audit matter (i.e., the reporting requirement seems to indicate both would apply). Under our proposed definition, the example of a significant deficiency would not be material to the financial statements taken as a whole; therefore, it would not be a critical audit matter. This would seem to align with the Board's intent to not have a critical audit matter itself be a source of original information about the entity.

The second part of Note 2 to paragraph 14 discusses the possibility that information not made publicly available by the company may be communicated by the auditor to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit. We believe original information in describing the principal considerations or how the matter was addressed should be limited to audit information and not original information about the entity, and suggest the Board consider clarifying this point in Note 2 and elsewhere. As discussed above, our concern is that if the auditor is the first to disclose original information about the entity, that information by definition goes beyond what the entity either (i) was required to disclose under existing financial reporting standards and SEC reporting requirements, or (ii) chose to disclose. Accordingly, the entity may view some or all of the information as confidential or privileged (in states that recognize the accountant-client privilege).

Although some state confidentiality laws may permit an auditor to report confidential information when required by law or auditing standards, it is unclear whether the reproposal would authorize an auditor to report original information about the entity, because it does not specifically identify the information that must be communicated in the auditor report. Rather, the auditor would apply its judgment to determine which information falls within the reproposal's reporting requirements. State-by-state analysis would be necessary to determine whether under these circumstances the auditor would violate confidentiality obligations or the accountant-client privilege. We believe the only way to avoid these concerns is to make clear that the auditor should not communicate original information about the entity in the auditor's report.

*Illustrations of critical audit matters and how the critical audit matters were addressed in the audit*

While we appreciate the PCAOB providing illustrations and the caveats related to the illustrations provided in the release text,[18] we are concerned they may be viewed as templates by entities or auditors and, as such, we have concerns about some of the content in these examples. The reproposed standard requires the auditor to describe the principal considerations that led the auditor to determine that the matter is a critical audit matter and how the critical audit matter was addressed in the audit,[19] but both examples include information that does not seem unique in the circumstances; therefore, may result in boilerplate language and unnecessary length that would not benefit the users of the financial statements. For example, the first illustration includes a lengthy background paragraph which then leads the illustration to summarize, in a separate paragraph, the principal considerations (instead of the background paragraph clearly and succinctly articulating the principal considerations). Additionally, both examples discuss testing of controls, which is not unique to the critical audit matters reported. Therefore, we suggest, to the extent the PCAOB intends to include such illustrations in any final standard, it tailor the illustrations to focus on just the principal considerations. In addition, in order to avoid lengthy recitations within critical audit matters of most of the procedures the auditor performed in connection with the

[18] *See* pages 32-35

[19] *See* reproposed standard paragraph .14b

critical audit matter (which we believe would be of limited benefit to users of the financial statements), we also suggest limiting the requirement of describing how the matter was addressed in the audit to just the *principal* ways in which it was addressed. This would be consistent with the requirement to communicate the principal considerations.

**Auditor tenure**

While we have previously commented on communicating auditor tenure in the audit report, we felt it appropriate to reiterate our concerns since the reproposal has not changed in this respect.[20] As acknowledged in the release text, research continues to be divided on the relationship between audit quality and auditor tenure.[21] Consistent with our response to the original proposal, we believe including auditor tenure in the audit report would create the false impression such a relationship exists and would give undue prominence to this information. Moreover, the responsibility for hiring and dismissing the auditor rests with the audit committee, not the auditor. Accordingly, we do not believe that auditor tenure should be included in the audit report. However, if audit committees and management believe it is useful information given their specific facts and circumstances, we would not object to disclosure by them of tenure elsewhere. This would allow for the disclosure to be provided in the proper context for why management chose to make the disclosure.

**Effective date and costs**

The release text notes the Board has not yet concluded on potential effective dates. We believe the first year of reporting under the reproposed standard will be a significant undertaking. Audit firms internally will need to make methodology changes, revisions to reporting guidance and templates, and training. Further, audit firms will incur time discussing the new report with audit committees and it is likely many firms, including ours, will put National Office consultation requirements in place to drive consistent and effective implementation potentially requiring additional resources to do so.

While we acknowledge the United Kingdom implemented their enhanced reporting model in one reporting cycle, the new auditor report in the UK applied only to companies reporting under the UK Corporate Governance Code, which is principally the FTSE 350. As a point of reference, we alone audit close to 1,000 issuers for whom reporting of critical audit matters would apply.

As it relates to the reporting of critical audit matters, we believe two years from when the standard is finalized and approved by the SEC would be appropriate for the reporting of critical audit matters, as this will allow firms sufficient time to train and develop quality control policies, including National Office consultations, to review the audit reports. Additionally, it is expected there will be initial and ongoing efforts in explaining audit reports to management and the audit committee, including consideration of their input in describing the facts around the critical audit matter. If the Board wanted to adopt other parts of the standard earlier as outlined in question 44, we would be supportive of that approach. Also, in order to achieve a successful transition, we suggest a phased implementation approach. One such approach would be to require reporting of critical audit matters for large accelerated filers two years after the SEC approval and accelerated and non-accelerated filers would adopt one year later.

---

[20] *See* reproposed standard paragraph .10b

[21] *See* page 49

As discussed in connection with the effective date, we believe the first year of reporting under a new standard will be a significant undertaking, and the activities firms will need to perform to prepare for, implement and execute on a new standard will result in significant up-front and ongoing costs. On a recurring basis, additional coordination among management, the audit committee, and the auditor (including National Office consultations) will be required to address critical audit matters included in the auditor's report. Although critical audit matters will be identified from matters that are already required to be documented, there will be incremental costs in analyzing and documenting which matters should be reported as a critical audit matter, drafting communications about the critical audit matter, and consulting with the National Office. While these costs should decrease over time as reporting of critical audit matters becomes more familiar, it is difficult to estimate what the ongoing recurring cost will be, as the cost will fluctuate engagement-to-engagement based on the number and complexity of critical audit matters identified and reported.

**Application to brokers and dealers, investment companies, benefit plans and emerging growth companies**

We agree with the exclusion of communication of critical audit matters from audits of brokers and dealers, investment companies (other than business development companies), and employee stock purchase, savings, and similar plans (benefit plans). We believe the reproposed standards should apply to audits of emerging growth companies.

**Legal considerations related to the reproposal**

In questions 10-12,[22] the Board asked about potential effects the communication of critical audit matters may have on private litigation and private liability. In our comments to the original proposal, we cautioned that the proposed standard would have significantly increased litigation risk for the profession. The reproposal includes positive changes which make the risk of increased litigation less severe. The revised definition of a critical audit matter, which focuses on "especially challenging, subjective, or complex auditor judgment," should help limit the number and type of statements which will be attributable to the auditor. Under the federal securities laws, an auditor can be subject to suit only for statements that are made by and properly attributed to it. Statements reflecting the exercise of judgment (i.e., statements of opinion) are less vulnerable to challenges that they are false or misleading. Thus, these changes may help limit the scope of claims made against auditors.

However, the reproposal includes requirements that still could significantly increase litigation risk over current reporting standards. As discussed above, the auditor may still be required to disclose original information about the entity. Among other things, the auditor will be required to communicate the principal considerations supporting its determination of critical audit matters, which may include "the nature of audit evidence obtained regarding the matter."[23] Additionally, the auditor will be required to disclose "how the critical audit matter was addressed in the audit."[24] This information could be used to attack the audits performed by, among other things, alleging that professional standards required additional or different audit evidence to have been obtained, or audit procedures to have been performed. In our prior comments, we cautioned that plaintiffs will be able to parrot and mischaracterize additional

[22] *See* page 42

[23] *See* reproposed standard paragraph 14(b) and 12(f)

[24] *See* reproposed standard paragraph 14(c)

statements regarding critical audit matters to create an incorrect appearance of specificity as required to plead scienter and survive dismissal. These risks still exist.

Finally, if these cases are not dismissed at the outset, the litigation and particularly discovery costs often drive a settlement regardless of merit. Though improved, the reproposal will likely mean more spurious claims will be brought, fewer meritless cases will be properly dismissed at an appropriate stage, and more unwarranted settlements will need to be reached. The further changes we suggest in this comment letter will help mitigate some of these risks; however, any enhanced reporting requirement will likely increase litigation risk to the profession.

* * * * *

We appreciate the opportunity to express our views and would be pleased to discuss our comments or answer any questions that the PCAOB staff or the Board may have. Please contact Leonard L. Combs (973-236-5265) or Neil A. Weingarten (617-530-6225) regarding our submission.

Sincerely,

PricewaterhouseCoopers LLP

**APPENDIX**

This appendix provides additional comments on specific requirements in the reproposal for the Board's consideration.

*Qualified opinions*

The reproposal would create auditing standard AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances* and create a note referring the auditor to AS 3101 to determine if the matter for which the auditor qualified his or her opinion is also a critical matter.[25] When the auditor's opinion is qualified, we believe the most important communication is the disclosure of the substantive reasons for the qualification, as discussed on page A2-14. If an auditor were to also report the qualification as a critical audit matter, the description of how the auditor addressed the matter may imply audit work was performed that was sufficient and appropriate (when in fact there was a scope limitation) or the accounting might be appropriate (when there is a departure from GAAP). Consistent with the Board's determination to not include critical audit matters when there is an adverse opinion[26] and disclaimer of opinion,[27] we believe the item that is driving a qualified opinion should not be a critical audit matter.

*Explanatory paragraphs*

The reproposal notes that a required explanatory paragraph (such as going concern) may also be considered a critical audit matter.[28] We believe that if an otherwise required explanatory paragraph is also a critical audit matter, disclosure in the auditor's report should be limited to one place in the audit report. If the Board believes it is important for users to understand the matter met both an explanatory paragraph and a critical audit matter, we agree it can be achieved by cross referencing within the separate sections.[29] Page 55 of the release text continues to discuss that alternatively the auditor may choose to provide the information in both places. We agree the reporting requirements for both an explanatory paragraph and a critical audit matter should be met but including discussion of the information in both places may become redundant, as acknowledged on page 55 of the release text. We recommend the PCAOB require the communication for both a critical audit matter and an explanatory paragraph be reported in the critical audit matter section of the auditor's report with a cross reference in the explanatory paragraph section if the Board believes it is important that it is included in both locations. If the Board believes certain items should be included in a separate section regardless if a critical audit matter or not that could also be reflected in the reproposed standard (for example, going concern).

*The auditor has not been engaged to audit internal control over financial reporting*

In situations in which management is required to report on the entity's internal control over financial reporting ("ICFR") but such an assessment is not required to be audited, the reproposal would require a statement that the auditor did not audit ICFR.[30]

[25] *See* page A2-15
[26] *See* page A2-30
[27] *See* page A2-32
[28] *See* page 55
[29] *See* page 55
[30] *See* page A2-44

While we do not believe such a requirement is necessary, we do not object to its inclusion; however, if the Board is to keep this requirement, we suggest it be expanded to all instances in which the auditor is not engaged to opine on ICFR, and not limited to when management is required to report on ICFR.

*Financial statement schedules*

The reproposal adds a requirement that the auditor's report include a statement identifying each financial statement and any related schedule(s) that has been audited.[31] We ask that the final standard clarify that when the schedules are finalized separately from the financial statements, auditors may, consistent with current practice, issue a separate report.

*AS 3305*

The reproposal includes proposed amendments to AS 3305.12. The proposed amendment may be misconstrued that, for special reports in which the specified elements, accounts, or items of a financial statement are intended to be presented in conformity with GAAP, the auditor need only refer to the opinion in AS 3101 and AS 3105. We recommend the proposed amendment be further modified as follows:

> .12 When expressing an opinion on one or more specified elements, accounts, or items of a financial statement, the auditor should plan and perform the audit and prepare his or her report with a view to the purpose of the engagement. The standards of the PCAOB are applicable to any engagement to express an opinion on one or more specified elements, accounts, or items of a financial statement. If the specified elements, accounts, or items of a financial statement are intended to be presented in conformity with generally accepted accounting principles, the auditor's reports~~opinions~~, as described in AS 3101 and AS 3105, are applicable.

*Other periods presented*

In question 4[32], the Board asks if there are specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, rather than only the current period. We do not believe there are specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented. The current year is the most relevant to users, and it is likely many critical audit matters in earlier periods will be repetitive to those in the current period.

*Referring to disclosures outside the financial statements*

In question 7[33], the Board asks if it would be appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating a critical audit matter. We do not believe it would be appropriate for the auditor to refer to relevant disclosures outside of the financial statements as this information is not audited and doing so may further the expectation gap on the auditor's involvement with other information.

---

[31] *See* reproposed standard paragraph .8b

[32] *See* page 28

[33] *See* page 38

*Ability to determine there are no critical audit matters*

In question 8[34], the Board asks if it is appropriate to retain the possibility of the auditor determining there are no critical audit matters. We agree with retaining this ability, as there are certain companies for which there may be no critical audit matters.

Re: PCAOB Rulemaking Docket Matter No. 034

To the Members of the PCAOB,

I appreciate the opportunity to comment on the reproposed standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*. It has been a long, slow road to improving the audit report since the Board shouldered this load in 2011. I applaud the Board for taking on this unpopular task - one where the status quo is considered good enough by the preparer and auditor community; understandably so, because they are the ones who have the most work ahead of them if this becomes an auditing standard. Their main concern is the critical audit matters – the CAMs. It is my main concern as well.

While I understand the anxiety surrounding CAM reporting, I believe it is misplaced: The Board has dramatically slimmed down its proposal from the last iteration. The requirement that reported CAMs relate to material reporting matters of which the audit committee should be aware and involving significant auditor judgment should cause only the most important issues to be reported; there should be no unreasonably lengthy audit reports resulting from this requirement. I believe that the specter of oversized, boilerplate audit reports is being invoked in order to arouse opposition to the proposal, as well as the possibility that auditors might disclose information that might not be required to be disclosed by accounting standards. I do not believe that this is what the Board intends in the proposal, nor do I believe that auditors would want to interpret the proposed standard in that fashion.

Some critics charge that investors do not need this information because it is already handled by the auditors in their dealings with the audit committee of the board of directors. Both auditors and audit committee members are agents of the shareholders, and are supposed to be championing the interests of their principals. That's true, but are the agents really putting the interests of the principals first if they can't share the most critical issues with those principals?

Keep in mind that both auditors and board members – including audit committee members – are elected by the shareholders and the cost of retaining both sets of agents is borne by the shareholders. What would happen to most of us if we refused to tell our employers what they wanted to know about the way we did our jobs for them?

The question has been raised, even at the Board level: how will investors use the information in the CAMs? The question seems to be posed as a reason for not improving the audit report. The thinking may be that if investors won't use the information to say, fashion their quarterly or annual earnings estimates, then the information must not be worth the effort to collect it.

Before answering the question "how will investors use CAM information," I have a question of my own: how do investors use the audit report *now*? In thirty-plus years of working in the investment research world, I've rarely encountered anyone who reads them – and when they do read them, it's not for the purpose of incorporating nuggets of information from them into an earnings model.

Also before answering the question, let us also be clear on just who the term "investors" addresses. If one presumes the kind of investors typically showing up at shareholder meetings – that is, usually individual investors, rarely professional or institutional investors – the answer is that they'll probably do nothing with the information, and they very likely don't ever do anything at all with the audit report or the financial statements. Does that make the PCAOB's proposal a bad idea because this particular class of investors won't use the information? No. Should standard setting efforts be aimed at pleasing this particular segment of investors? No. If they're not going to use financial statements anyway, it's wrong to make financial reporting standards tailored to suit people who don't use financial statements. It's a waste of resources.

If, by investors, one means professional investors, that's still not a monolithic class. Some professional investors can go through their whole career without looking at audit reports or financial statements, and still function viably. Consider stockbrokers: it's unusual to encounter ones that will spend time with an annual report, but nevertheless, they can be considered investors. They will, however, have their opinions shaped by the advice of their firm's research analysts – and those are investors who are very likely to read financial statements and audit reports (especially if they believe the audit reports aren't in the category of "seen one, seen them all.") Also likely to read financial statements and audit reports are the in-house analysts of buy-side institutions like mutual funds – and they often invest on behalf of the individual investors who will never read financial statements or audit reports.

That category of investors – the professional, institutional investor – is the one that's likely to use the information resulting from the PCAOB's proposal. So, back to the question – how will these investors use the information in the CAMs?

They'll use it like they use any other information about accounting standards. They'll read it and form opinions when they understand it. Nobody questions how investors use accounting policy footnotes or critical accounting estimates. Those disclosures help investors get an idea of a firm's reporting environment, and they also help an investor get an idea of their own limits: for example, if a company has an accounting policy related to revenue recognition tied to multiple-element arrangements, and the investor has no idea what that means, it will be incumbent upon the investor to learn about them. These disclosures in the audit report will augment and add another dimension to the story told by accounting policy footnotes in the financial statements and the critical accounting policies and estimates disclosed in the Management's Discussion & Analysis – and because it comes from the auditor, who is very directly the agent of the investor, it should be valued very highly by investors.

What preparers and auditors fail to take into account is the fact that the level of accounting knowledge within the investor community is not always deep, and certainly not consistent among investor factions. Information can always be ignored and sometimes, investors choose ignorance when it comes to existing information about accounting policies or critical accounting estimates. Standard setters have not chosen to penalize investors who make good use of such information because some investors choose ignorance.

Unlike investors, auditors are experts in accounting matters, and they should be. If a firm's auditors find that a material matter was particularly taxing of their own judgment, and they communicated that fact to the audit committee - the other agents of the investors – then including it in the audit report would amplify the investors' own understanding of the other information in the financial statements about accounting policies and estimates. Hopefully, an investor might think that if an expert considered this to be a tough matter, then maybe it would make sense for the investor to really understand the issue well.

Not every disclosure or number in the financial statement package is "used" by investors in, say, building earnings estimates. They don't "do" something with every figure in the package. That doesn't mean information of a qualitative nature, such as the CAMs, is without its uses. If investors get into the habit of understanding them, they may find that there are other parts of the financial statement package they've been neglecting. Critics of the proposal may say there isn't value to CAMs because investors won't "do" something with them, but if CAMs exist in the audit report and investors read about them, they will add a useful element to the current reporting package: an expert's link to the more vexing accounting issues embedded in the financial statement package. That will do more to highlight for investors the critical accounting issues of a company than any mere litany of accounting policies.

* * * * * * * * * * * * * *

If you have any questions about these thoughts, members of the Board or the staff are welcome to contact me to discuss further. Best regards.

Sincerely,

Jack Ciesielski

Re: PCAOB Rulemaking Docket Matter No. 034

TRANSMITTED VIA EMAIL: comments@pcaobus.org

Members of the Board:

The Retail Industry Leaders Association ("RILA") and its Financial Leaders Council ("FLC") are pleased to submit the following comments on the Board's Proposed Auditing Standard for *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion* ("Re-proposed Standard"), issued by the Board on May 11, 2016. RILA is an organization of the world's most successful and innovative retailer and supplier companies – the leaders of the retail industry. RILA members represent more than $1.5 trillion in annual sales and operate more than 100,000 stores, manufacturing facilities, and distribution centers nationwide. Our member retailers and suppliers have facilities in all 50 states and the District of Columbia, as well as internationally, and employ millions of workers domestically and worldwide.

RILA and its FLC commend the Board for engaging in a thoughtful process and re-proposing its views following its initial, proposed standard to address the subject, issued by the Board on August 13, 2013, and its Concept Release on *Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements*, issued by the Board on June 21, 2011. Most of our members are public companies and all of our members recognize that the efficient operation of our markets mandates that financial statements present fairly the financial position of the company and provide sufficient transparency so that investors and other users of financial statements can make informed investment or other decisions.

We believe two of the most important areas for improvement with respect to financial information are 1) to improve the timeliness of the auditor's report and 2) to provide necessary information but not create information overload. Unfortunately, changes discussed in the Re-proposed Standard, relative to the communication of critical audit matters, are still contrary to both of these objectives. The additional disclosures increase the length of time necessary to complete an audit and, as a consequence, increase the length of time required to make audited financial information available to investors. Investors interested in our member companies would prefer more timely disclosure as opposed to increased disclosures in the auditor's report. In addition, disclosure of critical audit matters only adds to information overload, without contributing to assurances that the financial statements are free of material misstatement.

RETAIL INDUSTRY LEADERS ASSOCIATION
Educate.Collaborate.Advocate.

1700 North Moore Street, Suite 2250, Arlington, VA 22209

Our specific comments follow:

1. The Re-proposed Standard has been revised to define a critical audit matter as any matter arising from the audit that was required to be *communicated to the audit committee* and that *relates to accounts or disclosures that are material to the financial statements* and *involved especially challenging, subjective, or complex auditor judgment.* SEC rules already provide for disclosure of audit related information that the SEC believes is relevant to investors in the Management Discussion and Analysis ("MD&A"). Disclosure of critical audit matters, as defined in the Re-proposed Standard would not serve the best interests of investors or other users of financial statements. Simply providing information on critical audit matters that are defined as challenging, subjective, or complex in the opinion of professionals whose job it is to perform the audit function would simply provide more information, but not "good" or "better" information. Instead, we believe such disclosures would only increase confusion, speculation and the drawing of incorrect conclusions, potentially increasing litigation costs for both audit firms and preparers. Audit committees are charged with evaluating this information, in the context of the business at issue, and the company is required to follow SEC rules and U.S. GAAP standards governing related MD&A disclosures including, but not limited to, accounting estimates and policies, critical management judgments, risks and uncertainties. Further, we believe that the proposal would usurp the audit committee's oversight role, and the role of a company's Board, as auditors would, in effect, be making communications directly to investors.

2. According to the PCAOB release, *"communication of critical audit matters would be relevant to investors and other financial statement users by informing them of issues identified in the audit that were significant to the auditor and focusing their attention on issues that would be pertinent to understanding the financial statements."* We believe that the scope of a financial statement audit is to determine whether the financial statements are free of material misstatement. The issues that the auditor considered were obviously resolved to the auditor's satisfaction if the auditor is able to opine that the financial statements are free of material misstatement. What the auditor considered and discussed with the audit committee in order to reach the opinion that the financial statements are free of material misstatement will not provide investors with information that would allow a user of the financial statements to better understand those financial statements. The proposed inclusion of critical audit matters in the audit report distorts the auditor's function from an attestation role to a reporting role.

In sum, auditing standards are designed and audit firms are trained explicitly to obtain reasonable assurance that financial statements are free of material misstatement and therefore, are accurate. Frequently matters require communication to the audit committee. Most audits have subjective and significant auditor judgments related to accounts or disclosures that are material to the financial statements. Furthermore, many audits have areas that are challenging, subjective and complex to audit. This does not imply that a company is a good investment or a bad investment. The investor community is inherently in the best position to understand the risks and rewards of investing in a business; this ownership should not be delegated to an audit firm.

Although we appreciate the efforts and the outreach of the Board, we do not believe that the changes discussed in the Re-proposed Standard, relative to the inclusion of critical audit matters, is necessary. In our opinion, these disclosures would not improve the quality of audits or financial statements. Quite the contrary, the inclusion of critical audit matters in the audit report would increase audit costs, increase litigation costs resulting from confusion, speculation and drawing of incorrect conclusions, and protract

**From:** John R. Roberts
**To:** Comments
**Subject:** PCAOB Release No. 2016-003
**Date:** Thursday, August 11, 2016 5:42:23 PM

Board Members and Staff of the PCAOB:

With regard to the above referenced Release I have several concerns that I would like to address. By way of background I spent 35 years with a large international public accounting firm 23 of which I was a partner and also served as managing partner of two different offices while also serving as lead audit partner on several large multinational clients. Beginning in 2001 I have served on the Board of Directors three NYSE registered firms (one retired and two current) and have served as chairman of the audit committee of each firm.

With that as a backdrop I can honestly say that I have attend in excess of one hundred shareholder meetings where the auditors were present and available to answer questions. To the best of my recollection I do not recall any investor ever asking any question of the auditors. Therefore I am having a very hard time understanding the need for the auditors to disclose “critical audit matters” when the opportunity already exists for interested investors to raise any questions they may have. This appears to be a solution in search of a problem.

I share the concerns of those other responders who believe such a standard will have a chilling effect on the open communications that presently exist between auditors and audit committees. Will auditors be reluctant to discuss sensitive matters or audit committees be reluctant to ask sensitive questions if PCAOB reviewers might subsequently conclude that such discussions could have been deemed “material”? I believe this issue alone might well diminish an audit committee’s ability to exercise its oversight responsibility of the audit on behalf of the shareholders.

If the PCAOB subsequently determines that an auditor’s report failed to include a certain “critical audit matter” will the auditor be required to recall the defective report and reissue a new one even if several years have passed? How might this effect a company in the midst of a transaction or registration? This might not not be a situation where the financial statements and notes, which are still the primary responsibility of management, were misstated but merely reflect a difference of opinion between the auditor and PCAOB. It seems such an occurrence could be highly detrimental to the shareholders.

I am not in favor of this release and appreciate the opportunity to share my comments.

Most sincerely,

John R. Roberts

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Office of the Secretary:

RSM US LLP appreciates the opportunity to offer our comments on the PCAOB's *Proposed Auditing Standard, "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion," and Related Amendments to PCAOB Standards.* RSM US LLP is a registered public accounting firm serving middle-market issuers, brokers and dealers.

We are pleased that the reproposal retains the existing pass/fail model of auditor reporting, which generally is acknowledged to be useful to investors and other users of audited financial statements. We continue to support the PCAOB's objective of enhancing the auditor's report with more disclosure and agree that the disclosure of critical audit matters would provide investors with more information than previously provided in the auditor's report. However, we are concerned that the material additional costs associated with critical audit matters will be disproportionate for nonaccelerated filers, smaller reporting companies, and emerging growth companies, and may outweigh the perceived benefits their investors gain from the information provided. As discussed below, we therefore suggest a phased-in approach with a period of evaluation after implementation by large accelerated filers and accelerated filers before the communication of critical audit matters would be required for audits of nonaccelerated filers, smaller reporting companies and emerging growth companies.

Our letter further explains other enhancements that could be made to the reproposed standard, and includes comments related to specific paragraphs of the reproposal that we believe should be clarified or modified.

**Critical audit matters**

***Determination of critical audit matters***

We support narrowing the source of potential critical audit matters to only those matters arising from the audit of the financial statements that were communicated, or required to be communicated, to the audit committee. We believe this is the most logical starting point for the auditor to discern which matters are to be considered worthy of public disclosure in the auditor's report because they involve especially challenging, subjective or complex auditor judgment.

We also support including the concept of materiality in the definition of a critical audit matter as we believe that will focus the auditor on those matters deemed to be most critical to the audit. However, the current materiality factor to be used in identifying a critical audit matter is "accounts or disclosures that are material to the financial statements." We believe this materiality threshold could result in the auditor being required to disclose a nonmaterial matter (related to a material account or disclosure) that would not otherwise be disclosed by the registrant, and therefore would inadvertently make the auditor the original source of information about a registrant. For example, it should not be necessary to disclose in the auditor's report a significant deficiency related to a material account when management is not required to disclose the significant deficiency under SEC rules.

We believe it would be more appropriate for the concept of materiality in identifying critical audit matters to relate to the financial statements taken as a whole so as to not require disclosure of nonmaterial matters related to material accounts or disclosures. We therefore suggest the following revisions to the definition of a critical audit matter in paragraphs .11 and A2 of the reproposed standard (deletions are struck through and additions are noted in bold font):

> "A critical audit matter is any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) ~~relates to accounts or disclosures that are~~ **is** material to the financial statements **taken as a whole** and (2) involved especially challenging, subjective, or complex audit judgment."

To further clarify that the auditor should not be the original source of information about a registrant, we recommend the Board consider revising Note 2 to paragraph .14 to read as follows (deletions are struck through):

> "When describing critical audit matters in the auditor's report the auditor is not expected to provide information about the company that has not been made publicly available by the company ~~unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit~~.

***Illustrative examples of the communication of critical audit matters***

We appreciate the Board providing illustrative examples of the communication of critical audit matters as we believe such examples will be helpful resources for auditors. We are concerned, however, that the illustrative examples go beyond the requirement in paragraph .14.b. to describe the principal considerations that led the auditor to determine that the matter is a critical audit matter. The illustrative examples included in the reproposed standard seem to indicate that all aspects of the audit be included in the description of the critical audit matter. We suggest the Board consider revising the illustrative examples to clarify that they are intended to illustrate how an auditor may describe the *principal* considerations that led the auditor to determine that the matter is a critical audit matter.

***Cost Considerations***

Our firm was one of nine public accounting firms that field tested the implementation of the originally proposed standard to directly assess the impact on various aspects of the audit, including, among others, the additional involvement of senior audit partners, the efforts that would occur during the final stages of the audit and the cost to the client. As documented in the June 19, 2014 letter from the Center for Audit Quality to the PCAOB, feedback from audit engagement teams that participated in this field test, as well as from management and audit committees, was that the additional time and effort was likely to be incurred during the completion phase of the audit by senior members of the audit engagement teams and may require national office consultations and possibly legal review on behalf of the auditors and the registrant. This could occur at a time when auditors, management and audit committees are focused on a number of other issues in connection with a particular filing, and the finalization of critical audit matters may delay, or cause distraction in, the resolution of these issues. Further, many of the accounting firms expressed the view that the incremental time required may not decrease significantly in future years, given (a) that one of the stated objectives of the originally proposed auditor reporting standard is to avoid boilerplate descriptions and (b) the need to address new potential critical audit matters each year as a result of transactions or other changing business or financial reporting dynamics.

The expenditure of additional time ultimately will be reflected in increased costs for the auditor resulting in increased audit fees for the registrant. Additional legal counsel reviews also may result in increased costs for the registrant. Further, we believe the compression of work by both management and the auditor during the final stages of the audit may adversely impact the quality of financial reporting. This may be particularly burdensome for smaller reporting companies, most of which historically need all of the time available up to the reporting deadline for financial reporting.

Because nonaccelerated filers, smaller reporting companies and emerging growth companies have small market capitalization and typically less extensive investor and analysts' reviews of their financial statements, we are concerned the material additional costs associated with critical audit matters may outweigh the perceived benefits investors gain from the information provided.

*Applicability*

We agree that the following entities should be excluded from the requirement to communicate critical audit matters in the auditor's report:

- Nonissuer brokers and dealers
- Investment companies other than those regulated as business development companies
- Employee benefit plans

We continue to believe the reproposed disclosure of critical audit matters would not be scalable based on the size of the registrant. Smaller registrants often do not have the same level of sophistication in terms of information technology systems or financial reporting professionals as larger registrants are able to have. This lack of sophistication can cause the auditor to need to make more difficult, subjective and complex auditor judgments and also can pose more difficulty to the auditor in obtaining sufficient appropriate evidence. All of these matters are required to be communicated to the audit committee and therefore are the population from which critical audit matters will be determined. For these reasons, we believe auditors' reports on the financial statements of smaller registrants may be required to include a disproportionately higher number of potential critical audit matters than those of larger registrants. As discussed below, we believe a robust analysis of the costs and benefits of the reproposed auditing standard should be conducted prior to determining whether and when the standard should be implemented for nonaccelerated filers, smaller reporting companies and emerging growth companies.

**Effective Date**

If finalized, the auditor reporting of critical audit matters required by the reproposed standard will require audit firms a considerable amount of time to develop and implement effective quality control procedures and related training. Also, the new requirements likely will require extensive discussions with client management and audit committees as they evaluate the potential effect of the additional auditor communications in the auditor's report. Due to the extent of these efforts, we believe it would be prudent for the reproposed standard to first be effective for large accelerated filers for audit periods ending two years after the SEC approves the final standard. To allow firms to benefit from the experience of audits of large accelerated filers, we suggest the final standard be effective for accelerated filers one year after the effective date for large accelerated filers.

As to the effective date for nonaccelerated filers, smaller reporting companies and emerging growth companies, we continue to encourage the PCAOB to conduct a robust analysis of the costs and benefits of the reproposed audit reporting standard before concluding that the benefits of the additional disclosures outweigh the costs and the impact on timeliness of information. Therefore, subsequent to the implementation of the standard by large accelerated filers and accelerated filers, we encourage the PCAOB Center for Economic Analysis to perform a post-implementation review of the overall effect of the standard, similar to the approach used to assess Auditing Standard 7, *Engagement Quality Review*. This review could evaluate the costs and benefits associated with the standard, whether the adopted standard is accomplishing its intended purposes, and whether and when the standard should be implemented for nonaccelerated filers, smaller reporting companies and emerging growth companies. This review also should include evaluation of the unique needs of the investors for these filers as compared to large accelerated filers and accelerated filers.

We believe this phased-in approach would allow for more efficient implementation of the standard in audits of nonaccelerated filers, smaller reporting companies and emerging growth companies because initial implementation issues could be resolved, and related costs would be absorbed, by issuers with the most sophistication and the largest economic footprint. This approach also would align the with PCAOB's mission of protecting the interest of investors, without placing an undue burden on smaller players in the capital markets.

**Tenure**

In 2011, the PCAOB issued Release No. 2011-006, *Concept Release on Auditor Independence and Audit Firm Rotation,* to seek comment on the advantages and disadvantages of mandatory audit firm rotation, among other matters. Because auditor tenure continues to be a topic of PCAOB discussion and the subject of academic research, we continue to believe the concept of auditor tenure and mandatory audit firm rotation should be addressed in that context separately from any other proposed auditing standard.

Paragraph .10.b. of the reproposed auditor reporting standard, however, requires the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor. We are not supportive of including auditor tenure in the auditor's report for the reason discussed in the preceding paragraph and because it is unclear what a user should infer from such a disclosure. Disclosure of auditor tenure also has the potential of distracting the user from more relevant information in the auditor's report. Further, investors who are interested in information about auditor changes can obtain relevant information publicly.

If the PCAOB wishes to consider disclosure of auditor tenure, we believe it would be more appropriate to make such disclosure in Form AP, *Auditor Reporting of Certain Audit Participants,* rather than in the auditor's report. Also, if the auditor is required to disclose auditor tenure either in Form AP or in the auditor's report, we believe guidance should be issued to address how tenure should be calculated so as to provide comparability across all firms. Such guidance should address the following issues, among others:

- The impact of the following on the calculation of auditor tenure:
  - Audit firm mergers and acquisitions
  - Registrant mergers, reverse mergers and acquisitions
- Whether periods audited before an initial public offering count toward auditor tenure or whether auditor tenure begins with the first effective registration statement

- Whether tenure for a new auditor begins when the firm signs an initial engagement letter to audit a registrant's financial statements or when the firm begins the audit

**Clarification of auditor responsibilities in the auditor's report**

We support the proposed change to move the auditor's opinion on the financial statements to be in the opening paragraph of the auditor's report. We also support the additional language clarifying the requirements related to auditor independence. Further, we agree with the expanded language regarding the auditor's responsibilities regarding financial statement material misstatement, whether due to error or fraud.

To promote consistency of auditor reporting globally, we strongly encourage the Board to consider additional auditor report language so as to further align it with the language used in auditor reports issued in accordance with the standards of the International Auditing and Assurance Standards Board. Such language would include expanded descriptions of the responsibilities of management and those charged with governance in a paragraph that is separate from the description of the auditor's responsibilities. Such additional disclosures would enhance financial statement users' understanding of the various responsibilities in the financial reporting and audit processes.

We would be pleased to respond to any questions the Board or its staff may have about our comments. Please direct any questions to Sara Lord, National Director of Assurance Services, at 612.376.9572.

Sincerely,

RSM US LLP

**Subject:** The Auditor"s Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion
**Date:** Wednesday, May 18, 2016 10:32:33 AM

The PCAOB needs to rein in the proliferation of new requirements that are driving the cost and complexity of audits with minimal or NO positive impacts to the benefits derived from the audit process and reporting. I've witnessed layer and layers of "additions" of processes, procedures and reporting as a result of the PCAOB's work and find it solely lacking in substance of better informing the reader of audited financial statements. In my opinion, the PCAOB needs to get members on the board and needs to incorporate a practical application understanding to what they implement.

I would NOT be in favor of the proposed additions PCAOB is proposing.

**Re: PCAOB Release No. 2016-003,** Proposed auditing standard: *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards***.** PCAOB Rulemaking Docket Matter No. 34

Dear Members of the Board:

The Global Financial Institutions ("GFI") Accounting Committee and the Asset Management Accounting Policy Committee, both of the Securities Industry and Financial Markets Association ("SIFMA"), appreciate the opportunity to provide comments on the Public Company Accounting Oversight Board's ("PCAOB's" or the "Board's") revisions to the proposed auditing standard, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* ("The Re-proposal").

We support the PCAOB's objective to improve investor confidence and understanding of the audit process through enhanced auditor communications. We also applaud the Board's efforts to incorporate feedback on the original proposal by including the consideration of materiality in the identification of a critical audit matter ("CAM") and attempting to limit the auditor's ability to disclose original information. Additionally, we agree with the need to exclude extensively regulated entities such as broker-dealers and investment companies. However, we remain unconvinced that the changes in the Re-proposal fully address respondents' concerns to the previous proposal. We do not believe the disclosure of CAMs provides "value-relevant" information beyond what is already publicly available to users, and continue to have concerns that CAMs will almost certainly add significant cost to the audit, create operational challenges and potential legal issues, and could cause discord between management and the auditor. Therefore, in the penultimate paragraph of our comment letter we suggest an alternative approach.

We support the PCAOB's proposal to exclude broker-dealers for reasons regarding ownership and reporting characteristics, in addition to the recently updated reporting and auditing requirements for broker-dealers from both the SEC and the PCAOB. However, we disagree with the PCAOB's retention of the ability for auditors to "voluntarily" include CAM requirements for broker-dealers without justification. Retaining this unusual voluntary option for broker-dealers results in lack of

sifma
Invested in America

regulatory clarity and will subject the broker-dealer industry to diverse audit practices. Further, the ambiguity could lead to auditors conservatively choosing to include CAMs in their reports to avoid the risk that their judgment would be challenged. As such, this may remove the voluntary nature of the option in practice, which would have the effect of overriding the PCAOB's original intent of the broker-dealer exclusion. Therefore, we strongly recommend that the PCAOB eliminate this voluntary option.

Additionally, to ensure that audit requirements across the industry are consistent (including the costs and operational efforts), we also believe that it would be more appropriate to exclude all broker-dealers, including those required to file audited financial statements under Section 13 or 15(d) of the Exchange Act ("issuer broker-dealers"). Further, given that the PCAOB notes that it is not currently aware of any issuer broker-dealers, we suggest that a conclusion on application of the proposed requirements for these entities be deferred until the PCAOB has a significant enough population to analyze the entities as thoughtfully as it has done for all other broker-dealers.

We agree with the PCAOB's exclusions for investment companies; however, we are concerned that investment companies, similar to broker-dealers, would also be subject to voluntary application of this auditing standard.

We support the proposal to move the opinion paragraph to the beginning of the report as we believe that most readers of auditor's reports are primarily interested in whether a company has received an unqualified opinion from its auditor.

Notwithstanding these points, we are also concerned that auditors might be economically and reputationally incentivized to exercise an overabundance of caution relative to the identification and disclosure of CAMs. Although the auditor is not expected to provide information about the company that has not already been made publicly available, such information may be provided by the auditor if it is necessary to describe the principal considerations used to determine that a matter is a CAM or how the CAM was addressed in the audit[1]. This exception language, along with the requirement to reference management's existing disclosures, provides auditors with significant leverage to compel disclosure in notes to financial statements of information that may not otherwise be required or considered necessary by management. This additional leverage by the audit firm may result in significant costs as management works with the auditors to identify, evaluate, debate and ultimately determine whether to disclose any CAMs.

While we agree with the requirement to apply a materiality threshold to the identification and disclosure of CAMs, it is likely to have little effect as long as existing audit firm materiality thresholds for balance sheet and income statement items remain the same. Moreover, given that matters that are material to the financial statements should already be disclosed by management in the notes to the financial statements, management's discussion and analysis (MD&A) or both, we question how

[1] Note 2 to paragraph .14 of Proposed AS 3101 included in Appendix 1 to the Re-proposal (page A1-9)

redundant disclosure in the auditor's report will provide decision useful information to users of the financial statement.

Given the feedback received by the Board on the original proposal and the limited empirical evidence to support expanded auditor reporting, we question whether there is sufficient basis to require CAMs. The Board noted in the Re-proposal that it is unsure of the value of CAMs to users, acknowledging that research on expanded auditor reporting is limited and that results are *ambiguous* as to whether expanded reporting would provide new information beyond what is already available in the financial statements. As such, we do not understand the Board's justification for the Re-proposal based on the hope that users will find information useful once they are provided with it. We strongly encourage the Board to study this matter further and gather more empirical evidence on the usefulness and the cost-benefit implications of expanded auditor reporting before concluding whether such expanded auditor reporting is warranted.

We are also concerned that the emphasis on the CAM disclosures may imply that the auditor is providing assurance on individual components of the financial statements, rather than the financial statements taken as a whole. Additionally, the Re-proposal's example disclosure related to the allowance for loan losses for a component of the loan portfolio appears to include information that would not normally be required in financial statement disclosures; rather it appears to contain information which, if material, would normally be disclosed in MD&A. Lastly, it is unclear what incremental value users will derive from the description of procedures performed by the auditors, which will be by necessity boiler plate, (e.g., read legal contracts, tested assumptions, and used specialists). It is unclear how this information will help users better analyze financial statements.

Instead of the disclosure of CAMs, we suggest the Board consider an alternative approach that will draw users' attention in the auditors' report to significant accounting policies and estimates in the financial statements and MD&A. This could be accomplished by referencing the disclosure of these items (i.e., location and page number), together with a statement indicating that the auditor's report should be read in conjunction with management's disclosures of significant accounting policies and estimates. This approach would avoid the inference that the auditor is providing assurance on separate components of the financial statements and would correspond with areas that receive the most attention from auditors during the audit.

SIFMA's GFI Accounting Committee and Asset Management Accounting Policy Committee would like to thank the PCAOB for the opportunity to provide feedback on this Re-proposal. We would be pleased to discuss our comments or answers to any questions that may arise. Feel free to contact either Tim Bridges at 212-902-7052 or tim.bridges@gs.com or Israel Snow at 212-357-5730 or israel.snow@gs.com.

This paper is based on my dissertation at Texas A&M University. I thank the members of my dissertation committee: Dechun Wang (Chair), Chris Wolfe, Sarah Rice, and Deidra Schleicher for their guidance, support, and helpful comments. I also thank participants at the British Accounting and Finance Association (BAFA) 26th Audit & Assurance Conference for their comments. This paper also benefited from the workshops at Texas A&M University, Louisiana State University, University of Tennessee, University of Arkansas, North Carolina State University, and Virginia Polytechnic Institute and State University.

# Tell Me More: A Content Analysis of Expanded Auditor Reporting in the United Kingdom

## Abstract

This study examines the effect of expanded audit disclosures required by ISA 700 (UK and Ireland), *The Independent Auditor's Report on Financial Statements*, on the communication value of the audit report. Using content analysis measures, readability and tone, as proxies for communication value, I find that in the post-ISA 700 period: 1) audit report readability improves and 2) audit report tone changes with a higher occurrence of negative and uncertain words. I also evaluate analyst behavior in response to the ISA 700 audit report. I find that analyst forecast dispersion decreases in the post-ISA 700 period. In additional analyses, I show that Big N and industry expert auditors write audit reports that are more readable. I also find that domain-specific word dictionaries, generated from Form-10Ks and earnings press releases, have a lower frequency in audit reports in both the pre and post ISA 700 period. With the heightened global interest in improving the historical pass/fail audit report, these results show that expanded audit disclosures can be communicated in a manner that is accessible and meaningful to the financial statement user.

## I. INTRODUCTION

Communicating the results of financial statement audits has evolved from the two-paragraph report (AIA 1948; APC 1980) to the more recent multi-paragraph audit report (FRC 1993; AICPA 1988; PCAOB 2007). One mainstay in the evolution of the audit report is the standardized language that provides a uniform description of the audit process.[1] To address the criticism on the opaque audit reports that are dominated by boilerplate language, the United Kingdom (UK) Financial Reporting Council (FRC) issued International Standard on Auditing (UK and Ireland) 700, *The Independent Auditor's Report on Financial Statements ("ISA 700")* in June 2013 (FRC 2013a). ISA 700 requires audit reports, for issuers that comply with the UK Corporate Governance Code, to include a discussion of: 1) the risks of material misstatements with the greatest impact on engagement team effort; 2) the application of materiality in the audit; and 3) the scoping decisions made in the execution of the audit. The standard suggests that in order for the audit report to be useful to investors, the additional disclosures should be client-specific and not general or standardized (FRC 2013a).[2] The new ISA 700 audit report is the first attempt by a standard-setter to include expanded auditor disclosure in the audit report. The expanded disclosures significantly alter the pass/fail audit report model; however, it is not immediately clear that more audit report disclosures improve communication value. Using the

[1] In response to the Northern Rock bank failure, John Griffith-Jones, former UK KPMG Chief Executive Officer commented, "If you have a company that has leverage of 100 times and a company that has no leverage at all, the audit report is the same"(Osborne 2011). This view highlights the challenge of the historical pass/fail model of the standard audit report which prompted standard-setters to consult with constituents to determine the best path forward to enhance the communication value of the standard audit report (FRC 2007; IAASB 2011; PCAOB 2010; PCAOB 2013; PCAOB 2014; FRC 2013c).
[2] The UK Corporate Governance Code ("Code"), maintained by the FRC, provides principles and rules for boards of UK listed companies. The Code is located here: https://www.frc.org.uk/Our-Work/Codes-Standards/Corporate-governance/UK-Corporate-Governance-Code.aspx .

introduction of ISA 700 as a quasi-natural experiment, I examine whether the communication value of the audit report changes after the issuance of ISA 700.

Communication value in financial reporting is evident when the information provided by the source is received by the destination (Smith and Smith 1971). Coram, Mock, Turner, and Gray (2011) provide a similar definition when examining audit reports and note that communication value is shown when the message that is intended to be conveyed by the report is received by the intended user (Coram et al. 2011). I use two content measures, readability and tone, as proxies for communication value. Readability is a communication measure that captures whether the receiver can understand the message delivered by the sender. If the receiver understands the message, then the message is useful to the receiver thereby improving the communication value of the message. Tone is a measure that captures the "affect or feeling of a communication" (Henry 2008). If the audit report reflects the tone of the audit engagement, as expressed in the choice of words used in describing the audit, the receiver's understanding is improved thereby enhancing communication value. To assess the financial statement users' response to ISA 700, I investigate the change in analyst behavior under the new reporting regime. If the expanded audit report has increased in communication value, then analyst behavior should change, signaling an improvement in the information environment.

Evaluating the communication value of ISA 700 is important because it provides empirical evidence on whether the standard achieved its objective of enhancing communication between the auditor and the financial statement user. As the UK is the first jurisdiction to require client-specific audit disclosure, assessing the communication value of the expanded audit report will benefit other standard-setters considering or adopting similar proposals (PCAOB 2013; PCAOB 2016; IAASB 2015). Prior studies have shown the difficulty financial statement users have in understanding the information in audit reports (Church et al. 2008; Gray et al. 2011; Coram et al. 2011; Asare and Wright 2012; Manson and Zaman 2001; Hermanson et al. 1991). Academic research shows that the standard audit report did not convey financial risks during the financial crisis as the majority of the failed financial institutions received unqualified opinions prior to failing (Doogar et al. 2015; Sikka 2009). The introduction of ISA 700 provides a tailored approach for auditors to convey information that can enhance financial statement users' understanding of the audit process. The additional disclosures on risks of material misstatements, materiality, and audit scope give users insights into the auditor's decision process during the audit. Thus, consistent with the standard setters' objective, I predict that the communication value of audit reports under ISA 700 regime increases.

I address this important issue by examining audit report readability and audit report tone. First, I adopt the method proposed by Smith and Smith (1971) and Li (2008) in evaluating the communication effectiveness of financial reports by measuring readability. Readability measures have been used in evaluating disclosures and accounting narratives (Beattie 2014; Li 2010; Jones and Shoemaker 1994), however there is limited research on audit report readability (Barnett and Loeffler 1979; Pound 1981; Smith and Smith 1971). Previous studies on audit report readability performed in the late 1970's are prior to the issuance of Statement of Auditing Standard No. 58, *Reports on Audited Financial Statements* (AICPA 1988) and the audit market consolidation of early 1990s. I address this gap in the literature by comparing the readability of the newly introduced ISA 700 audit report to the pre-ISA 700 report using a sample of publicly traded firms from the UK and Ireland.

Second, I assess whether audit report tone changes in the post-ISA 700 period compared to the pre-ISA 700 period. Accounting and finance literatures have introduced evaluating tone as an approach to further understand the impact of the written word on investor behavior (Antweiler and Frank 2004; Tetlock 2007; Tetlock et al. 2008; Loughran and McDonald 2011). Historically, the audit report included legalistic and boilerplate language used in every audit report regardless of the underlying risks of the audit client. With the ISA 700 report, the language used is auditor-generated which can give additional insights into the nature of the communication to the user. I utilize financial word dictionaries developed by Loughran and McDonald (2011) to measure the tone of the expanded audit report. By comparing audit report tone in the pre-ISA 700 and post-ISA 700 periods, I assess whether the auditor issues reports consistent with the FRC's expectation to reduce general and boilerplate language.

Lastly, I investigate whether financial statement users respond to the expanded audit report. Focusing on a subset of financial statement users, I test the association between ISA 700 and a sell-side analyst behavior, analyst forecast dispersion. Evaluating analyst forecast dispersion determines whether the expanded audit report improves the information environment. When evaluating *annual* report readability, Lehavy, Li, and Merkley (2011) show that less readable Form 10-Ks are associated with greater forecast dispersion (Lehavy et al. 2011). However, it is an empirical question whether analysts respond similarly when the auditor is the source of the communication.

Using hand-collected audit report data from London and Irish Stock Exchange listed companies, I find that readability improves in the post-ISA 700 period. This finding supports that ISA 700 meets the objective of improving the value of the audit report to the financial statement user. I also find that the expanded audit report captures more client-specific audit risk with increases in negative and uncertain tone. This finding rebuts criticisms that the new audit report includes boilerplate language that is not useful to the reader (IAASB 2011; Mock et al. 2013;

Gray et al. 2011; Citi Research 2014a). Finally, I find that analyst behavior changes in the post-ISA 700 period as evidenced by lower analyst forecast dispersion. In addition, less readable audit reports are associated with higher analyst forecast dispersion in both the pre- and post-ISA 700 periods, consistent with Lehavy et al. (2011). In supplemental analyses, I find that audit report readability and audit report tone are associated with high quality auditor characteristics. I also find that domain-specific word dictionaries, generated from Form-10Ks and earnings press releases, have a lower frequency in audit reports in both the pre and post ISA 700 period suggesting that auditor disclosure is different from management disclosure.

My study makes several important contributions. First, I add to the readability literature by expanding the readability of annual reports to audit reports. Recent reviews on the auditor's reporting model and archival audit research (Mock et al. 2013; DeFond and Zhang 2014) and initial studies on the US expanded audit report proposal (Christensen et al. 2014; Kachelmeier et al. 2014) illustrate the need for more research on standard-setting related to the audit report. ISA 700 introduces several additional disclosures related to risk assessment, materiality, and audit scope designed to enhance the communication between the auditor and financial statement user. Using this setting, my paper is the first to examine audit report readability in the current environment. My results show that these additional disclosures are useful when the disclosures effectively transmit the information that the auditor intended.

Second, I provide insight that is useful to standard-setters and regulators. The International Auditing and Assurance Standards Board (IAASB) released guidance on expanded auditor reporting in January 2015 (IAASB 2015) and the Public Company Accounting Oversight Board (PCAOB) is currently deliberating expanding the audit report in the United States (PCAOB 2013; PCAOB 2016). This study informs standard-setters and regulators on how audit firms implemented ISA 700 in the United Kingdom and the response from financial statement users. These findings could influence future standard-setting in this area. I show that the audit report is more readable in the post-ISA 700 period, which improves the communication value. I also show that analysts respond to the ISA 700 audit report, which confirms earlier analysts' preferences for client-specific information in the report.

Finally, I expand the audit literature with the introduction of content measures to evaluate the effectiveness of the expanded audit report. More specifically, unlike concurrent studies (Gutierrez et al. 2016; Lennox et al. 2015; Reid et al. 2015) that use a year dichotomous variable to compare the audit report information content in the pre- versus post-ISA 700 era, I use readability to evaluate *how* well the ISA 700 report communicates its message to the user. In addition, I use audit report tone to assess *what* the auditor is communicating in the expanded report. I also examine domain-specific word lists in the context of auditor disclosure to investigate word choice differences in auditor disclosure versus management disclosure. Overall, my test results show the benefit of using content measures in the evaluation of the auditor communication.

The next section of the paper provides an overview of ISA 700, reviews prior literature, and develops my hypotheses. Section 3 discusses research methodology. Section 4 discusses results. Section 5 includes supplemental analyses. Section 6 summarizes and concludes.

## II. BACKGROUND AND HYPOTHESIS DEVELOPMENT

### The Auditor's Report on the Financial Statements (ISA 700)

The UK Financial Reporting Council issued ISA 700 (UK and Ireland), *The Auditor's Report on the Financial Statements* in June 2013. This standard requires audit report disclosures that describe: 1) the risks of material misstatement that required the greatest audit effort; 2) the application of materiality in the execution of the audit; and 3) the scope of the audit including how the engagement team addressed (1) and (2). The standard is applicable for entities subject to UK Corporate Governance Code and is effective for fiscal periods beginning on or after October 1, 2012 (FRC 2013a).[3] The introduction of ISA 700 (UK and Ireland) in June 2013 was the first major content change for the audit report in several decades. In the press release announcing the issuance of the standard, Nick Land, Chairman of the FRC's Audit and Assurance Council, commented, "*The provision of a fuller description of the work the auditor has undertaken will give far more insight to investors than the binary pass/fail model of the current audit report* (FRC 2013b)."

The introduction of ISA 700 provides a unique opportunity for auditors to discuss audit risk areas and audit scoping determinations. The standard addresses the critiques of the historical pass/fail model audit report by requiring client-specific audit risk information in the report. The standard provides suggestions for items to disclose such as the materiality type (overall, performance, and threshold for audit committee communication), audit coverage by area, locations visited by the auditor, and the audit group structure (centralized or multi-location). The standard also states the FRC's preference for client-specific language instead of "standardized language" when applying the provisions of ISA 700 (FRC 2013a).

[3] Entities subject to UK Corporate Governance Code reporting are companies with a Premium listing of equity shares on the London Stock Exchange and companies incorporated in Ireland with a primary or secondary equity listing on the Ireland Stock Exchange. The London Stock Exchange designates Premium listing for companies and investment entities that issue equity securities and comply with the UK super-equivalent governance requirements.

**Audit Report Readability**

*Communication Value, Communication Theory, and the Audit Report*

The audit report in its simplest form is a communication from the auditor to financial statement users about the results of the audit. Figure 1 shows the audit report communication model based on the linear communication model advanced by Shannon and Weaver (Shannon and Weaver 1949). Academic research on the communication value of the audit report has noted both an expectations gap and an information gap when assessing the communication value of the audit report. The expectations gap is the gap between what the auditor's responsibility is and what financial statement users believe the auditor's responsibility should be. The information gap is a different, but related concern, wherein there is a gap between information that is publicly available to the financial statement user and information that is not publicly available, that the financial statement user believes will be helpful in investment decision-making (IAASB 2011). An abundance of research on the expectations gap has resulted in mixed results on whether the changes to the audit report introduced by standard-setters have reduced the expectations gap (Mock et al. 2013; Church et al. 2008; Gray et al. 2011; Coram et al. 2011; Turner et al. 2010; Geiger 1994; Miller et al. 1990; Miller et al. 1993). Research on the information gap is limited, but survey evidence shows that financial statement users prefer more information in the audit report to assist with understanding their underlying investments (IAASB 2011; IOSCO 2009; CFA Institute 2010).

Smith and Smith (1971) advance the importance of communication theory when assessing how well financial reporting delivers its message to the financial statement users. In their study, they introduce readability as an approach to evaluate the effectiveness of financial reporting communication. Using a sample of fifty financial statements notes, they find that the notes are understandable to readers with at least a college education, highlighting the complexity of the documents. They contend that readability is an adequate measure to evaluate the performance of how well financial reporting communicates its message about the client (Smith and Smith 1971). Other studies show similar findings that financial statement communication is very complex when evaluating management reports (Lewis et al. 1986), footnote disclosure (Barnett and Loeffler 1979), corporate annual reports (Soper and Dolphin 1964; Jones and Shoemaker 1994; Clatworthy and Jones 2001; Courtis 1998; Courtis 1995; Li 2008) and analyst reports (De Franco et al. 2015).

Calculating readability is an approach to evaluate the performance of how well an audit report communicates its message about the audit process and the audited entity. There are limited studies that evaluate the readability of audit reports. Barnett and Loeffler (1979) find that the audit report readability is "very difficult." In addition, they found no statistically significant difference in readability between the external auditors issuing the audit report. Pound (1981) finds for a sample of Australian audit reports that the reading ease is "inhibitive" to effectively communicating audit results to financial statement users. Consistent with Barnett and Loeffler (1979), Pound (1981) did not find a difference in reading ease among the large public accounting firms. Taken together, these studies show that the audit report is inherently difficult to understand and that there is an opportunity to improve the communication value of the audit report.

*ISA 700, Communication Value, and Readability*

Leading to the issuance of ISA 700 (UK and Ireland), standard-setters discussed readability (FRC 2007; ICAEW 2007). However, most of the discussion centered on moving standardized audit scope language later in the report or to a separate website (FRC 2007). As noted in Smith and Smith (1971), "communication occurs in financial reporting only if the meanings intended by the information source are assigned to the financial statement messages by the destination." As previously established, readability is a measure that can assess how well information is communicated (Smith and Smith 1971; Courtis 1998; Courtis 1995; Li 2008; Beattie 2014). Therefore, it is an empirical question whether ISA 700, with its additional disclosure requirements, improves the readability of the audit report. Readability could improve as the auditor has the flexibility to comply with the provisions of ISA 700. If the auditor views the expanded audit report as a communication to the financial statement user and not a compliance exercise, the auditor may be more inclined to communicate in a way that is easier for the recipient to understand. As such, the readability of the audit report may improve with the implementation of ISA 700.

In informal discussions with UK audit practitioners from several international accounting firms, I noted a consistent theme of making the additional disclosures beneficial to the reader. Specifically, one senior practitioner commented that there was a focus to "make the [audit report] as readable as possible." Another practitioner commented that their firm "tried to stay away from jargon terms, [wanted to make the report] easy to follow." If the auditor acts with a communication focus versus a compliance focus when implementing ISA 700, the auditor will create an audit report that is more readable than the pre-ISA 700 audit report. As such, I state my first hypothesis in the alternative:

**H1a:** *Audit report readability improves in the post-ISA 700 audit report period compared to the pre-ISA 700 audit report period.*

**Audit Report Tone**

Critics of the expanded audit report raised concerns regarding the potential for boilerplate disclosures that provided limited information to the user (IAASB 2011; Mock et al. 2013; Gray et al. 2011; Citi Research 2014a). Readability measures *how* well a financial reporting message conveys its intended audience but it does not fully capture *what* the message contains. Recent accounting and finance literature has introduced content analysis to provide insights on whether the content of business texts is related to investor behavior (Antweiler and Frank 2004; Tetlock 2007; Tetlock et al. 2008; Loughran and McDonald 2011). One commonly used content analysis measure is tone, wherein tone captures the "affect" or "feeling" (Henry 2008) of Form 10-Ks, business press articles, and investor informal chat discussions[4].

Prior to the issuance of ISA 700, the need for an evaluation of audit report tone was non-existent as all audit reports contained the same boilerplate language. With ISA 700, there is an opportunity to examine the feeling communicated based on the words used as reflected in tone measures. I use Loughran & McDonald's (2011) *Negative*, *Positive*, and *Uncertainty* word dictionaries to capture the audit report tone. These three word dictionaries are more appropriate in the audit report setting as the negative and uncertainty word dictionaries approximate the level of negative or risk-related content discussed in the audit report. The positive word dictionary used in this setting captures the alternative word choice to negative or uncertain language. ISA 700 requires auditors to disclose risks of material misstatements that the engagement team

[4] Tone is commonly determined based on the word count frequency of words in psychology-developed word lists, such as the Harvard General Inquirer word list, found in the business texts (Loughran and McDonald 2011; Henry and Leone 2016). Loughran & McDonald (2011) provide an alternative to the psychology-based categorizations by creating six word dictionaries specific to financial statement disclosure (negative, positive, uncertainty, litigation, strong, and weak). I do not use the litigation word dictionary due to the significant overlap with the negative word dictionary. In addition, I do not use the strong and weak dictionaries due to low rates of occurrence. Several studies in accounting and finance have used these dictionaries when examining short-selling (Engelberg et al. 2012), local news and firm value (Gurun and Butler 2012), and disclosure tone and shareholder litigation (Rogers et al. 2011).

dedicated significant effort to and to disclose the material and scoping decisions related to those risk assessments. In informal discussion with audit partners on the implementation of ISA 700, they remarked that firms did not overly rely on standard audit report templates and allowed audit partners to tailor the audit report based on the underlying client-risks. One interviewee stated that the firm stressed that "this [audit report] is your communication; you need to be proud of what you have done." As auditors have the ability to expand their word usage in the post-ISA 700 environment, I expect the expanded audit report to include more word variety that captures risks than in the prior standard audit report. This leads me to my next hypothesis:

**H1b:** *The frequency of negative, positive, and uncertain words (i.e., audit report tone) will be higher in the post-ISA 700 period than in the pre-ISA 700 period.*

**ISA 700 Audit Report and Analyst Behavior**

*Financial Analysts and the Audit Report*

The aforementioned audit report communication model illustrates three components in the communication process: 1) the auditor, 2) the audit report, and 3) the financial statement user. To assess the communication value of the expanded audit report, it is necessary to determine if the financial statement user receives the audit report message. Financial statement users include a broad constituency including investors, financial analysts, banks, and regulators. Of these users, financial analysts are sophisticated consumers of financial information. The financial analyst performs an "information intermediary" role in the capital market by reducing the information asymmetry between management and the investor (Healy and Palepu 2001).

The audit report is a source of information for financial analysts when performing their information intermediary role. Prior research shows that analysts value the unqualified opinion included in the audit report (Coram et al. 2011; Mock et al. 2009). In an experiment with

Australian financial analysts, Coram et al. (2011) show that analysts focus on the opinion but not on the remaining audit report content. Mock et al. (2009) conducted focus groups with users, including financial analysts, to obtain user perceptions on the standard audit report. Their results show that financial analysts desire “more information and transparency” in the audit report (Mock et al. 2009). An analyst participating in the focus group commented that “in addition to the company’s disclosure of how they selected specific estimates and their judgments, analysts also would like a similar discussion from the auditor (Mock et al. 2009).” The CFA Institute, a professional association of investment professionals, issued a 2010 survey in which 94% of the respondents liked to see more information in the standard audit report (CFA Institute 2010). In addition, survey research on sell-side and buy-side analysts show that financial reports are an input to the forecasting process (Brown et al. 2015; Brown et al. 2014). In summary, prior research illustrates the analysts’ use of the audit report and preference for additional information in the audit report. Following prior studies, I examine analyst forecast dispersion, to capture changes in the information environment in the post-ISA 700 period.

*ISA 700 Audit Report and Analyst Forecast Dispersion*

Analyst forecast dispersion captures the variation in the views of analysts in their forecasts for a company. Analysts use private information along with publicly disclosed financial information to inform their earnings forecast. With each financial analyst having differing information sets and differing abilities to forecast, variation in the earnings forecasts occurs. Prior literature shows the less readable communication contributes to higher analyst forecast dispersion due to the high cost of processing and interpretation (Lehavy et al. 2011). ISA 700 audit reports include client-specific audit disclosures available to all financial analysts for use in forecasting earnings. The availability of these disclosures in terms of more readability and higher frequency of words representing audit risk (i.e. tone) could reduce the cost of processing the information, but the effect on the interpretation could differ. On one hand, audit reports in the post-ISA 700 period could result in analysts interpreting the client-risks in a consistent manner due to the ease of information processing. This results in more consistency with other analyst forecasts leading to reduced forecast dispersion. On the other hand, audit reports in the post-ISA 700 period could result in analysts generating divergent views due to the revelation of new information or due to differences in interpretations of the new disclosures. This leads to the same or increased forecast dispersion in the post-ISA 700 period compared to the pre-ISA 700 period. Due to these competing predictions, I state my next hypothesis in the null:

> **H2:** *Analyst forecast dispersion does not change in the post-ISA 700 period.*

## III. RESEARCH METHODOLOGY

### Content Measures

*Readability Measure*

Consistent with readability studies (Li 2008; De Franco et al. 2015; Smith and Smith 1971), I use *FOG* as the primary readability measure to compare the pre-ISA 700 audit reports to the post-ISA 700 audit reports.[5] The Fog Index *(FOG)* is a widely used readability statistic developed by Robert Gunning (Gunning 1952) that evaluates the number of words in a sentence and the percentage of complex words (words with three syllables or more) to estimate the

[5] Flesch-Kincaid (KINCAID) and Flesch (FLESCH) Reading Ease are additional readability measures. The Flesch-Kincaid (KINCAID) Index calculates readability based on syllables per word and words per sentence and rates the text based on the U.S. grade school level. The higher the measure the more education is required to read the text. It is calculated as: (11.8 x syllables per word) + (0.39 x words per sentence) – 15.59. Flesch (FLESCH) Reading Ease rates reading ease on a scale of 1 to 100 based on words per sentence and syllables per sentence. Contrary to FOG and KINCAID, the higher the number, the easier the text is to read. FLESCH is calculated as: 206.8 – (1.015 x words per sentence) – (84.6 x syllables per word). The empirical results and inferences using these measures are consistent with the FOG measures and are untabulated.

number of formal years of education an average person would need to read and comprehend the text.[6] The *higher the measure the more complex the text*.

*FOG = (words per sentence + percent of complex words) x 0.4.* *(1)*

To calculate *FOG* for each company-year observation, I obtain all annual reports for the companies, extract the audit report, and convert all documents to text files. I remove all header and pagination information from the text file to result in text-only opinion. Using Perl (Lingua::EN::Fathom package), I calculate *FOG* for each firm-year observation.[7]

*Tone Measures*

Tone is commonly determined based on a "bag of words" approach using the frequency of words in psychology-developed word lists, such as the Harvard General Inquirer word list, appearing in business texts (Loughran and McDonald 2011; Henry and Leone 2016). The word frequencies are utilized to quantify the tone exhibited in the written texts. Loughran & McDonald (2011) provide an alternative to the psychology-based lists by creating six word dictionaries specific to financial statement disclosure (*Negative*, *Positive*, *Uncertainty*, *Litigation*, *Strong*, and *Weak*).

I obtain the *Negative*, *Positive*, *Uncertainty* word lists from Bill McDonald's Word List Page maintained at http://www3.nd.edu/~mcdonald/Word_Lists.html. The latest Master Word List (Dictionary) is as of March 2015. There are 2,355 words included in the Negative word list, 354 words included in the Positive word list, and 297 words included in the Uncertainty

[6] I do not perform tests using other measures of readability such as file size (Loughran and McDonald 2014) and BOG (Bonsall et al. 2015) as these measures are focused on compliance with US Securities and Exchange Commission rules on Plain English usage and are not fully applicable in the UK reporting setting.

[7] In other readability studies (Li 2008; De Franco et al. 2015), length is used to capture another facet of readability and is calculated as the logarithmic transformation of the number of words in the text. In my setting, the audit report length mechanically increases due to the additional disclosures required by ISA 700. As such, length is not a readability measure in this study.

word list. I converted the word lists to column vectors that include word and dummy variables that correspond to the designated word list for each word. Due to the overlap in the Negative and Uncertain word lists, several words included more than one dummy variable. After the column vectors were completed, I imported the matrix into the Linguistic Inquiry and Word Count (LIWC) Software as a custom dictionary. Using the custom dictionary function, LIWC analyzed each audit report in the sample to generate the *NEGATIVE*, *POSITIVE*, and *UNCERTAIN* tone measures. The measures represent the word count frequency for the negative, positive, and uncertain word lists that appear in the sample audit reports.

**ISA 700 Implementation and Audit Report Readability (H1a)**

Prior readability models used by Li (2008) focus on client-specific variables when evaluating MD&A disclosure developed by client management. Audit reports are a product of both client characteristics and auditor characteristics. I expand the Li (2008) model to include auditor characteristics (Hronsky 1998) that may impact the level of auditor disclosure in the audit opinion. In addition, I control for the audit report structure. The following model tests the association between ISA 700 implementation and audit report readability. I use a differences approach where each firm serves as its own control using one observation from the pre-ISA 700 period and one observation from the post-ISA 700 period.

$$\begin{aligned} FOG \quad = {} & \beta_0 + \beta_1\, NEWOPINION_{it} + \beta_2\, SIZE_{it} + \beta_3\, MB_{it} \\ & + \beta_4\, AGE_{it} + \beta_5\, SI_{it} + \beta_6\, EARN\_VOL_{it} + \beta_7\, NBSEG_{it} \\ & + \beta_8\, ACQUISITION_{it} + \beta_9\, SEO_{it} + \beta_{10}\, BIGN_{it} \\ & + \beta_{11}\, COMBINED\_OP_{it} + Industry\ Fixed\ Effects + \varepsilon \qquad (2) \end{aligned}$$

*NEWOPINION*, the variable of interest, is an indicator variable equal to one if the audit opinion is issued in the first year of ISA 700 implementation and zero otherwise (the year immediately prior to ISA 700 implementation). I control for client characteristics and auditor characteristics that may alter the level of auditor disclosure in the auditor's opinion. Larger firms (*SIZE*), high market-to-book firms (*MB*), firms with special items (*SI*), firms with earnings volatility (*EARN_VOL*), firms with multiple business segments (*NBSEG*), firms that are acquisitive (*ACQUISITION*), firms that issue equity offerings (*SEO*), and firms with a combined audit opinion (*COMBINED_OP*) are more likely to have complicated audit opinions. Older firms (*AGE*) and Big N firms (*BIGN*) are less likely to have complicated audit opinions. Industry fixed effects are included to control for industry variation. Variable descriptions are included in Appendix A.

**ISA 700 Implementation and Audit Report Tone (H1b)**

To test the association between the implementation of ISA 700 and the tone of the audit report, I modify the readability model in Equation 2 to include tone measures (*NEGATIVE*, *POSITIVE*, and *UNCERTAIN*) as the dependent variables. I also include a composite tone measure, *COMBINED_TONE*, to capture the overall change in word usage by summing *NEGATIVE*, *POSITIVE*, and *UNCERTAIN* for each observation. I include the same control variables in the tone model as in the readability model as the same client and auditor specific characteristics that drive the complexity of an audit report also drive the tone of the audit report. The following model tests the association between ISA 700 implementation and audit report tone.

$$\begin{aligned} TONE = {} & \beta_0 + \beta_1\, NEWOPINION_{it} + \beta_2\, SIZE_{it} + \beta_3\, MB_{it} \\ & + \beta_4\, AGE_{it} + \beta_5\, SI_{it} + \beta_6\, EARN\_VOL_{it} + \beta_7\, NBSEG_{it} \\ & + \beta_8\, ACQUISITION_{it} + \beta_9\, SEO_{it} + \beta_{10}\, BIGN_{it} \\ & + \beta_{11}\, COMBINED\_OP_{it} + Industry\ Fixed\ Effects + \varepsilon \end{aligned} \tag{3}$$

*NEWOPINION*, the variable of interest, is an indicator variable equal to one if the audit opinion is issued in the first year of ISA 700 implementation and zero otherwise (the year immediately prior to ISA 700 implementation). Consistent with Equation 2, I include industry fixed effects to control for industry variation. All other variable descriptions are consistent with Equation 2 and are included in Appendix A.

**ISA 700 and Analyst Forecast Dispersion (H2)**

To test the association between the implementation of ISA 700 and analyst forecast dispersion, I follow Lehavy et al. (2011). Equation 4 tests the association between the implementation of ISA 700 and analyst forecast dispersion. Equation 5 tests the association between analyst forecast dispersion and audit report readability (tone) and the ISA 700 period. Equation 6 tests the interactive effect of ISA 700 implementation and audit report readability (tone) on analyst forecast dispersion.

$$\begin{aligned} DISPERSION = {} & \beta_0 + \beta_1\, NEWOPINION_{it} + \beta_2\, LOGSIZE_{it} + \beta_3\, MB_{it} \\ & + \beta_4\, NBSEG_{it} + \beta_5\, INST_{it} + \beta_6\, RD_{it} + \beta_7\, EARN\_VOL_{it} \\ & + \beta_8\, logFILESIZE_{it} + Industry\ Fixed\ Effects + \varepsilon \end{aligned} \tag{4}$$

$$\begin{aligned} DISPERSION = {} & \beta_0 + \beta_1\, FOG\ (TONE)_{it} + \beta_2\, LOGSIZE_{it} + \beta_3\, MB_{it} \\ & + \beta_4\, NBSEG_{it} + \beta_5\, INST_{it} + \beta_6\, RD_{it} + \beta_7\, EARN\_VOL_{it} \\ & + \beta_8\, logFILESIZE_{it} + Industry\ Fixed\ Effects + \varepsilon \end{aligned} \tag{5}$$

$$\begin{aligned} DISPERSION = {} & \beta_0 + \beta_1\, NEWOPINION_{it} + \beta_2\, FOG\ (TONE)_{it} \\ & + \beta_3\, NEWOP*FOG\ (NEWOP*TONE)_{it} \\ & + \beta_4\, LOGSIZE_{it} + \beta_5\, MB_{it} + \beta_6\, NBSEG_{it} + \beta_7\, INST_{it} \\ & + \beta_8\, RD_{it} + \beta_9\, EARN\_VOL_{it} + \beta_{10}\, logFILESIZE_{it} \\ & + Industry\ Fixed\ Effects + \varepsilon \end{aligned} \tag{6}$$

Consistent with Lehavy et al. (2011), *DISPERSION* is defined as the standard deviation of the individual analyst earnings per share forecasts in the first analyst consensus forecast (annual) after audit report issuance, scaled by the share price 90 days prior to the consensus forecast date. *NEWOPINION* is the variable of interest in Equation 4 and *FOG (TONE)* is the variable of interest in Equation 5. *NEWOP*FOG (NEWOP*TONE)* is the variable of interest in Equation 6. I control for client characteristics that are associated with analyst following found in prior literature. Lehavy et al. (2011), Bhushan (1989), O'Brien and Bhushan (1990), and Marston

(1997) find that larger firms (*LOGSIZE*) have greater analyst following. As a proxy for growth (Lehavy et al. 2011), I use the logarithm of book to market firms (*MB*). To control for firm complexity (Lehavy et al. 2011; Marston 1997) that may lead to higher analyst following, I include the natural logarithm of the firm's business segments (*NBSEG*). Institutional ownership is associated with high analyst following, therefore I control for institutional ownership (*INST*) (Bhushan 1989; Brennan and Subrahmanyam 1995; Frankel et al. 2006). I also control for high research and development expense (*RD*) (Barth et al. 2001), and volatile earnings (*EARN_VOL*) (Lehavy et al. 2011). Finally, I control for the content of the audit report using the logarithmic transformation of the electronic file size of the audit report (*logFILESIZE*). Industry fixed effects are included to control for industry variation. Variable descriptions are included in Appendix A.

**Sample Selection**

The study sample is comprised of companies listed on the London Stock Exchange (LSE) and Irish Stock Exchange (ISE) that are required to comply with the provisions of ISA 700. I start with all companies listed in the Compustat Global Fundamentals Annual Dataset listed on the London Stock Exchange or Irish Stock Exchange from 2012 – 2014. From those firms, I eliminate firm-year observations prior to the year immediately before ISA 700 implementation and firms that are not Premium listed based on the December 31, 2013 LSE Company Listing.[8] In addition, I eliminate financial institutions and investment funds based on the London Stock Exchange Securities Groups. I obtain financial information and securities identifying

[8] The listing of LSE companies and securities are located at http://www.londonstockexchange.com/statistics/companies-and-issuers/companies-and-issuers.htm .

information from the Compustat Global Fundamental Annual and Security Daily Datasets. This results in 458 companies eligible for the readability analysis.

I obtain audit reports for the pre-ISA 700 and post-ISA 700 periods for each company identified to generate readability statistics. I eliminate 30 companies in which readability statistics are not determinable due to language translation or file security issues. Subsequently, I match the Compustat Global and readability data to the Bureau van Dijk Amadeus (Financials) Dataset to obtain closing share price, market capitalization, and shares outstanding for each firm-year observation. I obtain institutional ownership information from Bloomberg and analyst information from the I/B/E/S International Summary Statistics File. Audit firm information is hand collected from company annual reports for each company in the sample. The resulting sample size is 350 companies and 700 company-year observations. Table 1 presents the sample size calculation for this study.

## IV. EMPIRICAL RESULTS

### Descriptive Statistics and Univariate Results

Table 2 presents descriptive statistics for the study sample. By design, fifty percent of the sample audit reports are subject to the provisions of ISA 700 (*NEWOPINION*). The mean *FOG* value of 27.35 indicates that the audit report remains a complicated text when compared to other business texts such as Form 10-Ks (FOG=19.39) and Wall Street Journal articles (FOG=15.20) (Li 2008). The tone measures for the sample show that 1.24% (*NEGATIVE*) of the words in the audit report are included in the negative word lists. Only 0.25% (*POSITIVE*) of the words in the audit reports are included in the positive word lists and 0.87% (*UNCERTAIN*) of the words in the audit reports are included in the uncertainty word lists. The *NEGATIVE* tone measure is consistent with Loughran and McDonald’s negative tone of 1.39% when assessing

Form 10-Ks (Loughran and McDonald 2011). However, the measures for *POSITIVE* and *UNCERTAIN* are lower for my audit report sample than for Form 10-K samples noted in the finance literature. The mean forecast dispersion (*DISPERSION*) is 0.30.

Audit firm related descriptive statistics show that the four largest international accounting firms (*BIGN*) audit 93% of the sample. Seventy-five percent (*BUSY*) of the audits occur during the months of December – March. Sixty-nine percent (*COMBINED_OP*) of the audit reports include the report for both the group and the parent company.[9] The natural logarithm of audit fees for the sample is 13.00 (*LOGFEES*). These audit firms descriptive statistics show that the companies subject to ISA 700 are primarily clients of the Big N firms and the audit work is concentrated in the traditional audit year-end work periods.[10] London audit firm offices issue fifty-five percent (*LONDON*) of the sample audit opinions. Client specific descriptive statistics show that 19% (*FTSE 100*) and 39% (*FTSE250*) of the company-year observations are for companies listed on the Financial Times Stock Exchange (FTSE) Index 100 and 250 for the entire sample period, respectively. The average size of the companies in the sample is 20.49 (*SIZE*) and the average age of the company is approximately 24 years. The market-to-book ratio is 2.41 (*MB*) and only 16% (*LOSS*) are loss firms. Two percent (*GOING CONCERN*) of the sample audit opinions have going concern report modifications. Approximately one-third (*EXP_DOMINANCE*) of the sample are audited by firms that are industry leaders. Overall, the client statistics show that the sample is comprised of mature companies that are fiscally healthy.

---

[9] In the United Kingdom, the corporate structure includes the group and the parent company. In most cases, the operations of the company are recorded in the group accounts with the holding company operations in the parent company.

[10] I evaluate readability measures on an audit firm basis. In untabulated results, BDO and KPMG have the lowest average *FOG* measures at 26.22 and 26.56, respectively. PWC, which has the highest number of observations in our sample, has an average *FOG* of 27.55. OTHER, which represents the smallest firms in our sample, have an average *FOG* of 28.10. Overall, this provides support that there is variation in audit report content across firms.

All continuous variables have been winsorized at the 1st and 99th percentiles to account for outliers in the sample.

Table 3 includes the results of the univariate analysis that compares test variables in the pre-ISA 700 period to the post-ISA 700 period. The results show that readability (*FOG)* showed statistically significant improvement in the Post-ISA 700 period. *FOG* decreased 4.83 points ($p<0.01$). This result provides initial support that the expanded audit report improved in readability, which then enhances the usefulness of the report to the financial statement reader. Similarly, all tone measures increased in the Post-ISA 700 period with *NEGATIVE* showing the highest increase with an increase of 0.87. Untabulated results show that the majority of the client characteristics variables did not have a statistically significant change in the post-ISA 700 period from the pre-ISA 700 period. *MB* increased slightly and more firms had acquisition activity (*ACQUISITION*). In addition, more firms combined the parent company audit report with the group audit report in the post-ISA 700 period. Related to the audit report, the number of pages increased in the Post-ISA 700 period to 3.34 pages from 1.23 pages in the pre-ISA 700 period. On average, auditors included approximately four risks in the ISA 700 audit report. The analyst behavior variable, *DISPERSION*, decreased in the post-ISA 700 period, but the difference is not statistically significant. The multivariate analyses that follow further explore these univariate results.

**Multivariate Results**

*Hypothesis 1a*

Hypothesis 1a evaluates the association between readability and the implementation of ISA 700. Table 4 presents the ordinary least squares regression results of estimating Equation 2. The variable of interest, *NEWOPINION*, is negative and significant ($p<0.01$). The coefficient of

(-4.99) shows that an average person would need five *fewer* years of formal education to read and comprehend the audit report in the post-ISA 700 period. This indicates that in the post-ISA 700 report period audit report complexity decreased resulting in a more readable report. Said differently, the improvement in readability shows that the overall communication value has improved in the expanded audit report. The coefficients on the firm-specific control variables are not statistically different from zero except the positive coefficients on *BIGN* ($p<0.10$) and *COMBINED_OP* ($p<0.01$). This indicates that a change in client-level factors did not have an effect on how the auditors disclosed audit risks, materiality, and audit scope decisions. The change in readability is consistent with UK practitioners' views that the new standard was the impetus for generating reports that were easy to understand. These results support H1a and show strong evidence that audit reports under ISA 700 are more readable to users thereby achieving the intended purpose of ISA 700 of improving communication value of the report.

*Hypothesis 1b*

Hypothesis 1b tests the association between the implementation of ISA 700 and audit report tone. Table 5 presents the result of the ordinary least squares regression of Equation 3. Column 1 shows that the variable of interest, *NEWOPINION*, is positive and significant ($p<0.01$) when *NEGATIVE* is the dependent variable. This indicates that the tone of the post-ISA 700 report is more negative than in the prior period. This is consistent with auditors including risks of material misstatements and the impact of the risks on the scope of the audit. Large firms (*BIGN*) generated reports that had higher negative language evidenced by the positive and significant coefficient ($p<0.01$). Interestingly, clients with special items (*SI*), segments (*NBSEG*), and combined opinions (*COMBINED_OP*) have less negative language in their audit opinions. These areas would potentially generate additional disclosures but may have written in a manner that fewer negative terms were included.

Column 2 includes the results when *POSITIVE* is the dependent variable. Again, the variable of interest is positive and significant (p<0.01), however the magnitude of the coefficient *NEWOPINION* is much smaller than the coefficients when *NEGATIVE* and *UNCERTAIN* are the dependent variables. Larger clients (*SIZE*) have a statistically significant association with positive language in the audit report. Large firms (*BIGN*) have a higher occurrence of positive language in their audit report. Firms with volatile earnings (*EARN_VOL*) had fewer occurrences of positive language in their audit reports. The results from Column 2 indicate that in the post-ISA 700 period, auditors included positive language in the expanded audit report but at a lower frequency.

Column 3 provides results when *UNCERTAIN* is the dependent variable. Consistent with both Columns 1 and 2, the variable of interest, *NEWOPINION*, is positive and significant (p<0.01) when evaluating the presence of uncertain language. Large firms (*SIZE*) have a higher occurrence of uncertain language (p<0.01) while *SI*, *EARN_VOL*, and *COMBINED_OP* remain negative and significant (p<0.01). Evaluating the composite tone measure, *COMBINED_TONE*, the coefficient on *NEWOPINION* is positive and significant (p<0.01) indicating that in the post-ISA 700 period there is a higher rate of occurrence for tone-related words. Overall, the results provide evidence the audit report tone did increase in the post-ISA 700 period supporting H1b. The results refute the argument that the additional disclosures in ISA 700 would be boilerplate in nature and highlight the benefit of the auditor language choice in disclosure.

*Hypothesis 2*

Hypothesis 2 tests the association between analyst forecast dispersion and the implementation of ISA 700. Table 6 presents the results of the ordinary least squares regressions of Equations 4-6. Column 1 reports a negative and marginally significant coefficient on *NEWOPINION* ($p<0.10$), supporting H2b. These results indicate that the introduction of client-specific audit disclosures in the ISA 700 report assisted in reducing the variation between analysts when developing their forecasts. The public dissemination of audit risks and audit scoping decisions provides all analysts with similar information to use in their forecasts. The availability of previously private information has a leveling effect on the analyst forecasts resulting in reduced dispersion.

In Column 2, the coefficient on *FOG* is positive and significant ($p<0.05$). This indicates that less readable audit reports contribute to higher analyst dispersion. A less readable audit report is subject to more interpretation by the analyst covering the client and results in wider forecast dispersion. Consistent with prior literature, the number of segments, institutional ownership, and research and development expenditures are positive and significant ($p<0.10$). Overall, the results show that analyst behavior responded to the ISA 700 required disclosures. This validates the analysts' position that a more informative audit report is beneficial to their role as financial statement users. In the interaction model, *NEWOP*FOG* is negative and significant ($p<0.10$) indicating that *FOG* is less associated with analyst dispersion in the post-ISA 700 period.[11]

[11] To address collinearity in the interaction models, *FOG* (*TONE*) is mean-centered when the interaction term is included in Equation 6.

In Columns 4 and 5, the coefficients on *COMBINED_TONE* are negative but insignificant ($p>0.10$). The coefficient on *NEWOP*TONE* in Column 5 is positive and insignificant. These results indicate that the variation effect of tone is diminished in the post-ISA 700 period.

## V. SUPPLEMENTAL ANALYSES

### ISA 700 Audit Report Readability and Audit Quality

In November 2006, the FRC issued a discussion paper entitled “Promoting Audit Quality” that introduced an audit quality framework that included four main drivers of audit quality, which included the “reliability and usefulness of audit reporting (FRC 2006).” Linking communication theory to the FRC audit quality framework, more readable audit reports are more useful reports, which contributes to higher audit quality. This logic is consistent with practitioner feedback on the implementation of ISA 700, that the expanded audit report is a “positive driver of audit quality.”

Thus, auditor characteristics such as auditor size and office size that are associated with higher audit quality, may contribute to differential readability in audit reports. The auditing literature has shown that Big N firms exhibit higher audit quality than non-Big N firms due to their size and access to resources (Defond et al. 2014; Choi et al. 2010; DeAngelo 1981; Dopuch and Simunic 1982). Studies using office size show that larger offices perform higher quality audits than smaller offices when evaluating earnings quality (Francis and Yu 2009; Choi et al. 2010) and restatements (Francis et al. 2013) because larger offices possess a higher level of independence from their clients and expertise. As such, it is possible that the audit quality benefits embedded in large auditors and large practice offices shown in the financial reporting setting will extend to the audit report readability setting.

Auditor expertise is another auditor characteristic that may lead to differences in ISA 700 audit report readability. Prior literature shows that national-level and city-level industry experts provide higher quality audits (Reichelt and Wang 2010) and that there is an audit fee premium for industry experts (Ferguson et al. 2003; Francis et al. 2005). Balsam, Krishnan, and Yang (2003) also find that clients of audit industry specialists have better earnings quality than clients of non-audit industry specialists (Balsam et al. 2003). If the auditor is an industry expert, they may be well versed in the industry and can communicate their understanding of the client's business in an easy to read manner. Alternatively, the industry expert may resort to using industry jargon and terminology when discussing significant audit matters that may limit the readability of the audit report even when providing higher quality audits.

While ISA 700 is applicable for any auditors of premium listed companies on the London Stock Exchange or a listed company on the Ireland Stock Exchange (FRC 2013a), auditors are not equally equipped to apply this new standard. Barclays' Audit Committee Member Mike Ashley, stated that "the big four accountancies have fared well but [said] the next tier of firms had been slower to react (Pearce 2014)." This comment provides additional motivation for understanding implementation differences between Big N firms and non-Big N firms, between large and small practice offices, and between industry experts and non-experts.

The following model tests the association between auditor characteristics and audit report readability in the post-ISA 700 period.

$$\begin{aligned} FOG = {} & \beta_0 + \beta_1 \,(Auditor\ Characteristics) + \beta_2\, SIZE_{it} + \beta_3\, MB_{it} + \beta_4\, AGE_{it} \\ & + \beta_5\, SI_{it} + \beta_6\, EARN\_VOL_{it} + \beta_7\, NBSEG_{it} + \beta_8\, ACQUISITION_{it} \\ & + \beta_9\, SEO_{it} + \beta_{10}\, COMBINED\_OP_{it} + Industry\ Fixed\ Effects + \varepsilon \end{aligned} \tag{7}$$

I evaluate three auditor characteristics, Big N firm affiliation, industry expertise, and office size and their association with audit report readability. *BIGN* is an indicator variable equal to one if the auditor is one of the big four international accounting firms. Industry expertise is captured using two measures based on the number of clients audited by the firm in a specific SIC Code (one-digit). *EXP_NUMCLT* is equal to one if the company is audited by an audit firm with the most clients in that industry when compared to all other audit firms in the sample in year t and zero otherwise. *EXP_DOMINANCE* is equal to one if the company is audited by an audit firm that has 10% more audit clients in an industry than the firm's nearest competitor in year t and zero otherwise. *OFFICE_SIZE* equals the number of audit clients in each firm office for each firm-year in the sample. Industry fixed effects are included to control for industry variation. All other variable definitions are consistent with Equation 2.

Table 7 reports the ordinary least regression of Equation 7. This test uses observations in the post-ISA 700 period only because auditors have much less flexibility in audit reporting in the pre-ISA 700 period. Column 1 shows that readability improves when a Big N firm issues the audit report. The coefficient is negative and significant ($p<0.05$). This finding is consistent with untabulated univariate tests comparing readability statistics by firm.[12] Column 2 shows the coefficient on *OFFICE_SIZE* ($p < 0.05$) is negative and significant providing evidence that larger offices generate reports that are more readable.

Columns 3 and 4 include the results when evaluating industry expertise and the association with readability. Consistent with the results in Columns 1 and 2, the coefficient on *EXP_NUMCLT* and *EXP_DOMINANCE* are both negative and significant at the 1% level. Based on the results in Column 4, the effect is slightly stronger for the dominant industry leader. Columns 5 and 6 show the results of the full model including the Big N, office size, and industry expertise variables.

[12] The Big N firms had the largest average FOG change with a decrease of 4.96 points compared to the Non-Big N firms that had an average FOG change of 1.67 points.

When measuring industry expertise by the number of clients, Column 5 shows that *BIGN* and *EXP_NUMCLT* are significant at the 10% and 5% level, respectively. In Column 6, when industry expertise is measured by industry dominance, the coefficient on *EXP_DOMINANCE* is negative and significant ($p < 0.01$) with *BIGN* maintaining marginal significance ($p<0.10$). Taken together, the results from Columns 5 and 6 show that industry expertise is more strongly associated with improved readability. The results from Table 7 show that higher readability is associated with higher audit quality characteristics providing support that a more readable, hence a more usable report, contributes to audit quality.[13]

**ISA 700 Audit Report Readability and Audit Firms**

Recent analyst and regulatory reports on the implementation of ISA 700 have noted variation in the "quality of risk discussion" (Citi Research 2014a; Citi Research 2014b; FRC 2015; FRC 2016) among the auditors of FTSE 100 companies. ISA 700 reports generated by Ernst & Young (EY) are characterized as having less risk disclosures than the other Big 4 international accounting firms (Citi Research 2014b). To evaluate whether there is also variation in the readability of audit reports, I perform a firm analysis (untabulated) on readability in the year of implementation. First, I modify Equation 2 to include an indicator variable, *EY*, that equals one if the auditor is *EY* and zero otherwise. Second, I modify Equation 2 to include *EY*, *NEWOPINION*, and an interaction variable *NEWOP*EY*.

In the EY model, the coefficient on *EY* of 1.062 is positive and significant indicating that an average person would need one *additional* year of formal education to read and comprehend

[13] For brevity, I do not report the results of auditor characteristics and report tone. The inferences are similar. In sum, I find that high quality auditor characteristics are associated with changes in tone in the ISA 700 period. *BIGN* firms are associated with more negative words ($p<0.10$) in the ISA 700 audit reports, but industry experts (*EXP_CLIENT or EXP_DOMINANCE*) use fewer negative words ($p<0.01$). *BIGN* firms and industry experts are not associated with positive word use in the ISA 700 audit reports. Similar to the negative word finding, industry experts use fewer uncertain words ($p<0.01$).

audit reports generated by EY. In the full interaction model, the interaction coefficient on *NEWOP*EY* of 3.86 is significant at the 1% level indicating that approximately *four* more levels of education are necessary to read the audit reports generated by EY in the post-ISA 700 period compared to other firms. This shows that opportunity remains for audit firms to provide more readable and informative audit reports in future implementation periods.[14]

**Alternative Tone Measures Analysis**

With the advent of the expanded audit report in the UK, the words describing the audit reflect the linguistic choice of auditors. Prior accounting literature has evaluated the linguistic choice of managers when analyzing the tone of Form 10-Ks, conference calls, and press releases (Li 2010; Matsumoto et al. 2011; Henry 2008; Henry 2006). Henry and Leone (2016) evaluate tone measures used in the capital markets literature to provide evidence on the differences in general and domain-specific word lists when analyzing financial texts. In addition, the authors compare the dictionary approach to more complicated content analyses such as natural language processing and inverse document frequency (*idf*) weighting (Henry and Leone 2016). I extend their evaluation of tone measures into the audit report setting using the introduction of the ISA 700 report to: 1) further examine audit report tone; 2) assess differences in word dictionaries used in content analysis; and 3) determine if tone measures created in the management disclosure setting are also relevant in the new auditor disclosure setting.

In the test of Hypothesis 1a, I utilize the Loughran and McDonald (LM) (2011) *Negative*, *Positive*, and *Uncertai*n word dictionaries. To evaluate whether alternative tone measures also

[14] In untabulated analyses, I also evaluate each of the remaining Big N firms using the same model construction. The interaction coefficient on *PWC*NEWOP* of -2.67 is significant at the 1% level. The interaction coefficient on *KPMG*NEWOP* was also negative (-0.34) but not significant. *DT*NEWOP* was positive (0.22) but not significant. These results show the variation in ISA 700 implementation across the international firms and indicate areas for additional improvement.

show increased word choice and negative tone as shown in the Table 5 results, I construct *TONE_LM*, *TONE_FD Henry*, and *TONE_LIWC* following the variable construction in Henry and Leone (2016).[15]

The LM and FD Henry word lists are domain-specific based on financial texts such as Form 10-Ks and earnings press releases. The LIWC word list is a general list created to evaluate a wide variety of written and spoken texts. Following the tone interpretation in Henry and Leone (2016), an audit report with a maximum positive tone results in a tone score of one (1). An audit report with a maximum negative tone results in a tone score of negative one (-1). An audit report with a neutral tone results in a tone score of zero (0).

I modify the dependent variable, *TONE*, in Equation 3 to represent the alternative tone measures, *TONE_LM*, *TONE_FD Henry*, and *TONE_LIWC.* I expect that, consistent with the findings in Table 5, the post-ISA 700 audit report will have a more negative tone reflected in a negative coefficient on *NEWOPINION*. Additionally, I expect a higher usage of domain-specific words in the post-ISA 700 reports.

Table 8 reports the univariate and multivariate results evaluating the alternative tone measures. Panel A shows the univariate analysis of the tone measures and the audit report word frequency for each word list (LM, FD Henry, or LIWC). All tone measures show a statistically significant decrease in tone when comparing the post-ISA 700 reports to the pre-ISA 700 reports. The tone measures based on domain-specific word lists (LM and FD Henry) are both negative in

[15] As noted in Section III, the LM word lists include 2,355 negative words and 354 positive words. The FD Henry word lists are derived from Henry (2006, 2008) include 93 negative words and 117 positive words (Henry 2006; Henry 2008). The LIWC word lists, created by Pennebaker, Chung, Ireland, Gonzales, and Booth (2007) as a part of the LIWC text analysis software, provide an efficient method of analyzing the structural, emotional, and cognitive components of written language (Pennebaker et al. 2007). The LIWC word lists include 499 negative words and 408 positive words. See variable definition in Appendix A.

the post-ISA 700 period. However, the tone measure based on the general word list (LIWC) had a positive tone in both periods, but was less positive in the post-ISA 700 period. When examining the coverage of audit report words by the each of the three word lists, an interesting trend emerges. The domain-specific word lists, LM and FD Henry, only capture 3.8% and 1.5% of the post-ISA 700 audit report words, respectively. On the other hand, the LIWC word lists captures 79% of the audit report words in both the pre- and post-ISA 700 periods. This difference in word capture between domain-specific and general word lists provides some evidence that audit reports may include more common language than disclosures generated by management. This evidence is consistent with both anecdotal and regulatory views on the expanded audit report that indicate a less complicated discussion of audit matters in the report.

Panel B of Table 8 reports the ordinary least squares regression of Equation 3 using the alternative tone measures. Column 1 reports a negative and significant ($p<0.01$) coefficient on *NEWOPINION* when *TONE_LM* is the dependent variable. Columns 2 and 3 report similar results when *TONE_FD Henry* and *TONE_LIWC* are the dependent variables. These results further support the univariate analysis and the Table 4 results that the post-ISA 700 reports had a negative tone indicating the reports captured the underlying risks of the audit. Although the test results are consistent, the explanatory power of each model varies. The $R^2$ for Column 1 is 37.25% compared to 69.92% in Column 2 and 81.12% in Column 3. These differences in explanatory power shows the importance of word list selection when evaluating different types of financial texts. Appendix B summarizes the most frequent domain-specific words included in the pre- and post-ISA 700 audit reports.

**ISA 700 Implementation and Market Response**

Contemporaneous studies (Gutierrez et al. 2016; Reid et al. 2015; Lennox et al. 2015) evaluate the market reaction to the introduction of ISA 700 reporting. Although my study focuses on the auditor's response to ISA 700, I also examine market response using abnormal trading volume (*AVOL*) and abnormal returns (*ABRET*).[16] In untabulated analysis, I find a negative and insignificant (-0.03, p=0.54) association between *NEWOPINION* and *AVOL*. I also find a positive but insignificant association (0.01, p=0.31) between *FOG* and *AVOL*. Further, in assessing abnormal returns, I find a positive and insignificant association between *NEWOPINION* and *ABRET* (0.00, p=0.63). Consistent with the *AVOL* tests, I finds a negative and insignificant association between *FOG* and *ABRET* (-0.00, p=0.27). Taken together, this provides evidence that the market did not have an observable response to the introduction of the expanded audit report.

## VI. SUMMARY AND CONCLUSION

The introduction of ISA 700 presented a significant shift in auditor disclosure included in the audit report. The FRC designed the additional disclosures on risks of material misstatement and audit scoping decisions to make the standard audit report more informative to the audit report user. I examine whether introduction of ISA 700 changes the communication value of the audit report. Using readability and tone to measure communication value allows for a direct evaluation of the effectiveness of the expanded audit report. In addition, I address the financial statement users' response to the expanded audit report by evaluating analyst forecast dispersion.

[16] *AVOL* is calculated as the mean daily trading volume during the event period (-1, 0, 1) minus the mean daily trading volume during the non-filing period (-61, -21) deflated by the standard deviation of daily trading volume during the non-filing period (-61,-21). The estimation period is based on the earnings announcement date to avoid capturing trading volume related to the release of earnings. *ABRET* is calculated as company returns minus London Stock Exchange value weighted returns for the event period (-1, 0, 1).

Finally, I investigate the association of the expanded audit report with audit firm characteristics associated with high quality audits.

I find that audit reports in the post-ISA 700 period are more readable indicating improved communication value. I show that ISA 700 adoption resulted in more negative and uncertain audit report tone. This indicates that auditors capture the underlying risks of their clients by utilizing negative and uncertain words in the expanded audit report. The audit report tone results also provide indirect evidence that the auditor disclosures were not boilerplate but varied in language choice. In evaluating the financial statement users' response, I find that analyst forecast dispersion decreased lending support that the expanded audit report effected financial statement user behaviors.

My study contributes to the audit literature in three ways. First, my paper is the first to provide a content analysis of the expanded audit report to gain insight into *how* and *what* auditors communicate using the expanded audit report and adds significantly to readability and tone literatures. Second, my findings are useful to standard-setters and regulators. ISA 700 reports are easier to read and provide more information to assist investors and information intermediaries in making informed investment decisions. In addition, the ISA 700 reports are not boilerplate in nature and adequately capture the underlying client-specific audit risks through negative and uncertain word usage. I also contribute to the literature by showing that high-quality auditor characteristics are associated with producing more readable audit reports. Finally, I provide initial evidence in word choice differences in auditor disclosure compared to management disclosure. This study should be of interest to standard-setters, regulators, and academics as the study provides a content-based approach to evaluating the implementation of expanded auditor disclosure that can inform future standard setting.

# APPENDIX A

## VARIABLE DEFINITIONS

| | |
|---|---|
| **Dependent Variables – Main Analyses** | |
| *FOG* | Calculated as words per sentence + percent of complex words) x 0.4. |
| *NEGATIVE* | Represents the word count frequency in the audit report based on the Loughran and McDonald Negative Word List. |
| *POSITIVE* | Represents the word count frequency in the audit report based on the Loughran and McDonald Positive Word List. |
| *UNCERTAIN* | Represents the word count frequency in the audit report based on the Loughran and McDonald Uncertain Word List. |
| *COMBINED_TONE* | Calculated as the sum of *NEGATIVE*, *POSITIVE*, and *UNCERTAIN*. |
| *DISPERSION* | Calculated as the standard deviation of the individual analyst forecasts in the first analyst consensus forecast (annual) after audit report issuance, scaled by the share price 90 days prior to the consensus forecast date. |
| **Dependent Variables – Supplemental Analyses** | |
| *TONE_LM* | Calculated as *(POSITIVE-NEGATIVE)/(POSITIVE + NEGATIVE),* where *POSITIVE* and *NEGATIVE* refer to the word count frequency based on the positive and negative words in the Loughran and McDonald word lists, respectively. |
| *TONE_FD Henry* | Calculated as *(POSITIVE-NEGATIVE)/(POSITIVE + NEGATIVE),* where *POSITIVE* and *NEGATIVE* refer to the word count frequency based on the positive and negative words in the Loughran and McDonald word lists, respectively. |
| *TONE_LIWC* | Calculated as *(POSITIVE-NEGATIVE)/(POSITIVE + NEGATIVE),* where *POSITIVE* and *NEGATIVE* refer to the word count frequency based on the positive and negative words in the LIWC word lists, respectively. |
| **Test Variables** | |
| *NEWOPINION* | Is an indicator variable equal to one if the audit opinion is issued in the first year of ISA 700 implementation and zero otherwise (the year immediately prior to ISA 700 implementation). |
| *FOG* | Calculated as words per sentence + percent of complex words) x 0.4. |
| *BIGN* | Is an indicator variable equal to one if the auditor is one of the big four international accounting firms in year *t* and zero otherwise. |
| *EXP_NUMCLT* | Is equal to one, if the company is audited by an audit firm with the most clients in that industry when compared to all other audit firms in the sample, in year *t* and zero otherwise. |
| *EXP_DOMINANCE* | Is equal to one if the company is audited by an audit firm that has 10% more audit clients in an industry than the firm's nearest competitor in year *t* and zero otherwise. |
| *OFFICE_SIZE* | Equals the number of audit clients in each firm office for each firm-year in the sample. |
| *EY* | Is equal to one, if the company is audited by EY in year *t* and zero otherwise. |
| **Control Variables** | |
| *ACQUISITION* | Is an indicator variable equal to one if the company's acquisition expense is greater than zero in year *t* and zero otherwise. |
| *AGE* | Represents the number of years since the company's IPO at the end of year *t*. |
| *BIGN* | Is an indicator variable equal to one if the auditor is one of the big four international accounting firms in year *t* and zero otherwise. |
| *BUSY* | Is an indicator variable equal to one if the company's fiscal year end is from December to March and zero otherwise. |
| *COMBINED_OP* | Is an indicator variable equal to one if the audit report includes both the group audit report and the parent company audit report in year *t* and zero otherwise. |

| | |
|---|---|
| *EARN_VOL* | Represents the standard deviation of earnings over the prior five year period at the end of year *t*. |
| *Industry Fixed Effects* | Fama and French 12 Industry Classification |
| *INST* | Decile ranking of the number of the company's shares held by institutional investors divided by the number of the company's shares outstanding at the end of the fiscal year. |
| *LOGSIZE* | Represents the logarithmic transformation of market value at the end of year prior to the issuance of the audited financial report. |
| *logFILESIZE* | Represents the logarithmic transformation of the file size of the audit report. |
| *LOSS* | Is an indicator variable equal to one if the firms has net income of less than zero and zero otherwise. |
| *MB* | Represents the market value at the end of year t divided by the book value at the end of year *t*. |
| *NBSEG* | Represents the logarithmic transformation of the number of business segments included in the Bureau van Dijk dataset. |
| *RD* | Represents the ratio of research and development expenses to total operating expenses for the fiscal year. |
| *SEO* | Is an indicator variable equal to one if the company is listed in the Thomson One Equity Issuance Database as issuing an equity offering in year *t* and zero otherwise. |
| *SI* | Represent the amount of special items scaled by total assets at the end of year *t*. |
| *SIZE* | Represents the logarithmic transformation of total assets at the end of year *t*. |

## APPENDIX B

## TWENTY MOST FREQUENT WORDS OCCURRING IN THE PRE AND POST ISA 700 AUDIT REPORTS FROM THE LOUGHRAN AND MCDONALD NEGATIVE AND HENRY FINANCIAL DISCLOSURE WORD LISTS

**Panel A: Loughran and McDonald Negative Word List**

| Pre-ISA 700 Audit Reports | | | Post-ISA 700 Audit Reports | | |
|---|---|---|---|---|---|
| **Rank** | **Word** | **% of Fin-Neg Word Count** | **Rank** | **Word** | **% of Fin-Neg Word Count** |
| 1 | inconsistencies | 21.56% | 1 | misstatement | 10.96% |
| 2 | concern | 17.07% | 2 | concern | 10.15% |
| 3 | misstatement | 11.30% | 3 | misstatements | 7.15% |
| 4 | disclosed | 11.17% | 4 | impairment | 7.14% |
| 5 | error | 11.08% | 5 | inconsistent | 6.26% |
| 6 | fraud | 11.08% | 6 | inconsistencies | 5.95% |
| 7 | misstatements | 10.85% | 7 | fraud | 4.53% |
| 8 | loss | 2.09% | 8 | challenged | 4.14% |
| 9 | inconsistent | 0.54% | 9 | disclosed | 3.97% |
| 10 | incorrect | 0.45% | 10 | incorrect | 3.79% |
| 11 | unable | 0.45% | 11 | misleading | 3.26% |
| 12 | doubt | 0.36% | 12 | against | 3.21% |
| 13 | uncorrected | 0.18% | 13 | error | 2.21% |
| 14 | critical | 0.14% | 14 | uncorrected | 1.46% |
| 15 | redress | 0.14% | 15 | claims | 1.28% |
| 16 | undetected | 0.14% | 16 | loss | 1.27% |
| 17 | concerned | 0.09% | 17 | challenging | 1.13% |
| 18 | impairment | 0.09% | 18 | discloses | 1.07% |
| 19 | misleading | 0.09% | 19 | inappropriate | 0.96% |
| 20 | negligence | 0.09% | 20 | losses | 0.84% |

| Panel B: Henry Financial Disclosure (FD) Word List | | | | | |
|---|---|---|---|---|---|
| Pre-ISA 700 Audit Reports | | | Post-ISA 700 Audit Reports | | |
| **Rank** | **Word** | **% of Henry FD Word Count** | **Rank** | **Word** | **% of Henry FD Word Count** |
| 1 | under | 40.86% | 1 | risk | 18.22% |
| 2 | certain | 26.40% | 2 | under | 15.76% |
| 3 | more | 20.92% | 3 | risks | 12.54% |
| 4 | risk | 7.95% | 4 | certain | 6.83% |
| 5 | uncertainty | 0.81% | 5 | below | 5.81% |
| 6 | risks | 0.46% | 6 | above | 5.79% |
| 7 | below | 0.40% | 7 | challenged | 4.98% |
| 8 | uncertainties | 0.40% | 8 | more | 3.97% |
| 9 | low | 0.29% | 9 | growth | 3.36% |
| 10 | above | 0.23% | 10 | greatest | 2.29% |
| 11 | achieve | 0.23% | 11 | uncertain | 1.79% |
| 12 | successful | 0.23% | 12 | least | 1.56% |
| 13 | exceeds | 0.12% | 13 | uncertainty | 1.38% |
| 14 | greatest | 0.12% | 14 | most | 1.37% |
| 15 | uncertain | 0.12% | 15 | challenging | 1.36% |
| 16 | challenged | 0.06% | 16 | lower | 1.27% |
| 17 | challenging | 0.06% | 17 | uncertainties | 0.95% |
| 18 | exceed | 0.06% | 18 | challenge | 0.86% |
| 19 | exceeded | 0.06% | 19 | achieve | 0.70% |
| 20 | expansion | 0.06% | 20 | exceed | 0.57% |

**TABLE 1**
**Sample Size Calculation**

| | Companies | Observations *t* and *t-1* |
|---|---|---|
| **Sample Criteria** | | |
| Companies in Compustat Global listed on the London Stock Exchange (LSE) or Irish Stock Exchange with fiscal year ends from 2012 – 2014 | 1,680 | 3,360 |
| Less: Company fiscal year ends prior to the year immediately before ISA 700 implementation | (101) | (202) |
| Less: Non LSE Premium Companies | (871) | (1,742) |
| Less: Banks and Financial Institutions | (250) | (500) |
| | 458 | 916 |
| Less: Observations without readability data | (30) | (60) |
| Less: Companies without available stock data | (78) | (156) |
| **Full Sample** | 350 | 700 |

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, DC 20006-2803

Dear Public Accounting Oversight Board Secretary :

While it is a privilege to be able to comment on the PCAOB PROPOSED AUDITING STANDARD – "THE AUDITOR'S REPORT ON AN AUDIT OF FINANCIAL STATEMENTS WHEN THE AUDITOR EXPRESSES AN UNQUALIFIED OPINION AND RELATED AMENDMENTS TO PCAOB STANDARDS", the present commenter has read through a number of the other comment letters and concerning these, the American Accounting Association letter is an outstanding memorandum on the subject at hand, especially in its summarizing of a number of items of considerable scope and supportive prose in considerable detail, the studies cited, and the supporting language at the end of the AAA paper. In the interest of utility of time and effort, therefore, and thereby in constructively commenting on PCAOB Release 2016 – 003, proposed AS 3105 and related documentation, present author will not attempt a writing in kind.

PCAOB Release 2016 – 003 in its request for comment has called not only for letters as to the various critical audit matters (CAM's) and the proposed requirements for disclosure given the CAM's, but for consideration and understanding of the uniqueness of the U.S. financial system and its accounting in addition to that as systemically strict and stringent. The additional language as proposed for the auditor's report for issuers appears to be an effort to allow the auditor to make some technical elaboration on the financial statements that would otherwise be somewhere within the statements documentation itself. There is a question as to whether this is actually good for investors and financial statement end – users, however, as the report itself might be used as a vetting tool, or as a proxy for one by these stakeholders. In addition, the purpose in including what might be interpreted as specific and technical business entity financial information on the face of the auditor reports might prove unfounded, especially given the necessity for investors and end – users to read the entire reports. These proposed changes and others represent a departure from the practice of balance sheet and the equity method of accounting that valuably characterizes the long – standing uniqueness and separateness of U.S. accounting. In this humble author's view, one need not depart from this simply because international investors and financial statement end – users, and other stakeholders, usually do not understand such things conceptually, nor the equity method of accounting overall. Systemically, one might be in a quandary about the way this dilemma is to be resolved, and in general this would not change the auditors' report itself as the cornerstone of financial reports, in fact due a tacit or inopportune, or even very rare plain willful ignorance of current U.S. accounting methods and practices. This interpretation of the dilemma that strict and detailed accounting rules present to stakeholders does not have to do with the principles or even rules approaches that one considers in auditing a business entity, but has more to do with what the common investor and financial statement end – user believe to be the purpose an intent of financial statements and how these are themselves evaluated and used. The proposed new framework for issuer audit reports also calls for additional communication between auditor and the business audit committee in enhancing a process that might propose additional risks to the audit while being only of ministerial or procedural importance and then of marginal benefit to stakeholders and to the value of the report form itself.

This reporting auditing standard as re - proposed allows for specific fraud language in the report, though after reading through the literature it does appear this is somewhat ambiguous as to purpose and intent in protecting who and what stakeholders involved in the production or use of specific entity financial statements, management and investors alike; and others including regulators and the public. The proposed standard also does not address the European practice of income – smoothing (or a proxy thereof) that goes hand – in – glove with European accounting methods and practices since some time ago. Further, due to an apparent departure from balance sheet accounting, any audit under this proposed accounting standard might inadvertently result in over – auditing business operations instead of attention to what are again in the U.S. more material and important line items on the balance sheet. Given again the enhancing of auditing questions around business operations, and other considerations including those of Emerging Growth Companies and the audit that influence this proposed standard, implementation of the new rules does possibly call for a financial tiering based upon assets and gross revenues of the business in deference to large issuers and their stakeholders who might more readily need the proposed disclosures and reports, and to alleviate a possibly undue compliance burden on small issuers. Also, and as mentioned in PCAOB Release 2016 – 003, there is indeed more information asymmetry with respect to details, public and private, about smaller public companies, though the economic impact of this is overshadowed by similar, yet less numerous, and much higher – impact large issuer questions. One needs consider as well whether or not the auditor is doing the equities research, benchmarking and financial scoring, and other homework of investors and financial statement end – users in integrating and implementing these proposed disclosures.

Very truly yours,

*Thomas H. Spitters, C.P.A.*

**Re: PCAOB Release No. 2016-003: Proposed auditing standard - *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards.*  PCAOB Rulemaking Docket Matter No. 34**

Dear Board Members:

State Street Corporation ("State Street") appreciates the opportunity to comment on the Public Company Oversight Board's ("PCAOB" or "Board") reproposal of the auditing standard, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards (the "Reproposed Standard")*. With $28 trillion in assets under custody and administration, and $2 trillion in assets under management as of June 30, 2016, State Street is a leader in providing financial services and products to meet the needs of institutional investors worldwide.

We support the efforts to improve audit quality and auditor communication to enhance stakeholder confidence and applaud the Board's attempt to incorporate feedback on the original proposal by including the consideration of materiality in the identification of a critical audit matter ("CAM") and attempting to limit the auditor's ability to disclose original information. However, we have a number of concerns regarding the Reproposed Standard that we believe should be addressed in order to achieve the proper balance of ensuring that additional information in the form of auditor communications is relevant to the users of financial statements and does not overshadow information provided by management.

State Street believes that the current auditor's report ("pass/fail model") clearly communicates the nature of the audit and whether the financial statements are presented fairly, in all material respects, in accordance with GAAP. The concept of clarification of the standard auditor's report would further lengthen the auditor's report unnecessarily and create redundancies with management disclosures without achieving the objective of enhancing communication between auditors and the users of audit reports, thereby compromising the report's effectiveness.

STATE STREET.

We are concerned that the Board's proposal to add CAMs to the audit report may inappropriately suggest a weakness in financial statement reporting process, including management's competence or the effectiveness of the control environment. Requiring auditors to provide information on the company's financial reporting process could compel independent auditors to consistently hold (or "assume") the most conservative view on matters of accounting judgment, resulting in excessive CAMs being included in the auditor's report. As this subjective exercise of caution will vary between auditing firms and audit teams, comparability of audit reports among different issuers likely will be adversely affected, potentially augmenting the risk of inappropriately perceived weakness in financial statement reporting process for some issuers and compromising the report's main message. Limiting the source of potential CAMs to matters communicated or required to be communicated to the audit committee does not address this concern.

State Street believes that auditors should not be the original source of disclosure specifically related to management judgments and estimates, or accounting policies and practices, including areas of significant judgment. The auditor's role is to evaluate whether the financial statements taken as a whole are presented fairly in accordance with generally accepted accounting principles (GAAP). Providing information to investors with respect to our accounting policies and their application is the responsibility of State Street's management, not the independent auditor. Sophisticated stakeholders are aware that information that would be disclosed as CAMs by the auditor is already included in disclosures made by management (e.g., "Significant Accounting Policies" and financial statement footnote disclosures). Requiring the auditors to disclose this information would unnecessarily convolute the financial statements, as stakeholders would need to sort through information provided by both management and the independent auditors. The auditor's responsibility to communicate such matters should be limited to situations in which the financial statements are not in conformity with GAAP in all material respects.

The Reproposed Standard requires the independent auditors to summarize to investors the same level of detail and context that is provided to a company's Board of Directors, the independent elected body representing stakeholders. Although the auditor is not expected to provide information about the company that has not been made publicly available by the company, such information may be provided by the auditor if necessary to describe the principal considerations used to determine that a matter is a CAM or how the CAM was addressed in the audit (e.g., information regarding information technology controls, or other information not currently required by GAAP or typically included in the financial statements). In the absence of appropriate context and two-way communication, we believe that such information potentially would be misleading, incomplete, and would not enhance the overall understanding of the readers of the auditor's report and financial statements. Additionally, we note that requiring supplemental reporting, such as the proposed CAMs, will likely lengthen the time to complete the audit, as there may not be sufficient time for the auditor to complete the audit of the financial statements while also providing assurance on the incremental areas identified in the Reproposed Standard, and therefore adversely influence filing timelines for large accelerated filers. Furthermore, while the introduction of a materiality component within the definition of CAM is an important improvement of the Reproposed Standard, it does not address our concerns above as it continues to require a dependency on auditor judgment, leaving the possibility for different materiality thresholds used by management for financial statement reporting and auditors for CAM reporting. Moreover, given that matters that are material to the financial statements should already be disclosed by management in the notes to the financial statements, management's discussion and analysis or both, we question how redundant disclosure in the auditor's report adds value.

STATE STREET.

State Street does not object to the requirement to disclose auditor tenure in the auditor's report, but we believe it is not necessary because we reject the assumption that auditor tenure and audit quality are related.

We appreciate your consideration of these matters and welcome the opportunity to discuss them with you.

Sincerely,

Sean P. Newth

Re: PCAOB Rulemaking Docket # 034 (Reproposed Rule)

I am writing to express my opinions regarding the above referenced Reproposed Auditing Standard (Proposal) - *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion.* I previously commented on the original proposal in my letter dated December 10, 2013. While I appreciate the Board's efforts to enhance investors understanding of the current audit process and the auditor's responsibilities as it relates to providing an attestation on management's assertions regarding its Company's financial statements and internal control over financial reporting, I do not support some of the requirements contained in the Proposal.

**Critical Audit Matters**

The Proposal would require the auditor to make certain disclosures in the audit report regarding each critical audit matter (CAM), as defined. While the definition of a CAM in the new Proposal is an improvement as compared to the CAM definition in the original proposal, my concern with the CAM requirements in the Proposal remain unchanged: the determination and description of CAMs would have the auditor going beyond an attestation on management's financial statements and internal control over financial reporting, as a CAM ultimately provides disclosure regarding the nature and extent of the procedures performed by the auditor, and in some cases may result in the auditor's disclosure of information regarding the Company that is otherwise not required to be included in the Company's financial statements (including the footnotes)[1]. The auditor should not be the source of any disclosure regarding a Company; if the auditor believes additional disclosures are required in the financial statements or other parts of a Company's periodic filings, existing auditing standards address the auditor's responsibilities in such an event, including communicating such concerns with the audit committee.

[1] See, for example, the illustrative disclosure regarding Company A beginning on page 32 of the Proposal. Much of the information in the first paragraph of the example does not represent disclosures that would normally be included in the footnotes to the Company's financial statements. The guidance in the Proposal that the auditor is normally not expected to provide information about the Company that has not been made publicly available by the Company is not responsive to this concern, as the guidance also indicates an exception to this expectation when such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a CAM or how the matter was addressed in the audit.

Of course the Board has statutory oversight authority in respect to auditors. But the Board has no oversight authority with respect to registrants or the form and content of a registrant's financial statements and other disclosures in their periodic filings with the SEC. Accordingly, I question whether the Board has the appropriate authority to adopt the Proposal as it relates to the CAM requirements, because as drafted the CAM requirements in the Proposal appear to go beyond disclosures regarding the auditor and the scope of the auditor's procedures in connection with their attestation engagements.

The disclosure and discussion of CAMs could also result in confusion on the part of investors as to the subject matter of the CAMs, and is inconsistent with the "pass/fail" model which the Board appropriately determined should be retained. The illustrative examples of hypothetical disclosures of CAMs in the Proposal essentially say "here is a CAM, here is why we determined it was a CAM, and here in general are the audit procedures we performed in connection with our audit of the relevant financial statement account(s) associated with the CAM." The auditor's disclosure and discussion of each CAM would likely be viewed as a piecemeal opinion and/or a qualification to their overall opinion, despite the required disclosure that "the CAMs communicated do not alter in any way our opinion on the financial statements, taken as a whole, and we do not provide separate opinions on the critical audit matters or on the accounts or disclosures to which they relate."

As with the original proposal, it appears that the Board's objective in disclosing CAMs is to essentially highlight areas where a Company's management, in preparing its financial statements, has to apply significant judgment and/or make significant accounting estimates. Current SEC rules already require disclosure of such financial statement areas – the Critical Accounting Policies section of MD&A. This is the appropriate place for such financial statement areas to be disclosed, by management, and not by the auditor.

The proposal for disclosure and discussion of CAMs should not be included in any final Standard. However, if the Board believes that highlighting in the auditor's report the areas where a Company's management, in preparing its financial statements, has to apply significant judgment and/or make significant accounting estimates (on the basis that such areas would reasonably be expected to have an impact on the scope of the auditor's work), then this can be accomplished by the inclusion of the phrase to the standard auditor's report as contained in the Proposal, as indicated below.

> We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management (including those significant estimates made by management as described in the "Critical Accounting Policies and Estimates" section of this Annual Report), as well as evaluating the overall presentation

of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

**Audit Tenure**

My views regarding disclosure of auditor's tenure in the audit report remain unchanged from the original proposal. Statutorily, the decision on which audit firm to engage is the sole responsibility of the audit committee. The audit committee is in the best position to make that decision, taking into consideration all factors the audit committee deems relevant. Some factors may generally be consistent from Company to Company, while other factors may be unique to a specific Company. Regardless, the audit committee ultimately makes the decision. Disclosure of audit tenure by the auditor in a vacuum without any additional disclosure regarding what factors went into the committee's determination on what firm to engage (and for whatever period of time the committee has determined to engage such firm) would be an incomplete disclosure, at a minimum, and potentially misleading.

The Board notes that there is no agreement as to any correlation between the length of an auditor's tenure and audit quality. The Board has failed to provide any persuasive rationale for requiring such disclosure by the auditor in the audit report. For these reasons, it is inappropriate for the auditor to disclose in its audit report the audit tenure as contained in the Proposal. The Board notes that some registrants are voluntarily disclosing auditor tenure in their annual proxy statements. If such disclosure of auditor tenure is to be mandated, it should be left to the SEC to make that determination.

Thank you for your consideration of these comments and suggestions.

Sincerely,

Greg Swalwell

RE: ***Re-Issued*** Proposed Auditing Standards—*The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards.* PCAOB Release No. 2016-003 May 11, 2016.

To Whom It May Concern:

One of the expressed goals of the Texas Society of Certified Public Accountants (TSCPA) is to speak on behalf of its members when such action is in the best interest of its members and serves the cause of Certified Public Accountants in Texas, as well as the public interest. The TSCPA has established a Professional Standards Committee (PSC) to represent those interests on accounting and auditing matters. The views expressed herein are written on behalf of the PSC, which has been authorized by the TSCPA Board of Directors to submit comments on matters of interest to the committee membership. The views expressed in this letter have not been approved by the TSCPA Board of Directors or Executive Board and, therefore, should not be construed as representing the views or policy of the TSCPA.

After a thorough review of the contents of the original Exposure Draft (ED) which proposed radical changes to the auditor's report and the re-issued ED on the same subject, we decided to focus our attention on the issues therein that we consider most germane to our membership. The auditor's standard report represents the most critical communication link between the auditor and those third parties who use the auditor's report as a basis for the extent of their reliance on a client's published financial statements. We believe any proposed changes to the wording of the standard auditor's report should be viewed and evaluated in the context of this all-important communication link.

As we pointed out in our response to the original ED, we disagree with required disclosure of Critical Audit Matters (CAM) in the auditor's report. We firmly believe the inclusion of audit procedures performed on any matters would not be beneficial to the users because knowing how the auditor tested certain accounts or assertions does not give users any additional information regarding a registrant's financial position or results of operations. Adding information on the audit procedures performed would significantly increase the length of the auditor's report and decrease the clarity of the auditor's message. The negative impact on the reader's ability to understand the intended message of the report would be significant. Also, it is unlikely that the auditor will identify all the procedures performed or considerations of mitigating factors considered in the design of the audit procedures, which will serve to intensify the lack of understanding on the part of those for whom the audit report is intended. Further, we believe auditors will be prone to spend additional time performing procedures, not to assess the risks

14651 Dallas Parkway, Suite 700 • Dallas, TX 75254-7408 • 972/687-8500 • 800/428-0272 • Fax 972/687-8646

associated with the client's financial results, but rather to include procedures that are compatible with the audit procedures included in the audit reports issued by other auditors. Also, by requiring CAMs in the auditor's report the Board has implied an auditor cannot be trusted to determine the appropriate scope of an audit engagement. Thus, the user should be informed of the auditor's scope even though most users have little or no understanding of the purpose or relevance of the audit procedures being disclosed.

If the Board chooses to include disclosure of CAMs in the final Standard, we do not believe it is appropriate for auditors to refer to relevant disclosure outside the financial statements when communicating a CAM. The requirement that auditors refer to financial statement accounts and disclosures alone is burdensome for auditors. Requiring that they also cross reference other areas of the document would be overly burdensome and would further put them in the role of management. If the Board believes it important that other areas of the document be addressed then the Board should request that the SEC propose a change in disclosure requirements of the company requiring the company to cross reference each CAM to other parts of management's document.

We see no reason to include audit-tenure language in the auditor's report. Of what relevance is such a disclosure? What's better, longer tenure, shorter tenure or no knowledge of tenure? The auditing standards that apply to the performance of an audit engagement are basically the same for the auditor whether he/she has performed the audit for a number of years or only one or two. Thus, what important inferences does the Board see the user drawing from information regarding the tenure of an auditor? If such information is deemed to possess some relevance wouldn't it be more appropriate to have it come from client management in the proxy statement or other communication (i.e. Form AP)?

While we are opposed to the notion of CAMs for all entities, we find the concept to be totally without merit for small entities. If CAMs are a part of the final standard, we encourage the Board to exclude audits of emerging growth companies, smaller reporting companies, investment companies, broker-dealers, and employee benefit plans. To require CAMs in the audit of such entities would seem to fail the cost/benefit test.

We appreciate the opportunity to provide input into the standards setting process.

Sincerely,

Jerilyn K. Barthel

**Re: PCAOB Release No. 2016-003 Rulemaking Docket #34**

Dear Messrs. Doty, Ferguson, Hanson and Harris, and Ms. Franzel:

Capital Group Companies, Inc. (referred to herein as "Capital") is one of the oldest and largest global investment management firms in the nation. We appreciate the opportunity to provide comments on the Proposed Auditing Standard, *The Auditors Report of an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*. These comments are informed by our experiences with audited financial statements of portfolio companies in which associates of Capital and its affiliated companies invest. These comments reflect the signers' own views and not necessarily those of Capital or other Capital associates. Capital invests in equities and fixed income securities globally, and has approximately 300 equity and fixed income analysts and portfolio managers around the world. We conduct extensive, fundamental, on-the-ground company research and we rely heavily on financial statements prepared by public companies. Capital buys and holds investments for the long-term.

It is long overdue for auditors of U.S. issuers to provide meaningful information about audits to investors, the customers of independent audits. Audit committees and investors should know about critical audit matters (CAMs) from the perspective of the independent auditor. It's important for investors to have an understanding of the auditor's perspective on the financial statements including their risk assessment and what they ultimately found.

As our former chairman, Paul G. Haaga, Jr., commented at PCAOB's roundtable in September 2011, some of the areas where auditor communication would be useful to investors are: significant issues which arose in the audit and *how they were resolved*, areas of greatest risk, significant estimates and judgments, restatements and materiality assessments.

If auditors had provided their perspective about financial statements, internal controls and audits, this might have provided critical information to investors regarding the banks ahead of the financial crisis, ahead of Chinese company frauds, and other recent examples where investors suffered large losses such as Valeant and Lending Club. Similarly, Mr. Haaga also recommended that PCAOB look at audits which went wrong and determine what the auditors could have usefully pointed out to their investor customers. This is an important recommendation. It's essential for PCAOB inspections and enforcement activities to inform standard setting.

If PCAOB proceeds with a standard which limits disclosure of CAMs to those which the auditor communicated to the audit committee, then PCAOB must address any concerns as to why auditors failed to inform audit committees of significant matters ahead of frauds coming to light such as at Enron, and many more.

Recommendation 1 – Eliminate materiality requirement for CAMs

Many cases of material accounting problems or fraud started as 'immaterial' to the financial statement and built over time. Under current audit standards, if an auditor determines there has been a *proposed adjustment not booked* by a company, the auditor must inform the audit committee irrespective of materiality to the overall financial statements. Additionally, if an auditor uncovers any fraud, it must also be reported to the audit committee. Matters such as these are significant in the eyes of the auditor, and investors should be informed as well.

Would the current proposal compel auditors to deem such issues as 'immaterial'? It is a serious deficiency in the proposal if investors would only hear about critical audit matters after suffering large losses which is the current disclosure paradigm.

Moreover, the auditor should say or address in the auditor's report whether any quantitatively or qualitatively material items, albeit not required by a particular standard, are required to be disclosed in order for the financial statements not to be misleading.

Recommendation 2 – Eliminate reference to subjectivity for CAMs

PCAOB's proposal should state "Regardless of how subjective a matter is, if an auditor feels that an item is a critical matter in the audit and documents it in the engagement closing memorandum, then it should be disclosed to the audit committee and investors."

There are those who argue against transparency by defining it as the release of information about every matter to which auditors devoted attention. We do not agree that transparency is an all-encompassing concept. Rather, transparency should include the vexing issues and they must be shared with investors when they would be relevant to a reasonably-informed investor.

In order for investors to understand the degree of flexibility provided by the subjectivity clause, the board needs to clarify the extent to which CAMs that investors might consider material will fall outside the proposal's disclosure requirement. For instance, under FASB's new revenue recognition standard, companies are clearly not required to have a fixed and determinable price, customer acceptance or sell-through of goods to the customer before recognizing revenues. Moreover, it is not uncommon for material errors to occur in basic accounting areas which do not involve especially challenging, subjective or complex accounting judgment.

We also urge PCAOB to require disclosure of the auditor's perspective on material related party transactions in the auditor's report regardless of subjectivity. As noted in Auditing Standard No. 18, related party transactions can lead to errors in financial statements, and have been used to engage in fraudulent financial reporting or to conceal a misappropriation of assets. Auditors are required to communicate about related party transactions to the audit committee in a timely manner and prior to the issuance of the auditor's report, and, in turn, auditors should communicate about them to investors.

PCAOB must ensure these sorts of risks will be highlighted and discussed in the auditor's report irrespective of subjectivity.

<u>Recommendation 3 – Require disclosure by auditors and management of materiality measures</u>

Investors, including analysts at Capital who responded to the PCAOB Investor Advisory Group's survey have expressed strong support for disclosure by auditors and companies of their materiality measures. It would be constructive to compare materiality over time to trends in restatements and adjustments. Materiality would help inform our proxy voting process for auditor ratification and audit committee members. Materiality disclosure would be a valuable supplement to our audit fee analysis. One would expect if audit fees decrease as materiality rises, it could signal scoping of an audit based on audit fees instead of risk; we don't want to be subject to low quality audits.

Auditors should also be required to disclose what adjustments they make to reported figures in determining materiality thresholds for the audit.

Materiality disclosures, as well as significant discussion of CAMs and any changes, and how the auditor addressed them, are already provided in many auditor reports in the U.K. and other European countries to investors' benefit. Such disclosures inform us as investors better than in the U.S. today. For dual-listed registrants which remove such auditor disclosures from 20-F filings, we currently must look at overseas annual reports for the information.

<u>Recommendation 4 – Address the problem of alternative dispute resolution clauses</u>

Capital strongly opposes any requirement to use alternative dispute resolution. We believe such requirements can have a negative effect on audit quality, just as the SEC has stated auditor indemnification clauses can impact audit quality and independence. We do not believe these provisions are in the best interest of investors and therefore believe they should not be permitted.

There currently is a lack of transparency to investors of when such clauses are part of an audit agreement. We urge PCAOB to require disclosure of these clauses in the auditor's report when this type of provision is included in the audit engagement agreement.

Mr. Haaga previously recommended disclosure by the auditor of these clauses in his written submission to the Treasury's Advisory Committee on the Auditing Profession (ACAP) on February 4, 2008.

Recommendation 5 – Disclose reasons for any change of audit partner prior to mandatory rotation

It is material information for investors to be informed if an audit partner was changed prior to completion of mandatory partner rotation due to disagreement. PCAOB should require disclosure in the auditor's report of the reason for such a change clarifying if it was or was not due to a disagreement. We recommended this disclosure as well to the ACAP.

Recommendation 6 – Require more of auditors on whistleblower systems and fraud detection

PCAOB standards should be clarified to require the auditor to gain an understanding of a company's whistleblower system and process, how the whistleblower tips and complaints were resolved by management and the audit committee, and whether the whistleblower program is working effectively and independent of management. A fraudulent financial reporting study (May 2010) sponsored by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) found that in 89% of the cases, the Accounting and Auditing Enforcement Releases (AAERs) named the CEO and/or CFO as being associated with the financial statement fraud.

Many accounting problems and frauds come to light by whistleblowers. Having an effective whistleblower system is an important step towards stopping accounting-related problems earlier, as opposed to waiting until the stage when large losses will ensue for investors.

We appreciate that the proposal would add a statement in the auditor's report about auditor independence and the phrase "whether due to error or fraud," when describing the auditor's responsibilities under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements. Unfortunately, this statement is too small a step towards addressing the continuing "expectations gap" discussed under Part VII, Recommendation 4 of the ACAP's Final Report issued October 6, 2008. It would be more useful to have a statement that the auditor looked for material fraud and what steps the auditors took to gain comfort.

Thank you for considering these comments. Please feel free to contact Elizabeth Mooney, member of the PCAOB Standing Advisory Group, at (415) 646-7620. We invite staff to discuss with us our thoughts on the current proposal in more detail.

Sincerely,

*/s/ Elizabeth F. Mooney*

ICAEW REPRESENTATION
122/16

**PROPOSED AUDITING STANDARD—THE AUDITOR'S REPORT ON AN AUDIT OF FINANCIAL STATEMENTS WHEN THE AUDITOR EXPRESSES AN UNQUALIFIED OPINION AND RELATED AMENDMENTS TO PCAOB STANDARDS**

ICAEW welcomes the opportunity to comment on the *Proposed Auditing Standard —The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* published by the PCAOB on 11 May 2016, a copy of which is available from this link.

This response of 11 August 2016 has been prepared on behalf of ICAEW by the Audit and Assurance Faculty. Recognised internationally as a leading authority and source of expertise on audit and assurance issues, the Faculty is responsible for audit and assurance submissions on behalf of ICAEW. The Faculty has around 7,500 members drawn from practising firms and organisations of all sizes in the private and public sectors.

ICAEW is a world-leading professional accountancy body. We operate under a Royal Charter, working in the public interest. ICAEW's regulation of its members, in particular its responsibilities in respect of auditors, is overseen by the UK Financial Reporting Council. We provide leadership and practical support to over 145,000 member chartered accountants in more than 155 countries, working with governments, regulators and industry in order to ensure that the highest standards are maintained.

ICAEW members operate across a wide range of areas in business, practice and the public sector. They provide financial expertise and guidance based on the highest professional, technical and ethical standards. They are trained to provide clarity and apply rigour, and so help create long-term sustainable economic value.

## MAJOR POINTS

1. We congratulate the PCAOB on these revised proposals for auditor reporting. The further alignment with IAASB standards is particularly welcome and will benefit US investors. It will also benefit investors in Europe and elsewhere to the extent that the proposals are more closely aligned with the new EU audit legislation, effective 17 June 2016. The PCAOB is committed to research seeking to understand the outcome of enhanced auditor reporting. We applaud its support of rigorous and independent academic research not least because the data and information auditors will provide in the new audit report and Form AP will promote and facilitate innovative approaches to analysis and learning, particularly by academics. The information in UK audit reports already analysed, combined with the analysis of US audit reports and indeed reports from other jurisdictions should yield valuable insights into audit, auditors, companies and more. These insights will benefit US investors and investors worldwide, and should ultimately contribute, demonstrably, to the enhanced functioning of the US and global capital markets.

### Alignment with the IAASB and the wider purpose of enhanced reporting

2. We are particularly pleased that the PCAOB has decided not to prescribe how CAM are to be described, and have instead developed a list of matters to be covered that is very similar to the list used by the IAASB. We noted in our response to the PCAOB's original proposals dated 11 December 2013 (ICAEW Rep 172/13) our belief in the importance of the PCAOB doing what it can to ensure that the apparent areas of difference between the different proposed reporting regimes are minimised. We noted that US investors investing outside the US and foreign investors investing in the US are unlikely to have the time or inclination to distinguish between the purported virtues of the different regimes, particularly where dual listed entities include audit reports prepared under both local and PCAOB standards in their filings.

3. We also noted:

   - that investors are unlikely to be convinced that wording differences in auditing standards will, in the long run, result in any significant differences in what is communicated. The depth and quality of auditor reporting will be driven by investor demand, the regulatory approach to monitoring auditors, the approach taken by audit firms and common practices that develop within and across industry sectors in the next few years.
   - that we did not believe that CAM as defined by the PCAOB and KAM as defined by IAASB were significantly different, even as they stood, and that the range, depth and detail of reporting would be similar, whichever regime applied. The closer alignment of the two regimes means that this is even more true now. Firms reporting under UK, US and international standards base their methodologies on ISAs and firm efficiency and practice risk management dictate that they will seek to align their reports across different regimes as far as possible.
   - our belief that the main threat to enhanced transparency is that CAM disclosed will be irrelevant, or degenerate into boilerplate.

4. While we have some concerns that the new regime will come to be seen as an end in itself we are confident that the power of data analytics will, over time, enable academics, investors, regulators and others to mine the information provided in the audit report and Form AP to yield valuable insights. Enhanced auditor reporting is the start of a journey whose purpose is to open up the dialogue between auditors, audit committees, investors and boards by providing everyone involved with a starting point for a discussion. This requires changes to existing patterns and modes of thinking and communication. To make CAM *effective*, investors, audit committees and auditors need to step up their level of engagement with each other. CAM will be relevant and useful to investors and other financial statement users provided:

- investors continue to engage with audit committees and auditors, and are clear about what they want to know;
- auditors avoid boilerplate where possible;
- regulators, companies and investors do not drive auditors into the defensive reporting of boilerplate with threats of sanctions and litigation.

### The UK experience

5. The enhanced reporting regime has, to date worked well in the UK. The UK has a strong and mature profession and deep and liquid capital markets, in which the threat of litigation involving auditors arises relatively infrequently. In jurisdictions where these conditions are not present, it may be harder to make the change to enhanced auditor reporting effectively and the easier the new regime is made for all concerned to operate, the better.

6. We noted in our previous response that IAASB's documentation requirements, and those in the UK, focus on why KAM are KAM, whereas the PCAOB's requirements focus on documenting why possible CAM are not considered CAM. This seems to be more about preparing audit files for inspection than communicating information to investors. Firms approach the documentation of CAM in different ways. Some do start with all matters reported to the audit committee and put them into 'in' or 'out' buckets in determining whether they are also CAM. But other firms start with a list of significant risks, put them into 'in' and 'out' buckets for reporting purposes, and then determine what to report to the audit committee. Other firms again approach each exercise separately. We urge the PCAOB to think again about this requirement, and about how it will be enforced. The documentation requirements as they stand re-inforce the sense that the disclosure of CAM is an end in itself. If the dialogue between investors, audit committees and auditors is not significantly improved as a result of the new regime, a great deal of effort will have been wasted and we urge the PCAOB to continue to think about how it will encourage these communications, and about how it will measure the *effectiveness* of the new regime.

### The nature and purpose of Form AP

7. We noted in our previous response that while we agree that information regarding auditor tenure is of *interest* to investors, we do not believe that the auditors' report is the right home for it. We are therefore pleased that the PCAOB is recommending inclusion of this information in Form AP. It would have been out of context in the audit report.

8. The evidence relating to the relationship between auditor tenure and audit quality is mixed and we note that two out of five of the PCAOB Board members are not wholly supportive of the proposals in this respect. We too have concerns. We remain of the view that the information provided will be fairly basic, that no form of words can cover every eventuality and that. misunderstandings and inconsistencies are therefore possible. Nevertheless, enhanced auditor reporting, as noted elsewhere in this response is the start of a journey and we expect that the PCAOB will monitor and finesse the nature and quality of the information in Form AP over time. The consistency provided by this reporting requirement will facilitate better quality academic work not least because academics currently have to construct their own data sets using their own assumptions regarding changes in firms and auditor tenure. The information will be publicly available and that of itself has value.

9. The PCAOB also needs to consider the nature and purpose of Form AP. Firms are currently making significant changes to their internal reporting mechanisms to fulfil the current requirements for the information required by Form AP. We encourage the PCAOB to

   - develop criteria for the inclusion of further information in this form;
   - consider its quality and its uses;
   - consider how information in this form and information in the audit report is to be distinguished.

There is a risk, otherwise, that unhelpful 'noise' will be created by Form AP, if it comes to house a large amount of basic data to which rudimentary analytical tools are applied by unskilled users. The PCAOB risks creating a rod for its own back if the only rationale for the inclusion of information in Form AP is that it is 'of interest' to some who strongly believe that there *is* a relationship between audit quality and audit tenure for example, and are determined to prove it, despite more rigorous academic evidence being inconclusive. Simply providing this information lends credence to the underlying but unproven assumptions about such relationships and the PCAOB is thereby, by implication, endorsing them. We are not convinced that the PCAOB is comfortable with this perception and we encourage the PCAOB to monitor the quality of the information in Form AP, and consider carefully how it is used and for what purposes.

10. We have not answered specific questions on issues that arise from PCAOB inspections or are specific to the US.

## RESPONSES TO SPECIFIC QUESTIONS

**Q1: Is the definition of 'critical audit matter' appropriate for purposes of achieving the Board's objective of providing relevant and useful information in the auditor's report for investors and other financial statement users? Is the definition sufficiently clear to enable auditors to apply it consistently? If not, describe why the definition may not be clear, including examples demonstrating your concern.**

11. There are no fundamental flaws in the definition and it is sufficiently clear to enable auditors to apply it consistently. However, we have concerns that regulatory, company and investor behaviour may encourage auditors to carry on including CAM, year after year, through *excessive emphasis on consistency* at the expense of applying the spirit of the requirements. It will always be easier to leave something in, rather than take it out, if auditors not only feel obliged to explain the change in the audit report, but then explain it again to investors and regulators.

12. We note elsewhere in this and previous responses our belief that there would be little if any difference in practice to what is reported if the PCAOB moved further in the direction of the IAASB's definition.[1] The only possible difference of emphasis is in the focus on materiality and while the IAASB standard focuses less on this, we believe it will be a rare set of circumstances indeed in which something is considered technically immaterial, but still relevant.

13. While terminology should be aligned between standard-setters wherever possible, we understand the limits to this. We therefore congratulate the PCAOB on using virtually the same words as the IAASB regarding the description of the matters to be covered by auditors. To have the confidence to do so is the mark of a mature regulator and we encourage the PCAOB going forward to continue to consider how it can best leverage the work of other standard-setters and, just as importantly, we will encourage other standard-setters going forward to consider how they can best leverage the work of the PCAOB.

14. Nevertheless, we remain uncertain about the rationale for the use of the term 'critical; rather than 'key'. While the IAASB and PCAOB definitions are different, as we indicate elsewhere in this response, we do not believe that combined effect of market pressure and audit firm desire for consistency will result in any significant differences in matters reported under the two regimes. While 'critical' can be read as a narrower category than 'key' in plain English - we are not sure how important that difference is to the PCAOB - if the PCAOB were to use the term 'key' rather than 'critical', we think there would little real danger that anyone would assume that the IAASB's regime had been applied.

[1] Matters that, in the auditor's professional judgment, were of most significance in the audit of the financial statements, as against matters that relate to material accounts or disclosures involving especially challenging, subjective, or complex auditor judgment

15. In achieving the Board's aim of providing relevant and useful information to investors and others the definition of CAM is probably less important than the behavioural drivers that will affect the quality of auditor disclosures. We note in our major points above our continued belief that auditor communication of CAM will be relevant and useful to investors and other financial statement users if:

- investors continue to engage with audit committees and auditors, and are clear about what they want to know;
- auditors avoid boilerplate where possible;
- regulators, companies and investors do not drive auditors into the defensive reporting of boilerplate with threats of sanctions and litigation.

16. We believe that the IMA awards in the UK which recognise excellence in auditor reporting are one way of encouraging stakeholders to engage with auditors, the audit process and auditor reporting, and that the PCAOB has a role in promoting this type of engagement with auditors to investors.

**a. Are matters communicated or required to be communicated to the audit committee the appropriate source for critical audit matters? Why or why not?**

17. Matters communicated/required to be communicated to the audit committee is the appropriate source for CAM not least because it is aligned with IAASB's requirements.

**b. Are there any audit committee communications that should be specifically excluded from consideration as a source of potential critical audit matters? If so, identify and explain the reason for the exclusion.**

18. There are no audit committee communications that should be specifically excluded from consideration as a source of potential CAM.

**c. Is the 'relates to accounts or disclosures that are material to the financial statements' component of the definition of a critical audit matter appropriate and clear? Why or why not?**

19. The 'relates to accounts or disclosures that are material to the financial statements' component of the definition of a critical audit matter is reasonably clear.

**d. Is the 'involved especially challenging, subjective, or complex auditor judgment' component of the definition of a critical audit matter appropriate and clear? Why or why not?**

20. The 'involved especially challenging, subjective, or complex auditor judgment' component of the definition of a critical audit matter is reasonably clear.

**Q2: Are factors helpful in assisting the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? Why or why not?**

21. The factors listed are helpful in assisting the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment although we are not clear as to why the factors refer to significant 'unusual' transactions in terms of the related work effort, rather than simply to 'significant' transactions.

22. The PCAOB should resist calls to add to this list. It is sufficient as it stands.

**Q3: Are there any factors that the Board should consider adding or removing to better assist the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? If so, what are those factors?**

23. There are no factors that the Board should consider adding or removing to better assist the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment.

**Q4: Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, rather than only the current period? For example, should communication be required in an IPO or in a re-audit? Why or why not?**

24. We do not believe that there is any need for the PCAOB to prescribe specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented and we are pleased that the re-proposal regarding communication of prior period CAM does not mandate disclosure. Nevertheless, the PCAOB might wish to consider mandating auditor *consideration* of the disclosure of CAM for each period presented for any situation in which CAM in respect of prior periods have not been previously disclosed; for example, in the case of an IPO.

25. The PCAOB states that the change *allows auditors to include critical audit matters for prior periods when the auditor decides it is appropriate to do so*. On our reading of the proposals, the PCAOB appears to restrict communication of prior period CAM to those two circumstances. We believe that a more general permission is more appropriate.

**Q5: Are the reproposed requirements regarding the description of critical audit matters in the auditor's report, including the principal considerations and how the matter was addressed in the audit, sufficiently clear for consistent implementation by auditors? Why or why not? If not, how could the requirements be clarified?**

26. We believe that the PCAOB should be clear that when it refers to consistent implementation, it is referring to the consistent identification of CAM, rather than consistent disclosure. The latter might encourage boilerplate by leading auditors in borderline cases to sticking to extant wording regarding a CAM identified in several consecutive periods, rather than changing it to reflect changes in circumstances, to avoid accusations of inconsistency and having to explain again to PCAOB inspectors why changes have been made.

27. We note in our major points that we are particularly pleased that the PCAOB has decided not to prescribe how CAM are to be described and have instead developed a list of matters to be covered that is very similar to the list used by the IAASB.

**Q6: Do the reproposed communication requirements appropriately address commenter concerns regarding auditor communication of critical audit matters, such as:**

**a. The auditor providing original information in describing the principal considerations for the determination that the matter is a critical audit matter or describing how the matter was addressed in the audit, and**

**b. Investors and other financial statement users misinterpreting critical audit matters as undermining the auditor's pass/fail opinion or providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate? Are there other steps the Board could take to address these concerns? If so, what are they?**

28. On rare occasions, auditors may have little choice about including original information about the entity in the audit report, particularly if management refuses, inappropriately, to disclose certain information in the financial statements and we believe that the manner in which the PCAOB deals with this is appropriate.

29. To the best of our knowledge, there have, to date, been no issues arising from investors or other financial statement users misinterpreting the UK equivalent of CAM as undermining the pass/fail opinion or providing separate opinions. Litigation aside, we see little reason why this should be an issue for US investors.

**Q7: In addition to referring to the relevant financial statement accounts and disclosures, would it be appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating a critical audit matter? Why or why not?**

30. The PCAOB does not provide examples of situations in which auditors might refer to disclosures outside the financial statements and we cannot imagine any situations in which this might be appropriate. Such references would easily be misinterpreted as implying that auditors had audited or in some other way been more involved with the disclosure outside the financial statements beyond the requirements of existing PCAOB standards, which could lead to an expectation gap between investors and auditors.

**Q8: Is it appropriate for the reproposed standard to retain the possibility of the auditor determining that there are no critical audit matters and to require a statement to that effect?**

31. It is appropriate for the reproposed standard to retain the possibility of the auditor determining that there are no critical audit matters and, if so, to require a statement to that effect in the auditor's report. The PCAOB may wish to consider adding to this situations in which the only CAM relate to certain modified audit reports, to bring it further into line with ISAs.

**Q9: Is the reproposed documentation requirement clear and appropriate? Why *or why not? If not, how should the documentation requirement be formulated?***

32. The re-proposed documentation requirements are clear, but they could be improved. We note in our major points above different firms approaches to documentation and our belief that flexibility will help ensure that the disclosure of CAM do not become a compliance exercise and an end in itself. Some firms start with all matters reported to the audit committee and put them into ‘in’ or ‘out’ buckets in determining whether they are also CAM. Other firms start with a list of significant risks, put them into ‘in’ and ‘out’ buckets for reporting purposes, and then determine what to report to the audit committee. Other firms again approach each exercise separately.

33. IAASB requires the documentation of the rationale for inclusion as KAM, rather than exclusion. We urge the PCAOB to consider the extent to which it could move further towards IAASB’s position, by, perhaps, deleting the first requirement regarding the documentation of everything communicated/required to be communicated and leaving it at matters that involved especially challenging, subjective, or complex auditor judgment.

**Q10: What effect, if any, could the auditor's communication of critical audit matters under the reproposed standard have on private litigation? Would this communication lead to an unwarranted increase in private liability?**

34. We have not responded to this question as it arises from PCAOB inspections and/or is specific to the US.

**Q11: Do the changes from the 2013 proposal address concerns that have been raised about private liability? If not, what additional changes would you suggest should be made?**

35. We have not responded to this question as it arises from PCAOB inspections and/or is specific to the US.

**Q12: Are there other steps the Board could or should take to address the likelihood of increasing an auditor's or company's potential liability in private litigation through the requirement to communicate critical audit matters in the auditor's report?**

36. We have not responded to this question as it arises from PCAOB inspections and/or is specific to the US.

**Q13: Is the reproposed requirement relating to auditor independence clear? Would this information improve investors' and other financial statement users' understanding of the auditor's independence responsibilities? Why or why not?**

37. Despite the fact that IAASB has a similar requirement, we remain of the view expressed in our previous response that the inclusion of the statement regarding auditor independence is unnecessary, although some readers might welcome the clarification for the specific independence standards that have been complied with. We do not believe that inclusion of such language in the audit report will have any significant impact on auditor behaviour.

**Q14: Is it appropriate to limit the required addressees to the shareholders and the board of directors, or equivalents for companies not organized as corporations? Are there other parties to whom the auditor's report should be required to be addressed, and if so, who are they?**

38. We have not responded to this question as it arises from PCAOB inspections and/or is specific to the US.

**Q15: Is it clear how the auditor's report would be addressed for companies not organized as corporations? Why or why not?**

39. We have not responded to this question as it arises from PCAOB inspections and/or is specific to the US.

**Q16: Are the reproposed requirements for information regarding auditor tenure appropriate and clear? Why or why not? Are there any specific circumstances that could affect a firm's ability to include tenure information they?**

**Q17: Is it appropriate to disclose the earliest period the auditor began auditing any company in the group of investment companies even if the auditor has not audited all of the companies in the group for the same period of time? Why or why not?**

**Q18: Should disclosure of auditor tenure be made on Form AP rather than in the auditor's report? Why or why not?**

40. We note in our major points above our belief that Form AP is a better home for the information regarding auditor tenure than the audit report, mainly because the audit report is the wrong place for it, and that we have yet to be convinced about the value of this information. It is likely to be fairly basic because no form of words can cover every eventuality. Misunderstandings and inconsistencies are therefore possible. Nevertheless, we expect that the PCAOB will monitor and finesse the nature and quality of the information in Form AP over time. The consistency provided by this reporting requirement will facilitate better quality academic work because academics currently have to construct their own data sets using their own assumptions regarding changes in firms and auditor tenure. The information will be publicly available and that of itself has value.

41. We also note in our major points above our belief that some further thought needs to be given to the nature and purpose of Form AP. Firms are currently making significant changes to their internal reporting mechanisms to fulfil the requirements for Form AP. The PCAOB needs to think about the purpose of Form AP, its uses and the quality of the information it houses and how decisions are to be made regarding the inclusion of information in the audit report or Form AP. We see no justification for information such as auditor tenure, being included in both Form AP and the audit report.

42. Form AP should not be permitted to become a repository for a large amount of basic data to which unsophisticated users apply rudimentary analytical tools. There is a risk that this will happen if the only rationale for the inclusion of information in Form AP is that it is 'of interest' to some who strongly believe that there *is* a relationship between audit quality and audit tenure, for example, and are determined to prove it, despite more rigorous academic evidence being inconclusive. Simply providing this information lends credence to the underlying but unproven assumptions about such relationships and the PCAOB is thereby, by implication, endorsing them. We are not convinced that this PCAOB is comfortable with this perception and we encourage the PCAOB to monitor the quality of the information in Form AP, and consider carefully how it is used and for what purposes.

**Q19: Would requiring disclosure of auditor tenure in the auditor's report reduce investor search costs? Why or why not? Should the Board require a specific location for disclosure of auditor tenure in the auditor's report? If so, where and why?**

43. We are puzzled by this question partly because it seems more likely that search costs will, if anything, be greater if the information is included in the audit report as they are not aggregated and appear in different locations within a company's filing. Moreover, we think that requiring disclosure of auditor tenure is unlikely to make *any* significant difference to investor search costs, regardless of where the information is housed. Investors and others concerned with such issues are likely to be making comparisons across companies and taking account of many other variables.

44. If the Board does require disclosure in the auditor's report, a specific location, clearly distinguished from the rest of the report is important to avoid confusion regarding the significance of the disclosure and its relationship to the better quality information in the rest of the report.

**Q20: Are the changes to the basic elements of the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor appropriate and clear? Why or why not?**

45. The changes to the basic elements of the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor are broadly appropriate and clear.

**Q21: Is the interaction between the communication of critical audit matters and required explanatory paragraphs clear and appropriate? Why or why not?**

46. The interaction between the communication of critical audit matters and required explanatory paragraphs is clear.

**Q22: Should auditors be permitted to include the critical audit matter communications in the required explanatory paragraph? Would integrating explanatory paragraphs and critical audit matters be helpful to investors? Alternatively, would it decrease the impact of the explanatory paragraph? Why or why not?**

47. Auditors *should* be permitted to include the very limited number of matters meeting the definition of a CAM and requiring explanatory paragraphs such as certain going concern issues, in the required explanatory paragraph. It is unlikely that many such reports will be issued and this approach would avoid confusion and maintain the alignment of the PCAOB's requirements with those of the IAASB in this relatively rare but nevertheless important area.

**Q23: Should the Board's requirement to include an explanatory paragraph in the auditor's report when the auditor did not perform an audit of ICFR apply not only if company's management is required to report on ICFR, but also if management is not required to report, such as for investment companies?**

48. The requirement to include an explanatory paragraph when the auditor did not perform an audit of ICFR should apply in all cases, because readers may not be aware of the specific requirements regarding when management is required to report on ICFR.

**Q24: Is the interaction between the communication of critical audit matters and emphasis paragraphs clear and appropriate? Why or why not?**

49. The interaction between the communication of critical audit matters and emphasis paragraphs is clear, appropriate and aligned with the IAASB's approach. Auditors are not expected to include an emphasis paragraph about a matter that meets the definition of a CAM.

**Q25: Would the reproposed requirements for a specific order of certain sections in the auditor's report and for section titles make the auditor's report easier to use? Should the standard allow more or less flexibility in the presentation of the auditor's report?**

50. The re-proposed requirements for a specific order of certain sections in the auditor's report and for section titles will make the report easier to use and is broadly aligned with the IAASB's requirements.

**Q26: Are the reproposed amendments to PCAOB standards appropriate? If not, why not? Are there additional amendments related to the reproposed standard that the Board should consider? If so, what are they?**

51. The re-proposed amendments relating to the interaction between CAM and qualified and adverse opinions are generally aligned with IAASB requirements except in respect of adverse opinions. However, the number of these issued is small.

**Q27: How would investors use the information communicated in critical audit matters? Would the communication of critical audit matters help reduce information asymmetry between investors and management? Investors and the auditor?**

52. We note in our major points above our belief in the importance of the new regime not being seen as an end in itself, and that it does in fact serve as the start of a journey, opening up a dialogue between auditors, audit committees, investors and boards by providing a starting point for a discussion. The formal evidence aside, anecdotal evidence tells us that:

- it takes time for the dialogue to open up;
- many investors are 'quietly satisfied' with the new regime, the information they had so long called for is now being provided.

53. The mischief that the new auditor reporting regime was intended to remedy, which is a lack of communication has, to some extent, melted away. Our overall impression is that the enhanced reporting regime has, to date, not just worked well in the UK, but better than expected. We hope that this success will be replicated elsewhere and we hope that it will be just as effective in the US, despite the more litigious environment.

54. We note in our answer to question 1,above belief that the IMA awards in the UK which recognise excellence in auditor reporting are one way of encouraging stakeholders to engage with auditors and auditor reporting, and that the PCAOB has a role in promoting this type of engagement to investors.

**Q28: How would each of the elements of the communication (i.e., identification, principal considerations, audit response, and financial statement reference) be used by investors?**

55. We believe that the auditor's response, findings and key observations are likely to be of most interest to investors. Investors are generally looking for more explanation of changes.

**Q29: Would critical audit matters be useful in assessing company financial performance? If so, how?**

56. This question is likely to be addressed in due course by academics, however, we believe that the PCAOB should exercise caution in blurring the boundaries between companies and their auditors. Poor quality financial statements are harder to audit than good quality financial statements but the relationship between audit quality and company financial performance is likely to be complex, and good quality evidence regarding that relationship is only likely to become available a decade or more of reporting under the new regime.

**Q30: Would critical audit matters be useful in assessing audit quality? If so, how?**

57. Assessing audit quality, as the PCAOB is aware, is a vexed issue as evidenced by the wide variety of approaches to audit quality indicators (AQIs) currently being proposed. Nevertheless,

the disclosure of CAM seems likely to result in more focus on CAM and to encourage more extensive dialogue and to that extent, it seems likely to promote audit quality. Poorly drafted CAM will clearly impact the indirect assessment of audit quality. In our response to the IAASB's recent ITC, we went further and suggested that enhanced auditor reporting can do more than just help to *assess* audit quality. It can also contribute to the *improvement* of audit quality through its indirect demonstration of professional scepticism and transparency.

**Q31: Would the communication of critical audit matters enhance attention by auditors, audit committees, and management to the matters identified as critical audit matters? If not, why not? Would such changes enhance audit quality, improve management's disclosures, or otherwise be beneficial to investors? Why or why not?**

**Q32: Would the communication of critical audit matters trigger other changes in behavior? If so, what changes? Would such changes enhance audit quality or otherwise be beneficial to investors? Why or why not?**

**Q33: Would the impact of critical audit matters vary depending on the size of the accounting firm? The size of the company? If so, what would the differences be?**

58. It seems obvious to those outside the profession that communication of CAM cannot fail to enhance attention by auditors, audit committees, and management to the matters identified as CAM and that the idea that there will be no impact on the work performed, naive. It is to be hoped that such changes will enhance audit quality, improve management's disclosures, and thereby benefit investors, but this is not guaranteed. Improvements in audit quality require a belief in the value of transparency, and that companies and firms will be rewarded for it. There are fears in some jurisdictions that the financial markets might penalise companies whose auditors go the extra mile and regulators such as the PCAOB and the SEC have an important role to play in ensuring that the financial markets properly understand the purpose and value of the enhanced auditor reporting regime.

**Q34: Would the communication of critical audit matters provide a basis on which auditors could differentiate themselves? Why or why not?**

59. The PCAOB notes that communication of CAM is a way in which firms have sought to differentiate themselves in the UK. It is important to remember in that context though that mandatory auditor rotation was also introduced in the UK at the time the new reporting regime was implemented, which seems likely to have added impetus.

**Q35: Are there additional academic studies or data the Board should consider? The Board is particularly interested in studies or data that could be used to assess potential benefits and costs.**

60. We are not aware of any such studies or data.

**Q36: Are there additional benefits, costs or unintended consequences, or other economic considerations, such as competitive effects, associated with critical audit matters or the additional improvements to the auditor's report that the Board should consider? If so, what are they?**

61. The PCAOB notes that the zero change in audit fees in the UK would not fully reflect the cost of implementing expanded auditor reporting to the extent that accounting firms chose to absorb those additional costs and because audit fees do not reflect the impact of any additional demand on management's time associated with expanded auditor reporting. This caveat is important. Underestimating the significance of the cost of regulatory reform, particularly for smaller companies and their auditors, is all too easy. The structures firm need in place to deal with these reporting requirements is such that enhanced reporting for just a few clients is likely to be particularly burdensome for smaller firms, some of which are likely to decide that it is too risky or expensive to operate in this market. This regrettable (but probably unavoidable) effect can be reduced if regulators inspect the new regime in a proportionate manner.

62. We have not responded to questions 37 - 43 as they arise from PCAOB inspections and/or is specific to the US.

**Q37: Is it appropriate for the communication of critical audit matters not to be required for the audits of brokers and dealers reporting under Exchange Act Rule 17a-5, investment companies other than BDCs, and benefit plans? Why or why not?**

**Q38: For these specific types of entities, are there situations in which critical audit matters would be useful to investors? If so, what are these situations?**

**Q39: While not requiring communication of critical audit matters in the audits of these specific entities, should the Board encourage voluntary communication? Why or why not?**

**Q40: Should the requirements related to critical audit matters not apply to the audits of other types of companies, such as shell companies? Why or why not?**

**Q41: Should the reproposed requirement regarding communication of critical audit matters be applicable for the audits of EGCs? Should the other elements of the reproposed standard and amendments be applicable for the audits of EGCs? Should the reproposed requirements be modified to make their application to EGCs more appropriate? Would excluding audits of EGCs benefit or harm EGCs or their investors? Why or why not?**

**Q42: If the Board determines not to apply all or part of the reproposed standard and amendments to the audits of EGCs, would there be any unintended consequences if auditors complied voluntarily? If so, what are they?**

**Q43: Are there any other benefits, costs or considerations related to promoting efficiency, competition, and capital formation that the Board should take into account with respect to applying the reproposed standard to audits of EGCs?**

**Q44: If the reproposed standard is adopted by the Board and approved by the SEC, how much time would auditors need to implement it? Should the Board consider a delayed compliance date for the reproposed standard, or for certain parts of the reproposed standard, for audits of smaller companies? If so, what criterion should the Board use to classify companies, for example smaller reporting companies? Are there criteria other than the size of the company that the Board should consider for a delayed compliance date?**

63. We noted in our previous response that there may be some merit in phasing in the requirements, firstly for large accelerated filers whose auditors have more resources to address the new requirements to help establish best practice, and then for all other issuers.

THE MARCO CONSULTING GROUP

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Ms. Brown:

The Marco Consulting Group ("MCG") is a registered investment advisor to more than 300 benefit plans with combined assets under advisement of $145 billion. The funds we represent provide retirement security to more than a million plan beneficiaries across the country. Investors rely on auditing standards to help them accurately assess the risks of their investment decisions.

MCG is writing to express its support for the proposed auditing standards outlined in "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion." We applaud the Public Company Accounting Oversight Board's ("PCAOB") efforts to provide more transparency for investors.

In particular, we believe the proposed rule to require auditors to disclose critical audit matters ("CAM") in the audit report will allow investors to make better informed decisions when voting on auditor's reports, although we urge the PCAOB to broaden its definition of relevant information. Defining the threshold for reporting accounts or disclosures that are material to the financial statements is overly narrow and may lead to the exclusion of important information.

MCG also urges the PCAOB to require the disclosure of auditor tenure in the auditor's reports. Investors may have reason to question the independence of auditors given extensive tenures. Providing this data point to investors will enable them to assess whether tenure should be a factor to consider when approving company auditors.

We appreciate the PCAOB efforts and the opportunity to express our views. Should you require any further background, please contact me at 312-612-8446 or obrien@marcoconsulting.com.

Sincerely,

Maureen O'Brien
Director of Corporate Governance

**Re: PCAOB Proposed Auditing Standard on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (PCAOB Release No. 2016-003, May 11, 2016) (PCAOB Rulemaking Docket Matter No. 034)**

Dear Ms. Brown:

The U.S. Chamber of Commerce (the "Chamber") is the world's largest federation of businesses and associations, representing the interests of more than three million U.S. businesses and professional organizations of every size and in every economic sector. These members are both users and preparers of financial information. The Chamber created the Center for Capital Markets Competitiveness ("CCMC") to promote a modern and effective regulatory structure for capital markets to fully function in a 21st century economy. The CCMC believes that businesses must have a strong system of internal controls and recognizes the vital role external audits play in capital formation. We support efforts to improve audit effectiveness and appreciate the opportunity to comment on the Public Company Accounting Oversight Board ("PCAOB") Proposed Auditing Standard on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "Proposal").

The CCMC is pleased that the PCAOB has dropped from the Proposal any new requirements on auditor responsibilities for other information outside the financial statements that were included in the prior proposal and is continuing research on these issues. The CCMC also appreciates the Proposal differs from the prior proposal in regards to critical audit matters ("CAMs") in that it reflects definitional refinements and narrows the scope and application of auditor reporting of CAMs. Nonetheless, many of the serious concerns we previously expressed about both the PCAOB's rationale for and approach to changing the auditor's report continue to apply. Specifically, our concerns include but are not limited to the following:

1. The need for the Proposal is not sufficiently addressed;
2. The required disclosure of CAMs is often duplicative and not decision-useful;
3. The treatment of original and confidential information and potential adverse consequences upon internal controls;
4. The increase of legal liability for business and auditors;
5. Additional concerns with CAMs and adverse consequences for business, auditors, and investors;
6. The Proposal should not apply to emerging growth companies; and
7. The PCAOB has not demonstrated why disclosure of audit firm tenure is necessary.

We discuss our concerns in more detail in corresponding sections below. This discussion reinforces a number of the concerns that we expressed in our prior comment letters, which should continue to be considered as part of the public record, and provides additional perspective incremental to those letters.

**Background**

Financial reporting is the responsibility of management and includes the GAAP financial statements and other disclosures, such as disclosures required by the Securities and Exchange Commission ("SEC") in Management's Discussion & Analysis ("MD&A"). In turn, the board of directors, largely through the audit committee, provides oversight of management's reporting and disclosures. The independent auditor's responsibility is to express an opinion on whether the company's annual financial statements, including the notes thereto, are presented fairly, in all material respects, in conformity with generally accepted accounting principles ("GAAP"). Determining GAAP for

U.S. companies is the responsibility of the Financial Accounting Standards Board ("FASB").

Another core principle of financial reporting is that the auditor is not an original source of information about the company. Accordingly, if there is material, decision-useful financial information for investors, it is not the auditor, but management that should provide it—based on guidance from FASB or the SEC.

This is the PCAOB's second proposal concerning revisions to the auditor's report. The CCMC commented on the prior proposal issued in August 2013, as well as a related Concept Release issued in June 2011.[3]

The Proposal would supersede or amend various existing PCAOB auditing standards on financial statement audit reports. The Proposal would require auditors to communicate in the auditor's report CAMs arising from the audit of the current period financial statements and certain information about each CAM. It would also add new language on auditor responsibilities regarding independence and obtaining reasonable assurance about whether the financial statements are free of material misstatements "whether due to error or fraud" and on audit firm tenure.[4]

These core principles provide a foundation for our discussion of the Proposal, including the threshold question of need.

---

[4] *See* the Proposal, pages 3-4.

## Discussion

*Need for Proposal Not Sufficiently Addressed*

We continue to seriously question the need for this initiative. Our previous comment letters have emphasized the necessity of addressing this threshold question and whether the PCAOB should engage in such a sweeping standard-setting initiative that would substantially change the role and responsibilities of the auditor and represent the most significant changes to auditor reporting in more than 70 years. This question is especially important given the strong support from stakeholders for retaining the current "pass-fail" model of auditor reporting—a model that reflects the core principles of financial reporting just described.

According to the Proposal, the Board believes that the communication of CAMs should help focus investor attention on these matters and provide a new perspective on the financial statements.[5] We respectfully disagree with this premise as an appropriate rationale for PCAOB standard-setting to significantly change the auditor's report.[6]

As previously discussed, any perceived inadequacies in the financial information currently provided to investors should be addressed by the SEC and/or FASB, not the PCAOB. Furthermore, based on the Proposal itself, we strongly believe that CAMs would, for the most part, simply duplicate information already disclosed by management, while creating a number of other unintended consequences.

---

[5] *See* the Proposal, page 2.

[6] We have long supported global convergence of auditing standards. However, the Proposal focuses on auditor reporting and would not change any auditor performance standards. Thus, while we appreciate that regulators and standard-setters in other jurisdictions, such as the International Auditing and Assurance Standards Board ("IAASB"), have changed auditor reporting to include "CAM-like" disclosures, we also recognize that financial reporting frameworks, regulatory requirements, legal settings and the like in other parts of the world differ from the U.S. For example, not all reporting frameworks in other jurisdictions have an equivalent of the SEC's MD&A requirements, including management's disclosures of critical accounting policies and practices ("CAPs"). Further, jurisdictions, such as the United Kingdom, that relatively recently changed auditor reporting requirements did so in conjunction with changes in management and audit committee reporting, while the PCAOB has no authority over management reporting or audit committees.

*Required Disclosure of CAMs Is Often Duplicative and Not Decision-Useful*

The Proposal would require auditors to report on matters that were adequately and appropriately disclosed by management. For example, in addition to management's disclosures in the GAAP footnotes, SEC requirements for MD&A include management disclosure of critical accounting policies and practices ("CAPs"). CAPs are those accounting policies and practices that require management's most difficult, complex, and/or subjective judgments. Yet, the Proposal defines CAMs as "accounts or disclosures that are material to the financial statements and involved especially challenging, subjective, or complex auditor judgment."[7] At times, matters that may require disclosure of CAPs by management may coincide with required disclosure of CAMs under the Proposal. In these instances, CAMs disclosed by auditors will only duplicate information already disclosed by management in MD&A and/or the GAAP footnotes.

The Proposal provides two examples of CAM disclosures that reinforce this point.[8] Although the Proposal provides no illustration of management's disclosures, we believe that by its very nature much of the information in the two CAM disclosure examples would clearly duplicate information disclosed by management in MD&A and/or the GAAP footnotes.

In many circumstances, auditor information identifying the CAM, describing the principal considerations that led the auditor to determine that the matter is a CAM, and referring to the relevant financial statement accounts and disclosures would all duplicate information disclosed by management.[9] Otherwise, the remaining required information in the illustrative examples, uniquely disclosed by the auditor, describes how each CAM was addressed in the audit. As subsequently discussed, in our view this information is problematic and not actionable by or decision-useful for investors.

---

[7] *See* the Proposal, page 3.
[8] *See* the Proposal, pages 32-35.
[9] This reinforces a concern we expressed in our prior comment letter as to whether the auditor would be allowed to refer to information disclosed by management in MD&A not just the GAAP financial statements and footnotes covered by the auditor's opinion. Any such limitation would also exacerbate financial reporting complexity.

To summarize, the two examples of CAM disclosures in the Proposal illustrate that the proposed auditor information would be duplicative of management's disclosures or otherwise not decision-useful for investors.

*Treatment of Original and Confidential Information and Potential Adverse Consequences Upon Internal Controls*

A core principle of financial reporting is that the auditor is not an original source of information about the company. In fact, the auditor is subject to both legal and ethical requirements on confidentiality that preclude this from occurring except in certain specific circumstances. We discussed in our prior comment letters that requiring auditor disclosure of CAMs is inconsistent with this core principle. Further, auditor reporting of CAMs undermines the financial reporting and disclosure frameworks of the SEC and FASB, as they can necessitate auditors disclosing matters that the SEC and/or FASB have specifically decided that companies are not required to disclose.

We appreciate that the PCAOB recognizes these problems and the Proposal reflects revisions from the prior proposal in an attempt to address them. However, we do not believe the Proposal solves these problems.

For example, while the Proposal emphasizes that a note in the proposed auditor reporting standard indicates that "when describing [CAMs] in the auditor's report, the auditor is not expected to provide information about the company that has not been made publicly available by the company." But, the note goes on to say, "unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a [CAM] or how the matter was addressed in the audit."[10] Further, the Proposal adds:

[10] *See* the Proposal, pages 35 and A1-9.

> *[M]anagement may decide that additional management disclosures would be useful to financial statement users. However, management's decision about whether to disclose additional information does not affect the auditor's responsibility to describe the principal considerations that led the auditor to determine that a matter is a [CAM] or how the matter was addressed in the audit.*[11]

The Proposal provides another example related to deficiencies in internal control over financial reporting ("ICFR") that are not material weaknesses and, therefore, do not otherwise require any disclosure by management or auditors under SEC or PCAOB requirements, as follows:

> *However, matters that would not themselves constitute [CAMs] under the reproposed definition, such as information about the company's processes and controls, could be included, for example, in the description of the principal considerations that led the auditor to determine that a matter is a [CAM].*[12]

As we have stated in the past, the Chamber believes that spending a disproportionate amount of time on issues that are not material weaknesses, with respect to reporting on ICFR, do not promote investor protection or provide the basis for an effective and sustainable system of controls. This issue is particularly significant in the inspection context, where companies and auditors spend a significant amount of time documenting every judgment and decision. However, a natural consequence of the Proposal is that it could incentivize auditors to report potential deficiencies in ICFR in the auditor's report that are not material, adding more time and complexity to the ICFR process without any additional benefit to investor protection. The Proposal could also incentivize an expectation that controls need to be designed and tested to fit an audit, a concern that we have raised in the past.

To summarize, under the Proposal, auditors can still become an original source of information and/or disclose confidential company information in order to comply with PCAOB auditor reporting requirements, even though

---

[11] *See* the Proposal, pages 35-36.
[12] *See* the Proposal, page 20.

doing so may violate codes of professional ethics and state laws. Consequently, the CCMC recommends the PCAOB include a statement in any final proposal that an auditor normally should not be an original source of information.

Also, we note that some of the quoted guidance appears in the release text of the Proposal, rather than in the proposed rule itself. The CCMC has previously expressed concerns about using release text in this manner.

*Increase of Legal Liability for Business and Auditors*

The CCMC remains very concerned about the legal liability implications of the Proposal. This encompasses potential liability for what auditors communicate and what they do not. The former includes liability for being an original source of statements, including disclosing confidential company information, as previously discussed, and the latter includes both private legal actions and regulatory activities (e.g., through PCAOB inspections and enforcement) based on second-guessing auditor judgments on matters that were deemed by the auditor not to meet the threshold of CAMs.

*Additional Concerns with CAMs and Adverse Consequences for Business, Auditors, and Investors*

The CCMC has additional concerns with the Proposal related to CAMs, some of which were expressed in our prior comment letters, as follows:

- Circumstances will arise when CAMs lack clarity and/or raise questions and there is no mechanism or venue for the auditor to respond. In addition, confidentiality restrictions will likewise constrain the auditor. As a result, the company and management are put in the position of having to explain, after the fact and in compliance with Reg FD, what the auditor meant.

- CAMs elevate for public disclosure matters that were fully addressed and resolved to the auditor's satisfaction before the audit report was issued.

- Auditor reporting on CAMs involves some practical considerations including creating potential impediments to timely SEC filings by companies. Perhaps, on average, auditors will identify CAMs well in advance of SEC filing deadlines and resolve all necessary issues with the company in this regard. Nonetheless, circumstances will arise when this is not the case, and so, the likelihood cannot be ruled out that the Proposal will result in situations where auditor reporting of CAMs delays the timely filing of information by companies.

- The reporting of CAMs is not likely to be a "free-writing" exercise at the engagement level. A number of forces, including legal forces will necessitate consistency in the drafting of CAMs over time and across companies. Thus, the likelihood is very high that this initiative would result in auditor reporting that is simply boilerplate.

- The Proposal adds a requirement to describe how the auditor addressed each CAM. It is unlikely that that an auditor's response to addressing "accounts and disclosures that are material to the financial statements and involved especially challenging, subjective, or complex auditor judgment" can be reduced to a few sentences of meaningful or decision-useful information for investors and other users. Any such disclosure does not provide actionable information for investors and is particularly susceptible to becoming boilerplate.

- The PCAOB expects that CAMs will be disclosed for most audits. Given the heterogeneity in the circumstances of an audit, this expectation may be misplaced. For example, some audits are less complex and more straight-forward.

- Mandating the disclosure of CAMs related to any matter communicated to the audit committee rather than matters required to be reported to the audit committee will have a harmful chilling effect on the normal communication processes between the auditor and management and the audit committee. For example, management and/or the audit committee may be more cautious and less open and/or timely in their discussions with auditors to avoid having a matter unnecessarily becoming elevated to a CAM.

- While we support principles-based auditing standards and avoiding a "one-size-fits-all" or "checklist" approach, the CCMC has also emphasized the importance of respecting reasonable judgments by auditors and encouraged the PCAOB to develop an auditor judgment framework, which has not occurred.

Thus, given the definition of CAMs in the Proposal, the CCMC is concerned about the potential for second-guessing of auditor judgments on the determination of CAMs and the disclosures made in the auditor's report in regard to CAMs via PCAOB inspections, regulatory enforcement actions, and private securities actions.

Moreover, any determinations of audit reporting deficiencies, such as via PCAOB inspections, may cause inconsistencies for companies with regards to their SEC filings that include the auditor's report, even though there is no issue with respect to the information provided by management.

*Proposal Should Not Apply to EGCs*

The CCMC appreciates that the Proposal does not provide for auditor reporting of CAMs by brokers and dealers, investment companies (except business development companies), and benefit plans. However, the question remains as to whether the Proposal applies to emerging growth companies ("EGCs").

As background, the PCAOB has not proceeded with Auditor Discussion and Analysis ("AD&A") as articulated in the Concept Release of June 2011. Unfortunately, CAMs appear substantively similar to AD&A, notwithstanding that CAMs are described as being grounded in auditing rather than financial reporting matters. This is important because the 2012 Jumpstart Our Business Startups Act ("JOBS") provides that any PCAOB rules on audit reporting of AD&A shall not apply to audits of EGCs.

Accordingly, we believe the Proposal should not apply to EGCs.

*PCAOB Has Not Demonstrated Why Disclosure of Audit Firm Tenure is Necessary*

The Proposal calls for disclosing auditor tenure (that is the year the auditor began serving consecutively as the company's auditor). Consistent with statements by PCAOB Board members Franzel and Hanson,[13] the CCMC questions the inclusion of this information in the auditor's report.

It is not obvious how tenure connects to the nature of the auditor's work performed or the auditor's opinion and, therefore, why this information belongs in the auditor's report. As the audit committee has the responsibility to oversee and monitor the selection and retention of the audit firm, the audit committee report in the annual proxy statement provides a more appropriate placement for such a disclosure. And, a number of audit committees already disclose this information in the proxy statement.[14]

By including tenure information in the auditor's report, the Proposal implies some systematic connection between audit quality and tenure. However, as explained in the Proposal and emphasized by board members, the PCAOB has not reached a conclusion regarding the relationship between audit quality and auditor tenure and the PCAOB's inspection process has not been designed to determine any such relationship. Unfortunately, even though the PCAOB does not have data to support a relationship between audit quality and auditor tenure, the fact that the PCAOB would require disclosure of auditor tenure might suggest that the PCAOB believes the information is meaningful.

---

[13] *See* Statements by Board members Hanson and Franzel on Reproposing an Auditing Standard on the Auditor's Report at the PCAOB Open Board Meeting on May 11, 2016.
[14] We also note that the SEC solicited public comment on this matter in the Concept Release on *Possible Revisions to Audit Committee Disclosures*; 17 CFR Part 240; Release Nos. 33-9862, 34-75344; File No. S7-13-15; RIN 3235-AL70.

The Proposal acknowledges that information to determine auditor tenure is already publicly available, but suggests that disclosing this information in the auditor's report will reduce investors' search costs.[15] Clearly any such costs incurred by investors are trivial.

To summarize, in our view any benefits of disclosing auditor tenure in the audit report are questionable and would be heavily outweighed by the costs imposed, as we have noted in our previous correspondence on this issue. Moreover, the Proposal has not demonstrated any linkage between auditor tenure and audit quality. Thus, the CCMC does not support disclosure of information on auditor tenure in the audit report.

***

Once again, the CCMC appreciates the opportunity to comment on the Proposal.

The CCMC continues to have serious concerns regarding the Proposal, including that the Proposal

1. blurs and even weakens lines of corporate governance, especially in cases where open communication may been needed between the audit committee and an external auditor;
2. may create duplicative disclosures in many cases while risking auditors serving as original sources of information in others; and
3. may raise the liability for auditors and businesses which ultimately harms investors.

All things considered, the CCMC questions whether the costs of the Proposal outweigh the benefits. We believe that these issues should be addressed before any Proposal moves forward.

Finally, if the PCAOB decides to proceed with this initiative in spite of all the concerns expressed about it, the PCAOB should recognize that auditor

---

[15] *See* the Proposal, page 68.

reporting of CAMs, in particular, is a giant experiment. As such, the CCMC recommends that any standard-setting that results from this initiative should include a sunset provision (of within three to five years of its effective date). Only after a robust post-implementation review of the costs and benefits and a determination that the benefits exceed the costs should a similar or revised auditor reporting standard be allowed to be re-implemented.

We stand ready to assist in this matter.

Thank you for your consideration.

Sincerely,

Andres Gil

**PCAOB Rulemaking Docket Matter No. 034: PCAOB Release Number 2016-003: *Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* (May 2016)**

Dear Ms. Brown:

This letter provides the U.S. Government Accountability Office's (GAO) responses to the Public Company Accounting Oversight Board's (PCAOB) Release Number 2016-003, *Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards* (hereafter Release No. 2016-003 or the Reproposal). GAO promulgates generally accepted government auditing standards, which provide professional standards for auditors of government entities in the United States.

We support efforts to improve the quality of financial reporting and increase the confidence users have in the audit of financial statements. Release No. 2016-003 is a reproposal of various changes to the audit report initially proposed in the PCAOB's Release No. 2013-005.

Consistent with our December 11, 2013, letter in response to the PCAOB's Release No. 2013-005, we continue to support the PCAOB's proposal to improve the format of the auditor's report, which should result in meaningful improvements for users. For the specific format, we encourage the PCAOB to consider using a format that more closely aligns with the International Auditing and Assurance Standards Board's (IAASB) International Standard on Auditing (ISA) 700 (Revised), including discrete sections that describe management's responsibilities and the auditor's responsibilities instead of including such information within the proposed Basis for Opinion section. We have consistently advocated for harmonized standards and consistent practice, absent any compelling reasons that would require different practice, to ensure audit quality. We acknowledge that ISA 700 (Revised) and ISA 701 call for including in the auditor's report (1) key audit matters and (2) a statement related to the auditor's independence. We believe that the PCAOB's Release No. 2016-003 represents an improvement to the original release and is better aligned with the standards adopted by the IAASB.

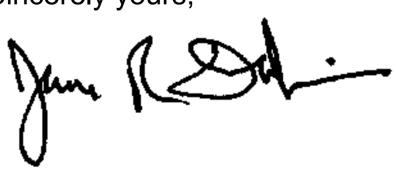
Also, we encourage the PCAOB to study early results from the changes implemented by the IAASB and perform periodic look-back analyses of the PCAOB implementation to determine whether the changes in the PCAOB reporting standards ultimately had the desired effects and whether the changes resulted in unanticipated or unintended consequences.

We are not persuaded that the Reproposal's addition of a requirement to disclose auditor tenure in the auditor's report represents an improvement to PCAOB standards. The information is already available by other means, and the PCAOB has not clearly indicated what it expects the users to infer from such information. Inclusion of the auditor tenure in the auditor's report may create user confusion about how to interpret the information with respect to the auditor's opinion. Further, the PCAOB seems to be adding information to the audit report that is beyond the report's primary purpose. While the additional information may be useful to users, we do not believe that the audit report is the appropriate place for it. Instead, we believe that the PCAOB should coordinate with the Securities and Exchange Commission (SEC) and jointly determine what type of additional information, if any, is critically important to users and determine the best communication method. We believe that if the PCAOB and SEC determine that additional auditor information is critical to users, the proxy statement would be the most appropriate place to communicate it, as investors consider the information in the proxy statement in determining whether to elect, approve, or ratify the principal auditor for the current year.

We believe that the Reproposal's interaction between the communication of critical audit matters, required explanatory paragraphs, and emphasis paragraphs may create unnecessary duplication and confusion for investors and financial statement users. For example, if descriptions of how a critical audit matter was addressed are provided in the required explanatory paragraph, a user may not be able to consistently locate the information when looking at multiple audit reports. Integrating critical audit matters and required explanatory paragraphs can also confuse the impact of some required explanatory paragraphs. For instances where a critical matter is also an explanatory paragraph or emphasis of matter, we suggest that the PCAOB harmonize its approach with that of the IAASB, which requires a reference in the key audit matter section but waives the requirements to describe the key audit matter and how it was addressed during the audit. The auditor would still have to follow the applicable standards related to reporting the required explanatory paragraph. The PCAOB is seeking comment on a number of questions related to the Reproposal. We have provided our responses to certain specific questions in the enclosure to this letter.

If you have any questions about this letter or wish to discuss any of our responses, please feel free to contact me at (202) 512-3133 or dalkinj@gao.gov.

Sincerely yours,



James R. Dalkin
Director
Financial Management and Assurance

## Enclosure: Answers to Questions

**1. Is the definition of "critical audit matter" appropriate for purposes of achieving the Board's objective of providing relevant and useful information in the auditor's report for investors and other financial statement users? Is the definition sufficiently clear to enable auditors to apply it consistently? If not, describe why the definition may not be clear, including examples demonstrating your concern.**

We have consistently advocated for robust standards that are in harmony among the various standard setters to ensure audit quality. While the proposed approach generally appears to be appropriate for achieving the Public Company Accounting Oversight Board's (PCAOB) stated objective, we believe that the PCAOB should harmonize the definition of critical audit matters with the International Auditing and Assurance Standards Board's (IAASB) definition of key audit matters to enhance overall consistency.

**2. Are factors helpful in assisting the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? Why or why not?**

We have consistently advocated for robust standards that are in harmony among the various standard setters. While the proposed factors generally appear to be appropriate for determining which matters involved especially challenging, subjective, or complex auditor judgment, we believe that the factors should be harmonized with International Standard on Auditing (ISA) 701, *Communicating Key Audit Matters in the Independent Auditor's Report*, paragraphs 9 and 10. In addition, additional application and explanatory guidance may help the auditor determine which matters involved especially challenging, subjective, or complex auditor judgment.

**3. Are there any factors that the Board should consider adding or removing to better assist the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? If so, what are those factors?**

As noted in our response to question 2, we believe that the factors should be harmonized with ISA 701 paragraphs 9 and 10.

**4. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, rather than only the current period? For example, should communication be required in an IPO or in a reaudit? Why or why not?**

We believe that the PCAOB should consider requiring the auditor to report critical audit matters fully for the current year along with additional information sufficient to provide context on changes to critical audit matters from the prior year.

**5. Are the reproposed requirements regarding the description of critical audit matters in the auditor's report, including the principal considerations and how the matter was addressed in the audit, sufficiently clear for consistent implementation by auditors? Why or why not? If not, how could the requirements be clarified?**

We believe that the reproposed requirement for describing the critical audit matters is sufficiently clear to facilitate consistent implementation. However, over time, we believe that the content may evolve into standard (boilerplate) language.

**6. Do the reproposed communication requirements appropriately address commenter concerns regarding auditor communication of critical audit matters, such as:**
**a. The auditor providing original information in describing the principal considerations for the determination that the matter is a critical audit matter or describing how the matter was addressed in the audit, and**
**b. Investors and other financial statement users misinterpreting critical audit matters as undermining the auditor's pass/fail opinion or providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate?**

**Are there other steps the Board could take to address these concerns? If so, what are they?**

If the PCAOB requires auditors to include critical audit matters in auditor's reports, we suggest that the PCAOB perform periodic look-back analyses to determine whether the changes in PCAOB reporting standards had the desired effects and whether the changes resulted in unanticipated or unintended consequences.

**7. In addition to referring to the relevant financial statement accounts and disclosures, would it be appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating a critical audit matter? Why or why not?**

Since an audit report relates to specific relevant financial statement accounts and disclosures, it would be appropriate for the auditor's reporting of critical audit matters to relate to those financial statement accounts and disclosures.

**8. Is it appropriate for the reproposed standard to retain the possibility of the auditor determining that there are no critical audit matters and, if so, require a statement to that effect in the auditor's report? Why or why not?**

As some audits do not involve especially challenging, subjective, or complex auditor judgment, we believe that it is appropriate for the standard setter to allow for the auditor to determine that there are no critical audit matters. We concur that if the auditor deems that there are no critical audit matters, a statement to that effect in the auditor's report should be required to inform financial statement users of that conclusion.

**9. Is the reproposed documentation requirement clear and appropriate? Why or why not? If not, how should the documentation requirement be formulated?**

We have consistently advocated for robust standards that are in harmony among the various standard setters. While the reproposed documentation requirement for critical audit matters generally appears to be clear and appropriate, the reproposed requirement differs from ISA 701 in that it does not address how to document the rationale for reporting no critical audit matters or instances where a critical audit matter would not be reported in an auditor's report because of circumstances such as a law or regulation precluding the disclosure of the information.

**10. What effect, if any, could the auditor's communication of critical audit matters under the reproposed standard have on private litigation? Would this communication lead to an unwarranted increase in private liability?**

We are not providing comments responding to this question.

**11. Do the changes from the 2013 proposal address concerns that have been raised about private liability? If not, what additional changes would you suggest should be made?**

We are not providing comments responding to this question.

**12. Are there other steps the Board could or should take to address the likelihood of increasing an auditor's or company's potential liability in private litigation through the requirement to communicate critical audit matters in the auditor's report?**

We are not providing comments responding to this question.

**13. Is the reproposed requirement relating to auditor independence clear? Would this information improve investors' and other financial statement users' understanding of the auditor's independence responsibilities? Why or why not?**

We believe that the reproposed requirement relating to auditor independence is clear, and it is generally consistent with ISA 700 (Revised). We are not certain how this would meaningfully improve investors' and other financial statement users' understanding of the auditor's independence responsibilities.

**14. Is it appropriate to limit the required addressees to the shareholders and the board of directors, or equivalents for companies not organized as corporations? Are there other parties to whom the auditor's report should be required to be addressed, and if so, who are they?**

We believe that the current auditor's report address format is appropriate and the PCAOB does not need to add additional addressees.

**15. Is it clear how the auditor's report would be addressed for companies not organized as corporations? Why or why not?**

We are not providing comments responding to this question.

**16. Are the reproposed requirements for information regarding auditor tenure appropriate and clear? Why or why not? Are there any specific circumstances that could affect a firm's ability to include tenure information in the auditor's report which the Board should consider? If so, what are they?**

We believe that including auditor tenure in the audit opinion is unnecessary and may lead to user confusion and potentially inconsistent and inappropriate interpretation of the information. Also, the PCAOB has not clearly indicated what it expects the users to infer from such information. For example, are users expected to infer that an extended tenure diminishes independence or audit quality? Or should users infer that a long tenure is preferable, as presumably the auditor has a better understanding of the history of the issuer? This information is already available by other means, and the PCAOB seems to be adding information to the audit report that is beyond the report's primary purpose. While the additional information may be useful to users, we do not believe that the audit report is the appropriate place for it. Instead, we believe that the PCAOB should coordinate with the Securities and Exchange Commission (SEC) and jointly determine what type of additional information, if any, is critically important to users and determine the best communication method. We believe that if the PCAOB and SEC determine that additional auditor information is critical to users, the proxy statement would be the most appropriate place to communicate it, as investors consider the information in the proxy statement in determining whether to elect, approve, or ratify the principal auditor for the current year.

**17. Is it appropriate to disclose the earliest period the auditor began auditing any company in the group of investment companies even if the auditor has not audited all of the companies in the group for the same period of time? Why or why not?**

Please see our response to question 16.

**18. Should disclosure of auditor tenure be made on Form AP rather than in the auditor's report? Why or why not?**

As indicated above, if the PCAOB and SEC believe that auditor tenure should be disclosed, the more appropriate place would be in the proxy statement. However, if the PCAOB requires the disclosure of auditor tenure, making such disclosure on Form AP would be preferable to doing so in the auditor's report.

**19. Would requiring disclosure of auditor tenure in the auditor's report reduce investor search costs? Why or why not? Should the Board require a specific location for disclosure of auditor tenure in the auditor's report? If so, where and why?**

Please see our response to question 16.

**20. Are the changes to the basic elements of the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor appropriate and clear? Why or why not?**

The changes to the basic elements of the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor appear appropriate and clear. Consistent with AU-C 700 and ISA 700 (Revised), we suggest that the format include discrete sections for management's responsibilities and auditor's responsibilities, instead of including such information in the proposed Basis for Opinion section.

**21. Is the interaction between the communication of critical audit matters and required explanatory paragraphs clear and appropriate? Why or why not?**

We believe that the interaction between the communication of critical audit matters and required explanatory paragraphs may create unnecessary duplication and confusion for the investors and financial statement users. For example, if descriptions of how a critical audit matter was addressed are provided in the required explanatory paragraph, a user may not be able to consistently locate the information when looking at multiple audit reports. Integrating critical audit matters and required explanatory paragraphs can also confuse the impact of some required explanatory paragraphs. For instances where a critical audit matter is also a required explanatory paragraph, we suggest that the PCAOB harmonize its approach with that of the IAASB, which requires a reference in the key audit matter section but waives the requirements to describe the key audit matter and how it was addressed during the audit. The auditor would still have to follow the applicable standards related to reporting the required explanatory paragraph.

**22. Should auditors be permitted to include the critical audit matter communications in the required explanatory paragraph? Would integrating explanatory paragraphs and critical audit matters be helpful to investors? Alternatively, would it decrease the impact of the explanatory paragraph? Why or why not?**

Please see our response to question 21.

**23. Should the Board's requirement to include an explanatory paragraph in the auditor's report when the auditor did not perform an audit of ICFR apply not only if company's management is required to report on ICFR, but also if management is not required to report, such as for investment companies?**

We are not providing comments responding to this question.

**24. Is the interaction between the communication of critical audit matters and emphasis paragraphs clear and appropriate? Why or why not?**

We believe the interaction between the communication of critical audit matters and emphasis paragraphs can create unnecessary duplication and confusion for the investors and financial statement users. Integrating critical audit matters and emphasis paragraphs can also confuse the impact of some emphasis paragraphs. Similar to our response to question 21, we believe that the PCAOB should include a reference in the critical audit matter section but waive the requirement to describe the critical audit matter in the emphasis paragraph.

**25. Would the reproposed requirements for a specific order of certain sections in the auditor's report and for section titles make the auditor's report easier to use? Should the standard allow more or less flexibility in the presentation of the auditor's report?**

The reproposed requirements for a specific order of certain sections in the auditor's report and for section titles will make the information in the auditor's report easier for users to locate. Also to ensure consistent presentation, the PCAOB should be consistent with other standard setters in the ordering and sections titles of the auditor's report.

**26. Are the reproposed amendments to PCAOB standards appropriate? If not, why not? Are there additional amendments related to the reproposed standard that the Board should consider? If so, what are they?**

As noted in our other responses, we do not believe that the reproposed language on auditor tenure and the statement of independence improve audit quality or meaningfully inform users about the audit.

**27. How would investors use the information communicated in critical audit matters? Would the communication of critical audit matters help reduce information asymmetry between investors and management? Investors and the auditor?**

We are not certain how investors would use information communicated in critical audit matters sections, and as noted earlier, we believe that such information may evolve into standard (boilerplate) language.

**28. How would each of the elements of the communication (i.e., identification, principal considerations, audit response, and financial statement reference) be used by investors?**

We are uncertain whether investors and other financial statement users will find the elements of the communication useful. Accordingly, we suggest that if the PCAOB adopts the changes proposed, it should perform periodic look-back analyses to determine whether the standard achieved its objective, including whether the information was ultimately useful to users.

**29. Would critical audit matters be useful in assessing company financial performance? If so, how?**

We are not certain that the audit report would be an appropriate source for information for assessing a company's financial performance. The company's performance data need to be presented in the financial statements and regulatory filings in accordance with the corresponding standards, laws, or regulations. The role of the audit report is to report whether the information in the financial statements is fairly presented in conformity with the accounting framework, in all material respects.

**30. Would critical audit matters be useful in assessing audit quality? If so, how?**

We are not persuaded that requiring auditors to report critical audit matters in the auditor's report will be useful for assessing audit quality. If the PCAOB requires auditors to report critical audit matters, we encourage the PCAOB to conduct periodic look-back analyses to assess whether the critical audit matters resulted in the desired effects and whether this reporting resulted in additional unexpected or unintended consequences.

**31. Would the communication of critical audit matters enhance attention by auditors, audit committees, and management to the matters identified as critical audit matters? If not, why not? Would such changes enhance audit quality, improve management's disclosures, or otherwise be beneficial to investors? Why or why not?**

We do not believe that under current auditing and regulatory standards there is insufficient communication among auditors, audit committees, and management to address matters critical to their audits. Accordingly, we are not persuaded that including critical audit matters would enhance communication among such parties. If the PCAOB adopts the proposal to require critical audit matters, we encourage the PCAOB to perform periodic look-back analyses to determine whether such reporting resulted in the desired effects and whether it resulted in unexpected or unintended consequences.

**32. Would the communication of critical audit matters trigger other changes in behavior? If so, what changes? Would such changes enhance audit quality or otherwise be beneficial to investors? Why or why not?**

As discussed in our December 11, 2013, letter, we believe that critical audit matters may evolve into standard (boilerplate) language. Thus, if the PCAOB requires critical audit matters reporting, we encourage the PCAOB to perform periodic look-back analyses to determine whether such reporting resulted in the desired effects and whether it resulted in unexpected or unintended consequences.

**33. Would the impact of critical audit matters vary depending on the size of the accounting firm? The size of the company? If so, what would the differences be?**

We believe the nature and complexity of the audit is more relevant to the impact of critical audit matters than the size of the accounting firm or the company.

**34. Would the communication of critical audit matters provide a basis on which auditors could differentiate themselves? Why or why not?**

We are not certain that the communication of critical audit matters would provide a basis on which auditors could differentiate themselves, but if the PCAOB adopts the proposal to require critical audit matters, the PCAOB should perform look-back analyses to assess the impact on auditors.

**35. Are there additional academic studies or data the Board should consider? The Board is particularly interested in studies or data that could be used to assess potential benefits and costs.**

We are not providing comments responding to this question.

**36. Are there additional benefits, costs or unintended consequences, or other economic considerations, such as competitive effects, associated with critical audit matters or the additional improvements to the auditor's report that the Board should consider? If so, what are they?**

We are not providing comments responding to this question.

**37. Is it appropriate for the communication of critical audit matters not to be required for the audits of brokers and dealers reporting under Exchange Act Rule 17a-5, investment companies other than BDCs, and benefit plans? Why or why not?**

We are not providing comments responding to this question.

**38. For these specific types of entities, are there situations in which critical audit matters would be useful to investors? If so, what are these situations?**

We are not providing comments responding to this question.

**39. While not requiring communication of critical audit matters in the audits of these specific entities, should the Board encourage voluntary communication? Why or why not?**

We are not providing comments responding to this question.

**40. Should the requirements related to critical audit matters not apply to the audits of other types of companies, such as shell companies? Why or why not?**

We are not providing comments responding to this question.

**41. Should the reproposed requirement regarding communication of critical audit matters be applicable for the audits of EGCs? Should the other elements of the reproposed standard and amendments be applicable for the audits of EGCs? Should the reproposed requirements be modified to make their application to EGCs more appropriate? Would excluding audits of EGCs benefit or harm EGCs or their investors? Why or why not?**

We are not providing comments responding to this question.

**42. If the Board determines not to apply all or part of the reproposed standard and amendments to the audits of EGCs, would there be any unintended consequences if auditors complied voluntarily? If so, what are they?**

We are not providing comments responding to this question.

**43. Are there any other benefits, costs or considerations related to promoting efficiency, competition, and capital formation that the Board should take into account with respect to applying the reproposed standard to audits of EGCs?**

We are not providing comments responding to this question.

**44. If the reproposed standard is adopted by the Board and approved by the SEC, how much time would auditors need to implement it? Should the Board consider a delayed compliance date for the reproposed standard, or for certain parts of the reproposed standard, for audits of smaller companies? If so, what criterion should the Board use to classify companies, for example smaller reporting companies? Are there criteria other than the size of the company that the Board should consider for a delayed compliance date?**

We believe that the PCAOB should consider an implementation strategy that phases in companies by size. This approach may reduce implementation costs to companies and auditors, as lessons and accepted practices will emerge from the large company audits.

**RE: PCAOB Rulemaking Docket Matter No. 034**

Dear Madam Secretary:

The Office of the Investor Advocate[1] at the U.S. Securities and Exchange Commission ("Commission" or "SEC") monitors developments in accounting and auditing, and we strive to ensure that the interests of investors are appropriately considered as rules are modified. We appreciate this opportunity to provide comments in regard to the reproposed standard, The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion.[2]

In summary, we support PCAOB's reproposed standard, which we believe advances the Board's statutory mandate to "protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports."[3] In particular, we strongly support the reproposed requirement for the audit report to include communication of critical audit matters ("CAMs") arising from the audit that required especially challenging, subjective, or complex auditor judgment, and of how the auditor responded to those matters. We also support the proposed additional improvements to the Auditor's Report, including a requirement for a statement regarding the auditor's tenure, and measures to improve the form of the auditor's report. We believe these improvements will enhance the usability of audit reports for investors and other users.

## Why Critical Audit Matters (CAMs) Are Needed

Investors and others have often argued that the current reporting model should be expanded to provide information specific to the audit of the company's financial statements. One investor organization has

[1] This letter expresses solely the views of the Investor Advocate. It does not necessarily reflect the views of the Commission, the Commissioners, or staff of the Commission, and the Commission disclaims responsibility for this letter and all analyses, findings, and conclusions contained herein.
[2] PCAOB Rulemaking Docket Matter No. 034, The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, (May 11, 2016), https://pcaobus.org/Rulemaking/Docket034/Release-2016-003-ARM.pdf (hereinafter "Reproposal Release").
[3] Section 101(a) of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley").

described the standard reporting model as "bare-bones" and "seriously outdated."[4] We agree, and we believe that the inclusion of critical audit matters (CAMs) in auditor reports will improve their communication value and make them more usable for investors.

Calls to enhance the auditor's report are not new. In 2008, the U.S. Department of the Treasury Advisory Committee on the Auditing Profession ("ACAP") recommended improving the content of the auditor's report beyond the current pass/fail model to include a more relevant discussion about the audit of the financial statements.[5] ACAP noted that greater complexity in financial reporting, including the increasing complexity of global business operations and growing use of judgments and estimates, supported improvements to the auditor's report. Moreover, as far back as 1978, the Commission on Auditors' Responsibilities (Cohen Commission) made an observation that still rings true today:

> For the largest corporations in the country, an audit may involve scores of auditors and tens of thousands of hours of work for which the client may pay millions of dollars. Nevertheless, the auditor's standard report compresses that considerable expenditure of skilled effort into a relatively few words and paragraphs.[6]

The current pass-fail model has persisted for more than 70 years. The longevity of the standard reporting model, which arguably reflects the merits of the pass-fail model, nonetheless stands in contrast to the changes that have coursed through financial markets and financial reporting over the past decade and that continue to do so. These changes include the growing use of complex accounting estimates and fair value measurements, which we believe contributes to the information asymmetry between investors and management. Forthcoming fundamental accounting changes, including those involving the bedrock of revenue recognition, will make it even more imperative for investors to understand management's judgment. The due deliberation in which the PCAOB has been engaged for more than five years clearly makes the case for the proposed improvements, in particular in the communication of critical audit matters.

In this still-evolving environment of financial complexity, the disclosure of CAMs holds the promise of contributing to investors' understanding by communicating the most challenging, subjective, or complex auditor judgments on material issues that auditors face. We don't expect CAMs, in themselves, to provide investors with all the information they need in the face of growing financial complexity. We do, however, believe that the communication of critical audit matters will add to the total mix of information, contributing to the ability of investors and others to analyze companies, form a multifaceted understanding of them, and make informed investment decisions.

---

[4] CFA Institute, Comment Letter on PCAOB's 2013 Proposal, (Dec. 30, 2013), https://pcaobus.org/Rulemaking/Docket034/232b_CFA_Institute.pdf.
[5] ACAP, Final Report of the Advisory Committee on the Auditing Profession to the U.S. Department of the Treasury (Oct. 6, 2008), at VII:17.
[6] As quoted in ACAP, Final Report of the Advisory Committee on the Auditing Profession to the U.S. Department of the Treasury (Oct. 6, 2008), at VII:15.

As the record assembled by the PCAOB makes clear, investors generally support the inclusion of CAMs to enhance auditor reports. The Reproposal Release (Part VI, Economic Considerations, in particular) lays out a compelling case as to why the proposed improvements will reduce informational asymmetries and add to the total mix of information available to investors.

Investors want to hear directly from the auditor. As the Reproposal Release observes, "Because the auditor is required to be independent, information provided by the auditor may be viewed by investors as having greater credibility."[7] Surveys of professional investors also confirm "that additional information from the professional auditor in the [Standard Auditor Report] is of much higher interest and value to an investor in addition to hearing more from the audit committee."[8] Certain academic research, as well as comment letters from knowledgeable investors, further reiterates this point.[9]

Investors can be expected to use CAMs in a wide variety of ways, reflecting the rich diversity of investors and their experience, resources, strategies and other attributes. Let me suggest three examples of how investors may use CAMs.

1. CAM disclosures can serve to focus users' attention on key financial reporting issues and identify areas that deserve more attention. For example, an investor may find that a set of CAMs confirms his or her analysis of key audit issues, or, alternatively, may surprise the investor and point the way for further analysis. In this way, CAMs can boost the efficiency of investors and others in the consumption of financial information.

2. The disclosures can facilitate a more focused and richer dialogue between investors and the company. Even without providing original information about the company, the communication of CAMs can highlight areas that investor may wish to emphasize in their engagement with a company. If a critical audit matter is important enough to merit a conversation between the auditor and the audit committee, investors may determine that it could also merit discussion in their conversations with management.

3. The disclosures offer important information that investors can use in making proxy voting decisions, including ratification of auditors.

We also believe that CAMs may have a salutary effect on the behavior of auditors, company management, corporate boards and their audit committees. By heightening the focus on critical audit matters, the communication of CAMs may provide incentives for preparers, corporate managers and audit committees to provide better disclosures, adopt more widely accepted financial reporting approaches, and enhance audit quality. That's a win-win for investors and companies alike – as well for our capital markets and economy at large. All will benefit if the communication of CAMs enhances the

[7] Rulemaking Docket Matter No. 034, Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments ("Docket 034").
[8] CFA Institute, *supra* note 4 at 3.
[9] *See generally*, Brant E. Christensen, Steven M. Glover, and Christopher J. Wolfe, Do Critical Audit Matter Paragraphs in the Audit Report Change Nonprofessional Investors' Decision to Invest? 33 Auditing: A Journal of Practice & Theory 71, 71–93 (2014); Jack T. Ciesielski, Comment Letter on Reproposal Release (July 25, 2016), https://pcaobus.org/Rulemaking/Docket034/8c_JTCiesielski.pdf.

quality of audit information and thus ultimately helps to reduce the cost of capital and raise the efficiency of capital allocation.[10]

**Disclosure of Auditor Tenure: A Question of Where, not Whether**

In addition to the disclosure of CAMS, we strongly support requirements for public disclosure of auditor tenure. There are some differences of opinion about who is best positioned to make the disclosure (the auditor, company management, or the board audit committee) and where that disclosure should be made (in the auditor's report, on Form AP, in the audit committee's report, in the company's proxy statement, or elsewhere). However, we believe these questions are secondary, and that the more important and more immediate concern is the need for the disclosure *somewhere* that is easily accessible. In the absence of such a requirement by the SEC, the PCAOB should move forward with its proposal to require disclosure of auditor tenure.

In its Concept Release on Possible Revisions to Audit Committee Disclosures, the SEC asks whether information on auditor tenure should be required in the audit committee report.[11] At least one institutional investor has favored disclosure in the proxy or elsewhere in a Form 10-K.[12] The CFA Institute, meanwhile, has expressed support for including the tenure information in the auditor's report in addition to EDGAR.[13]

Ultimately, we believe that the Commission should decide these questions. We hasten to add, however, that the worst outcome would be for *neither* the PCAOB or the Commission to adopt a disclosure requirement. Therefore, we recommend that the PCAOB take a two-pronged approach. First, the PCAOB should adopt a requirement for auditor tenure disclosure (either in the audit report or on Form AP). Second, we suggest that the PCAOB consider including a contingent sunset clause, such that the required disclosure in the audit report or on Form AP would expire if and when the Commission adopted a requirement for audit tenure disclosure in the audit committee report, proxy statement, or other document.

**Enhancing Usability**

We commend the PCAOB for including several measures to enhance the usability of auditor reports. The reproposed standard would require the "Opinion on the Financial Statements" section to be the first section of the auditor's report, immediately followed by the "Basis for Opinion" section. The reproposed standard would also require titles for all sections of the auditor's report to provide consistency and assist users in identifying the individual sections of the auditor's report. These measures are relatively modest, but they would be a positive step for investors because they would enhance the clarity and comparability of disclosures.

[12] Blackrock Comment Letter on Reproposal Release, (Oct. 30, 2013) https://pcaobus.org/Rulemaking/Docket034/008b_Blackrock.pdf.
[13] CFA Institute, *supra* note 4 at 8.

**Materiality Component**

In response to earlier criticisms, the Board narrowed the scope of the CAMs disclosure in several ways, including adding a materiality component to the definition of critical audit matter.[14] Some investors have argued that the PCAOB pulled back too far in its adjustments. For example, the Council of Institutional Investors ("CII") argued in its comment letter that the modified definition "is too narrow and unnecessarily excludes relevant information from investors."[15] Another investor, in urging the Board to eliminate the materiality requirement for CAMs, argues: "Many cases of material accounting problems or fraud started as 'immaterial' to the financial statement and built over time.…It is a serious deficiency in the proposal if investors would only hear about critical audit matters after suffering large losses which is the current disclosure paradigm."[16]

These thoughtful investor criticisms of the Reproposal merit serious consideration. Despite this shortcoming, however, the reproposed standard represents a major improvement to the auditor model, and I encourage you to move forward swiftly to adopt these important reforms. And, if a materiality standard is ultimately adopted, the PCAOB should carefully monitor the implementation of the new standard to ensure that it does not create a significant disclosure gap.

**Audits of Emerging Growth Companies (EGCs)**

As the Reproposal makes clear, the question of whether to apply critical audit matter requirements to the audits of EGCs is necessarily two-pronged. First, this is a policy question, which the PCAOB should judge on the merits of the issue. Second, the SEC will need to make a legal determination on whether such a requirement with respect to the audits of EGCs would accord with certain provisions of the Jumpstart Our Business Startups ("JOBS") Act.[17]

From a policy perspective, we strongly believe that the proposed PCAOB standard should apply critical audit matter requirements to the audits of EGCs. The Reproposal Release itself makes a compelling argument:

---

[14] Reproposal Release, *supra* note 2 at 3 ("The reproposal narrows the requirements in several ways: by limiting the source of potential critical audit matters to matters communicated or required to be communicated to the audit committee; adding a materiality component to the definition of critical audit matter; narrowing the definition to only those matters that involved especially challenging, subjective, or complex auditor judgment; and revising the related documentation requirement").
[15] Council of Institutional Investors, Comment letter on Reproposal Release (July 27, 2016), https://pcaobus.org/Rulemaking/Docket034/010c_CII.pdf.
[16] Elizabeth F. Mooney and Dane Mott, The Capital Group Companies, Inc., Comment Letter on Reproposal Release (June 24, 2016). https://pcaobus.org/Rulemaking/Docket034/03c_Capital.pdf.
[17] Reproposal Release, *supra* note 2 at 108 (As explained in the Release, Section 104 of the JOBS Act provides that "[a]ny rules of the Board requiring . . . a supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the financial statements of the issuer (auditor discussion and analysis) shall not apply to an audit of an emerging growth company. Section 104 further provides that any other rules adopted by the Board subsequent to April 5, 2012, do not apply to the audits of EGCs unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors, and whether the action will promote efficiency, competition, and capital formation.")

> A majority of EGCs continue to be smaller public companies that are generally new to the SEC reporting process. This suggests that there is less information available to investors regarding such companies (a higher degree of information asymmetry) relative to the broader population of public companies because, in general, investors are less informed about companies that are smaller and newer. For example, smaller companies have very little, if any, analyst coverage which reduces the amount of information made available to financial statement users and therefore makes markets less efficient.[18]

This heightened asymmetry of information makes us wary of the various regulatory attempts to further reduce information by waiving disclosure requirements for small or emerging companies in the name of "scaling." Specifically with respect to CAMs, we believe that application of the communication requirements would result in even greater benefits for EGC investors than for investors in the broader population of operating companies. Moreover, these benefits would likely accrue not only to investors, but also to EGCs themselves. Both the companies and investors will benefit from such benefits as increased analyst coverage, higher trading volume, and lower cost of capital for EGCs.[19]

We recommend that the PCAOB adopt the proposed standard, and thereby advance the legal question to the SEC, which would then determine whether a CAMs requirement could be applied to audits of EGCs without running afoul of provisions in the JOBS Act. Moreover, to prepare for any outcome of that determination, we recommend that the PCAOB adopt language encouraging auditors, on a voluntary basis, to include CAM communications in the audit reports on EGCs.

**Adopt and Monitor**

We strongly support final adoption of the Reproposal standards, which will represent a major change for the auditor reporting model and hold the promise of important benefits for investors and capital markets. Given the scope of the changes to the auditor's reporting model, it will be especially important for the Board – along with the Commission, investors, analysts, preparers, company management and boards, and others – to monitor the implementation of the new rule. We offer three examples of the areas in which the proposed standard, once adopted, should be monitored.

First, some investors and other commenters have expressed concerns lest the new requirements merely result in a checklist approach and boilerplate, standardized language. Such an outcome would make it difficult for investors and other users to distinguish the critical audit matters involving one company from another's. The reproposed standard attempts to address this risk by clarifying that the auditor is required to describe only the principal considerations that led the auditor to determine critical audit matters, and by emphasizing that the communication should be tailored to the audit to reflect the specific circumstances of the matter.[20] However, the new standard, if adopted, should be monitored to make

---

[18] Reproposal Release, *supra* note 2 at 108.
[19] Reproposal Release, *supra* note 2 at 73-74 (As the Release notes, one study found a significant increase in trading volume particularly for companies about which there is less information available to investors as measured by lower analyst coverage).
[20] Reproposal Release, *supra* note 2 at 31 ("In response to comments, the reproposed standard clarifies that the auditor is required to describe only the principal considerations that led the auditor to determine that the matter is a critical audit matter.

sure that the communication of CAMs does not devolve into mere boilerplate language, but instead provides the auditor's unique perspective on critical accounting matters.

Second, monitoring should assess the impact on investor understanding of the auditor's responsibilities and the audit report. Some have expressed concerns that investors and other users might mistakenly perceive an expanded auditor's report as providing a qualified or piecemeal opinion. The reproposed standard specifically addresses these concerns by proscribing certain language in the auditor's report,[21] but its effectiveness should be evaluated over time. The standard, if adopted and implemented, should be monitored to confirm that the expanded audit report does not cause investor confusion but, on the contrary, enhances their understanding of critical audit matters and the financial statements of issuers.

Third, and more broadly, the PCAOB and others should continue to monitor how investors actually use the audit report and other financial information. As noted above, finance and financial reporting continues to grow in complexity. At the same time, technological advances in the delivery of financial information have facilitated the use of data aggregation and data analytics by investors and other users of financial information. We should monitor how investors use financial reporting and how their usage may evolve in the face of technological change.

Thank you, again, for the opportunity to submit our comments regarding this important matter. Should you have any questions, please do not hesitate to contact me or Stephen Deane, who handles audit and accounting matters on my staff, at (202) 551-3302.

Sincerely,

Rick A. Fleming
Investor Advocate

---

The auditor's description of the principal considerations should be specific to the circumstances and provide a clear, concise, and understandable discussion of why the matter involved especially challenging, subjective, or complex auditor judgment. It is expected that the communication would be tailored to the audit to avoid standardized language and to reflect the specific circumstances of the matter").

[21] Reproposal Release, *supra* note 2 at A1-9 ("Language that could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for the critical audit matters or the auditor's opinion on the financial statements is not appropriate and may not be used. The language used to communicate a critical audit matter should not imply that the auditor is providing a separate opinion on the critical audit matter or on the accounts or disclosures to which they relate").

**Re: Rulemaking Docket Matter No. 034 – Proposed Auditing Standard – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and Related Amendments to PCAOB Standards**

Dear Members of the Board:

This letter is submitted on behalf of UnitedHealth Group Incorporated ("UnitedHealth Group" or the "Company"), a diversified health and well-being company dedicated to helping people live healthier lives and making the health system work better for everyone. UnitedHealth Group employs more than 200,000 individuals, is a Fortune 10 company with annual revenues expected to exceed $180 billion in 2016 and a market capitalization in excess of $134 billion as of June 30, 2016. We report financial information under the generally accepted accounting principles in the United States ("U.S. GAAP"), and we file public financial statements in accordance with the regulations of the United States Securities and Exchange Commission (the "SEC").

We appreciate the opportunity to provide our comments in response to the Public Company Accounting Oversight Board's ("PCAOB" or the "Board") Rulemaking Docket Matter No. 034 as discussed in PCAOB Release No. 2016-03 dated May 11, 2016 (the "Proposed Standard"). The Company, together with the other four leading publicly-traded managed care companies in the United States (Aetna, Inc., CIGNA Corporation, Humana Inc., and Anthem, Inc.), commented on the PCAOB's concept release related to Rulemaking Docket No. 034 (the "Concept Release") in our letter dated September 28, 2011 ("2011 Joint Comment Letter").

We acknowledge the PCAOB's objective to improve the relevance and usefulness of the auditor's report, and do not object to certain proposed enhancements to the auditor's report that we would consider minor, such as standardizing the form of the report. However, many of the concerns expressed in our 2011 Joint Comment Letter continue to exist in the Proposed Standard with respect to critical audit matters ("CAMs") as determined by the auditor. Additionally, we do not agree auditor tenure should be added as a basic element of the auditor's report.

UNITEDHEALTH GROUP®

**Critical Audit Matters**

In our 2011 Joint Comment Letter on the Concept Release, many concerns were raised related to an Auditor's Discussion and Analysis ("AD&A"). These concerns continue to exist in the Proposed Standard in the form of CAMs, which would require the auditor to provide audit-specific information about challenging, subjective, or complex aspects of the audit as they relate to the relevant financial statement accounts and disclosures.

Under the current distinct frameworks that govern financial reporting and auditing, the roles of all parties involved are clear. *Companies* are responsible for compiling and disclosing financial information in accordance with U.S. GAAP and SEC reporting requirements for the purpose of providing users of financial statements with relevant, useful information about our businesses. *Auditors* are responsible for forming independent, informed opinions about whether or not we have fulfilled that responsibility. Finally, *audit committees and boards of directors* are responsible for active and independent oversight of management regarding the adequacy of internal controls, integrity of the financial statements, compliance with legal and regulatory requirements, and risk management; and a significant component of this role involves dialog and discussion with the auditors regarding the results of their audit procedures.

With respect to CAMs, our primary concern is that the addition of these to an auditor's report could alter the balance of duties within this framework by partially shifting responsibilities for reporting to our auditors. Additionally, enacting the proposed changes could have the effect of implying, in a subtle way, that audit committees are not capable of, or effective in, carrying out the responsibilities traditionally reserved for them. We believe that the Board's intention is to find a way to *supplement* our existing financial reporting; but in practice we believe that the proposed changes would have the effect of *diluting*, and potentially *supplanting* our own reporting to varying degrees to the detriment of users of our financial statements.

We do not believe that implementation of CAMs is appropriate as contemplated in the Proposed Standard. CAMs could undermine the role of the audit committee, which is independent from management and already represents the shareholders in its oversight of and direct communications with the auditors. Though we recognize CAMs would focus on challenging, subjective or complex areas of the audit, we believe it would be rare in practice for those matters to differ from critical accounting estimates which are already required to be disclosed by management. Furthermore, we believe CAMs would ultimately provide little incremental value to users of financial statements since, over time, "boilerplate" language would be unavoidable and the information provided in such reports would likely gravitate towards the lowest level of acceptable disclosure for the purpose of minimizing legal exposure. At the same time, auditors would face significant risks by deviating in any meaningful way from the statements and commentary provided by management (or by choosing to highlight different areas), so their reporting would most likely mirror the

UNITEDHEALTH GROUP®

Sr. Vice President and Chief Accounting Officer
UnitedHealth Group Incorporated
9900 Bren Road East, Minnetonka, MN 55343
Tel (952) 936-1875

company's reporting. The creation of duplicative disclosures does not add value or provide decision-useful information to our investors.

Though we believe duplication is most likely to occur, there is also risk of conflicting information being disclosed in the CAMs, or the CAMs disclosing competitively sensitive information. The Proposed Standard includes an explanatory note to address concerns about the auditor potentially becoming the source of original information, however, does not completely eliminate our concern. As previously stated, we believe financial statements, including disclosures of challenging, subjective, and complex estimates and areas are the responsibility of management. We believe it would be very rare for an auditor to deem something a CAM due to auditor judgment, which didn't first require management judgment. Auditors may not be consistent in identifying CAMs, and could identify inappropriate CAMs, for example based on industry benchmarking exercises. Exercising unbiased professional judgment may be difficult in practice, for legal exposure reasons, which could result in over reporting of CAMs, including CAMs related to areas not disclosed by management. Any unreconciled 'inconsistent or competing information' could be a source of great tension and disagreement between management, audit committees, and auditors and could lead to breakdowns in communication that would diminish the quality of financial reporting and auditing as a whole.

While certain investors may demand more transparent disclosure from public companies, we believe that reforms in that area should appropriately come from the standard-setters best positioned to enact them: the Financial Accounting Standards Board ("FASB") and the SEC.

Finally, the Proposed Standard requires auditors to describe how a CAM was addressed in an audit. We do not believe an auditor's procedures would be useful to users of the financial statements, and would also undermine the responsibilities of the audit committee. Publicly disclosing audit procedures would expose auditors to scrutiny from the public on whether their procedures were sufficient. A user of the financial statements does not necessarily have enough insight into a company or knowledge of auditing procedures to determine what procedures are appropriate given the facts and circumstances of a given company. The sufficiency of audit procedures should be determined through an auditor following generally accepted auditing standards, auditor judgment, an audit firm's quality control procedures, as well as through regulation by the PCAOB, among other things. The addition of these disclosures could result in increased audit procedures by the auditor to ensure that any and all possible procedures are performed, which could help mitigate auditor liability.

Audit risk is conceptually different than business risk, and not all of the risks businesses face impact the scope and conduct of an audit. More reporting on how and when specific audit procedures were conducted will not likely change how a strategic investor assesses the future prospects of our businesses, and will instead increase audit costs with little to no corresponding benefits to the investing community.

UNITEDHEALTH GROUP®

**<u>Auditor Tenure</u>**

As further discussed in our comment letter to the SEC dated September 8, 2015 on SEC Release No. 33-9862 File No. S7-13-15, UnitedHealth Group does not believe disclosure about auditor tenure is necessary or effective. Requiring such disclosure implies there is a correlation between the length of an independent auditor's engagement and audit quality. However, as the Proposed Standard acknowledges, studies that have examined the role of auditor tenure on audit quality have reached mixed conclusions. We believe this to be particularly true in our complex and highly regulated industry. What matters most for companies such as ours is having a well-staffed and sufficient number of auditors with a deep understanding of the technical accounting principles applicable to our industry and our business.

UnitedHealth Group routinely chooses to disclose certain information in our proxy materials or other publicly available information that is not required under regulatory standards. Though we do not believe it should be a requirement within an auditor's report, UnitedHealth Group chooses to disclose auditor tenure within our audit committee disclosures in the proxy materials. We routinely engage with shareholders to determine which disclosures investors are interested in receiving, and take this feedback into consideration when preparing our disclosures. We believe auditor tenure should be a voluntary disclosure to be performed by the company and not the auditors, based on a company's unique facts and circumstances and investor base. We believe this information should be optionally included within other publicly available information, such as the proxy materials, where a company is able to further elaborate on auditor tenure such that inappropriate conclusions are not drawn by users.

**<u>Summary and Conclusion</u>**

We recognize the PCAOB's objective to improve the relevance and usefulness of the auditor's report, however, believe the provisions regarding CAMs and auditor tenure do not achieve this objective. As we and other commenters have already suggested, the proposed changes regarding CAMs could potentially undermine the responsibilities and credibility of management teams and audit committees; adversely affect relationships among auditors, audit committees, and our management teams; and increase auditor legal exposure (which therefore increases costs to companies and investors with little to no added benefits). These are all significant potential effects that we strongly urge the Board to avoid.

Washington, DC 20006-2803

Rulemaking Docket No. 34 - PCAOB Release No. 2016-003:
Proposed Auditing Standard—The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards

Dear Secretary:

My comments and responses to certain of the questions asked in the above-mentioned proposed auditing standard (the "reproposal") are set out below. For convenience, this comment letter uses the term "investor" to include collectively every type of investor, shareholder, creditor, analyst, and other financial statement user including stakeholders.

## Critical Audit Matters ("CAMs")

General Comments

I am opposed to the inclusion of Critical Audit Matters in the auditor's report for the reasons outlined in this letter.

It will be argued by some respondents to the reproposal that any disclosure by the auditor would be informative and useful, add value, enhance audit quality, reduce asymmetrical information between management and investors, make the audit report more relevant and credible, and consequently help investors to incorporate whatever information the auditor deems appropriate to provide in the form of CAMs into their investment strategies, voting considerations and lending decisions.

Nevertheless, the reproposal does not support by compelling and reliable evidence that these objectives will be met. Based on the unpersuasive evidence in the reproposal, Critical Audit Matters will –

- not be "valuable" or "useful" to investors (as some respondents to the reproposal would hope),
- not provide investors with any real "insight into the extent and appropriateness of the auditor's work,"[1]
- increase (not decrease) information asymmetry between the auditors and investors,

[1] Page 79.

- run many pages and overwhelm other information in the audit report (for some industries), and
- be redundant, repeating information that has already been disclosed by management.

Investors always want more data and more information, especially when it is free. However, every public company will bear some portion of the cost of that information, which cost will be passed on to them by their auditors, and the auditors will in turn reap the monetary benefits of the reproposed CAM reporting. The reproposal says that the PCAOB staff found that the average change in audit fees was an increase of approximately 5 percent.[2] For 2014, the average audit fees for 7,071 SEC filing companies were $1,533,438, totaling $10,842,940,098 of audit fees.[3] Using the 5 percent cited in the reproposal results in an increase in recurring total audit fees of approximately $542 million (aka a half billion dollars each year), an average of $76,672 for each of the 7,071 SEC filing companies.

The reproposal has not established that the benefits (as yet unknown and unproven) exceed the costs to be borne by every public company.

By definition, a CAM "is not expected to provide information about the company that has not been made publicly available by the company."[4] Nevertheless, the reproposal weakly argues that CAMs are important to investors because the auditors can "more effectively" convey company information than management.

> The Board believes that expanding the auditor's report to provide information about especially challenging, subjective, or complex auditor judgments should help investors and other financial statement users "consume" the information presented in management's financial statements more effectively.[5] (Emphasis added.)

In addition, the reproposal points out that there may be matters that are relevant or important to investors, but may not be reported as a CAM.

> With a materiality component, however, matters that are not material to accounts or disclosures in the financial statements but may be important to investors would not be included as critical audit matters in the auditor's report.[6]

Since auditors would not be required to present information about the company that has not been made publicly available,[7] it then follows that if investors really want useful and valuable information, they should read firsthand the registrant's entire Form 10-K, including MD&A and the financial statements, then they would immediately have the data, comparisons, trend

---

[2] Page 83. The 5 percent pertains to the expanded auditor reporting in the United Kingdom.

[6] Page 95.

[7] See discussion of the "unless" clause in answer to Question 6.

information, business, operations, prospects, contingencies, the entity's "critical accounting policies" and "significant accounting policies," and much more.

The information contained in "critical accounting policies and estimates" and "significant accounting policies" includes the entire universe of accounts and disclosures required to be included in a CAM, and all the information investors need to understand the registrant's significant risks, management's judgments, operating trends and potential variability of a company's earnings, cash flow and more.

I do not believe that investors fully use the information they already have in the annual report on Form 10-K, interim reports on Form 10-Q, and other SEC filings – information much more usable and valuable than the limited amount of information that investors could glean from any CAM reported by the auditor.

Critical Accounting Policies

As mentioned, investors reading the SEC filings would be aware of the registrants "critical accounting policies." The SEC requires that registrants include in their MD&A a full explanation of their critical accounting policies, including "the judgments and uncertainties affecting the application of those policies, and the likelihood that materially different amounts would be reported under different conditions or using different assumptions."[8] The SEC advises that in the MD&A disclosure of critical accounting policies and estimates "companies should consider whether they have made accounting estimates or assumptions where:

> the nature of the estimates or assumptions is material due to the levels of subjectivity and judgment necessary to account for highly uncertain matters or the susceptibility of such matters to change; and
>
> the impact of the estimates and assumptions on financial condition or operating performance is material."[9]

The reproposal defines CAMs (in part) as [audit matters that] "involved especially challenging, subjective, or complex auditor judgment." The definitions of "critical accounting policies"[10] and CAMs are fundamentally the same, the only difference is that auditor's must report on those accounts or disclosures that were particularly "hard to audit" for any number subjective reasons and disclose some (but not all) of the audit procedures used to audit the CAM.

Significant Accounting Policies

As said, investors reading the SEC filings would be aware of the registrants "significant accounting policies." Hence, an investor reading the notes to the financial statements will learn, in great detail, the "significant accounting policies" followed by the registrant.

---

8 See Cautionary Advice Regarding Disclosure About Critical Accounting Policies, SEC Release 33-8040 and Interpretation: Commission Guidance Regarding Management's Discussion and Analysis of Financial Condition and Results of Operations, SEC Release 33-8350, FR 72.

9 SEC Release 33-8350, FR 72.

10 See paragraph .12, Item 2, and Appendix A to AS 1301 and Question 1.

FASB Topic 235, *Notes to Financial Statements*, requires the disclosure of all significant accounting policies. This ASC states "… a description of all significant accounting policies of the entity shall be included as an integral part of the financial statements.[11] ASC Topic 235 then defines accounting policies disclosure as –

> The accounting policies of an entity are the specific accounting principles and the methods of applying those principles that are judged by the management of the entity to be the most appropriate in the circumstances to present fairly financial position, cash flows, and results of operations in accordance with generally accepted accounting principles (GAAP) and that, accordingly, have been adopted for preparing the financial statements.[12]

IAASBs Key Audit Matters ("KAMs")

There are those who believe that convergence with the IAASBs KAM disclosure is a desirable goal. However, while somewhat similar, there are very significant differences between the IAASBs KAM disclosures and the reproposed CAM disclosures.

ISA 701 defines Key Audit Matters as "[t]hose matters that, in the auditor's professional judgment, were of most significance in the audit of the financial statements of the current period. Key audit matters are selected from matters communicated with those charged with governance."[13]

The definitions of a KAM and a CAM do not align in many respects including the terminology used and the materiality (vs. significance) of the audit matter. Thus, audit reports using the ISAs KAM standard will contain significantly different information than the reproposed CAM standard.

Exhibit 2 contains a small sample from a number of audit reports of how the auditor addressed specific company KAMs. This is deadly reading, and confirmation of how useless these descriptions of the audit procedures undertaken by the auditor will be for investors.

Information Asymmetry

The reproposal states that "in economic terms, an expanded auditor's report should reduce the information asymmetry between investors and auditors, which should in turn reduce the information asymmetry between investors and management about the company's financial performance."[14]

While at first this argument sounds appealing, the reproposal does not provide any evidence that the reporting of a CAM will in fact close the information gap between auditors and investors, and therefore in turn reduce asymmetric information between management and investors.

---

[11] ASC 235-10-50-1.

[12] ASC 235-10-50-3.

[13] Paragraph .08 of ISA 701, *Communicating Key Audit Matters in the Independent Auditor's Report*.

[14] Page 64.

The argument that CAM reporting will reduce the asymmetric information between the management and investors is wholly conjectural and there is no basis for the assertion. How does the reporting of audit procedures decrease the "information asymmetry" between the management and an investor? How can knowing that certain audit procedures were applied to an account or disclosure increase an investor's knowledge of a company's financial performance? The reproposal provides no answers to these "how" questions.

Useful Information?

The reproposal itself questions the usefulness of CAM reporting:

> Overall, the results from research analyzing whether the information provided in expanded auditor reporting is useful to investors are limited. Collectively the results are ambiguous as to whether the expanded auditors' reports have provided investors with new information beyond what is contained in the financial statements. The Board will continue to monitor academic research in this area during the rulemaking process.[15]

On the other hand, in making the case for the reporting CAMs, the reproposal observes:

> The Board believes that the communication of critical audit matters should help focus investors' and other financial statement users' attention on these matters by making them more prominent, which could facilitate their analysis of the financial statements and other relevant disclosures.[16]

Hence, it is possible that the reporting of CAMs could help investors, but the reproposal contains no concrete evidence that it would, or just how investors will use this information in their analysis of financial statements. The reproposal continues –

> The communication of critical audit matters in the auditor's report would also help investors and analysts who were interested in doing so engage management with targeted questions about these issues.

Auditors have not historically been engaged by management to act as a primary stimulus of investors to ask "targeted questions" of management regarding information in the auditor's report. In my view, these "targeted questions" inspired by CAM reporting will be a negative by-product of CAM reporting.

Still more from the reproposal (footnotes omitted):

> The communication of critical audit matters may also assist investors in assessing the credibility of the financial statements and, in at least some instances, audit quality. For example, the audit matter may help investors understand the types of issues that the auditor grappled with in addressing these challenging, subjective, or complex areas of the audit, which may allow a more nuanced understanding of the related financial statement accounts and disclosures. Furthermore, investors have stated that having the auditor, a third party expert, rather than the company provide this type

[15] Page 74.

[16] Page 64.

> of information would be of added value to investment decision making. Because the auditor is required to be independent, information provided by the auditor may be viewed by investors as having greater credibility.[17] (Emphasis added.)

The basis for these claims is very weak and speculative: "may assist," "may help," "may allow," "may be viewed" tells the reader that there is also a possibility that CAMs may do none of these things and that the Board just does not know enough about the value and utility of CAM reporting.

**Question: 1. Is the definition of "critical audit matter" appropriate for purposes of achieving the Board's objective of providing relevant and useful information in the auditor's report for investors and other financial statement users?**

When first read the definition seems clear enough, but when examined more closely, the definition is not as clear as it could be. To eliminate any ambiguity, I believe that "involved especially challenging, subjective, or complex auditor judgment" should be read as "involved any combination of especially challenging, subjective or complex auditor judgment."

What Do the Words Really Mean?

Almost every word in the definition has an element of uncertainty and will mean different things to different auditors. The usual definitions of some of the words used in the definition follow:

- Especially: "to a great extent; very much." How much is very much?
- Challenging: "testing one's abilities; demanding." Obviously, the abilities and judgments of auditors differ.
- Subjective: "personal feelings, tastes, or opinions; existing in the mind; open to interpretation." What is the level and degree of objectivity? How much of auditor judgment is subjective?
- Complex: "consisting of many different and connected parts." This word only adds to the difficulty of having a uniform understanding of the definition.
- Judgment: "the ability to make considered decisions or come to sensible conclusion."
- Lastly, what is the meaning of the phrase "complex auditor judgment"? This is not a term of art, and as far as I could determine it appears nowhere in the PCAOB, AICPA, FASB or SEC literature.

AS 1301 (*Communications with Audit Committees*) defines "critical accounting policies and practices" as –

> … a company's accounting policies and practices that are both most important to the portrayal of the company's financial condition and results, and require management's most difficult, subjective, or complex judgments, often as a result of

[17] Pages 64-65.

> the need to make estimates about the effects of matters that are inherently uncertain (emphasis added).[18]

AS 1301 also says

> Critical accounting policies and practices are tailored to specific events in the current year, and the accounting policies and practices that are considered critical might change from year to year.[19]

However, the similar usage in AS 1301 is not under discussion here.

**Question 1 (continued). Is the definition sufficiently clear to enable auditors to apply it consistently? If not, describe why the definition may not be clear, including examples demonstrating your concern.**

The definition cannot be applied consistently when auditors, be they in different firms or engagement teams, attempt to follow imprecise terms used in the reproposal and discussed immediately above, namely: "material," "especially," "challenging," "subjective," "complex," and "audit judgment."

**a. Are matters communicated or required to be communicated to the audit committee the appropriate source for critical audit matters? Why or why not?**

Yes. The source of CAMs should be limited to only those matters communicated to the audit committee.

**b. Are there any audit committee communications that should be specifically excluded from consideration as a source of potential critical audit matters? If so, identify and explain the reason for the exclusion.**

Yes, not all required communications should be the source of a CAM. For example, Item 2-07, *Communication with Audit Committees*, of Regulation S-X requires the auditor to report to the audit committee:

> (2) All alternative treatments within Generally Accepted Accounting Principles for policies and practices related to material items that have been discussed with management of the issuer or registered investment company, including:
>
> > (i) Ramifications of the use of such alternative disclosures and treatments; and
> >
> > (ii) The treatment preferred by the registered public accounting firm;
>
> (3) Other material written communications between the registered public accounting firm and the management of the issuer or registered investment company, such as any management letter or schedule of unadjusted differences;

---

[18] Appendix A to AS 1301.

[19] Paragraph 12 of AS 3101.

Both of these requirements should not be the source of a CAM. In addition, the overall planned audit strategy,[20] the qualitative aspects of significant policies and practices,[21] uncorrected and corrected misstatements,[22] violations or possible violations of laws or regulations,[23] and disagreements with management,[24] should not be considered as a source of potential CAMs.

**c. Is the "relates to accounts or disclosures that are material to the financial statements" component of the definition of a critical audit matter appropriate and clear? Why or why not?**

As to the materiality component of the definition, the reproposal cites the US Supreme Court cases TSC Industries v. Northway, Inc. and Basic, Inc. v. Levinson.[25]

Obviously, any materiality definition cited in a final standard should reference the FASBs final standards (if issued) regarding (1) Conceptual Framework for Financial Reporting, Chapter 3 - Qualitative Characteristics of Useful Financial Information, and (2) Notes to Financial Statements – Assessing Whether Disclosures are Material.

Pending the issuance of these documents, the definition in FASB Concepts Statement 2, paragraph 132, should be referenced.

The proposal requires that the following language be included in the auditor's report: "The critical audit matters communicated below … (1) relate to accounts or disclosures that are material to the financial statements …." I suggest that the words "material to the financial statements" be followed by the words "taken as a whole" in order for the definition to be congruent with the other verbiage required by the reproposal in the audit report. Thus, the first sentence would read, "… (1) relate to accounts or disclosures that are material to the financial statements, taken as a whole, and …."

**d. Is the "involved especially challenging, subjective, or complex auditor judgment" component of the definition of a critical audit matter appropriate and clear? Why or why not?**

See above discussion.

**Question: 2. Are factors helpful in assisting the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? Why or why not?**

Yes, the nonexclusive listing of various factors[26] will be helpful in deciding in determining CAMs.

---

[20] Required by paragraphs .10 and .11 of AS 1301.

[21] Detailed in paragraph .13(a) to (g) of AS 1301

[22] Paragraphs .18 to .20 of AS 1301.

[23] Paragraph .08 of AS 1301.

[24] Paragraph .22 of AS 1301.

[25] Footnote 40, page 20.

[26] Paragraph .12 of Proposed AS 3101.

**Question: 3. Are there any factors that the Board should consider adding or removing to better assist the auditor in determining which matters involved especially challenging, subjective, or complex auditor judgment? If so, what are those factors?**

Audit evidence must be appropriate and sufficient; therefore, the factor "[t]he nature of audit evidence obtained regarding the matter" should be expanded to say "nature, extent (i.e., sufficiency) and quality of the audit evidence."

Another factor entering into "matters involved especially challenging, subjective, or complex auditor judgment" would be the complexity, in the auditor's judgment, of the US GAAP accounting required to properly record transactions or an event. This factor would include among other considerations those FASB accounting standards that rely on "management's intent."

Still another factor would be the specific consultation protocols internal to the audit firm, such as when transactions involve complex or innovative accounting issues, or where there are differences of opinion regarding an accounting treatment or a financial reporting matter.

**Question: 4. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, rather than only the current period? For example, should communication be required in an IPO or in a reaudit? Why or why not?**

1. The reproposal[27] leaves investors in a twilight zone. An investor does not know why certain CAMs appear in one year <u>and</u> disappear the next year, or conversely.

What should an investor infer if a CAM regarding, for example, a loss allowance is reported for the prior year and is not reported as a CAM for the current year, notwithstanding that the current year's financial statement discloses a much larger loss allowance? Should an investor infer that the audit of the allowance is no longer "especially challenging"? That a different, smarter, more sophisticated audit term replace last year's team? That the company's internal controls strengthened? There is more evidence to support the allowance? That the auditors obtained a greater level of "reasonable assurance"?

Similarly, what should an investor conclude if a CAM is reported for the current year and was not reported for the prior year, notwithstanding the fact that similar accounts or disclosures were made in the financial statements for both years? Of course, any number of subjective factors go into the CAM decision, but what should an investor conclude when the audit report is silent as to the disappearance of last year's CAM? How should an investor interpret this mix of information?

2. One solution is to require CAM reporting for all periods reported on by the auditor. This solution would obviously expand the auditor's report to some as yet unknown size, and will overshadow in length and likely overwhelm the opinion and basis for the opinion paragraphs.

---

[27] Paragraph .11 of Proposed AS 3101 requires, "The auditor must determine whether there are any critical audit matters in the audit of the current period's financial statements." Paragraph .13 of Proposed AS 3101 requires, "The auditor must communicate in the auditor's report critical audit matters (footnote omitted) relating to the audit of the current period's financial statements or state that the auditor determined that there are no critical audit matters."

Where the prior year has CAMs 2, 4, 6 and 8, and this year has CAMs 2, 6 and 10, an investor would not understand why CAMs 4 and 8 disappeared and why 10 is now a CAM, when the account and disclosures for 10 also appeared in the prior year's financial statements.

The solution would be for the auditor to explain why there was no CAM last year but there is one this year, and conversely to explain why there is no CAM this year despite the fact there was one last year.

As said, this would enlarge the auditor's report, but an investor would learn why CAMs are moving in and out of the report. Auditors will need a creative writing course to explain cogently the reasons why CAMs appear and disappear during the three years covered in the auditor's report. This solution is odious and repugnant.

3. The reproposal leaves CAM reporting to the professional judgment of the auditor, thus each year stands on its own with no explanation as to why certain items disappear or reappear. Information asymmetry between the auditor and investors will increase under all of the above-outlined scenarios, and information asymmetry between the company and investors may also increase.

**Question: 5. Are the reproposed requirements regarding the description of critical audit matters in the auditor's report, including the principal considerations and how the matter was addressed in the audit, sufficiently clear for consistent implementation by auditors? Why or why not? If not, how could the requirements be clarified?**

While the definition of CAMs may be "sufficiently clear" to some auditors, because it uses highly subjective terms[28] it is very unlikely that the requirements would be consistently addressed and reported on.

Holding constant the financial statement accounting and disclosures, if three different audit firms (or engagement teams from the same firm) audited the same registrant for the same year, each using their professional judgment in interpreting the reproposal's highly subjective definition, they would not arrive at a consistent application of the standard. The odds would be low that the reported CAMs and the description of the audit procedures will be the same, or similar, for all three firms (or engagement teams).

<u>Identify Each CAM</u>

The reproposal says that "For each critical audit matter communicated in the auditor's report the auditor must: a. Identify the critical audit matter …."[29] Perhaps it would be clearer to say, "The auditor's report a. Must identify each critical audit matter…."

The reproposal cautions auditor's not to be the source of original (and potentially confidential) information about the company stating "When describing critical audit matters in the auditor's

[28] There is little question that all of the following terms used in the definition are subjective: "material to the financial statements," "especially," "challenging," "subjective," "complex," "judgment."

[29] Paragraph 14 of Proposed AS 3101.

report the auditor is not expected to provide information about the company that has not been made publicly available by the company…."[30]

Hence, in identifying each CAM, the auditor is duplicating information investors already have. For example, reading the examples given in the reproposal we see that they do not provide any new information that has not already been disclosed and that is readily available to the investor.

The example for Company A[31] says, "as more fully described in Note 7" regarding the Allowance for Loan Losses – New Loan Product. The auditor's report for Company A[32] then apparently repeats what has been disclosed in Note 7.

Similarly, the Company B example states, "Accounting for Acquisitions Refer to Notes 2 and 13 to the financial statements." The auditor's report for Company B[33] then restates information that is in Notes 2 and 13 to the financial statements, albeit using different words.

**Question: 6. Do the reproposed communication requirements appropriately address commenter concerns regarding auditor communication of critical audit matters, such as: a. The auditor providing original information in describing the principal considerations for the determination that the matter is a critical audit matter or describing how the matter was addressed in the audit, and b. Investors and other financial statement users misinterpreting critical audit matters as undermining the auditor's pass/fail opinion or providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate? Are there other steps the Board could take to address these concerns? If so, what are they?**

<u>Principal Reasons Why the Matter is a CAM</u>

The reproposal requires the auditor's report to "b. Describe the principal considerations that led the auditor to determine that the matter is a critical audit matter …."

The reproposal illustrates this "principal reasons" disclosure as follows:

> The Company A example says "The principal considerations for our determination that the allowance for loan losses for nine-year auto loans is a critical audit matter are that it is a new loan product with limited historical loss data and auditing the estimated allowance for losses on these loans involved our complex and subjective judgment."
>
> The Company B example says "Auditing the accounting for the Company's 2015 acquisitions involved a high degree of subjectivity in evaluating management's estimates, such as the recognition of the fair value of assets acquired and liabilities assumed."

These two examples illustrate the disclosure of the principal considerations that led the auditor to identify a CAM, and they illustrate that the disclosures do not provide any information about the company that has not been already made publicly available management.

---

[30] Note 2 to Paragraph 14 of Proposed AS 3101.

[31] Page 33.

[32] Page 32.

[33] Page 33.

Now that the auditor has repeated certain information that was already in the financial statements, how does the investor actually use this redundant information? See Question 27 below.

Audit Procedures

The reproposal then requires the auditor's report to "c. Describe how the critical audit matter was addressed in the audit …." [34]

Now the investor can read some (but likely not all) of the audit steps the auditor undertook to verify the CAM. See Exhibit 2 for a partial list of some procedures undertaken in response to the IAASBs KAM reporting. After a few minutes reading the audit procedures undertaken by the auditor, some investors will be in a deep sleep.

Investors reading the exposition of various audit procedures will and should believe that the account or disclosure reported by the auditor as a CAM has had much more scrutiny than is "normal" and is therefore is "certified"[35] by the auditor, notwithstanding the auditor has neither said or implied a separate opinion on the CAM, and notwithstanding the report does not contain any language that "could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for the critical audit matters or the auditor's opinion…."[36]

The "Unless" Clause

The reproposal states that a CAM "is not expected to provide information about the company that has not been made publicly available by the company **unless** such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit"(emphasis added).[37]

The reproposal provides the following example of the "unless" clause:

> [I]n describing the principal considerations that led the auditor to determine that revenue recognition is a critical audit matter, it is possible that the auditor could provide more information than is provided in management's disclosures.[38]

The reproposed audit report is required to include in the basis for the opinion the following sentence, "These financial statements are the responsibility of the Company's management." In addition, the first part of Note 2 says that that the auditor should not be the source of original information about the company, but when following the "unless" clause the auditor will now

---

[34] Paragraph 14 of Proposed AS 3101.

[35] I use "certified" in the old-fashioned, circa 1915, sense, i.e., "WE HEREBY CERTIFY that in our opinion the described CAM correctly presents the account, amount and disclosure communicated in this audit report."

[36] Paragraph 14 of Proposed AS 3101.

[37] Note 2 to paragraph 14 of Proposed AS 3101.

[38] Page 35.

be responsible for financial statement information. Not a desirable consequence of CAM reporting, see Question 10 concerning litigation.

It is not clear from the example audit reports for Company A and Company B[39] whether the "unless" clause was followed; however, Example B discusses the auditors assessment of "revenue growth rates, projected profit margins, and the expected rate of return" of the 2015 acquisitions. This information (likely confidential information and not disclosed by management in any public filing) is viewed as an example of the "unless" clause and would inspire investors to ask for the rates and margins from management – an unintended consequence of this "unless" type of disclosure.

**Question: 7. In addition to referring to the relevant financial statement accounts and disclosures, would it be appropriate for the auditor to refer to relevant disclosures outside the financial statements when communicating a critical audit matter? Why or why not?**

Since I do not support the auditor reporting of CAMs, it follows that I cannot support CAM-type reporting of disclosures, even if relevant, that are outside the financial statements. Auditors should confine all CAM reporting to the audited financial statements, including notes to the statements and related schedules. Opening up disclosure to data or information outside of the audited financial statements is well beyond the scope of the usual audit engagement and the audit report.[40]

**Question: 8. Is it appropriate for the reproposed standard to retain the possibility of the auditor determining that there are no critical audit matters and, if so, require a statement to that effect in the auditor's report? Why or why not?**

There are many reasons for having no CAMs to report. For instance, this years financial statements contain no new transactions, there were no new GAAP requirements to implement, and an experienced audit team staffed the audit and in their professional judgment there were no unusually subjective or complex audit decisions – hence no reported CAM.

The PCAOBs expectation that "in most audits the auditor would determine that at least one matter involved"[41] a CAM, may "pressure" auditors to move at least one account or disclosure into a CAM category to meet the Boards presumption. How difficult would it be to move a subjective audit judgment to a very subjective audit judgment?

The absence of a CAM will be evidenced by the simple fact that there is no mention of one in the audit report. Said differently, the absence of the disclosure of a CAM should tell an investor that there was none.

There is no logical reason for auditors to state that "we did not audit intangible assets" if the audited entity does not in fact have such assets. It follows then that there is no reason for

---

[39] Pages 32-35.

[40] If disclosures outside of the financial statements were referred to in a CAM, such disclosures should be considered as audited supplemental information and subject to the audit and reporting requirements of AS 2701 (*Auditing Supplemental Information Accompanying Audited Financial Statements*).

[41] Paragraph .12 of Proposed AS 3101.

auditors to state "that there were no matters that met the definition of a CAM during this year's audit."

Defining a CAM in the auditor's report,[42] and then saying that the matter did not exist is ludicrous. The sentence "We determined that there are no critical audit matters"[43] should be eliminated from any final standard.

**Question: 9. Is the reproposed documentation requirement clear and appropriate? Why or why not? If not, how should the documentation requirement be formulated?**

The documentation required in the reproposal is clear and appropriate.

However, the reproposal's discussion about documentation does not appear to agree with the requirements in the proposal. The reproposal says:[44]

> Thus, under the reproposed standard, auditors would be required to document the basis for the auditor's determination whether each matter that both: (1) was communicated or required to be communicated to the audit committee and (2) relates to accounts or disclosures that are material to the financial statements, involved <u>or did not involve especially challenging, subjective, or complex auditor judgment</u>. (Emphasis added.)

While Proposed AS 3101 states:[45]

> Documentation of Critical Audit Matters
>
> The auditor must document the basis for the auditor's determination whether each matter that both:
>
> a. Was communicated or required to be communicated to the audit committee; and
>
> b. Relates to accounts or disclosures that are material to the financial statements involved especially challenging, subjective, or complex auditor judgment. (Footnote omitted)

This proposed language does not require documentation of the basis for matters that did <u>not</u> meet the definition of a CAM. However, if matters that do not meet the definition of a CAM are to be documented, then the documentation requirements quoted above should be clarified.

**Question: 10. What effect, if any, could the auditor's communication of critical audit matters under the reproposed standard have on private litigation? Would this communication lead to an unwarranted increase in private liability?**

For the following reasons, I believe that litigation against auditors and registrants will increase.

---

[42] Required by paragraph .16 of Proposed AS 3101.

[43] Paragraph .16 of Proposed AS 3101.

[44] Page 39.

[45] Paragraph .17 of Proposed AS 3101.

At this time, there is no direct evidence for an increase in litigation involving CAMs; however, auditors should never underestimate the resourcefulness of the securities class action bar.

CAMs are prominently set out in the audit report and put investors on notice that in the auditor's judgment the account, transaction or disclosure is material to the financial statements (by definition) and were especially challenging to audit. Therefore, class action lawyers will tag CAMs as potential "red flags" which may provide a road map to probable "smoking guns" and material risks and weaknesses, all required to be documented in the audit work papers.

Assuming a class action lawyer can make a plausible case that their client relied on the CAM disclosures in making investment decisions that resulted in provable damages, and the CAM accounts or disclosures were either misstated or omitted a material fact, the auditors and the registrant will likely then be defendants in litigation.

In addition, there is significant litigation risk when the auditor's description of the CAM does not accurately and completely describe the CAM, or the "principal considerations that led the auditor to determine that the matter is a" CAM, or fully describe exactly how the CAM was addressed in the audit, or does not properly (or inaccurately) refer to the financial statement accounts and disclosures that relate to the CAM.

The reproposal attempts to make the case that CAMs will reduce information asymmetry between the audit and the investors, which will in turn reduce information asymmetry between management and the investor. While this argument is baseless, it could open up another path for class action lawyers to maintain that auditors were somehow negligent (or worse) in fulfilling the desired outcome and goal of reducing the information gap between the company and the investor.

There is also a question concerning whether a CAM is an "opinion" on specific accounts or disclosures versus whether the auditor is making a factual statement in reporting a CAM and the audit procedures undertaken. I do not know whether the Supreme Court's decision in Omnicare[46] regarding audit "opinions" applies to CAM reporting. It is possible that CAMs may not be the expression of an opinion since some of the information comes directly from the auditor and may be viewed as specifically "carved out" of the audit report. The reproposal requires the report to say –

> Critical audit matters do not alter in any way our opinion on the financial statements, taken as a whole, and we do not provide separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.[47]

**Question: 27. How would investors use the information communicated in critical audit matters?**

Question 27 goes to the heart of another significant problem with CAMs. This is the key question, how would investors use CAMs?

Why is it important for an investor to know that the audit team believes the accounting for a specific transaction was particularly complicated and therefore "harder to audit," or the

---

[46] Omnicare, Inc. v. Laborers Dist. Council Const. Indus. Pension Fund.

[47] Paragraph .15 of Proposed AS 3101.

valuation of a class of investments (for example, Level 3 fair values) required "complex" auditor judgment in verifying that valuation?

What really matters is that the auditor conducted the audit in accordance with the standards of the Public Company Accounting Oversight Board (United States) and that in the auditor's opinion, the financial statements are presented fairly, in all material respects.

Investors will be directed to read about critical audit matters and procedures that may in actually detract their attention from whatever the real operational issues and risks are. CAM disclosures will produce no (perhaps very little) signal and a great deal of noise, i.e., a low signal to noise ratio. See the discussion under Question 4.

Despite all the discussion and research, no one has yet made a believable case as to exactly how investors will factor the required CAM disclosures into any technical or fundamental analysis regarding how many dollars to invest in a company, how much of the investment to sell, when to buy or just to hold. The reproposal does not say exactly how investors can use these disclosures in their trading strategy or in deciding how to vote their shares.

The reproposal and the investment community have not demonstrated that CAMs would have some direct and objectively measurable influence on investment strategies.

In addition, assuming CAM reporting did have some small value to some segment of the investor universe; this value is diminished because it is historical, after the fact and stale information.

Some questions concerning the usefulness of CAMs –

- How can investors determine which CAM is important and which CAM is not?
- Is a reported CAM a negative or positive?
- Is the description of an account and the five audit steps followed by the auditor (of the seventeen actually undertaken) likely to be important and relevant to the decision to trade in a security?
- Will an investor have better and more useful information and really be motivated to trade a security if all seventeen audit steps were set out in the audit report?
- Which of the seventeen audit steps should the reader focus on?
- How do investors grade the audit procedures reported?
- Should investors feel more secure about the stated account or disclosure because the auditor highlighted that matter for inclusion in the audit report?
- Should investors reading the exposition of various audit procedures believe that the account or disclosure reported by the auditor as a CAM has had much more scrutiny than is "normal" and is therefore is "certified"?

The reproposal never does answer these questions other than to say investors want whatever the auditors see fit to say in the CAM disclosure.

As said earlier, investors will gather information that is more useful reading the Form 10-K and other SEC filings in their entirety, than they can from reading CAMs.

**Question 27 (continued). Would the communication of critical audit matters help reduce information asymmetry between investors and management? Investors and the auditor?**

Asymmetric information occurs when an investor has less knowledge than management about the financial condition, the results of operations, cash flows, liquidity, capital resources, trends, commitments, etc.

Investors must bridge this information gap by deriving information directly from management by reading SEC filings and the financial statements as are available. Investors cannot and should not rely on CAM reporting to reduce this gap.

**Question: 29. Would critical audit matters be useful in assessing company financial performance? If so, how?**

The reproposal does not persuasively present enough believable facts that support how

- most investors would actually use CAMs (Question 27),
- all or most CAMs can actually be used in assessing financial performance, and
- CAMs really reduce information asymmetry between management and investors.

**Question: 30. Would critical audit matters be useful in assessing audit quality? If so, how?**

The reproposal says the reporting of CAMs –

> may … lead to an incremental increase in audit quality[48];
>
> may lead to an incremental increase in the quality of information presented[49]; and
>
> may lead to an incremental increase in audit quality and financial reporting quality, which could increase investors' confidence in the reliability of the financial statements.[50]

However, the above-quoted possibilities are nothing more than conjecture, and it is entirely possible that CAMs will not lead to any increase in audit quality, or the quality of the information provided, or an increase in investor confidence in the reliability of financial statements.

The reproposal says –

> While these studies analyze potential effects of expanded auditor reporting on the perception of financial reporting quality, at least one study analyzes how the IAASBs expanded auditor's report influenced perceptions of audit quality. (Footnote omitted) The authors did not find evidence that key audit matters had an effect on the participants' perception of audit quality.[51] (Emphasis added.)

---

[48] Page 3.

[49] Page 76.

[50] Id.

[51] Page 73.

> The second study concluded that additional reporting in the auditor's report can increase investors' attention to financial statement disclosures mentioned in the auditor's report, but that the communication of critical audit matters led to a decrease in the perceived level of audit quality and a perception that the level of assurance provided by the audit was not uniformly applicable across all aspects of the financial statements.[52] (Emphasis added.)

**Question 34. Would the communication of critical audit matters provide a basis on which auditors could differentiate themselves? Why or why not?**

Since the definition of CAMs is entirely subjective, it is possible (but not likely) that some auditors can distinguish themselves through a creative and innovative approach to the expression, or display of CAMs.

**Question: 40. Should the requirements related to critical audit matters not apply to the audits of other types of companies, such as shell companies? (Footnote omitted) Why or why not?**

Shell companies that qualify as an emerging growth company should not be subject to CAM reporting. See the response to Emerging Growth Companies, Question 41 et seq., below.

## Auditor Independence

**Question: 13. Is the reproposed requirement relating to auditor independence clear? Would this information improve investors' and other financial statement users' understanding of the auditor's independence responsibilities? Why or why not?**

Yes, the requirement is clear, but the additional language does little to improve an investors' understanding of the auditor's independence responsibilities.

The heading to the auditor's report says that the auditor is in fact independent when it states "Report of Independent Registered Public Accounting Firm."

The reproposal dictates the audit report to say we "are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB." Rather than communicate independence by inference, the report language would be more informative if it explicitly said "and we are ~~required to be~~ independent with respect to the Company in accordance with …."

The reproposed standard should allow, when appropriate, the report language be modified to include reference to other government agencies that license audit firms and CPAs. For instance,

[52] Page 73, footnote 142.

licensed New York State CPAs are required to comply with the independence requirements of the New York State Rules of the Board of Regents.[53]

## Addressee

**Question: 14. Is it appropriate to limit the required addressees to the shareholders and the board of directors, or equivalents for companies not organized as corporations? Are there other parties to whom the auditor's report should be required to be addressed, and if so, who are they?**

Yes, the addressee should be limited to include both the shareholders and the board of directors. I know of no other party to whom the audit report should be addressed.

**Question: 15. Is it clear how the auditor's report would be addressed for companies not organized as corporations? Why or why not?**

Yes.

## Auditor Tenure

**Question: 18. Should disclosure of auditor tenure be made on Form AP rather than in the auditor's report? Why or why not?**

No. This information has no discernible value to investors.

**Question: 19. Would requiring disclosure of auditor tenure in the auditor's report reduce investor search costs? Why or why not? Should the Board require a specific location for disclosure of auditor tenure in the auditor's report? If so, where and why?**

The reproposal includes many persuasive arguments against the inclusion of this information in the audit report, for example:[54]

- information regarding the auditor's tenure included in the auditor's report could result in inappropriate and inconsistent assumptions about correlations between auditor tenure and audit quality
- [a]cademic research on the relationship of tenure to audit quality has varied conclusions – for example
  - engagements with short-term tenure are relatively riskier
  - that audit quality is improved when auditors have time to gain expertise in the company under audit and in the related industry

---

[53] Specifically § 29.10 "Special provisions for the profession of public accountancy of" Part 29, "Unprofessional Conduct."

[54] Pages 90-91.

   - that investors are more likely to vote against, or abstain from, auditor ratification as auditor tenure increases … [suggesting] that investors view long-term auditor-company relationships as adversely affecting audit quality
   - that, at least prior to 2001, both short tenure (less than five years) and long tenure (greater than fifteen years) can have detrimental effects on audit quality

- it is possible that some investors may draw incorrect inferences about auditor tenure that could have an unwarranted effect on cost of capital
- [it] could also result in conversations that are an inefficient use of management and audit committee time

The reproposal observes –

> While commenters' views and academic research (footnote omitted) continue to be divided on the relationship of auditor tenure and audit quality, the Board is proposing to include auditor tenure (footnote omitted) to make this data point readily available in the auditor's report. Requiring the disclosure of auditor tenure in the auditor's report would ensure that the disclosure is in a consistent location – the auditor's report – for all companies and would reduce search costs for investors and other financial statement users who are interested in this piece of information.[55] (Emphasis added.)

The reproposal does not (a) make a cogent argument as to why it is necessary to make this data point readily available, (b) support the argument that auditor tenure is in anyway useful to investors, (c) allude to the idea that audit tenure has an impact on independence or the "quality" of the audit.

The reproposal expresses the view that some investors may find audit tenure useful.[56] What is missing from the tenure discussion are answers to the questions:

> Exactly why are investors interested "in this piece of quantitative information"? How will investors use it? In what way?
>
> Does it make any difference to an investor whether Peggy Smith LLP has served as the Company's auditor since 2005? Since 1999?

The reproposal provides no answers to these questions and never definitively says exactly what this information about tenure implies.

There is no relationship of audit tenure and audit quality; there is no correlation between audit tenure and independence – so why add this information to the auditor's report when no one has any evidence regarding its significance.

It is also noted that PCAOB Release No. 2015-005 (*Concept Release on Audit Quality Indicators*), neither directly nor indirectly, mentions audit tenure as an indicator of audit quality.

[55] Page 49.

[56] Page 48.

SEC Initiative

I believe that many of the comments submitted to the SEC on its Release No. 33-9862 (*Possible Revisions to Audit Committee Disclosures, July 1, 2015*), which discusses auditor tenure, are relevant to this reproposal.

Exhibit 1 to this letter contains the questions asked in the Release and selected responses to the questions, which provide additional compelling arguments against the disclosure of, audit tenure.

To sum up, for all the above-mentioned reasons, auditor's tenure is neither relevant nor useful to investors, and the reproposal does not support the need for its disclosure.

## Clarifications of Existing Auditor Responsibilities

**Question: 20. Are the changes to the basic elements of the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor appropriate and clear? Why or why not?**

Related Notes

I agree with the reproposal to require the audit report identify the financial statements as including the related notes, and when applicable, schedules, as part of the audited financial statements.

Error or Fraud

As the release points out, this language tracks the language in AS 1001 (*Responsibilities and Functions of the Independent Auditor*); therefore, I agree with the inclusion of this language in the auditor's report.

## Standardized Form of the Auditor's Report

**Question: 25. Would the reproposed requirements for a specific order of certain sections in the auditor's report and for section titles make the auditor's report easier to use? Should the standard allow more or less flexibility in the presentation of the auditor's report?**

In General

The reproposal maintains –

> … the existing standards do not require a uniform approach to basic content, such as the addressee of the report and the form of the auditor's report. The reproposed standard contains provisions requiring the basic elements in the auditor's report to be presented more uniformly.[57]

While having a "uniform approach" initially sounds good, I favor a more flexible audit report. The proposed new headings will easily guide the reader through the audit report without the need for a rigid, inflexible format.

[57] Page 67.

The reproposal argues –

> These enhancements should increase the usability of the auditor's report by improving financial statement users' understanding of the auditor's responsibilities, reducing search costs for information in the auditor's report, and facilitating comparisons across auditor's reports."[58]

The reproposal provide no evidence to support that premise that an investors understanding of the auditor's responsibility will measurably improve, or that search costs for information in the auditor's report were ever a factor in audit reporting.

Opinion Paragraph

For many years (decades), investors have read, understood and digested the auditor's report in its current form. Reading and understanding the current audit report (which ordinarily, and before CAM reporting) fit nicely to one page or less. Investors have had no difficulty reading the auditors opinion in its current location.

Obviously, if auditors are required to report CAMs, the report will grow to an indeterminate length and moving the opinion paragraph to the second sentence of the first paragraph will relieve investors from having to read further than the pass/fail words. The reproposal does not convincing make any case for exactly how investors will be better served by this move.

As said, I favor a more flexible, less rigid ordering of the audit report and suggest the Board express a preference about where the opinion should appear in the audit report and not mandate its location.

Overall, the PCAOB audit report is substantially different from the IAASBs audit report,[59] and there is no pressing need to have the PCAOB fall into lockstep with the IAASB as to the placement of the opinion language. There is nothing sacred about the IAASBs formulation of the report and there is little gained in having a uniform and inflexible report other than help lazy investors.

Headings

While the heading requirement is not a substantive issue, I support to use of headings in the audit report notwithstanding the following comments.

1. Today, the standard audit report normally 4 paragraphs and some 350 words long. The reproposal adds about another 100 words (without the description of specific CAMs and the procedures undertaken). No one really knows the length of future audit reports if this reproposal is adopted.

2. The reproposal would require section headings telling the reader that they are looking at the "opinion," then further down the page they will be reading the "basis for the opinion", then "critical audit matters" and lastly some other information, (i.e., the audit signature, the auditor's tenure, the location of the auditor and the date of the audit report).

3. The requirement for these headings is viewed by some accountants as a dumbing down of the audit report since it assumes investors and shareholders will not understand the report,

---

[58] Page 96.

[59] See paragraph 37 of ISA 700.

have to be told what they are reading and then must be led through it. Again, the current audit report is quite short – do readers need to be told what they are reading? Is the idea here to allow readers of the report to skim it and land on only those parts of the report they may have an interest in? For example, an investor can read the "Opinion," then the "CAMs," and skip the mildly boring "Basis for Opinion."

4. The required headings differ from the AICPAs requirements.[60]

## Emerging Growth Companies

**Question: 41. Should the reproposed requirement regarding communication of critical audit matters be applicable for the audits of EGCs?**

In theory, and assuming the need for and utility of the disclosure of Critical Audit Matters, such CAM reporting should be of equal or greater importance to investors in EGCs vis-à-vis investors in non-EGCs.

As discussed in the reproposal,[61] the JOBS Act requires that rules adopted by the PCAOB do not apply to an audit of any EGC, unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation."

Unfortunately, the reproposal presents no persuasive evidence, empirical or otherwise, that the CAM disclosures are in the public interest, protects investors, and presents no economic analysis (other than mention the associated higher audit costs) as is required under the JOBS Act.

Information Asymmetry

The reproposal asserts[62] that EGCs "may have a higher degree of information asymmetry relative to the broader population of issuers." With regard to information asymmetry, the reproposal references to some stale "research" dated before the 2012 JOBS Act.[63]

One of the objectives of the JOBS Act was to simplify the registration process, reduce the costs and overall burden of financial reporting, and consequently the overall costs and burden of auditing the financial statements.

Like it or not, information asymmetry is exactly one of the objectives, and a by-product, of the JOBS Act. It is well understood that EGCs are eligible to take advantage of exemptions from various disclosure and reporting requirements that apply to non-EGCs including, but not limited to:

1. Not being required to comply with the auditor attestation of internal controls over financial reporting;[64]

---

[60] AU-C 700, *Forming an Opinion and Reporting on Financial Statements*.

[61] Page 106.

[62] Page 107.

[63] Footnote 224, page 107. The four articles cited are dated 2000, 1995, 1988 and 1988.

2. being allowed to present only two years of audited financial statements and only two years of the related MD&A, instead of three years;
3. being permitted to present the same number of years of selected financial data as the years of audited financial statements presented (i.e., two years), instead of five years;
4. reduced disclosure obligations about executive compensation, including no Compensation Disclosure and Analysis;
5. not being required to comply with any requirement that may be adopted by the PCAOB regarding mandatory audit firm rotation, or a supplement to the auditor's report providing additional information about the audit and the financial statements (i.e., *Auditor's Discussion and Analysis*); and
6. exemptions from the requirements of holding a non-binding advisory vote on executive compensation and shareholder approval of any golden parachute payments not previously approved.

The reproposed audit report is not the proper vehicle to alter the JOBS Acts built in information gap (asymmetry) between management and investors. Until it has been firmly established that CAMs are truly useful to investors, and that the audit report is the logical and proper vehicle to fix asymmetrical information, EGCs should be exempt from the disclosure of CAMs.

As mentioned in Item 5 above, the JOBS Act[65] exempts EGCs from any future PCAOB rules calling for the expansion of the auditor's report to include a supplemental auditor's discussion and analysis (AD&A) of an EGC. The reproposed CAM reporting closely resembles the PCAOBs proposed supplemental AD&A reporting[66] and, therefore, will be considered an end run around the Section 104 prohibition regarding such reporting by the auditor.

**Should the other elements of the reproposed standard and amendments be applicable for the audits of EGCs?**

Language regarding auditor independence (see the suggested revision above), the addressee, and the clarifications of the existing auditor responsibilities, should apply to EGCs.

The requirement for disclosure of auditor tenure and CAMs should not be required for EGCs, or any public reporting entity.

As stated in this letter, I am opposed to the standardized and inflexible uniformity of the auditor's report imposed by this reproposal including the mandatory requirement that the opinion be in the first paragraph of the report.

I support the required headings to the report.

---

[64] Required by Section 404(b) of the Sarbanes-Oxley Act of 2002.

[65] Section 104.

[66] PCAOB Release No. 2011-003, June 21, 2011.

**Should the reproposed requirements be modified to make their application to EGCs more appropriate?**

No.

**Would excluding audits of EGCs benefit or harm EGCs or their investors? Why or why not?**

I do not know of any research or evidence that demonstrates either benefit or harm if CAMs, or auditor tenure, where excluded from audit reports.

As discussed above, by law, EGCs provide much less information to investors than is required by non-EGCs, and auditors should not be assigned by the PCAOB to attempt to fix this information gap (asymmetry) in any way.

**Question: 42. If the Board determines not to apply all or part of the reproposed standard and amendments to the audits of EGCs, would there be any unintended consequences if auditors complied voluntarily? If so, what are they?**

When auditors of EGCs comply voluntarily with a standard that is not applicable EGCs, they run the risk of additional scrutiny and possible litigation. Auditors who make such voluntary disclosures should have answers to the following questions:

- Why were the standards not applicable to EGCs?
- What is the justification for the gratuitous disclosure?
- Does it present litigation or other risks?
- Could the voluntary disclosure be selective, that is, must the disclosures follow the exact requirements of the standard?
- If the disclosure is voluntary, must such disclosures be made every year?

**Question: 43. Are there any other benefits, costs or considerations related to promoting efficiency, competition, and capital formation that the Board should take into account with respect to applying the reproposed standard to audits of EGCs?**

Additional costs to auditors (which will be passed on to their clients) are discussed in the reproposal.[67] As to other benefits, I cannot think of any.

**Question: 44. If the reproposed standard is adopted by the Board and approved by the SEC, how much time would auditors need to implement it? Should the Board consider a delayed compliance date for the reproposed standard, or for certain parts of the reproposed standard, for audits of smaller companies? If so, what criterion should the Board use to classify companies, for example smaller reporting companies?**

[67] Pages 82 and 83.

In answer to the last question, not all EGCs qualify as smaller reporting companies ("SRCs"), and a full exposition of these differences is beyond the scope of these comments. However, SRCs are permitted to –

- provide simplified executive compensation disclosures in their filings,
- are exempt from the provisions of Section 404(b) of the 2002 Sarbanes-Oxley Act (requiring an attestation report on the effectiveness of internal control over financial reporting),
- limit the required description of the business, and
- have certain other decreased disclosure obligations in their SEC filings, including, among other things,
  - only being required to provide two years of audited financial statements in annual reports, rather than the three years required of other companies, and
  - are allowed to provide MD&A for these two years.

It is well known that EGCs and "smaller reporting companies" (SRCs) present unavoidable risks to investors and the reduced disclosure requirements may make investments in these entities less attractive to investors.

In sum, SRCs should be considered as EGCs for purposes of applying any final audit standard.

**Question: 44 (continued). Are there criteria other than the size of the company that the Board should consider for a delayed compliance date?**

If CAM disclosure is proven to have real value, then in theory CAM disclosures should be of equal or greater importance to investors in EGCs versus investors in non-EGCs. However, until the Board believably establishes that CAMs are truly useful and that there are in fact measureable benefits to investors by giving investors immediate and sufficient information needed to make informed investment, lending or voting decisions, the disclosure of CAMs should not apply to EGCs or SRCs.

## Internal Control over Financial Reporting

**Question: 23. Should the Board's requirement to include an explanatory paragraph in the auditor's report when the auditor did not perform an audit of ICFR apply not only if company's management is required to report on ICFR, but also if management is not required to report, such as for investment companies?**

There is no need to report matters that are not required. Conceivably, there is no limit as to this type of gratuitous disclosure in the future.

* * * * *

I appreciate your consideration of my comments, suggestions and responses to the reproposal and would be pleased to answer any questions the Board or the Staff may have.

Sincerely,

Robert N. Waxman, CPA

## EXHIBIT 1

This Exhibit sets forth the questions asked in the SECs Release No. 33-9862 *(Possible Revisions to Audit Committee Disclosures, July 1, 2015*), relating to audit tenure and some selected responses to the questions.

**Questions**

The SEC Release asked for comments on the following questions:

**45. Should the audit committee's report include information about the length of the audit relationship? What types of disclosures could the audit committee make in this regard? Should it be just the years of auditor tenure?**

**46. Should there also be disclosure as to whether and, if so, how auditor tenure was considered by the audit committee in retaining the auditor? Should there be disclosure of how tenure was considered in evaluating the auditor's independence and objectivity? Why or why not?**

**47. Would disclosure of auditor tenure be more appropriately disclosed in the auditor's report? Why or why not? Would it be better disclosed somewhere else (such as in a form filed with the PCAOB)? Why or why not?**

**Selected Responses –**

**Securities Industry and Financial Markets Association ("SIFMA")**

We do not believe that the audit committee should be required to provide any disclosures regarding auditor tenure. Such disclosure places an undue emphasis on one factor (i.e., audit firm tenure) and ignores information regarding partner rotation; differences in audit firms' industry expertise and other possibly more relevant information regarding the totality and the context of the audit committee's decision regarding the selection of the audit firm.

**Autoliv, Inc.**

In particular, companies should not be required to make specific disclosures related to audit firm tenure. Tenure is not necessarily an indicator of audit quality or audit firm qualifications since the relationship between auditor tenure and audit quality is necessarily fact and circumstance-specific to each issuer. Requiring disclosure related to audit firm tenure could lead investors to make arbitrary comparisons between companies without further information regarding the background of the relationship between a company and audit firm.

**New York State Society of Certified Public Accountants**

… auditor tenure should not be required to be disclosed as it might imply that there is a correlation between auditor tenure and audit quality or auditor independence. However, if the tenure of the external auditor is to be disclosed, it would be prudent for the audit committee report to discuss how the reappointment of the auditor was determined to be appropriate.

**BDO USA, LLP**

… while investors may find information about audit tenure to be interesting, we do not believe that including such information within the audit report provides the appropriate context for that communication. We are concerned that including such a disclosure in the audit report may infer a correlation between audit quality and audit tenure – a correlation which we believe has not been established.

**Mutual Fund Directors Forum**

Disclosure of Auditor Tenure Is Unhelpful With Respect to Funds. The Release raises the issue of whether disclosing the auditor's tenure might be "a relevant consideration to the audit committee's determination of whether or not to engage or retain the auditor." Whether or not that is true in the operating company context (and the Release concedes that neither short nor long auditor tenure is correlated with audit quality), it is not sufficiently significant for funds to justify highlighting it.

**Deloitte & Touche LLP**

… while auditor tenure is currently disclosed by almost two-thirds of the S&P 100, we have concerns that if the Commission were to require this disclosure, it would suggest that the Commission believes it has a relevance that is not supported by evidence.

## EXHIBIT 2

**IAASBs Standard re Key Audit Matters (KAM) requires disclosure regarding how the key KAM was addressed in the audit (see paragraph 13 of ISA 701). The following is a random listing of procedures found in audit reports reporting KAMs:**

- Our procedures included understanding and testing management's controls around the completeness and accuracy of
- We agreed the recorded amounts during the year to contractual evidence on a sample basis
- Amounts were either confirmed, recalculated or reconciled to
- We performed a retrospective review of subsequent collections
- We tested cut-offs
- We tested the identification and valuation
- We evaluated the competency and objectivity of the third party external appraiser
- We involved our tax experts
- We reviewed the work of the Company's predecessor auditor
- On a sample basis we
- We observed inventory counts
- We conducted additional audit procedures
- We evaluated the Company's policies and procedures
- We challenged management's assumptions
- We involved our valuation experts
- We assessed the legal advice
- We obtained confirmations
- We evaluated the actuarial and demographic assumptions and valuation methods
- We assessed whether the key actuarial assumptions are reasonable
- We validated that assumptions are consistently applied
- We involved our pension experts
- We tested management's controls
- We evaluated the adequacy of
- We verified the accuracy and completeness of (used several times to describe the audit procedures)
- We verified that the valuation of
- We verified the disclosure of
- We substantively tested the accuracy of
- We verified the additional costs incurred of
- We determined that the disclosure is complete and consistent with the financial statements
- Understanding and testing of the design and operating effectiveness of the key
- We assessed the eligibility of the development costs for capitalization
- We have reviewed the design of the key controls identified by management surrounding
- We tested such key controls and performed substantive test of details
- We tested on a sample basis testing underlying evidence
- We evaluated the assumptions and methods used by the company
- We assessed the adequacy of the company's disclosures

- With the assistance of tax specialists, we audited the available tax losses carried forward
- We obtained an understanding of the processes related to revenue recognition
- We evaluated the design and tested the effectiveness of controls in this area relevant to our audit
- We performed a combination of internal control and substantive audit procedures to address revenue recognition
- We performed extensive sales cut-off procedures
- We tested the calculation of the underlying data
- We obtained an understanding of the warranty process
- We evaluated the design of, and performed tests of controls in this area

**Re: PCAOB Release No. 2016-003, PCAOB Rulemaking Docket Matter No. 34**

Dear Members of the Board:

Wells Fargo & Company is a diversified financial services company with over $1.9 trillion in assets providing banking, insurance, investments, mortgage and consumer finance services. We appreciate the opportunity to comment on PCAOB Release No. 2016-003, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified opinion and Related Amendments to PCAOB Standards* (the "Re-proposal).

We continue to support the PCAOB's objective to improve investor confidence and understanding of the audit process through enhanced auditor communications[1]. We applaud the Board's attempt to incorporate feedback on the original proposal by incorporating the consideration of materiality in the identification of a critical audit matter ("CAM") and attempting to limit the auditor's ability to disclose original information. However, the changes in the Re-proposal do not fully address respondents' concerns nor do they provide compelling evidence that the disclosure of CAMs will provide "value-relevant" information beyond what is already publicly available to users. We strongly believe the identification and disclosure of CAMs will almost certainly add significant cost to the audit, create operational issues, and cause problems in the management/auditor relationship.

We question whether there is sufficient basis for the Board to re-issue the proposal given the feedback it received on the original proposal and the limited empirical evidence to support expanded auditor reporting, The Board acknowledged that research on expanded auditor reporting is limited and results are *ambiguous* as to whether expanded reporting has provided new information beyond what is already available in the financial statements. If the Board is unsure of the value of CAMs to users, we do not understand the Board's justification for the Re-proposal based on the hope that users will find information useful once they are provided with it.

[1] We previously commented on the original proposal in our letter dated December 2, 2013 (PCAOB Release No. 201-005, PCAOB Rulemaking Docket Matter No. 34).

We encourage the Board to study this matter further, gather more empirical evidence on the usefulness of the proposal and evaluate the cost benefit implications of expanded auditor reporting.

Although the auditor is not expected to provide information about the company that has not been made publicly available by the company, such information may be provided by the auditor if such information is necessary to describe the principal considerations used to determine that a matter is a CAM or how the CAM was addressed in the audit[2]. This exception language along with the requirement to reference management's existing disclosures provides auditors with undue leverage to compel disclosure of information that may not otherwise be required or necessary. We encourage the PCAOB to clarify in the Re-proposal that that it is not appropriate for the auditor to be the original source of information unless a matter continues to be unresolved with management and the audit committee. Communication to the audit committee of unresolved differences should be sufficient to drive appropriate resolution and adequately protect investors.

In addition, as a consequence of the PCAOB's inspection process, auditors will have a natural tendency to identify more rather than less CAMs. This concern is supported by the impact of PCAOB inspection findings on audits of internal controls over financial reporting, which we, along with other affected companies, have recently discussed with the PCAOB in numerous meetings and forums[3]. We fear the desire to avoid being second guessed by the PCAOB will provide further incentive for auditors to compel management to disclose non-public information, resulting in significant unnecessary cost, time and effort related for preparers. A significant consequence of the Re-proposal is that registrants may be compelled to provide significant incremental disclosures, which is inconsistent with the general disclosure framework for registrants who are governed by SEC guidance when determining what to disclose, rather than PCAOB standards.

Based on disclosures under the relatively recent and similar regulations implemented in the United Kingdom, we are also concerned that CAM disclosures may evolve over time to include subjective information that is not appropriate in the auditor's report. In particular, the 2015 auditor's report for Rolls-Royce Holdings plc has been mentioned as an excellent example by PCAOB representatives and includes subjective assessments such as:

- We found the degree of caution/optimism adopted in estimates…to be slightly less cautious than in the previous year, but balanced overall; and
- …the financial statements have been prepared on the basis of appropriate accounting policies, reflect balanced estimates compared to the mildly cautious estimates made last year…

[2] Note 2 to paragraph .14 of Proposed AS 3101 included in Appendix 1 to the Re-proposal (page A1-9)
[3] Meetings with the PCAOB were held with members of the Financial Executives International Committee on Corporate Reporting (CCR). CCR member companies represent approximately $5 trillion in market capitalization and actively monitor standard setting activities of the PCAOB. Wells Fargo is a member and current chair of CCR.

While these assessments far exceed what is required by the Re-proposal and such disclosures may be unlikely in the heavily regulated and litigious environment in the U.S., it is conceivable that such disclosures could eventually materialize.

We are supportive of the proposed inclusion of a materiality threshold for the identification and disclosure of CAMs. However, until the PCAOB addresses its guidance to the audit firms to eliminate clearly trivial matters from their examination findings it is unlikely to have much effect on balance sheet related matters as long as materiality thresholds for the balance sheet and income statement items remain the same. Moreover, given that matters which are material should already be disclosed in the notes to the financial statements and/or management's discussion and analysis (MD&A), we question how redundant disclosure in the auditor's report is value-relevant.

The example disclosures included in the Re-proposal do not provide compelling evidence that CAM disclosures provide users with value-relevant information. In fact, the example of the allowance for loan losses disclosure only perpetuates the concern that the auditor is providing assurance on a component of the financial statements rather than the financial statements as a whole. Also, the CAM disclosure seems to disclose information that is either not required or necessary. Management is already disclosing any relevant material information in either the notes to the financial statements, MD&A or both. Lastly, it is unclear what incremental value users will derive from the description of procedures performed by the auditors. Given the litigious environment in the U.S., such information will be boiler plate by necessity, i.e., reading legal contracts, tested accuracy of assumptions, and using specialists. It is unclear how this information will help users better analyze financial statements.

Moreover, an audit of a global entity is complex and involves a significant number of individual audit and accounting issues. Many issues that are considered in the normal course of an audit of a complex organization may nevertheless fall within the definition of a CAM given the professional judgments and estimates involved, (e.g., credit impairment, fair value measurements and hierarchy, derivatives and hedging activities, business combinations, etc.). These issues are regularly considered as part of the accounting issue resolution process of a global organization and the potential list of items that satisfy the overly broad definition of a CAM could be endless.

Instead of the disclosure of CAMs, we encourage the Board to consider an alternative that will draw users' attention in the auditors' report on the registrant of the significant accounting policies and estimates in the financial statements and MD&A. This can be accomplished by referencing the disclosure of these items, i.e., location and page number, and including a statement indicating that the auditor's report should be read in conjunction with management's disclosures of significant accounting policies and estimates. This approach avoids the inference that the auditor is providing assurance on separate components of the financial statements and would correspond with areas that receive most attention from auditors during the audit.

It is important to remember that qualified knowledgeable professionals can have reasonably different views, particularly related to assumptions or estimates that require significant judgment, or when an issue relates to complex matters that require multiple discussions between the auditor and preparer, including situations where it is necessary to consult with the auditor's national office. The PCAOB and SEC must acknowledge this reality and ensure that requirements of their standards do not inappropriately subject auditors and preparers to litigation. Introducing safe harbor rules may be a reasonable way to avoid such outcomes.

We also have concerns that audit procedures to address the new standard are likely to occur at a critical time during the audit process and may distract auditors and management from completing other critical parts of the financial statement preparation and audit process. This may involve partner and manager time, as well as national office resources, including input from the registrant's senior management team including internal and external legal counsel, and audit committee members. In some cases, this could result in a delay in filing for certain companies and should be appropriately considered during implementation.

We do not believe that there is any meaningful link between auditor tenure and audit quality and therefore, recommend that this disclosure should not be required in the auditor's opinion. Including this information in Form AP would be preferable to inclusion in the audit report.

We do support the proposal to move the opinion paragraph to the beginning of the report as it is our belief that most readers of auditor's reports are mainly interested in whether a company has received an unqualified opinion from its auditor. We also support inclusion of a statement that the auditor is required to be independent and the added language clarifying "whether due to error or fraud" when describing the auditor's responsibilities.

We appreciate the opportunity to comment on the proposal. If you have any questions, please contact me at (415) 222-3119.

Sincerely,

/s/ Richard D. Levy

Richard D. Levy
Executive Vice President & Controller

**NOTICE:** This is an unofficial transcript of the Public Company Accounting Oversight Board's Roundtable on the Auditor's Reporting Model held on September 15, 2011, that related to the Board's concept release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards.

The Public Company Accounting Oversight Board does not certify the accuracy of this unofficial transcript. The transcript has not been edited and may contain typographical or other errors or omissions. An archive of the webcast of the entire Roundtable can be found on the Public Company Accounting Oversight Board's website at http://pcaobus.org/News/Webcasts/Pages/09152011_Roundtable.aspx.

PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD

ROUNDTABLE ON THE AUDITOR'S REPORTING MODEL

Thursday, September 15, 2011

9:31 a.m.

1201 15th Street, N.W.

Washington, D.C.

# PARTICIPANTS

PCAOB Members:

| | |
|---|---|
| JAMES R. DOTY | MARTIN F. BAUMANN |
| DANIEL L. GOEZLER | LEWIS H. FERGUSON |
| JAY D. HANSON | STEVEN B. HARRIS |
| JENNIFER RAND | JESSICA WATTS |
| HASNAT AHMAD | ELENA BOZHKOVA |

Participants:

| | |
|---|---|
| ALAN L. BELLER | L. DOUGLAS BENNETT |
| STEVEN BULLER | JOSEPH V. CARCELLO |
| JACK CIESIELSKI | WILLIAM CLARK |
| J. MICHAEL COOK | JAMES D. COX |
| CHARLES ELSON | MIKE J. GALLAGHER |
| ROBERT L. GUIDO | PAUL G. HAAGA JR. |
| MARY HARTMAN MORRIS | GARY R. KABURECK |
| WAYNE A. KOLINS | STEPHEN KOZERACKI |
| ROBERT J. KUEPPERS | MARK LA MONTE |
| PETER H. NACHTWEY | MARK NEWSOME |
| SAM RANZILLA | KEVIN B. REILLY |
| FLERIDA RIVERA-ALSING | LAWRENCE J. SALVA |

PARTICIPANTS (CONTINUED)

| | |
|---|---|
| MICHAEL SANTAY | KURT N. SCHACHT |
| CHRIS SPAHR | MATT TORREY |
| LYNN E. TURNER | JOAN WAGGONER |
| GARY WALSH | ANN YERGER |

Observers:

| | |
|---|---|
| BRIAN CROTEAU | LAWRENCE W. SMITH |

P R O C E E D I N G S

[9:31 a.m.]

MR. BAUMANN: Well, good morning, everybody. I'm Marty Baumann, the PCAOB's chief auditor and director of professional standards.

I want to thank everybody for coming to this roundtable to discuss our concept release on the auditor's reporting model. This is an extremely important project. Efforts are going on not only here at the PCAOB, but in many other places globally discussing the auditor's report.

And our concept release asked for comments by September 30th. So we're looking forward for comment letters. We have received several and very valuable ones and looking for more. And we're very interested in everybody's comments today.

But with that, let me turn it over to our chairman, Jim Doty.

MR. DOTY: Thank you, Marty.

Today's open meeting roundtable of the Public Company Accounting Oversight Board will elicit the views of 32 experts that we have around the table this morning. You bring here such various backgrounds as investors, auditors, corporate board members, financial statement preparers, and academics.

In this, the third public meeting on today's subject, the PCAOB wants to hear how we can improve the relevance and usefulness of auditors' reporting on the results of their audits of public company financial statements.

I want to begin by thanking you, the distinguished group of participants who have agreed to spend the day with us to discuss the PCAOB's auditor's reporting model project. Your active, robust participation here constitutes the most meaningful public service our society asks.

Because you each have busy schedules and many other demands on your time, the PCAOB's chief auditor, Marty Baumann, who is chairing today's discussion, and his staff have worked very hard to ensure that your time is wisely and productively used here. We have a full day of discussion topics, and I expect it will be lively. I know it will be valuable to us and to the public.

I want to also thank the Securities and Exchange Commission, in particular Chairman Schapiro, Chief Accountant Jim Kroeker, Deputy Chief Accountants Mike Starr and Brian Croteau, for their support for the PCAOB and our inquiry into ways that we may be able to make the auditor's report more relevant for investors.

I also want to thank my fellow Board members for their support for and active participation in this project. And before I turn the floor back to Marty, who will invite fellow Board members to offer their thoughts, let me touch briefly on a couple of points about the concept release.

The PCAOB's consideration of the audit reporting model is intended to confront questions that recur in times of economic crisis. In the concept release, we attempt to identify meaningful opportunities to enhance the relevance of auditors' communications to investors.

Our alternatives aim to enhance relevance and to highlight a statement we made in the concept release -- the alternatives suggested do not aim to change the fundamental role of the auditor to perform an audit and to attest to management's assertions as embodied in management's financial statements.

To be clear, they are not intended to put the auditor in the position of creating and reporting financial information for management. So discussion about that may be very important today.

As the concept release states, the alternatives are not mutually exclusive. A revised auditor's report could include one or a combination of these alternatives, or elements of these alternatives. Discussants may also suggest other alternatives to consider.

We are at a very early stage in this project. The concept release format allows us to frame today's discussion and the broader debate that will play out through the public comment process. It is not intended to lead inexorably to proposed requirements in any of the areas we have suggested.

Proponents of ideas, whether embodied in the release or introduced today, should come forward with evidence and analysis explaining why the idea is worthwhile. Both supporters and opponents of changes to the auditor reporting model should present persuasive support for positions they advocate.

We are in the middle of a long public comment process. I am confident today will not be the last public discussion of the concept release, but I encourage participants and members of the public who are interested in the project to follow up on today's discussion with any additional analysis or evidence they have to inform and help shape this project.

Thank you again, all of you. Thank you for being here, for your interest in the project.

Thanks to Marty and the staff. Marty?

MR. BAUMANN: Thanks, Jim.

Let me now turn it over to Board member Dan Goelzer for some comments.

Thank you.

MR. GOELZER: Thank you very much.

First, I would like to join Chairman Doty in welcoming all of the roundtable panelists here this morning and thanking you for your willingness to provide the Board with your views on ways in which the auditor's reporting model could be improved.

Exploring whether to expand what auditors communicate to financial statement users raises fundamental issues about the purpose of the audit and about what it means to be an auditor. The Board has heard repeatedly that investors want more from auditors than the assurance that the traditional pass/fail report provides. Frustration over financial institution disclosures in the run-up to the economic crisis crystallized that dissatisfaction with the current reporting model.

As Chairman Doty indicated, to address these concerns, the Board's concept release floats a series of alternatives. At one end of the spectrum, auditors might be required to create an auditor's discussion and analysis commenting on such matters as management's judgments and estimates and its selection of accounting policies and principles. The auditor might also be asked to characterize particular accounting and auditing decisions as "close calls" and to describe the underlying issues and risks.

The AD&A proposal rests partly on the notion that auditors had insight into undisclosed risks and dubious judgments on which the pre-crisis reporting of major financial institutions rested and should have alerted investors.

In contrast, other concept release alternatives would expand auditors' reporting responsibilities by building on their traditional attestation role without requiring the auditor to compete with management as an information source. For example, emphasis paragraphs keyed to management's disclosures would be a way for the auditor to indicate the existing disclosures that, in his or her view, are the most significant to understanding the company's financial reporting.

Auditors could also be required to opine on the accuracy and completeness of information outside the financial statements that management already provides, such as in MD&A or in earnings releases.

I have serious doubts about whether financial reporting would benefit from requiring auditors to move from attesting to or emphasizing the importance of information that management presents and into creating their own information about the company's financial reporting. However, as the concept release discusses, even without requiring auditor-created commentary, there is still plenty of room to expand the scope and relevance of auditor communications.

In any event, this threshold issue is one that the Board will have to grapple with as the project moves ahead. I am looking forward to hearing the views of roundtable participants on that question and on the full range of possible ways of making auditor reporting more relevant to users.

Again, thank you very much to everyone for being here, and I'm certainly looking forward to the discussion.

MR. BAUMANN: Thanks, Dan.

Now comments from Board member Steve Harris.

MR. HARRIS: Thank you, Marty, and I will be very brief.

Let me say simply the law states that the purpose of the PCAOB is "to protect the interest of investors and further the public interest in the preparation of informative audit reports." And I stress the words "investors" and "informative."

Investors clearly do not believe the current three-paragraph, largely boilerplate, binary audit report is either sufficiently informative or serves their needs. This is apparent from comments made to regulators both in the United States and abroad in the context of the recent financial crisis.

So the issue before us today is how best to provide the information in a cost-effective and efficient way directly to investors. And by directly to investors, I mean not wholly funneled through management or audit committees.

I asked myself some basic questions. What keeps an auditor awake at night, and what information does an auditor learn from an audit that he or she would want to know as an investor?

Why shouldn't auditors disclose to investors that information and the same significant risks they disclose to audit committees? And since all that investors are asking for is what auditors already know, why can't this be done easily and cost effectively?

There was a time, going back to the days of Arthur Andersen and Leonard Spacek, that the profession embraced their obligation to safeguard investors' interests. I think we need to return to that mindset and provide investors with more of the information they are asking for.

I want to thank Kurt Schacht and Joe Carcello for the surveys they conducted for the Certified Financial Analysts and the Board's Investor Advisory Group, which forcefully demonstrate the desire amongst investors for modernizing today's antiquated audit report.

I look forward to hearing from our distinguished participants, and I thank you, Marty and Mr. Chairman.

MR. BAUMANN: Thank you, Steve.

Everybody should have a package in front of them which includes the concept release, the briefing paper we sent out, an agenda, and various other materials for the day.

I'm going to give a brief overview in a couple of minutes of how we expect this meeting to run and operate today. But before we do that, given the size of the crowd and the distinguished group that we've gathered, I'd like to go around the table and ask everybody to please just take a moment to say hello and introduce themselves.

So I've done that already, and I'll start to my left.

[Introductions.]

MR. BAUMANN: Thank you very much.

If you take a look at your agenda for the day, what we've planned is for each of the topics that are listed there, we at the PCAOB have asked a couple of people to kick off the topic with some opening remarks. After those opening remarks, the floor will be open to all for comments.

I will ask -- I will repeat what we indicated in the briefing paper, that we hope the comments that we get are as specific as possible about the proposals, about your view of the proposed change in the auditor's report, taking into account challenges, implementation issues, as well as what investors' needs are.

But the greater the specificity, the more valuable the input will be to us as we go ahead and think about this meeting and think about future possible changes to the auditor's report.

After the opening commenters speak on each section, anybody who wants to speak please just turn this tent card up on its edge. We'll then make sure we get around and call on each of you to comment and give your views on the specific topic we are discussing.

So, as the agenda indicates, we're starting with the suggested potential auditor's discussion and analysis, then later on moving towards emphasis paragraphs, and auditor assurance in other areas. To the best extent possible, we'd appreciate trying to stay on topic for each of these areas during the morning.

We also have a section later on to discuss other alternatives, but certainly, variations on the theme of the AD&A or variations on the theme of emphasis paragraphs would be welcome during those discussions.

Opening comments will be made by the following participants, just for your information. In the auditor's discussion and analysis, we've asked Ann Yerger to make opening comments. As you heard, Ann is with CII. Gary Kabureck from Xerox, and Bob Kueppers from Deloitte & Touche will all give opening comments on that subject. Again, after that, the floor will be open to all for comments.

In the required and expanded use of emphasis paragraphs, Joe Carcello from the University of Tennessee will kick that off and then followed by Kevin Reilly from Ernst & Young.

With respect to auditor assurance on other information outside of the financial statements, we've asked Mary Hartman Morris from CalPERS to lead the discussion initially, followed by Mike Cook, sometimes audit committee chairman, to follow thereafter.

And then, the final discussion of the day on the clarification of the language in the auditor's report and a further discussion, an open discussion of other alternatives that participants may have, Jennifer Rand from the Office of the Chief Auditor will lead that discussion.

For each topic, we've included questions to be considered. Your comments, when you make them, can be related to the questions or to any other aspect of the specific topic we are addressing. But again, we do ask that you focus your comments on specificity, as we requested in the briefing paper.

The outreach we performed, and many people here were parts of that outreach, greatly informed the concept release, and we appreciate the great participation of many people who were part of our outreach. Outreach gave us a lot of insights into what ways the audit report could potentially be changed, but it's this roundtable and comment letters that we're looking for to really help us get more granular in what those changes will be, as we think of changes going forward.

As a reminder, I just want to repeat one more time that comment letters are due by September 30th, the end of this month. As I said, we've received a number of valuable comment letters to date and hoping to receive many more between now and September 30th.

With that, let's begin starting discussing the auditor's discussion and analysis. The questions we'd like to address in the auditor's discussion and analysis -- and again, we can stay on topic with these questions, or you can think of others -- but include what types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A -- audit risk, audit procedures and results, auditor independence?

What types of information should an AD&A include about the auditor's views of the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A? That is, management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including close calls.

Next, what are your views regarding the potential for an AD&A to present any consistent or competing information between the auditor and management? What effect will this have on the financial statement presentation? And what are the potential benefits and any shortcomings for implementing the AD&A?

So, with that, I will keep these summary questions posted. With that, I would like to turn it over to Ann Yerger for your opening remarks in this area.

Thanks, Ann.

MS. YERGER: Thank you. Good morning, everyone.

Thank you, Chairman Doty, Board members, PCAOB staff, for hosting today's roundtable.

I'll speak on behalf of the Council of

Institutional Investors, that we greatly appreciate your leadership and, indeed, regulatory courage in exploring some issues that have long been debated and that remain very controversial even today.

As noted in the concept release, the quality of the auditor's report has been discussed and debated for decades now. And over the years, a variety of highly respected groups have recommended expanding the breadth and depth of the report.

Calls for reform actually haven't ebbed over the years. In fact, I think we could argue they have intensified in the wake of the financial crisis. Most recently, changes have been recommended by the U.S. Department of Treasury's Advisory Committee on the Auditing Profession; by surveys of members of the CFA Institute, which I am a proud member of; by a recent survey of investors by the PCAOB's own Investor Advisory Group; and by the PCAOB staff's own extensive outreach.

The bottom line is that investors want more information from the outside auditors. Today, an outside audit of a U.S. company may entail thousands of hours of work, involve reviews of financials produced around the globe, and cost more than $100 million. But all the investing public generally sees of this tremendously valuable labor is a few paragraphs of boilerplate language.

The current pass/fail model does have some benefits. It's brief, and it offers clarity, consistency, and comparability. However, today, it is clear that this report no longer adequately satisfies the information needs of investors, the key customer of this work.

An auditor's discussion and analysis section is an ideal approach for enhancing communications between auditors and investors. This supplemental report would maintain the benefits of the current report while satisfying the needs of investors for more relevant and useful information from the auditor.

This approach was supported by the IAG survey, which found that a majority of the surveyed investors believe there should be a separate AD&A section in the 10-K.

I believe an AD&A should include, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates. Such disclosure was supported by 86 percent of the respondents to a 2011 CFA survey and 79 percent of the respondents to the IAG survey.

Respondents to the IAG survey also highly value discussions by the auditor of the following areas: first, high financial statement and audit risk; second, unusual transactions, restatements, and other significant changes to the financial statements; and third, discussions of the quality, not just the acceptability of accounting policies and practices.

And I'm not an auditor. I'm not a technician in this space. But I think the feedback from those surveys sort of suggest that investors want a little more color to what the auditors are seeing and what they view about what's being presented in the financials.

Certainly, there are risks to a supplemental report, and the biggest is that these reports would become boilerplate and of little value. Clearly, this is not a desired outcome.

To avoid this possibility, the PCAOB must write standards for this report. However, I also believe any standards must not be overly prescriptive and that all AD&As should be subject to robust enforcement by the PCAOB to ensure that auditors present reports tailored for each company's particular risks, facts, and circumstances.

The benefits of AD&As are many. They would provide investors valued information from an independent expert that is relevant for investors analyzing and pricing risks and making an investment and voting decisions. They would also heighten the perceived value of audit firm work and would give audit firms more leverage to effect change and enhance management disclosure in the financial statements.

The end result would be increased transparency to investors and heightened investor confidence in audited financial reports, and that's a good outcome.

I strongly believe the additional information should come from the audit firms and not management or audit committees. Audit firms are objective, third-party experts that have unique insights into companies, and it is appropriate and beneficial for the investing public to receive more information directly from these unbiased experts.

We would expect that these insights would result in complimentary and not dueling information to that provided by management. This is information that would inform and not confuse investors.

Regarding costs, the information of interest to investors is already being communicated by outside auditors to audit committees. So I do not believe the report should significantly increase audit costs. But regardless, I believe investors would say the benefits of this additional, highly valued information would far outweigh any incremental costs.

Thank you again for letting me participate today, and I look forward to learning from all of you during the afternoon and morning.

MR. BAUMANN: Thanks, Ann, for those very thoughtful opening comments.

I'll turn it now to Gary Kabureck for his opening comment.

MR. KABURECK: Good morning, everybody.

And let me begin by thanking Marty, you and Jessica and the Board, for inviting me to be here. I'm looking forward to it.

This clearly is a very important project and one certainly worthy of significant efforts by the Board and the staff. And I'd also like to actually compliment the authors of the concept release for a very readable, very professional document. It was very well done.

For today, I'll withhold judgment about how truly critical it is for the current standard order report to change. But that said, I do believe it's desirable and useful to do so.

In broad terms, I believe the preparer community will generally support a number of the changes in the concept release, provided the report expansion is reasonably concise and is limited to information about the audit, as opposed to the financial statements.

For example, I believe many preparers would support greater use of emphasis paragraphs, where you talk about critical accounting areas, critical audit areas, and likewise, I think you'd support a lot of potential clarifying enhancements in the release.

Regardless of where this project comes out, however, I think sooner rather than later I encourage the Board to decide what level of audit knowledge should be presumed to be known by the users of financial statements. While I personally believe it's a reasonable expectation that a user should be assumed to be a knowledgeable reader and can comprehend what is meant by phrases such as "reasonable assurance" and "free of material misstatements," the Board may conclude otherwise.

An early determination of what level of audit knowledge should be assumed I believe will greatly aid the Board and the staff in deciding what modifications need to be made to the standard report.

Today, I was asked to talk about a preparer's perspective of the concept of an AD&A. While it's certainly not impossible to do, to the extent any AD&A would provide commentary about a company's financial affairs, I submit that you'll find general opposition from the preparer community for a number of reasons -- some conceptual, some practical.

For instance, in my view, the auditor's report should not be the vehicle to communicate any new information about a company's finances, accounting policies, quality of earnings, significant judgments, conservatism on the account. If the Board or the SEC or the FASB believes additional information is needed, they should make this concern and address it through normal rulemaking processes applicable to preparers.

I think disclosures of a company's financial affairs are the roles of management and the company's board. To require the auditor to provide analysis of a company's financial statements I believe would create some independence and legal issues for the auditors and, let's be realistic, has an awful large number of practical limitations.

For example, auditors are experts in accounting and auditing, not operational and financial analysis, and I don't think we should lose sight of this. I think it's also wrong to assume that an auditor knows more about a client's financial affairs than management, but any rulemaking which requires the auditor to comment on a client's financial disclosures and affairs beyond management's disclosures could effectively put the auditor in that position.

And there is nothing an auditor could disclose that the client couldn't also disclose. Presumably, management has disclosed everything relevant or required. And if they haven't, the auditors have remedies are already available to the auditor.

Let's play this out and assume an AD&A, as envisioned by the concept release, becomes required. I think this creates some other problems you're going to need to deal with. For example, to the extent the auditor's disclosures are different or incremental to management's, how to reconcile and explain computing views.

I cannot envision a case where an adverse or more conservative or controversial disclosure by the auditor will go unresponded to by the client. I just don't see how investors and other users are better off in such situations to have competing disclosures.

We need to be mindful that in some types of AD&A, disclosures may be interpreted as close or contentious calls, when, in fact, this might not actually be the case. Then I would ask what controls and training will there be on the auditor to be balanced in his or her thinking? Will the Board or the SEC provide a set of boundaries and other rules that provide management some recourse?

Despite my reservations, should the Board decide to require an AD&A, I would strongly recommend the auditor be permitted to rely on similar and presumably new disclosures made by management, and it would only be the default answer if management does not provide that information.

I don't believe a goal of this project should be to increase a company's disclosures through new audit requirements. However, should this be the ultimate direction, everyone, in my opinion, is better off served by having expanded management disclosures rather than expanded auditor disclosures.

And my last point just on cost. An AD&A is not going to be free or even cheap. On the contrary, when dealing with external report drafting of this type, this tends to be very expensive time. I personally believe internal audit fees would be better spent diverting the value of this time into increased audit procedures in the high-risk audit areas rather than report writing.

So, in closing, I'll go back to the beginning of my remarks. As a preparer, I can see a number of beneficial changes in the standard audit report, provided a focus of the audit process. I want to reiterate that I believe it's inappropriate for the audit report to communicate any incremental information about a company's accounting or finances.

If such additional information is ultimately considered appropriate, then I think it should be addressed in FASB or SEC standard-setting processes.

So, again, thank you for the time, Marty. Appreciate it. Thank you.

MR. BAUMANN: And thank you for your willingness to make some opening comments, and we appreciate hearing them.

The third person to introduce this is from the audit profession, and that's Bob Kueppers.

MR. KUEPPERS: Thank you, Marty.

Let me take a few minutes to set out my thoughts on this topic of auditor's discussion and analysis, or AD&A. And I think my views are consistent with the views of my colleagues in the other firms here today. Of course, if they're not, they'll let me know that.

But the reason I say that is we've spent a lot of time -- actually, the better part of the last year -- collaborating, working together on the issues of what the auditor report might be, and I think there are a couple of important points to sort of set the stage for our part of this dialogue.

First, I think it's important to understand that the profession is in no way opposed to meaningful changes in the auditor's report. To the contrary, I think responsible changes to improve the relevance and information value of what we produce as auditors is a good thing. That should better serve investors and the other users of our reports as the end product of our work.

In fact, we provided the PCAOB with a fairly comprehensive set of examples in a preliminary comment letter just a week after the concept release was published, showing how reports might change under many of the proposals in that concept release. And now these examples are part of the public record, and I encourage you to take a look of so how might it look if certain of these changes were actually made? Hopefully, that will inform the standard-setting process.

I will tell you this, informing our views, we developed a short set of what we're calling overarching principles, and I think we'll come back to these throughout the day. And I'll be very brief, but I want to cover them right here.

First, we think that auditors should not be the original source of disclosure about the issuer. Management's responsibility should be preserved in this regard. One way to think about it is that we think management should remain the provider of information, and the auditor should be the provider of assurance on that information.

Second, changes should enhance or at least in no way diminish present-day audit quality, and I think changes should serve to narrow or at least not widen the expectation gap.

I also think it's important to avoid investor confusion. Any revisions requiring investors to sort through differences across information from management, the audit committee, and then the auditor I don't think will be an improvement. I think it will create misinterpretation on what it all means, and auditor reporting should focus largely on the objective rather than the subjective.

And finally, I think any changes should be market driven. In other words, they should be called for. What we do that might be different should add value, and I think we have to take note of appropriate cost-benefit considerations.

Now, having said that, while we do not support the changes to require an auditor's discussion and analysis as set forth in the concept release because I think it's contrary to the principles I just covered, I think it's very important to just give you a couple of reasons why we think that's the case.

Now if we become the original source of disclosure about the issuer rather than management, that is fundamentally changing our role, in my view, and I think it could do a disservice to investors and, in fact, create the confusion I mentioned earlier.

We talk about complicated areas like management estimates and the close calls. So, at the end of a robust discussion with the company, the audit committee, and the auditor, a decision is made, but it's in some nebulous category called a close call. Does that mean that that was not a good decision? Does the decision that was made that was not a close call, is that somehow qualitatively better than the one that received more attention?

The truth is that the -- when you talk about quality of accounting, variability of estimates, that is the subject of a two- or three-way dialogue with the audit committee, and I find that that process works very effectively. It is hard to capture in a report the essence of a dialogue that happens through the course of an entire financial reporting cycle, and I just don't think it lends itself to a meaningful reporting model that could ever capture the insight or the value of that.

So the audit committee, the knowledge of the management, the knowledge of the financial reporting process, and the oversight that they exhibit throughout an entire cycle is something that doesn't lend itself to a few paragraphs in a written report.

I think it also changes us, changes our role from being objective to subjective. Our work has a lot of subjectivity, a lot of judgment. When you take that and then have another layer of that in the reporting model, I think you will not find comparability across reports from the same firm. You will not find comparability across reports from different firms in the same industry, and I'm not sure that we, at the end of it all, would say that we have actually improved the system.

And I hate to mention it, because it sounds self-serving, but time is a problem. The current reporting deadlines that we face, I can only tell you, and I'll be sort of gentle with this, it is extremely difficult to get it all done, wrapped up, get our papers ready for inspection, everything that has to be done, all within a very compressed timeframe.

And with some of our new standards, including new standards for engagement quality review, the pressure just keeps building, and I think this kind of a model would add to that.

However, I think we should very carefully keep in mind the problem we're trying to solve. If disclosures are not adequate for the purpose of the users, the investors, the requirements for those disclosures should be changed. Whether it's the management's discussion and analysis, whether it's financial statements themselves, if we're not meeting the needs of investors, that issue must be addressed.

And I think there are some very good ways to do that that will give investors what they say they are lacking, and I think management is in the best position to provide those enhanced disclosures that we remain in the best position to provide assurance on those disclosures.

And I think some of the disclosures that are on the table today, including emphasis of a matter, some of the potential for assurance on other parts of the document, I think that will come out in the course of our dialogue today.

Let me just close by saying I've been around this process from the day that the doors of the PCAOB opened, and I must tell you, Marty Baumann and his staff have done an incredible job of outreach ahead of the concept release. It's sort of unprecedented. I mean, it went on for weeks, months, I'm not sure.

But having participated in that process, this is one of the healthiest, most informed concept releases you've ever done, and I encourage, as you go forward, to the extent you have the will or the time, to continue that process. I thought it was just excellent.

I look forward to the discussion, and I'm happy to answer questions.

Thank you, Marty.

MR. BAUMANN: Bob, thanks for your opening comments.

I will say during the outreach -- and please, I hope to start seeing tent cards turning up on their edge in the near term. Otherwise, I have to keep talking. Certainly, during the outreach, investors were very strong in their views and amongst a broad group that they needed to hear more from auditors than the standard report that Ann made reference to in her opening comments.

And different terms were used by different investors of what they wanted, but the essential issue was it was simply lacking during the financial crisis and over the years in terms of not understanding that there were certain issues that were borderline on the edge and, at the end of the day, could have caused -- would have informed them better had they known about that.

So those are strong views from investors, and we wound up calling it AD&A in the press release. That term "auditor's discussion and analysis" wound up being used a lot, but the concept was hear more from the auditor about the types of issues that are discussed with the audit committee. We did hear some concerns from the auditors, et cetera, about some of the problems with that, including timeframe.

So, with that, I'm glad to see cards. Jessica, you were up first. I think Mike Cook may have been up first. So we'll turn to Mike.

MR. COOK: Thank you, Marty.

And my sentiments to you and the staff as well, as have been expressed by others. Appreciation for a very thorough and open-minded approach to a subject that has been studied rather extensively for a rather long time.

And maybe I'd just offer one historical sort of perspective on that in that the auditor's report has changed some over the years. We've modified references to uncertainties. Where we used to have "subject to" opinions, the going concern has changed, the use of emphasis has changed. There have been some modifications, but the core of the report and the pass/fail characteristic is not substantially different than what it has been for a long time.

There is one thing, though, that I think has changed dramatically during that period of time that should be thought about when we analyze whether or not the auditor's report needs to be changed, and that is the emergency and growth of audit committees. Audit committees did not exist in many instances in the early stages of some of these studies that we're talking about.

I can remember being on the Auditing Standards Board 35 years ago when we took up this subject, and it's been lots of folks have had a go at it since then. So it's not an unfamiliar topic.

But the point being that audit committees are there for a reason, and one of the principal parts of the process that the audit committees are engaged in is a very robust dialogue and communication with auditors and with management, with others who participate in the process. And lots of what we're talking about here that we might be thinking about putting into an auditor's discussion and analysis doesn't end up in the same environment where there is an open discussion among people in person, live, free flowing.

Stating some of that same information is the notion that, "Well, if you say it to the audit committee, why not say it to the investors?" doesn't really comprehend, I don't think, the discussion and the give-and-take and all the effort that goes in to the close calls and things of that kind.

So one thing I would ask, I thought this would be better at a gathering of the American Medical Association. But nonetheless, I would say, as I think I've said once before, let's be sure we don't do any harm. Do no harm here to other communication processes that are emerging and growing and getting better all the time and are working quite well.

And when you get into some of the notions that are being expressed in different ways and what we have before us today, such as all communications from auditors to audit committees need to be in writing and communications from auditors to audit committees ought to be, in turn, communicated to the public. We start putting those pieces together, and we will drive communications between auditors and audit committees with management back, light-years back from where it is today and take out of the process what I think makes the process really work.

So I would make a plea on behalf of audit committee members and people who are working very hard at this to not be so quick to dismiss the effectiveness of that role in the process and leap from the auditor to the investor as if the audit committees were not actively engaged in the middle.

And I know you have a separate project on communications with audit committees, and perhaps a high degree of coordination between these two projects might produce a better end result for everybody than we might otherwise get.

I'd like to just make an observation about the auditor's discussion and analysis. I think we're all speculating as to what it might turn out to be.

And I, for one, if I was a betting person, I would put all my chips on the boilerplate number, whatever that might be, as opposed to betting that this will turn out to be a free-flowing, open, effective communication because I don't see how you can overcome the potentials from inconsistency from person to person, from company to company, from industry to industry, from firm to firm.

And to the extent we end up with something which is very different from company to company and firm to firm and so on, I think the inconsistency of that and the confusion that that will create, perhaps almost chaos that that will create, would detract so much more than any benefit that would be derived from it.

So if you end up with speculation A, boilerplate, probably not a great deal of harm, just cost with no benefit. If you end up with the alternative, I think you end up with a potential for substantial decline in the overall quality. so I would suggest we need to be very careful at what the standards are and agreeing with Ann saying they should not be prescriptive. But at the same time, this can't be a free-for-all.

And I would urge one thing, and that is if the inclination is to move forward with AD&A that, in addition to the great outreach you've done up to now, this needs some serious field testing because I think the issue of timing, which Bob points out is critical; the issue of how management will interact with what the auditor is saying in the discussion and analysis; the what the content is going to be, what is it going to look like, how is it going to be presented should not be done in a vacuum.

So I'm not a fan of this. I'm not enthusiastic about it because I still believe the boilerplate is going to win out in the end. But if we are going forward, I would say do so with great care.

MR. BAUMANN: Thanks, Mike.

And I can assure you that the staff and the Board will certainly encourage us to work with due care on this most important matter, and we'll continue to, hopefully, go about this with the thoughtful way in which many of you have complimented us for moving along so far. So thanks for those thoughtful comments.

I'd like to turn to Joe Carcello.

MR. CARCELLO: Thanks, Marty.

First of all, I think Ann did a wonderful job of laying out the case for AD&A. So I won't reiterate what she said, and I thought Gary and Bob and Mike's comments were very good, very thoughtful. I disagree with much of it, and I could try to rebut it, but I won't do that at this point.

I do want to point out -- since in this forum in the past at times I have been critical of the profession when I think their performance has fallen short, I do want to reiterate or second what Bob Kueppers said about the CAQ comment letter, and I've said this to Sam and others in other public forums, I think it's actually a very good comment letter.

The profession has gone further than I thought they would. Not as far as I'd like to see them go, but further than I thought they would. And in particular, Marty, I would point out to you in Exhibit A, Item Number 4 on page 4, I think is quite good. I think that's the kind of information that investors are really driving at. So I give the CAQ and their members credit for that.

But what I want to talk about very briefly is we're hearing a lot today, and I think this is really one of the essential issues -- maybe the most essential issue -- is that auditors shouldn't be --

MR. BAUMANN: Just as an aside, that Exhibit A is not something that everybody has in front of them. You're referring to the Exhibit A to the CAQ letter.

MR. CARCELLO: CAQ comment letter.

MR. BAUMANN: That's not in front -- it's on our Web site, but it's not in front of everybody today. I saw some people looking through their folders.

MR. CARCELLO: That's right. It's not in

front of everybody today.

The essential issue is whether the auditor's role in doing more direct reporting is appropriate or inappropriate, and I think that's probably the major source of tension. So I just want to do -- very briefly make a couple of comments not from Joe Carcello, but from the profession itself.

And so, I have a comment here. This is from testimony before ACAP by Dennis Nally -- Mike, your boss, I guess, or one of your bosses -- the chairman of PWC International, who stated, "It's not difficult to imagine a world where the trend to fair value measurement leads one to consider whether it is necessary to change the content of the auditor's report to be more relevant to the capital markets and its various stakeholders."

And in the white paper that the CEOs of the six largest firms produced in 2006, they stated, "The new reporting model should be driven by the wants of investors and other users of company information."

Also in that same white paper, they stated, "Given our independence and experience, we, the auditor, are in an ideal position to provide value to investors throughout the world." We agree with them. We agree with them.

The last thing, and this is from a book written by Sam DiPiazza, who is a former CEO of PWC and one of his colleagues, and I'm quoting now from this book, "Making the future better requires responding to the market's demand for audit opinions that say more about the information on the health of the business. Today, a great deal of this information is already reported by management and for certain purposes is considered in the course of the audit, including such issues as management estimates, the possibility of fraud, risks, liquidity, and future scenarios.

"The audit opinion" -- I'm still quoting. "The audit opinion could be expanded to address this information, as well as how all the pieces fit together as a whole."

So we're in agreement with everything I've just said there, and I guess my question to my friends in the profession is what's changed?

MR. BAUMANN: Joe, we appreciate those comments and all of the research that you've done on our behalf. And we'll look forward to your ongoing research to support our efforts.

I'll turn to Mark Newsome.

MR. NEWSOME: Thank you.

The first thing from my perspective over the years is the audit opinion generally has not provided much value. I typically look to see if it was unqualified or not and if there was something added after that, you know, some type of change in accounting policy.

And so, when I started to think about this invitation -- by the way, thank you for inviting me -- I started to think about what would be nice to see in an audit opinion and what I've seen through other channels in my investing career.

And so, the first thing is I think about what and auditor did review, right? An example might be, as an analogy, a legal opinion that I might see in a private investing transaction. There's a negotiation that takes place where the company's counsel will provide an opinion and explain what they reviewed and what they did to come to that opinion.

When I think about close calls, I think about not necessarily a contentious situation or, "Boy, that was a close call" type of conclusion. But I think about the range of possibilities that might have been discussed.

For example, if you're talking about a particular figure on a balance sheet, was the probability chosen equal among five possible outcomes, and they settled on one? So then, maybe the auditor should discuss the fact that there was a wide range of possibilities that were relatively equal and potential conclusion.

When I think about coming back to the unqualified opinion, I think about accounting due diligence reports that I've seen where, let's say, an investor would hire an auditing or accounting firm to render some form of opinion on a company's financial profile. And those reports are generally rich in information, and they provide a lot of value, whereas the audit for public and private companies opinion does not.

And then when I think about the boilerplate comments, my opinion of companies across my career is that each one is different, even within a small peer group where companies do generally the same thing. And I know that the management financials, not necessarily the audited financials, the management financials are generally different from company to company.

And so, if that's the case -- and I encourage management teams to use their own style because I believe the financial statements are a tool to help me understand how they run their company. And so, if management financials are different even within peer groups, then why should the audit opinion be identical for companies within a peer group?

And so, I have lots of other comments, but let me stop there and, again, thank you for the opportunity.

MR. BAUMANN: Thank you.

Steve Buller?

MR. BULLER: Thank you, Marty, and thank you for inviting us to speak this morning.

So I have a number of general observations and then a few specific observations with respect to the questions you've asked.

So, as part of BlackRock, we actually polled the analysts globally to get their input from our firm and also our preparers. So BlackRock preparers roughly -- it is subject to audits on roughly 3,500 sets of financial statements between the corporate entities we have and all the funds.

I was afraid for a while, as I was getting these very passionate views on both sides, that I would be issuing the reciprocal of the SEC disclaimer that the opinions were those of my company and not my own. But we've reached some agreement where they actually are my opinions also.

As part of our challenge in issuing all these statements, many of our statements that we have are SEC registrants, and particularly on the fund side, and those statements are included in the financial statements of other nonregistrants in the U.S., as well as local registrant and nonregistrant entities overseas.

So one of our general observations is that we really believe it's important that as part of this undertaking, which we believe is important and very useful, that there be a collaborative effort between the PCAOB, the AICPA, the SEC, the FASB, and certainly the IAASB in making sure there is some alignment to the extent possible in the audit opinion effort because we think it might be difficult for many of the users of our statements, who are global users, to see different sets of opinions that might have different levels of content. So, to the extent that those can be developed in a parallel fashion, that would certainly be useful.

So, in addition to that kind of global perspective, we also believe, and I think Bob made the comment from D&T, that it's important to have statements around objective as opposed to subjective information where possible. And we believe there are a number of objective criteria in the A&A which do benefit from comment.

And thirdly, again, a comment made by several people is it's important that management, where possible, be the original source of disclosure about the company. And again, we think there is value to having a review by the SEC and other entities in the materials that are contained in S-K to see if some of those should not, in fact, be moved to S-K because some of the disclosures that now are being made or should be made perhaps in MD&A could be subject to auditor oversight and, therefore, a higher level of assurance by the user.

So, with respect to some more specific comments, we do believe that the AD&A could be a useful tool, but there should be some parameters around the content of the AD&A. And among those are I think that it would be useful to have information on -- pointing on significant new accounting principles and whether they are preferable in the context of authoritative and regulatory guidance. So, again, something that is subject to a specific definitive benchmark, as opposed to a subjective determination.

We also think that our users in particular felt that there were a number of situations where they would have benefitted from additional information on going concern entities. So they thought that whether our issues involving uncertainties, that those -- the insight on those uncertainties, declining or concentrated cash flows, upcoming material financial obligations, changes in other characteristics of the operations of the company, that insight, if not communicated by management, would be very helpful to have in the AD&A.

There also are some areas related to auditor independence. And so, we think the AD&A could benefit from a couple of different segments to it. One is general observations on audit procedures, some on the company, and then on auditor independence because not all aspects of auditor independence are, in fact, disclosed in a proxy.

So we, of course, have our audit fees

disclosed in our proxy. We have a number of related party arrangements, including audits of our funds that we sponsor, that do not appear in the -- the fees don't appear in the proxy or other disclosures. And we think it's important for investors to have some perspective on the overall relationship that the auditor has with a registrant, which may be both direct through the fees paid by the registrant as well as indirect through those services provided to affiliates and related parties that can be audit and not audit services that could bear upon independence.

We also think it would be important to have information on the tenure of the audit relationship, again as part of that overall disclosure in the AD&A.

We think that there are some areas that, again, would be helpful to investors, and that would be disclosure of audit procedures and material errors. Now this is a catch-22 because we don't want the AD&A to be a 45-page document talking about every specific procedure performed.

But we do think that there are material errors where at least it would be helpful to allow the investor to have some insight into those significant judgments regarding uncertainty with respect to some of the sensitive areas like fair valuation, review of the impairment of intangible assets, loan loss reserves, tax uncertainties, all those things which have been the flashing red lights in the reports over the past several years.

We would not object to the identification in AD&A of those areas which were -- where there is significant management or auditor judgment or significant uncertainty, given their complexity and, as part of that, the attendant disclosure of some of the key inputs upon which the auditor relied.

And again, part of the thesis that we believe, which is based upon the need for management to make original disclosures, we believe that will in part force management to enhance their disclosure and their financial statements, as opposed to having the auditor talk about their key inputs. Because we believe that many of the key inputs that the auditor uses in performing their procedures also are the same key inputs that are used by management. Not in all cases, but we believe those would benefit from that.

Responding to the comment on close calls that was made, and I forget who made that, we really do not support disclosure of close calls because it almost has a pejorative nature to the assertion because it sounds like that there is a toggle point, and that toggle point is a close call when, in fact, the very nature of preparation of financial statements involves estimates and a level of uncertainty. And it would be perhaps misleading because it almost implies that there is a failure to adopt proper accounting principles or the failure to have an appropriate determination on the accounting issue.

So we believe there are other ways to communicate that. One of those is in the MD&A section, many firms are encouraged by the SEC literature to include ranges around estimates. We believe that that literature should be clarified to make it clear that information should be prepared by the registrant, included in financial statements to provide more insight on the nature of that uncertainty, as again opposed to a statement by the auditor that there was a close call may imply that something is wrong when, in fact, all there is, is a determination made around a range of possible outcomes.

Again, I think in the MD&A, it's important to the extent that there is also forward-looking information that that forward-looking information be made by management and that the auditor be restricted to objective comments and does not go beyond those points.

And I think those are probably the significant statements that we'd like to make.

Thank you.

MR. BAUMANN: Thanks, Steve.

Can I just follow up a little bit, just want to make sure I was clear on the point you were making on the insight with respect to judgments and estimates. Were you talking about the insight with respect to what audit procedures were performed by the auditor on those judgments and estimates, or about the auditor's insight as to the quality of those judgments and estimates made by management, or both?

MR. BULLER: So it would be based upon to the extent that there are audit procedures performed, it would be clarification around those procedures performed. So it, in fact, points the reader to understanding that there are areas of significant judgment.

That to the extent that there were inputs that were used in making those determinations by the auditor, potentially disclosure of those inputs so the reader would have some understanding of the basis upon which the auditor reached their conclusion.

MR. BAUMANN: Thank you.

Just so those whose cards are up, brief order I have right now is going to be Bob Guido, Jack Ciesielski, and then Mike Santay. And now I do see other cards up, but just knowing you're going to be called on.

MR. GUIDO: Thanks, Marty, and I appreciate the invite.

Many of the things that I'll mention have been addressed by a lot of you already. I'm all for changing the auditor's report in a very professional way. I've been dealing with the expectation gap for nearly 45 years, both from a public accounting standpoint and the last 5 1/2 years as an audit committee chair.

But again, I'll -- not quite as long as Mike Cook, by the way. But having said that, I do agree with what Mike said. And Steve, some of your comments just now, I do agree with.

I might start off by saying that in my mind, the auditor's report provides assurance that the financial statements are presented in accordance with GAAP. I really believe that provides a lot of value. So I personally take exception to anyone who doesn't believe that.

The audit is historical. There's no question the opinion is a point in time. It's not predicting the future. And if we need to focus more on the future, then we need to change a lot more.

I would say that in Mike's summation about audit committees and usefulness of audit committees and what they really have been doing -- and I've been a little bit spoiled in the profession because I had some great audit committees that I worked with. Then I had some not so great ones in the '70s and '80s.

But Sarbanes-Oxley really changed the game plan, and a lot of great things came out of Sarbanes-Oxley, in my mind. And the audit committee arena, which Mike mentioned and I fully agree, really needs to be studied more, where we are and where we're going, because there's a lot of great things happening, in my experience, with audit committee and audit committee institutes across the capital markets.

Today's markets, I would also say, are much more sophisticated, and the investors, institutional investors, the analysts that I deal with ask great questions. Their predictive models are wonderful.

However, as an audit committee chair, I really am concerned that many suggestions in the AD&A could make the committee's oversight of the audit and communications with the external auditors much more difficult without providing the promised benefits to the ordinary investors. Providing investors with the same information that is provided to audit committees without the context obtained from a two-way dialogue may be incomplete, generate, in my mind, greater confusion, and not enhance the overall understanding of the readers of such a report.

I've also great concern that the notion of an adoptable report that he or she could tailor to a company's specific risks, facts, and circumstances. This, in my mind, would lead likely to an administrative nightmare in trying to wrap up an audit, given that each report would be custom made and would likely have to be cleared with the national office, accounting and auditing experts, let alone legal.

The resulting report, in my mind, would be extremely long and complex. It would probably lack comparability with other companies and would likely not be in a format that easily can improve communications with users. And again, remember, that's what we're trying to do here.

And last, but not least, I have a real concern that at least in my boards, I want the audit partner to really focus on the risk and the complexity of what they're doing and prove audit quality and not worry about haggling over a lot of words. And I'm very concerned about that.

Thank you.

MR. BAUMANN: Thanks very much, Bob.

You've probably been observing the same thing, but I just want to maybe summarize a little bit because I'd be interested that as you are making your comments, those who think an AD&A is a good idea, those who seem to have expressed concern about it during this session have talked about timing and how it could impact 60-day reporting deadlines at year end.

The fact of a lack of context maybe that the two-way dialogue had between audit committee members, or three-way -- audit committee members, management, and the auditor. And some concerns that those who were expressing that about inconsistency, since individual partners would be writing the AD&A, inconsistency within a firm, I guess, with respect to various clients and then certainly between firms and industries. And those are some of the concerns being expressed, and we heard those in our outreach.

And I guess to the extent those who have their cards up who think AD&A is a good idea, how do they think that we could work around that as a concept? So please comment on whatever you want, but I just -- those are some consistent themes I hear, and I just am interested in those who have -- believe the AD&A is a good idea maybe to comment on those.

As I said, Jack Ciesielski was going to be the next commenter.

MR. CIESIELSKI: Thanks, Marty.

If I could just tack on to what you just said, obviously, I support the AD&A concept, but I don't think that it has to be a replacement for the audit opinion. It's a supplement. Therefore, I think you could expect to have variability from client to client and within a firm.

If you think about the MD&A as a model, the MD&A wasn't exactly, I think, welcomed by companies when it was first initiated. But it's evolved and developed, and it's not a bad framework for thinking about the AD&A. It's custom tailored to each individual company. There really isn't much comparability from one MD&A from one firm to another, and I don't think investors would expect one AD&A to be the same for two companies in the same industry, even if they're audited by the same firm.

The way I read the concept release and the understanding that I have of what an AD&A should be is a communication between the investor and the auditor. And I think when we start worrying about having competing disclosures with management's disclosures, I think we're muddying it up a little bit because it's really quite clear in the concept release that this is not intended to contradict or supplement the management disclosures. It really should be about the relationship between the investor and the auditor, which you don't get much of in three paragraphs right now.

I think, actually, if you're going back to the analogy of the MD&A, one place that auditors typically begin their audit is with an assessment of the risks within the company in the operating environment they participate in. So I think it would be very useful for an investor, just to throw away -- getting away from the close calls issue, but what would be good for an investor?

I think it would be good for an investor to understand how the auditor assessed the risks within the firm before they began the audit, how the economy, how their competitors might have effects on the assets and liabilities of that particular company.

There could be competition that's making their product obsolete. It might encourage the auditor to expand their testing of inventory or accounts receivable because maybe their products that they've already shipped are already obsolete, and they have problems with customers.

But understanding the environment that the company operates in is central to the audit, and sharing that assessment with the investor would be useful from a very broad, high-level kind of assessment, and that could be communicated and how that affected the way they performed the audit.

I don't think that the investor wants to have an audit program in an AD&A, but I think they want to know why the accounting principles employed by one company are sufficient. Not just because they're in GAAP, but what makes them preferable?

If I could give an example that's something happening right now? We've had pension accounting for about since 1988 that's a confluence of many deferred losses, deferred gains, all kinds of stuff amortized into pension costs.

Lately, in the past year, we've had companies, within the confines of GAAP, starting to use much more stringent accounting on pension by getting rid of deferred losses that they would otherwise amortize. You have some companies that you have the same audit opinion on both sets of pension accounting principles used.

One is preferable to the other. There is preferability letters for those companies that make the changes, but you don't see that in the audit opinion. It just says it's presented in conformity with GAAP.

I think investors would like to know more about the accounting principles being used, why they're preferable, why they're doing a good job of describing the economics of the firm. And I think that's the kind of thing they'd really like -- that investors would really like to see more of in an AD&A than just near death events, or close calls, whatever you want to call them.

So, that said, I just want to address one theme that was recurring in some of the earlier remarks about costs. Audits today are still a bargain. In the last 5 years for the S&P 500, the total change in the audit fee has been about 5 percent since 2006 through 2010. That's not much.

And in fact, there's in the S&P 500, there is 371 CEOs whose pay was greater than the entire audit fee. So you can think what you like about CEO pay, but it's making the audit fee look like a relative bargain in terms of the work that's done for the investor. I don't think I've ever heard investors complain about the size of audit fees.

And I think if you give them something more in the audit opinion with an AD&A or any of the other avenues that we're going to explore today, I don't think they'll complain about an increased fee either. So I know that that sits well some folks and not others, but the investors are the ones ultimately footing the bill, and I don't think they'd mind.

What else? That's all I've got for right now.

MR. BAUMANN: Thanks, Jack.

And let me turn to Mike Santay and then

Charles Elson and Kevin Reilly and then Flerida Rivera-Alsing.

MR. SANTAY: Thanks, Marty. And thanks, Jack, for your comments on audit fees. We appreciate that.

MR. CIESIELSKI: Thought you would.

MR. SANTAY: We understand investors are seeking more information, and the auditors need to bring more value, and we agree with that. We also agree with the earlier comments that the auditor should not be the original source of some of this information that might be contemplated for the AD&A. We don't think that's operational, as it's currently positioned.

Whether the auditor is the asserter or the attester, the end result should be the same. That is, the information that's presented should be accurate and useful in allowing the investor to make their decisions in evaluating the financial statements and the disclosures.

We believe that the auditor is in the best position to be the asserter in this model, and it's consistent with what their training has been and what their role has historically been. To provide subjective assumptions about the financial statements in an AD&A we believe has a high risk of calling into question the overall opinion that -- the GAAP opinion that they're providing.

We had analogized that to situations where the auditor is faced with a qualification of their opinion. You know, in those situations, the auditor does become the asserter. They need to -- they have a requirement to disclose what management has not in a qualified opinion. So, from that perspective, the AD&A could be construed as somewhat of a qualification of the auditor's opinion on the financial statements.

Now it strikes me that what the key disclosures are is what management -- what keeps management up all night and why? And that should be the basis for the financial statements and some of the subjective analysis that we've been talking about here.

And as it relates to opportunities for

improvement, I think we'll get into that in some of the other areas as we talk through the day, particularly auditor involvement in other information. We talked about critical accounting estimates. I think we'll talk a little bit about some of the auditor involvement in perhaps interim information and others, and I think that's going to be important.

But I think providing the auditor specific views as it relates to the subjective assessments we think would be problematic.

Thank you.

MR. BAUMANN: Okay. Thank you, Mike.

Charles Elson?

MR. ELSON: I take just a slightly different tact and look a little bit more at sort of the governance implications of -- general governance implications, I think, of the proposal. I mean, no one can be against increased information and transparency. That, in and of itself, is a good goal. But I think sometimes you also have to look at the side impacts of what you're attempting to do.

What you've seen in the last 10 years since Sarbanes-Oxley has been a tremendous change in the nature of the audit committee. I mean, 20 years ago, the audit committee was really the place you put people who you really didn't know what else to do with, and it was the worst place to end up. Perhaps it still is.

But you've seen a real professionalization of the committee itself, the idea of the financial expert on the committee, the idea of financial literacy on the committee. And it's really changed dramatically. I mean, the notion that you have retired auditors chairing committees is a new concept and I think have been a very helpful concept.

And the role of the committee itself has changed in that the committee today engages the auditor. Where 10, 15 years ago, it was management who, effectively, hired the auditor, today, it's the committee, and that was an important change in SOX. So the idea of the auditor is to effectively work for the committee, providing assurance to the committee and the shareholders, obviously, of the effectiveness of the financial reporting structure and information that's being reported.

The difficulty, I think, with creating a new auditor discussion and analysis section, which basically reports on what the auditor thinks and what the auditor has said or maybe hasn't said to the committee, is it changes the nature of the committee dramatically, if you think about.

Because what's happening now is the committee engages the auditor, and the auditor is now being asked to comment on all its relations to the committee.  It's like hiring a lawyer and having a lawyer, after the lawyer advises you on what to do and not to do, get up publicly and tell everyone what they said to you and what they didn't say to you, which effectively is substituting in a way the auditor for the committee itself.

And that's a bit problematic.  There's a difference between advising a committee and giving assurance to a committee and the shareholders and effectively becoming the committee itself. And from a governance perspective, I think if this goes through as proposed and it begins to weaken the committee -- it removes the committee as the middle person, if you will, between the company and the shareholders -- I think it ultimately may impact negatively the monitoring role obviously that the committee provides and the board itself.

Central to our system is the board within the organization, representing the investors, overseeing management for the benefit of the investors. It's a small group who reviews management for the benefit of the investors in the company itself. And if you diminish their authority and ability to monitor, I think you really create long-term problems with the entire board oversight model.

Substituting a third party, the auditor, for the board itself, elected by the shareholders, in this regard I think ultimately may lead to more problems than not. It's the old "careful with what you wish for, you may get your wish."

This is one of those because I think that while greater disclosure is welcomed, the greater disclosure here I think may lead ultimately to less effective monitoring, which ultimately is more harmful to the organization and the investors.

MR. BAUMANN: Thank you very much for those very thoughtful comments.

Kevin Reilly, Flerida Rivera-Alsing, and then Paul Haaga.

MR. REILLY: Yes, Marty. Just let me make a brief comment, and that is I just want to stress one of the points that I view to be the 800-pound gorilla in this debate. And that is -- and it's the one that speaking for the profession through the CAQ efforts is the one that has given us the greatest amount of indigestion.

And that is the calls for the auditor to provide subjective views and impressions surrounding a company's financial reporting matters is the one that we view to be really troubling in this regard. And that is, look, we have these conversations with audit committees. We provide these discussions in due diligence reports.

But those communications happen, as Mike Cook mentioned and as Bob Guido reiterated, in the context of an effective, two-way discussion and dialogue. And to blast this stuff out in a widely distributed public report is going to be a real problem and will create, in my view, significant confusion for investors.
