Critical audit matters will inherently vary from company to company, and it is this very fact that allows an investor to glean company-specific focus. In some industries there will be more variance than others, as some might have a relatively comparable pool of critical audit matters that affect all of them while other industries consist of companies each with unique issues. Regardless, I think this challenge is minimal. Critical audit matters are not meant to radically alter the substance of a company's financial statements, but rather to grant the reader insight into specific areas that might warrant additional attention.

*****

I appreciate the opportunity to share my viewpoint on the Proposed Standard, and I thank you for your consideration of my comments.

Sincerely,

Kevin J. Gomez

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//

**Re: PCAOB Rulemaking Docket Matter No. 034 – Proposed Auditing Standards on The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards**

Dear Board Members and Staff:

Grant Thornton LLP appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or "Board") proposed auditing standards and amendments, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report and Related Amendments to PCAOB Standards*, and we respectfully submit our comments and recommendations thereon.

Overall, we support the Board's efforts to enhance the relevancy and transparency of the auditor's report. We agree that retaining and also expanding beyond the "pass/fail" reporting model, will benefit investors and other users of financial statements and related financial information. As the PCAOB considers moving to a less-structured report in order to enhance relevancy and transparency, we believe global consistency is of critical importance. We strongly encourage the Board's collaboration with other standard-setters, such as the International Auditing and Assurance Standards Board ("IAASB") to align, to the extent practicable, the reporting requirements in order to minimize differences in definitions and application and, therefore, maximize the benefit to users of auditor's reports worldwide.

We are participating in the Center for Audit Quality's coordinated field-testing efforts of certain elements of the proposal. We believe this effort will provide important feedback on the operationality and cost elements of the proposal, and accordingly, we strongly encourage the PCAOB to consider the results of the field testing prior to finalizing the proposed new and revised standards. We also note that this analysis could be particularly important for smaller listed entities. We agree with the Board's expectation that the adoption of the proposals will increase the time necessary to complete an audit and the costs related thereto, predominantly related to critical audit matters and other information.

### Critical audit matters

We agree with the objectives of increasing the relevance and usefulness of the auditor's report. Providing more insight into critical audit matters ("CAMs"), the audit matters that were of most significance to the audit, should provide investors and other users of the financial statements with information that could be useful in evaluating the underlying financial statements.

We have identified suggestions for improvement with respect to the proposal's scope, filtering mechanisms, and form of communication. These suggestions are intended to address concerns we have as to how the proposal aligns with current audit processes and documentation protocols. For example, the proposal could better leverage the process and work performed under other auditing standards, such as Auditing Standard No. 16, *Audit Committee Communications* ("AS 16").

Additionally, we agree that tailoring CAMs to the specific facts and circumstances of each engagement is important in providing meaningful information to investors. However, we note that this may create challenges to investors who attempt to compare reports even within the same industry because risk assessment and audit issues are very unique to each issuer. To illustrate this point, consider two companies in the same industry where one auditor may report difficulties on one issuer while another auditor may not report anything on the other issuer. We understand the flip-side to this risk is that such disclosures will become boilerplate. We recommend that the Board continue to evaluate these potential challenges through further outreach and post-implementation review separate from the inspections process.

#### Scope and definition of a CAM

We believe that the proposed scope under which CAMs are determined (documented in the engagement completion document, reviewed by the engagement quality reviewer, and/or communicated to the audit committee) creates redundancy and inefficiencies when considering the current audit process. We believe that audit teams effectively identified matters that are most significant to the audit in developing their communications to the audit committee under AS 16. Our view is that the audit team will have already filtered through the engagement completion document and work reviewed by the engagement quality reviewer in order to develop those significant matters that will be communicated to the audit committee. Therefore, requiring reconsideration of the matters defined in the proposal would significantly increase time and costs with little benefit to CAM identification. Accordingly, we believe the more appropriate starting point for identification of CAMs is to consider the matters included in audit committee communications.

When comparative financial information is presented, we agree with limiting the CAMs to the most recent financial period. We believe the most recent financial period is likely the most relevant to users of the financial statements and may enhance understandability and transparency. Further, limiting the CAMs to the most recent financial period may avert unnecessary complexities in auditor reporting. Other than in the initial year of implementation, we believe that financial statement users may have access to the prior period's auditor's report should they wish to consider CAMs related to such period.

*Factors in determining a CAM*

We are supportive of the factors considered in determining CAMs listed in the proposed standard and believe these will assist the auditor in assessing matters, based on the audit procedures performed, to adequately identify CAMs. However, we believe that the current proposal would be improved by providing more direct linkage of the factors to significant matters disclosed in the financial statements. The examples provided and related discussions in the Release focus on those types of matters (for example, complex fair value measures). As currently drafted, situations where the auditor spent considerable effort in developing an audit plan over say a multi-location audit may appear to meet the CAM factors for consideration, but disclosing those efforts may not provide actionable information to the users of the financial statements as the auditor considerations would not be presented in the context of an impact on the financial statements. In relating matters directly to the financial statements, we would also encourage consideration as to materiality, which we believe is a significant factor when considering practical application of the standard, but is currently implicit in the requirements. Therefore, we strongly encourage the Board to revise paragraph nine of the proposed standard to include a more direct link to the financial statements – the auditor would consider matters that are material to the financial statements as well as those involving the most difficult, subjective or complex auditor judgments; posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence; and/or posed the most difficulty to the auditor in forming an opinion on the financial statements.

Communication

We generally support the proposed language that would precede CAMs in the auditor's report, when considered with the relevant comments throughout this letter. However, we note that there is no reference to auditor judgment, and we believe it is important to specifically communicate that the determination of CAMs is based on the auditor's professional judgment. Adding language to this effect will better align the proposal with other standard setters as well as the Board's risk assessment standards.

Further, paragraph 11b requires that the auditor describe the considerations that led the auditor to determine that the matter is a CAM. We recommend the Board consider revising this requirement so the auditor considers the "primary" considerations that led to the determination of a CAM. As currently proposed, an auditor may repeat all of the factors in paragraph nine, which we do not believe is the Board's intention. If the requirement is revised to focus on the primary considerations, the auditor can better communicate what were the most relevant factors that led to the conclusion that a matter is a CAM.

We appreciate the Board providing various examples of CAMs and the opportunity to comment on those examples. We are generally supportive of the examples, however, we have significant concerns with respect to disclosing information about the company (internal control deficiencies and proposed adjustments) that should be the purview of management to consider for disclosure. Absent disclosure by the entity, we do not believe the auditor should be in the position of needing to or being expected to disclose such information.

We believe that the current proposal and related examples imply that certain information may be reported by the auditors and not disclosed by management. Such disclosures by the auditor would blur the auditor's responsibilities with those of management. We also believe that unintended consequences could arise if the auditor were to communicate matters that are not otherwise required to be disclosed, such as significant deficiencies in internal control, since this could create confusion and inconsistencies with current SEC reporting requirements. Such disclosure by the auditor could also result in negative consequences to the issuer given the context in which those disclosures might be made and the fact that the issuer did not make the disclosures themselves. Application guidance provided in paragraph A37 of the IAASB's Proposed International Standard on Auditing ("ISA") 701, *Communicating Key Audit Matters in the Independent Auditor's Report* states:

> "It is appropriate for the auditor to seek to avoid the description of key audit matters inappropriately providing original information about the entity that is the responsibility of the entity's management and those charged with governance unless, in the auditor's judgment, the additional information that the auditor may provide is critical to the auditor's description of the key audit matter and providing such information is not prohibited by law or regulation. In such circumstances, the auditor may encourage management or those charged with governance to make relevant disclosures in the financial statements that include such other information, so that reference can be made to those disclosures within the description of the key audit matters in the auditor's report, rather than the auditor providing original information."

We believe this is important application guidance that we recommend the Board consider adding to their proposed standard related to CAM. As noted above, we believe alignment in the auditor reporting standards is important for investors and other stakeholders. Adopting this guidance will better align the requirements with the proposed ISA and clarify that auditor reporting should be limited to only audit-related matters and should not include information that management is responsible for disclosing.

We also note that the examples include references to the procedures the auditor performed with respect to the CAM. As proposed, there is currently no guidance or framework for the auditor to consider how and what to describe with respect to the audit response to a CAM. While we recognize that CAMs are intended to make the auditor's report more informative and useful, it is essential for investors to better understand the concepts of auditing in order to fully benefit from this additional information regarding audit procedures performed and to be able to use the information as intended by the proposed standard. In recent years, investors have adapted to new and emerging accounting information, but accounting topics (and changes thereto) do not equate to auditing topics, and there would be a significant learning curve for many investors who do not understand audit fundamentals and objectives.

We do support providing the auditor the option to include audit procedures in the explanation of each CAM if, in the auditor's judgment, conveying those procedures provides a better understanding regarding the significance of the matter. However, we strongly recommend the Board continue to perform outreach in this area prior to concluding on whether to promote or require such disclosures.

Finally, we note that the reporting of CAMs will likely present additional auditor litigation risk surrounding what matters were selected, how they were described, and even the order in which they are presented in the auditor's report. Such risks may not be limited to the legal liability of the auditor but may also heighten the audited company's litigation risk. However, we believe revisions to the proposal based on certain of our recommendations may mitigate this risk.

Documentation

We support the effort to align the documentation requirement under the proposal with current auditing standards. However, as noted previously, we believe that it is important to clarify within the proposal that the determination of and response to CAMs are a matter of auditor judgment. Further, the current proposal requires the auditor to document why the auditor concluded that a matter potentially meeting the definition of a CAM was not ultimately communicated as a CAM. This type of documentation is inappropriate and will add unnecessary time and costs to the audit. We believe that this requirement is inconsistent with current auditing standards and auditor protocols regarding documenting the results of procedures performed and evidence obtained to support the auditor's opinion. Documenting what the auditor considered but did not act on is not operational, and we do not believe it improves audit quality.

Also, the proposed standard appears somewhat inconsistent with the additional discussion on this topic provided in Appendix 5, *Additional Discussion Related to the Proposed Auditor Reporting Standard* ("Appendix 5") of the proposal, which notes:

> "In fulfilling the documentation requirements under the proposed auditor reporting standard, the auditor would not be expected to provide an explanation for each matter documented in the engagement completion document, reviewed by the engagement quality reviewer or communicated to the audit committee."

We are concerned that, as currently drafted, the proposal will result in a significant amount of time and effort relating to fulfilling the documentation requirements, particularly at the end of the audit when available time is often minimal. Consequently, we are concerned with the potential impact on audit quality, as such requirements would strain resources and could potentially impact the communications between the auditor and engagement quality reviewer and/or the audit committee.

## Auditor's responsibility regarding other information

We support providing greater transparency into the auditor's responsibility and procedures related to other information, which we believe will be beneficial to users of the financial statements. We agree with the Board's view that investors and other users of the financial statements will benefit from understanding the auditor's responsibilities for information that accompanies the auditor's report and financial statements. We do note that some of the suggested changes in the proposal seem to indicate that the Board is remedying a deficiency in current practice, rather than bringing transparency to the existing process. We think this is most evident in the Board's discussion in Appendix 6, *Additional Discussion Related to the Proposed Other Information Standard* of the release as to the upgrading of the auditor's responsibility from "read" to "evaluate." We are not aware of previous concerns articulated by the Board or PCAOB staff with respect to the auditor's responsibilities and execution under current standards.

### Objectives and scope

We believe that certain clarifications to the objectives may enable the auditor to meet such objectives. We recommend clarifying the objectives to refer directly to the financial statements as well as adding language allowing for the auditor to consider the materiality of the other information, in order to focus the auditor's efforts in areas where potential misstatements of fact or material inconsistencies may be more likely to occur.

We have suggested certain revisions to the proposal related to clarifying the scope of the auditor's responsibilities and the auditor's ability to use judgment in determining the level of effort to expend on certain information. For example, we believe it would be appropriate to allow the auditor to determine the extent of work necessary on certain aspects of other information. Also, we are not clear as to the Board's intent with respect to the exhibits filed with the company's annual report and whether previously filed exhibits are also subject to the same approach with respect to evaluating the information and performing procedures. While such clarification is not currently included in AU 550, *Other Information in Documents Containing Audited Financial Statements,* we believe current practice would include a pragmatic approach to the need for or level of review of certain other information included in the exhibits, for example. Accordingly, we recommend the Board clarify the scope of other information that would be subject to this standard as well as provide for auditor judgment in determining the nature and extent of the procedures performed related to the other information.We are also concerned as to the implications of extending the auditor's responsibility to information filed subsequent to the issuance of the company's Form 10-K, specifically the definitive proxy statement or any subsequent amendments to the annual report. As currently written, the auditor is responsible for evaluating information that is not available as of the report date. We believe this requirement could result in significant operational issues. We recommend the Board reconsider the impact subsequent filings may have on auditors fulfilling their responsibilities under this standard and the interaction with other standards, such as those related to report dating, predecessor/successor auditor changes, etc.

We also believe the Board should clarify in the standard that it does not intend for another company's financial statements to be considered "other information" for purposes of this standard (for example, in cases where financial statements of an acquired entity are included in a registrant's Form 10-K). These financial statements should not be considered within the scope of the proposed standard given that they are not the company's information and were subjected to a separate audit.

### Evaluating the other information

As noted above, the proposed standard elevates the level of auditor responsibility, which we believe is unnecessary. The benefits of this change to investors will not be commensurate with the costs associated with expanding the auditor's responsibilities related to other information. By increasing the requirement from "read and consider" to "evaluate and conclude," the burden to identify misstatements of fact is now higher, but there is no reference in the second objective of the standard with respect to the evidence obtained. We strongly encourage the Board to consider retaining the current performance requirements in AU 550 .

We do have concerns regarding the proposed responsibilities for information not directly related to the financial statements. As currently written, we believe this may be interpreted inconsistently and potentially drive excessive work by audit teams attempting to compare audit evidence with aspects of such information. We believe that the evaluation of other information not directly related to the financial statements as described in paragraph 4c of the proposal should be separate from the responsibility for information directly related to the financial statements. Consistent with current practice, we believe the auditor's responsibility should be limited to reading and considering the other information not directly related to the financial statements based on the auditor's understanding gained during the audit.

We also note that the proposal does not specify that the auditor would communicate the date through which the other information subjected to the auditor's evaluation was available. We believe this should be included especially when considering potential issues related to report dating and subsequently filed other information.

Responding to material inconsistencies or misstatements

We support the proposed responses to potential material inconsistencies or material misstatements of fact as set forth in the proposal. We do note that it is unclear whether the Board's reference in the proposal to AU 561, *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report*, implies that the audit report should be amended or dual dated in instances where the auditor identifies a material inconsistency or misstatement of fact within a company's subsequent filing, such as a definitive proxy statement. Additionally, is the report on other information affected by subsequent matters? We believe further clarification of the intent of the Board with respect to such events is necessary.

Reporting in the auditor's report

We support flexibility with respect to the order of items to be reported within the auditor's report; however, we believe that reporting on other information should not be included prior to the description of management's (and the audit committee's) or the auditor's responsibilities, both of which refer to the audit of the financial statements. Reporting on other information should be clearly separated and included at the end of the auditor's report on the audited financial statements.

We believe it is important to consider the users' perception of the proposed paragraph to be added to the report and the conclusion provided in that paragraph. We believe that providing a conclusion on other information in the report would likely result in an increase in the expectation gap for investors and other users as to the level of work performed on the other information. We strongly recommend the Board consider revising the reporting requirements to focus on the materials the auditor was responsible for, and a general description of the performance requirements without providing a conclusion.

We suggest the Board consider clarifying scenarios as it relates to the auditor's reporting responsibilities. For example, if the auditor identifies a material misstatement of fact with respect to a matter that does not affect the financial statements and management will not revise the disclosure, would the auditor be expected to report this misstatement in the auditor's report? Would the auditor include it but specifically state that the material misstatement does not impact the financial statements? Since the scope of information currently encompasses all other information, all of the various scenarios that may arise should be considered by the Board prior to finalizing the proposal.

Finally, with respect to the impact on predecessor auditors, we do agree with the Board's proposed changes with respect to the predecessor's responsibilities. We note that AU 508.71 discusses representations from management and the successor auditor that the predecessor should obtain. We suggest the Board consider expanding the nature of the representations to include matters that come to the attention of the successor auditor that might have a material effect on the predecessor's conclusion with respect to previously reported other information, in addition to the financial statements reported on by the predecessor auditor.

## Basic elements of the auditor's report

### Addressees

We are supportive of the addressees of the auditor's report including both shareholders and the board of directors or its equivalent in order to gain more consistency in practice. We believe that addressing the report to the shareholders is supportive and consistent with the objective of the audit, which is to enhance public confidence. However, we do not believe the addressees should extend beyond the shareholders and the board of directors or equivalent. The primary users of the financial statements that are considered when planning and executing an audit are "reasonable investors" as described in Auditing Standard No. 11, *Considerations of Materiality in Planning and Performing an Audit.* Including other parties beyond these may misalign the addressees of the auditor's report and the primary users considered in an audit.

### Auditor's responsibilities and nature of an audit

We further support the clarifications and proposed additions to the report language surrounding the auditor's responsibilities as well as the nature of the audit. We believe such information may be helpful to investors and other users of the financial statements. We also recommend that the Board consider aligning those requirements, where appropriate, with the IAASB proposal, which we believe would be beneficial to financial statement users. In particular, we recommend adding the following:

- Definition of "reasonable assurance"
- The auditor's responsibility related to obtaining an understanding of internal control relevant to the audit (financial statement only audit)
- The auditor's responsibility to communicate with the audit committee

### Auditor tenure

We recognize that greater transparency regarding tenure may be important to some users of the financial statements, but we believe the auditor's report is not the appropriate place to convey this information. If included in the auditor's report, the information could be misinterpreted as having a correlation to audit quality, as highlighted in the PCAOB's release, where there is no definitive empirical evidence that such a correlation exists.

The Board refers to rules adopted by the United Kingdom ("UK") Financial Reporting Council in Appendix 5 that require UK-listed companies to provide information on the length of auditor tenure in a separate section of the annual report. In this case, the listed company provides this information, not the auditors. We believe it would be more appropriate if this information were reported by a company's audit committee through the proxy statement or other means. If the responsibility to disclose this information must lie with the auditor, we would be supportive of the Board requiring the tenure information to be included in audit firms' annual report on Form 2. Since an audit firm's Form 2 is available to the public, we believe this is a more reasonable method for conveying this information without risking it being misinterpreted.

### Form of the auditor's unqualified report

We believe retaining the pass/fail model is important, particularly with the introduction of CAMs. Maintaining the pass/fail model will make it clear that the auditor's opinion is on the financial statements taken as a whole and not on specific elements. As indicated above, we support not mandating the ordering of sections in the auditor's report in order to allow flexibility. However, we are concerned about the proposed standard's use of headings. Currently, headings are required for only certain sections of the auditor's report. The proposed use of headings may imply to users of the financial statements that certain sections are more important than others or should be weighed differently when evaluating the auditor's report taken as a whole. We recommend requiring headings for all sections, which is consistent with other standard setters. We believe this would better align the intended use of the auditor's report with how it is read and used by investors.

### Explanatory language within the auditor's report

We agree with retaining the concept of explanatory paragraphs to emphasize a matter regarding the financial statements. We note that the proposed definition of CAM is included in Appendix A to the proposed auditor reporting standard. We suggest the Board consider adding a definition of an "emphasis of matter paragraph" to clearly differentiate the expected use of those paragraphs from CAM. .

With respect to placement, we support the flexibility afforded by the proposal that permits auditor's to place emphasis of matter paragraphs within the auditor's report based on the nature of the information and the auditor's judgment as to its relative significance. This flexibility is consistent with not mandating the ordering of the various sections of the auditor's report.

## Other considerations

### Scope

We recommend that the two proposed standards be applicable to issuers, including emerging growth companies (thus entities filing Regulation 305 or 309 statements would not be subject to these provisions), with an  exception for Form 11-K filers. While we understand that certain industries, such as investment companies, include entities that are not complex and reporting and disclosures are straightforward (such as a mutual fund that invests in highly rated securities with little complexity or valuation uncertainty), we would find it difficult to “draw a line” as to when CAM would be required for an entity or type of entity based on those scoping characteristics.

We believe that employee benefits plans are designed for a specific purpose and as a result would likely have either no CAMs identified, or similar, potentially boiler-plate CAM descriptions. Employee benefit plans are inherently less complex and entail fewer estimates and judgments, and CAMs for these entities would likely include auditing hard-to-value investments, which require extensive fair value disclosures. Further, plans have a limited amount of other information that would be filed with the SEC. Since each plan also files an AICPA report with the Department of Labor, scoping plans out of the proposed standards would avoid different forms of the auditor’s report for the same entity.

With respect to broker-dealers, we believe the standards should apply to broker-dealers that are issuers, consistent with our views above. We are aware of situations where a broker-dealer can request confidentiality with respect to certain statements included in a filing. In those circumstances, the auditor’s responsibilities for reporting CAM may conflict with the reduced financial statement presentation. We recommend further discussion on this matter and consideration as to whether CAM, in those circumstances, would be limited for consideration to the matters related to the publicly available financial information.

### Consideration of other independent auditors

It is currently unclear how these proposed standards would interact with AU 543, *Part of Audit Performed by Other Independent Auditors.* We believe that further guidance is needed with respect to applying the proposed standards to audits where multiple auditors are involved, such as in scenarios where a principal auditor makes reference to another auditor’s report.

### Considerations related to securities act documents

We agree with the Board’s deliberate approach as it relates to expanding the scope of the proposed standard or incorporating elements of the performance and reporting of the proposed standard to AU 711 *Filings Under Federal Securities Statutes.* Current practice for most securities offerings that include capital-raising often include an underwriter who will require that the company’s auditor provide a comfort letter related to the financial statements and other financial information included in the filing. The interplay between the responsibilities and legal liability of the underwriter and that of the auditor under the federal securities laws is complex. Providing more transparency as to the auditor’s responsibilities for other information included in those filings without also including the responsibilities of the other parties (such as underwriters and attorneys) may be confusing and result in inappropriate conclusions by the readers of those filings.

## Cost considerations

As described above, we agree that initial costs will be incurred by firms in order to update firm policies and methodologies, and there will be ongoing costs in order to apply the requirements of the two proposed standards. We note that certain of our suggestions are intended to address efficiencies as well as maintain effectiveness of executing on the objectives set forth in the proposal.

Some of the additional cost considerations will include incurring additional time identifying and drafting CAMs, evaluating other information, documenting procedures and conclusions reached on CAMs and other information, and discussing these matters at length with the audit committee. Audit firm quality control procedures will likely include national office involvement. This increased time will also be incurred by the more expensive team members since the proposed standards provide minimal opportunity to leverage this work.

As noted above, we are in the process of performing field testing in conjunction with the Center for Audit Quality, which will help us determine an estimate of the increase in hours and costs. While we currently do not have empirical evidence to provide to the Board, we believe that the increase in cost and time will be due to considering the sensitivity of company information and interrelationship with company disclosures in the financial statements and other information, and the additional discussions that will need to take place with management, those charged with governance, and possibly the company's and auditor's legal counsel. We do expect that the increased time will impose pressure on meeting an issuer's filing deadline and also create pressures on audit quality. The costs to be incurred by the auditor will also pressure firms to raise the cost of the audit.

Lastly, we support and recognize the importance of a post-implementation review separate from the Board's inspection process that includes an evaluation of the direct and indirect effects on financial markets, regulatory scrutiny, and litigation matters. It is inevitable that auditor judgments across and within firms will differ with respect to determining and describing CAMs and, as a result, there will be variations in practice. In addition, we believe that users of financial statements would utilize and apply the additional information to be included in the auditor's report in diverse ways to suit their specific needs. Accordingly, monitoring the effects of the new auditor's reporting model and whether it is not only being applied appropriately by auditors but also has met user expectations will be essential to achieving the objectives of the proposed standards.

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//

**Subject:** PCAOB Comments in support of Lisa Roth
**Date:** Thursday, December 12, 2013 9:05:41 AM

I endorse and support Lisa Roth's comments.
As a small independent business, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies many of which are closely held independently owned businesses.
Thank you for your interest in our opinion.
Stacy

**Subject:** Proposed Auditing Standards
**Date:** Monday, November 04, 2013 5:57:16 PM

Whenever I read proposed regulations I try to determine what problem exists that requires a new regulation. As to the proposal to "enhance" the auditor's report and to "enhance" the auditor's responsibility over other information outside the financial statements in annual reports, I do not find an existing problem that these proposals will solve.

Critical audit matters are akin to the critical accounting matters already disclosed, at least in duplicate, in the notes to the financial statements and the MD&A. Each of these began as an attempt to identify the critical matters but quickly expanded to an almost inclusive litany of all but the minor accounting matters affecting the financial statements. In practice registrants run a risk of omitting anything that litigants may subsequently deem critical. I see the same happening in this proposal so it will result in a third litany of matters already covered elsewhere in the financial statements and the annual report. The result will be additional bulk in an already bulky document. Recently, Chairman White commented on the unnecessary duplication and disclosure of information suggesting a need to streamline, not expand, data.

Asking the auditor to expand responsibility over information outside the financial statements is another solution seeking a problem to solve. Auditors already read the entire documents in which their reports are included and if they identify inconsistencies or other information with which they do not want to be associated, they can withhold their report. This proposal formalizes and expands their responsibilities which in turn will expand the scope, time and fees for their work plus increase their legal exposures.

The responsibility for complete and accurate financial statements and other information issued by issuers is that of management of the company. These proposals suggest a shift of responsibilities to the auditors. This trend leads to them, not the registrant, being responsible. At what point do they lose independence due to the expanded responsibilities?

RE: PCAOB Rulemaking Docket Matter No. 34

Board Members:

This comment letter is presented by the Audit Committee and management of Healthcare Realty Trust (NYSE:HR) in response to PCAOB Release No. 2013-05, PCAOB Rulemaking Docket Matter No. 034 dated August 13, 2013 (the "Release").

We are opposed to any significant expansion to the independent auditor's report and to the additional extensive disclosures by the independent auditors regarding the integrated audit that are outlined within the Release. We believe any specific expansion is not justified. This release, if adopted, would add more confusion and not clarity.

Our main objection is that it is not clear that there are any specific benefits to an expansion as contemplated by this Release. We do not believe this additional information from independent auditors would be useful to users of an Issuer's financial statements and periodic filings. The Release contains many references to academic research and highlights a major weakness to this type of academic research – the benefits are not definitive, only theoretical. Providing this information solely as a data source to be mined for further academic research is not in the best interests of the investing public, an Issuer, or an Issuer's independent auditor.

We believe this Release is an example of what SEC Commissioner Daniel Gallagher was referring to in his remarks on December 6, 2013 at the Second Annual Institute for Corporate Counsel. His outreach with investors reveals that currently "disclosure documents are lengthy, turgid, and internally repetitive" which results in disclosure documents that are "not efficient mechanisms for transmitting the most critically important information to investors – especially not to ordinary, individual investors. They are not the sort of documents most people are likely to read, even if doing so is in their financial self-interest." Given this overload of disclosure, the Board should be measured in its rulemaking to avoid expanding disclosures, such as those included in the Release, that are supported mainly by academic research that notes such rules "could" provide benefits that are elusory. The history of the accounting profession has been that rules, disclosures and related costs only increase. They very seldom are reduced.

Further, we have not been able to reconcile the inevitable expansion of an Issuer's regulatory filings as a result of the Release with the comments from SEC Chair Mary Jo White on October 15, 2013 to the National Association of Corporate Directors addressing information overload. She described this as "a phenomenon in which ever-increasing amounts of disclosure make it difficult for an investor to wade through the volume of information she receives to ferret out the information that is most relevant." She also commented on the SEC's outreach activities in the mid-1970s:

> "the Commission... held public hearings on what topics should be required in corporate disclosures. In the course of those hearings, it received suggestions of over 100 topics – a 'bewildering array of special causes' – ranging from charitable contributions to 'good things a company has done.' Expressing the view that disclosure should generally be tethered to the concept of materiality, the Commission decided against requiring disclosure of the identified matters, noting that 'as a practical matter, it is impossible to provide every item of information that might be of interest to some investor in making investment and voting decisions.' "

In the Board's outreach it appears to have had a similar experience that Chair White references in her speech – "a bewildering array of special causes." The proliferation of ideas the Board has elected to explore and expose for comment has resulted in response fatigue. Issuers and independent auditors have responsibilities other than monitoring the Board's activities and responding to these activities in public letters. This creates the probability that ideas with little value will be promulgated since Issuers, who fund the PCAOB's operations, simply cannot keep up. Better discretion is needed by the Board in its rulemaking process and communications. As Commissioner Gallagher noted, "from an investor's standpoint, excessive illumination by too much disclosure can have the same effect as obfuscation – it becomes difficult or impossible to discern what *really* matters."

Another concern raised by Chair White in her speech is whether investors are "getting the information they need when they need it." The effects of this Release could constrain an Issuer's ability to meet the current regulatory filing deadlines. The Board needs to consider the current reporting requirements along with the expansion of disclosures in connection with this Release, and discuss this with the SEC, to determine what is in the best interests of the investing public.

In all of the Company's experiences and across all communications media with the public, the Company has never had any questions or discussions with investors on any matter involving the Company's audit. The Board does not appear to be communicating with the same investor groups as the Company. As an Issuer who is active in the public markets, the Company is in constant communication with existing and potential investors, both institutional and individual. An extensive and efficient infrastructure has been carefully created to allow investors to communicate easily with management. The Company's periodic filings are governed by the rules of the SEC and include not just the periodic reports on Form 10-Q and annual reports on Form 10K, but include all other 1934 Act and 1933 Act filings. This information is available instantaneously once filed and is designed to provide the investor with not just the GAAP-based financial statements and related notes, but management's commentary on historical results, forward-looking views on trends, risk factors and any other information deemed relevant to an investor or potential investor. In addition, the Company furnishes other information via a Form 8-K that is not required to be filed with the SEC, such as investor presentations and other supplemental information, all with the intention of assisting interested parties in developing as complete an understanding of the Company's business and industry as possible. Management holds a quarterly earnings call with analysts and investors where management makes itself available to answer questions regarding the Company's business. A shareholders' meeting is held annually that is open to all current investors to attend. At this meeting, representatives from the Company's management team, audit committee, and independent auditors are all available to interact with attendees and respond to inquiries of any kind. Further, the Company provides other telephonic and electronic means for all parties to access management. It should also be noted that the Company's independent auditors have never received any inquiries from the investing public regarding their audits or the Company's financial statements.

The Release would fundamentally alter the communications among independent auditors, Issuer's audit committees, Issuer's management, and the public. At its core, the nature of an attest engagement requires the independent auditor, through its audit report, to communicate its conclusion whether the Issuer's written assertions (i.e., the financial statements and related notes) are presented fairly, in all material respects, in conformity with accounting principles generally accepted in the United States of America. Requiring auditors to provide more information about what constitutes an audit will substantially increase the volume of information that will eventually be required under the Release. Alternatively, the Board could publish a description of what constitutes an audit on its website. Matters of judgment inherent in the execution of any audit of financial statements under PCAOB standards cannot and should not be relegated to boilerplate disclosures or "sound bites."

The Release injects information from outside the Issuer, but that pertains to the Issuer and its financial statements, that is beyond the control of an Issuer's management to substantiate or certify (as the CEO and CFO are personally required to do for every Form 10-K and Form 10-Q). We are fundamentally opposed to the independent auditors being such a source of original disclosure and believe this establishes a dangerous precedent. The primary focus of investors should be on the content of the financial statements included in the public filings, the sole reason for the filing. The source of this information is the Issuer. The requirements in this proposal are another step in shifting that focus away from the primary purpose of the filing in favor of the audit process, and the independent auditors. The purpose of the Annual Report on Form 10-K is not to give the independent auditors center stage. This document is the responsibility of the Issuer and is signed by members of the Issuer's management and Board of Directors. Embedding the type of third party information within these documents that the Board is proposing in this Release is a major change to the purpose of this 1934 Act filing.

We believe independent auditors under the Release would be encroaching on confidentiality and giving the appearance of assuming more responsibility for management's judgments and business decisions reflected in the financial statements that are the subject of the audit. This does not align with the Board's stated mission of preserving auditor independence.

This additional information that would result from this Release will become subject to review by the Board in the inspection process and could result in additional "failed audits." The Board already has unfettered access to a domestic Issuer's audit file that contains the raw materials for these proposed disclosures. The Board's inspections presumably already focus on the very items proposed to be disclosed publicly. However, the costs of complying with this Release will rise as further refinements, clarifications, interpretations, and expansions to the rules by the Board invariably occur in the future.

We believe the results of the Board's efforts in the last few years, intentional or not, are a re-defining of what constitutes an integrated audit without the clarity and transparency of purposefully and diligently communicating this objective to the public. This has created more confusion among auditors, Issuers' managements and audit committees, as well as within the investment community for whom these measures are purported to benefit.

We have concerns over the agenda of the PCAOB. It is difficult to understand who has established the agenda and what the ultimate objectives are. For example, the PCAOB has released concept statements or proposals on auditor rotation, auditor communications with management and the audit committee, this current Release, and signing the partner's name. In the midst of these piecemeal proposals, the Board released in December 2012 the results of its 2010 inspections that painted a dire picture of audit quality based on the number of "audit failures" it identified. We believe attention should be focused on these basics (i.e., eliminating "audit failures") and that the Board should strive to establish stronger bonds with audit committees, which was discussed in the response letter from the Company's audit committee in November 2011 on the auditor rotation project.

The multitude of regulations governing an Issuer requires that an audit committee satisfy certain criteria. These criteria, such as financial literacy and independence from the Issuer's management and the Issuer's independent auditor, are designed to make the audit committee relevant and credible in the execution of its responsibilities. One audit committee responsibility is to oversee the independent auditors and their work. In addition to focusing on auditor independence, objectivity and professional skepticism (as discussed in the Board's prior proposal on required auditor rotation), the audit committee is tasked with understanding how effectively the independent auditors executed their audit. This evaluation necessarily includes a discussion of the areas of significant auditor judgment, significant risks within the financial statements, etc. The Board has recognized the importance of these responsibilities and has mandated the formal communication of these and other matters in Auditing Standard No. 16, Communications with Audit Committees, many of which the Board is now proposing be disclosed directly to the public by the independent auditors. The audit committee is also responsible for overseeing management. This access to both parties involved in the audit – the auditor and the Issuer – makes the audit committee the resource through which the Board should operate.

The Board continues to incrementally marginalize the role of audit committees. The Release circumvents audit committees in favor of going directly to the public, unfiltered, with information they will not understand. Instead of further diminishing the role of audit committees, the Board should be seek to become an ally with audit committees in its efforts to promote "informative, accurate and independent audit reports."

Finally, the larger registered firms are a valuable voice in the rulemaking process. They must play a prominent role in the rulemaking process in order to ensure that the auditing standards of the Board are effective and the interests of the public are being served by the Board. We believe the Board should be aware of a growing point of view among Issuers and board members who serve on audit committees that the larger registered firms may not express candidly their perspectives with the Board formally in public in an effort to decrease the perceived tension that exists within that relationship. Those of your board members that have been directly involved in the audits of Issuers' financial statements and the expansion of the independent auditor's report understand the significant costs of expansion. Ultimately, the current shareholders of Issuers bear the costs of all these additional procedures. Whereas audits of internal controls over financial reporting have added benefits, they have significantly increased, in many instances more than doubled, the audit fee. What the Board is proposing in this Release will only increase fees without any actual benefits.

We are available to discuss this response letter with you at your convenience. We can be reached at (615) 269-8175.

Sincerely,

Bruce D. Sullivan

**RE: PCAOB Rulemaking Docket 034: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments**

Dear Board Members:

We welcome the opportunity to comment on the PCAOB's proposals in relation to the auditor's report.

By way of background, Hermes is a leading asset manager in the City of London. As part of our Equity Ownership Service (Hermes EOS), we also respond to consultations on behalf of many clients from across the world, all of which invest in companies whose audits are subject to PCAOB oversight. In all, EOS advises clients with regard to assets worth more than $195 billion.

We are supportive of the proposed disclosure enhancements and of the intent behind them, and believe that if auditors report in ways that aspire to communicate effectively, real value can be added for shareholders. We make these concrete suggestions to enhance the proposals. These are italicised to ease identification.

Requiring disclosure of matters that are critical to the audit process is a welcome addition to corporate disclosure as it provides greater clarity on the robustness of the audit process and in turn on the quality of the audit report. We are supportive of the inclusion in the audit report of information clarifying the auditor's responsibility for the evaluation of other information which may influence their ultimate assessment of the company's financial statements.

Currently the audit is entirely invisible to the shareholders who pay for it and for whose benefit it is carried out. This is simply not a sustainable situation and it is no wonder that confidence in the value of the audit continues to fall and questions continue to be asked about whether there might be different and alternative models that would better serve shareholder interests. Making the audit more visible to those who pay for it and for whose benefit it is carried out is a small but vital step forwards. As well as providing necessary visibility, we believe that good disclosures will potentially rebuild confidence in audit quality.

We agree with the PCAOB's classification of "critical audit matters" and expect that by identifying these in the auditors report, users of financial statements will have a clearer indication of areas where further scrutiny is merited. As intended in the proposed reforms, it

HERMES

will be of particular value to enhance disclosure around areas of the audit process where the auditor has identified significant management judgements or where there is an indication of significant uncertainty. In addition, this would promote greater accountability as it would highlight areas in which the company has failed to provide sufficient information, or information of sufficient quality, for the auditor to perform a thorough assessment. We hope that, and will encourage, the audit firms to avoid this disclosure to descend into boilerplate. It is important that both *shareholders and regulators encourage audit firms to see competitive advantage in good quality audits* and the reporting of how they attempt to achieve them.

Another additional clear benefit of these proposals is that shareholders will have a foundation of information on which to hold dialogue with the company (whether the executive team or the audit committee) on matters related to the audit. We would also hope that over time mechanisms can be found for these disclosures also to form the basis for contact between shareholders and the auditor itself. Through these routes, both with the company and with the auditor, greater confidence in audit quality, and also in the quality of the company's reporting, can be built.

We believe that encouraging auditors to comment on matters that are unique to a company's audit process will be a welcome addition and a shift away from the largely boilerplate language currently disclosed by most companies in their reports. This should be more indicative of the quality of the disclosure that companies provide to auditors. We therefore also welcome the proposal to require auditors not only to consider other information disclosed by the company in preparation of its financial statements, but also to evaluate the materiality of such additional information and the impact it may have in the quality of the audit. *To encourage further the development of helpful audit reports, we believe that the auditors should identify any critical matters that had not been identified at the time of commencement of the audit.*

Overall, we view the proposed amendments as enhancements that should foster greater transparency and accountability by companies and auditors alike. We need to challenge audit committees to perform their role more fully and clearly on behalf of shareholders, and the changes proposed by the PCAOB will further empower us to do so. *However, to make engagement on these issues more effective, we believe that the audit committee should comment on what it believes the most important management judgments are in relation to the matters covered by the external audit together with a description of the main elements of its work programme during the year.*

We appreciate the opportunity to provide input into the consultation. I would be glad to discuss any of the points above with you further on +44 (0)20 7680 3758 or at m.isaza@hermes.co.uk.

Yours sincerely,

Manuel Isaza

**Subject: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards – *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion* (the Proposal)**

Dear Board Members:

Host Hotels & Resorts, Inc. appreciates this opportunity to respond to the request for comments from the PCAOB (the Board) on the above referenced Proposal. We support the Board's objective to protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports. While we agree with the Board's conclusion to preserve the pass/fail model, our main concern is that the proposed disclosures of critical audit matters in an unqualified report, as suggested by certain financial statement users, would not provide additional value.

Rather than expand the auditor's disclosures, we recommend that the Board and the accounting profession continuously: 1) uphold management's responsibility of the financial statements; 2) assert the current role of the auditor, audit process and auditor reporting framework; and, 3) emphasize the value of viewing the Form 10-K as a comprehensive financial reporting package. Further, we believe that investors are best served by the prevention of audit deficiencies through the improvement of standards and procedures that result in high-quality audits.

**About Host Hotels & Resorts, Inc.**

Host Hotels & Resorts, Inc. is an S&P 500 and Fortune 500 company and is the largest U.S. lodging real estate investment trust (REIT) and one of the largest owners of luxury and upper-upscale hotels. We are also a member of the National Association of Real Estate Investment Trusts® (NAREIT). The Company currently owns 102 properties in the U.S. and 15 properties internationally totaling approximately 62,200 rooms. We also hold non-controlling interests in a joint venture in Europe that owns 19 hotels with approximately 6,400 rooms and a joint venture in Asia that owns one hotel in Australia and a minority interest in two hotels in India. Guided by a disciplined approach to capital allocation and aggressive asset management, the Company partners with premium brands such as Marriott®, Ritz-Carlton®, Westin®, Sheraton®, W®, St. Regis®, Le Meridien®, The Luxury Collection®, Hyatt®, Fairmont®, Four Seasons®, Hilton®, Swissotel®, ibis®, Pullman®, and Novotel® in the operation of properties in over 50 major markets worldwide. For additional information, please visit our website at www.hosthotels.com.

**Host Hotels & Resorts, Inc.'s Comments and Recommendations**

As previously stated, rather than increase the auditor's disclosures, we recommend that the Board and the accounting profession: 1) uphold management's responsibility of the financial statements; 2) assert the current role of the auditor, audit process and the auditor reporting framework; and, 3) emphasize the value of viewing the Form 10-K as a comprehensive financial reporting package. These communications should be made to the user community on a continuous basis.

***Uphold Management's Responsibility of the Financial Statements***

We believe that the financial statements should unequivocally remain the full responsibility of management. Based on certain users' views, it appears that they would be inclined to use the auditor's disclosures as the primary source of disclosure about our company. We recognize that certain users believe that they would find value in critical audit matters, especially those matters resulting from changes in principles or areas that involve significant judgment, which may require discussion with management to clearly understand and correctly apply to their models. We suggest that the Board stress in its communications to users that management is responsible for the financial statements and that, in addition to evaluating the overall financial statement presentation, the auditor assesses the accounting principles used and significant estimates made by management.

Similar to financial statement users, we believe that the disclosures of these matters are relevant to issues that are significant toward understanding the financial statements. Therefore, we suggest that the Board inform users about companies' control requirements and refer users to the disclosures in Management's Discussion and Analysis (MD&A) and the notes to the financial statements. In this regard, we believe that the disclosures in the MD&A section are critical to an investor's understanding of the financial statements.

Accordingly, our most recent Form 10-K included five pages of discussion regarding these issues that when read in conjunction with the audited footnotes provides clear and important guidance to investors. Like many companies, our financial reporting objective is to provide a complete and accurate understanding of the financial statements. We perform extensive reviews to ensure appropriate disclosures, as well as establish effective controls and procedures surrounding these disclosures.

***Assert the Current Role of the Auditor, Audit Process and the Auditor Reporting Framework***

We recommend that the Board and the accounting profession increase user awareness of the current responsibilities of the auditor, the audit process and auditor reporting framework and make these communications outside of the auditor's report. Based on the Proposal, it seems as if there is a need to clarify the auditor's role and the work involved in an audit of the financial statements resulting in the need for change of the auditor's report. We understand the value of the current unqualified report because we are aware of the work involved in an audit. Therefore, we recommend that the accounting profession assert to the user community the standards and procedures applied to perform audits in accordance with the PCAOB. We believe that this information would be more beneficial and provide comfort to users.

Further, we suggest that the PCAOB retain the same level of materiality for disclosures of critical audit information as provided in the current auditor reporting framework. As such, if there is a material departure from U.S. generally accepted accounting principles (GAAP), material weakness or insufficient scope, the auditor issues a departure from an unqualified report (qualified, adverse or disclaimer based on the circumstances). As a result, the auditor discloses the basis for a departure because of its significance to users.

In an unqualified report, the auditor would deem critical audit matters as insignificant toward changing the outcome of the opinion; therefore, we believe that this information would not provide incremental value to users. Instead, these matters would complicate the user's understanding of the auditor's opinion. Based on the Proposal's examples, we believe that adding disclosures of critical audit matters would create confusion within the investor community that the judgments used by management may not be in accordance with GAAP or that the auditor disagreed with those judgments, which could ultimately raise doubt over the auditor's judgment used to form the opinion. Therefore, to avoid confusion, we support maintaining the current defined responsibilities of management and the auditor. We believe that investors are best served by the prevention of audit deficiencies through the improvement of audit standards and procedures.

***Emphasize the Value of Viewing the Form 10-K as a Comprehensive Financial Reporting Package***

Rather than providing supplemental disclosures in the auditor's report, we recommend that the PCAOB and the accounting profession emphasize the importance of looking at the Form 10-K as a comprehensive financial reporting package. This package includes but is not limited to: 1) the auditor's report on the financial statements; 2) the auditor's report on the company's internal control over financial reporting; 3) the financial statements and the notes to the financial statements; 4) MD&A; 5) certifications of the Chief Executive Officer and the Chief Financial Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002; and, 6) management's representations of the effectiveness of disclosure controls and procedures and internal controls over financial reporting. When these integral parts are viewed together, we believe that users would receive greater value from this package than the proposed critical audit matters.

---

Again, thank you for allowing us to participate in the Board's considerations toward the development of PCAOB standards. If you would like to discuss our comments, please contact Brian Macnamara, Senior Vice President and Corporate Controller, at (240) 744-5423 or brian.macnamara@hosthotels.com.

Respectfully submitted,

/s/ Brian Macnamara

**RE: PCAOB Rulemaking Docket Matter No. 034; Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments**

Dear Sir or Madam:

Husky Energy is responding to the Public Company Accounting Oversight Board's (PCAOB or the Board) Proposed Rule; Docket 034 (the Proposal). We appreciate the opportunity to provide comments on the proposed ruling, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, specifically appendix 6.

Husky Energy is one of Canada's largest integrated energy companies headquartered in Calgary, Alberta, and is publicly traded on the Toronto Stock Exchange under the symbols HSE and HSE.PR.A. The Company operates worldwide with Upstream and Downstream business segments. As a Canadian incorporated entity and a filer with the SEC, the company is required to comply with both Canadian generally accepted auditing standards and the standards of the PCAOB.

We agree with the Board's overall objective to apply the auditor's responsibility for other information, which is consistent with existing US and Canadian standards. We have no specific concerns with the auditors communicating this objective within the auditor's report.

We are however concerned with the Board's objective to enhance this responsibility by adding procedures, and whether these procedures will provide more valuable information to users. Other information, such as the Management Discussion and Analysis (MD&A) is a supplemental narrative through the eyes of management of how an entity has performed, its financial condition and future prospects. Most of the information contained within these supplemental reports is forward looking, operational, non-financial or if financial, contains the use of non-GAAP measures or information indirectly related to the audited financial statements. The scope of these additional procedures should only relate to information drawn directly from the audited financial statements congruent with existing requirements. We recommend to the Board that the additional processes do not extend beyond the existing roles and responsibilities of the auditors by positioning them as evaluators of a company's operations and suggest clarification of scope to be included within the auditor's report. Without clarification there is a risk that users will be mislead to believe that forward looking, operational, non-financial and indirect financial information is being evaluated and concluded on.

*707 - 8 Avenue S.W Box 6525, Stations D, Calgary, Alberta T2P 3G7 (403) 298-6111*
*www.huskyenergy.ca*

Husky Energy

Lastly, we would like to address our concern as to whether the additional disclosures would have an incremental benefit over current practice. We do not believe that including disclosure within the auditor's report on the evaluation of other information will significantly, if at all, impact the users' interpretation of the financial statements. We believe that additional procedures will result in significant costs. In order for entities' to provide a formal cost-benefit analysis as requested by the Board, detailed documentation outlining these additional procedures would have to be provided. We recommend that the Board not proceed with this proposal until specific procedures have been established in order for entities to appropriately assess the cost-benefit.

We would like to thank the PCAOB for the opportunity to allow us to respond to the proposal.

Regards,

Angela Butler
Vice President, Finance and Controller
Husky Energy Inc.

IDACORP

December 11, 2013

Public Company Accounting Oversight Board
Office of the Secretary
1666 K Street, NW
Washington, DC 20006-2803

Subject: **PCAOB Rulemaking Docket No. 034**

Dear Secretary,

As chairman of the audit committee for IDACORP, Inc. and Idaho Power Company, I am pleased to provide comments on behalf of the Audit Committee on the two proposed audit standards under the above referenced Docket.

IDACORP is an investor-owned utility holding company, with approximately $5.5 billion in assets, $1.1 billion in annual revenues, and serving 500,000 electric customers in Idaho and Oregon. IDACORP's principal subsidiary, Idaho Power, has a 98-year history as a hydro-based electric utility with significant facilities along the Snake River.

Below are my comments based on audit committee experience at IDACORP since 2008, but also as a board member for several other public companies, including International Rectifiers Corp. and DineEquity, Inc.

**Auditor Reporting Standard (Critical Audit Matters, or CAMs)**

Docket 34's Introduction lays out underlying rationale for the proposal to enhance the standard audit report with disclosures of key areas that the auditor found "the most difficult, subjective or complex" and "found to be challenging". The docket assumes that this type of disclosure "could help to alleviate the information asymmetry that exists between company management and investors." (Page 6, first and third paragraphs).

My first and primary concern with the proposal is that it undermines the foundation upon which the current rules (SEC, FASB) and the current roles of auditor and Audit Committee combine to effectively protect the integrity of financial reporting to the investing public. To increase auditor reporting by requiring our auditors to provide supplementary information that led them to their unqualified opinion, is tantamount to having investors read the auditor's required communications to the Audit Committee. Additionally, when the Audit Committee reviews such currently required written communications, we also get to hear and ask questions about the context which gives rise to any difficult to audit areas, or significant management estimates. Without the context discussion, the auditor report would be confusing and require additional language to provide adequate context for investors. Asking auditors to reduce this

1221 W. Idaho St. (83702)
P.O. Box 70
Boise, ID 83707

robust and engaging governing process down to a written subset for investors will become difficult and problematic in my opinion. I envision that in an absence of bright lines or clear definitions in matters of auditor judgment, reporting will tend toward over-kill and lead to marginal value CAM disclosures. I also believe that investors who may be frustrated that the current level of audit report language is uninformative, will soon grow frustrated with the expanded version as well. The current governance process - well defined under the charter of a public company Audit Committee - serves the investing public well, and should not become the domain of the auditor to communicate.

My second concern is the price tag. Each and every disclosure that our company makes to our auditors (for example, through the quarterly representation letter) and vice versa, that they make to the company (for example, a comfort letter for bank loan reporting) goes through a vetting process that includes senior management, audit partners, Audit Committee members, and internal and sometimes external legal counsel for these parties. A single word change at the last moment may ripple through another lap through senior level management, Audit partners and legal reviews. I anticipate that unscripted CAM language will trigger senior management process reviews that will become a regular part of the quarterly reporting cycle – driving up fees and slowing down the reporting cycle at precisely the time when issuers were poised to file with the SEC. The untimely delay and additional costs will not justify the value of the incremental information provided. Over time, I believe that the CAM language in the auditor's report will tend to mirror the company's language in disclosures of critical accounting estimates, policies, fair value measurements and risk factors.

Third, the current law governing the content and clarity of financial reporting is well established and comprehensive, and is the domain of the SEC and the FASB. If investors seek additional disclosures, these would be best addressed through the financial reporting model, its rulemaking bodies, and implemented by management. Management should remain fully responsible for disclosures to investors, and auditors should remain fully responsible to attest on such disclosures. It is my view that the current rules governing the various roles of management, Audit Committee, and auditors, working together, provide for a full and complete disclosure to serve the information needs of investors.

Lastly, I couldn't help but comment on the idea of information asymmetry between management and investors. Is this really a substantive issue that requires a remedy? The company must at all times maintain custody of the detailed information that runs the business, and investors will always need a summarized view of key details. It seems to me that there is a natural asymmetry here. Using this rationale to seek additional auditor disclosure is vague and frankly, a black hole that cannot possibly be filled with virtually any amount of additional information. Again, if more detailed disclosures are needed, they should remain the sole responsibility of management and be imposed through the well-understood and accountable rulemaking processes of the FASB and SEC.

**Other Information Standard**

"The proposed other information standard would respond to investors' interests in obtaining information regarding the auditor's responsibilities for other information outside the financial statements" (page 7, first full paragraph).

The current standard requiring our auditors to read and consider other information for consistency has been effective in my experience to raise areas of concern prior to issuing a report. The Audit Committee has been the proper venue for discussing and remediating any inconsistencies that have historically occurred. In no situations, have we allowed any concerns that were raised by our auditors to remain unaddressed in a final report. While I would not object to adding language into the audit report to describe and clarify this scope undertaken by the auditor, I would object to adding language to this requirement that might be construed as increasing the scope of review procedures. Increasing a system of internal controls over narrative information becomes problematic. The difficulty to define and make a bright line test over adequacy of narrative disclosures, will drive over-reporting and over-controlled reporting processes – driving up costs. Historically, we have remedied any discovered inconsistencies prior to issuing any report, and thus there is no need to report the process and issues to investors – they are gone by the time investors receive such disclosures. I do not see any justification here to increase compliance costs, or to delay reporting cycle time, both of which would ultimately be negative for investors.

I would like to thank the PCAOB for the opportunity to comment and invite your board or staff to further discuss these matters. I would be pleased to also discuss these comments if the need arises.

Sincerely,

Richard J. Dahl

Subject: **PCAOB Rulemaking Docket No. 034**

Dear Office of the Secretary,

The management of IDACORP, Inc. and Idaho Power Company (the Companies) submits its comments on selected components of the two proposed audit standards in Docket 34.

IDACORP has operated as an electric utility holding company since 1998 and its principal subsidiary, Idaho Power Company has operated as an integrated electric utility since 1915. The electric operations cover a 24,000 square mile service territory and serve 500,000 customers in southern Idaho and eastern Oregon. Idaho Power Company has been a publicly-traded issuer for most of its nearly 100-year history. Our auditors, Deloitte & Touche, and our Audit Committee, comprised of independent directors, half of whom are also considered financial experts, provide the Companies primary governance oversight for financial reporting to investors. We are proud of the quality and transparency that our public reporting to investors consistently achieves through the oversight processes currently in place.

Our comments will pertain to each of the proposed standards under Docket 34: first, the auditor's report on an audit of the financial statements when the auditor expresses an unqualified opinion (the Auditor Reporting Standard); and second, the auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report (the Other Information Standard).

Auditor Reporting Standard

There are a number of elements to the changes proposed for the auditor's report, but we will focus in on requiring auditors to disclose critical audit matters (CAM's) to investors. This proposal would erode the role and responsibility currently tasked to management, and transfers a key disclosure role to our auditors. A new requirement like this would usher in processes and controls to fully review all public language, involving senior management at both the Companies and at Deloitte, including each party's legal teams. This new and untimely process of circulating new auditor report language will increase costs to our Companies and delay filings.

1221 W. Idaho St. (83702)
P.O. Box 70
Boise, ID 83707

Will the proposed reporting requirement serve investors well? We don't think so. First, investors seek updated reports as soon as management will comfortably stand behind the underlying disclosures and is ready to file. The timing of reports would be slowed and likely migrate toward the last day allowed by the SEC. Historically, our reports have been issued several days in advance of the deadline. Second, investor groups with whom we have direct experience, primarily ask for information that would allow them to better forecast future impacts to financial results. Would the CAM proposal provide any forecasting value? We don't see much or any forecasting value to the CAM disclosures. Third, investors ultimately pay for the cost of compliance through the market prices of stocks, and naturally would expect reasonably useful information to come at a reasonable cost. Would this result under the proposal? We don't see either reasonably useful information, or reasonable costs associated with this proposal.

What might a new CAM requirement turn into? Inconsistent reporting across industry issuers; unnecessary shifting of reporting responsibility from management to auditors; erosion of oversight currently tasked to the audit committee; high cost reviews by external parties (audit firm and outside legal counsel); delays to issuing dates; CAM language standardization; duplication between auditor and management disclosures; increased pressure on audit fees – to name some possibilities. We don't see investors ultimately wanting this. Our experience indicates that investor's primary information gap is forward-looking insight to better predict the financial future. Unfortunately, disclosures surrounding an issuer's CAMs will not aid financial modeling.

An alternative approach might be to work through the SEC and the FASB to enhance management disclosures that would aid investor's understanding of the auditor's role and process. This approach would maintain the key responsibility of investor disclosure with management, not the auditors.

Other Information Standard

The current requirement that auditors read and "consider" the consistency between other information in a report and the underlying financial statements has been the rule long enough to build well-established processes that occur near the end of the audit cycle and just prior to the issue date. The practice of "consider" the consistency has generally led to discussions with management about how to tighten language for key events and issues. Inconsistencies, when they are noted by the auditor's reading of the document, become a discussion item that the Audit Committee and management work out and resolve, before any final report is issued.

The new proposal would now require auditors to read and "evaluate" the consistency. The breadth of "evaluate" is something yet to be defined, but connotes something more extensive than "consider". This subjectivity will lead our auditors to interpret such requirements protectively, instituting increased processes and controls, and resulting in higher costs. All of this activity would occur behind the scenes prior to issuing a report, and would increase timing pressure at precisely the time issuers are preparing to submit their report to the SEC. The end result of the new requirement will be the same as what we currently have – inconsistencies identified continue to be remedied prior to issue.

An alternative approach to aid investors wanting to know the steps and detail behind the auditors "read and consider" requirement, would be to add clarifying language to the existing auditor report to describe the current requirement.

IDACORP appreciates the opportunity to add its views to this Docket and acknowledges the PCAOB Board for being responsive to comment letters previously submitted under this Docket. We are particularly appreciative that the Auditor's Discussion and Analysis proposal was reconsidered by the Board in light to the many comment letters submitted in September 2011.

Additional information or discussion on this matter can be addressed to me at (208) 388-2650.

Sincerely,

Darrel T. Anderson

ILLINOIS CPA SOCIETY

December 11, 2013

Office of the Secretary
PCAOB
1666 K Street, N.W.
Washington, D.C. 20006-2803

Dear Board Members:

The Audit and Assurance Services Committee of the Illinois CPA Society ("Committee") is pleased to comment on the PCAOB's Proposed Auditing Standards on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (Docket Matter No. 34) dated August 13, 2013. The organization and operating procedures of the Committee are reflected in the attached Appendix A to this letter. These comments and recommendations represent the position of the Illinois CPA Society rather than any members of the Committee or of the organizations with which such members are associated.

**Executive Summary**

The stated purpose of the release, as illustrated through the "proposed auditing standard," "proposed other information standard," and related "proposed amendments," is to increase the relevancy and usefulness of auditor reports, by adding "clarity" and "informational value," for investors. As indicated in our response to the Concept Release dated September 30, 2011, our Committee is in favor of adding clarity to the auditor's report so that the responsibilities of the auditor, management, and the audit committee are better understood by the financial statement users. We greatly appreciate the Board's efforts on this undertaking and the opportunity to comment on the proposal. Our comment letter divides the whole proposal into three sections: Critical Audit Matters, Other Information Reporting, and Other Matters.

The Critical Audit Matters section includes the Committee's views on adding such a section to the auditor's report. Our Committee agrees that the requirements for the critical audit matters, as drafted, will not necessarily provide meaningful information to the users and that the additional information will be costly to provide. We suggest the Board align certain portions with the IAASB proposal, including revising the scope of items to be considered a critical audit matter to just those items communicated to those charged with governance and those issuers where the auditor should report on such information limited to just accelerated and large accelerated filers.

The Other Information Reporting section indicates our agreement with the Board regarding the wide disparity in practice over other information. We support an effort to standardize practice amongst auditors. However, we have concerns that the scope of the Board's proposal includes items for which the auditor will be unable to make a determination based on the audit procedures performed. The proposal includes evaluations that the auditor cannot make based on normal audit procedures.

The Other Matters section includes the Committee's thoughts on the remaining items in the proposal including independence and tenure disclosures. While we support the Board's goal to increase investor knowledge and reduce information asymmetry, we do not believe much of the information included in this section will meet this goal. Rather, it appears neutral.

ILLINOIS CPA SOCIETY

## Critical Audit Matters

**Definition and Determination of Critical Audit Matters:**

Our Committee generally believes that the definition of critical audit matters is sufficient to capture information that *could* be relevant and useful to investors and other financial statement users. However, we believe that the definition, if applied too literally, may also capture information that is not likely to be particularly relevant or useful to those users. For example, the auditor may determine that the following matters could meet one or more of the three characteristics of a critical audit matter:

a. The partners and staff to include on the audit engagement.
b. The component auditors to reference in their report.
c. The auditor specialists, among several choices of such specialists in the same field, to select.
d. The auditor's need to be able to read and interpret audit evidence in a foreign language when the audit firm has limited resources that can read and understand that foreign language.

While the above examples, and others, might represent significant difficulties that the auditor needed to overcome to complete an audit, they generally would not be relevant or useful to financial statement users. That lack of usefulness might be obvious and lead auditors not to consider these types of matters as being critical audit matters worthy of communicating to financial statement users, but they nonetheless could literally be considered to meet the proposed definition of a critical audit matter. We note that some of these types of matters could conceivably be included amongst matters that are documented in an engagement completion document, reviewed by the engagement quality reviewer, or communicated to the audit committee. To reduce the potential for auditor's identifying these types of matters as critical audit matters, the definition of critical audit matters might refer to "Those matters having a material impact on the financial statements, including disclosures, that the auditor addressed during the audit of the financial statements …" or other clarifying language.

In any case, we further note that even if critical audit matters are disclosed that fully meet the probable intention of the definition of critical audit matters, our Committee was not convinced that the additional information would be useful to investors. As defined, critical audit matters are a reflection of audit risk. Investors would presumably be more interested in identification and understanding of business risks (environmental, legal, regulatory, etc.) facing the issuer. Such information should be provided by management, not auditors, and is, at least in part, already required to be disclosed pursuant to non-financial reporting regulations.

We also note that the proposed definition could result in the identification of reportable critical audit matters that otherwise would have been exempted from disclosure by other rules and regulations. As Jay Hanson, PCAOB Board Member, observed in his Statement on the Proposed Standard, matters such as significant deficiencies and going concern doubts that were overcome may represent critical audit matters under the proposed definition and thereby be disclosed when such matters are specifically otherwise exempt, or perhaps even prohibited, from disclosure by other rules and regulations. For example, if a "close call' regarding the level of probable loss contingency accruals and/or disclosure of reasonably possible contingent losses in excess of amounts accrued are described as a critical audit matter, the user may question whether the proper accruals and disclosures were made.

For some of the reasons described above, our Committee believes that the population of matters an auditor should consider as potential critical audit matters should be limited to those matters required to be communicated to the audit committee. Such a requirement would be consistent with the current proposal by the International Auditing and Assurance Standards Board. A broader requirement also to consider matters included in engagement completion

ILLINOIS CPA SOCIETY

documentation and reviewed by the engagement quality reviewer is likely to result in matters of significantly lesser importance being eligible for disclosure as critical audit matters. At a minimum, the proposed standard should indicate that matters communicated to the audit committee are the primary population of matters to be considered for disclosure as critical audit matters.

While the use of the word 'most' in the definition of critical audit matters in paragraph A2 is generally adequately explained, it is not clear whether 'most' should be considered solely in the context of the particular audit being reported on or whether it should be considered in the context of audits in general. For example, an auditor will likely encounter appreciable difficulties in auditing the valuation of intangible assets in many of its audits. For a particular audit, perhaps these difficulties – while less appreciable than in the 'average' audit – might nonetheless have posed the most appreciable difficulty for this particular audit. Presumably, the Staff's intention is to consider 'most' solely in the context of the audit being reported on; however, that intention is not clear in the proposed definition or guidance.

**Undue Consequences:**

An auditor's unqualified opinion on the financial statements indicates that the auditor was sufficiently able to overcome the difficulties associated with the disclosed critical audit matter(s) in order to provide the unqualified opinion that the audited financial statements are fairly stated in accordance with the applicable financial reporting framework. As such, the reporting of critical audit matters may unduly raise investors' and other financial statement users' concerns over the quality of the audited financial statements. If the critical audit matter describes a significant deficiency, that disclosure may not only prompt a user, who generally is not a trained auditor, to suspect the veracity of the financial statement opinion, but also of the internal control opinion if one is provided (and/or of management's report on internal controls). Such undue concerns will potentially result in a) excessive communications between management and stakeholders in earnings conference calls and other modes as stakeholders try to better understand the issues underlying the disclosed critical audit matters and how management nonetheless determined that the issuer's financial statements were reliable, and b) inappropriate conclusions regarding investing decisions.

While the auditor's report will indicate that no critical audit matters alter the auditor's opinion on the financial statements, users may nonetheless consider the disclosed critical audit matters as somehow qualifying that financial statement opinion. Also, as indicated above, investors that mistakenly over rely on critical audit matter disclosures to highlight areas of concern, may not be properly informed or consider items that were not included as a critical audit matter, in particular business risks. In an effort to potentially minimize these concerns, we suggest expanding the final sentence of the standard language preceding critical audit matters in the auditor's report as follows:

> "The determination of critical audit matters is highly subjective. The critical audit matters communicated below may not represent all or even the most important elements of the accompanying financial statements and should not be considered as such. Furthermore, the critical audit matters communicated below were adequately addressed by our audit procedures and therefore do not alter, in any way, our opinion on the financial statements, taken as a whole."

Due to the subjective nature of critical audit matters, different auditors, both within and amongst the audit firms, will select different places along the 'difficulty' continuum where a matter becomes a reportable critical audit matter. Comparability between auditor reports will decrease, in both the number and content of the specific matters that are disclosed, as well as the in the degree auditors consider matters to be critical audit matters. Additionally, companies may - over time and likely with the aid of media or other reports that will evolve to track such things - start to consider which audit firms disclose more or fewer critical audit matters and how those disclosures are made when those companies choose which audit firm to engage.

ILLINOIS CPA SOCIETY

**Audit Period Covered:**

We agree with the Board's assessment that it will usually be sufficient to include critical audit matters only for the current year audit as investors and other users will likely be most focused on the current year and could easily access prior year disclosures in any case. We believe inclusion of prior period critical audit matters may distract from the potential usefulness of the communication, since the matters disclosed are likely to be the same or similar from year to year. We suspect that auditors might tend to not want to vary the critical audit matter disclosures from year to year (other than for nonrecurring transactions that might result in critical audit matter disclosures) to reduce potential legal exposure with identifying critical audit matters in one year when they were not called out, but were present, in other years.

The Note on paragraph 10 requires the auditor to consider disclosing critical audit matters for prior years' audits in certain circumstances, but provides no guidance as to what those considerations might be relevant to such an assessment. Additionally, we would recommend that the guidance regarding a predecessor auditor not being required to include previously-disclosed critical audit matters when that predecessor's report is included in filings on comparative statements (as indicated on page A5-34) be added directly into the proposed standard.

**Communication of Critical Audit Matters:**

We strongly support not requiring, or even permitting, disclosure of any specific audit procedures, including resolution of critical audit matter. Doing so could a) undermine the audit process by informing management of the auditor's plans and b) lead to more investor confusion and uncertainty as such disclosures would be almost impossible to completely convey the range of relevant procedures performed, and why they were selected, as well as confusion over audit concepts such as sampling and materiality.

The examples of critical audit matters in Appendix 5 are helpful in that they provide a lot of detail that could be useful in drafting critical audit matter language on unrelated topics. However, we believe the repeated use of such phrases as "involved difficult and subjective judgments," "posed difficulty in obtaining sufficient appropriate evidence," "posed difficulty in forming an opinion on the financial statement," and "we consulted with others outside the engagement team," may result in similar, "boilerplate" language being used by firms in communicating these issues for similar reasons to those noted above. We also note that the amount of details included in the example disclosures add to their length and complexity and will potentially result in longer drafting and discussion time and cost. As such, we recommend more succinct example disclosures while leaving the comprehensive background and footnote disclosure elements.

**Documentation of Critical Audit Matters:**

In documenting the auditor's determination that each reported matter was a critical audit matter, it would appear that the considerations for such a determination would be the same as the considerations required to be disclosed pursuant to paragraph 11b of the Proposed Standard. As such, it is possible for the auditor to conclude that the auditor's report itself provides the documentation required by the Proposed Standard for matters that are reported. We recommend that the Proposed Standard indicate this concept in order to reduce the burden of such documentation.

In regards to the proposed documentation requirements for non-reported audit matters, we note that many auditors might consider that every matter included in an engagement completion document, reviewed by the engagement quality reviewer or communicated to the audit committee, is 'eligible' to be reported as a "critical audit matter". We note in the proposal's guidance on pages A5-39 and A5-40 that not every such matter would be expected to require explanatory documentation and that only such matters that an experienced auditor having no previous connection to the audit might, after also considering the factors in paragraph 9 of the Proposed Standard, believe to be reportable critical audit matters require explanatory documentation. However, many auditors will use similar criteria to that outlined in Paragraph 9 in determining which items to include in the engagement completion document, have been reviewed by the engagement quality reviewer or communicate to the audit committee. Therefore, an auditor may conclude that every one of these items would require explanatory documentation if it was not reported. We believe such a documentation requirement would be unduly burdensome and would likely result in auditors ultimately reducing the number or type of such items reviewed or communicated, resulting in lower quality reporting. We note again our preference that the population of possible matters to be considered as critical audit matters be limited to those matters required to be communicated to the audit committee.

Otherwise, we believe that the proposed documentation requirements are sufficiently clear.

**Other Considerations for Critical Audit Matters:**

An additional effort and cost, for both auditors and companies, which may not be adequately described, is the discussions between auditors and management and audit committees that will undoubtedly ensue regarding which matters the auditor determines to include in its report and how such matters are described. Even though the auditor’s opinion will be unqualified, management and audit committees will encourage fewer and shorter critical audit matter disclosures, whereas auditors may tend to want to include more matters and fuller descriptions to lessen perceived liability concerns, likely after internal legal consultation. As an additional detriment, these discussions will take place near the filing deadline, thereby adding increased pressure to achieve that deadline.

A similar situation occurred a several years ago when SEC reporting first required auditors to report identified material weaknesses in internal control. Such reporting also prompted discussions that took place at the back end of the audit process and, as such, perhaps there is some historical evidence to help assess more specifically what impacts critical audit matter discussions might have. However, since management was also required to identify material weaknesses but will not be required to identify critical audit matters, it may be difficult to use the experience with material weaknesses as a benchmark for assessing the effect of critical audit matter disclosures.

Another additional effort and cost for companies that may not be adequately described in the proposal material is the incremental communications management will likely need to make to its stakeholders as to the reliability of the issuer’s financial statements in light of the identified critical audit matters.

Our Committee believes that audit firms will incur fairly substantial costs - both one-time to adjust internal quality assurance mechanisms and recurring to determine the exact disclosures on each audit - in order to help manage perceived litigation and regulatory oversight concerns and to reduce potential confrontations with management and audit committees. This increased effort, primarily by partners, and increased perception of litigation and regulatory oversight concerns will translate into higher audit costs for issuers.

We would expect that such efforts and costs, for both auditors and companies, would generally be proportionate to the complexity of the audit, with more complex audits requiring more efforts and higher costs. Audit complexity might be driven by company size, company industry, the accounting standards applicable to the company, company SEC filing status, or other factors. However, even relatively non-complex audits would incur incremental efforts and costs, while the more complex audits will likely have diminishing incremental efforts and costs. For example, even the relatively non-complex audits will likely have one or a few critical audit matter(s) disclosed, while audits with, say, more than three times the complexity, will not necessarily have more than three times the number of disclosed critical audit matters. Investors may not understand this difference in critical audit matters related to the engagements.

To help contain incremental audit costs, our Committee would be in favor of limiting the requirement to disclose critical audit matters to reports on financial statements of accelerated and large accelerated filers.

While the Committee believes that incremental auditor liability concerns are less prevalent in these proposed critical audit matter reporting requirements compared to some of the approaches described in the related Concept Release, the proposed requirements do raise some incremental auditor litigation risk – if for no other reason than the requirements force an auditor to make incremental decisions (about what are and how to describe critical audit matters) and to disclose those decisions to the public who may not understand the meaning of the disclosures or the process an auditor might go through to make the related decisions. However, our Committee believes that this incremental risk is not substantial compared to the litigation risk that the auditor already assumes in being associated with the financial statements and issuing an unqualified opinion thereon. However, and importantly, we note that no one on our Committee is an attorney and, as such, our comments in this area are not supported with appropriate specialized knowledge.

## Other Information Reporting

The Committee agrees with the Board in that a more uniform process is necessary to minimize differences in an auditor's approach to other information included with audited financial statements in a company's annual report, as there is wide variety in what auditors are actually performing in practice. We support aligning the procedures performed by audit teams; however, we offer some suggestions to the current proposal, which are included below:

**Auditor's Responsibility to Evaluate:**

In paragraph 4, the proposal states the auditor will be required to read the other information and, based on relevant audit procedures and conclusions during the audit, "evaluate" the other information. The term "evaluate" is not specific to the procedures the auditor should actually perform. Each bullet should include the specific procedure language. For example, bullet a. could read "Trace and agree amounts from other information to the financial statements or relevant audit evidence for consistency." The release notes include greater discussion about the meaning of "evaluate." We request the Board to include the specifics (as discussed starting on A6-19 of the proposal documentation) within the standard itself. As written, the proposal can be broadly interpreted by auditors, which does not help to standardize the procedures between auditors.

Paragraph 4b of the proposed standard includes, "evaluate the consistency of any qualitative statement in other information…" Auditors are qualified to opine on the financial statements. They are not experts in all things like the qualitative statements (paragraph 4b of the proposal) often found in annual reports. Phrases like "industry leader," "top performer", etc. are common. These types of qualitative assertions are not the auditor's specialty to monitor. The SEC should be monitoring these types of claims through its inspection and comment letter process, rather than the auditor. If auditors question management's qualitative assertions, they may include less information in annual reports, instead of more – an unintended consequence of the proposal.

Paragraph 4c includes other information not directly related to the financial statements. This scope can include items that auditors are not qualified to evaluate. We disagree with this bullet for two reasons. With the advent of the risk assessment standards, the information that could potentially impact the audit have expanded greatly to include qualitative items, like company strategy, human resources involvement, and possible actions by competitors. As a result, the scope is unclear. Also, we are concerned this includes items that auditors do not have knowledge about and that does not related to any audit evidence. For example, the beneficial ownership table does not impact the financial statements and is not something auditors have expertise to evaluate. We request the Board to remove paragraph 4c in its entirety.

**Auditor's Report Language:**

We are concerned about the language in the example at paragraph 14b that reads, "based on our evaluation, we have not identified a material inconsistency or a material misstatement of fact in the other information." It reads as if the auditor has performed involved audit procedures (equivalent to those performed on the financial statement balances as part of the audit) over the other information. This can confuse and mislead financial statement users into thinking that the auditor has performed audit procedures over the entire annual report, not just the financial statements. This sentence conflicts with the language found in paragraph 14a that reads, "our evaluation was based on relevant audit evidence obtained and conclusions reached during the audit. We did not audit the other information and do not express an opinion on the other information." Clearly stating that a material inconsistency or material misstatement was not identified can be interpreted similar to an official opinion.

**Economic considerations in applying the proposed standard:**

Additional time and staffing resources will be needed to comply with the proposal, which will add costs to audit engagements, particularly late in the engagement. Our Committee estimates that for simple, smaller reporting companies, the additional time could be as few as 20 hours. However, for large, multi-national companies with extensive other information, we estimate that the additional time incurred could exceed 50 hours. Public accounting firms will not be able to simply add a new member to the team to complete the proposed procedures because the proposal suggests that teams use their existing audit knowledge to complete the procedures. The core audit team will need to complete these procedures. Without adding more time to filing deadlines, this could potentially compromise audit procedures and time spent on other audit areas.

In addition, applying the standard to amended annual reports will cause a significant economic burden, due to scheduling challenges and audit team member rotation and tenure. In addition, this situation will lead to uncertainty surrounding the date of the auditor's report and the responsibility the auditor is taking after the original audit report date. There is not clear guidance in the proposed standard to address these concerns.

**Applicability of Standard to Audited Financials Statements of Another Entity Pursuant to Article 3 of Regulation S-X:**

The Board is seeking comment on whether or not the proposed other information standard should apply to audited financial statements of another entity that are required to be filed in the company's report under Article 3 of Regulation S-X (such as a business that is acquired or to be acquired) and whether there are practical issues in doing so. The Committee does not believe that the auditor should include these other entities in the evaluation because the financial statements of the other entity have been subject to an audit independent from the company and the auditor. So, the auditor would not have the audit support to evaluate the items included. We recommend that the proposed other information standard not apply to such information. If the audit of the other entity was performed in accordance with PCAOB standards, then the other auditor would have already performed an evaluation of the other information associated with the other entity's financial statements.

**<u>Other Matters</u>**

**Auditor Report Addressees:**

The proposed requirement to address the auditor's report to at least (1) investors/shareholders of the company, and (2) the board of directors or equivalent governing body could be perceived by users of the financial statement to be of

ILLINOIS CPA SOCIETY

relevance only for the explicitly addressed user groups and potentially limiting the scope and responsibilities of the auditor to those addressed user groups only.

We believe an audit should address the needs of all potential users of the financial statements, rather than being limited to the needs of specific users. Furthermore, the auditor stands between management and the investment community and must be viewed as independent of each. The auditor should not be viewed as an advocate of either party. While the auditor's role includes consideration of both management and investors as potential users of the financial statements, we believe addressing the auditor's report solely to these two groups may exclude other potential users of the financial statements is not realistically feasible, even if management helped identify potential users. As such, we believe that the required inclusion of addressees in the auditor's report will become standardized language to include only the two (2) proposed required user groups.

The Committee does not believe adding required addressees is significant to the financial statements, will appreciably serve the purpose of better informing readers of the financial statements, or will significantly impact the scope of the audit or the responsibilities of the auditor. We do not believe further consideration or amendment of this proposed requirement is worth the effort by any involved party, and we recommend that the requirement be excluded from any finalized standard.

**Auditor Tenure:**

Our Committee has no objection to the underlying principle of disclosing auditor tenure as long as it is not done in the auditor's report. The proposed requirement to disclose auditor tenure in the auditor's report tends to imply that there is an actionable basis for the financial statement user in interpreting such information. As noted in Board member statements and academic studies referenced within the proposal, there is not a definitive linkage between auditor tenure and audit quality. As such, adding an auditor tenure disclosure to the auditor's report infers that some definitive linkage must exist between auditor tenure and audit quality, which should be considered by the user.

The determination of the number of consecutive years that an auditor served is sometimes difficult to make. There are infinite grey areas regarding calculating auditor tenure and such determination may require legal involvement and, as a result, more effort and cost than might otherwise be expected. As such, we would recommend that any requirement to disclose auditor tenure allow the auditor to explain, if necessary, how such disclosure was determined. Additionally, the disclosure of just auditor tenure, without disclosure of auditing standards that likely have greater impact on audit quality (such as required quality control standards and even mandatory partner rotation requirements), may result in an unbalanced presentation of the relevant facts. We further note that if such expanded reporting was required or permitted (including information for balance), putting it in an auditor's report would risk overwhelming the users of the financial statements with information that may not be considered incrementally helpful to them.

We also note that auditor tenure information is already publically available to interested parties via historical filings, if desired. For example, if an individual investor decided that he/she would only invest in companies that have an auditor with tenure of less than 10 years, the investor could reference previous filings to determine whether or not the company met the individual investor's standards. Therefore, the additional effort for a potentially small segment of financial statement users that might be influenced by this disclosure is not worth the additional tangible and intangible costs to provide it.

**Auditor Independence:**

The proposed requirement to include a statement in the auditor's report regarding the auditor's independence is provided in the example as follows:

ILLINOIS CPA SOCIETY

> "We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB..."

The required title of the auditor's report is "Report of Independent Registered Public Accounting Firm." The Committee believes that even less sophisticated users of the financial statements could infer from the title of the report alone that the auditor is (1) registered as a public company auditor under the applicable governance body (the PCAOB in this case) and (2) independent. As even fairly sophisticated users will not be familiar with the nuances involved in the definition of "independent" in accordance with the "United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB" referring to those laws and regulations has little significance. Accordingly, while we do not strongly object to the proposed independence disclosure, we do not believe it will add any appreciable incremental value to financial statement users. We further note that the use of unnecessary and overly technical references may diminish the trust between financial statement users and auditors.

**Explicit Reference to Opining on "Fraud":**

The existence of fraud is a valid concern of both auditors and users of the auditor's reports. Preventing and detecting fraud is the responsibility of management. Assessing the risk of fraud, and planning and performing audit procedures in relation to those risks, is a role of the auditor. Detection of all fraud, regardless of materiality, is not the responsibility of the auditor. The inclusion of the phrase "whether due to error or fraud" in the first paragraph of the Basis of Opinion section of the auditor's report when describing an auditor's reasonable assurance about whether the financial statements are free of material misstatement alone implies that the auditor is responsible to reasonably assure the users of the financial statements that they are free of even immaterial fraud. This implication could provide for a false sense of security and perceived transfer of responsibility in preventing and detecting fraud away from management, exposing companies to greater risk of fraud, and unintentionally increasing auditor liability. We believe that the required inclusion of the phrase inaccurately increases an auditor's assurance beyond auditor responsibilities and should be excluded from any finalized guidance, without adequate disclosure of the auditor's responsibility for fraud.

We strongly object to the sole addition of the phrase "whether due to error or fraud." As a solution to provide clarity, in addition to a supplemental alternative described in the "Other Report Wording Changes" subsection below, is to require the following sentence in the introduction paragraph describing management's various responsibilities:

> "Company's management is also responsible for designing and implementing controls to prevent and detect fraud, and to inform us about all known or suspected fraudulent activity that could have a material effect on the Company's financial statements."

**Other Report Wording Changes:**

The Committee recognizes the auditor's report has become "boilerplate" in nature and that financial statement users have become accustomed to the format and reference it solely to understand whether or not the Company passed or failed the audit. Although the current model has been effective, the Committee agrees that clarification and amendment of the standard auditor's report is appropriate if the information enhances a financial statement user's understanding of the audit process and auditor's, management's and the audit committee's roles in regards to the audited financial statements. Unless otherwise described in this letter, we do not object to the proposed wording

ILLINOIS CPA SOCIETY

changes in the auditor's report nor, however, do we believe that they necessarily add meaningful informational value or clarity.

The Committee believes that, irrespective of the significant proposed expansion of the auditor's report, the added section titles will aid the financial statement user in identifying relevant sections of the auditor's report.

The proposal acknowledges the need for greater clarification in the role and responsibilities of auditors, management and audit committees. However, the proposed auditor's report provides little improvement in adding clarity, transparency, or informational value in aiding the users of the financial statements in understanding those roles and responsibilities. We believe the current proposal is instead more focused on the disclosure of Critical Audit Matters and Reporting on Other information. The Committee recognizes that the auditor's report, as proposed, is approaching a potentially unreadable length and that a thorough description of everyone's roles and responsibilities with respect to the related financial statements and disclosures would further add to repetitive "boilerplate" verbiage across each auditor report for infinite periods, which is inefficient, and contrary to the principles of this proposal.

We do not believe the current reporting framework is broken; however, we do believe that the more financial statement users understand about the public company auditor and its responsibilities in regards to the audited financial statements, the more informed they will be as to the level of assurance the auditor provides in its report as to the fair presentation of the financial statements. While this incremental understanding does not necessarily translate into a better understanding of what risks might reside in those financial statements, it nonetheless allows the user to better appreciate how the auditor may have addressed such risk as part of its audit. However, we recognize that a lengthy description of the responsibilities of the various parties in regards to audited financial statements inside of the standard auditor's report would unduly increase its length and comprehensiveness. Accordingly, we remind the Board of a supplemental alternative we provided as a part of our response to the Concept Release to this proposal, for the auditor's report to provide a cross reference to a more complete description of what a public company auditor's roles and responsibilities are, and a general discussion on risk assessment, professional judgment, materiality, and sampling concepts a compliant audit might provide. The referenced materials would be described in "plain English" and could be available to the general public on a free basis from a named web-site. We believe that the cost of creating this singularly referenced guidance statement would significantly outweigh the repetitive and truncated statements of responsibility in each audit report, and would potentially be perceived as adding more value from an independent governing body providing outreach as compared to audit firm disclaiming responsibility.

**Relevance to Audits of Specific Entities:**

As further described throughout this letter, the additional required procedures, disclosures, and cost to comply with the standards, as proposed, are going to be overly burdensome to certain registrants. There are many entities required to register with the SEC and/or have their audits conducted in accordance with PCAOB standards due to various federal laws. However, the SEC has issued exceptions to many of their filing requirements to many of these entities due to the nature of their operations, users, and usefulness of their financial information and the cost/burden of providing much of the information as described in this proposal. Without analyzing each individual industry, we recommend as a general rule of thumb, the Board consider limiting the required final reporting requirements on Critical Audit Matters and Other Information to those entities considered a public reporting company under Sections 12 or 15(d) of the Securities Exchange Act of 1934.

**Overall comment:**

ILLINOIS CPA SOCIETY

Under the proposed standards, we believe that the potential liability in private litigation would increase. Based on the changes in the proposal, it would appear the auditor is taking on a significant amount of responsibility over the financial statements and other information, which is the responsibility of management and not the auditors.

The Illinois CPA Society appreciates the opportunity to express its opinion on this matter. We would be pleased to discuss our comments in greater detail if requested.

Sincerely,

**James J. Gerace, CPA**

ILLINOIS CPA SOCIETY

APPENDIX A

AUDIT AND ASSURANCE SERVICES COMMITTEE
ORGANIZATION AND OPERATING PROCEDURES
2013 – 2014

The Audit and Assurance Services Committee of the Illinois CPA Society (Committee) is composed of the following technically qualified, experienced members. The Committee seeks representation from members within industry, education and public practice. These members have Committee service ranging from newly appointed to almost 20 years. The Committee is an appointed senior technical committee of the Society and has been delegated the authority to issue written positions representing the Society on matters regarding the setting of audit and attestation standards. The Committee's comments reflect solely the views of the Committee, and do not purport to represent the views of their business affiliations.

The Committee usually operates by assigning Subcommittees of its members to study and discuss fully exposure documents proposing additions to or revisions of audit and attestation standards. The Subcommittee develops a proposed response that is considered, discussed and voted on by the full Committee. Support by the full Committee then results in the issuance of a formal response, which at times includes a minority viewpoint. Current members of the Committee and their business affiliations are as follows:

INDEPENDENT COMMUNITY BANKERS of AMERICA®

December 11, 2013

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, DC 20006

Re: *Proposed Auditing Standards: The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* & *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*; PCAOB Rulemaking Docket Matter No. 034

Dear Ladies and Gentlemen:

The Independent Community Bankers of America (ICBA)[1] appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) proposed auditing standards *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (proposed auditing standards). The objective of the proposed auditing standards is to make improvements to the current auditor reporting model by expanding the communication by the auditor of specific facts about the audit and the responsibilities of the auditor. The audit report would also be expanded to include discussion of identified critical audit matters.

ICBA objects to the PCAOB's desire to expand the independent auditor's reporting model without first considering the impact on the nation's community banks. Community banks are highly regulated financial institutions that operate today under tremendous regulatory burdens that limit the ability of these institutions to adequately serve their communities and the associated economies. Any increase in the auditor reporting beyond the current pass/fail model that increases auditor costs will in turn raise the cost of the audit and further strain vital community bank resources.

[1] The Independent Community Bankers of America®, the nation's voice for more than 7,000 community banks of all sizes and charter types, is dedicated exclusively to representing the interests of the community banking industry and its membership through effective advocacy, best-in-class education and high-quality products and services.

With nearly 5,000 members, representing more than 24,000 locations nationwide and employing more than 300,000 Americans, ICBA members hold more than $1.2 trillion in assets, $1 trillion in deposits, and $750 billion in loans to consumers, small businesses and the agricultural community. For more information, visit ICBA's website at www.icba.org.

**Background**

The proposed changes to the auditor reporting model are designed to increase the usefulness of the auditor's report to the readers of the financial statements and footnotes as well as tackle the challenges of reporting on critical audit matters. These critical audit matters would be indentified in a specific section of the auditor's report. The auditor's report would also more thoroughly cover the auditor's independence, tenure, and his or her review of items that cover information beyond the financial statements.

Critical audit matters would be identified by the auditor as those items that prove most difficult to provide attestation, bring difficulty to the auditor's ability to form an opinion on the financial statements, and are the most subjective and complex. These items are generally those that are communicated to the audit committee. If the auditor concludes that no critical audit matters exist, that conclusion should also be communicated in the audit report.

In addition to the changing reporting model, the proposed auditing standards include the requirement for the auditor to review and evaluate information outside of the audited financial statements including information in the annual report filed with the Securities and Exchange Commission (SEC) under the Securities Exchange Act of 1934 containing both the audited financial statements and the auditor's report. The evaluation procedures related to the other information include the search for inconsistencies and misstatements of fact.

**Impact on Community Banks**

ICBA believes that the proposed changes to the auditor reporting model that require the identification of critical audit matters represent a duplication of the disclosures already presented within the footnotes to the financial statements. Because the critical audit matters would require thorough documentation including determination with significant support for conclusions reached, the auditor would incur additional costs to properly complete the engagement that would most certainly be passed on to the engagement client.

Additionally, the expanded scope of the engagement that includes scrutiny of other information would require more time and effort on the part of the engagement team to complete applicable audit procedures leading to even more increased costs to the engagement client. The end result of this expansion of auditor responsibilities is an increased reliance on the part of financial statement users of the work performed by the auditor that could reasonably lead that user to obtain a false sense of assurance in the work performed by the auditor. The indirect impact of the proposed auditing standards include an almost certain increase in disclosures required to be made by the audit client and the level of work required by the auditor to mitigate the exposure to the engagement partner.

IDC
INDEPENDENT DIRECTORS COUNCIL

INVESTMENT COMPANY INSTITUTE

December 11, 2013

Ms. Phoebe W. Brown
Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, D.C. 20006-2803

Re: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments; Docket Matter No. 034

Dear Ms. Brown:

The Independent Directors Council and the Investment Company Institute[1] appreciate the opportunity to comment on the Public Company Accounting Oversight Board's proposed changes to the auditor's reporting model.[2] The Proposed Auditor Reporting Standard would, among other things, require communication in the auditor's report of "critical audit matters" (CAMs). Communication of CAMs is intended to make the auditor's report more informative, thus increasing its relevance and usefulness to investors and other financial statement users. The Proposed Auditor Reporting Standard would also enhance existing language related to the auditor's responsibilities for fraud, and add new language related to auditor independence and auditor tenure. In addition, the Proposed Auditor

[1] IDC serves the fund independent director community by advancing the education, communication, and policy positions of fund independent directors, and promoting public understanding of their role. IDC's activities are led by a Governing Council of independent directors of Investment Company Institute member funds. ICI is the national association of U.S. investment companies, including mutual funds, closed-end funds, exchange-traded funds, and unit investment trusts. ICI seeks to encourage adherence to high ethical standards, promote public understanding, and otherwise advance the interests of funds, their shareholders, directors, and advisers. Members of ICI manage total assets of $16.1 trillion and serve more than 90 million shareholders, and there are approximately 1,900 independent directors of ICI-member funds. The views expressed by IDC in this letter do not purport to reflect the views of all fund independent directors.

[2] *See The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*; and *Related Amendments to PCAOB Standards*, PCAOB Release No. 2013-005 (August 13, 2013) (the "Release"). We refer to these proposed standards as the "Proposed Auditor Reporting Standard" and the "Proposed Other Information Standard."

Reporting Standard would add new language regarding the auditor's responsibilities for other information outside the financial statements and the results of the auditor's evaluation of that information. The Proposed Other Information Standard is intended to improve the auditor's procedures and enhance the auditor's responsibilities with respect to the information, other than the audited financial statements and the related auditor's report, contained in a company's annual report filing.

Our comments focus on the application of the proposal to audits of investment company financial statements and the issues that may arise as a result.[3] Both IDC and ICI have demonstrated longstanding and strong support for meaningful disclosure that helps mutual fund investors make informed investment decisions.[4] But, as we discuss in greater detail below, we oppose the proposed CAM disclosure as it relates to investment companies because it would not provide useful information to fund investors and could inappropriately influence investment decisions, while certainly increasing audit fees. Investment company assets consist almost entirely of investment securities and, as a result, their financial reporting is less complex than other types of companies. Consequently, funds routinely may not have any critical audit issues, but the proposal, as currently structured, would pressure auditors to disclose CAMs in their reports.

We do, though, support the proposed enhancement to the existing opinion language regarding the auditor's responsibility for fraud, as well as the proposed new language regarding auditor independence. In addition, while we do not oppose the proposed auditor tenure disclosure, we question its value to fund investors. Finally, we are concerned that the Proposed Other Information Standard as currently drafted is overly broad in the investment company context and, thus, would unnecessarily increase audit costs. We therefore urge the PCAOB to limit a fund auditor's responsibility under the standard to those items that relate directly to the fund's financial statements.

---

[3] In its proposal, the PCAOB indicates that, if adopted by the Board and approved by the SEC, the Proposed Auditor Reporting Standard would apply to the audits of investment companies. The proposal specifically seeks comment on whether the proposed changes are appropriate for audits of investment companies, and if so, whether there are any specific considerations that the PCAOB should take into account.

[4] *See e.g.,* Letter from Dorothy A. Berry, IDC Governing Council Chair, to Elizabeth M. Murphy, Secretary, U.S. Securities and Exchange Commission, re Comment Request for Study Regarding Financial Literacy Among Investors; File No. 4-645 (March 23, 2012); Letter from Robert W. Uek, IDC Governing Council Chair, to Nancy M. Morris, Secretary, U.S. Securities and Exchange Commission, re Enhanced Disclosure and New Prospectus Delivery Option for Registered Open-End Management Investment Companies; File No. S7-28-07 (Feb. 15, 2008); Letter from Karrie McMillan, ICI General Counsel, to Nancy M. Morris, Secretary, U.S. Securities and Exchange Commission, re Enhanced Disclosure and New Prospectus Delivery Option for Registered Open-End Management Investment Companies; File No. S7-28-07 (Feb. 15, 2008); and Letter from Craig S. Tyle, ICI General Counsel, to Jonathon G. Katz, Secretary, U.S. Securities and Exchange Commission, re Shareholder Reports and Quarterly Portfolio Disclosure of Registered Management Investment Companies; File No. S7-51-02 (February 14, 2003).

**Proposed Auditor Reporting Standard**

*Critical Audit Matters*

The Proposed Auditor Reporting Standard would require auditors to communicate CAMs, which are described as those matters addressed during the audit that (a) involved the most difficult, subjective, or complex auditor judgments; (b) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (c) posed the most difficulty to the auditor in forming an opinion on the financial statements. CAMs ordinarily are matters of such importance that they are included in the items required to be documented in the engagement completion document, reviewed by the engagement quality reviewer, or communicated to the audit committee.

Under the proposal, the auditor must communicate in its report the CAMs relating to the audit of the current period's financial statements or state that there are no CAMs. For each CAM the auditor must identify the matter, describe the considerations that led the auditor to conclude the matter is a CAM, and refer to the relevant financial statement accounts and disclosures that relate to the CAM.

CAM Disclosure Would Not Provide Useful Information to Fund Investors. A fund's activities are limited to issuing and redeeming its capital shares and investing in securities. The principal objectives in auditing investment company financial statements are to provide reasonable assurance that: 1) the investment company has ownership of and accounting control over all of its portfolio investments; 2) all transactions are authorized and recorded in the accounting records in the proper account, amount, and period; 3) portfolio investments are valued properly, and their costs are recorded properly; 4) income from investments and realized gains and losses from securities transactions are accounted for properly; and 5) investments are free of liens, pledges, or other security interests or, if not, that such matters are identified properly and disclosed in the financial statements.[5]

In the investment company context, the audit matters most likely to be deemed "critical" under the proposal would involve the auditing of security values. Generally accepted accounting principles currently require extensive disclosure regarding valuation of investments, with particular emphasis on securities for which observable transaction prices are not available. For example, investment company financial statements are required, among other things, to disclose the following:

- The level within the fair value hierarchy in which the fair value measurements are characterized in their entirety (e.g., level 1, 2, or 3);

[5] *See* paragraph 2.189, *AICPA Audit and Accounting Guide, Investment Companies* (May 1, 2013).

- Any transfers between levels, the reasons for the transfers, and the policy for determining transfers;
- A description of the valuation technique(s) and the inputs used in the fair value measurement;
- For fair value measurements categorized within level 3, a quantitative description about the significant unobservable inputs used in the fair value measurement;
- For fair value measurements categorized within level 3, a reconciliation from the opening to the closing balances, disclosing separately gains or losses for the period, purchases and sales, and the amount of any transfers into or out of level 3 and the reasons for those transfers;
- For fair value measurements categorized within level 3, a description of the valuation processes used, including how the fund decides its valuation policies and procedures and analyzes changes in fair value from period to period; and
- For fair value measurements categorized within level 3, a narrative description of the sensitivity of the fair value measurement to changes in unobservable inputs to a different amount that might result in a significantly higher or lower fair value measurement.[6]

Given the extensive disclosure requirements relating to level 2 and level 3 securities, investors are well informed about the extent of the fund's investments in securities that present difficult or subjective fair value measurements. We believe that requiring the auditor to describe the difficulty associated with auditing these fair value measurements would not add anything to the mix of information already provided to investors. Indeed, CAM disclosure indicating that certain securities trade less frequently and were valued through reference to unobservable inputs would be repetitive of information already provided by management in the notes to the financials.

<u>CAM Disclosure May Inappropriately Influence Investment Decisions.</u> Identification of CAMs would involve a significant amount of judgment. We have concerns that two different auditors could reach different conclusions after reviewing the same set of facts and that the identification of CAMs would be inconsistent across different audit firms and even different audit partners within the same firm. This inconsistent identification of CAMs by audit firms may impair the comparability of funds. For example, an investor looking for a particular type of fund (*e.g.*, an intermediate-term bond fund) may compare funds of this type from multiple sponsors and interpret CAM disclosure relating to a particular fund as an indication that an investment in that fund carries a higher risk than investment in a comparable fund with no CAM disclosure. This scenario may apply as well in the context of existing shareholders, who may decide to redeem their fund shares after reading the auditor report. The influence of inconsistent CAM disclosure on investment decisions could be heightened if third-party rating services use the presence of

[6] *See* Financial Accounting Standards Board Accounting Standards Codification Topic 820-10-50.

CAM disclosure in auditor opinions as a factor in their fund ratings. As a result, CAM disclosure may inappropriately influence investment decisions.

CAM Disclosure Could Become Boilerplate. Auditors to funds that invest primarily in difficult to value securities may provide the same CAM disclosure year after year. For example, auditors to funds that invest primarily in mortgage-backed securities or bonds ranked below investment grade would likely provide the same CAM disclosure annually in each audit opinion. If the same or similar CAM disclosures are provided year after year, the disclosure will likely become "boilerplate" and, consequently, lose its effectiveness.

CAMs Should Not Be Expected in Most Fund Audits. We urge the PCAOB to clarify that it may not be unusual for an audit, particularly a mutual fund audit, to not involve any CAMs. Fund financial statements are relatively less complex than those of operating companies[7] and, consequently, it may be unlikely that there will be an audit matter that rises to the level where it should be disclosed to investors.

The Proposed Auditor Reporting Standard describes CAMs in relative terms as those matters that involved the *most* difficult auditor judgments, posed the *most* difficulty in obtaining sufficient appropriate audit evidence, or posed the *most* difficulty in forming an opinion on the financial statements. We submit that every audit would necessarily involve a judgment that is the *most* difficult relative to all the judgments made in the context of that audit, or posed the *most* difficulty in obtaining sufficient appropriate audit evidence. The fact that a particular judgment or audit procedure was the most difficult in relation to others, however, does not mean that the judgment or audit procedure gives rise to an audit risk about which investors should be informed.

We note that the Proposed Auditor Reporting Standard states "it is expected that in most audits, the auditor would determine that there are critical audit matters."[8] We are concerned that this statement, combined with the definition of CAMs as a relative concept, would pressure auditors to communicate CAMs in virtually all audits, notwithstanding the absence of a matter that is truly critical. For example, in order to ensure that the fund has ownership and accounting control over all of its portfolio securities, the auditor will seek confirmation of ownership from the fund's custodian, agent banks, and brokers. In certain instances these banks or brokers may not respond to the auditor's confirmation request. In such instances the auditor may perform alternate procedures to confirm ownership and the standard auditor report on an investment company makes reference to the auditor's use of such alternate procedures.

[7] The PCAOB previously recognized the relatively less complex nature of investment company audits in its decision to assess them accounting support fees at ten percent of the amount paid by operating companies. *See* Establishment of Accounting Support Fee, PCAOB Release No. 2003-003 (April 18, 2003). Investment company financial reporting does not include difficult or subjective matters relating to, for example, deferred tax assets, impairments, goodwill, or allowances for sales returns.

[8] *See* the Release, *supra* note 2, at Appendix 1 – Proposed Auditor Reporting Standard, Paragraph 7.

Obtaining this audit evidence may be the most difficult part of the audit. That does not mean, however, that the auditor could not obtain sufficient appropriate audit evidence, or that ensuring ownership and accounting control was subjective or judgmental in nature. Circumstances such as these could lead to disclosure that investors mistakenly believe describes a truly critical matter and they could attach much greater significance to it than is warranted.

The Proposed Auditor Reporting Standard Undermines the Role of Audit Committees. If a critical issue arises during the course of an audit, it is the audit committee's role to discuss and evaluate the matter with the auditor.[9] The audit committee is better equipped to ask questions and probe technical and complex matters in a one-on-one setting than investors are by just reading disclosure. This dialogue allows for a more nuanced conversation of any critical issues that arise during an audit. The audit committee can then determine what, if any, action is appropriate to take to follow up on the matter. For example, the audit committee may decide to modify the fund's valuation policies and procedures if the auditor disagrees with a fair valuation estimate.

CAM Disclosure Would Unnecessarily Increase Fund Audit Fees. As the PCAOB acknowledges, the proposal is not without costs. Auditors would incur one-time set-up costs relating to updating their methodology regarding auditor reporting. In addition, audit firms would incur ongoing annual costs associated with documenting their decisions as to why particular matters are or are not CAMs. Further, there would be costs associated with developing the disclosure to be included in the auditor's report. We anticipate additional costs associated with review by the audit firm's national office of the CAM disclosure to be included in the auditor's report. We are concerned that auditors would pass these costs on to their fund clients. Importantly, fund audit fees are paid by the fund – not the fund manager. Thus, for the reasons discussed above, these costs would reduce returns to shareholders without providing any discernable benefit.

The PCAOB Should Perform Outreach with Fund Investors. In its Release, the PCAOB notes that "extensive outreach conducted over the last three years" led it to issue the Release. Further, the Release indicates that "many investors have expressed dissatisfaction that the content of the existing auditor's report provides little, if any, information specific to the audit of the company's financial statements" and "that investors indicated they would benefit from additional auditor reporting" on this information. The PCAOB does not indicate, however, whether any of this outreach included retail mutual fund investors. Given the unique nature of investment company financial reporting, fund investors may value the proposed disclosure differently than investors in operating companies when making investment decisions. Because the PCAOB has not demonstrated a compelling need or desire from fund investors for this disclosure, we urge it to perform outreach to retail mutual fund investors to verify the perceived benefits.

---

[9] AS 16, *Communications with Audit Committees*, ensures that the audit committee is well informed about difficult or contentious issues that arise during the course of the audit.

Fund-Specific Issues Should Be Addressed. Fund sponsors typically offer many different funds, each with their own financial statements. Where funds share a common fiscal year end, their financial statements may be combined into one shareholder report "book." That book contains financial statements and other SEC-required disclosures (*e.g.*, management's discussion of fund performance, the fund expense example, the graphic presentation of the fund's investment portfolio) separately for each of the funds included in the shareholder report book. The auditor's report, however, is typically prepared on a joint basis and covers all of the funds included in the shareholder report book. Currently, there are no fund-specific disclosures required to be included in a joint auditor report. The proposed CAM disclosure, however, would require fund-specific disclosures and therefore calls into question the ability of an auditor to provide a joint report covering several funds. We urge the PCAOB to confirm the ability of fund auditors to provide these joint reports.

*Basic Elements of the Auditor's Report*

The Proposed Auditor Reporting Standard primarily retains the basic elements of the auditor's report. There are, though, three basic elements of the auditor's report that the PCAOB seeks to refine: additional disclosure about the auditor's independence, clarification about the auditor's responsibility regarding fraud, and new disclosure about auditor tenure. Our comments are below.

First, the proposal would require additional disclosure regarding an auditor's independence. This statement, regarding the auditor's existing requirements to be independent, is intended to enhance investor understanding about an auditor's obligations related to independence and to serve as a reminder to auditors of these obligations. We support adding this disclosure to the auditor's report.

Second, the Proposed Auditor Reporting Standard would revise the auditor's report to recognize the auditor's existing responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether due to error or fraud. In particular, the phrase "whether due to error or fraud," would be added to the report when describing the auditor's responsibility to obtain reasonable assurance about whether the financial statements are free of material misstatement. The PCAOB has proposed this change to clarify the auditor's role in detecting fraud as the current auditor's report makes no explicit reference to fraud. We believe the proposed disclosure better informs investors of the auditor's responsibility and we support adding it to the auditor's report.

Third, the proposal would require the auditor's report to indicate the year in which the auditor began its service. The Release indicates that the PCAOB has not reached a conclusion regarding the relationship between audit quality and auditor tenure. The mere fact that the PCAOB proposes to require disclosure about auditor tenure, however, suggests that the PCAOB believes the information to be meaningful and that investors should consider the length of the auditor's tenure in assessing audit quality or auditor independence. As explained in the Release, the topic of auditor tenure has been the subject of discussion for quite some time, and IDC and ICI have been actively involved in the dialogue.[10] We do not object to disclosure of auditor tenure in the auditor's report, but we question its relevance to investors.

In the event the PCAOB determines to adopt the proposed disclosure, its application needs clarification in the investment company context. Typically, a fund complex organizes a corporation or a business or statutory trust under state law, which issues a number of separate series of shares, each of which represents a separate fund. Each fund will prepare its own financial statements and those financial statements must be audited annually. From time to time the corporation or trust may issue an additional series of shares representing a new fund. As proposed, it is unclear whether the auditor tenure disclosure requirement would apply at the fund complex level, the trust level, or the fund level. For example, assume an investment adviser first engages in the mutual fund business in 2000 by forming a business trust that offers one series of shares (*e.g.*, a growth fund). Assume that the adviser forms a separate business trust in 2005 and that trust offers one series of shares (*e.g.*, a value fund). In addition, assume the business trust formed in 2005 issues an additional series of shares (*e.g.*, a bond fund) in 2010. If the same auditor has audited each of these funds since their respective inception dates, the auditor tenure disclosure might be measured from 2000 for the complex, 2005 for the trust, or 2010 for the bond fund.

If the PCAOB requires auditor tenure disclosure, we believe it would be appropriate to measure the auditor's tenure from when it first audited any fund in the complex. This approach is logical because all of the funds within a complex are on the same accounting system and are subject to the same system of internal controls over financial reporting. Furthermore, many fund complexes have one board of directors that oversees all the funds in the complex and it is the board's responsibility, by statute, to select a fund's auditor.[11] This approach is consistent with the application of the SEC's audit partner rotation requirements to investment companies. In particular, an audit partner is required to rotate off all the SEC registered investment companies in the complex after serving any fund for five years, and that partner cannot serve any of the funds in the complex during the ensuing five years.[12]

[10] *See* Letter From Dorothy A. Berry, IDC Governing Council Chair, to J. Gordon Seymour, Secretary, Public Company Accounting Oversight Board, re Concept Release on Auditor Independence and Audit Firm Rotation; Rulemaking Docket Matter No. 37 (Dec 14, 2011) and Letter From Gregory M. Smith, Director – Fund Accounting, Investment Company Institute, to J. Gordon Seymour, Secretary, Public Company Accounting Oversight Board, re Concept Release on Auditor Independence and Audit Firm Rotation; Rulemaking Docket Matter No. 37 (Dec 14, 2011).

[11] *See* Section 32 of the Investment Company Act of 1940 (the 1940 Act).

[12] *See* Rule 2-01(c)(6)(iii) of Regulation S-X. We recommend not using the definition of "investment company complex" included in rule 2-01of Regulation S-X to measure auditor tenure. That definition includes the investment adviser, any entity controlled by or controlling the investment adviser, and entities under common control with the investment adviser that provide services to the fund. These entities would be on a different accounting system and have a different board of directors than the funds.

**Proposed Other Information Standard**

Existing PCAOB standards require that the auditor "read and consider" whether other information in the annual report filing is materially inconsistent with information in the financial statements. In the context of mutual funds, this information is that which is contained in the fund's shareholder report and the fund's Form N-CSR filing. The Proposed Other Information Standard would enhance the auditor's responsibility for the information by requiring that the auditor "read and evaluate" it. That is, the auditor would need to perform specific procedures based on information obtained during the audit and then disclose in the auditor's report its responsibility for, and the results of, its evaluation of the information. For the reasons discussed below, we urge the PCAOB to modify the proposed standard to limit a fund auditor's responsibility to read and evaluate other information to those items that relate directly to the fund's financial statements.

<u>The Scope of the Proposed Other Information Standard is Overly Broad in the Investment Company Context and Would Unnecessarily Increase Fund Audit Costs.</u> We are concerned that the evaluation and reporting required by the proposal would unnecessarily increase fund audit costs. Much of the information the Proposed Other Information Standard would require the auditor to evaluate is beyond the scope of an auditor's expertise and does not relate to the fund's financial statements. Specifically, some of the information in a fund's annual shareholder report cannot be evaluated through reference to data obtained during the course of the audit of the financial statements. For example, the statement regarding the basis for board approval of the investment advisory contract[13] is not related to the fund's financial statements, note disclosures, or internal controls over financial reporting. Rather, the disclosure describes the factors and conclusions that led the fund's board of directors to approve the investment advisory contract, including the nature of the services provided to the fund by the adviser and the fee charged for those services. An evaluation of this information is well beyond the scope of the auditor's expertise and no procedures performed or evidence obtained as part of the financial statement audit will enable the auditor to provide a meaningful evaluation.

Similarly, certain of the information contained in a fund's Form N-CSR filing[14] beyond the shareholder report does not relate to the fund's financial statements and cannot be evaluated through

---

[13] The statement regarding a board's basis for approval of the investment advisory contract appears in the annual shareholder report if the board approved the contract during the second half of the fund's fiscal year. Otherwise, the statement appears in the semi-annual report covering the first half of the fund's fiscal year.

[14] A fund's Form N-CSR filing includes the fund's shareholder report and the following other information: (i) the fund's code of ethics; (ii) identification of the fund's audit committee financial expert; (iii) audit fees, audit-related fees, tax fees, and all other fees paid to the fund's principal accountant; (iv) the principal executive's and principal financial officer's conclusions regarding the effectiveness of the fund's disclosure controls and procedures based on an evaluation of those controls and procedures performed within 90 days of the filing date; (v) any changes in the fund's internal controls over financial reporting; (vi) the principal executive's and principal financial officer's certifications; and (vii) certain other information for closed-end funds.

reference to data obtained during the course of the audit. Furthermore, unlike SEC Form 10-K, we believe it would be highly unlikely that a fund shareholder would rely upon Form N-CSR in evaluating the fund or to make investment decisions. Accordingly, we see little benefit in including it within the scope of the auditor's responsibility for other information.

The Proposed Other Information Standard Fails to Take into Consideration the Timing of a Fund's Form N-CSR Preparation. The proposal does not take into account the fact that the Form N-CSR filing likely is not available to the auditor in time for effective evaluation. This is because investment companies must send their annual shareholder report to investors not more than 60 days after the fund's fiscal year end,[15] and the shareholder report must be filed with the SEC on Form N-CSR not more than 10 days after the shareholder report is sent to shareholders.[16] We understand that the shareholder report, including the signed auditor's report, must be delivered to the printer several days prior to the 60th day to enable typeset, proofing, production and mailing no later than the 60th day. The Form N-CSR is generally prepared only after the shareholder report has been finalized and delivered to the printer and is typically filed with the SEC after the 60th day. As a result, a fund auditor would not be able to effectively evaluate the Form N-CSR prior to signing off on the fund's financial statements.

We understand this sequence is different than that in an operating company context, where the Form 10-K filing, including the audited financial statements, is first filed with the SEC and the glossy annual report or Form 10-K filing is later mailed to shareholders. Indeed, while many operating companies send the entire Form 10-K to shareholders, we are not aware of any investment company that sends Form N-CSR to its shareholders.

A Fund Auditor's Responsibility For Other Information Should Be Limited to Items Relating Directly to the Fund's Financials. We see no benefit associated with requiring the auditor to evaluate disclosures that have no relationship to the financial statements. Recognizing that investment companies must include information in the shareholder report on the fund's performance, the factors that affected performance, the fund's expenses, and the fund's portfolio, and that shareholders may consider this information in evaluating fund performance, we recommend limiting the auditor's responsibility for other information in the context of an investment company audit to those items that relate directly to the fund's financial statements. In particular, if the PCAOB adopts the Proposed Other Information Standard, the auditor's responsibility for other information should be limited to total return information included in management's discussion of fund performance,[17] the expense example, and the graphical presentation of

[15] 1940 Act Rule 30e-1.

[16] 1940 Act Rule 30b2-1.

[17] Much of the information in management's discussion of fund performance cannot be evaluated through reference to information obtained during the course of the audit of the financial statements, and should be outside the scope of the auditor's evaluation. In particular, information relating to how the fund over- or under-weighted certain sectors or securities relative to

the fund's holdings.[18] All of this information is included in the shareholder report that is sent to investors, and is available to the auditor in time for effective evaluation. Moreover, narrowing the scope of the proposal for funds in this way would limit the costs associated with the proposal. If the Board does not limit a fund auditor's responsibility for other information to those items that relate directly to the fund's financial statements, then we oppose the Proposed Other Information Standard.

its benchmark index would only be found in portfolio management or investment database systems outside the scope of the fund's accounting records.

[18] We recommend, though, that the PCAOB clarify that an auditor need not, as part of its evaluation of other information, evaluate or mathematically recalculate investment attributes relating to particular holdings or the fund's portfolio. This is because certain attributes of a fund's holdings, such as average market capitalization, average price to earnings ratio, and average price to book ratio, are based on information outside the scope of the fund's accounting records.

Re: PCAOB Rulemaking Docket Matter No. 034
Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments

Dear Board Members and Staff of the PCAOB,

Informatica Corporation and its Audit Committee of the Board of Directors ("Informatica") are pleased to comment on the Public Company Accounting Oversight Board's ("PCAOB") proposed revisions to the auditor's reporting model.

We are supportive of the Board's efforts to address the financial reporting concerns of investors and other users of financial statements. This letter provides our views on the proposed standards.

1. **The communication of Critical Audit Matters in the auditor's report would not provide meaningful new information to investors and other users of financial statements, would be costly for audit firms and management, and may impact comparability of financial statements.** Critical Audit Matters are those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements. Informatica believes that any critical audit matters identified by our auditor would be duplicative to the "risk factors," "management's discussion and analysis," and "critical accounting policies and estimates" sections already disclosed in our financial statements. It is unlikely that critical audit matters identified would not already be disclosed elsewhere, and therefore, minimal new information would be provided to investors and other users of financial statements.

   Informatica believes that audit costs will likely increase as a result of communicating critical audit matters. While the Board's proposal includes reference to various sources to assist in determining critical audit matters, auditors must still incur additional time in order to identify critical audit matters, discuss and review the matters internally and with management, audit committees, and others charged with governance, and draft communications to be included in the auditor's report. The indirect costs include time taken away from auditors during the completion stage of the audit, and incremental investment of time by the audit committee to review critical audit matters.

**Informatica Corporation** 2100 Seaport Boulevard, Redwood City, California 94063
main: 650 385 5000 fax: 650 385 5500 www.informatica.com

In addition, due to the subjective and judgmental nature of the determination of critical audit matters by the auditor, there may be inconsistencies of critical audit matters included in auditor reports of various companies, therefore impacting comparability of our financial statements to other companies.

2. **The proposed new element to the auditor's report related to auditor independence does not provide meaningful information to investors and other users of financial statements.** A statement regarding the auditor's existing requirements to be independent of the company is considered redundant as the title of the report includes the word "independent," and the report states that the audit was performed in accordance with PCAOB audit standards, which sets forth independence requirements.

3. **The proposed new element to the auditor's report related to auditor tenure may be informative to investors and other users of financial statements.** We do not object to inclusion in the auditor's report of the year in which the auditor began serving consecutively as the company's auditor, although we believe it would be preferable to include such information in the proxy. While disclosure of a change in auditor to the SEC is already required in a Form 8-K, inclusion of auditor tenure in the auditor report or proxy would provide another way to disclose whether there has been a change in auditor. Such information may cause investors to inquire whether there were any disagreements with management as to accounting or financial statement disclosures, and may cause additional scrutiny, as new auditors may not have developed a comprehensive understanding of a new audit client, particularly when the company is complex and/or operates in multiple jurisdictions.

4. **The proposed standard related to auditor's responsibilities regarding other information would significantly increase the scope of auditors and would be costly for audit firms and management.** Auditor reporting on information outside the financial statements would increase the scope of the auditor's responsibilities, would require the development of new auditing standards, and would potentially require additional regulatory efforts. Informatica would suggest that the Board perform a more extensive analysis of the demand for auditor's reporting on information outside the financial statements, and costs to issuing such a standard.

5. **Enhanced standardized language in the auditor's report would facilitate continued consistency, comparability, and clarity in auditor's reporting.** The enhancements to standardized language will result in enhanced understanding of what an audit represents and the related auditor responsibilities, thus narrowing the expectations gap. In addition, there would be very little cost to implementing enhanced standardized language.

6. **The inclusion of guidance on explanatory language or explanatory paragraphs is appropriate.** Additional guidance on circumstances that would require explanatory language and examples of when an auditor might include explanatory paragraphs provide enhanced clarity to the auditor.

In summary, we are supportive of various aspects of the proposals; however, we encourage the Board to continue to assess the demand and cost implications of communication of critical audit matters and auditor's responsibilities regarding other information outside the financial statements.

Thank you for the opportunity to comment on the proposal.

Dear Mr. Baumann,

**Re.: PCAOB Release No. 2013-005, August 13, 2013**

**PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards –**

**The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion**

**The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report**

**And Related Amendments to PCAOB Standards**

We would like to thank you for the opportunity to provide the Public Company Accounting Oversight Board (PCAOB) with our comments on PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report, And Related Amendments to PCAOB Standards (hereinafter referred to as "the draft").

Since the auditor's report is often the only product of the audit that external users see, auditor reporting is closely linked by users to the value of audits. If

GESCHÄFTSFÜHRENDER VORSTAND:
Prof. Dr. Klaus-Peter Naumann,
WP StB, Sprecher des Vorstands;
Dr. Klaus-Peter Feld, WP StB CPA;
Manfred Hamannt, RA

INSTITUT DER WIRTSCHAFTSPRÜFER

the value of an audit and perceptions thereof can be increased within the context of the related costs and risks by including more information in auditors' reports, then this should be attempted. For this reason, and the discussions about the content of the auditor's report in the EU and at the IAASB, we consider this exposure draft to be both necessary and timely.

We would like to emphasize that we believe that the draft ought to be restricted to matters that relate to improving auditor reporting only, without consideration of matters in connection with the modernization of the audit or expansions of audit scope, such as those proposed in relation to other information. These latter issues are important too, but may need to be considered by the PCAOB in future in a separate project. Having the audit of the financial statements cover information other than the financial statements, whether by means of an attest opinion or by reporting on audit procedures, is a matter that can only be determined by legislators, securities regulators and terms of engagement – not by auditing standards setters. For this reason, we are convinced that changes to the auditor's responsibilities for other information that go beyond reporting on what is currently required in PCAOB standards is not a matter for the auditor reporting project, but is in fact a broader issue relating to the scope of the audit that needs separate treatment. It is also unclear to us whether the PCAOB has a statutory mandate to expand auditor responsibilities for other information in this way.

We are also aware that the discussions of the European Commission, the European Parliament and the Council of Ministers on matters of audit policy, including on the content of the auditor's report, are due to be finalized soon, and indeed, may have been completed by early next year. We therefore encourage the PCAOB to maintain an intense dialogue with the European Commission, the European Parliament, and the Presidency of the Council of Ministers so as to help minimize the risk that the final European legislation is at variance with the PCAOB's proposals beyond those necessary under U.S. securities laws and existing PCAOB standards.

We also note that the PCAOB issued proposed auditing standards are in many ways similar to those of the IAASB, but that also contain differences. We encourage the PCAOB to engage with the IAASB to seek to minimize differences for audits of financial statements of listed entities.

We have responded in the Appendix to this letter to some of the questions posed by the PCAOB in the draft. However, not all issues are relevant to our members and therefore we have not chosen to respond to all question posed. In addition, we have focussed on what appear to us to be major issues and the

INSTITUT DER WIRTSCHAFTSPRÜFER

fact that we have not addressed every issue or relevant question is not indicative that we agree or disagree with the approach taken by the PCAOB for the issues that we have not addressed.

We hope that our views will be helpful to the PCAOB in its deliberations on auditor reporting. If you have any questions relating to our comments in this letter, we would be pleased to be of further assistance.

Yours truly,

Klaus-Peter Feld
Executive Director

Wolfgang P. Böhm
Director Assurance Standards,
International Affairs

# APPENDIX:

## Responses to Some of the Questions Posed

## Appendix 5 of the Draft

**Question Related to Section II:**

1. **Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?**
   Subject to our responses to other questions posed in the draft relating to the meaning or definition of critical audit matters (CAM), we agree that the objectives assist the auditor in understanding the requirements and what would be communicated in an auditor's unqualified report.

**Questions Related to Section IV:**

2. **The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?**
   To whom an auditor's report ought to be addressed is, in our view, a matter of U.S. securities and contract law. It seems reasonable to us, given what we know about that law, that the report be addressed to the owners of the company (the shareholders, or in a master limited partnership, the partners) and to those engaging the auditor (the board of directors or equivalent body). It does not appear to be appropriate to address the auditor's report beyond these parties.

3. **The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?**

INSTITUT DER WIRTSCHAFTSPRÜFER

We believe it to be crucial that, with the exception of the description of the audit of internal control, the description of the audit of the financial statements in the auditor's report for both audits performed in accordance with International Standards on Auditing (ISAs) and PCAOB standards to be equivalent to the extent that the other underlying standards are equivalent. We therefore encourage the PCAOB to liaise with the IAASB to harmonize the content of the auditor's report with respect to auditor responsibilities.

4. **The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?**

   With respect to auditors' reports for audits of financial statements under PCAOB auditing standards, we believe that a statement relating to independence would be useful. The inclusion of the source of independence requirements (PCAOB independence requirements) is also acceptable in an audit performed under PCAOB requirements because there is only one source of such requirements. In audits performed under the ISAs, for example, we are not convinced that reference to sources would be useful, since there may be multiple, and in part overlapping, sources, which may confuse users. This is an instance in which we believe that there may be a justifiable difference between PCAOB standards and the ISAs.

5. **The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**

   a. **Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**

      We believe that information regarding audit tenure might be useful to investors, but we do not believe that enough research has been done to determine whether this is so. Even if after such research it were to be determined that such information were to be useful to investors, we are not convinced that this information is relevant to an audit report that relates to conveying an opinion on the financial statements (and on internal control) and to describing the audit – such a disclosure would misuse the auditor's report for purposes for which it is not designed. In this case, we would prefer that the SEC require that management or those charged with governance provide information about audit tenure in documents that are filed by registrants with the SEC.

b. **Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**

We are not aware of particular challenges in this matter.

c. **Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

As noted in our response to a., we believe that such information is more likely to be useful if included in filings by SEC registrants to the SEC, such as EDGAR.

6. **The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

We would agree that having the proposed auditor reporting standard require the auditor to describe the auditor's ***current*** responsibilities under ***extant*** PCAOB standards for other information would make the auditor's report more informative and useful. However, we believe that actually expanding the responsibility of the auditor to additional procedures or other form of evaluation is not just an auditor reporting matter and therefore requires deliberation in a project that is entirely separate from a project on auditor reporting. This is also the view we take with respect to the IAASB's proposals on these matters.

We would like to emphasize that we are, in principle, in favor of enriching the audit of financial statements by having the audit extend procedures or attest opinions or conclusions to beyond the financial statements. However, we are not convinced that a proper cost-benefit analysis of this issue has been done. We believe that investors will understand the procedures as providing some form of attest opinion or conclusion on the other information, when in fact it is not. Furthermore, we believe that this is a matter that needs consideration at statutory (i.e., Congressional) level, if not at least at SEC level that should not be dealt with by auditing standards setting alone.

For this reason, we would also request that the PCAOB consider whether expanding the scope of the audit beyond the financial statements is within its statutory mandate. We note that Section 101 (c) (2) of the Sarbanes-Oxley Act (hereinafter referred to as the "Act") empowers the PCAOB to "establish or adopt, or both, by rule, auditing ... and other standards relating to the preparation of audit reports for issuers in accordance with Section 103." Section 103 (a) (1) in turn empowers the PCAOB to "by rule, establish...such auditing and related attestation standards ... to be used by registered public accounting firms in the preparation and issuance of audit reports, as required by this Act or the rules of the Commission, or as may be necessary or appropriate in the public interest or for the protection of investors."

In this respect we note that, with the exception of the blanket phrase "as may be necessary or appropriate in the public interest or the protection of investors" both Sections 101 (c) (2) and 103 (a) (1) limit the powers of the PCAOB to establishing auditing and other (including attestation) standards to the preparation of audit reports as required by the Act or the rules of the Commission. An "audit report" is defined in Section 2 (a) (4) of the Act as "a document or other record (A) prepared following an *audit* [*underlined italics added*] performed for the purposes of compliance by an issuer with the requirements of securities laws; and (B) in which a public accounting firm either (i) sets forth the opinion of that firm regarding a financial statement, report or other document...". Section 2 (a) (2) in turn defines an "audit" as "an examination of the financial statements...for the purpose of expressing an opinion on such statements." Neither rules of the Commission nor both the Securities Act of 1933 and the Securities Exchange Act of 1934 appear to mandate anything other than an *audit of the financial statements* (and as required by Sections 103 (a) (2) (A)(iii) and 404 (b) of the Act, an audit of internal control over financial reporting). Furthermore, the "blanket phrase" noted above seems to us not to represent a "blank check", but rather should be interpreted narrowly given the clear intentions of both Congress and the SEC to limit attestation or assurance opinions or conclusions to the financial statements (and internal control over financial reporting) – that is, the

PCAOB is being given the power necessary to improve the *quality* of audits of *financial statements* (and internal control) as needed in the public interest and to protect investors – not to unilaterally expand the scope of the audit. Hence, there is a question as to whether there is a statutory mandate to expand the scope of the audit beyond the financial statements and internal control over financial reporting, even if such an audit could be extended by the terms of engagement (which appear covered in the interim standards AU 551, AU 623, AU 634 and AU 711). The interim standard AU 550 is limited to "reading", unless the auditor becomes aware of a potential material inconsistency or material misstatement of fact because the objective is to identify material inconsistencies between the financial statements and the other information that are obvious to users and that thereby undermine the credibility of the audited financial statements, and hence the audit. It is not the objective of an audit as currently defined in securities legislation to provide an attestation or assurance opinion or conclusion on the other information. We believe that the current proposal with its reporting of an "evaluation" and its required procedures will intimate to users that in fact such an opinion or conclusion is being provided. It also seems to us that the procedures being required in proposed paragraphs 4 a. to d. on page A2-3 would in fact lead to the auditor being able to provide an opinion on the consistency of the other information with the financial statements AND the audit evidence obtained during the audit, and would lead to the basis for an opinion on the other information in line with paragraph 12 of extant AU 551. We therefore believe that this represents a clear extension of audit scope "through the back door" that may exceed the PCAOB's statutory authority. We also expect that the work effort required to perform the procedures proposed on page A2-3 is much greater than the PCAOB probably anticipates.

7. **Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?**
Based on our discussions with users and preparers on a similar question posed by the Invitation to Comment from the IAASB, it appears to us that users and preparers would welcome some comparability among auditors' reports worldwide. Changing the order for individual reports could also involve signaling effects for users. Hence, to increase the comparability of audit reports under PCAOB standards worldwide and to avoid unintended signaling effects, we suggest that the PCAOB require a specific order to the auditor's report. We recommend that the PCAOB liaise with the IAASB on this matter so that the structure of the two reports remains similar.

**8. What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?**

Other than the additional elements or content that might arise due to our suggestions in our response to Question 3 above, we do not believe that there should be any additional elements to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor.

**9. What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.**

Other than for critical audit matters (CAM) and for increasing the work effort for other information, no cost increases other than the one-off change in the form and content of the auditor's report are expected. The new requirements with respect to CAM are expected to result in a cost increase for the additional time needed and potential delays in finalizing the auditor's report with regard to the following areas:

- Drafting the additional information (CAM) to be included in the auditor's report;
- Discussing these matters as well as any matters ultimately not determined as CAM internally within the audit firm, including with the engagement quality control reviewer, perhaps the firm's legal counsel, and possibly with others outside the firm (e.g., in some cases recourse may be had to advisory services by a professional institute); and
- Discussions with both management and those charged with governance.

Management and those charged with governance (TCWG) are also likely to spend additional time reviewing and discussing wording and presentation with the auditor. Nevertheless, we regard the added benefit to users in increasing the usefulness of audit reports to outweigh the costs.

We note our concerns about the likely underestimation of the costs involved in expanding the work effort on other information in our response to Question 6.

**Questions Related to Section V:**

**10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

**11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

As a matter of principle, we welcome the idea that the auditor's report provide more relevant information to users (note: when we speak of users in our comment letter, we mean "intended users", which may be narrower than "users", and are referring to "external users" – that is, neither management nor those charged with governance, who have additional access to information about the audit) of financial statements because it would increase the value of audits to users. However, it seems to us that based on our roundtable of users, regulators, and preparers and from our consultation with members of our profession, not enough research has been done to determine which information is really of interest to users and what they would do with that information if it were available through the auditor's report.

For this reason, we do not believe that we are able to conclude as to whether the introduction of CAM into the auditor's report will in fact enhance the usefulness of the auditor's report. In particular, we expect a continuing danger of boilerplate and user misunderstanding of the nature of CAM (with the resulting increase in the expectations gap) in this respect to remain. On the other hand, we note that the inclusion of CAM may provide users with additional information about matters in the financial statements involving auditor judgment and that therefore the expectations gap may also be reduced with respect to the nature of the audit opinion. For these reasons, overall we believe that the arguments for including some form of CAM in such auditors' reports outweigh the arguments against. It is therefore important that the PCAOB monitor the implementation of CAM to review the application of CAM in practice after a few years of experience in practice.

We welcome the fact that CAM is focused on having the auditor report on matters that are important to the audit, and that therefore CAM no longer serves the purpose of having the auditor help users "navigate" through the financial statements, which we believe is the role of management – not the auditor.

However, in this context, we believe that the PCAOB has not emphasized the purpose of CAM in relation to user needs enough. Ultimately, like the content of the financial statements depends on the financial information needs of users, the contents of auditors' reports must be driven by the information needs of users with respect to the audit. It is inconsistent to claim, on the one hand, that auditors must use their judgment to determine materiality for the financial statements and consider materiality for the fair presentation of the financial statements based on the financial information needs of users, but at the same time claim that auditors are not able to determine what the contents of CAM ought to be based upon the auditor's judgment of the information needs of users with respect to the audit.

It is the lack of a connection to user information needs with respect to the audit that we believe causes some weaknesses in the proposed draft for the determination of when audit matters ought to be CAM. On the whole, we do not perceive a reasonable alternative to some form of CAM, properly defined and with clear criteria for its determination.

However, we do not believe it would be at all helpful to investors, auditors and regulators if the PCAOB and the IAASB were to use differing terminology, definitions and criteria in their respective final pronouncements. We have not been able to determine whether the differences in the proposals would lead to different reporting, and would encourage cooperation between the two Boards in this respect.

**12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?**

In line with our views in our response to Question 11, we believe that the definition of CAM ought to be as follows:

> "Those matters critical to the audit that the auditor judges are reasonably expected to influence decisions of intended users."

We believe that a definition should serve to identify the distinguishing characteristic of CAM – not serve as a set of criteria based on the definition to determine which matters are CAM. In our response to

Question 14 below we explain our views on the appropriate criteria for CAM that would clarify the determination of CAM.

We also believe that the use of a relative test ("most"), rather than an absolute test (e.g., the "critical" in the "critical audit matters"), suggests that number of matters identified as CAM must always be similar across all audits and that consequently, there can never be no CAM. It would be confusing to users as to why a matter that is critical for two registrants is not included in both audit reports because one of the registrants has more matters that are critical. It may also lead matters that are not critical to be included in CAM simply because they were "most" significant. We therefore suggest dispensing with the term "most".

**13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

We assume that additional time incurred regarding critical audit matters would have an overall positive effect on audit quality, but could pose challenges to the timely completion of the audit.

**14. Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?**

We believe that there is room for further improvement in the requirements regarding the determination of CAM. We have been informed that field tests undertaken in the firms in relation to KAM as defined by the IAASB appear to suggest that auditors intuitively identify those matters that they believe ought to be KAM or CAM. However, we do have some concerns that the criteria as currently conceived may not lead to reasonably consistent auditor judgments about which matters ought to be CAM across firms, and therefore may be difficult to enforce because the PCAOB may have a different view as to what is CAM: therefore the intuitive process applied by auditors needs to be reflected in a clear "filter".

As we note in our response to Question 12 above, basis for the determination of CAM must be user information needs with respect to the audit: the objective of CAM ought to be to increase the value to users of the auditor's report. Consequently, the filter gleaning matters of interest to users of the auditor's report that ought to be CAM needs to be based on the decision-usefulness of the information about the audit to users, which in turn depends upon the use to which auditors expect users to put that information.

We believe that unless the matter in question relates to a significant risk of material misstatement, the matter is not likely to be a matter that ought to be CAM because it is unlikely to be of interest to users. This means that the starting point for the determination of CAM ought to be whether a matter has been identified as a significant risk (or perhaps a high risk of material misstatement for which substantive procedures alone do not provide sufficient appropriate evidence and for which a significant deficiency in internal control is relevant). We note that the concept of significant risks of material misstatement is more than just an audit planning or risk assessment concept because an auditor is required to evaluate before the conclusion of the audit whether the risks of material misstatement at the assertion level remain appropriate (which implies determining whether the identification of significant risks remains appropriate).

However, this does not imply that all such significant risks of material misstatement ought to be CAM. In particular, those risks that are always significant risks or are presumed to be significant risks under the PCAOB standards (e.g., fraud risk, revenue recognition, management override of controls) need not be CAM unless the nature of such risks of material misstatement are of critical importance to the audit of the financial statements due to their being peculiar to the entity, the information about which would therefore also be decision-useful to users. This means that only those significant risks ought to be regarded as CAM that involve significant auditor judgment in relation to significant matters. Such auditor judgment would occur when the matter relates to significant management judgment as to the appropriateness of accounting treatment of recognition, measurement, presentation or disclosure issues, the use of grooming transactions, or in relation to auditor judgment that sufficient appropriate evidence has been obtained.

This approach would provide a clear set of criteria, directly related to items in the financial statements, to which auditors can apply professional judgment to filter out those matters that ought to be CAM.

In relation to the criteria for the determination of CAM, we suggest that the criteria be worded as follows:

INSTITUT DER WIRTSCHAFTSPRÜFER

"The auditor shall determine those matters that are critical audit matters by:

(a) Identifying those matters that have been identified as significant risks of material misstatement or a high risk of material misstatement for which substantive procedures alone do not provide sufficient appropriate evidence and for which a severe significant deficiency in internal control is relevant;
(b) Excluding those risks of material misstatement that are always required to be treated as significant risks of material misstatement in an audit (the risk of material misstatement due to fraud, including the risk of management override of controls) or are always presumed to be a significant risks of material misstatement due to fraud (revenue recognition), unless the nature of such risks of material misstatement are of critical importance to the audit of the financial statements due to their being peculiar to the entity, the information about which would therefore also be decision-useful to users.
(c) Excluding those significant risks of material misstatement not relating to significant management judgments about recognition, measurement, presentation or disclosure issues in the financial statements or grooming transactions, or not relating to significant auditor judgment that sufficient appropriate audit evidence has been obtained."

This approach would help clarify the filtering process that auditors intuitively use to identify CAM and would aid documentation and enforceability.

With respect to the communication of critical audit matters, we believe that communication of the following matters is essential:

- A description of the matter
- An explanation as to why the matter is CAM
- A reference to where the matter is disclosed in the financial statements

We would not support including audit procedures performed in the communication of CAM because such inclusion is likely to raise more questions than answers for users. Furthermore, we believe that including a conclusion about the resolution of CAM would be regarded as a piecemeal opinion by users, and therefore such conclusions should not be included.

**15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

As noted in our response to Question 14, we do not believe that including the audit procedures performed would be useful due to the fact that users will not understand that the description of the procedures would never be complete (and therefore this would raise more questions than answers to users). In addition, addressing the resolution of CAM would be construed by users as a piecemeal audit opinion, which we believe ought to be avoided.

**16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

**17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

We regard the factors not to be particularly useful; as long as the criteria for identifying CAM are clear as noted in our response to Question 14, we believe that such factors are not necessary. In particular, we note the following:

- The factor listed in a. on page A5-30 (degree of subjectivity) is already covered by the criteria we note in (a) and (c) in our response to Question 14, but in a manner linked to significant risks of material misstatements and management and auditor judgment.
- The factor listed in b. on page A5-30 (the audit effort required) may not be indicative that a matter has been resolved conclusively; users are not interested in matters that have been conclusively resolved, even if they required considerable audit effort.
- The factor listed in c. on page A5-31 (difficulty in obtaining sufficient appropriate audit evidence) is already covered by the criteria we note in (c) in our response to Question 14.
- The factor listed in d. on page A5-31 (severity of control deficiencies) is covered by the criteria we note in (a) in our response to Question 14.
- The factor listed in e. on page A5-32 (change in risk assessment and procedures) does not imply that this is necessarily of interest to users – particularly if the evidence obtained as a result is conclusive and therefore not critical.

- The factor listed in f. on page A5-33 (nature and significance of corrected misstatements) is not of interest to users once conclusively corrected,
- The factor listed in g. on page A5-33 (extent of specialized skill or knowledge) would not be relevant to users when that skill or knowledge led to the conclusive resolution of the matter.
- The factor listed in h. on page A5-33 ( nature of consultations outside engagement team) would not be of interest to users when the results of such consultations are conclusive.

Overall, we have come to the conclusion that it is more important to get the criteria for the determination of CAM "right" than to list factors.

Hence, we do not believe that additional factors are necessary either.

**18. Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?**

**19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?**

**20. Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?**

We believe that the proposed requirement is sufficiently clear, but we do not support the notion that auditors should be documenting matters considered for inclusion in CAM that were subsequently rejected. This list could be very long and would lead to the PCAOB second-guessing the list with hindsight. We believe that the documentation requirement is otherwise sufficient and that a broader requirement is not needed.

**24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?**

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

We believe that the auditor should first and foremost concentrate on those critical audit matters arising from the audit of the current period, even in the case of comparative financial statements, when the auditor is required to report on both the current period financial statements and the prior period financial statements in connection with the current year's audit.

Nevertheless, due to the fact that these critical audit matters are likely to recur in the risk assessment of the audit of financial statements and internal control report year on year, there might be a need to consider whether critical audit matters of the previous period remain crucial audit matters in the current period.

26. **What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.**
It is likely that users will look for comparability of reports in particular industries or where circumstances giving rise to critical audit matters are pervasive. However, such reporting is intended to be non-boiler plate and specific to the audit on the financial statements and internal control report of a specific period, so comparability cannot be an overriding goal – rather information useful to users about the audit should be the overriding goal.

27. **What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**
There may be circumstances when law or regulation effectively prohibits the dissemination of information by the auditor. In these cases, the draft needs to recognize that there may be legitimate limitations on what can be included in CAM. For example, law or regulation may effectively preclude the reporting of identified or suspected fraud or non-compliance with law or regulation.

IDW

INSTITUT DER WIRTSCHAFTSPRÜFER

**Questions Related to Section VI:**

29. **Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?**
30. **Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?**
    We believe that it would be appropriate to retain the concept of emphasis of matter paragraphs and to introduce the concept of other matter paragraphs in line with ISA 706 as issued by the IAASB, even when the auditor is required to communicate CAM. In this respect it is important for the PCAOB to clearly differentiate these from CAM. The reason is that the definition (whether that proposed in the draft or our proposed definition) of CAM will not cover all of the circumstances for which emphasis of matter and other matter paragraphs can be used. It is therefore entirely appropriate that the former be retained and the latter introduced.

31. **Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?**
32. **Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?**
    The only matter that ought to require emphasis is the identification of substantial doubt with respect to whether the entity will continue to operate as a going concern. However, given the IAASB's direction on this matter, once FASB has completed its relevant accounting standards on this matter, the PCAOB may wish to consider whether going concern reporting requires a separate section rather than an emphasis of matter.

    We do not believe that more matters should be added to the list of possible matters that might be emphasized.

## Appendix 6 of the Draft

We note our response to Question 6 of Appendix 5 of the draft, which summarizes our views with respect to the requirements for auditor responsibility for other information.

Dear Sir/Madam

**PCAOB Rulemaking Docket Matter No. 034**
**Proposed Auditing Standards *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report***

The Institute of Chartered Accountants Australia is pleased to respond to the above Rulemaking Docket.

The Institute has always been a strong supporter of enhancing auditor reporting as we believe that clear and informative auditor reporting is of value to the users of financial statements. Maintaining user confidence in the audit process is key to maintaining strong capital markets and auditor reporting that demonstrates the value of the audit to the users is key to achieving that aim.

We have consulted widely on the International Auditing and Assurance Standards Board (IAASB) proposals for changes to the auditor report and believe many of the matters raised by our members, who represent all participants in the financial reporting supply chain, are relevant to the PCAOB's proposals. We are restricting our comments to matters that were raised by our members during those consultations and not all the matters covered in the Rulemaking Docket.

**Global Consistency**

We note that the PCAOB and IAASB have consistent aims to enhance the value of the audit report through increasing transparency in relation to the judgments inherent in the audit process. This has led to many consistencies in the proposals. However we strongly urge more direct liaison as you contemplate responses and finalise recommendations.

The global nature of markets and investment, and the sizable number of companies reporting in multiple jurisdictions, mean even slight variations in wording or content can cause great expense to manage different compliance obligations, and great confusion for users. For example, understanding whether the difference between a "critical audit matter" and a "key audit matter" is merely wording or a more fundamental difference, is an unnecessary complication for users and can inhibit understanding and confidence in the audit process.

**Critical Audit Matters**

Our recent consultations with members in relation to similar proposals from the IAASB revealed mixed views among stakeholders. While many, including investor bodies, saw advantages in an explanation of the important judgments made by the auditor, there were widespread concerns about the actual and potential costs associated with implementation. These include the:

- costs, time and resource to manage the expanded reporting requirements
- increased liability
- number of additional pages to the audit report, potentially losing the impact of the opinion and adding further to the length of annual reports
- amount of additional documentation in audit files to manage potential subsequent regulator review and challenge

The benefits to users of additional commentary by the auditor do not seem to outweigh these costs.

There were strong preferences expressed for a model where the company provides additional information to the users and the auditor provides assurance over that information. This was particularly evident when understanding that users were actually interested in the company's risks and judgments rather than audit procedures.

However on the basis that the proposals are pursued, we recommend that critical audit matters:

- be identified through principle-led judgment (rather than prescription), with clear and concise guidance around the framework for application of the principles
- focus on why the matter is of interest to users of the financial statements and not on what audit procedures were performed.

**Tenure of auditors**

Although not part of the consultation for the IAASB proposals, we would like to comment on the proposal to disclose the tenure of the auditor. We do not support including this information in the audit report. The date of appointment is available elsewhere in most jurisdictional regimes (and through the 10K process in the US). Including the information in the audit report:

- implies this is a defining matter or a key point of reference for users when in fact there is no evidence about the impact of tenure on audit quality
- merely adds to the length of the report and the amount of information users need to sort through.

**The Institute of Chartered Accountants Australia**

The Institute is the professional body for Chartered Accountants in Australia and members operating throughout the world.

Representing more than 73,000 current and future professionals and business leaders, the Institute has a pivotal role in upholding financial integrity in society. Members strive to uphold the profession's commitment to ethics and quality in everything they do, alongside an unwavering dedication to act in the public interest.

Chartered Accountants hold diverse positions across the business community, as well as in professional services, government, not-for-profit, education and academia. The leadership and business acumen of members underpin the Institute's deep knowledge base in a broad range of policy areas impacting the Australian economy and domestic and international capital markets.

The Institute of Chartered Accountants Australia was established by Royal Charter in 1928 and today has more than 61,000 members and 12,000 talented graduates working and undertaking the Chartered Accountants Program.

The Institute is a founding member of both the Global Accounting Alliance (GAA), which is an international coalition of accounting bodies and an 800,000-strong network of professionals and leaders worldwide; and Chartered Accountants Worldwide, which brings together leading Institutes of Chartered Accountants in Australia, England and Wales, Ireland, New Zealand, Scotland and South Africa to support, develop and promote over 320,000 Chartered Accountants in more than 180 countries around the world.

**Further information**

We trust you find our comments of value. Should you require further information or clarification on any of our views, please contact Liz Stamford, Head of Audit Policy via email at liz.stamford@charteredaccountants.com.au.

Yours sincerely

PCAOB Rulemaking Docket Matter No. 034

Dear Board Members:

The Financial Reporting Committee (FRC) and Small Business Financial and Regulatory Affairs Committee (SBFRC) of the Institute of Management Accountants (IMA) are writing to provide their views on the proposed auditing standards dealing with the auditor's report, PCAOB Release No. 2013-005 dated August 13, 2013 (Exposure Draft). We certainly understand the desire of the Board to "make the auditor's report more informative, thus increasing its relevance and usefulness to investors and other financial statement users." However, while we are pleased that certain major modifications to the auditor's report suggested in the earlier concepts release are not proposed in this Exposure Draft, we believe that key aspects of the current draft will not achieve the objective quoted above. Further, we are concerned that significant audit time will be added to most engagements without commensurate benefit and the timing of some of this work will be problematic with respect to Security Exchange Commission (SEC) filing deadlines.

The IMA is a global association representing more than 65,000 accountants and finance team professionals. Our members work inside organizations of various sizes, industries and types, including manufacturing and services, public and private enterprises, not-for-profit organizations, academic institutions, government entities and multinational corporations. The FRC is the financial reporting technical committee of the IMA. The committee includes preparers of financial statements for some of the largest companies in the world, representatives from the world's largest accounting firms, valuation experts, accounting consultants, academics and analysts. The FRC reviews and responds to research studies, statements, pronouncements, pending legislation, proposals and other documents issued by domestic and international agencies and organizations. The SBFRC addresses issues that impact small and medium-sized organizations. On behalf of IMA's members, the SBFRC engages and suggests solutions to standard-setters and regulatory agencies such as the Financial Accounting Foundation, SEC, International Accounting Standards Board, Small Business Administration, American Bankers Association, Internal Revenue Service and others. Information on both committees can be found at www.imanet.org under the Advocacy section.

**Overview**

As noted in our September 22, 2011 letter commenting on the Concepts Release on this same subject, we believe that the overall framework for the auditor reporting model should be consistent with the following principles.

1. The objective of an audit should remain as we know it today. It should provide an opinion on the financial statements, not management's discussion and analysis (MD&A) or other areas of financial reporting.
2. Auditors should not be disclosing information for which they are not the original source. Rather they should opine on information provided by management.
3. The auditor's report should provide transparency for investors as to what the audit provides in terms of assurance (what it is), as well as, what it does not address (what it is not).
4. Auditor involvement and attestation should be limited to areas for which they have the appropriate expertise.

Consistent with this framework, we fully support the existing "pass/fail" model that has stood the test of time and is endorsed by the Board in the current proposal. Notwithstanding efforts of the PCAOB or others to improve the usefulness of the auditor's report, we believe most users will continue to look only to see if a company has received an unqualified ("clean") opinion. Our strong support for the pass/fail model is one reason we are concerned about critical audit matters (CAMs), as discussed below, as lengthy lists of CAMs may tend to obscure the actual pass/fail conclusion.

Also consistent with our framework, we strongly support the Board's decision not to include a proposal for an auditor's discussion and analysis (AD&A) in the exposure draft. In particular, an AD&A would have required auditors to report information that in many cases was not already being reported by the company itself. Financial statements and other information in SEC filings are representations of management. While investors may always desire improvements in financial reporting and other disclosures in filings, the proper source of this information is management and not the auditor. We also believed that a requirement for an AD&A would have diverted resources from the audit process and have similar concerns about the proposal for CAMs as discussed below.

Our earlier letter also suggested that a requirement for emphasis paragraphs to be added to auditor's reports in most cases was not warranted. Thus, we support the position in the Exposure Draft to continue current practice to allow such paragraphs in unusual circumstances but not burden all reports with numerous emphasis paragraphs. Some companies have experimented with "road maps" to their annual reports or similar ways to highlight matters that they believe will help readers better understand those reports. We encourage those efforts by companies but again believe it should be management's responsibility to take the lead on such disclosure matters rather than assigning such reporting to the auditor.

## Critical Audit Matters

Without question the most significant proposed change to the auditor's report is the inclusion of critical audit matters. The Board defines CAMs as the audit matters that:

- involved the most difficult, subjective, or complex auditor judgments;
- posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; and

The Association of Accountants and Financial Professionals in Business

- posed the most difficulty to the auditor in forming an opinion on the financial statements.

The source of such matters is identified as being:

- included in engagement completion documents;
- reviewed by the engagement quality reviewer; and
- communicated to the audit committee.

Proposed documentation requirements are such that any matters in the above source list are likely to be judged as CAMs under the proposal as the auditor would be required to otherwise justify in the working papers why such treatment was not appropriate. And that judgment, of course, would be subject to second guessing by PCAOB inspectors. Thus, we assume that the practical application of this guidance would be for most auditors to err on the side of including more rather than fewer CAMs in their reports. This, of course, would lead to several CAMs being included in an auditor's report in typical circumstances and resulting multi-page reports.

While we are concerned about whether multi-page auditor reports would be truly useful to the readers of those reports, our real concern about the proposed addition of CAMs to the auditor's report is not just with the issue of size. Rather, we return to the fundamental issue of the roles of the auditor and management. While the notion of CAMs purports to provide users with information about the audit, for all practical purposes the definition is simply an indirect way of identifying important matters in the company's financial reporting (where significant estimates were made, etc.). The Exposure Draft requires a description of the CAM and why it is one but is silent on whether the auditor should include a description of audit procedures applied (although the examples provided do include such procedures). This indicates that the information being provided is intended more as a way of helping the reader understand the financial reporting rather than understand the auditing performed.

As noted earlier, we understand the desire to "make the auditor's report more informative," which is the PCAOB's objective in this project. But we strongly believe that the report should be limited to describing the auditing procedures performed and related matters and not be extended to serve as guidance for readers of the financial statements and other information in annual reports, etc. to better understand that information. The latter responsibility clearly lies with management. Frankly, we believe the sections of MD&A covering critical accounting policies and use of estimates are quite informative at present for most companies. However, to the extent this and other financial reporting needs improvement, we stand ready to work with the FASB, SEC, and other parties as appropriate.

We also are concerned that the time and effort devoted to fulfilling these particular requirements could distract attention from what we consider the core deliverables of the audit and divert valuable resources of audit firms, management, and audit committees. At present, companies present their financial statements and other information for final review and signoff by the audit engagement partner, concurring partner, and often, national office SEC reviewing partner – all of this under very tight SEC filing deadlines. With a CAM requirement, the process would become more like a "simultaneous equation" as the company would have its information and the auditors would have their own version and each party would then have to enter into negotiations on which version of the description of certain significant estimates, etc. is in the CAM vs. the MD&A, footnotes, etc. This would require discussions among financial management, audit committees, internal and external legal advisors, local and possibly regional and national office audit personnel, and so on. It's hard to understand how this can possibly be a productive use of senior audit executive time at the critical audit closing juncture.

We are pleased that the Board has encouraged companies and auditors to field test how the CAM provision would be applied in practice and submit the results to the PCAOB. As noted, this exercise will be most effective if the auditor/company information is reviewed with users of the information (investors, creditors, etc.) and the investors' views are also shared with the Board. We believe that field testing is likely to demonstrate operational difficulties with the proposal and other negatives rather than positive reinforcement for the CAM notion. If nothing else, however, it will be useful to have some real examples of five to ten page reports that mainly repeat what is already in MD&A, footnotes, etc. and then to ask investors what they find useful about such reports.

In summary, we do not support the inclusion of CAMs in auditor's reports and urge that this part of the proposal be dropped.

**Reporting on Other Information**

In our earlier letter we indicated, "While the Committees do not support extending the auditor's opinion to cover other areas of filed reports (e.g., MD&A, other 10-K information) or earnings releases, we would agree that there may be some benefit to providing investors and other readers of the financial statements a clearer articulation of the auditor's responsibility for the other information in filed financial reports. This information is currently provided to the audit committee and could be added to the auditor's external report in a manner that would not be disruptive or otherwise detrimental to the audit and closing processes." Thus, we end that section of our letter with the following, "… we would not object if the PCAOB required that a brief description be added to the auditor's report to assist investors in understanding the nature and extent of auditor involvement in reviewing other areas of the reporting entity's filed information."

However, in the Exposure Draft, the Board has proposed a different standard of auditor involvement with other information. Rather than read the other information and "consider" whether it is materially consistent with the audited financial statements, the auditor would now be required to read and "evaluate" the consistency of the information. Further, paragraph 4 of the Exposure Draft states in part, "The auditor should read the other information and, based on relevant audit evidence obtained and conclusions reached during the audit, evaluate the …"

The change from "consider" to "evaluate," and the phrase "based on relevant audit evidence obtained and conclusions reached during the audit" has resulted in some accounting firms indicating that they believe substantial additional auditing procedures would be necessary to satisfy the Board's intent. It apparently is unclear whether the quoted phrase was intended by the PCAOB to mean only what had already been performed or whether at least some additional procedures are needed to meet an "evaluate" standard. And if some additional procedures are needed, what are they? We assume this concern is based in part with the firms' experience with the PCAOB inspection program in second guessing the application of many audit judgments. And we are particularly interested in making sure that we learn from our past experience with auditing of internal controls, wherein the accounting firms went well beyond what seemed reasonable in the initial application of Auditing Standard No. 2, which ultimately resulted in the need to issue a revised auditing standard a few years later.

Rather than bringing forward the current auditing guidance in Section AU550 with an added reporting responsibility (to which we had not objected in our earlier letter), the Board seems to have carefully chosen words in its proposal to significantly expand the auditor's responsibility and risk. For example, the Board could have required that the auditor disclaim an opinion – e.g., "Because we were not able to apply sufficient auditing procedures, the scope of our work was not sufficient to enable to us to express an opinion, and we do not express an opinion." Or the relevant paragraph could be titled differently, such as "The Auditor's Disclaimer Regarding Other Information." In other words, there are several means available to make clear that no audit of the other information was performed and to not create report language that may well be misunderstood by even a sophisticated investor. It's no wonder that accounting firms' first reaction to the proposal is to suggest that they would have to perform substantially more auditing procedures.

As a final point on this issue, we urge the Board to study (field test) how accounting firms would apply the proposed guidance on the auditor's responsibility for other information. It is important to determine, before the fact, whether such procedures would be unduly costly. It is our belief that substantially expanding auditing procedures in exchange for some form of negative assurance on the other information would not meet any sort of reasonable cost-benefit evaluation. A robust field test of how the proposed guidance would be applied should help demonstrate that to the Board.

**Auditor Tenure**

We understand that there is some (limited?) investor interest in auditor tenure. However, given the lack of evidence of association with audit quality, we do not support inclusion in the auditor's report. Rather, we believe this is more appropriately considered a corporate governance matter and considered for disclosure in proxy statements as part of audit committee reports or in connection with shareholders' ratification of auditor reappointment.

**Other Matters**

The remaining matters in the Exposure Draft are modest wording changes that we support or at least do not object to as follows:

- addressing the report to shareholders and the board;

The Association of Accountants and Financial Professionals in Business

- adding wording to clarify that a material misstatement means whether due to unintentional error or intentional fraud;
- adding footnotes to the language of "financial statements" covered by the auditor's report; and
- adding wording to the report indicating that the auditor is independent (as defined by the SEC).

**Conclusion**

We appreciate the opportunity to express our views on the exposure draft. We would be pleased to further explain these views or provide additional information at your request.

Sincerely,

Subject: PCAOB Rulemaking Docket Matter No. 034. Release No. 2013-005.

Dear Board Members of the PCAOB:

Intel appreciates the opportunity to respond to the Public Company Accounting and Oversight Board's (PCAOB) proposed auditing standards relating to the auditor's report and the auditor's responsibilities regarding other information. We support the PCAOB's objective of increasing the transparency and relevance of the auditor's report to financial statement users. However, as issued, we have significant reservations that the key elements of the proposed standards will achieve their objectives.

**Critical Audit Matters (CAMs)**

As stated in our letter to the PCAOB relating to their concept release on the auditor's reporting model on September 30, 2011, we firmly believe that any standard setting initiative should not change the responsibilities of management, the audit committee or the auditors. Our concern is that the current proposals may blur the lines of responsibility between management and the auditor by creating the context for the auditor to be the first point of disclosure and giving the appearance of playing the role of management.

We support maintaining the pass/fail model and the decisive clarity it brings to the auditor's opinion. We are concerned that through the expectation of CAMs existing for most audits and the likelihood the auditors will need to defend their judgments through the PCAOB inspection process, the number of CAMs will naturally increase. The subjective nature of CAMs will cause the auditor's report to become a highly interpretive document leading to user misunderstanding of the report's conclusion.

We are also concerned that this proposal is adding to an already comprehensive framework of disclosure with transparency over critical accounting estimates, risk factors and business trends. We expect that layering additional disclosures may have the unintended effect of creating more complexity and less clarity for users of the financial statements.

We believe that any changes to the auditor's report ought to require field testing with the user community to validate there is significant value from adding CAMs to the auditor's report. Other alternatives should also be explored, such as enhancing the transparency of the PCAOB inspection process and the timeliness of the inspection results, or a reexamination of the disclosure framework, so that the best solution can be developed for users.

**Auditor's responsibility regarding other information**

We support providing further clarity in the auditor's report regarding their responsibilities over other information. However, the proposal expands the scope of the auditor's responsibilities in areas that are more forward looking and subjective in nature. We note that comments from some audit firms indicate the current proposals will require additional audit procedures to be performed. It is unclear what level of assurance would result from these additional procedures. We therefore do not see significant user value in moving from a model of "read and consider" to one of "read and evaluate". Furthermore, we are unaware of significant issues associated with auditor's existing responsibilities over other information in the financial statements.

We recommend that the PCAOB carefully consider the procedures expected of auditors regarding other information and complete a cost/benefit study to determine if expected incremental costs are significantly outweighed by the value to users.

Ms. Phoebe W. Brown
Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, DC 20006-2803

Re: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments; Docket Matter 034

Dear Ms. Brown:

Invesco Advisers, Inc. ("Invesco" or "we") is a registered investment adviser that, along with its affiliates, provides a comprehensive range of investment strategies and investment vehicles to retail, institutional and high-net-worth clients. As of October 31, 2013, Invesco had approximately $233.8 billion in assets under management in Invesco Funds registered investment companies ("RICs") and, along with our affiliates, had over $763.9 billion in total assets under management. Invesco appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB") proposed changes to *The Auditor's Report on the Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, The Auditor' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements, and the Related Auditor's Report, and Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting Standard* (the "Proposal").

Invesco supports efforts to improve audit quality in order to enhance investor confidence of the audit process and the auditor's responsibilities related to other information. However, Invesco does not support the PCAOB's proposals in their current form.

By this letter, we wish to communicate our support for the comments of the Investment Company Institute ("ICI") in their comment letter dated December 11, 2013, with respect to the Proposal. However, we are submitting this separate letter in order to emphasize the burden that the Proposal would place on investment companies and their auditors and the increase in audit costs, with no demonstrated benefit to mutual fund investors. Therefore, we to note the following specific points from the ICI's letter that we believe are of heightened importance to investment companies (mutual funds) and their investors:

- <u>No Additional Useful Information</u>. Critical Audit Matter ("CAM") disclosure requirements are not likely to add useful information to the existing disclosures in a mutual fund's shareholder report. Because mutual funds' assets are primarily invested in investment securities, the financial reporting is less complex than a traditional corporation and is significantly related to such investments. A CAM reported by the auditor regarding difficult or subjective audit matters is likely to be repetitive of similar disclosure already included in the financial statements (e.g., fair value measurements). The nature of the investments in certain mutual funds may mean that the auditor will make the same CAM disclosure every year and consequently lose its effectiveness. Conversely, some mutual funds may not have any significant audit risks but the proposed definition of CAMs as a relative concept may induce the auditor to communicate non-critical items as CAMs anyway.

- <u>Investor Confusion</u>. CAM disclosure requirements may inappropriately influence and/or confuse investors in their decision-making process regarding which mutual funds to invest in. By their nature, CAM disclosures can be subjective, from one auditor to the next and from one fact pattern to the next. Different auditors can see the same set of facts and make different determinations on whether a CAM is necessary. This inconsistent use and application of CAM disclosures could lead an investor to misunderstand the impact of a CAM on a mutual fund, placing emphasis on CAMs when reviewing similar types of mutual funds, and incorrectly using a CAM as a deciding factor on investing in a mutual fund, when other factors such as the mutual funds' investment objectives, strategies, risks and fees would be more appropriate tools to use for mutual fund comparison purposes. CAM disclosures may also unnecessarily impact brokers who sell mutual funds and/or third-party consultants reviewing mutual funds and recommending them for investment purposes. This influence and impact does not appear to be outweighed by the benefits, if any, of CAM disclosure in mutual fund financial reports, which are not typically the documents used by investors when making a mutual fund investment selection.

- <u>Increased Investor Expenses</u>. CAM disclosure requirements may lead to an increase in audit costs due to the one-time setup necessary to update auditing methodologies and the ongoing annual costs associated with making determinations on whether a CAM exists or not. These additional audit costs will be borne by the mutual funds being audited, not the investment adviser of the mutual funds. These additional mutual fund costs will have direct impact on mutual fund net asset values, in turn, reducing shareholder returns. Again, any benefits to be realized by potential CAM disclosures do not outweigh the negative impact of higher audit costs on mutual funds and the impact these higher audit costs will have on investor returns.

- <u>Outreach to Retail Mutual Fund Investors</u>. We do not believe that any substantive outreach was conducted toward mutual fund investors who own shares of investment companies that are being audited. There does not appear to be any evidence of a need or desire by mutual fund investors for CAM disclosures. Rather, as noted above, mutual fund investors base their investment selection on mutual fund strategies, performance and fees, among other things, not financial statement disclosures.

- Enhanced Auditor Review of Other Information. Unlike annual reports of traditional corporations, mutual fund reports contain a number of items that do not directly relate to the mutual fund's financial statements (e.g., fund performance and management's discussion thereof, growth of $10,000 chart, graphical representation of portfolio holdings and the board's basis for approval of the fund's investment advisory contract, among other things). We do not believe it is beneficial for mutual fund investors to incur additional audit costs for auditors to thoroughly review and evaluate this non-financial statement information when it does not relate to the mutual fund's financial statements—the subject of the audit. Nevertheless, the Proposal requires that auditors place more emphasis on these non-financial disclosures. Again, we do not believe these additional efforts are offset by any real tangible or potential mutual fund investor benefits. Moreover, if the Proposal does go forward, we believe that any "Other" information should be limited to the management discussion and other information included in the report itself, and not go outside the report. Expanding the reporting requirement to information included outside of the information in the report would create inconsistencies in the timing of required mutual fund reporting and would increase the costs to mutual fund investors without demonstrated incremental benefits. Narrowing the scope of the Proposal for mutual funds by limiting review to items included in the mutual fund report would limit the costs of the Proposal.

We appreciate the opportunity to comment on the Proposal. We support the ICI's comment letter to the PCAOB relating to the Proposal. And we would like to emphasize again our concerns that the Proposal will have a negative impact on mutual funds and their investors, without any real tangible benefits. The lack of benefits, the potential investor confusion and the potential for increased costs lead us to the conclusion that as written, the Proposal is inappropriate and unnecessary for investment companies. If you have any questions, please contact me at 713-214-4354.

Sincerely,

/S/ SHERI M. MORRIS

Re: Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor's Report of Certain Participants in the Audit; Docket Matter No. 034

Dear Ms. Brown:

The Investment Company Institute[1] appreciates the opportunity to comment on the Public Company Accounting Oversight Board's proposed amendments that would require disclosure in the auditor's report of the name of the engagement partner.[2] The Proposal indicates that the Board believes that disclosure of the engagement partner would provide investors with important information about audits conducted for their benefit.[3] We are concerned that the Proposal as currently structured could impair the ability of investment companies and other issuers to access capital markets on a timely basis. In particular, if the engagement partner is unwilling or unable to consent to being named in the auditor's report, then the issuer would be unable to incorporate its audited financial statements into its registration statement and would be unable to conduct the planned offering. If the Board requires identification of the engagement partner, we recommend disclosure outside the auditor's report.

Section 7 of the Securities Act of 1933 (1933 Act) requires issuers to file with the Securities and Exchange Commission the consent of any accountant who is named as having prepared or certified any part of a registration statement filed with the Commission. Registration statement forms prescribed by

[1] ICI is the national association of U.S. investment companies, including mutual funds, closed-end funds, exchange-traded funds, and unit investment trusts. ICI seeks to encourage adherence to high ethical standards, promote public understanding, and otherwise advance the interests of funds, their shareholders, directors, and advisers. Members of ICI manage total assets of $16.1 trillion and serve more than 90 million shareholders, and there are approximately 1,900 independent directors of ICI-member funds.

[2] *See Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor's Report of Certain Participants in the Audit*, PCAOB Release No. 2013-009 (December 4, 2013) (the "Proposal").

[3] The Board cites investor comment, empirical research, and its oversight experience as basis for its belief that the proposed disclosure would benefit investors.

the Commission require audited financial statements to be included or incorporated by reference into the registration statement.[4] Accordingly, we believe an issuer would be required to file a consent of any engagement partner named in the auditor's report included in a registration statement in order for the Commission to declare that registration statement effective.

Mutual funds offer their shares daily and maintain an "evergreen" registration statement. A mutual fund with a December 31 fiscal year end would deliver its annual shareholder report including audited financial statements to its shareholders no later than March 1.[5] That fund would update its registration statement by filing a post-effective amendment that includes or incorporates by reference the annual shareholder report including audited financial statements no later than May 1.[6]

If the engagement partner has resigned or retired from the audit firm after March 1 and prior to May 1, the partner may be unwilling to provide the required consent. The engagement partner may be unable to provide the required consent due to death or disability. In order to avoid this outcome, if the Board determines to require identification of the engagement partner, we recommend disclosure outside the auditor's report.

## Overview

The Discussion Paper identifies two key features that call for adjustments:

1) Current audit reports are based on a binary (pass/fail) model, and

2) The current "boilerplate" format of reports provides little company specific information.

In addition, the Discussion Paper considers extending the scope of auditor's report to cover other information already included in regulatory filings, such as the Management Discussion & Analysis section. Three changes are proposed in the wording of audit reports to encompass:

1) "Critical Audit Matters" will be a part of the report in which the auditor identifies the issues that were the most difficult, complex, in need of exercising most judgment and/or items for which it was most difficult to gather audit evidence;
2) Auditor's independence, tenure, and responsibility for other information; and
3) Additional standardized language such as "Whether due to error or fraud."

Overall we are disappointed with the half-hearted proposals. This attempt to induce better disclosure, while well meaning, is likely to still produce uninformative boilerplate, albeit longer, reports.

## Analysis

**The Proposed New Audit Report**

We agree that the two key issues with respect to the auditor's report are its binary (Pass/Fail) format, and the boilerplate nature of their content. We are disappointed that the PCAOB does not propose to move the needle on either of these limitations. If the binary (pass/fail) scale is retained, the auditor will continue not to convey any of the detailed knowledge they acquire during their examination to the investors. They could do so through use of a finer grading scheme, say A+ through D-, or even F. Of course, how these grades are labeled is not important for their informativeness, but the fineness of the grading scheme (number of possible grades) is.

The call for additional reporting of "critical audit matters" is an improvement in the sense that it takes us back to the past when auditors issued a long-form audit report including extensive commentary on the key audit procedures and key risk areas in the audit. However, by its failure to even identify the key areas of risk, the proposed revision appears to be a poor cousin of the long form audit report of the 1920's. All regulations, no matter how well-meaning, are vulnerable to be reduced to boilerplate meaninglessness jargon depending on how much room for judgment is allowed in their implementation and enforcement. Mechanical enforcement of such regulations will achieve little more than creating a longer report full of defensive legal verbiage. How many people believe (or believed at the time the law was written) that SOX provisions have (or would) transfer more responsibility for misstatements to the C-suite executives? The addition of proposed commentaries on independence, and its standardized language, also unfortunately belongs in this boilerplate category.

We are disappointed that the PCAOB chose to stick with the binary (pass/fail) system. In government certification, it is common for regulation to set a minimum quality standard (floor) for candidates to get a “pass”. Private certifiers, for the most part, assign a letter or numerical grade to their rating, signalling finer gradations of quality than a pass/fail allows. Some public sector regulators have been courageous in adopting a finer rating system. The Department of Agriculture has many grades of grains and meat (e.g., Grade A Wheat and US Prime Beef). Restaurant hygiene inspections in many cities switched from pass/fail to a letter grading (e.g., A-F) systems. We hope that the PCAOB will also be bolder and strive to create a finer and more informative audit report grading system.

The expansion of the auditor’s report to cover critical audit matters could at least take us back to the level of reporting that occurred in the 1920’s where auditors provided long form reports. Those reports identified the key audit procedures they conducted, and the key risk accounts they identified in the audit. These items are more useful than the vague items required in the current proposal such as “difficult, subjective or complex” items. The proposed requirements lend themselves to be easily reduced to uninformative boilerplate reports where the same set of broad categories can be cited as being the most critical audit matters for all clients to fulfill the new regulations with no additional information whatsoever. The recent (concurrent) proposal by the International Auditing and Assurance Standards Board (IAASB) to require auditors to report the key risks they assessed and the key audit procedures conducted in response to these risks, provide better guidance and are less susceptible to being reduced to boilerplate ritual.

Audit reporting could be more informative if the auditors could convey their expert opinion (preferably via a letter grade) on the quality of the accounting policies and estimates made by management, quality of internal control, quality of governance and quality of disclosure. An alternative would be to publicly disclose the issues that the auditor reports to the audit committee. This would be more informative to users and would be specific to each entity, rather than boilerplate reports.

**Expanding the Scope of Matters Covered by the Audit Report (e.g. MD&A)**

A second proposal is to formally require the auditor's report to expand its scope to cover other filings made with regulators, such as MD&A to ensure propriety and consistency of matters reported in all regulatory filings. While we understand this quest to police all management's discussions that include financial numbers, we feel that this step is misdirected. Managerial disclosures are scrutinized extensively so a manager who reports numbers in different ways in different communication channels will have to make sure the narrative is consistent (or at least plausible) at the risk being "self-revealed" to be untrustworthy to the market. There is no need to require an auditor to police all representations of management. Management should have some flexibility in disclosing information about the company and be subject to market scrutiny.

**Conclusion**

We are disappointed that PCAOB does not propose to move beyond the current pass/fail system to adopt a letter grading system. We are also concerned that the proposed "critical audit matters" don't require the two key items captured in the long form reports of an earlier era, namely, the key audit risks, and key audit procedures performed to mitigate these risks. The proposed disclosures are vulnerable to becoming boilerplate disclosures, except now the audit report would be a lot longer. This appears more like a step back than forward.

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington DC 20006-2803
USA

Dear Sirs,

**PCAOB Rulemaking Docket Matter No 29**
**PCAOB Rulemaking Docket Matter No 34**

As a recently appointed member of the PCAOB Standing Advisory Group I am writing in support of the PCAOB in their proposal to improve audit quality and transparency by requiring registered public accounting firms to disclose the name of the partner responsible for signing the audit report (Docket No 29) and the proposal to revise the auditing standard regarding the Auditor's Report and the Auditor's responsibilities regarding other information.

In 2011, I delivered the annual Aileen Beattie memorial lecture for the Institute of Chartered Accountants of Scotland (ICAS), an honour also bestowed on your chairman, James Doty, in 2013. My lecture contained a number of matters which I felt needed to be considered if our profession is to deliver a service to publically quoted companies that is relevant in today's (and future) global and local market places. I indicated that the "stool" of corporate reporting needed three strong legs in order to stand the weight of expectation from the investor community. It needs a robust financial reporting framework, quality auditing and reporting and effective, transparent, corporate governance, this latter part being partly delivered through the report of the audit committee. Without these three legs there is always scope for deficiencies in the information provided within financial statements all of which is relied upon by the investor community. It is also true that there is a need for all three legs to make their own contribution and one leg should not take on the task of rectifying any deficiencies in the other two. The audited financial statements underpin all other corporate reporting, whether it is quarterly and half yearly trading updates, preliminary announcements or analyst briefings, so it is essential that they contain sufficient, balanced and relevant information for the investor and the wider stakeholder community to understand the risks within the company.

My lecture notes contained a number of messages, all of which were designed to facilitate change in the auditor, company and stakeholder relationship and to ensure the information reported in the financial statements is helpful in commenting on the risks within the business. Only in this way will we ensure that we were continually developing the relevance of the work we do and be recognised as working in the public interest.. The audit model and auditor reporting has not changed very much in the 150 years that ICAS (the oldest accounting institute in the world) has been in existence. Techniques have changed and the scope has, to a degree, changed but the fundamentals of auditor engagement and reporting have not. As a result of more focus being put on company and auditor reporting following the financial crisis it has become evident that now is the right time to change.

The conclusions I drew in 2011, and therefore the basis for my support for the PCAOB proposals, were contained in the following extract from the lecture:

*"So how can we or should we be delivering on the mission to always undertake our work in the public interest? As I have said throughout this lecture, there is a need for the profession to do more in order to meet the ever increasing needs of the various stakeholders.*

- ***Firstly, let us get company reporting right.*** *The need for the corporate report to tell the story of the business in a much more concise manner, focusing on the business model, the strategy, the key business risks and the rationale for believing the company is a going concern, both in the short and medium to long term, is an absolute necessity. The responsibility for this lies, primarily, with the preparer but the auditor also has a role.*

- ***Let us deepen our role of the auditor.*** *There is potentially a need for auditors to do more in relation to going concern but how far should this go? As stated earlier, the auditor should opine on information provided but if the company does not disclose matters ….. then the auditor is likely to be asked to provide that information.*

- ***Let us expand the role of the auditor beyond the numbers and the statutory disclosures.*** *The desire of users for some form of assurance over the front half of the Annual Report is evident - auditors will need to adapt to meet that demand.*

- ***Let us expand the auditor's reporting.*** *The need for greater insight to be given publicly as to what happens behind closed doors in the audit process. The auditors' engagement with the audit committee and with management is crucial. The big debate is how should this information be conveyed externally – should it be through the audit report or through the report of the audit committee. This is fundamentally important to the whole question of auditor communication not only to users but also to supervisors and regulators. In my view, the audit committee report is the right vehicle.*

- ***Let us accept the need for more professional scepticism*** *and ensure that we build this into our day to day activities,*

- ***Let us contribute to better Company Stewardship.*** *There is a need for greater engagement with the investor community but as yet it is undecided how this could be best achieved. This is very important but if we get our mission 'right' by dealing with the points I have just made then perhaps this would, in essence, already have been taken care of.*

*And, during this whole debate we must ensure that the auditors' independence and integrity is not impaired or compromised."*

When I look back on these conclusions it is evident that we have come a long way in many jurisdictions around the world to plug what I call "the information gap"; a better description than the "expectation gap" which is a term so often used when considering what the investor community wants and the company and the auditor provides. We cannot provide all the information the various stakeholders seek but the current reporting model does need improvement and there is still a long way to go in most jurisdictions, including the United States.

We do need more work on corporate reporting as in some areas it is too complicated and does not always identify the key risks being, or likely to be, experienced by the company. This applies to all national and international accounting standard setters. The financial crisis has shown that there are areas where more is required from the financial reporting framework and this should be addressed by the accounting standard setters and not leave it to the audit standard setters to "plug the holes".

There is more to do on going concern by the company, and this is where the financial reporting framework could again help by having more requirements put onto company management to report formally within the financial statements. Additional requirements under auditing standards will help change the work the auditors do and how they report on this crucial area. In the UK this is now required and has been a positive move forward.

I think that the information in the front half of financial statements is extremely important both in relation to the present condition and the future prospects of the business and therefore there is more that the company and the auditor can do in relation to this information. It is appreciated that opining on future events is both difficult and dangerous for the auditor. Having said that, there are other judgements that need to be made throughout the audit of the financial statements so, as long as the auditor ensures that the reporting by the company is consistent with their knowledge of the company which is obtained during the course of the audit, why not say so in the audit opinion?

Expanding auditor reporting in my view is an essential part of the move to better quality auditing and more meaningful financial reporting. As I stated in one of my bullet points above, the information on the risks within the business should be provided by the company through its business review and through the audit committee report, however, the work undertaken by the auditor to mitigate the impact of those risks to ensure that there is no material error within the financial statements is also extremely important and useful to external stakeholders. This information forms the basis of audit committee / auditor discussion so should be pertinent to the investor community. Clearly, some matters are commercially sensitive but this should not be used as an excuse to withhold information that it critical to understanding the company's financial position.

During 2010, 2011 and 2012, I was very active in Europe on matters relating to the audit market, corporate governance and financial reporting as President of the Federation of European Accountants (FEE). In addition I was a member of the International Auditing and Assurance Standards Board (IAASB) Consultative Advisory Group (CAG). Consequently, I was heavily involved with the proposals put forward by the European Commission and the European Parliament primarily relating to changes within the audit profession. It became clear very early in 2010 that change was required and demanded. It was at this point I requested that auditor reporting should be much higher up on the agenda of the IAASB whose standards were being used throughout almost all of Europe in one form or other. The IAASB did take this, and other input, into account when formulating there future work plan and fast tracked the revision of the auditing standard on audit reports (ISA 700). At the same time there were discussions taking place in the UK where they too were moving in the same direction. Both these were positive moves in my eyes and the proposals being put forward by the PCAOB by the release of these two rulemaking dockets are equally seen as a positive move for the global economy.

Turning to the two areas currently being debated in the US in relation to these matters.

**Rulemaking Docket 29**

In my view the inclusion of the name of the partner responsible for the audit engagement and for signing the audit opinion on behalf of audit firm improves accountability and transparency. I do not, however, believe that other firms or individuals should also be disclosed. The auditor who signs the report is the one responsible for the whole engagement and the inclusion of other names has the potential to dilute the perception as to who is ultimately responsible. If a large amount of the work undertaken is performed by firms or individuals not under the direct control of the audit engagement partner then additional procedures are required to enable the engagement partner to sign the opinion as he/she has this ultimate responsibility. As is the practice in Europe, I suggest that the name is disclosed at the end of the report where the opinion is signed and that the signature is that of the person responsible not the name of the firm.

There are numerous reasons why the naming of the engagement partner enhances transparency and quality, many of which are included in other comment letters received by the PCAOB. Consequently, I do not intend to recite them here. One important effect, however, is to more easily identify and evaluate the engagement audit partner’s experience within the sector in which the client operates and the extent of his/her workload on publicly quoted companies within the audit firm. These are particularly important when assessing the quality of the work being undertaken and the time availability of the individual auditor.

**Rulemaking Docket 34**

The work undertaken by IAASB, the European Commission and the Financial Reporting Council (FRC) in the UK is moving the reporting framework for auditors in one direction and that is towards providing more detail of what an audit is, enhancing the information provided on audit performance and moving away from just a pass / fail model. The pass / fail model will still exist but the reasons behind the pass or fail will be more transparent.

Given the global nature of business it is therefore important that the US keeps itself aligned with the rest of the world. The PCAOB proposals go a long way towards closing this gap and should be encouraged but alignment would be preferable. Convergence in auditor reporting across the globe will improve understanding and enable comparison to be made from one jurisdiction to another. The opinion should use the same terminology, definitions and criteria if confusion is to be avoided.

The answer to most of the questions raised in the first public consultation on Rulemaking Docket 34 is “yes” but I consider one omission which should be included is specific reference in the audit report to the going concern basis of accounting adopted by the company and the auditor's conclusion on this issue. The comments on this aspect could be included as a critical audit matter as in the majority of cases it is relevant to many of the judgements being made. Much of this information should already be contained in the MD&A so it is not a significant move to link all the disclosures.

Regarding critical audit matters, these should be kept to a few rather than many. Depending on the complexity of the company / group I would expect these to be between five and ten each year. They are not the identified risks of material misstatement contained in the initial audit plan but those which required most consideration by the company and the auditor and which were critical in the understanding of the company's financial position and its internal control assessment. The proposed "Auditors Discussion and Analysis" will in my view lead to too much information being included and could detract from the important areas of judgement being made. In this regard the enhanced audit opinion should provide better information to the reader and not focus on just providing more information.

Disclosure of critical audit matters has many benefits. Comparison of critical audit matters reported from one year to the next provides the reader with useful information on whether there is a changing profile to the risks within the business. This is an important element in order to understand the shifting nature of corporate risk and is, once again, an important indicator to stakeholders.

As I mentioned during the Aileen Beattie lecture, I believe that the reporting by the audit committee should also be enhanced as it is here that information on the company should be addressed and not provided by the auditor. This is addressed in the second public consultation document and the answer here is "yes". The role of the auditor is to opine on the information provided by the company and only supply the information if there are shortcomings in the company's reporting. This is a clear dividing line and one that should continue. It is primarily management's responsibility to provide company specific information not the auditor's.

**Personal experience of changes to audit committee and auditor reporting**

In the UK, September 2013 saw a change in the FRC requirements on reporting to shareholders by both the audit committee and the auditor. As the chair of one audit committee and a member of another, the reporting in the 2013 financial statements saw a significant change in this regard. Reflecting on the positives coming out of this experience there was certainly greater engagement between the audit committee and the auditor. The audit committee focussed heavily on the key matters within the financial statements and were far more engaged with management and the auditor to ensure appropriate judgements were being made and that the reporting of these judgements was appropriate. There was also more detail provided by the auditor to the audit committee as to how they had addressed key matters and how they had satisfied themselves as to the key judgements. Altogether it was a positive experience with few, if any, negative comments from audit committee members or auditor. At the end of the process I believe that both parties benefitted from the new reporting model. There was robust debate but no differences of opinion as to what should be reported in the financial statements. The requirement in the UK to ensure that the financial statements, as a whole, must be fair, balanced and understandable also helped when drafting the disclosures.

From an auditor perspective, it was reported that the new requirements had increased the awareness of the whole audit team regarding the importance of the work being undertaken and also increased the level of scepticism being exercised. They felt that their work was having a more direct impact on the audit opinion itself. They also felt that they were providing useful information to the wider stakeholder community that required a higher degree of evidence to be obtained in order for it to be included in the auditor's report. Consequently, more engagement by the audit team in the audit and more evidence collected during the course of the audit.

Overall there was certainly better reporting by the audit committee and, I am sure, an improvement in audit quality as a consequence of the changes made.

I trust that my observations will be of use to the Board when it deliberates over the next steps to be taken in relation to this very important subject.

Yours sincerely

Philip Johnson

Re: PCAOB Release No. 2013-005, Rulemaking Docket Matter No. 34

Proposed Auditing Standards - *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (collectively referred to as "proposed standards")

We are writing on behalf of the Emerging Standards Committee (ESC) of the Kentucky Society of Certified Public Accountants (KyCPA). The KyCPA is the sole professional organization representing CPAs in the Commonwealth of Kentucky. Its 5,100 members are engaged in business communities throughout the Commonwealth and have a comprehensive grassroots view of the needs of businesses, ranging from large public companies to small owner-managed businesses. KyCPA's ESC consists of a group of KyCPA members organized to monitor the activities of accounting and auditing standard setters, as well as government authorities, with the objective of participating in the standards-setting process by providing thoughtful comment on developing issues.

We appreciate the opportunity to comment on the PCAOB's proposed standards on auditor reporting. Our comments for your consideration are as follows:

**<u>Overall Comments</u>**

We are supportive of the PCAOB's efforts to improve audit quality that will increase investor confidence and understanding of the audit process including the responsibilities of the auditor. However, we have serious concerns regarding the effectiveness, excessive cost and operability of the current proposal as discussed in our comments below. We believe it would be in the best interest of the Board to perform extensive real world field testing of the key elements in this proposal. Such an action would help identify the more costly and less beneficial elements within the proposal. Accordingly, we suggest this proposal be tabled or deferred until further research is completed. Further, the SEC should be involved during this research and study phase because some of the information being proposed relates to the Company and may not be otherwise disclosed. Accordingly, the SEC's involvement is important and they may wish to have Company management address certain Company matters mentioned by the auditors. Investor confusion would not represent an improvement in current practice.

**<u>The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion</u>**

The proposed standards implement significant changes with respect to the existing auditor's report in three main areas: a) addition of a critical audit matters section, b) addition of new elements to the auditor's report, and c) enhancement of certain standardized language in the auditor's report. We highlight our concerns regarding each of these areas below.

*Critical Audit Matters (CAMs)*

We believe CAMs, as currently defined, will create confusion with respect to audit quality. Acknowledging there are varying levels of sophistication among financial statement users, the additional information provided may inappropriately skew investors' perceptions of audit quality and assurance provided, as well as create additional risk for auditors as a result of this confusion. For example, if more CAMs are disclosed, an investor may incorrectly assume a lesser quality audit was performed (e.g. more issues) when in fact the opposite could be true. In another example, one audit team may disclose they consulted their national office on a CAM, but another audit team of another company in a similar industry with the same CAM may not. Given there could be valid reasons that one team did and another did not consult, an investor may inappropriately conclude a different level of audit quality among the audit teams. Further, there would be no process for investors to have their questions addressed or clarification provided. However, we believe that certain improvements, clarifications and illustrations can assist in establishing a standard that is more operational. We believe the following comments highlight the most important issues that must be addressed.

- Determination of CAMs – We believe the current definition of a CAM in the proposed standards is flawed. Specifically, we believe the sources of a CAM (completion document, engagement quality review matters, and audit committee communications) and factors as noted in paragraph 9 of the proposed standards are too broad. We believe the starting point to determine a CAM should be the required communications pursuant to AS 16. The ultimate CAMs determined should represent only material items that involved significant interaction with the Audit Committee. If the current "catch all" approach is implemented, we fear this will significantly impair the robust two-way communication with the Audit Committee, which is critical to an effective audit.

  Further, we believe the requirement in paragraph 14 to document why a matter is not a CAM is not operational and subjects the auditor to unreasonable second guessing. A more practical approach would be to document the determination of which matters communicated pursuant to AS 16 were CAMs.

- Communication of CAMs – We have serious concerns regarding the communication requirements of CAMs. If the expectation is to communicate any items noted in paragraph 9, this would put the auditor in a precarious position as he/she may be communicating information not previously disclosed by the company. Examples of this would include deficiencies that are not material weaknesses, consultations outside the engagement team, and quantitative or qualitative information regarding corrected or uncorrected misstatements.

This issue must be addressed; auditors should not be allowed to serve as the original communicator of company information except in extraordinary circumstances. This is a matter that should be appropriately addressed by the SEC and not the PCAOB only.

The proposed standards provide the auditor the option, but not the requirement, to describe audit procedures related to CAMs. This will create diversity in practice and potential expectation gaps with investors. We suggest the description of audit procedures related to a CAM either be required or precluded. If it is required, we believe that further clarification and illustrations should be provided. We recommend a framework that is concise and focused on the financial statement assertions and factors that resulted in the determination of the CAM.

- Perceived assurance – Auditing standards require an audit be planned and performed to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to fraud or error (based on the financial statements as a whole). The audit report should clarify that the auditor is not reporting on individual accounts or assertions related to each CAM, but on the financial statements taken as a whole. Without clarification, an investor may inappropriately assume the auditor is providing assurance on individual accounts or assertions related to each CAM.

- Conformity with the IAASB Proposal – We strongly suggest that the PCAOB work with the IAASB to conform their effective dates and their proposals from a content perspective. The proposals regarding CAM (PCAOB) and Key Audit Matters (IAASB) are similar but not identical. This could result in different reporting depending on which standard is applicable, creating confusion with investors when evaluating U.S. vs. non-U.S. registered companies in similar industries that are under different standards.

- Litigation risk – We believe the proposed standards will absolutely result in additional auditor litigation risk. We understand this is not the Board's top priority, but the cause should not be flawed standards that cause investor confusion and increase the expectation gap.

*New Elements*

We agree with the proposed standards regarding new elements to the auditor's report with one exception. We believe that the auditor's tenure disclosure requirement should be removed. This does not appear to be relevant to the audit report and could result in inappropriate correlations between audit quality and auditor tenure. Acknowledging this is information certain investors have requested, we suggest this information be included in Form 2 reporting to the PCAOB or in the audit committee report of a company's annual proxy statement.

*Standardized Language*

We agree with the proposed standards regarding standardized language in the auditor's report.

**The Auditor's Responsibility Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report**

While there needs to be additional clarity and disclosure of the auditor's responsibility regarding other information, we do not believe the proposed standards as currently written are operational and we believe they will create significant incremental effort and costs. Further, the proposed standards as currently written may create significant gaps between the assurance investors will believe they are receiving versus what the assurance auditors will actually provide. The following comments highlight the most important issues that must be addressed and will help minimize confusion, cost and undue risk.

*Auditor's Responsibilities/Scope*

- The change in wording from "read and consider" under AU 550 to "read and evaluate" under the proposed standards appears to significantly increase the responsibility of the auditor. The term "evaluate" appears to infer a higher level of assurance. This will also create an expectation gap with investors who may assume auditors are providing a level of assurance similar to the audited financial statements. We recommend the wording and expectation be more consistent with AU 550. We also recommend adding clarification and examples of what procedures are expected to be performed by the auditor on other information.

- The proposed standards extend the auditors responsibility to include relevant audit evidence obtained during the audit, which is an expansion beyond the audited financial statements as currently described in AU 550. This appears to be unreasonably broad and cost-prohibitive. Specifically, it is unrealistic to expect the person performing the review of other information to know and remember all information that may reside in the audit work papers, especially if it is a multi-location or group audit.

- The proposed standard appears to increase auditor responsibility with respect to information not directly related to the financial statements. AU 550 only requires the performance of additional procedures if the auditor becomes aware of a potential material misstatement of fact. The increase in responsibility does not appear to be operational and we recommend reverting to the AU 550 requirement.

- The requirement to extend the other information procedures to information incorporated by reference and the proxy statement is cost prohibitive and not operational. We find it difficult to reconcile the cost/benefit regarding information incorporated by reference. Either this information would have already been considered as part of the audit or it is unlikely to be highly correlated to information in the financial statements. Further, it is impossible to perform these procedures on most proxy statements as they are not typically filed until after the auditor has issued their opinion.

*Reporting in the Auditor's Report*

We recommend that the audit report be revised to clearly state what procedures are performed on the other information and clearly state that the other information has not been audited.

**Other Matters**

*Cost and Resources*

We believe the implementation of the proposed standards, even if revised as we have suggested, will result in significant additional audit effort and costs (including ultimate costs to the investors). Further, the requirements in the currently proposed standards will likely cause significant resource constraints. Specifically, the effort required regarding CAMs will likely absorb critical capacity from the most senior members of the audit team in the late stages of the audit. We strongly suggest the PCAOB consider performing real world case studies to obtain better insights as to the actual effort and costs that will be required to implement the proposed standards.

*Scope of the Proposed Standards*

We believe that the proposed standards regarding CAMs are unnecessary for audits of benefit plans and we recommend these entities be exempted from CAM requirements. The potential CAMs for benefit plans would be very similar and these entities are inherently less complex. The effort and cost required would outweigh the benefit.

Similar to our comment on benefit plans as noted above, we believe the Board should justify why auditors of smaller reporting companies and non-accelerated filers should be required to comply with these proposed standards from a cost/benefit perspective. Specifically, the U.S. Congress and many others have grown increasingly concerned with administrative costs and related issues for smaller and emerging public companies. The JOBS Act is an example of addressing these issues. We believe this proposed standard is very costly and contrary to these initiatives.

Thank you very much for considering our thoughts.

Sincerely,

Glenn Bradley

## INTRO

I spent more than 6 years in accounting field as an auditor in Big 4 accounting firm. So I have experienced limitation and difficulty of financial audit. I observed many companies receive an “Unqualified” opinion go bankrupt or become distressed within a couple of years of the judgment. The result was investors, who relied on the opinion, losing money. Why did this happened? The auditor didn’t do their work properly and therefore did not identify the problem. Still many investors and financial information users think auditors have better and unique insights based on their audits. In this regard, some believe auditors should provide information about their methods in the auditor’s report to make the reports more relevant and useful. On August 13, 2013, the Public Company Accounting Oversight Board (PCAOB) proposed two new auditing standards to enhance the reporting model.

Before we identify any potential problem or effect of new changes, we should understand the nature of audits**; auditors do not take responsibility for the financial statements on which they form an opinion and the responsibility for financial statement presentation lies directly in the hands of the company being audited.** As long as responsibility of financial statements does not fully fall on to auditors, a new initiative which PCAOB propose**, I believe there is higher chance that effect of new judgment call for auditors would be minimal.**

## Critical Audit Matters (CAMs)

First, the proposed standards would require the audit report to disclose and describe CAMs that were specifically examined during the audit. The PCAOB proposal define CAMs as matter involving the most difficult, subjective or complex auditor judgments, including areas that posed the most difficulty to the auditor in obtaining evidence or forming and opinion on the financial statements.

I experienced many difficulties during the audit when I was a low-experience staff auditor. I took care of “contingent liability”, I had contact with lawyers and experts in other fields regardless of level of complexity. In retrospect, personally I want to say those three cases were the extremely difficult for me. If this is the case, guideline of CAMs asks us to include those three cases within CAMs.

**However, I do not support this assertion.** Based upon CAMs guideline, many auditors will need to spend their time compiling and organizing facts for the CAMs rather than focusing on their traditional auditing. Regardless of industry, the auditor spends many hours to verify numbers on the financial statements such as account receivable and allowance for account receivable or verifying the number for impairment. Do those need to be included within the CAMs? In that case, all audit reports would require trivial information such as all the depreciation recalculation information and aging schedule. **I strongly believe that CAMs will not enhance the quality of audit information but it will just increase the load of the auditor's work. Requiring subjective standard would be hard justify in an objective manner.**

Other Information (OI)

The proposed standard would require the auditor to perform an evaluation of, and report on, information outside of the audited financial statements that is included in a company's annual report filed with SEC. This OI would include management's discussion and analysis of financial condition (MD&A), results of operations, exhibits, etc. Auditor should perform additional procedure to determine whether the OI contains a material misstatement of fact in the audited financial statements.

Auditors are not industry experts. They cannot judge management's future projection within MD&A for their business and are also not capable of verifying the reference data included within financial statements made by management. Based on Big 4 experience, having an interview for Discounted Cash Flow projection and having an interview for reconciling accounts are totally different. **As a whole, it is not feasible and adopting this procedure will require huge costs and generate little benefit to investors and financial users.**

Additional Changes

The proposed standard would require the audit report to contain a statement regarding the auditor's existing requirements to be independent from the issuer, and a statement disclosing the year that the audit firm began serving continuously as the company's auditor. In addition, the proposal would require auditors to address their responsibilities related to the notes to the financial statements, fraud and independence.

I do not think auditors' tenure information give some useful insights. Already, financial information users can find this data easily by checking the auditor's report. **This is obviously unnecessary suggestion. Also, addressing the responsibility for the fraud can bring side-effects. Auditor's job is not finding fraud**; maybe responsibility has to fall on the internal auditors or board members and financial executives. **Again, PCAOB has to understand that detecting financial statement fraud is not auditor's work.**

Conclusion

"Substance over form" and "Materiality" are the most important devices auditors use for their work. I truly understand the motive for this proposal, which increases the informational value and expands the auditor's responsibilities by improving current auditor reporting model. This proposal implies that current model do not work well and auditor should have more responsibility. This new initiative reminds me Sarbanes-Oxley Act of 2002

(SOX 404). I participated many SOX 404 engagements for US listed companies and even at that time, I had many doubts of effects if SOX 404 implementation; it was not only me who had doubts. By walking through this PCAOB's proposal, I sensed that there is strong similarity between SOX and the PCAOB's new initiative. This proposal would add value and not create misunderstanding if it designed and processed extremely well.

However, based on my observation, I believe it can be the next SOX 404 which has many controversial issues as an example, its failure to prevent the situations that led to the financial crisis of 2008. Many companies still tell me that it was expensive and useless. Lastly, I want to tell PCAOB who is taking care of this initiative; please focus the substance over form. Having a newly designed form does not enhance the value and quality of audit reports.

**PCAOB Rulemaking Docket Matter No. 034**
***Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards***

Dear Ms. Secretary:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or the Board) Release No. 2013-005, *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* (the PCAOB Release or the Proposed Standards).

The Board has requested public comment on the PCAOB Release for changing the auditor's reporting model. The objective of the Proposed Standards is to improve the auditor's reporting model and to increase the informational value and promote the usefulness and relevance of the audit and the related auditor's report, while not placing undue burden on the financial reporting process. We are supportive of the Board's objective.

The Board has proposed two auditing standards, and related amendments, to meet this broad objective. The first proposed auditing standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the Proposed Auditor Reporting Standard), which retains the current pass/fail model, is intended to provide more information to investors and other financial statement users about the audit and the auditor through various proposed changes to the auditor's report, including the communication of critical audit matters. The second proposed auditing standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the Proposed Other Information Standard), is intended to be responsive to investors' desire to better understand the auditor's responsibility for other information outside the financial statements that is contained in documents that include the audited financial statements and the related auditor's report.

**Overview**

As noted in the PCAOB Release, the communication of critical audit matters "could help investors and other financial statement users focus on aspects of the company's financial statements that the auditor … found to be challenging," and would also "provide investors and other financial statement users with previously unknown information about the audit that could enable them to analyze more closely any related financial statement accounts and disclosures." We believe that this is consistent with what the Board heard in its prior outreach activities, where investors identified certain information that they would recommend be included in the auditor's report, including (1) communication of areas with the most significant financial statement and audit risk and the work performed in those areas, (2) discussion of significant estimates and judgments made by management, the auditor's assessment of their accuracy and how the auditor arrived at that assessment, and (3) communication of results of sensitivity analyses in significant areas of judgment.

As originally noted in our comment letter dated September 30, 2011 on PCAOB Rulemaking Docket Matter No. 034, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the Concept Release), we support the Board's objectives to improve the auditor's reporting model and increase its relevance to financial statement users, in a way that both serves the interests of investors and provides benefits that outweigh their costs. We also noted in our comment letter on the Concept Release that current SEC rules and regulations require disclosures that substantially overlap with many of the items that investors have requested to be included in the auditor's report. For example, with respect to material estimates or assumptions with significant levels of subjectivity and judgment (i.e., critical accounting estimates), management is directed to provide within Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) greater insight into the quality and variability of information regarding financial condition and operating performance, and the analysis should include, to the extent material, such factors as to how management arrived at the estimate, how accurate the estimate or assumption has been in the past, how much the estimate or assumption has changed in the past, and whether the estimate or assumption is reasonably likely to change in the future. Furthermore, the disclosures require analysis of the critical accounting estimate's sensitivity to change, based on other outcomes that are reasonably likely to occur and could have a material effect.[1]

Given that there continues to be a significant overlap between investors' request for additional information relative to the most significant financial statement and audit risks and the incremental disclosures required within MD&A compared to what is required by generally accepted accounting principles, we remain of the mindset that the most effective way to achieve the above objective would be to require auditor association with a critical accounting estimates section within MD&A. We acknowledge that the SEC would likely need to amend Regulation S-X to

[1] Refer to Section 501.14 of Financial Reporting Codification, *Critical Accounting Estimates*, for a complete description of the MD&A disclosure requirements for critical accounting estimates.

require the critical accounting estimates section to be subject to attestation. Additional action on the part of the SEC and PCAOB might be required to implement this recommendation, including:

- The SEC requiring that the critical accounting estimates section be clearly identified within MD&A;
- The SEC reviewing existing interpretive guidance relative to critical accounting estimates to determine the adequacy of such guidance, and whether it should be formally adopted as part of Regulation S-K; and
- The PCAOB reviewing existing PCAOB attestation standards (i.e., AT section 101, *Attest Engagements*, and AT section 701, *Management's Discussion and Analysis*) to determine whether such standards would be suitable to be used by registered public accounting firms for purposes of attesting to the critical accounting estimates section of MD&A.

While we believe that auditor attestation of the critical accounting estimates section of MD&A would be the most effective way to meet the Board's overall objectives, as stated above, we would also support an approach that requires the communication of critical audit matters, with certain specific enhancements as described further below. Our comment letter with respect to the Concept Release described several overarching principles for consideration when developing possible areas of the auditor's reporting model for further evaluation. Those principles, which we believe are also relevant to the Proposed Standards, are as follows:

- Auditors should not be the original source of information about the entity; management's responsibility should be preserved in this regard. A fundamental shift from the auditor attesting to information prepared by management to the auditor providing original information about the company could result in unintended consequences that are not in the best interest of investors.
- Any changes to the auditor's reporting model should enhance, or at least maintain, audit quality.
- Any changes to the auditor's reporting model should narrow, or at least not expand, the expectation gap.
- Any changes to the auditor's reporting model should add value and not lead to investor misunderstanding. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee, and the independent auditors.
- Auditor reporting should focus on the objective rather than the subjective. Financial reporting matters assessed by the auditor can be highly subjective; however it is important that auditor communications provide objective information about these matters.

The remainder of this letter provides our specific comments on the Proposed Auditor Reporting Standard, the Proposed Other Information Standard, and other matters.

***I) The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion***

As noted in the PCAOB Release, the Proposed Auditor Reporting Standard would make the following significant changes to the existing auditor's report:

- Require the auditor to communicate in the auditor's report critical audit matters that were addressed during the audit of the current period's financial statements. If the auditor determines there are no critical audit matters, the auditor would state such in the auditor's report.
- Add new elements to the auditor's report related to auditor independence, auditor tenure, and the auditor's responsibility for, and evaluation of, other information in annual reports containing the audited financial statements and the related auditor's report.
- Enhance certain standardized language in the auditor's report, including the addition of the phrase "whether due to error or fraud," when describing the auditor's responsibility under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements.

**Auditor Reporting of Critical Audit Matters**

The Proposed Auditor Reporting Standard would require the auditor to determine whether there are critical audit matters in the audit of the current period's financial statements, based on the results of the audit or evidence obtained. The auditor would then be required to communicate these critical audit matters in the auditor's report. The auditor's report would be required to include a description of the critical audit matters and would:

- Identify the critical audit matter;
- Describe the considerations that led the auditor to determine that the matter is a critical audit matter; and
- Refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable.

As noted above, we are supportive of the Board's objective to provide investors additional information relative to the most significant financial statement and audit risks. We agree that the Proposed Auditor Reporting Standard may provide additional and more meaningful information to financial statement users. However, we believe that certain significant enhancements, clarifications, and illustrative guidance are required in order to ensure the Proposed Auditor Reporting Standard is operational, as further described below.

*Definition of a Critical Audit Matter*

An important element of the implementation and adoption of the Proposed Auditor Reporting Standard by auditors is ensuring that it includes an appropriate definition of a critical audit matter and an appropriate framework and application guidance to ensure the consistent identification and reporting of critical audit matters in a manner that meets the expectations of users. We believe that the definition of a critical audit matter, and the process used to determine critical audit matters, should be refined. We also believe that the population of potential critical audit matters is too broad, as currently written. We acknowledge that critical audit matters ordinarily would be documented in the engagement completion document and reviewed by the engagement quality reviewer. However, we believe that a critical audit matter would always be communicated to the audit committee pursuant to Auditing Standard No. 16, *Communications with Audit Committees* (AS 16). Therefore, the inclusion of the first two items noted in paragraph 8 of the Proposed Auditor Reporting Standard (i.e., documented in the engagement completion document or reviewed by the engagement quality reviewer) appears to be redundant and unnecessary. In determining whether a matter is a critical audit matter, we believe that the auditor should utilize a two-step process to first identify "significant audit matters," which would be those matters that are significant to the audit of the financial statements and required to be communicated to the audit committee pursuant to AS 16. The auditor also would take into consideration the factors noted in paragraph 9 of the Proposed Auditor Reporting Standard when identifying those matters deemed to be a significant audit matter. Critical audit matters would be a subset of significant audit matters, using the definition of a critical audit matter in the Proposed Auditor Reporting Standard, as further refined by adding two additional criteria. The first additional criterion is that a matter must be material to the financial statements in order for it to be a critical audit matter. The other criterion that we would recommend be added to the definition of a critical audit matter is one that is based on the level of auditor interaction (in terms of nature or extent) with the audit committee.

We also believe that certain wording related to identifying a critical audit matter should be refined and clarified in order to drive consistency in application. We agree with the Proposed Auditor Reporting Standard's intention to report those matters that are the most challenging, subjective, or complex. The word "most" implies that the number of critical audit matters should be limited, and we agree with the general premise that the greater the number of critical audit matters, the less useful the auditor's communication of critical audit matters may be. Therefore, we believe that the Proposed Auditor Reporting Standard should make this explicit, by indicating that the auditor should consider reassessing whether each of the matters meets the definition of a critical audit matter, if the auditor has initially identified a large number of matters for potential communication in the auditor's report.

*Reporting of Original Information*

As noted above, one of the overarching principles that we believe should be adhered to when developing the framework and basis for reporting is that auditors should not be the original source of information about the entity (referred to herein as original information); management's responsibility should be preserved in this regard. The Proposed Auditor Reporting Standard could require the auditor to convey original information, based on the definition of a critical audit matter and the manner in which the illustrative examples interpret the requirement in paragraph 11b.

We believe the illustrative examples included in the PCAOB Release, without any further application guidance, reflect an implicit requirement to communicate all of the paragraph 9 factors that are present, which would not be instructive, and may lead to less tailoring of the critical audit matter communication. As a result, we believe there are a number of items that may require communication by the auditor under the Proposed Auditor Reporting Standard that could have unintended consequences to the company and/or the users of the financial statements. These include (1) matters that may relate to confidential or privileged information; (2) information that would be harmful or detrimental to the company's operations; and (3) information that is not required by current securities laws to be communicated by the company.

The definition of a critical audit matter does not include any restrictions or any provisions related to this type of information. As an example, current securities laws do not require companies to disclose certain items, such as significant deficiencies in internal control and corrected or accumulated uncorrected misstatements, either in their financial statements or otherwise. However, based on the Proposed Auditor Reporting Standard, these items, if present in connection with a critical audit matter, would appear to be required to be communicated by the auditor, based on how paragraph 11b has been interpreted through the illustrative examples included in the PCAOB Release. As discussed in more detail below (see *Litigation Risks Raised by the Proposed Auditor Reporting Standard That Could Impact Auditors*), there also are potential legal issues that could arise if the auditor is the conveyor of original information.

In order to rectify this potential problem in the PCAOB's framework, we believe the auditor should describe the principal considerations that led the auditor to conclude that the matter was a critical audit matter. This would allow an auditor to exercise judgment in highlighting which particular factor, or factors, was most important to the auditor's determination that the matter was a critical audit matter, which would provide additional context as to why the critical audit matter is important to the financial statements. In addition, we believe the Proposed Auditor Reporting Standard should include a provision to preclude the auditor from communicating any original information, except in those rare situations where, in the auditor's judgment, the communication of such original information is necessary to the auditor's description of the critical audit matter.

We also noted that the illustrative examples included in the PCAOB Release contain a discussion of specific audit procedures performed by the auditor (e.g., consultations with the national office or the involvement of specialists). We do not support the communication in the auditor's report of consultations with the national office. Consultations with the national office can occur for a variety of reasons. Without any context regarding the experience of the engagement team, specific nature of the consultation, or details of discussions between the auditor and management and/or the audit committee, the inclusion of information about consultations with the national office, in the context of a communication about a critical audit matter, could have a number of adverse consequences, including widening the expectation gap (i.e., the user of the financial statements might improperly infer a higher level of assurance in those situations where consultation with the national office is communicated in the description of a critical audit matter).

*Description of Audit Procedures*

The PCAOB Release indicates that the "proposed auditor reporting standard would not require the auditor to describe the audit procedures related to critical audit matters. It would, however, not preclude an auditor from doing so." This is similar to the International Auditing and Assurance Standards Board's (the IAASB) proposal, which states that the auditor may communicate the effect on the audit, to the extent that the auditor considers it necessary for purposes of explaining why the auditor considered the matter to be one of most significance in the audit.[2] We note, however, that each of the illustrative examples in the PCAOB Release includes descriptions of audit procedures related to the critical audit matter. We believe that a description of the critical audit matter's effect on the audit would be of interest to users, and communicating it would be consistent with the objective of providing more transparency into the audit. In order to avoid inconsistent practice and interpretation of this provision, which would affect comparability, we believe the PCAOB's framework could be enhanced by explicitly requiring the auditor to provide a description of the critical audit matter's effect on the audit. If this enhancement to the framework is made, we believe it is essential that the PCAOB develop guidance on how the auditor should communicate the critical audit matter's effect on the audit. Such guidance should indicate that the description of the effect on the audit should be (1) a brief, high-level summary of the key audit procedures performed (e.g., the auditor's response to the risk of material misstatement identified in the critical audit matter) to address the principal considerations that led the auditor to conclude that a matter is a critical audit matter, (2) focused only on those assertions (e.g., completeness, valuation) that result in the matter being communicated as a critical audit matter, and (3) focused on the most significant assumptions or estimates, if applicable, affecting such assertions. While we believe this enhancement may provide more transparency into the audit, there are significant legal issues that the PCAOB should consider as it develops its guidance, which are discussed in more detail below (see *Litigation Risks Raised by the Proposed Auditor Reporting Standard That Could Impact Auditors*).

*No Piecemeal Opinion*

The auditor's report per the Proposed Auditor Reporting Standard would include an identification and description of critical audit matters and would make reference to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable. Auditing standards require that an audit be planned and performed to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to fraud or error. The audit opinion is based on the financial statements taken as a whole. We believe that the Proposed Auditor Reporting Standard should include a statement that the audit report does not contain all significant matters identified and communicated to the audit committee and should clarify that the auditor is not reporting on the individual accounts or issues related to each critical audit matter, but on the financial statements taken as a whole.

---

[2] See IAASB exposure draft entitled *Reporting on Audited Financial Statements: Proposed New and Revised Standards on Auditing (ISAs).*

*Documentation of Critical Audit Matters*

The Proposed Auditor Reporting Standard requires the auditor to document those items that would appear to meet the definition of a critical audit matter but were determined not to be a critical audit matter. This requirement is not operational, in our view, as there is no guidance in the Proposed Auditor Reporting Standard on how an auditor could demonstrate that such a matter is not a critical audit matter. Consistent with the enhancements noted above, we believe a more practical approach would be to require the auditor to document: (1) those matters communicated to the audit committee that were determined to be significant audit matters, and (2) the determination of which significant audit matters are critical audit matters. We believe this approach mitigates the practical challenges associated with documenting matters that "appear to be critical audit matters, but are not."

*IAASB Proposal*

In preparing our response to the PCAOB, we reviewed the criteria set out in the Proposed Auditor Reporting Standard to those in the IAASB's exposure draft. We note that the two proposals are similar, but not identical. This suggests that different items could be reported depending on which standard was applicable. We are concerned that auditors reporting under both PCAOB and IAASB requirements (e.g., for dual listed entities) may spend unnecessary time trying to understand and reconcile the differences. We strongly recommend that the PCAOB seek to work with the IAASB to ensure that the criteria for identifying and reporting critical or key audit matters are the same, because we do not believe that such differences are meaningful or helpful to users of the financial statements.

*Litigation Risks Raised by the Proposed Auditor Reporting Standard That Could Impact Auditors*

While any addition to the statements that an auditor is required to make increases the chance of civil litigation each time a company's performance differs from expectations, we believe the suggestions outlined in this letter will be helpful in limiting undue litigation risk.

The mere fact that the matter caused loss to an investor can make it appear critical. A significant litigation risk raised by the Proposed Auditor Reporting Standard is a claim that the cause of loss should have been identified as a critical audit matter. The factors listed in paragraph 9 of the Proposed Auditor Reporting Standard are very general, making it easy in hindsight for a third party to claim that an audit matter touches on one or more of them. The two-step process outlined above not only helps auditors identify and describe critical audit matters, it also will help courts and investors distinguish a truly critical audit matter from one that is merely claimed to be so after the fact.

With the benefit of hindsight, a third party also is in a position to second-guess what the auditor communicated about a critical audit matter. Requiring an auditor to communicate original information about the company magnifies the risk of such a claim. It would place sole responsibility on the auditor for information about the company beyond that which the company itself did not have to disclose to investors, allowing an investor to claim that the auditor should have provided more detail, or characterized the information differently. At the same time, more detail can put the auditor in conflict with other legal requirements. A company might object that the characterization is too negative, or that the added detail communicates a competitive confidence. A regulator (such as a bank examiner) might object that the auditor's communication of the information is prohibited by law. An employee (such as the subject of an investigation) might object that the details are personal.

In addition, the PCAOB Release notes that "the prominence with which information is disclosed can have implications for investment decision making." There is a risk that investors will give statements about critical audit matters a prominence that is undue, and such risk is increased when the auditor is communicating original information about the company since, by definition, such information was not considered of sufficient importance to investors to require disclosure by the company. The suggestions set out above can limit (although not eliminate) the harms caused by both misunderstanding and wasteful litigation.

Finally, statements about descriptions of audit procedures can appear to provide a level of line-item assurance not intended by an audit opinion. A plaintiff who believes that the communicated procedures were not performed adequately can claim that the auditor's description of such procedures is a misrepresentation, with the potential to turn every dispute over the auditor's communication of the critical audit matter's effect on the audit into an allegation of fraud. Just as the communication of a critical audit matter is not a separate opinion on that matter, the inclusion of the effect on the audit is not a separate opinion on those procedures. While such risks are an inherent risk of describing the critical audit matter's effect on the audit, we believe that undue risk can be limited if (1) the audit opinion contains a clear and explicit statement that the audit procedures that might be referenced in the auditor's communication of the critical audit matter's effect on the audit are directed toward the auditor's opinion on the financial statements taken as a whole, and (2) the Proposed Auditor Reporting Standard includes robust guidance on how the auditor should communicate the critical audit matter's effect on the audit.

As noted at the beginning of this section, an increase in litigation against auditors is a probable if not inevitable result of the expansion of the auditor's report contemplated by the Proposed Auditor Reporting Standard. Although the suggestions contained in this letter can help limit that risk, before proceeding with the recommendations included in our letter, it is essential that the Board review the scope of the litigation risk and its attendant costs, as well as the best means to avoid undue increase in litigation risk, in light of the field testing discussed in more detail below (see *Costs*).

**Addition of New Elements**

We agree with the addition of language on auditor independence explicitly stating that the auditor is independent. This is consistent with the requirement that the auditor's report be titled "Report of Independent Registered Public Accounting Firm" and provides clarification of this within the auditor's report.

We do not believe, however, that the inclusion of a sentence about the auditor's tenure within the auditor's report is appropriate. As noted in the PCAOB Release, no nexus has been established between an auditor's tenure and audit quality, and requiring such information in the auditor's report would give the false impression to the reader of the auditor's report that a correlation between the two does exist. We acknowledge that the communication of an auditor's tenure may be an item of interest to some stakeholders and support the communication and transparency that disclosing this information may provide. Therefore, we recommend that this information be required to be disclosed through different means (e.g., in the audit committee's report or by way of Form 2 reporting).

**Changes to Standardized Language**

We agree with the addition of the clarifying language proposed to be added to the current auditor's report, as it will enhance users' understanding about the audit and the auditor. However, we believe that the Board should re-consider adding the language noted by the Center for Audit Quality (CAQ) in their comment letter dated June 28, 2011, and re-iterated in their comment letter dated December 11, 2013 (see Appendix C in the CAQ's letter), as we continue to believe this language would provide added clarification for investors. This additional language also would more closely align the standardized language used by the PCAOB with the IAASB's proposed auditor's reporting model. The suggested additional language includes:

- Stating in the basis of opinion paragraphs that the procedures performed and the audit evidence obtained provide a reasonable basis for the opinion.
- Highlighting that references to the financial statements throughout the auditor's report relate to the financial statements taken as a whole.
- Providing an expanded discussion of the responsibilities of management and the audit committee with respect to the financial statements.
- Describing the meaning of reasonable assurance in the context of the basis for the auditor's opinion.
- Highlighting the necessity of using professional judgment in making audit risk assessments and in the selection of audit procedures, and the consideration the auditor gives to the company's internal control over financial reporting when making such determinations, as well as highlighting the auditor's use of professional skepticism throughout the audit.

We support allowing flexibility in the ordering of paragraphs provided the auditor's report includes the key elements set out in the Proposed Auditor Reporting Standard. However, we recommend that section headings be required for all elements within the auditor's report.

*Litigation Risks Raised by the Ambiguity in Adding Additional Addressees That Could Impact Auditors*

The principal risk created by the Proposed Auditor Reporting Standard concerning addressees of the auditor's report is the possibility that it will be confused with concepts (such as privity) that govern the scope of an auditor's liability under state law. Different users of financial statements are very differently situated: the board that oversees management of the company is not in the same position as its shareholders; shareholders have different interests than bondholders and other creditors; etc. The Proposed Auditor Reporting Standard does not purport to alter any state's rules governing who may bring a lawsuit against the auditor, just as it does not purport to alter the state's rules governing when an auditor may be held liable. Appendix 5 in the PCAOB Release suggests that the auditor's report could be addressed to others, such as bondholders. The guidance in the PCAOB Release does not provide any circumstances where an auditor would be required to address its report to bondholders, and we are unaware of any example where such an addressee would be appropriate.

***II) The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report***

We acknowledge and agree that there is a shortcoming in the existing standard (AU section 550, *Other Information in Documents Containing Audited Financial Statements* (AU 550)) with respect to the non-reporting of the auditor's responsibility related to other information. We support the Board's objective to provide a specific basis for the description in the auditor's report of the auditor's responsibilities for the other information outside the financial statements. We furthermore agree that the inclusion in the auditor's report of the auditor's responsibilities for other information in annual reports filed with the SEC containing the audited financial statements is the most effective manner of achieving the Board's objective.

However, the Proposed Other Information Standard goes beyond adding a reporting element to AU 550, and appears to have a number of flaws that would make the proposal difficult and costly to implement. The Proposed Other Information Standard expands the auditor's performance requirements, including raising the required level of assurance provided by the auditor on the other information to a level above what the extant standard currently requires, and to a level that could be construed as being consistent with the level of assurance being provided in the audit of the related financial statements. In addition, we believe that requiring the auditor to state in the auditor's report that the auditor has evaluated the other information and, based on that evaluation, has not identified a material inconsistency or material misstatement of fact would imply a level of assurance that is inconsistent with the proposed procedures.

We also believe that the Proposed Other Information Standard requires clarification with respect to certain other areas, including: (1) the scope of other information subject to the Proposed Other Information Standard; (2) the lack of a concept of risk assessment and materiality related to the other information; and (3) the documentation requirements under the proposal.

*Auditor Performance Requirements*

The Proposed Other Information Standard requires that an auditor "read and evaluate" the other information. The term "evaluate" appears to suggest a higher assurance and responsibility level than "read and consider," which is the performance requirement in AU 550. In existing auditing standards, the term "evaluate" is used in order to address auditor performance requirements. The context of the word "evaluate" in those standards is in connection with the auditor obtaining reasonable assurance on whether the financial statements are fairly stated in all material respects. We further note that proposed Auditing Standard No. 17, *Auditing Supplemental Information Accompanying Audited Financial Statements*, includes a requirement for the auditor to evaluate whether the supplemental information is presented in conformity, in all material respects, with the relevant regulatory requirements or other applicable criteria.

We believe the use of the word "evaluate" could be construed as providing reasonable assurance (or something akin to reasonable assurance, although not fully defined in the PCAOB Release) on the other information and this could have unintended consequences for investors or other users of the other information. We recommend that the requirement be changed from "evaluate" to "perform certain limited procedures" (such limited procedures would include reading the other information), which would more closely align the requirements to the extant standard and would be practicable from an operational perspective as well.

AU 550 states that the auditor's responsibility does not extend beyond the financial information that is identified in the auditor's report. The Proposed Other Information Standard extends this responsibility to include "relevant audit evidence obtained and conclusions reached during the audit." Relevant audit evidence is a broad concept and it could be interpreted to mean that the auditor who is fulfilling the performance requirement is required to be aware of each facet of each piece of audit evidence obtained during the course of the audit. This issue could be further exacerbated in a group audit situation, where the group auditor may only receive highlight memos from the component auditors, and may not have direct visibility into specific audit evidence that is present in the work papers of the component auditors. We believe that the interpretation described above is too broad and that the Proposed Other Information Standard should limit the responsibility of the auditor to compare the other information to the amounts in the financial statements and the accounting records that are subject to the audit, or have been derived directly from such accounting records by analysis or computation. This would clarify the auditor's responsibility and make the responsibility more consistent with current auditing standards and today's practice.

AU 550 also limits the auditor's responsibility to reading the other information not directly related to the financial statements, and requires additional procedures to be performed related to such information only if the auditor becomes aware of a potential material misstatement of fact. The Proposed Other Information Standard makes no distinction as it relates to requiring an evaluation to be performed with respect to other information directly related to the financial statements and other information not directly related to the financial statements. Given that the auditor's procedures are likely to be less in scope and generally may not entail any or a very limited amount of audit work with respect to other information not directly related to the financial statements, we believe that the Proposed Other Information Standard should be revised so that it requires the auditor to perform additional procedures with respect to other information not directly related to the financial statements only if the auditor becomes aware of a material misstatement of fact while reading such information.

*Auditor Reporting Requirements*

While we support the Board's proposal to include communication of the auditor's responsibility for other information, we believe that the format of the reporting should be amended to address several matters. Such changes include providing a description of the procedures that were performed and specifically stating that no audit or review has been performed on the other information. In addition, due to the heightened litigation risk that the Proposed Other Information Standard presents (see further description below), we believe that the reporting that should be required in situations where the auditor is not aware of a material inconsistency with the financial statements or a material misstatement of fact would be to indicate what the auditor's responsibilities are, without providing an explicit conclusion or statement about the results of that work. This could be accomplished by requiring the auditor to include a statement in the auditor's report that in the event the auditor becomes aware, based on the limited procedures performed, that the other information contains a material inconsistency and/or a material misstatement of fact that has not been appropriately revised, the auditor is required to describe the inconsistency and/or misstatement of fact in the auditor's report.

*Scope of Other Information*

The Proposed Other Information Standard defines other information broadly as information in the annual report other than the audited financial statements and the related auditor's report, including (1) information incorporated by reference in the annual report that is available to the auditor prior to the issuance of the auditor's report and (2) when the annual report is a Form 10-K, information incorporated by reference from the company's definitive proxy statement filed within 120 days after the end of the fiscal year covered by the Form 10-K. We believe that clarification is required to further define and illustrate what exhibits would be within the scope of the auditor's responsibility. As an example, certain exhibits (e.g., a merger agreement in connection with a business combination transaction) may have already been considered by the auditor in connection with determining whether a transaction was properly accounted for within a company's financial statements. Since such documents were already considered by the auditor in carrying out the audit, we do not believe that they should be further subjected to the requirements of the Proposed Other Information Standard. In addition, there may be other documents that are included as exhibits to the Form 10-K that have minimal, if any, relationship to the financial statements (e.g., articles of incorporation). We recommend that the PCAOB clarify whether the Proposed Other Information Standard is intended to be applicable to all exhibits, or only to those exhibits that are specifically prepared for purposes of complying with SEC rules and regulations.

Furthermore, as noted above, the Proposed Other Information Standard indicates that the auditor's responsibility regarding other information extends to information that is incorporated by reference from the company's definitive proxy statement filed within 120 days after the end of the fiscal year covered by the Form 10-K. It is unclear to us how this requirement would work in practice, since such information may not yet be prepared or available to the auditor and will not be filed until after the Form 10-K is filed. Since the auditor would be required to report on the other information (including the other information in the proxy statement not yet available) pursuant to the Proposed Other Information Standard, we believe it is inappropriate for an auditor to provide a "conclusion" on information that is not yet available or in final form. As such, it appears to us that the auditor would be required to reissue its report in connection with the filing of the proxy statement to convey that the other information in the proxy statement has been subjected to the auditor's performance requirements after the original issuance of the auditor's report. We are not sure how this would be applied in practice, since the auditor would presumably have to dual date its report, even if there was no change to the financial statements. We believe that the modifications we suggest above in the *Auditor Reporting Requirements* section appropriately address this timing issue, which is consistent with practice today under AU 550 (i.e., auditor reporting on the other information only on an exception basis).

*Materiality*

The Proposed Other Information Standard introduces specific procedures related to the auditor performance requirements. These procedures include comparing amounts in the other information to the financial statements and relevant audit evidence and re-calculating amounts presented in the other information. As currently written, there is no reference to materiality, as it relates to the requirement to perform the procedures in paragraph 4 of the Proposed Other Information Standard. We believe this is inconsistent with current auditing standards, whereby an auditor undertakes a risk assessment process to identify risks of material misstatement. We recommend that the Proposed Other Information Standard explicitly address or state that the performance requirements only apply to material other information.

*Documentation*

The Proposed Other Information Standard does not provide any guidance related to the nature or extent of the documentation that would be required with respect to the procedures performed on the other information, or the results of performing those limited procedures. With the change to a "read and evaluate" performance requirement, the level of effort that would be required to document the performance of the procedures described in paragraph 4 of the Proposed Other Information Standard (including having to perform procedures on other information that is not directly related to the financial statements) would increase. While some of our recommendations above may lessen the incremental impact related to documentation, we believe that further guidance would be helpful, in order to reduce any potential inconsistencies that could occur in practice. Therefore, we recommend that the PCAOB include specific guidance related to documentation within the Proposed Other Information Standard, in order to provide an auditor with a basis for documenting and retaining the results of its work.

*CAQ Comment Letter*

The CAQ's comment letter dated December 11, 2013 provides suggested changes to the auditor's performance and reporting requirements under the Proposed Other Information Standard, and the rationale for such changes. We believe those changes are consistent with our comments, and we are in agreement with those proposed changes.

*Litigation Risks Raised by the Proposed Other Information Standard That Could Impact Auditors*

Absent incorporating the changes suggested above, the Proposed Other Information Standard could create undue litigation risk to the extent it creates the impression that the auditor provides a level of assurance beyond the limited procedures contemplated. A court might construe the term "evaluate" to have the same meaning as it does in other auditing standards, and impose the requirements of those standards onto the consideration of other information. A court also might construe "relevant audit evidence" to hold an audit firm liable if anything in the company's filing does not comport with any part of the documentation in the work papers, or the understanding of any member of the engagement team. Where the other information in the filing is not directly related to the financial statements, its connection with the work of an auditor is that much less clear. That lack of clear connection leaves the auditor subject to more varied interpretations of its responsibilities, determined only after the fact in the context of civil litigation. The added clarity suggested above would help auditors know what to do, investors know what to expect, and courts know how to decide between the two.

Because an auditor can be held civilly liable under the federal securities laws only for the statements that it makes, requiring the auditor to make an affirmative statement that it has not identified a material inconsistency or material misstatement of fact creates a further, substantial expansion of the auditor's litigation risk. Even though the Proposed Other Information Standard cautions that the auditor is not expressing an opinion, and even though the actual procedures contemplated by such standard are limited, investors and courts may well find in this affirmative statement a conclusion that all of the other information set out by the company is accurate. Plaintiffs can argue that any error in the other information renders the auditor's statement false and actionable, greatly multiplying the chances of litigation. Meritless claims of this sort largely can be avoided if auditors are not required to conclude on a negative (i.e., the apparent absence of a material inconsistency or material misstatement of fact).

***III) Other Matters***

*Scope*

If adopted by the Board and approved by the SEC, the Proposed Standards would be applicable to the audits of employee stock purchase, savings and similar plans (benefit plans) that are required to file with the SEC an annual report on Form 11-K. The Proposed Standards would also apply to brokers and dealers that will be required to be audited in accordance with PCAOB standards for fiscal years ending on or after June 1, 2014, as well as registered investment companies.

With respect to the Proposed Auditor Reporting Standard, we recommend that the Board exempt all three types of entities (i.e., benefit plans, brokers and dealers, and registered investment companies) from the requirements to determine, communicate, and document critical audit matters pursuant to such standard. Benefit plans and registered investment companies are (1) designed for a specified purpose and, as a result, would likely have similar critical audit matters and (2) inherently less complex and entail fewer estimates and judgments. The typical critical audit matter that would be applicable to such entities would generally relate to auditing difficult to value investments, and there are extensive disclosure requirements regarding the fair value of investments pursuant to Accounting Standards Codification 820, *Fair Value Measurement.* In addition, as noted in the PCAOB Release, the ownership of brokers and dealers is primarily closely held (per the PCAOB's Office of Research and Analysis, approximately 75% of the brokers and dealers have five or fewer direct owners), and the direct owners are generally part of the entity's management. Therefore, the informational needs of these individuals would typically be different from those of an investor.

With respect to the Proposed Other Information Standard, we recommend that the Board exempt benefit plans and brokers and dealers from the requirements of such standard. We believe that the compliance or exemption report required to be filed by brokers and dealers under Rule 17a-5 and required to be reported on by auditors under Attestation Standard No. 1, *Examination Engagements Regarding Compliance Reports of Brokers and Dealers*, or Attestation Standard No. 2, *Review Engagements Regarding Exemption Reports of Brokers and Dealers*, provide users of broker and dealer financial statements with sufficient information to make any additional reporting by the auditor for such entities under the Proposed Other Information Standard unnecessary. In a similar fashion, there is limited other information that is included in a Form 11-K, and such document is not the predominant source of information that is used by plan participants when making their investment decisions.

We believe that the Proposed Auditor Reporting Standard and the Proposed Other Information Standard should be applicable to emerging growth companies, and therefore recommend that no exemption from the standards be provided to such companies.

*Costs*

We believe that the requirement of the auditor to determine and report on critical audit matters and the proposed increased requirements under the Proposed Other Information Standard will result in additional audit effort and increased audit cost. The enhancements put forth in this letter are intended to temper the incremental costs to implement the Proposed Standards, while still meeting the Board's stated objectives.

We are participating in a CAQ-led field test, and we believe that the results of that field test will provide some insights into the effect that the Proposed Standards will have on audit effort, audit costs, and a company's financial reporting process. We recommend that the Board also consider field testing the significant aspects of the Proposed Auditor Reporting Standard and the Proposed Other Information Standard to assist it in carrying out its cost benefit analysis of the Proposed Standards.

*Amendment to AU Section 722*

AU section 722, *Interim Financial Information*, is proposed to be amended to state that the auditor should consider the requirements of the Proposed Other Information Standard. We believe that the reference to "requirements" is too broad, as the reporting requirement of the

Proposed Other Information Standard would not be applicable in a review of interim financial information.

*Reporting When the Auditor Was Not Engaged to Examine Management's Assertion on the Effectiveness of Internal Control Over Financial Reporting*

SEC regulations do not currently require companies to disclose in their annual report, or for auditors to communicate in their auditor's report, that an attestation on internal control over financial reporting has not been performed. If a company is not required to obtain auditor attestation, then the auditor is permitted, but not required, to indicate in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report. We believe that this reporting should continue to be optional, given the fact that an investor can easily determine whether an attestation of internal control over financial reporting has been performed, based on currently available information.

* * * * * * * * *

We appreciate the Board's careful consideration of our comments, and fully support the Board's efforts to enhance the auditor's reporting model and increase the value of the audit. If you have any questions regarding our comments included in this letter, please do not hesitate to contact George Herrmann ((212) 909-5779 or gherrmann@kpmg.com) or Rob Chevalier ((212) 909-5067 or rchevalier@kpmg.com).

Very truly yours,

KPMG LLP

**Proposed Auditing Standards –**
**The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion**
**The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report**

Members of the Board:

We appreciate the opportunity to respond to you regarding the Board's *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (collectively, the "Proposed Standards"), issued by the Board on August 13, 2013.

By way of background, L Brands, Inc. (formerly Limited Brands, Inc.) (NYSE: LB) is an $11 billion global specialty retailer focused on intimate and other apparel, beauty and personal care products and accessories. We sell our merchandise through company-owned specialty retail stores in the United States, Canada and the United Kingdom and through our websites, catalogue and other channels. Our specialty retail brands include Victoria's Secret, Bath & Body Works, La Senza and Henri Bendel. We have been in business for over 50 years and employ approximately 100,000 associates.

Our management team and our stakeholders value accurate and informative financial statements and financial information. As a result, we understand and value a quality audit. We appreciate and support the PCAOB's objective to protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports.

3 Limited Parkway Columbus, OH 43230 614/415-7201 f 614/415-7202

Based on our values and our experience, we commend the Board for examining how to improve audit firms and auditing standards. However, we believe that material changes to the auditing standards are not warranted. Changing the scope, content and form of the audit report is not an effective way to address concerns about the quality, quantity or nature of disclosures included in financial statements. We do not object to minor improvement in the language in the auditor's report, but we fundamentally believe that it is a company's responsibility to provide relevant information to investors and that it is the investor's responsibility to interpret and evaluate this information. These responsibilities should not be delegated to the auditors.

Additionally, we believe two of the most important areas for improvement with respect to financial information are 1) to improve its timeliness and 2) to reduce information overload. Many of the changes in the Proposed Standards are contrary to these; the proposed changes would increase the length of time necessary to complete an audit and, as a consequence, increase the length of time required to make audited financial information available to the public. Delaying the availability of information is contrary to the needs of investors and the financial markets. Our investors would prefer more timely disclosure as opposed to increased disclosure. Further, the proposed additions to the auditor's report only add to information overload.

Following is a detailed discussion of our specific comments with respect to the Proposed Standards.

<u>Critical Audit Matters</u>
As described in the Proposed Standards, a standardized form of the auditor's report has been utilized since the 1940's. Although changes to the audit report have been debated or proposed from time to time, the audit report has proved that it plays an important role in the financial markets and it is functioning effectively.

As defined in the Proposed Standards, critical audit matters represent those areas that the auditor deems to be the most challenging and complex. Inherently, these are subjective assessments that should remain in the domain of the auditor's relationship with the company's audit committee. Disclosure of these matters would not serve the best interests of investors or other users of financial statements as they would lack the context required to appropriately evaluate the matters. The investor community is inherently in the best position to understand the risks and rewards of investing in a business. This ownership should not be delegated to an audit firm.

According to the PCAOB release, "communication of critical audit matters in the auditor's report could focus investors' and other financial statement users' attention on challenges associated with the audit that may contribute to the information used in investment decision making." We believe that this premise is flawed as the scope of a financial statement audit is to determine whether the financial statements are free of material misstatement. It is not to provide the investor with investment perspectives for investment decision making. Most audits have subjective and critical auditor judgments. Many audits have areas that are difficult to audit. This does not equate to whether a company is a good investment or a bad investment. Evaluation of whether an investment is appropriate must be completed by the individual investor.

Our management team and our investors count on accurate financial information. The auditing standards are designed and audit firms are trained explicitly to obtain reasonable assurance that our financial statements are free of material misstatement and, therefore, accurate. Adding background information on the audit process does not provide enhanced information about the financial statements or their accuracy. We believe that adding this type of information about the discussions that occur in the audit committee meetings without context would likely lead to increased litigation costs for both audit firms and preparers, further increasing total audit costs.

Auditor's Responsibilities Regarding Other Information

Auditors are currently required to review information in documents containing the audited financial statements to consider whether such information, or the way that it is presented, is materially consistent with the financial statements or whether it constitutes a material misstatement of fact. We believe this scope is appropriate and well defined. We do not agree with the proposed expansion of the auditor's responsibilities to other information outside the financial statements as described in the Proposed Standards.

As we discuss above, auditors are trained in accounting and auditing and their attest scope should focus on financial statements. The expansion of the auditor's responsibility to the other information will increase audit costs and will add incremental time to complete the audit process, both without any incremental benefit. Although the Proposed Standard provides that the auditor's evaluation should be based solely on relevant audit evidence obtained during the audit, we believe this provision is problematic as auditors cannot evaluate all of the information included in "other information" based solely on their audit evidence. Disclosures typically included in "other information" expand well beyond the scope required to complete the audit of the financial statements.

Auditor Tenure Disclosure

As drafted, the Proposed Standards would require disclosure of the year the auditor began serving as the company's auditor. There is no evidence indicating that auditor tenure has any correlation to audit quality. Thus, we do not understand why the auditor's report should disclose this information. The audit report should report meaningful points, not data that is irrelevant to the quality of the audit or the accuracy of the financial statements.

Conclusion
We appreciate the efforts and the outreach of the Board to protect the interests of investors. We do not believe many of the changes in the Proposed Standards are necessary. In our opinion, these changes would not improve the quality of audits or financial statements and disclosures. However, many of the changes proposed would increase audit cost and the time necessary to complete an audit.

We thank you for the opportunity to respond to the Proposed Standards and to provide our comments on these important topics.

Sincerely,

Wendy C. Arlin

RE: PCAOB Rulemaking Docket Matter No. 34, "Proposed Auditing Standards - The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion (the "Proposed Auditor Reporting Standard"), and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report (the "Proposed Other Information Standard").

**FILED ELECTRONICALLY**
**(comments@pcaobus.org)**

Dear Board Members and Staff:

Thank you for the opportunity to comment on the Public Company Accounting Oversight Board's (the "Board") "Proposed Auditing Standards Release on The Proposed Auditor Reporting Standard, and on The Proposed Other Information Standard" Release No. 2013-005 (the "Proposed Auditing Standards Release"), which was issued August 13, 2013.

I have been involved with financial reporting for many years in my current role as the Chairman of the Audit Committee of UTi Worldwide, Inc. and in my previous roles as Chairman of the Audit Committees for Levi Strauss & Co. and Allied Waste Industries, Inc. Further, for 17 years, from 1989 to 2006, I served as Chief Financial Officer and a Director of Computer Sciences Corporation. However, this letter reflects my opinions as an individual and my comments should not be taken to represent the views of any of these organizations.

The independent auditor's opinion is one of the cornerstones of our capital market system. It provides investors with assurance that the information they are using in their investment decision making is reliable; therefore, it allows them to concentrate on business performance rather than on evaluating the reliability of the information.

I believe there are two new requirements in these proposed standards which will have a significant and undesirable impact on investors, other users, preparers and auditors of financial statements and therefore should be reconsidered. These two new requirements are the requirement to disclose Critical Audit Matters (CAMs) and the requirement to perform additional procedures in evaluating other information.

**The Requirement to Disclose "Critical Audit Matters" and Related Drawbacks**

The requirement to disclose CAMs will have a significant negative impact because it will raise questions in the minds of investors and analysts regarding the quality of the accounting information provided by the reporting entity; it will raise questions regarding whether the auditor should have formed a different opinion on the financial statements; and, it will increase the effort and hours required by preparers and auditors and therefore the cost of audits to filers.

Causing investors and analysts to question whether the auditor should have reached a different conclusion is enormously undesirable. Attaching a list of CAMs to the unqualified opinion actually materially discounts the opinion. It is really no longer unqualified. This aspect of the proposal chips away at one of the cornerstones of the capital market system. Investors would be handed the added task of evaluating the reliability of the financial information. This effectively requires investors to become audit and accounting experts and defeats the purpose of having qualified accounting experts audit the financial statements.

While the term Critical Audit Matter is new, it is really just a way to classify an accounting issue. The existing standards already require that if an accounting issue results in a material deviation from Generally Accepted Accounting Principles this deviation must be disclosed in a qualified opinion. This current requirement meets the needs of investors and analysts in a straight forward and cost efficient manner.

The proposal indicates that investors and other financial statements users reference the existing auditor's report "solely" to determine whether the opinion is unqualified and the proposal implies that this simplicity is undesirable. Quite the contrary, this simplicity is highly desirable and, in fact, is the essence of the value provided by all the work that is performed in a financial statement audit.

The requirement to disclose CAMs will increase the effort and hours required by the auditor. The process of identification and disclosure of CAMs will require more time spent by audit teams, managers and partners of audit firms to determine that what makes it to the list of CAMs is adequate. This will increase the effort and hours required by the auditor which will then translate to yet an additional cost burden on SEC registrants.

In addition, the process of identification and disclosure of CAMs would be highly subjective. Two different auditors might reach different conclusions on whether or not a matter warrants disclosure as a CAM or not.

Also, taken out of the context of the auditor's work papers, the magnitude and effect of CAMs could easily be misinterpreted by users of the financial statements. Rather than providing additional helpful information, these disclosures will leave investors with many more unanswered questions.

**The Requirement to Perform Additional Procedures in Evaluating Other Information and Related Drawbacks**

The requirement to perform additional procedures in evaluating other information will have a significant impact because it will increase the effort and hours required by preparers and the auditor and; thereby, increase the cost of the audit to filers. The requirement to disclose the auditor's responsibility for evaluating other information will likely lead many investors to believe that the auditor has performed an audit of this information and that it is providing audit level assurance on this information.

Finance professionals who are familiar with the audit process recognize there will be significant costs associated with evaluating the details included in selected financial data disclosures, management's discussion and analysis and proxy statements. This effort will be considerable. The added hours will be significant and the additional costs to filers will be material. This will represent a further significant increase in the cost to be a public company filing on a US exchange.

Despite this significant level of added cost, this effort will not provide an opinion on the other information. However, by requiring the inclusion of reporting on the auditor's responsibility for other information as a component of the audit opinion, readers of the opinion will be confused about the level of responsibility the auditor is assuming. Many readers will assume that the auditor's assurance opinion extends to the other information.

**Drivers for the Proposal**

The proposal indicates on page three that "During the Board's outreach activities over the last three years, many investors have expressed dissatisfaction that the content of the existing auditor's report provides little, if any, information specific to the audit of the company's financial statements to investors or other financial statement users." The problem with this justification for the proposed changes is that it ignores the incredible volume of information that is specific to the company's financial statements which is already required to be disclosed in the notes to the financial statements, the 10-Q, 10-K and other filings.

The proposal further indicates on page four that "the auditor reporting model developed in the 1940s did not address the increasing complexity of global business operations that are compelling a growing use of judgments and estimates… contributing to greater complexity in financial reporting.. This complexity supports improving the content of the auditor's report beyond the current pass/fail model…" It is certainly a valid observation that there has been an increase in complexity in financial reporting. However, increasing the complexity in the auditor's report (which has changed over this period) hardly seems like a solution, on the contrary, this change would create additional complexities for analysts and investors which don't currently exist.

The fundamental flaw in the proposed requirements to disclose CAMs and perform additional procedures on other information is that the current approach in both areas is appropriate and cost effective. These proposals seek to fix things which simply are not broken. The additional costs and other drawbacks to these proposed changes are not justified by the minor perceived benefit to be gained by analysts who have indicated that the auditor could provide more information.

**Additional Concern**

There is one additional concern I would like to express regarding the nature of this proposal. It is the responsibility of the SEC to determine what disclosures companies should make regarding their financial information and accounting practices. The PCAOB was established to oversee the performance of financial statement auditors, not to direct the disclosure of additional information regarding filer's accounting practices. This division of responsibilities between the SEC and the PCAOB is appropriate and serves the investment community well. I think it is unnecessary, and potentially quite counterproductive, to add directing additional disclosures regarding company's accounting practices to the responsibilities of the PCAOB. Further, I suspect directing additional accounting practice disclosures exceeds the PCAOB's statutory authority.

**Summary**

In summary, I believe the existing layout and language of auditors' report meets the needs of investors and other users of the financial statements in an efficient and effective manner.  In addition, there are significant drawbacks and costs associated with the proposed requirements to disclose CAMs and to perform additional evaluation procedures on other information.

Thank you for the opportunity to comment on this Proposed Auditing Standards Release. I appreciate your consideration of my comments.

Sincerely,

Leon J. Level

**RE: PCAOB Rulemaking Docket Matter No. 034; Proposed Rule Under Release No. 2013-005; Release Date August 13, 2013**

***Comments Related to Critical Audit Matters (Paragraphs 7 – 14 of the Proposed Auditor Reporting Standard)***

Members of the Board:

I am a member of the financial community and potential investor and am writing to comment on the recent proposal by PCAOB that requires auditors to discuss "Critical Audit Matters" ("CAM") in the auditor's report. I strongly support this meaningful and implementable change to enhance the usefulness of the Auditor's report to the investors and external financial statement users given the reasons below:

**1. Alignment with the fundamental purpose of Auditors' report**

The proposed auditor reporting CAM aligns with the fundamental purpose of Auditors' report, which is to provide financial statement users an assurance that will help them make decisions based on the results of the audit, and ultimately protect the interests of investors and further the public interest.

Auditor’s report has been the primary means by which the auditor communicates with investors and other financial statement users information regarding his or her audit of the financial statements. By reporting CAM in the Auditors’ report, investors and other financial statement users will potentially obtain valuable information that they have expressed interest in receiving but have not had access to in the past. As businesses become more and more complex and fast changing, auditors’ report are getting more and more challenging for investors and external users to understand. Many of the statements, descriptions, calculations on the financial statements are based on management’s subjective assumptions, which are highly susceptive to the rapid changing technology and economic environment today. Auditors who gain knowledge about the company's financial statements during the audit that is not known to the public can create added value to investors by sharing the CAM. As PCAOB indicated, “requiring auditors to communicate critical audit matters could help investors and other financial statement users focus on aspects of the company's financial statements that the auditor also found to be challenging. Ultimately, communicating CAM would improve the relevance of the auditor's report by providing more insight about the most significant matters that the auditor addressed in the audit and providing investors with previously unknown information about the audit that could enable them to analyze more closely any related financial statement accounts and disclosures. Reducing the level of information asymmetry between company management and investors could result in more efficient capital allocation and, as academic research has shown, could lower the average cost of capital.

## 2. Enhancing, or at least maintaining audit quality

First of all, the Board's proposed auditor reporting standard would still retain the pass/fail model, including the basic elements of the current auditor's report, and would provide more information to investors and other financial statement users regarding the audit and the auditor. The proposal is not intended to create more tasks, obscure auditors' work or expand the expectation gap, but rather to require that the auditor's communication would focus on those matters the auditor addressed during the audit of the financial statements that involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence or forming an opinion on the financial statements. If the auditor determines that there are no CAM, the auditor would state in the auditor's report that the auditor determined that there are no such matters to communicate.

Many people argue that reporting the CAM will have potential cost related implications to the auditor's report. While this may be true, the reporting standard could be scalable based on the size, nature, and complexity of the audit of the company. Moreover, the auditor's communication of CAM is actually based on information known to the auditor and procedures that the auditor has already performed as part of the audit. Thus, it does not modify the objective of the audit of the financial statements or impose new audit performance requirements, other than the determination, communication, and documentation of CAM. Nonetheless, PCAOB is still aware of the potential cost implications and unintended consequences. I believe any of these consequences could be addressed through field testing and future adjustments.

**3. Strengthening auditors' responsibility and independence**

Reporting CAM would not alter the original source of disclosure about an entity or compromise auditors' independence. Auditors will maintain their current role from attesting on information prepared by management. Rather, the auditor would be communicating information about the audit, based on audit procedures the auditor performed. Moreover, the proposed reporting standard adds new elements that provide more information about the audit and the auditor, such as information regarding auditor tenure and the auditor's responsibilities regarding other information outside the audited financial statements, which will protect auditors' independence.

**4. Implementable scope and standards**

The proposed reporting of CAM is highly implementable thanks to the clear scope and standard set by PCAOB. Firstly, the reporting is very specific to each audit. By PCAOB's guideline, critical audit matters are those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements. In addition, PCAOB also provide several sources for auditors to determine CAM, including those documented in the engagement completion document, reviewed by the engagement quality reviewer or communicated to the audit committee. These sources provide a cost-effective and efficient means for auditors to determine CAM.

**In conclusion**, I strongly support this meaningful and implementable change to the auditor's report, although it may require the auditors to provide original information about a company and could be perceived as providing a piecemeal opinion rather than in the context of the financial statements taken as a whole. Because this proposal is highly significant, I believe that robust field testing will be required. Such an effort would help identify unintended consequences, ambiguities or inconsistencies in application and improve the quality of any final standard.

*******

I appreciate the opportunity to share my viewpoint on the Proposed Standard, and I thank you for your time.

Sincerely,

Yoobin Liang

Public Accounting Oversight Board

**Re: PCAOB Rulemaking Docket Matter No.034; Proposed Rule under Release No.2013-005;**

***Proposed Auditor Reporting Standard – Critical Audit Matters (Paragraphs 7-14)***

Dear Members of the Board:

As a member of the financial community and potential investor, I would love to make some responses on the Public Company Accounting Oversight Board's (here after PCAOB) Release No. 2013-005, specifically on the Proposed Auditor Reporting Standard regarding the Critical Audit Matters (hereafter CAMs).

***General comment***

In general, I find the proposed auditor reporting standard regarding CAMs really helpful for financial community to focus on aspects of the company's financial statements that the auditor also found to be challenging and unknown information about the audit, for reducing the level of information asymmetry and resulting in more efficient capital allocation, and for potential improvement in the financial statement disclosures due to increased attention by the auditor, management, and the audit committee. However, there are certain anticipated challenges and concerns on the proposed standard. If it is possible, I would recommend that the PCAOB give out further detailed criteria on CAMs and promote unified procedures for different CPA firms on coordinating the CAMs disclosures with management and audit committee, which I believe would be critical to address the public concerns on the proposed standard.

***Benefits for the Financial Community and Potential Investors***

I. Provide focus and additional information on certain areas of financial statement

The proposed "communication of critical audit matters in the auditor's report is intended to make the auditor's report more informative, thus increasing its relevance and usefulness to investors and other financial statement users. " As many investors believe that "auditors have unique and relevant insight based on their audits", the CAMs could provide some additional information for the community and support financial statement users to make better and more informed decisions.

For example in the analysis of Diamond Foods Inc., we had concerns on its correctness of cost and payment record, but we don't have enough information to get to a conclusion whether or not the company has cut-off issue. In that sense, the disclosure of CAMs from auditors would be great help. Through the audit process, auditor might already examine vouchers and ledger regarding the date of invoice and match that with the fiscal year end. Otherwise, it might suggest "posed the most difficulty to the auditor in obtaining sufficient appropriate evidence" which should be disclosed in CAMs and alert the investors.

II. Reduce information asymmetry and potentially lower the average cost of capital

"The communication of critical audit matters could help to alleviate the information asymmetry that exists between company managements and investors. More specifically, company management is typically aware of the auditor's most challenging areas in the audit because of regular interactions with the auditor as part of the audit, but this information is not usually known to investors. Reducing the level of information asymmetry between company management and investors could result in more efficient capital allocation and, as academic research has shown, could lower the average cost of capital." This benefit for both the company side and investor community is stated in the appendix of PCAOB release No.2013-005.

With my experience of conducting financial analysis on different companies' 10-k, I find this statement very true. For example in the analysis on Diamond Foods Inc., I would be really interested to know the goodwill assessment related to the acquisition of Kettle Foods, since the result and assurance I got from auditor might significantly impact on my valuation of the investment opportunity on Diamond Foods Inc.. But unfortunately, very limited information was provided while I believe intensive communications between management and auditors had covered the topic. From investors' perspectives, if I can have more detailed information provided to address my concern, I could make a more informed decision. Thus, lower risk and higher level of assurance I have will allow me to require a lower rate of return on the investment.

III. Improve financial statement disclosures

PCAOB has specified the potential benefit of improvement on financial statement disclosures, "The auditor's focus on, and communication of, critical audit matters could lead to improved financial statement disclosures related to areas of the financial statements that gave rise to critical audit matters. Potential improvements to financial statement disclosures in such areas could occur because of increased attention by the auditor, management, and the audit committee of matters communicated by the auditor in the draft auditor's report regarding critical audit matters. The improvement in the related financial statement disclosures could incrementally increase the amount or quality of the information in the financial statements."

Throughout the audit process, regular interaction between auditors and managements should already cover a great amount of issues including financial statement adjustments and internal control deficiencies. The public disclosure of the most challenging issues could bring in incentive and pressure for the management to react and rectify in a timely manner. In long-term, this practice could lead to higher quality of the information disclosed in the financial statements and create a virtuous cycle for managements to focusing on shareholders' value creation.

***Potential Challenges***

I. New judgment to auditors to select the "key" or "critical" audit issues

In PCAOB release, CAMs are defined as "matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements." And PCAOB also listed factors specific to the audit to help auditors to determine whether a matter is a critical audit matter.

While the wordings and the description of CAMs make a great deal of sense, there is still huge room for auditors to make the judgment call. This might be the least wanted from the investors' standpoint, to propose a subjective judgment call on information disclosure selection. In the process of audit, a quantitative material level is applied to guide the work of auditors. I am wondering if a more detailed quantitative criteria coupled with a qualitative description on the CAMs could solve this potential challenge.

II. Extract cost and efforts for auditors and companies to be in compliance with the proposed standard

PCAOB has anticipated that some cost increases would be in line with the proposed standard, including "one-time costs that related primarily to updating an audit firm's methodology and training", "recurring costs in each individual audit relative to the determination, communication in the auditor's report and documentation of critical audit matters", and "recurring costs for the company, including the audit committee, for reviewing the critical audit matters included in the draft auditor's report". Besides, the standard setter also expressed its concern on reducing time available to the auditor to review and complete the audit work.

In my opinion, the annual audit cost comparably contributes a very small portion of SG&A cost of a public company each year. That said, even in the case of cost increase due to the new standard, the financial impact would be acceptable to most of the shareholders, as this would be critical to protect their own interest and value. Moreover, audit report nowadays which just gives a pass/fail grade for the company only reflects a small part of the audit effort. Auditors continually communicate with management and audit committee on adjustments on financial statements and deficiencies on internal controls, which suggests management and audit committee are already reviewing some non-disclosed "critical matters" with the auditors before the proposed standard. What we asked for now is just to disclose the most challenging matters already be discussed back door. Meanwhile, academic community has raised evidence that the reduce of information asymmetry between management and investors could help to lower the average cost of capital, which is beneficial to the company and might potentially wash out the increase costs related to the proposed standard. In addition, if PCAOB could provide more unified procedures for auditors on coordinating the CAMs disclosures with management and audit committee, it will even lower the incremental cost and establish a comparable environment for different companies' audit reports and continually improve the usefulness of audit report.

III. Change of auditors' current role criticism

Understand that most auditors are concerning about the alter of the role of being an auditor, as they believe the new disclosure requirement might lead them to inappropriately step into the roles of managements and audit committee. Auditors claim that it is managements' responsibility to prepare financial statement and increase the transparency. In addition, the profession is concerned that users of the financial statements may not have sufficient context to digest the information provided in CAMs.

In my opinion, this concern could be addressed by more promotion on the unified procedures for CAMs. First of all, most of the users of the financial statements are sophisticated investors and experienced with continually changes on accounting and auditing standards throughout years. The group of people should have the ability to adapt themselves with the new proposed standard and adjust their financial analysis with the newly provided information. Besides, PCAOB specified that "the proposed auditor reporting standard does not intend to change the auditor's traditional role of attesting to matters in the financial statements when communicating critical audit matters". And the new standard is actually requiring the auditors to "provide insights about the most difficult, subjective, or complex matters that the auditor addressed in the audit". That said, the CAMs in the auditor's report would not replace the efforts for investors and other financial statement users to analyze and review the financial statements. Through sufficient education and promotion, the investor community in my opinion will be able to adjust the expectation and better leverage the unique insights from auditors regarding the company's financial statements in their own usage.

*******************************************************************

In conclusion, as a member of the financial community and potential investor, I support the proposed audit standard regarding the critical audit matters and recommend that the PCAOB could give out further detailed criteria on CAMs and promote unified procedures for different CPA firms on coordinating the CAMs disclosures with management and audit committee to better facilitate the changes and address concerns from different stakeholders of the standard.

Sincerely,

Ivy Liao

## PCAOB PROPOSED AUDITING STANDARDS:

**The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion (which would supersede portion of AU sec. 508, Reports on Audited Financial Statements).**

**The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report (which would supersede AU sec. 550, Other Information in Documents Containing Audited Financial Statements).**

**And the related amendments to PCAOB standards.**

The Advanced auditing Class has reviewed the above-referenced ITC and offers the following feedback for consideration by PCAOB.

Please note that our comments can be separated into two main categories: response to PCAOB questions and other suggestions.

For the sake of brevity we skipped those questions for which we had no substantive comments. Language that would be deleted by the proposed amendments is struck through. Language that would be changed is underlined.

**Responses to PCAOB Questions:**

**Discussion Related to the Proposed Auditing Standard - *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion***

**Question 7.**
**Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?**

**In our opinion** the Board should require a specific order for the presentation of the basic elements required in the auditor's report. This allows the users of the auditor's report, including investors and stakeholders, to gain familiarity with the report and presents greater efficiency and effectiveness of the report if they are looking for specific information. A uniform presentation of the basic elements in the auditor's report will allow for a timelier manner to find the information needed for investors and the like.

**Question 12.**

**Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?**

**In our opinion** auditor's communication of critical audit matters will benefit investors and other financial statement users in their investment decision making process. It will make the auditor's report more informative – increase its relevance and usefulness. Also, we think that communicating of critical audit matters will lead to improvement of financial statement disclosures that could incrementally increase the quality of the information in the financial statements.

However, we do think that the definition of a critical audit matter is not very clear for determining what would be a critical audit matter.

The proposed auditor reporting standard defines critical audit matters as follows:

A2. **Critical** audit matters – Those matters the auditor addressed during the audit of the financial statements that (1) involved the ~~**most**~~ difficult, subjective, or complex auditor judgments; (2) posed ~~**the most**~~ difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed ~~**the most**~~ difficulty to the auditor in forming an opinion on the financial statements.

**In our opinion** the use of the word **critical** is misleading. Critical implies that the audit could not be completed without addressing the matter that the auditor would list as a critical audit matter. When, in fact, many items are critical in an audit, nothing can be left open in order for the audit to be complete and final. We think the word critical should be replaced with **challenging**. Using the word challenging explicitly defines that the matter was difficult for the auditor to complete. When listing an item as challenging, the auditor should also have to explain why the item was challenging.

In addition, we think that the use of the word **"most"** is not clearly understood as it relates to the definition of critical audit matter. In the proposed auditor reporting standard the word "most" refers to the matter that would stand out from the other numerous matters addressed during an audit in terms of difficulty, subjectivity, or complexity. It is also not intended to imply that there is only one matter that surpasses all other matters.

**In our opinion**, the word “most” indicates that the matter is more challenging than all others. However, “most” implies “one”, so there could not be more than one "most critical audit matter". As a result, we think the word “most” should not be used. Instead, the auditor should only list matters that were challenging.

**Appendix 6- Additional Discussion Related to the Proposed Other Information Standard, *The Auditor’s Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor’s Report*, and the related amendments**

**Question 11**

Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?

The audit of the additional information would increase the fees and time associated with an audit. Auditors will be spending additional time understanding the format, and usage of different forms of additional information. This “consideration” of different types of additional information will add to the workload and training of auditors. The costs associated with the additional procedures would also include more time spent on the planning and review of the audit. The planning and review of the audit would now include preparation for and revision of the audit of other information to ensure that it is properly “considered”. Auditors would require more time to “read and consider” the other information and check for material inconsistencies and material misstatements of fact.

**Question 19**

**Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.**

**In our opinion,** the auditor’s procedures should not encompass evaluating information not directly related to the financial statements and for which the auditor has not obtained sufficient evidence. Requiring the auditor to identify other information not directly related to the financial statement takes responsibility away from management and the audit committee and places more on the auditor. Furthermore it expands the scope of the audit and would be more costly to the company than beneficial to users of financial statements.

**<u>Other Suggestions:</u>**

1. **Discussion Related to the Proposed Auditing Standard - *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report (which would supersede AU sec. 550, Other Information in Documents Containing Audited Financial Statements).***

**In our opinion,** the word **"documents"** in the Introduction (Paragraph 1 of the Proposed Other Information Standard) should be changed to the word **"information".** In the paragraph these words being used in a similar contest which would be wrong. The word "document" would rather describe something that would serve as evidence or proof. The word "information" would mostly refer to knowledge. Using both words in a similar context is misleading.

**<u>Introduction (Paragraph 1 of the Proposed Other Information Standard)</u>**

The proposed other information standard establishes requirements regarding the auditor's responsibilities with respect to the other information in certain documents containing audited financial statements and the related auditor's report. As more fully described later in this section, the introduction to the proposed other information standard provides a description of "other information," as used in the proposed other information standard, including (1) the **~~documents~~** **<u>information</u>** to which the proposed other information standard would apply and (2) the information to which the proposed other information standard would not apply.

Moreover, the Proposed Other Information Standard uses the word "information": "The Auditor's Responsibilities Regarding Other **Information** in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report (which would supersede AU sec. 550, Other **Information** in Documents Containing Audited Financial Statements)". In our opinion using the word "information" in both cases more appropriate and avoid misleading.

2. While increasing the consideration that auditors give to an annual report will assist investors, there should be an analysis of costs versus benefits. If auditors will be doing extra work to provide important information, there should be assurance that the investor will utilize the information.

3. The risk of litigation will be higher if the auditor is exercising more judgment and providing more information within the auditor's report. If companies believe that the auditor's report inappropriately conveys their financial position or negatively persuades investors, they may want to take legal action against the auditor. That being said, a disclaimer should be incorporated to address this issue. For instance,

“The following comments related to additional information in the annual report are based on assumptions and conclusions drawn during this company’s audit. These comments are subject to the judgment of the auditor, and should be analyzed with careful caution and consideration”

**Subject: Docket 034: Auditor's Reporting Model Proposal**

Dear Board Members and Staff of the PCAOB:

The Manufacturers Alliance for Productivity and Innovation ("MAPI") welcomes the opportunity to convey the views of its CFO and Financial Councils on the proposed Auditor's Reporting Model. The CFO Council is comprised of 107 corporate level CFOs with large publicly traded manufacturing companies while the Financial Council's has 86 members with publicly traded companies who are corporate level Controllers and Chief Accounting Officers. Together, there are 124 different publicly traded manufacturing companies represented on the two Councils.

The members of the CFO and Financial Councils were surveyed recently on their views regarding the PCAOB's proposed Auditor's Reporting Model. The results, based on responses from 63 companies, are briefly summarized in Part I and the detailed responses are presented in Part II. The companies that participated in the survey are very large manufacturers. Eighty-seven percent had annual revenues exceeding $1 billion in the latest fiscal year. The revenues of 45 percent of the companies exceeded $3 billion.

**Part I: Overview of Survey Results**

A majority of the respondents (97%) do not think expanded audit opinion letters will provide any value to investors or that any value would be nominal. At the same time, respondents believe that PCAOB's proposal will impose significant costs on companies. While the PCAOB's proposal is well intentioned, the association has three principle objections to the addition of critical accounting matters (CAM's) to the auditor opinion.

First, most respondents believe that the proposal will likely be interpreted as requiring auditors to disclose information not required to be disclosed by registrants. Generally, members believe that current FASB and SEC disclosure requirements, including those related to critical accounting policies, are sufficient to provide investors with necessary and appropriate information. However, if it is necessary to expand these disclosure requirements, members feel strongly that any new requirements should be required of registrants, not their auditors. Seventy-five percent of respondents said that the most important finding provided by the audit is that a firm's financial statements are presented fairly and that the stated financial position conforms to the financial reporting standards. Accordingly, members feel that the historical "pass / fail" basis for the audit opinion should remain intact, and auditors should opine on the accuracy of information provided by management, not provide original disclosure.

Secondly, 80 percent of the respondents indicated that the notion of "what keeps the auditor up at night" as a determinant of critical accounting matters is too subjective. In our existing litigious environment, this would result in auditors feeling compelled to identify a large number and broad array of critical accounting matters in order to protect themselves from later shareholder suits, similar to what has happened with the requirements regarding risk factors. In this event, members feel it is unlikely that investors will realize any additional useful information.

Last, the majority of members believe that in its current form, the proposal will significantly increase audit fees with no resultant investor benefit. One-third of respondents believe audit fees would rise by 6 to 10 percent or more and 32 percent said fees could rise by more than 10 percent. MAPI's most recent audit fee survey found that the median audit fee paid by its members companies in 2012 was $2.06 million.[1] A six percent increase in the median audit fee is equal to $124,000.

Members have additional concerns about the proposed requirement that auditors evaluate "other information" outside of the financial statements. The additional level of review expected under the proposal will increase audit fees and may result in auditors opining, in some cases, in areas for which they have no expertise. The majority of members believe that reading MD&A for consistency with the financial statements and footnotes, as required by auditors currently, is sufficient to meet the needs of investors.

Additional detailed comments from more than 30 respondents are reproduced in Part II.

## Part II: Survey Results

1. Of what value would expanded audit opinion letters addressing critical audit matters be to investors?

| | Number | Percent |
|---|---|---|
| No value | 34 | 55% |
| Nominal value | 26 | 42% |
| Moderate to significant value | 2 | 3% |

2. If you do not believe information regarding critical audit matters would provide much if any value to investors, what are the main reasons? (Check all that apply)

| | Number | Frequency (Percent of 61 Responses) |
|---|---|---|
| The notion of “what keeps the auditor up at night” is too subjective. | 49 | 80% |
| The most important finding provided by the audit is that a firm’s financial statements are presented fairly and that the stated financial position conforms to the financial reporting standards. | 46 | 75% |
| Some of what the PCAOB proposal is asking for is already provided in MD&A critical accounting policies. Any problems with these would influence the auditor’s communications with the Audit Committee. | 37 | 61% |
| Investors would find little value in the additional information provided in expanded auditor letters. | 28 | 46% |
| The proposal gives the auditor too much discretion. | 26 | 43% |
| Much of the information provided by the audit is dated by the time it is published. | 17 | 28% |
| The financial audit is just one source of information regarding a company’s financial position; there are other sources of information that complement annual reports | 15 | 25% |
| Other | 17 | 28% |

Those who indicated “Other” elaborated:

- Investors rely mainly upon the Earnings release information, script and Q&A together with any other management presentations and sector comparisons. They rely upon the 10Q/10K filings for a little of the extra data such as Pension deficits, Debt details etc. and the Audit opinion is mainly a point of comfort that the financials they have been using are reliable. Very few investors read the 10Q/10K in full detail and those that do are the most junior analysts who simply do compare analysis, e.g., did management change a risk factor?

- I believe it will be confusing.

- What is the ultimate value of the information relative to the effort required, i.e., the company and the audit firm are going to spend enormous amounts of energy "word-smithing" the final product.

- The auditor will be forced into over communicating critical audit matters to manage their legal liability. Auditors often have 10 to 15 key audit matters that are offered summarized for their concurring and national office reviews. Therefore, auditors will naturally need to include these as "critical audit matters" further contributing to the information overload in financial statements today.

- It will significantly drive up the cost of an audit.
- Matters that are complex and subjective are things such as impairments that are non-cash. For investors focused on cash flows, subjectivity does not come into play.

- The proposal could potentially confuse investors and cause unnecessary double-guessing.

- Investors are already overwhelmed with financial statement disclosures. This just adds to it.

- Creates more audit fees and provides little value. What does the auditor have that investors can't get from asking questions - other than the financial statement detail?

- Companies are already required to discuss risk factors and "seeing the company through the eyes of management in the MD&A" and auditors have to "sign off" on those. Management has to agree to “clawbacks”, CEO's and CFO's have to personally sign off on controls, etc. We are being forced to jump through hoops for the black swan event and in the process becoming less competitive.

- The letter could become another "boilerplate" document that generally is carefully worded by lawyers and this could greatly reduce the significance to investors.

- Disclosures already exist.

- It is difficult to provide an objective standard of critical audit matters between companies and industries.

- There is potential to misinterpret the criticality of the issue.

- It is nearly impossible to succinctly state issues in document. Our litigious society will be addressed by more and more disclosures where the list will be long and ultimately un-useful. The "taken as a whole" should continue to be standard for investors.

- As I understand the proposal, the Auditor will have to come up with something, even if it's not substantive. I think the reader will be curious, but won't know how to process the data. What's the value to the investor in the end?

- There will be inconsistency between what different auditors might report for different companies and this may lead to inappropriate relative perceptions about companies.

- Because of the limitations of an audit, the auditor would be very measured in what he/she wrote. It would quickly become boilerplate.

3. What do you think is driving the PCAOB proposal?

| What do you think is driving the PCAOB proposal? | Number | Percent |
|---|---|---|
| The PCAOB's view that more oversight is needed | 52 | 83% |
| Academic accounting literature showing a need for information on critical audit matters | 7 | 11% |
| Investor complaints regarding the inadequacy of current financial reporting | 2 | 3% |
| Other | 2 | 3% |

Those who indicated "Other" elaborated:

- Probably a combination of all of the above.

- Government's view that they have to prevent any and all potential losses by investors, regardless of the cost. You can't govern and establish rules to catch the crooks that will always be crooks. There is enough governance in corporate America right now without increasing the workload and costs for companies to compete. Think about Conflict Minerals - this is just another example of over-reaching.

4. If the PCAOB proposal is adopted, to what extent do you think audit fees would increase?

| | Number | Percent |
|---|---|---|
| There would be little or no impact on the cost of the audit. | 1 | 2% |
| Audit fees would rise by 1% to 5% | 20 | 33% |
| Audit fees would rise by 6% to 10% | 20 | 33% |
| Audit fees would rise by more than 10% | 19 | 32% |

5. Briefly, what is your opinion of the PCAOB proposal?

Twenty respondents provided short statements to the effect that they do not like the PCAOB's proposal, that it is overreaching and unnecessary, that it will not provide investors with much in the way of additional or useful information, or that its costs exceed its benefits. The comments of the other respondents who elaborated their concerns follow.

- Continually looking for ways in which to provide additional useful information to investors is a commendable goal. However, the proposal appears to alter the basic fundamental model that has been in place for decades, a model that currently provides for disclosures of important information be made by registrants and not auditors, with the auditor communicating a simple, objective "pass / fail" opinion. As such, we believe much additional discussion and analysis should take place prior to any proposal such as this one takes effect and should be led by all parties responsible for financial reporting (such as but not limited to the SEC and FASB). In addition, the benefit related to the expansion of scope of work of an auditor to perform procedures on other documents (such as but not limited to the proxy statement) is not clear. The costs could be significant, and it is not clear what actual problems have occurred that would suggest such work would result in a meaningful benefit.

- The current yes/no status of an audit opinion letter has great value and is the main value that investors draw from the audit process - they want statements that they can rely upon that have had independent scrutiny. Adding shades of grey/emphasis of matter etc., will probably quickly become like the risk factors - an ever growing section that is driven by Attorneys and concerns over minimizing risk - in this case to the Auditors. The clarity of the current pass/fail audit opinion is profound and should be maintained. Furthermore, consider what would have happened back in 2008/2009 with all of the concerns over corporations' ability to get refinanced or achieve Bank Covenant amendments during that period - the Auditors expressing such concerns in public would have led to Vendor confidence collapse, removal of terms and the achievement of a self-fulfilling prophecy - expressing concern over financial stability would have engendered financial instability and much heightened risk of financial failure.

- Unfortunately, the PCAOB's sensitivity to cost is low, as the effort of the audit firms and their clients both will be magnified, significantly in many circumstances, and the cost of risk paid as part of audit fees will necessarily rise as more information and opinion which can spawn and support lawsuits is exposed to our litigious environment. They also ignore the impacts from disclosure of competitive information. Differences of opinion which can safely persist under current disclosures will become more problematic, ultimately resulting in audit firms dictating even more judgmental decisions than they do today. I do not feel that is wise or helpful. In all, I feel it is a gross overreaction to a simple question of whether the opinion letter should be updated.

- It will only add to investor confusion. Every investor looks at different aspects of the company. It will be impossible for the audit firm to cover every item that the investment community might want to know about. Even after an audit, the auditors know about 10% of your business (they think they know much more, but they don't) so their ability to span the scope of investor needs is limited. Our auditors sometimes have a difficult time explaining issues to our audit committee (who are familiar with our company and financial policies). I can't imagine the gyrations we will have to go through with the auditors to have them try to put issues in writing for the world to see. It will create a lot of extra work for me and my staff.

- The information proposed for the auditor's report should remain solely the responsibility of the audit committee and not be added to the auditor's report. The PCAOB's proposal would likely invite an increase in litigation as litigious parties use the information to the disadvantage of public companies and/or their auditors. Most of the proposed information should be apparent in the financial statements if preparers are following the current disclosure rules properly.

- This proposal will put audit firms in a very difficult position with regards to audit committee and management communications. It will also be difficult to implement in an objective manner - the same issue at one company may be considered critical while at another, it does not reach that level.

- It is the companies' responsibility to report on the company, not the auditors. This proposal could result in a contentious working relationship between the company and auditor. I don't think the audit world wants this either. It is too subjective and provides little value to the investing community.

- The PCAOB is trying to prevent the black swan and wasting investors' money in the form of lower business competitiveness and lower profits. There is little pragmatism.

- It has merit in theory but auditors already read the MD&A. It is hard to believe that if they read something different in MD&A than their understanding of what is contained in the financial statements they would not let Audit Committees know. They would also be putting their firm reputation at risk.

- Another layer of regulatory controls for accounting companies to address, giving them reason to expand their scope, increase the fee-based revenue and wanting more protection from perceived liabilities at the detriment of the client. This moves further away from the simple concept that the company is responsible to provide all the required information in prescribed formats and standards with the auditor to attest that it did so properly.

- I disagree with their premise. The auditors should just audit and express their opinion on the overall financial statements.

- The proposal is of little value. While some of the PCAOB oversight has been positive, much of what they have now evolved toward trying to require scientific conclusions and documentation around highly subjective matters.

- The proposal is not appropriate as it changes the role of auditor from solely opining to reporting on Company matters. Also, more attention than necessary could be placed on insignificant matters.

- It will not improve the quality of earnings, the quality of accurate financial records or of a quality audit.

- I disagree with the premise. Auditors cannot be all-knowing; expecting them to be will spiral out of control.

- Investors rely on the auditor to determine if the financial statements are presented fairly. They expect the auditor to adequately address the critical audit matters. Investors shouldn't have to make this determination on their own based on disclosures from the auditor.

- The proposal is a solution in search of a problem. I really doubt any sophisticated investors are reading much less relying on the auditor's opinion other than the financials have been subjected to audit. An audit can't prevent a business failure and that is what really concerns investors.

- I do not like the proposal at all. If it were implemented, I see too large an opportunity for adversarial relations to develop between client and audit firm. And, I see much more changing of audit firms due to these differences.

- The regulations that exist over financial reporting are adequate to address investor needs. This is another example of regulation overkill. Based on the PCOAB view, there will never be enough data to satisfy their needs. If would be interesting to see if investors would be willing to fund every new regulation from the PCOAB directly vs. corporation.

- An unneeded additional regulation. The audit already covered management estimates and management must disclose this. If the auditor had problems with them, you think they would sign the opinion?

- It is hard to get your hands around what they are concerned about. As we address critical accounting policies in the 10-K and the auditors opine on the filing, what isn't already covered? I believe it would add as much value as audit firm rotation would to the audit validity.

- It generates little or no value (comfort). It simply breaks out what the auditor should be doing anyway. Adding the additional disclosures will simply add exposure to the auditor and, consequently, fees to the audited.

- It is over-reaching PCAOB's authority. The SEC is accountable for this.

- I don't understand what's driving it. Who's pulling for this? There will be too much subjectivity in deciding what issues to discuss, and the Auditors will be compelled to have to report on something. I also worry about confidentiality of issues that would be disclosed.

- It is out of touch with reality. This is another compliance item that is being layered onto everything else that public companies are supposed to do that end of the day waters down the communications to shareholders. The more disclosures that are mandated the less meaningful the disclosures become.

- The proposal is not necessary and will result in higher audit fees and will add delays to the close process. Investors value information that is both timely and accurate. This proposal will not increase the accuracy of financial reporting. But it will delay the timing between 'closing the books' and publishing a set of audited financials.

- I believe that the PCAOB proposal, although well-intentioned, is misguided. The PCAOB proposal reflects an overestimate of the auditor's role in the financial reporting process and asks the auditor to comment on matters that are far better addressed by management.

- This seems like a solution looking for a problem. Plus, the audit firm is designed to opine on the financial statements and associated disclosures and whether they are in accordance with GAAP. The audit firm will be risk-averse, as any additional information they provide will only be a negative in the case of an issue with the company; therefore, the additional information will ALWAYS be biased to the negative. It is management's responsibility to fairly present all information that is relevant to an investor; the audit firms don't have expertise in this area and their views will likely only add confusion. Hard to see how this improves any information available for investors.

- The financial statements are either fairly stated or unfairly stated. Due to the more subjective nature of this request, I envision it leading to a more adverse relationship between audit firm and client.
- More regulation with minimal to no benefit. Don't believe this proposal would have avoided or provided headlights to the fraud at Enron, WorldCom, Global Crossing and Quest nor the financial meltdowns at Lehman Bros, Bear Stearns or Merrill Lynch.

- Not needed, would add little to no value and will result in nothing more than the regurgitation of what is already in MD&A.

- The PCAOB proposal would make U.S. companies more challenged to compete against other companies that are not subject to such rules.

6. If you think the PCAOB proposal does not provide benefits commensurate with the costs, is there an alternative that is more workable and less costly?

| | Number | Percent |
|---|---|---|
| Yes | 18 | 30% |
| No | 43 | 70% |

Those who indicated that there is alternative provided the following suggestions:

- Monitor and enforce the current audit standards.

- Put wrongdoers in jail for a long time.

- Expand discussions in the MD&A and footnotes.

- If a change is necessary, the opinion letter could list areas of greatest focus in the audit that were discussed with the company's Audit Committee (or a similar standard). (And, to be clear, that is just what I think.)

- If there are matters that aren't being adequately addressed then rules should be expanded for management to address them in the qualitative discussions in Forms Q and K with in MD&A or elsewhere. Greatly expanding the audit opinion only adds to information overload.

- Enhance information about critical accounting policies if that is not currently adequate.

- In my view, the board of directors should provide a letter annually to investors.

- Consider more disclosure in the footnotes on critical accounting policies.

- Require the auditor to review MD&A and raise concerns if inadequate (this is already part of the auditors' responsibility)

- Assuming the Auditors already read the MD&A have them say in their letter to the Board and Shareholders "that in conjunction with the audit they have read the MD&A and when considered in relation to the basic consolidated financial statements taken as a whole presents fairly, in all material respects the information set forth".

- Consider expanded disclosure on Significant Accounting Policies | Critical Accounting Estimates

- Manage audit firm expectations through the investigation process that is already in place.

- Rather than continuing to add more costs to US public companies there needs to be a risk based assessment of what is truly most important from an investor's point of view. Stop requiring anything that is not a priority and focus only on the priorities. Our costs continue to increase with every letter that the PCAOB issues to any of the accounting firms and yet I would argue that neither the investors nor the company are benefited by the resulting reactions/changes.

- Expand Critical Acct Policies section/MD&A Section.

- Limit the discussion of Critical Audit Matters to: (1) material items, (2) items required to be disclosed by registrants, (3) items discussed with a registrant's Audit Committee, (4) expand the scope of auditor responsibility to MD&A only, and within MD&A only to items that are generated by the registrant's accounting system.

7. What were your company's total worldwide revenues in its latest fiscal year?

| | Number | Percent |
|---|---|---|
| Less than $1 billion | 8 | 13% |
| $1 billion to $3 billion | 27 | 43% |
| $3.01 billion to $5 billion | 14 | 22% |
| $5.01 billion to $10 billion | 6 | 10% |
| Greater than $10 billion | 8 | 13% |

Re: PCAOB Rulemaking Docket Matter No. 034

**Proposed Auditing Standards**

1. The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion;

2. The Auditor's Responsibility Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.

3. Marcum LLP ("Marcum", the "Firm") respectfully submits its comments on the referenced proposal. Marcum is a national, PCAOB registered CPA firm with offices in New York, Connecticut, Massachusetts, New Jersey, Pennsylvania, Florida and California. The Firm primarily serves microcap public and mid-sized nonpublic business entities, as well as many non-commercial entities.

**The Firm's Overall Comments**

We appreciate the opportunity to comment on the PCAOB's (the "Board") proposal. The proposal is a very significant change in the auditor's reporting on financial statements. Whereas we agree with the Board that the "pass-fail" model remains valid, we believe that certain of the proposals will degrade the reporting process:

- We believe that requiring the auditor to report on auditor tenure information in the auditor's report injects data that does not provide useful information and may imply problems or difference in quality where none exists.

- We believe that requiring the auditor to report on critical audit matters could result in a perceived difference in audit quality where none exists. In any audit conducted in accordance with PCAOB Standards, the auditor assesses the business in which the entity operates and the control risk within the entity, and addresses the audit risks that result from such assessments. We believe that the users of the audit report will not learn from the reporting of critical audit matters, whether such assessments were properly carried out or adequately addressed, nor will they learn any more about the company's business or control risks than is currently reported in other information filed with the Securities and Exchange Commission (the "Commission") and made public to users. Because the assessment of critical audit matters ("CAMs") is subject to wide interpretation, comparability is likely to be impaired. It is unclear to us whether a user would infer that set of financial statements, or the audit thereon, were of better or worse quality based on the number of critical audit matters disclosed under the proposed new auditor's report. Additionally, the number of such matters would vary between how individual auditors assess and categorize such matters.

- Requiring the auditor to report on CAMs could create the risk, especially with untrained readers that such reporting is read as a de facto piecemeal opinion on specific attributes of the financial statements.

- We believe that in regard to reporting CAMs, the Board may be attempting to address certain perceived problems through the audit reporting process that are better addressed through financial reporting standards through the appropriate standard setters.

- We believe that requiring the auditor to report on other information associated with the filing, including identifying material misstatements of fact, requires the auditor to express a conclusion the auditor is not trained or equipped to reach, and is beyond the auditor's competence. The auditor is considered to be expert in accounting and financial reporting, not in technology, marketing or the law.

- We also believe that the addition of excessive additional information can weaken the report's main message.

**<u>Auditor's Report</u>**

***Questions Related to Section II Objectives:***

1. **Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?**

   No. The objectives are understandable, but the guidance to implement the requirements is inherently too subjective to be useful. For example, the objective that critical audit matters be communicated is clear, but the supporting definition of CAM is widely open to various interpretations.

2. **The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?**

   No. Addressing the report to the shareholders and the board of directors is sufficient as it is a publicly available document. Therefore, it is not necessary to require further addressees.

3. **The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?**

   No.

4. **The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?**

   No. The title of the report, displayed prominently, is "Report of Independent Registered Public Accounting Firm". To add a redundancy in the body of the report just adds clutter that detracts from the reports main objective, which is rendering an opinion on the financial statements taken as a whole.

5. **The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**

   a. **Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**

      No. We do not believe that the length of the auditor's tenure has been shown to have any bearing on the quality of an audit and we are not aware of any body of reliable research that supports a correlation, much less causation between longevity of the audit firm and audit quality. We also believe that the board may be confusing data with information, or that more is always better no matter the relevance. Including this information could falsely give an impression that auditor's tenure in some way coincides positively or negatively with quality.

b. **Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**

No, however, the auditor's tenure should be explicitly defined to exclude predecessor firm tenure. When one firm acquires and merges with another firm, there may be inappropriate association of the pre-merged period with one of the pre-merged accounting firms or the combined accounting firm. By having the combined accounting firm associate with prior periods audited by one of the predecessor firms, it could increase the legal liability exposure of the combined accounting firm. Many transactions are structured as asset purchases, leaving the predecessor firm's legal existence intact, in order to mitigate exposure to historical liabilities of the predecessor. Additionally, there could be significant changes to the accounting firm's governance and quality control system subsequent to the merger, which would render the information useless, or worse, misleading.

Finally, should the Board decide to maintain the requirement to include the year the auditor began serving consecutively as the company's auditor, and should that requirement include firms that the auditor's firm has acquired or that have merged with the auditor's firm, some additional clarity is requested. For example, it is not uncommon for an individual audit partner of another firm to join a new accounting firm; that partner sometimes brings audit clients. Please provide guidance as to whether such a transaction would be considered a merger.

c. **Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

No. This information is not important or of significant use (Please see our response in 5.a. & 5.b. above). Inclusion in the audit report implies importance. In addition, the information is publicly available elsewhere. Excess information in the report make the report a less readable, and therefore less useful to the reader.

6. **The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

No. A requirement that the auditor provides, or appears to provide, assurance on Other Information, particularly misstatements of fact that can cover facts outside of the auditor's competence, is problematical.

The proposed standard by, among other things, requiring the auditor to state that there is no material misstatement of fact in the other information, expands the responsibility of the auditor to areas that we believe is beyond the competence of auditors and requires a conclusion that cannot be reached based on the proposed procedures (Paragraph 4, page A2 – 3). In addition, the inclusion of Other Information is often a legal matter; auditors are neither trained to nor licensed to practice law.

The proposed standard expands the auditor's responsibility from addressing consistency between the financial statements and other information to state that we are "evaluating" whether there are material misstatements of facts in the other information. This expanded requirement involves addressing legal matters and completeness of other information in addition to its accuracy. In particular, the requirements of paragraph 4.c. of the Proposed Other Information Standard should be deleted. Additionally, it is introducing a new term in the assurance lexicon, an "evaluation". We do not believe that it is clear what level of service or procedures would be performed by the auditor to qualify as an evaluation. We strongly recommend that these requirements be deleted from the proposal. However, should the Board decide to maintain the requirement to report on Other Information, we would suggest opinion language that would be similar to the following:

> In addition to auditing the Company's financial statements in accordance with the standards of the PCAOB, we are required to read the other information, included in the annual report on [*SEC Exchange Act form type*] filed with the SEC that contains both the December 31, 20X2 financial statements and our audit report on those financial statements, to determine whether it contains a material inconsistency with the financial statements. Our evaluation was based on relevant audit evidence obtained and conclusions reached during the audit. We did not audit the other information and do not express an opinion on the other information. Based on our evaluation, we have not identified a material inconsistency in the other information.

7. **Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?**

   Yes. This could be helpful to the reader by aiding comparability between auditor's reports for different companies.

8. **What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?**

   None.

9. **What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.**

The costs of a new requirement to report on a material misstatement of fact in Other Information that is not otherwise corrected by the reporting entity could be substantial, and would vary significantly between entities based on size and complexity. It is difficult to estimate such costs, but we estimate that it could be within 10% of total fees for small, non-complex engagements and as high as 25% for large complex engagements.

***Questions Related to Section V Critical Audit Matters:***

10. **Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

No. (1) Critical Audit Matters are too subjective. The inconsistency introduced in application by different accounting firms regarding what to disclose would make comparisons difficult between similar companies with similar issues, but different auditors. (2) The information would repeat much information that is already contained in the risk factors section of SEC filings; its inclusion would "crowd out" more relevant information and factors. (3) The additional factors would tend to either be short and formulaic, or excessively lengthy, and therefore unusable for the reader. (4) Disclosure of CAMs would likely be misunderstood by an inexperienced user that is not familiar with the audit process and does not have the context that both management and the company's audit committee possess.

Because the CAMs have been either resolved, or if not have been disclosed in a modification of the report or a scope restriction, it is uncertain what value is provided and to whom. We therefore believe it will not be useful. Although the information might be desired by a minority of users, and some investors would prefer as much additional data as possible, we do not believe such extra data would be relevant, or that the auditor's report would be the best place for it. It is not the auditor's responsibility to the reader to share the substance of the audit, especially if paired with responses and procedures, with the investor. We believe that management should be disclosing and discussing the critical aspects of a Company's business that would also be critical audit areas by nature and generally has more flexibility in doing so. The Board should not require the auditors to assume the responsibility of management.

We are not aware of other alternatives that should be considered.

11. **What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

This section of the auditors' report could become very lengthy and time consuming to prepare, adding to costs. It could also become too lengthy and needlessly technical and therefore become confusing. Complex audit engagements typically have various critical audit areas. To require a discussion of such matters in the auditors' report could transform the auditors' report into a version of the registrants' forepart. Any audit is subject to more than one valid approach; such approaches could result in different critical audit areas or different definitions of those areas. Reporting has been down this road before with the "long form" audit report, which has long been discredited and dropped from use. It would be undesirable return to the "long form" audit report.

As noted above, if the CAMs have already been addressed and resolved, then we believe the relevance of the additional disclosure in the auditor's report is doubtful. If the matter is resolved, it is unclear what inference a user should draw from the inclusion of resolved matters?

CAMs and their disclosures are the responsibility of the registrant. The auditors' responsibility is to conduct their audit, address the critical audit matters and render their opinion. Inherent in the auditor's opinion is the fact that their audit sufficiently addressed these matters. In addition, the presentation of the areas that the auditor determined to be critical is also subjective and would likely generate unwarranted criticism/second-guessing from others. The time required to complete an engagement would also be lengthened due to the proposed expanded content of the auditor's report within the existing very tight filing deadlines.

As noted above, there is a difference between data and facts. Piling everything that any interest group believes would be useful into the auditor's report makes the report longer, but not necessarily better.

The proposed requirement to disclose CAMs could be expected to result in a large increase in frivolous litigation.

The probability of such additional exposure could be expected to result in over-reporting of critical audit matters, which would make the report less user friendly and usable.

12. **(a) Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? (b) Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? (c) Is the use of the word "most" understood as it relates to the definition of critical audit matters?**

(a) No. It is too subjective. The Board appears to have made a good faith effort to limit the disclosure to those CAMs that would be discussed with the audit committee, however, we believe that the additional exposure inherent in this proposal would lead to a much broader inclusion of matters. It is also unclear how inclusion of a critical audit matter in the audit opinion adds any relevant information that would not otherwise be provided by existing disclosure in the financial statements. (b) No. It is by nature subjective and subject to interpretation by the auditor and the user, which cannot easily be resolved through a standard, no matter how refined the definitions. For example, what poses the greatest difficulty will vary by individual and audit team. (c) No.

13. **Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

The time required in reviewing and drafting the additional disclosure, particularly if it needs to be addressed in a defensive manner (see comments on frivolous litigation above) will detract from time better spent addressing the procedures surrounding the audit. This additional time requirement would drain available resources, both of the auditor and the audited entity from the major focus of the audit.

14. **Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?**

Yes, although the CAMs themselves are highly subjective and subject to interpretation.

15. **Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

No. (a) We wish to remind the Board that audit reporting has been down this road before and the so-called "long-form report" was discontinued long ago. We do not believe this type of format would be considered to be any more useful today. (b) We can't see any benefit to the user; providing such detail could undermine the acceptance of the current "pass-fail" reporting model. (c) The audit procedures performed are proprietary information and do not belong in the auditor's report. Informing the reader of the auditors' procedures is circumventing the audit process. One area in particular that would be affected is the audit for fraud. We should not disclose to a company how we audit for fraud. (d) The individual consideration of specific elements of the audit process could also be construed as forming a de facto separate (or piecemeal) opinion on specific matters, which is prohibited.

16. **Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

Yes, but they are only helpful for internal purposes, in which governing boards have appropriate information and context. They are too subjective for meaningful disclosure to third parties.

17. **Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

No. These matters should be left to the professional judgment of the auditor, and attempts to codify them create more difficulty in allowing the auditor to apply such professional judgment.

18. **Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?**

    It is sufficiently clear in that an auditor can understand the criteria to be used. It is not sufficiently clear for the purposes of this proposal in that its high subjectivity cannot by nature be overly defined and attempts to do so should be resisted.

19. **Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?**

    It may contribute to additional consideration, although it would more likely contribute to defensive over-reporting. Excessive disclosure might be added in order to avoid second-guessing in what is by nature a subjective field. Such over-reporting may actually defeat the intent by resulting in the disclosure of information of lesser importance. We are not aware of any further changes the board should make because we believe that the board's intent is already appropriately met under current standards.

20. **Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?**

    Yes, it is sufficient.

21. **What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?**

    As previously noted, the additional costs are going to be incurred at the higher level of the engagement team in identifying how to communicate the critical audit matters including the firms' quality control review function. More consideration is going to be focused on auditor exposure. This will include additional time at every level of review, consultation with technical reviewers and possibly with in-house counsel that would not provide additional audit quality. Yes, considerations will be similar in nature for all types of audits, however, more complex audits will be more costly.

22. **What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?**

We believe additional time spent by management with the auditors regarding the reporting of CAMs could add to the company's cost, the amounts of which would vary depending on the size and complexity of the audit. Management will probably consider this a source of additional risk and unintended consequences.

23. **How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?**

    Based on the responses to the matters discussed above, we believe audit fees will increase.

24. **Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?**

    Yes, If CAMs exist and have never been communicated before then communication for all periods presented is appropriate. We believe, generally for recurring audits, that critical audit matters will not vary from period to period. In the case of material non-recurring transactions, there would be a possibility to probability that CAMs might vary between periods.

25. **Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?**

    The examples are useful to the extent that they describe what the Board has in mind, however we believe that they have two flaws: (1) the examples are too "textbook" and do not provide usable guidance as to what level of disclosure should be made; (2) the examples appear to be de facto piecemeal opinions on specific matters.

26. **What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.**

    The CAMs are going to differ as they are going to be judgmentally written by different audit firms. There are different, equally valid approaches to any problem, which would result in either different CAMs or different methods of describing them. Audit firms internal policies and standards may also result in different styles of presentation. This would likely make it more difficult for a user to determine what inferences to draw from the additional disclosure. A user could draw inaccurate conclusions that they may not have otherwise drawn. The additional requirements might produce more unintended consequences than benefits. For example, users may derive inappropriate inferences from a long list as opposed to a short list of CAMs. If the CAM has been resolved, it is not relevant, but may be given unwarranted relevance through the added audit report disclosure.

Differences will also exist depending on the type of entity, i.e. industry and complexities, however, this source of difference would not be considered a negative.

27. **What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**

Although we believe it is beneficial to report resolved disagreements to those involved in governance, we do not believe it is beneficial to the outside user, who can't put it into the context of the Company's internal operations and controls. We do not believe, for example, that auditors are professionally trained to determine when a "possible" illegal act is "possible"? Many of the Board's examples in the Appendix come close to being piecemeal audit opinions, detract from the "financial statements as a whole" and introduce clutter rather than needed information. If the Board believes its current proposal for reporting CAMs will resolve some undefined problems with the current financial disclosure model, the appropriate remedy is to improve accounting and reporting standards through the appropriate standard setters.

As noted in our responses to several of the Board's previous questions, we believe that reporting CAMs is by nature highly subjective and would be expected to detract from the comparability between similar companies. Since there is no standard or context by which to analyze what is essentially not relevant since the CAMs have been resolved, the effects of reporting such matters may have unintended consequences.

As also noted above, this standard also appears to open the parties to endless frivolous litigation, increasing costs and perhaps resulting in significant defensive over-reporting, resulting in a less usable report.

28. **What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?**

We would expect expanding the auditor's report to include CAMs will result not only in significant excess litigation that would increase costs without providing any offsetting benefit or protection to the investing public. We are unaware under what authority the Board could mitigate the likelihood of this consequence.

*Questions Related to Section VI Explanatory Language:*

29. **Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?**

    Yes.

30. **Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?**

    Yes. No standard can foresee every circumstance. Some scope for judgment should be retained for those cases in which the auditor believes something should be brought to the attention of the user. This is, and should be, used in limited circumstances, not as a normal course of action.

31. **Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?**

    No. As noted above, this would be similar to discarding our successful common law tradition and trying to replace it with an inflexible legal code. No command and control solution can address a complex and changing landscape as well as allowing some scope for judgment.

32. **Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?**

    No.

*Questions Related to Section VII Conforming Amendments:*

33. **Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?**

    <u>Amendments to Auditing Standard No. 5</u>

    The "statement that the auditor is a public accounting firm registered with the PCAOB and is required to be independent with respect to the company in accordance with the United States federal securities laws and the applicable rules and regulations of the SEC and PCAOB" is not in and of itself inaccurate or harmful, we believe it is unnecessary and redundant, does not contribute any value and adds only clutter that detracts from the central message of the auditor's report.

The "statement containing the year the auditor began serving consecutively as the company's auditor" does not contribute useful information given the lack of any apparent connection between longevity or lack thereof and quality of the audit.

Amendments to Auditing Standard No. 6

Appear appropriate

Amendments to Auditing Standard No. 7

Appear appropriate

Amendments to Auditing Standard No. 16

As noted above, we believe that these communications do not belong in the auditor's report.

34. **What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.**

Audit fees would increase due to the additional requirements of Auditing Standard 16 and exposure to abusive litigation would increase.

*Questions Related to Section VIII Specific Entities:*

35. **Are the proposed auditor reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?**

No.

36. **Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report critical audit matters appropriate for audits of brokers and dealers? If not, why not?**

No. We do not believe that they are appropriate for any audit for the reasons described above.

In addition, the readers of an audit report on broker dealers are much more limited in number as they are generally privately held and therefore there would not be any extended benefits derived from such a requirement. Furthermore, it would be unduly burdensome on the time and cost perspective to the clients and their auditors of such entities.

37. **Since a broker or dealer may elect to file with the SEC a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?**

    No. There doesn't appear to be any difficulty or lack of understanding for the affected users here. There is no risk that requires mitigation.

38. **Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?**

    No.

39. **Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?**

    No.

40. **Should audits of certain companies be exempted from being required to communicate critical audit matters in the auditor's report? Why or why not?**

    Yes. Broker dealers that are not publicly held should be excluded. Otherwise, all public companies should be treated alike.

***Questions Related to Section X Effective Date:***

41. **Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?**

    Generally, yes. However, as with most new PCAOB standards, effective dates should be stated as fiscal year ending dates. Occasionally companies change year-ends, or for other reasons report on short periods. For example, the audit of a SPAC for an inception period dated March 1, 2016 to March 15, 2016, would require application of these new standards. As a result, an audit firm's implementation of a new standard could be at different times during the year. When implementing new standards, an audit firm needs to modify its policies and procedures and train its staff on the new requirements. It would be more practical to set effective dates based on a company's fiscal period end, so there is more uniformity with the timing of the implementation.

42. **Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

    Consideration should be given to an earlier date for accelerated filers to allow a lessons-learned year before the higher volume SRC audits come on line.

**<u>Other Information</u>**

The Firm is opposed to the proposed requirement that auditors report on other information as set forth in our response to Question 6 to the PCAOB's Auditor's Report section above.

***Questions Related to Section I Introduction:***

1. **(a) Is the scope of the proposed other information standard clear and appropriate? Why or why not? (b) Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?**

    (a) The Firm believes the scope of the other information standard is unclear. Much data, including that filed with the SEC, are made available on company websites, in some cases directly, in other cases by a link to the EDGAR database; it appears the former is not covered by the proposed standard, but the latter is; we question whether this makes any sense. And if the "glossy" annual report is partially incorporated by reference, readers will have difficulty sorting out what is covered and what is not; this seems to make little sense.

    (b) The Firm believes the proposed other information standard should be limited to annual reports.

2. **(a) Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? (b) Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?**

    (a) The Firm believes the proposed other information standard should be restricted to information that is expressly included in the document that includes the audited financial statements. In particular, there will be significant additional costs incorporating forward documents, such as a proxy, or an amended Form 10-K that includes the Part III information. It will be very difficult for auditors to control the process, as clients will not need their audit firm's opinion or consent to be included in the document. As such, it is possible that documents will get filed without the auditor's authorization. Such a requirement should only be implemented with a corresponding amendment to SEC rules to require a formal auditor consent, so that there is a definitive process for documenting and reporting that the auditor has completed its required procedures. Additionally, while there will be added cost and burden on auditors to comply, the users of the financial statements will not likely understand the auditor's involvement with the other information when it is incorporated by reference, so there will be no perceived benefit by the user community.

(b) The Firm believes there are substantial incremental costs associated with requiring the auditor to include other information incorporated by reference within the scope of the proposed other information standard, along with the practical difficulties of identifying such information, which may have changed since the date the auditor's report was issued.

3. **Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?**

The Firm believes that unless the cause of the amendment requires the auditor to update their audit report for information that impacts the amended financial statements, it is not appropriate to apply the proposed other information standard to amended annual reports. To do so would require the auditor to continuously update their audit report which would be unduly expensive.

4. **Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are there practical issues with applying the proposed other information standard to the other entity's audited financial statements?**

The Firm believes the proposed requirement is unclear. If it means that audited financial statements furnished pursuant to Article 3 are considered "other information," the Firm disagrees with the requirement; audited financial statements should not be considered "other information". Further, reporting on those financial statements is the responsibility of the other entity's auditor; the company's auditor should have no responsibility for them.

In addition, if the "other information" concerning the other entity is interspersed in the document with that of the registrant, identifying which auditor has responsibility for what information could be impractical. Also, it would not be practical for the Article 3 auditor to give any level of assurance, even negative assurance, on information related to the company, and vice versa. Such information should be clearly and affirmatively scoped out of the proposed standards.

*Question Related to Section II Objectives:*

5. **Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?**

   The Firm believes the stated objectives are helpful, but we disagree with the auditor being held responsible for evaluating whether the other information has a material misstatement of fact. Please refer to the Firm's response to Question 6 under the proposed auditor reporting standard.

*Questions Related to Section III Evaluating Other Information:*

6. **Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?**

   The Firm agrees with the proposed requirement to evaluate the other information for a material inconsistency with the financial statements, but we do not agree with evaluating it for a material misstatement of fact. Please refer to the Firm's response to Questions 6 under the proposed auditor reporting standard, and the Firm's response to Question 5 above.

7. **Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?**

   The Firm agrees that providing an auditor evaluation may convey greater confidence in the other information. However, the Firm is doubtful the reporting requirement will have any impact on the content of the other information. No additional procedures are necessary or appropriate.

8. **Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information? Would applying this definition represent a change to the materiality considerations auditors currently use under AU sec. 550?**

   The Firm believes the appropriate standard of materiality to apply in the proposed other information standard is that currently stated in AU sec. 550. Auditors already consider the implications of the SEC's definition of materiality in evaluating the impact of any variances.

9. **Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?**

The Firm believes the proposed procedures are appropriate for evaluating inconsistency with the financial statements, but they are not appropriate for evaluating any material misstatement of fact. There may be no link between audit evidence obtained and conclusions reached during the audit with the facts included in the other information, so the auditor would have no basis for the negative assurance proposed by the PCAOB. Arguably, since the fact is not within the scope of the evaluation, there is no assurance given, but a reader would then have no way of knowing what facts are subject to assurance and what facts are not.

10. **Is it understood which amounts in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?**

    The requirements set forth in paragraph 4.d. appear clear. However, to the extent recalculation is based on "other audit evidence" a user will not know whether it has been recalculated because the user will not know the content of the "audit evidence."

11. **Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?**

    If the auditors are required to deal with misstatements of fact in the manner proposed, they may feel forced to investigate the validity of facts not subject to audit evidence obtained and conclusions reached during the audit, and the cost of this could be substantial.

12. **Are the proposed auditor responses under paragraph 5 appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If not, why not?**

    The Firm believes the proposed auditor responses under paragraph are appropriate.

13. **Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?**

    The Firm believes the increased cost of implementing the proposed other information standard will be substantial. Also refer to the Firm's response to Question 11. above.

*Questions Related to Section IV Responding to Inconsistencies and Misstatements in Other Information*

14. **Are the proposed auditor's responses under paragraphs 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

The Firm believes the proposed auditor responses are appropriate.

15. **(a) Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? (b) Under what circumstances would such a report be appropriate or not appropriate?**

    (a) No. A material inconsistency is a serious matter. If an auditor is unable to convince management and the audit committee that such inconsistent information be revised, then they should not be permitted to issue an audit report. By allowing the auditor the option of reporting the existence of a material inconsistency, it diminishes the seriousness of the issue. Auditors and management should be required to work out the issues, as is required with respect to an auditor's report (i.e. GAAP exceptions, disclaimers, adverse opinions are generally not acceptable in filings with the Commission).

    (b) It should never be appropriate.

16. **Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

    The Firm believes the proposed responses are appropriate, but this situation creates a real problem. The auditor has no responsibility to investigate what occurs after its report is issued, and it is possible that a client may publish the other information without clearing it with the auditor; this is not unlikely if non-financial personnel are preparing the other information and controls over its release are not followed. As the time between the release of the auditor's report and the availability of the other information increase, the likelihood of inconsistencies increases.

***Question Related to Section V Responding if there is a Misstatement of the Financial Statements Based on Other Information***

17. **Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed other information standard, the auditor determines that there is a potential misstatement in the financial statements? Why or why not?**

    The Firm believes the proposed responses are appropriate.

***Questions Related to Section VI Reporting in the Auditor's Report:***

18. **Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?**

As pointed out in the Firm's response under Auditor's Reports Question 6, the scope of assurance given by the auditor when saying they "have not identified any material inconsistency with the financial statements" is very unclear. Among other reasons discussed elsewhere in this letter, the Firm is opposed to the proposed requirement that auditors report on other information.

19. **Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.**

The Firm believes that if the auditor does not have relevant audit evidence against which to evaluate certain other information (which may be relatively frequent under the PCAOB's proposal), the auditor will need to say so in its report. However, such a statement, which may run to multiple pieces of information, is bound to create confusion to the reader, which is undesirable. This potential for confusion is yet one more reason that the Firm is opposed to the proposed requirement that auditors report on other information.

20. **What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?**

The Firm does not believe these costs will be significant, and only marginally greater than incurred under the current reporting standards.

21. **Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?**

The Firm believes there is a real danger that financial statement users will consider any information that the auditor refers to in its report to be "verified," "certified," "approved" or similar terminology, regardless of what the auditor actually says in its report.

22. **Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?**

No, the presumption is reasonable that management will resolve the material inconsistency or material misstatement in the other information.

***Question Related to Section VII Responsibilities of a Predecessor Auditor:***

23. **Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?**

    The Firm believes the proposed responsibilities are appropriate and sufficiently clear.

***Questions Related to Section VIII Other Considerations:***

24. **(a) What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? (b) Would this reporting lead to an unwarranted increase in private liability? (c) Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?**

    The Firm presents the following responses to the specific questions:

    (a) The expansion of the auditor's report to include other information is likely to expand the risk of the auditor being drawn into private litigation, although perhaps to a lesser degree than the proposed reporting of critical audit matters. Nevertheless, there is some increased risk.

    (b) It could, consistent with our response to (a) above.

    (c) Any steps the Board, or the SEC (possible safe harbor?), could take in considering ways to mitigate the likelihood of increasing the auditor's potential liability under the proposed other information standard ought to be considered.

25. **Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?**

    The Other Information reporting requirements are stated to apply only to annual reports in Exchange Act filings. However, many of those filings are incorporated by reference into Securities Act filings. It is unclear how Section 11 liability can be avoided in this situation.

    We suggest that the PCAOB, possibly with the assistance of the Commission's staff, carefully examine the potential effect on auditor's liabilities under the securities acts and state laws.

*Questions Related to Section IX Conforming Amendments:*

26. **(a) Are the proposed amendments to PCAOB standards, as related to the proposed other information standard, appropriate? If not, why not? (b) Are there additional amendments to PCAOB standards related to the proposed other information standard that the Board should consider?**

    (a) Yes

    (b) No

27. **In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?**

    The Firm believes the Board should require such statements in order to remove a possible ambiguity.

*Question Related to Section X Broker Dealers:*

28. **Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?**

    No, unless the broker/dealer is publicly held.

*Questions Related to Section XI Effective Date:*

29. **Is the Board's effective date appropriate for the proposed other information standard? Why or why not?**

    The Firm recommends the Board establish a tiered effective date for accelerated and non-accelerated filers similar to our response in Question 42 related to the proposed auditor reporting standard. Also see our response to Question 41 regarding the use of fiscal years ending, instead of fiscal years beginning.

30. **Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

    See the Firm's response to Question 29 above.

***Questions Related to Section XII Securities Act Documents:***

31. **Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?**

    The Firm does not believe the application of the proposed other information standard should be extended to other securities act filings containing audited financial statements. For example, in an underwritten offering, the other information external to the financial statements is usually thoroughly vetted by the underwriter and further reporting by the auditor would not add any value.

32. **Are there some elements of the proposed other information standard that the Board should consider requiring the auditor to perform related to other information contained in filings under the Securities Act, such as the auditor's responsibility to evaluate the other information? If so, which elements of the proposed other information standard should the Board consider including in the procedures currently required for Securities Act documents under AU sec. 711? If not, why not?**

    The Firm does not believe the application of the proposed other information standard should be extended to other Securities Acts filings that do NOT contain audited financial statements, as the basis for reviewing such other information is the financial statements.

    Further, the Firm does not believe any part of the proposal should be limited to Exchange Act filings and not extended to any Securities Act filings.

33. **What costs or other challenges should the Board consider when assessing whether to propose extending some elements of the proposed other information standard to other information contained in documents filed under the Securities Act?**

    As we stated in our responses to several questions above, the Board should limit the required other information standard to securities filings that contain the annual report.

<u>Emerging Growth Companies</u>

1. **Should the proposed standards and amendments be applicable for audits of EGCs? Why or why not?**

    The proposed standards and amendments should not be applied to EGC's until they are fully effective for accelerated and non-accelerated filers and they have been evaluated for effectiveness. Imposing these complex new reporting requirements on EGCs could make the capital raising process more difficult for them.

2. **Are there any other considerations related to competition, efficiency, and capital formation that the Board should take into account with respect to applying the proposed standards and amendments to audits of EGCs?**

   No.

3. **Are there any special characteristics of EGCs that the Board should consider related to the proposed auditor reporting standard, including the communication of critical audit matters?**

   No.

4. **Would audits of EGCs be more, less, or equally likely to have critical audit matters?**

   EGC's in a particular industry are no more or less likely to have critical audit matters than established companies.

5. **Are there any special characteristics of EGCs that the Board should consider related to the proposed other information standard and amendments?**

   No.

6. **What costs would audit firms incur when implementing the proposed auditor reporting standard, including the communication of critical audit matters, for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?**

   The Firm cannot distinguish between the cost of implementing the proposed auditor reporting standard or the proposed other information standard between EGCs and established companies. However, it is likely the costs could be higher due to dealing with a newly formed company's need to establish its significant accounting policies and procedures, and may be disproportionately higher because of the relatively smaller size of EGCs.

7. **What costs would audit firms incur when implementing the proposed other information standard for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?**

   See the response to Question 6 above.

8. **Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed auditor reporting standard and amendments to EGCs?**

See the response to Question 6 above.

9. **Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed other information standard and amendments to EGCs?**

   See the response to Question 6 above.

10. **For auditors of both EGCs and other SEC registrants, would it be more costly not to apply the proposed standards and amendments to audits of EGCs because the firms would need to develop and maintain two audit methodologies?**

    This would not have a significant cost impact for audit firms, as PCAOB audit firms have been maintaining two audit methodologies since the formation of the PCAOB in 2003 (referring to PCAOB audit standards for publicly held clients and AICPA audit standards for non-public clients).

****

The Firm would be glad to discuss its comments further should the Board have any questions or require additional information.

Very truly yours,

Marcum LLP

December 11, 2013

Public Company Accounting Oversight Board
Attention: Office of the Secretary
1666 K Street, NW
Washington, DC 20006-2803

Docket Matter No. 034

Members of the Board:

MasterCard Incorporated appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or the "Board") Release No. 2013-005 dated August 13, 2013, "*Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards*" (the "Proposed Standard"). We appreciate the Board's efforts to make improvements to the auditor's report by means of endorsing more valuable auditor reporting. However, we have significant concerns over the implications the Proposed Standard would have on the role of the auditor, the responsibility of management to be the source of company-specific information, and the flow of information between a company and its auditor.

**Critical Audit Matters**

The communication of critical audit matters, as determined by the auditor, poses several significant areas for concern. Appendix 5 of the Proposed Standard asserts that auditor communication of critical audit matters could lead to improved financial statement disclosures. We believe that the disclosures as required by the Financial Accounting Standards Board and the U.S. Securities and Exchange Commission ("SEC"), coupled with management's judgment, provide the adequate amount and level of information to investors for decision making purposes. Further, it is management's responsibility to ensure that disclosures are complete, accurate, balanced and in compliance with existing securities laws. We have concern that the Proposed Standard attempts to supplement current disclosure requirements and suggests that those requirements are not sufficient for investors. We do not believe that the auditor communicating critical audit matters, which may be based more in auditing matters, would lead to improved financial statement disclosures. To the contrary, these disclosures could result in investor confusion.

AU 110 *Responsibilities and Functions of the Independent Auditor* states that: "The entity's transactions and the related assets, liabilities, and equity are within the direct knowledge and control of management. The auditor's knowledge of these matters and internal control is limited to that acquired through the audit." The Proposed Standard would require auditors to be the source of information, which raises concern that a third-party is being asked to communicate information that is not within their direct knowledge and control. Further, a third-party may not possess the necessary depth of knowledge, unlike a company's management, to adequately comment on critical matters. Thus, we have serious concern that a third-party would be an originator of company information.

MasterCard

Critical matters are disclosed in management's discussion and analysis and in the notes to the financial statements. We expect that the discussion of critical audit matters would be aligned with that of critical accounting estimates, and therefore auditor disclosure will likely be repetitive in nature. However, the communication of critical audit matters creates the potential for inconsistent identification of matters as the determination of a critical audit matter could be influenced by the audit partner or audit firm. The Proposed Standard may also have the unintended consequence of shifting the ultimate decision of disclosure from a company to the auditor based on audit report communication. Further, it is also not evident how investors would utilize and benefit from the disclosure of critical audit matters. Therefore, the disclosures may lead to investor confusion, which would directly conflict with the objective of the Proposed Standard.

We also have concern that the Proposed Standard will have a negative impact on the current, open dialogue that exists between management, auditors and audit committees. Specifically, if certain discussions would trigger auditor external reporting requirements, it is logical to believe that such future discussions would exclude the auditor. This unintended behavioral consequence will likely negatively impact the quality of the audit, contradicting the intention of the PCAOB.

**Other Information**

We anticipate that there would be significant incremental audit procedures required by the audit firms in order to evaluate the other information and communicate on such under the Proposed Standard. These additional procedures will prove to be costly to companies given the comprehensive scope of other information, including forward-looking statements. Considering the audit firm is not required to audit or express an opinion on the other information, we do not believe the cost of adding to the current level of requirements exceeds any perceived benefit.

**The Auditor's Responsibility for Fraud**

We recognize that the additional language in the Proposed Standard, "whether due to error or fraud", is not intended to modify the auditor's existing responsibilities with respect to fraud. However, the inclusion of such language raises concern that investors will perceive auditors to provide more than a reasonable assurance against material fraud. This perception may result in an increased legal and financial risk to auditors. Further, auditors may choose to increase sample sizes beyond a statistical benefit in order to mitigate perception risk, impacting the cost of an audit.

We appreciate the opportunity to provide comments on the Proposed Standard. If you have any questions, please contact me at (914) 249-5222.

Sincerely,

Andrea Forster

Re: PCAOB Release # 2013-005 dated August 13, 2013
PCAOB Rulemaking Docket Matter # 034

Maxim Integrated Products, Inc. is pleased to submit its views in response to the PCAOB's most recent request for comments on the two recent proposals – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion (the "proposed auditor reporting standard") and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report (the "proposed other information standard").*

While we appreciate the PCAOB for its solicitation of comments to address the issues discussed in PCAOB Release # 2013-005 and in its goal of trying to improve the auditors' report, we believe that the required disclosures have the potential to confuse investors by blurring the roles between the auditors, management, and the audit committee. Additionally, we believe that the proposed standard would significantly increase audit costs while providing little added context for investors. We, therefore, do not support the two new auditing standards proposed in PCAOB Release # 2013-005.

Specifically, we believe the requirement in the proposed auditor reporting standard that the auditor communicate in the auditor's report "critical audit matters" may cause confusion among investors. The company already discloses and comments on critical accounting policies and judgments in its Form 10K filings, which our auditors review and have the opportunity to provide comment. Under the proposed auditor reporting standard, a critical accounting policy item discussed by management in Management's Discussion and Analysis (MD&A) might be discussed within the auditor's report because it requires significant judgment while another critical accounting policy might not be discussed due to a lack of significant judgment. Investors may not understand the nature of why one item was disclosed while another item was not and might draw unwarranted inferences. Deciding what would be discussed and not discussed by the auditors in its audit report in the area of "critical audit matters" would in itself require judgment which in our opinion lessens the value of the auditor's report, as investors would have to read between the lines in trying to ascertain why certain audit policies were discussed in the auditor report and others were not.

In addition, we believe the requirement in the proposed other information standard to expand the auditor's report to include financial information outside of the financial statements, such as the MD&A, may also confuse investors and create questions as to who is ultimately responsible for the financial statements. We believe the Sarbanes-Oxley Act made it very clear to investors that management is ultimately responsible for the accuracy of the financial statements and that the auditor's role is clearly limited to the attestation function. To require an auditor to expand its audit report to evaluate and comment on such information will likely add substantially to the costs of audits as there would be significant time spent within the audit firm on what should be disclosed, and subsequent discussions with management to ensure that the company's disclosure and auditor's report contain consistent and substantially similar information.

We would like to thank the PCAOB for the opportunity to comment on the recent proposal and want to reiterate that we do not support the proposals contained in Release 2013-005.

Sincerely,
Joseph R. Bronson
Audit Committee Chairman

Re: PCAOB Rulemaking Docket Matter No. 34

Proposed Auditing Standards –

1. The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion;

2. The Auditor's Responsibility Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.

Mayer Hoffman McCann P.C. ("MHM") is pleased to provide the PCAOB (or "the Board") its comments on the above referenced proposed auditing standards. The PCAOB's desire to evaluate the auditor's reporting model is certainly understandable given that the current reporting model has remained in place without significant change for several decades.

We agree with the Board's decision to retain the current "pass/fail" reporting model. Our comments are directed at the Board's decision to significantly expand the auditor's reporting responsibilities, specifically the requirement to disclose in the auditor's report certain "critical auditing matters" as determined by the auditor and the auditor's responsibility for other information.

**Disclosure of Critical Auditing Matters**

We believe that a significant reason the current auditor reporting model has stood the test of time is that it conveys to investors the auditor's opinion on the financial statements in a concise, straight forward manner. We are concerned that the proposed additions to the auditor's report (i.e., critical auditing matters) may produce unintended consequences that are not wholly desirable.

While we understand the desire to provide investors with additional "color" related to the current pass/fail model; it is entirely possible that such information will prompt investors to interpret the additional information disclosed by auditors in a manner inconsistent with the actual meaning of the auditor communication. For example, does the disclosure of a significant number of critical audit matters infer something "bad" is happening with an entity's financial reporting? There are many aspects of an entity's financial reporting process that while routine in nature retain a high degree of complexity and subjectivity. Will these be disclosed as critical auditing matters? If so, will investors understand that nothing out of the ordinary was identified by the auditor? Will investors try to compare audit reports across companies and industries and reach conclusions that cannot be supported based on the subjective nature of the proposed auditor communication, which are almost always dependent on a set of facts and circumstances unique to the company and audit engagement. Our observations are not intended to ignore the possibility that in many cases the additional proposed disclosures might be useful to investors. However, we want to voice our concern that in some cases the information disclosed by auditors will have the potential to be misunderstood by investors, thereby greatly diminishing the value of the communication or leading to unintended consequences. The subjective nature of critical auditing matters leads to other operational concerns within the existing regulatory environment. For example, how will the PCAOB evaluate decisions about what to include in the auditors' report? How will the PCAOB determine and describe its conclusion during the inspection process if it disagrees with the decisions of an engagement team? Additionally, how will the Board ensure that its interpretations are consistently applied given that each firm may address audit matters differently, even with the same set of circumstances (i.e., choose different things as critical audit matters or go into more or less detail about such issues, etc.)?

The matter of legal liability must also be considered when evaluating the Board's proposed auditing standards. Some commentators have suggested that the disclosure of critical audit matters will serve as a road map to the "plaintiff's bar" when an auditor's work is subject to regulatory and/or legal action. Auditors will have to carefully evaluate which matters to disclose and choose the appropriate wording that best reflects the facts and circumstances underlying the critical audit matter. Firms will by necessity involve their most senior and technically proficient audit and legal professionals in the drafting process. The amount of dialogue between the auditor, management and the audit committee will likely be significant. Some firms may resort to "boiler plate" disclosure while others may include everything "under the sun" in an attempt to deal with regulatory and legal risk. The combination of these factors leads us to believe that the cost related to the disclosure of critical audit matters is almost certain to be significant, while the actual benefit to investors may prove difficult to accurately determine. Additionally, we believe the proposed reporting requirements will likely place additional strain on both the auditor and management with respect to meeting existing reporting deadlines.

The proposed changes to the auditor's reporting model may imply that the auditor could, or even should, provide information to investors not previously made available to investors by management. The auditor's role has always been to verify information prepared by management as opposed to becoming a source of new information for investors. Is it possible that investors might try to use information coming from the auditor in a manner inconsistent with its intended use, thereby altering the role and function of the auditor? For example, determining the existence of critical audit matters requires the auditor to consider the severity of control deficiencies identified relevant to the matter, if any. This could imply the auditor discloses internal control deficiencies at a level below a material weakness, where management has no requirement to do so. We respectfully ask the Board to clarify that it does not intend for auditors to "grade and report" internal control deficiencies through the communication of critical audit matters, when existing auditing standards that apply to the audit engagement do not require the auditor to do so.

We note that in the examples provided by the Board to illustrate the determination of critical audit matters, the Board chose to describe certain auditing procedures related to the critical audit matter. It is not clear whether the Board intends the auditor to provide a description of the auditing procedures related to the critical audit matter. We believe the inclusion of detailed auditing procedures in the auditor's report will be operationally difficult, distracting to investors, and may add significant volume to the auditor's report that does not provide a significant benefit to most investors. If the PCAOB believes that auditors should describe the auditing procedures related to the underlying critical audit matter, we request that the PCAOB clarify their expectation related to describing audit procedures and provide a sufficient number of examples to help auditors understand the expectation.

**Other Information**

With respect to the Board's proposal on "other information" we are principally concerned with two major items. The first is the possibility that an "expectation gap" will exist whereby investors believe that they have some form of audit assurance related to other information simply because the auditor is required to make an assertion about it in the auditor report. The second is the increase in cost related to the audit engagement that is virtually certain to occur under the current proposal. While some firms may already perform procedures related to other information (as a form of best practice), the inclusion of an assertion related to such procedures in the auditor's report is likely to prompt more rigor in both the procedures themselves and the documentation of the procedures performed related to other information. We note that both an "expectation gap" and an increase in costs occurred when the CEO and CFO certifications were implemented several years ago, as part of the Sarbanes Oxley Act of 2002.

We are also concerned with the meaning of the term "evaluate" used in the proposed standard on other information to describe the procedures required of auditors. The term "evaluate" could infer that an auditor needs to do whatever is necessary to reach a conclusion about the other information, as opposed to performing a standard set of procedures. We ask the Board consider whether the term "evaluate" is precise enough in its meaning to appropriately describe the Board's expectation of auditors under the proposed auditing standard on other information.

There are other matters that may create operational difficulties for auditors, for example, what responsibility does an auditor have for other information not derived from the accounting systems and internal controls over financial reporting that are the subject of the audit? There are typically a number of statements made by management in the annual report that are highly subjective in nature. While we understand the Board expects auditors to work through such matters by engaging in conversation with management, such activities will certainly contribute to the overall cost of implementing the standard given that subjective judgments are often selected by regulators and plaintiff's attorneys as potential issues to challenge.

**Disclosure of Auditor Tenure**

We do not believe the disclosure of the auditor's tenure is particularly relevant and therefore we question its value to investors. We note that many commentators have noted the lack of empirical evidence that establishes a direct correlation between auditor tenure and audit quality. We are also concerned that disclosure of auditor tenure in the auditor's report may be interpreted by investors as implying a problem with auditor independence when none exists. We believe the appropriate place for the disclosure of the auditor's tenure is the Company's proxy statement.

In closing, we note that recently the PCAOB reproposed an amendment to its auditing standards that would provide greater transparency to audits of public companies and broker-dealers about the engagement partner and certain other participants in the audit. Because this proposed amendment also impacts the auditor's report, we respectfully recommend that the timing related to the issuance of a final auditing standard pertaining to the proposed standards noted in number one and two above be delayed until the PCAOB concludes the process related to its auditor transparency standard. This allows for a one-time change to the auditor's report that encompasses all of the PCAOB's identified changes as opposed to a multi-step process.

Finally, while we acknowledge and support the Board's desire to improve audit quality; we are concerned that ultimately the improvements that arise from the proposed auditing standards will be outweighed by the financial cost necessary to achieve the benefit. We encourage the Board to carefully study the cost/benefit relationship related to these proposed auditing standards before the issuance of the final standards.

Sincerely,

Mayer Hoffman McCann P.C.

Regarding: PCAOB Release No. 2013-005 August 13, 2013
PCAOB Rulemaking Docket Matter No. 034

Dear PCAOB Board Directors,

I attended the National Association of Corporate Directors annual conference in October 2013 and subsequently, at a private meeting, listened to Jeanette Franzel explain the work the PCAOB is doing. I thank you for your time and the desire to seek comments from members of board of directors. I would like to submit my views in response to your request for comments on your two recent proposals. I have served on corporate boards for 15 years and currently chair the audit committees for Viacom Inc. and LKQ Corporation. I was the audit committee chair for Accenture from 2001 to 2011 and currently serve as a committee member.

There are two parts of the proposal I find most troubling:

- The proposed requirement that an auditor report on "critical audit matters" that are specific to each audit. These matters are defined in the proposal as those that (1) involved the most difficult, subjective or complex auditor judgments; (2) posed the most difficulty for the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements.

- The proposal to enhance the auditor's responsibility with respect to other information outside the financial statements.

Critical Audit Matters ("CAMs")

As I understand the proposed standard, the auditor is being asked to report on many matters that are already extensively disclosed in Management's Discussion and Analysis (MD&A) and financial statement footnotes. Auditor reporting on CAMs would be expected to overlap with, but also could be different than, the critical accounting policies disclosed by management of the company in the MD&A.

Auditor disclosures would also include information on the execution of audit procedures. I do not believe that users of financial statements would benefit from this repetitive disclosure in the audit report, and the additional disclosures may create confusion or lead to a misinterpretation about what the auditor's assessment actually covers. As a result, this requirement will not improve the overall quality of available financial information included in annual reports.

In addition, I believe transparency and open communication between the auditors and an audit committee will be harmed if the auditors are required to report on CAMs (and to explain why they have not reported on potential CAMs). Audit committee members review critical accounting policies and procedures regularly. But, CAMs can be very different in that they relate to the execution of audit procedures, and should be addressed in an open and candid manner initially between the auditor and the company management, followed by a report to audit committee members. Inclusion of CAMs in the audit report suggests a usurping of the role of the audit committee, who are entrusted by shareholders of public companies with the fiduciary responsibility of overseeing the relationship with a company's external auditor. In order to be most effective, the participants in these discussions must not be distracted by or concerned with the possibility of public disclosure and the consequences of such disclosures. I think there is a danger that plaintiff attorneys, analysts and others would review CAMs and second guess complicated and nuanced decisions about how to explain financial results most clearly. As a result, I worry that in order to avoid being second-guessed in the future, auditors will either (1) not raise certain matters with management or the audit committee, or (2) begin to include more (rather than fewer) CAMs in their reports, leading reports to be too lengthy and complicated to be useful. Neither of these results is beneficial to stockholders.

The auditor can best serve the public by objectively verifying the information a company presents in its financial statements and working with the company management to craft disclosures that can be part of the MD&A as well as the extensive footnotes which are an integral part of the financial statements. As a senior lecturer at Harvard Business School, I teach the Financial Reporting and Control class to first year MBA students. This 30-session course covers many aspects of business, particularly using cases that may appear to have "gray" areas in accounting and management decisions. I teach my students to read financial statement footnotes to really understand what is occurring and may occur with a company's financial results. Having an auditor opine on, disclose and re-frame vaguely-defined issues such as CAMs may obfuscate the real purpose of a public company auditor: expressing an opinion as to whether the overall financial statements are fairly presented. Keep the responsibility of accurate disclosure with the CEO and CFO who have responsibility for public filings through their written certifications required by Sarbanes-Oxley, which are strong incentives already in place to discourage inappropriate behavior and give regulators the ability to hold individuals accountable for their actions.

Auditor's Responsibilities Regarding Other Information

The requirements of Sarbanes-Oxley, including Section 404, have served us well. However, auditors' costs have increased as they spend time evaluating and commenting on other information to more effectively comply with Sarbanes-Oxley. The auditor should continue to focus on the attest function, but we must conduct a realistic cost-benefit analysis of additional work being asked of auditors. I think expanding their role as suggested by the proposal will create extra costs without extra benefit to financial statement users. Auditors already have an obligation to read and consider other information included in a company's annual report. Creating additional procedures and reporting requirements around this information does not appear to be solving any identifiable problem that exists with the current standard and is not a cost-effective way of increasing the adequacy and transparency of information included in annual reports. The responsibility for financial reporting, including this other information, should continue to be the responsibility of management. Auditors should continue to have the obligation to review the information for any material inconsistency; the existing standard already provides the auditor with procedures to respond to any material inconsistency. The last thing we should do is shift responsibility for financial reporting away from management and to the auditors.

Sincerely,

Blythe J. McGarvie

Re: PCAOB Rulemaking Docket Matter No. 034

McGladrey LLP appreciates the opportunity to offer our comments on PCAOB Release No. 2013-005, *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Auditing Standards*. McGladrey LLP is a registered public accounting firm serving middle-market issuers, brokers and dealers.

We strongly support retaining the existing pass/fail model of auditor reporting, and also support the PCAOB's objective of enhancing the auditor's report with more disclosure. The disclosure of critical audit matters would provide investors with more information than previously provided in the auditor's report. However, we have concerns whether the additional information would provide investment-decision-useful information. We are also concerned that the proposed standard has the potential to fundamentally alter the roles of management and the auditor. We believe management's role is to prepare the financial statements, and the auditor's role is to provide reasonable assurance that the financial statement information communicated by management is presented consistently with the applicable financial reporting framework. We believe the proposed requirements to communicate critical audit matters in the auditor's report need to be modified so as to not significantly alter these two roles.

We support transparency in the auditor's report with respect to the auditor's responsibilities related to other information but are concerned that, if adopted as proposed, the standard may lead to confusion as to the level of assurance provided by the auditor as it relates to other information. Further, we believe the proposed additional "evaluation" procedures beyond the current "read and consider" approach in PCAOB AU 550, *Other Information in Documents Containing Audited Financial Statements,* will simultaneously increase audit costs and further broaden the expectation gap between the users' understanding of the auditor's role and the auditor's actual performance when conducting an audit.

Our letter further explains enhancements that could be made to the proposed standards, and includes comments related to specific paragraphs of the proposal that we believe should be clarified or modified.

## Proposed Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*

### Critical Audit Matters

*Determination of Critical Audit Matters*

Paragraph 8 of the proposed auditor reporting standard states that critical audit matters ordinarily are matters of such importance that they are included in the matters required to be (a) documented in the engagement completion document; (b) reviewed by the engagement quality reviewer; (c) communicated to the audit committee; or (d) any combination of the three.

Due to the level of subjectivity and/or complexity involved with such matters, we are concerned that users of financial statements may not have sufficient context to understand a brief description of such matters. Further, providing all of this information to financial statement users who do not have sufficient context could diminish the governance role of the audit committee which does have sufficient context for evaluating critical audit matters. There also is a possibility that the communication between the auditor and the audit committee could diminish if every matter discussed with the audit committee was required to be included in the auditor's report.

We believe that any new standard should not diminish the role of the audit committee. Accordingly, the auditor should not communicate a matter in the auditor's report that was not required to be communicated to the audit committee. Therefore, we believe the only source of critical audit matters should be matters required to be communicated to the audit committee in accordance with PCAOB Auditing Standard (AS) No. 16, *Communications with Audit Committees*. We would not, however, expect all communications with the audit committee to necessarily be included as critical audit matters. Instead, the critical audit matters communicated in the auditor's report should be a subset of matters communicated to the audit committee.

Among other objectives, AS 16 is intended to provide the audit committee with timely observations arising from the audit that are significant to the financial reporting process. The requirements of AS 16, including those results of the audit that are significant to the financial reporting process, were thoroughly scrutinized by the PCAOB, having initially been proposed and the subject of a roundtable in 2010 and then reproposed in 2011 prior to being issued in 2012. After this thorough vetting process, the PCAOB issued AS 16 in 2012 stating, "Communications between the auditor and the audit committee allow the audit committee to be well-informed about accounting and disclosure matters, including the auditor's evaluation of matters that are significant to the financial statements, and to be better able to carry out its oversight role."[1] The auditor's required communications with the audit committee, therefore, are the most logical starting point for the auditor to discern which matters are to be considered critical audit matters worthy of public disclosure in the auditor's report. Therefore, we believe paragraph 8 should be revised to read as follows (proposed deletions are struck through):

8. Critical audit matters ordinarily are matters of such importance that they are included in the matters required to be ~~(1) documented in the engagement completion document; (2) reviewed by the engagement quality reviewer; (3)~~ communicated to the audit committee~~; or (4) any combination of the three~~.

However, a requirement to communicate *all* matters communicated to the audit committee as critical audit matters would limit the auditor's ability to discern which of those matters are truly *critical* audit matters for purposes of communication in the auditor's report. Therefore, after reviewing the matters communicated to the audit committee, the auditor should then be required to determine which of those matters would be the critical audit matters to be communicated in the auditor's report. The auditor's decision-making process should be designed to select the critical audit matters, from the matters communicated with the audit committee, based on the auditor's judgment about which matters were of most significance to the audit. Therefore, we suggest the beginning portion of paragraph 9 be revised to read as follows (proposed deletions are struck through, and proposed additions are shown in bold font):

9. **The auditor's decision-making process should be designed to select the critical audit matters, from the matters communicated with the audit committee, based on the auditor's judgment about which matters were of most significance to the audit.** Certain factors might

[1] PCAOB Release No. 2012-004, page 2.

affect whether a matter ~~addressed during the audit of the financial statements~~ **communicated to the audit committee** (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements. In determining…

*Communication of Critical Audit Matters*

Paragraph 11.b. of the proposed auditor reporting standard would require that for each critical audit matter communicated in the auditor's report the auditor must describe ***the considerations*** that led the auditor to determine that the matter is a critical audit matter (emphasis added). This required description of the considerations regarding a critical audit matter could require the auditor to disclose information about the audit or the financial statements that otherwise would not be required to be disclosed by the auditor under existing auditing standards or by the company under requirements of the applicable financial reporting framework or securities laws and regulations. Examples of such disclosures might include:

- Communication of a significant deficiency in internal control over financial reporting that was not determined to be a material weakness. Under applicable securities laws and SEC regulations, depending on the circumstances, a company may not have to disclose a significant deficiency, but the critical audit matter description in the audit report could cause that information to be disclosed.

- A difficult decision by the auditor regarding a company's ability to continue as a going concern even though the auditor's ultimate decision was that substantial doubt did not exist. Current standards expressly require the use of the phrase "substantial doubt about the entity's ability to continue as a going concern" whenever the auditor has reached that conclusion. The current standards also prohibit conditional language, such as, "If the company continues to suffer losses, there may be substantial doubt about its ability to continue as a going concern." Disclosure of a critical audit matter that describes considerations such as "possible future losses" would be inconsistent with current standards and could result in confusion for investors.

We do not believe it is appropriate for the auditor to be the source of original information about the entity. Both of the examples in the preceding two paragraphs would violate this principle. In addition, the auditor may need to obtain the client's permission to disclose confidential information to remain in compliance with the AICPA Code of Professional Conduct, which is included in the PCAOB's interim ethics standards.

Further, the requirement to disclose all considerations that led the auditor to determine that the matter is a critical audit matter could lead the auditor to disclose certain audit procedures, which, in turn, could compromise audit effectiveness. For example, one matter that could pose difficulty to the auditor in obtaining sufficient appropriate evidence is in the performance of auditing procedures related to revenue recognition that are responsive to the risks of fraud.

We believe the auditor should only be required to describe the *primary* considerations (*i.e.*, not all considerations) that led the auditor to determine that the matter is a critical audit matter so as to not require disclosure of audit procedures that could compromise audit effectiveness. Therefore, we believe paragraph 11.b. should be revised to read as follows (proposed addition is shown in bold font):

b. Describe the **primary** considerations that led the auditor to determine that the matter is a critical audit matter; and

*Documentation of Critical Audit Matters*

Paragraph 14 of the proposed auditor reporting standard requires audit documentation to contain sufficient information to enable an experienced auditor, having no previous connection with the engagement, to understand the basis of the auditor's determination that non-reported audit matters addressed in the audit that *would appear to meet the definition of a critical audit matter* were not critical audit matters (emphasis added). We believe the "would appear to meet the definition of a critical audit matter" criterion is too ambiguous to apply in practice and could cause auditors to include more critical audit matters in their reports than they would without this requirement.

Including more critical audit matters in the auditor's report could dilute the importance of the critical audit matters that are communicated and may leave the user with more questions than answers. There also is a risk the financial statement user will infer that, by disclosing numerous critical audit matters, the auditor's report is providing more assurance on the critical audit matters than on the financial statements taken as a whole.

If the source for critical audit matters was those matters communicated to the audit committee as we suggest above, the second sentence of paragraph 14 could be revised as follows (proposed deletions are struck through, and proposed additions are shown in bold font):

> To provide sufficient detail for a clear understanding of the conclusions reached regarding the determination of critical audit matters, the audit documentation must contain sufficient information to enable an experienced auditor, having no previous connection with the engagement, to understand the basis for the auditor's determination that (1) each reported matter was a critical audit matter and (2) non-reported audit matters ~~addressed in the audit that would appear to meet the definition of a critical audit matter~~ **communicated to the audit committee** were not critical audit matters.

**Basic Elements**

*Source of Auditor's Independence Requirements*

Paragraph 6.h. of the proposed auditor reporting standard requires the auditor to include a statement that the auditor is a public accounting firm registered with the PCAOB (United States) and is required to be independent with respect to the company in accordance with the United States federal securities laws and the applicable rules and regulations of the SEC and the PCAOB. We believe the quality of an audit that inspires investor confidence is built on the integrity, competence, objectivity and independence of our profession, so it is logical that the source of the auditor's independence requirements would be disclosed in the auditor's opinion.

*Auditor Tenure*

In 2011, the PCAOB issued Release No. 2011-006, *Concept Release on Auditor Independence and Audit Firm Rotation,* to seek comment on the advantages and disadvantages of mandatory audit firm rotation, among other matters. Because auditor tenure continues to be a topic of PCAOB discussion and the subject of academic research, we believe the concept of auditor tenure and mandatory audit firm rotation should be addressed in that context separately from any other proposed auditing standard.

Paragraph 6.i. of the proposed auditor reporting standard, however, requires the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor. We are not supportive of including auditor tenure in the auditor's report for the reason discussed in the preceding paragraph and because it is unclear what a user should infer from such a disclosure. Disclosure of auditor tenure also has the potential of distracting the user from more relevant information in the auditor's report. Further, investors who are interested in information about auditor changes can obtain relevant information publicly.

If the PCAOB decides to retain the requirement for the auditor to disclose auditor tenure, we strongly believe the illustrative auditor's report on pages A1-15 and 16 should be revised to include the disclosure as the concluding sentence in the illustrative auditor's report. Including it in the same paragraph as the source of the auditor's independence requirements could cause investors and analysts to conclude that there is nexus between independence and auditor tenure when there is no empirical evidence to suggest that there is. Also, if the PCAOB decides to retain the requirement for the auditor to disclose auditor tenure, we suggest the following guidance from page A5-16 of PCAOB Release No. 2013-005 be included in paragraph 6.i. of the proposed auditor reporting standard:

> **In determining the year the auditor began serving consecutively as the company's auditor, the auditor would look to the year beginning when the firm signs an initial engagement letter to audit a company's financial statements or when the firm begins the audit, whichever is earlier.**

*Certain Auditor Responsibilities*

Paragraph 6.m. of the proposed auditor reporting standard requires the auditor to include the phrase "whether due to error or fraud" at the end of the statement describing the auditor's responsibilities to obtain reasonable assurance about whether the financial statements are free of material misstatement. Also, the proposed standard would require the auditor's report to include a statement that an audit includes performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. We support the proposed clarifying language to be added to the auditor's report regarding these auditor responsibilities.

**Order**

Footnote 35 to paragraph 16 requires the explanatory paragraphs follow the opinion on the financial statements. Footnote 21 to paragraph 11 requires the critical audit matters section follow the opinion on the financial statements section and any explanatory paragraphs. We believe these requirements should be included in the actual standard, rather than in the footnotes.

**Cost**

Paragraph 7 of the proposed auditor reporting standard requires the auditor to determine whether there are any critical audit matters in the audit of the current period's financial statements *based on the results of the audit or evidence obtained* (emphasis added). Although the auditor's determination of critical audit matters is to be based on the audit procedures already performed, substantial additional effort will be required to determine which matters are and are not critical audit matters, to document that determination, and to draft the communication of critical audit matters. The reporting of critical audit matters in the auditor's report will involve the exercise of seasoned professional judgment by the most senior professionals assigned to the engagement, such as the engagement partner and the engagement quality reviewer, and could involve others, such as national office consultants. The expenditure of additional time ultimately will be reflected in increased costs for the auditor and increased audit fees for the company.

Additional time also will be incurred by management and the audit committee in reviewing critical audit matters in the draft auditor's report and in the related discussion with auditors and others. Further, audit committees and management could spend additional time comparing their auditor's report to the auditors' reports of similar companies. Audit committees also may wish to disclose their own view of the critical audit matters in their report to investors together with the steps they took to mitigate the risks involved.

Even though comparability regarding the pass-fail model will continue to be maintained, the communication of critical audit matters in the auditor's report that is specific to the audit of the company's financial statements could make the auditor's report less comparable among companies. Management and the audit committee might be concerned about investors' and other financial statement users' perceptions when the disclosure of critical audit matters in their audit report is different in number and/or content than the disclosure of critical audit matters in the audit reports of their competitors. Also, the company might be concerned about investors' and other users' perceptions of the potential differences between the company's current-period critical audit matters and those of prior periods.

The requirements in the exposure draft could cause companies to incur another type of cost – reduced timeliness of financial statement issuance. Under the current auditor reporting model, little time is devoted to review of the auditor report to be included in the annual report. The introduction of the disclosure of critical audit matters will require more extensive review by the auditor, management, the audit committee, and the company's legal counsel. The effort required to determine, draft the communication of, and document critical audit matters likely would occur during the final stages of the audit, which places added pressure on completion and review of the audit to meet filing deadlines. The compression of work by both management and the auditor during the final stages of the audit may adversely impact the quality of financial reporting. This may be particularly burdensome for smaller reporting companies, most of which historically need all of the time available up to the reporting deadline for financial reporting.

We believe the PCAOB should discern whether investors, who have indicated they would benefit from additional auditor reporting, would deem such benefit to outweigh any impact on the timeliness of the information and the substantial additional costs, both in terms of dollars and time, that would be incurred to comply with the requirements as proposed. Our firm is one of several public accounting firms that are field testing the implementation of these proposed standards to directly assess the impact on various aspects of the audit, including, among others, the additional involvement of senior audit partners, the efforts that would occur during the final stages of the audit, and the cost to the client. We believe the results of the firms' field tests should be carefully evaluated before concluding that the benefits of the additional disclosures outweigh the costs and the impact on timeliness of information.

**Scalability**

We do not believe the proposed disclosure of critical audit matters would be scalable based on the size of the company. Smaller companies often do not have the same level of sophistication in terms of information technology systems or financial reporting professionals as larger companies are able to have. This lack of sophistication can cause the auditor to need to make more difficult, subjective, and complex auditor judgments and also can pose more difficulty to the auditor in obtaining sufficient appropriate evidence. All of these matters need to be discussed with the audit committee in accordance with AS 16 and therefore are the population from which critical audit matters will be determined. For these reasons, we believe auditors' reports on the financial statements of smaller reporting companies may be required to include a disproportionately higher number of potential critical audit matters than those of accelerated filers. Therefore, we recommend audits of the following entities be excluded from the requirement to communicate critical audit matters in the auditor's report:

- Smaller reporting companies
- Emerging growth companies
- Nonissuer broker dealers
- Futures commission merchants
- Employee benefit plans

We also believe it would be prudent to provide a two-year extension for the effective date of the proposed standard for audits of nonaccelerated filers. This would allow for more efficient implementation of the standard in audits of nonaccelerated filers because initial implementation issues could be resolved, and related costs would be absorbed, by issuers with the most sophistication and the largest economic footprint.

## Proposed Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*

### Scope

The note to paragraph 1 of the proposed other information standard states that when the annual report is a Form 10-K, other information includes information incorporated by reference from the company's definitive proxy statement filed within 120 days after the end of the fiscal year covered by the Form 10-K. We believe that scoping in other information that is not available by the date of the auditor's report creates a responsibility for the auditor that extends beyond the date of the auditor's report, which contradicts existing guidance in paragraph 10 of PCAOB AU 560, *Subsequent Events*. Such a requirement also contradicts existing guidance in paragraph 15 of AS 3, *Audit Documentation,* which states, "Prior to the report release date, the auditor must have completed all necessary auditing procedures and obtained sufficient evidence to support the representations in the auditor's report." Further, scoping in other information that is not available by the date of the auditor's report could cause the auditor to be unable to assemble for retention a complete and final set of audit documentation as of a date not more than 45 days after the report release date as required by paragraph 15 of AS 3.

We believe other information issued after the date of the auditor's report should be excluded from the scope of the auditor's responsibilities for other information. We also believe documents filed as exhibits to an annual report should be excluded from the scope of the auditor's responsibilities for other information because those documents that are relevant to the financial statements and auditor's report would have already been subjected to audit procedures during the audit of the financial statements. Therefore, we suggest the note to paragraph 1 be included as the second sentence in the body of paragraph 1 after being revised to read as follows (proposed deletions are struck through and proposed additions are shown in bold font):

> For purposes of this standard, other information in an annual report that is filed with the SEC under the Exchange Act includes information, other than the audited financial statements and the related auditor's report, contained in the annual report and also includes ~~(1)~~ information**, other than exhibits,** incorporated by reference in that annual report that is available to the auditor prior to the issuance of

the auditor's report ~~and (2) when the annual report is a Form 10-K, information incorporated by reference from the company's definitive proxy statement filed within 120 days after the end of the fiscal year covered by the Form 10-K~~.

**Evaluating the Other Information**

Paragraph 4 of the proposed other information standard requires the auditor to read the other information and, based on relevant audit evidence obtained and conclusions reached during the audit, evaluate the:

a. Consistency of amounts in the other information, and the manner of their presentation, that are intended to be the same as, or to provide greater detail about, the amounts in the financial statements, with the amounts in the financial statements and relevant audit evidence;

b. Consistency of any qualitative statement in the other information, and the manner of its presentation, that is intended to represent or provide greater detail about information in the financial statements, with the financial statements and relevant audit evidence;

c. Other information not directly related to the financial statements as compared to relevant audit evidence obtained and conclusions reached during the audit; and

d. Amounts in the other information that are calculated using amounts in (1) the other information; (2) the financial statements; or (3) relevant audit evidence, by recalculating the amounts for mathematical accuracy.

We believe that asking the auditor to evaluate the other information not directly related to the financial statements as compared to relevant audit evidence obtained and conclusions reached during the audit per paragraph c would require, or at least cause, the auditor to document the evaluation by cross-referencing such information to the audit documentation or, failing to identify any relevant audit documentation, to document that fact. We believe the preparation and review of this cross-referencing and documentation will increase audit costs, which will be disproportionate to any benefit that could be received by financial statement users.

We believe this requirement would go beyond and contradict guidance in PCAOB AU 634, *Letters for Underwriters and Certain Other Requesting Parties,* for issuing comfort letters in connection with financial statements contained in registration statements filed with the SEC. Paragraph .55 of PCAOB AU 634 states, "Except as indicated in the next sentence [the accountants] should comment only with respect to information (*a*) that is expressed in dollars (or percentages derived from such dollar amounts) and that has been obtained from accounting records that are subject to the entity's controls over financial reporting or (*b*) that has been derived directly from such accounting records by analysis or computation. The accountants may also comment on quantitative information that has been obtained from an accounting record if the information is subject to the same controls over financial reporting as the dollar amounts. The accountants should not comment on matters merely because they happen to be present and are capable of reading, counting, measuring, or performing other functions that might be applicable."

Also, although the auditor would not be required to perform procedures to obtain additional evidence regarding other information not directly related to the financial statements that was not required to be obtained during the audit, it is unclear exactly what level of assurance users would infer the auditor is providing on the other information. The concept of the auditor "evaluating" the other information also may have the potential to cause confusion for both the auditor and the user. The auditor's work to "evaluate" the information will not constitute what is normally understood to be an "audit," nor is it the same as a "review." We think this lack of clarity will widen the expectation gap between the users' understanding of the auditor's role and the auditor's actual performance when conducting an audit. The user may not understand the limited universe of information and documents to which the proposed standard would apply and potentially erroneously infer that the auditor is providing assurance on all of the information disclosed in the client's annual report.

For example, the SEC recently proposed amendments to Item 402 of Regulation S-K to implement Section 953(b) of the Dodd-Frank Wall Street Reform and Consumer Protection Act. If finalized, the proposed amendments would require registrants to disclose the ratio of the median of the annual total compensation of all employees to the annual total compensation of the principal executive officer. We understand that registrants will have a fair amount of latitude to choose to identify the median using their full employee population or by using statistical sampling or another reasonable method. Also, registrants would be permitted to use reasonable estimates to determine the value of the various elements of total compensation for employees other than the chief executive officer. We believe investors will be confused about the degree to which the auditor evaluated this information when in fact the auditor may have obtained little, if any, relevant audit evidence related to this disclosure.

Therefore, we believe paragraph 4 should be revised to read as follows (proposed deletions are struck through, and proposed additions are shown in bold font):

4. The auditor should read the other information and, based on relevant audit evidence obtained and conclusions reached during the audit, ~~evaluate~~ **consider** the:

    a. Consistency of amounts in the other information, and the manner of their presentation, that are intended to be the same as, or to provide greater detail about, the amounts in the financial statements, with the amounts in the financial statements and relevant audit evidence;

    b. Consistency of any qualitative statement in the other information, and the manner of its presentation, that is intended to represent or provide greater detail about information in the financial statements, with the financial statements and relevant audit evidence; **and**

    c. ~~Other information not directly related to the financial statements as compared to relevant audit evidence obtained and conclusions reached during the audit; and~~

    ~~d.~~ Amounts in the other information that are calculated using amounts in (1) the other information; (2) the financial statements; or (3) relevant audit evidence, by recalculating the amounts for mathematical accuracy.

    Note: For example, the auditor would recalculate the amounts when the formula is described in the annual report, the formula is generally understood, or the recalculation can be performed without referring to a formula. Amounts, such as totals or percentages, that are calculated using simple mathematical operations, such as addition or division, ordinarily can be recalculated without referring to a formula.

**Reporting in the Auditor's Report**

Paragraph 13 of the proposed other information standard requires disclosures in the auditor's report about the auditor's responsibilities regarding other information. We believe there should be no disclosure in the auditor's report about the auditor's responsibilities regarding other information because the financial statement user does not know which other information in the company's annual report was considered by the auditor and which was not. We believe investors also will be confused about the degree to which the auditor considered this information.

**Costs**

The PCAOB's proposed other information standard would substantially expand the auditor's responsibilities related to other information contained in the annual report for public companies. The expenditure of additional time to meet these incremental responsibilities ultimately will be reflected in increased costs for the auditor and increased audit fees for the company.

The requirements in the exposure draft could cause companies to incur another type of cost – reduced timeliness of financial statement issuance. The introduction of the proposed requirements to evaluate other information and to include disclosures in the auditor's report about the auditor's responsibilities regarding other information will require more extensive procedures and review by the auditor. These efforts likely would occur during the final stages of the audit, which places added pressure on completion and review of the audit to meet filing deadlines. This may be particularly burdensome for smaller reporting companies, most of which historically need all of the time available up to the filing deadline.

We believe the requirements in existing PCAOB AU 550, *Other Information in Documents Containing Auditing Financial Statements,* adequately encompass the auditor's responsibilities for other information. If management believes investors desire additional procedures to be performed by the auditor on other information, there already is existing guidance for the performance of an attest engagement with respect to management's discussion and analysis presented in annual reports and in other documents in AT Section 701, *Management's Discussion and Analysis.* To the best of our knowledge, the performance of such an engagement has not been requested by any of our clients since the issuance of this guidance.

It is important to note that users can say they want information without considering the associated costs or the extent of its use or its investment-decision usefulness. We believe the PCAOB should be able to clearly demonstrate that the additional assurance to be provided by the auditor as a result of this requirement provides a benefit to users of the financial statements that would outweigh its costs, which will be significant.

We would be pleased to respond to any questions the Board or its staff may have about our comments. Please direct any questions to John Keyser, National Director of Assurance Services, at 614.456.2805.

Sincerely,

McGladrey LLP

Subject: PCAOB Rulemaking Docket Matter No. 034

Dear Ms. Brown,

Medtronic, Inc. ("Medtronic," "we," "our" or "us") appreciates the opportunity to provide the Public Company Accounting Oversight Board ("PCAOB" or "Board") with our comments on Release No. 2013-005, *The Auditor's Report on an Audit of Financial Statements when the Auditor expresses an unqualified opinion; The Auditor's Responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report* (collectively "the PCAOB Release"). Medtronic is the global leader in medical technology - alleviating pain, restoring health, and extending life for millions of people around the world.

## Summary

We support the Board's desire to protect the interests of investors and further the public interest in the preparation of informative, accurate, and independent audit reports. We also appreciate and recognize the Board for evaluating the concerns raised from 155 comment letters and roundtable discussions related to the June 2011 Concept Release, and making changes to the original proposal such as the Board's decision not to pursue imposing a requirement for Auditor Discussion and Analysis (AD&D).

We understand that the Board's underlying objective in proposing changes to the auditor's report is to enhance investor confidence in the quality of audits by improving the informational content, usefulness, and relevance of the auditor's report. However, we have the following significant concerns with regards to the proposed PCAOB Release:

- We do not agree with the proposed change in terminology from "read and consider" to "read and evaluate" for other information outside the financial statements. We are concerned that auditors will perform significantly more work in order to meet the new standard, resulting in higher audit fees, and readers of the auditor's report may assume a greater degree of accountability than is warranted.

- Because root cause evidence does not exist that links audit firm tenure to audit failures or lack of auditor independence, objectivity, and professional skepticism, we disagree with the inclusion of auditor tenure in the auditor's report.

- We have grave concerns with the proposed auditor reporting standard requirement that the auditor communicate "critical audit matters" (CAM's) in the auditor's report.

- We are concerned that there is currently a lack of defined field testing in the PCAOB Release. We believe the Board needs to work closely with public accounting firms to determine the incremental procedures auditors believe they would need to perform in order to meet the requirements of the PCAOB Release in order to ensure the resulting benefits exceed the incremental costs.

**Change in Terminology from "Read and Consider" to "Read and Evaluate" for Other Information Outside the Financial Statements**

We appreciate investors' interest in obtaining more information regarding the auditor's responsibilities for other information outside the financial statements that is contained in documents that include the audited financial statements and the related auditor's report. We support additional disclosure regarding auditor's association with the other information in the filing, including a statement in the auditor's report that the auditor evaluated whether the other information contains a material inconsistency with the financial statements, a material misstatement of fact, or both. We would also support adding a statement in the auditor's report that clearly defines the scope of the data included or excluded from such a review of other information and an explanation of the depth of procedures undertaken and the level of comfort provided, including a statement that the auditor did not audit the other information and does not express an opinion on the other information. However, we do not support the proposed change in terminology from "read and consider" to "read and evaluate".

The following excerpt from Auditing Standard 17 "Auditing Supplemental Information Accompanying Audited Financial Statements" appears to provide context around the term evaluate:

> The proposed standard includes requirements that the auditor evaluate the supplemental information, which includes evaluating (1) whether the supplemental information, including its form and content, is fairly stated, in all material respects, in relation to the financial statements as a whole, and (2) whether the supplemental information is presented in conformity, in all material respects, with the relevant regulatory requirements or other applicable criteria. In addition, the evaluation should encompass, among other things, whether the

information is complete and accurate, is consistent with the audited financial statements, and complies with relevant regulatory requirements, if applicable.

We believe that a level of assurance to achieve "complete and accurate" is higher than what is currently provided today under the requirement to "read and consider". We believe that this will lead to significant expansion in the level of audit work being performed, resulting in higher audit fees, and potentially result in certain challenges for the auditor in gaining comfort with regards to certain non-financial information, performance metrics, and qualitative statements. We believe the auditor would need to expand their audit scope procedures considerably, to fulfill their obligations related to evaluating this other information. These metrics and supplemental information are frequently not derived from systems or processes which the auditor has previously audited, as such unwarranted scope expansion would surely occur.

In addition, we believe that current regulations and disclosure requirements, such as CEO and CFO certifications, and listing rules by the NYSE requiring independent audit committee supervision and review of quarterly and annual reports in conjunction with the establishment of effective disclosure controls, such as Disclosure Committees and quarterly certifications by key executive management, are an effective means to ensure that non-financial information has been verified by the company. Thus, we see no incremental benefit to requiring auditors to do more than what is already required under existing "read and consider" standards.

## Inclusion of Auditor Tenure in the Auditor's Report

The PCAOB Release proposes to add new elements to the auditor's report related to auditor independence, auditor tenure, and enhancements to certain standardized language in the auditor's report, including the addition of the phrase "whether due to error or fraud". While we are in general support of the inclusion of clarifying language to the existing standard auditor's report to enhance investors' and users' understanding of the scope, process, and limitations of the audit process, we do not support the PCAOB Release requirement that a statement be included in the auditor's report containing the year the auditor began serving consecutively as the company's auditor.

Because root cause evidence does not exist that links audit firm tenure to audit failures or lack of auditor independence, objectivity, and professional skepticism, we believe there could be unintended consequences resulting from investors believing that a shorter / longer auditor tenure is presumed to be good or bad. In addition, we believe inclusion of auditor tenure in the auditor's report could dilute the independence disclosure already included in the auditor's report. If the Board feels strongly about providing investors with further details as to the length of auditor tenure, then we recommend such information be considered more suitably placed in the proxy statement, as we believe such information is more directly relevant to investors' decisions regarding whether the independent auditor should be reappointed for another fiscal year.

**Auditor Communication of "Critical Audit Matters" (CAM's) in Auditor's Report**

The PCAOB Proposal would require the auditor to communicate in the auditor's report "critical audit matters" that would be specific to each audit. The auditor's required communication would focus on those matters the auditor addressed during the audit of the financial statements that involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient audit evidence or forming an opinion on the financial statements. The sources for CAM's could include engagement completion documents, items reviewed by the engagement quality reviewer, and information communicated to the Audit Committee.

While we appreciate investors' interest in gaining a better understanding of what is reported in the financial statements, it remains unclear to us whether or not the reporting of CAM's in the auditor's report will facilitate an increased understanding. Based upon our regular interactions with our auditors as part of their audit, we believe a close relationship already exists between the auditor's most complex and challenging areas of the audit and the critical accounting estimates currently disclosed by the Company. Moveover, these topics are part of an ongoing dialogue between the auditor, Company management, and the Audit Committee and often require background and discussion between the parties to achieve an appropriate and meaningful communication. Thus, we believe the fundamental responsibilities of the Audit Committee, management, and the auditors should not be changed. We believe that the direction of the "PCAOB Release" may have unintended consequences on the clarity of responsibilities, the ownership of the financial statements, and undermine the existing corporate governance and audit oversight, including the communications between the Audit Committee, management, and the auditors. We strongly believe it is the responsibility of the Company, not the auditors, to provide useful information about the company's financial statements to financial statement users.

We also have doubts that the auditor's communication of CAM's would be based upon information known to the auditor and procedures that the auditor has already performed as part of current audit practices for a Company, resulting in incremental audit hours and significantly higher audit fees. For example, if the auditor determines that certain items should be excluded from CAM's, the auditor may assume it needs to justify in the audit work papers why such items were not CAM's. We expect that most auditors would error on the side of including more CAM's rather than fewer CAMs in their reports, given the increased risks an auditor would assume as a result of proposed requirement to include CAM's in their audit reports. In addition, we believe extensive information related to matters that may qualify as CAM's already exists in current disclosures such as critical and significant accounting policies, significant estimates, business trends, and operational and financial risks.

We are also concerned that the time and level of incremental effort required to fulfil these proposed requirements on CAM's could distract focus and attention from the primary deliverables of the audit and divert key time and resources from Audit Committees, Company management, and auditors, and result in incremental and time consuming discussions between Audit Committees, Company management, external legal advisors, and local and national office audit personnel. The level of effort required by the auditor to determine, prepare language for communication, and to document CAM's would most likely occur during the final stages of an audit, which may reduce the time available for the auditor to review and complete other key audit procedures. Thus, we do not believe the increased level of engagement required and resources consumed by this activity will significantly improve the quality of the audit.

We believe the roles and responsibilities of the Audit Committee, Company management, and the auditors should not be changed as a result of the proposed PCAOB Release. However, should the Board ultimately decide to retain the concept of CAM's in the Board's final standard, then we recommend development of a clearer definition with regards to CAM's, including, at a minimum:

1) CAM's identified should only include those requiring disclosure to the Audit Committee in accordance with existing audit standards
2) CAM's must be material to the consolidated financial statements of the Company
3) Prejudicial and/or highly sensitive information (such as loss contingencies or certain tax matters) should not be included in CAM's, except as previously disclosed by the Company in the consolidated financial statements
4) CAM's must not be included if specifically excluded from disclosure by existing other legislation
5) Outside of certain exceptions, (such as going-concern issues) auditors should not become the original source of information to investors and users of financial statements. The communication of CAM's by auditors should not diminish the current governance role of the Audit Committee over a company's disclosure of financial information.
6) Auditors should not be required to separately document why audit matters are not considered to be CAM's.

**Lack of Defined Field Testing in the PCAOB Release**

Given our concerns raised about significant incremental costs versus the assumed benefits of the proposed PCAOB Release, we are concern that the current PCAOB Proposal lacks a defined comprehensive field test.

We believe the Board needs to work closely with public accounting firms to determine what incremental procedures auditors believe they would need to perform in order to meet the requirements of the PCAOB Release in order to ensure the resulting benefits exceed the incremental costs. While we understand that the underlying intent is to raise audit quality, we are concerned that some of the proposed changes may have the opposite effect, as we have discussed above. Field testing has proven in the past to be an activity that leading standard setters use to better understand whether or not the proposed changes are operational and for purposes of identifying potential unintended consequences the proposed changes may have on the effectiveness of current practices.

* * * * * * * *

**Conclusion:**

In summary, we have certain concerns with the proposed PCAOB Release. In addition, we respectfully ask the Board to carefully review and evaluate all comment letters received, and specifically to consider and carefully review the issues and feedback identified in our comment letter.

Very truly yours,

Steve Howarth

**PCAOB Rulemaking Docket No. 34, PCAOB Release 2013-005 (August 13, 2013)**

Dear Office of the Secretary:

MetLife, Inc. (MetLife) appreciates the opportunity to provide comments to the Public Company Accounting Oversight Board's (PCAOB) Request for Public Comment regarding proposed auditing standards on (i) the auditor's report; (ii) the auditor's responsibilities regarding other information; and (iii) related amendments to PCAOB standards, (PCOAB Release 2013-005), which are updates to the PCAOB's Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (issued June 2011).

MetLife is a leading global provider of insurance, annuities and employee benefit programs, serving 90 million customers in over 50 countries. Through its subsidiaries and affiliates, MetLife holds leading market positions in the United States, Japan, Latin America, Asia Pacific, Europe and the Middle East.

To reiterate our September 30, 2011 comment letter to the PCAOB regarding the June 2011 Concept Release, MetLife supports the PCAOB's overall effort to undertake standard-setting initiatives to consider certain enhancements to improve the quality and content of the current auditor reporting model.

However, consistent with our September 30, 2011 comment letter:

- Any changes must provide useful and objective information to investors and other financial statement users while continuing to acknowledge that the preparation of the financial statements and related disclosures are the responsibility of management and that the auditor's opinion is on the fair presentation of the financial statements "taken as a whole."

- In our view, it is management's role, and not that of the auditor, to disclose all financial information relevant to investors and other financial statement users to facilitate making informed decisions based on those financial statements. Management owns the financial information, is most familiar with it, and is in the best position to disclose it in the most complete and meaningful manner. The primary role of the auditor's report should remain in providing an opinion as to whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in accordance with the applicable financial reporting framework. The auditor's opinion on the financial statements, in our view, must remain, and, perhaps more importantly, be perceived by financial statement users to remain, on the financial statements "taken as a whole". The moment the auditor's report begins to discuss specific audit risks, audit procedures, management judgment calls, etc. the perception of the opinion covering the financial statements overall is compromised, which we believe will inevitably lead to a lack of clarity, consistency and comparability for financial statement users.

Upon review of PCAOB Release 2013-005, consistent with the recommendation in our comment letter on the June 2011 Concept Release, we are in agreement that the auditor's report be amended to contain clarifying language as to the auditor's current responsibility for information outside the financial statements. We are also in agreement that the standard auditor's report language be enhanced to (1) clarify the auditor's responsibilities for fraud and the notes to the financial statements and (2) include reference to audit tenure and applicable independence requirements. However, we are not in agreement with the PCAOB's proposed changes requiring auditors to include detailed descriptions of critical matters in the audit, including the auditor's criteria for what constitutes critical matters. Our reasons are as follows:

- It is counter to our position noted above, specifically that it is management's responsibility to disclose the relevant accounting treatment and risks with respect to critical accounting matters and estimates,

- Work performed by the auditors for addressing critical matters is part of their professional audit responsibilities in accordance with established audit guidance and audit standards and is, therefore, best left for discussion with a company's audit committee in their governance role, for reasons cited in our comment letter on the June 2011 Concept Release, and

- Additional language regarding critical matters could lead to the perception that the auditor's opinion is no longer covering the financial statements overall, which we believe will inevitably lead to a lack of clarity, consistency and comparability for financial statement users.

We suspect that critical matters identified by the auditor would directly align with areas currently identified and disclosed by management as involving critical accounting estimates, i.e., those areas involving the most subjective management judgment in preparing the financial statements and accompanying notes. To address our concerns, we would be supportive of the auditor's report containing the following with respect to critical audit matters:

  - A brief summary of the critical matters the auditor has evaluated to support their overall opinion,

- An overall statement that difficult, subjective, or complex auditor judgments were involved with respect to these critical matters, and

- Reference to the related financial statement accounts and disclosures made by management that highlight the related risks and uncertainties associated with these critical matters.

We also support clarification of the auditor's association with other information outside of the financial statements as part of the proposed disclosures in the auditor's report. Inclusion of such disclosure within auditor's reports would be informative to users of registration statements and periodic filings. It is our understanding that this proposed requirement was not intended to introduce a significant change from existing requirements with regard to role of the auditor in reviewing such information. Therefore, we recommend that the PCAOB not change the requirement from "consider" to "evaluate", nor expand the scope of information to be considered as "relevant other information." Such changes could lead to significant additional work by the auditor and cost to companies.

We once again thank you for the opportunity to respond to your proposal and for taking into consideration our previous observations and comments when preparing PCAOB Release 2013-005. If you have any questions regarding the contents of this letter or would like to further discuss our comments, please do not hesitate to contact me.

Sincerely,

Peter M. Carlson

MFS Investment Management (MFS) and the MFS Funds Board Audit Committee appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or "the Board") Proposed Auditing Standards on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "Proposed Standards"). Our comments relate to the Proposed Standards' application to Securities & Exchange Commission (SEC) registered investment companies as issuers of financial statements.

Background on MFS and the Industry[1]

MFS is a global asset management firm providing investment management services to clients including 140 registered investment products which in total represent approximately $170 billion in assets. MFS and its predecessor organizations have been registered as an investment adviser under the Investment Advisers Act of 1940 (the "Advisers Act") since 1969. MFS is a majority owned subsidiary of Sun Life Canada (U.S.) Financial Services Holdings, Inc., which in turn is an indirect majority owned subsidiary of Sun Life Financial, Inc. (a diversified financial services organization). MFS has been a subsidiary of Sun Life since 1982. As of June 30, 2013, MFS managed approximately $353 billion in assets.

From an industry perspective, U.S. investment companies are responsible for the investment of over $13.6 trillion; mutual funds, which are owned by an estimated 92 million shareholders, represent the lion's share of those assets. There are roughly 7,600 mutual funds, 600 closed-end funds and 1,200 exchange-traded funds, each of which is subject to an annual audit requirement and oversight by the PCAOB and SEC. As is the case with the registered funds managed by MFS, investment companies typically have no employees of their own, and the operations are carried out by various affiliated entities (e.g., the investment advisor, the administrator and the distributor) and unaffiliated service providers (e.g., the custodian and the transfer agent) under the oversight of the manager and a Board of Trustees.

Overview of the Proposed Standards

The Proposed Standards are a follow-up to the PCAOB's 2011 Concept Release No. 2011-003 entitled *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (the "Concept Release") and the feedback received from related public roundtables. Based on the investor feedback received from those roundtables and on the Concept Release, the PCAOB's recommendations in the Proposed Standards seek to increase the relevance, usefulness and informational value of the auditor's report by (1) requiring the auditor to include more information in the form of "critical audit matters" on the most difficult, subjective or complex areas of the audit and (2) clarifying the auditor's responsibility with respect to fraud; independence; the notes to the financial statements; and other information outside the financial statements.

[1] Industry statistics as of December 31, 2012 per the *2013 Investment Company Institute Industry Fact Book.*

As discussed below, MFS Investment Management (MFS) and the MFS Funds Board Audit Committee understand and support the PCAOB's intent to increase the value of the auditor's report, and support some - but not all - of the changes to the auditor's report outlined in the Proposed Standards. We are in favor of the PCAOB's proposed clarifications to the auditor's report with respect to independence, fraud and the notes to the financial statements. We, however, express strong reservations with regard to the inclusion of Critical Audit Matters and tenure in the auditor's report and we also believe that further clarification is needed on the scope and relative costs-benefits of expanding the auditor's responsibility for other information outside of the financial statements.

Independence, Fraud and the Financial Statement Notes

Under the Proposed Standards, the auditor's report would be modified to include a statement that the auditor is registered with the PCAOB and is required to be independent. The language in the auditor's report also would be enhanced to better articulate the auditor's responsibility for fraud and the notes to the financial statements. We believe that these enhancements to the auditor's report will clarify existing auditor requirements and responsibilities in these areas for investors and, as such, we fully support the PCAOB's proposed changes to the auditor's report related to clarification of auditor independence as well as the auditor's responsibility for fraud and the notes to the financial statements.

Critical Audit Matters (CAM)

CAM as defined by the Proposed Standards would be matters that were deemed by the auditor to be the most subjective, involved complex auditor judgments or were the most difficult areas on which to obtain audit evidence or form an opinion. Under the Proposed Standards, the auditor would be required to communicate in a separate section of the auditor's report any CAM that it identified during the audit of the current period's financial statements.

We do not support the PCAOB's proposal with respect to the inclusion of CAM in the auditor's report as we believe that CAM compromise the current "pass/fail" model of an audit and introduce subjectivity into what should be an objective process. Based on the subjective decisions made by different audit teams or firms, the CAM identified in the auditor's report may differ among very similar entities with the unintended consequence of negatively impacting the comparability of the entities. CAM may also impact the appeal of an entity to an investor relative to its peers based solely on how the auditor's report is drafted. Investors will be directed to focus on particular accounts within the financial statements which have been identified as CAM, instead of on the financial statements taken as a whole. Also, inclusion of CAM may compel the auditor to report information that is not otherwise publicly available and is not required to be disclosed by management, which we do not feel is appropriate. In these ways, the inclusion of CAM alters the defined role of the financial statement auditor in a manner that is not consistent with the audit function.

*Red Flag*

CAM may be incorrectly interpreted by investors as a "red flag", a sign that there is something wrong with the audited entity. Indeed, even the use of the word "critical" to describe the audit matters has negative connotations. Requiring the auditor to call out as CAM each area in which a significant judgment is made or on which audit evidence is most difficult to obtain, may cause investors to incorrectly conclude that there are problems with the audited entity, when in reality judgments, estimates and assumptions are inherent in the financial statement process, a fact that is clearly disclosed in the financial statements in accordance with Financial Accounting Standards Board Accounting Standard Codification ("ASC") 275-10-50-4.

In the investment company industry, the use of judgments, estimates and assumptions is generally most prevalent with respect to investment valuation, especially with securities that are classified as Level 3 under ASC 820's fair value hierarchy. As such, investment valuation would presumably be called out by the fund auditor as a CAM. Although management makes significant judgments, estimates and assumptions in the valuation of Level 3 securities and the auditor may have to engage the help of a valuation specialist to evaluate those valuations, the auditor is able to obtain sufficient audit evidence to support those valuations in order to reach an unqualified opinion on the financial statements as a whole. Moreover, the financial statement disclosures with respect to investment valuation, especially with respect to the assumptions (i.e., methodologies and valuation inputs) used in valuing Level 3 securities, are very robust. In such circumstances, by calling out investment valuation as a CAM, the auditor is raising a "red flag" to investors where no problem exists and where significant disclosure is already available for the investor within the notes to the financial statements.

*Subjective Yardstick*
The PCAOB has expressed a view that they would not expect to see an auditor's report without a CAM. This may give the auditor an incentive to identify and disclose several items as CAM in order to demonstrate the comprehensive nature of its audit and its compliance with the PCAOB's directive. Given that CAM may be perceived as a "red flag" by investors, the requirement for auditors to disclose CAM may have further unintended negative consequences in that investors may use CAM as a "yardstick" with which to determine relative ratings on the investment worthiness of audited entities and even the quality of the related audits. The determination of CAM by an auditor is subjective and, as such, the number of CAM cited or the reason for citing a CAM in the auditor's report may differ among very similar entities based on subjective decisions made by the different audit teams or firms involved.

This issue of auditor subjectivity is particularly problematic for the investment company industry where, for most of the larger fund complexes, a portion of the funds in the complex are audited by one audit firm while the remainder are audited by a second firm (i.e., a "two audit provider model"). Under the two audit provider model, two substantially similar funds within the same fund complex could be subject to audit by two different audit firms - each with their own unique thoughts on what constitutes a CAM and the reasons why. Although the strategy, holdings and investment performance of those two funds may be almost identical, we believe that the fund that has more CAM (or more reasons for CAM) cited in its auditor's report may unjustly be at a relative disadvantage in the eyes of investors. This concern is magnified when looked at in the context of the auditor's reports for the industry's full universe of competing funds each of which is audited by different audit teams and firms.

*Auditor in the Role of Management*
In communicating their reasons for concluding something is a CAM, the auditor may be forced to include in the auditor's report information about the audited entity's operations or financial results that is not otherwise publicly available (e.g., control deficiencies or proposed auditor adjustments) and that is not required to be disclosed by management based on either management's judgment or the reporting requirements of the entity's regulators. Under such circumstances, the requirement to report CAM places the auditor in a position outside of the role of the auditor as defined by AU Section 110 *Responsibilities and Functions of the Independent Auditor* which states that "the financial statements are management's responsibility. The audited entity's transactions and the related assets, liabilities, and equity are within the direct knowledge and control of management. The auditor's responsibility for the financial statements he or she has audited is confined to the expression of his or her opinion on the fairness with which they present, in all material respects, financial position, results of operations and its cash flows in conformity with generally accepted accounting principles." The concept of CAM, which requires auditors to disclose information on the financial statements beyond what is required to be disclosed by management, is counter to the auditor's defined role and muddles the roles of management and the auditor. If the information that would be included in a CAM is considered truly important to an investor's investment decision making process, then management should be the party responsible for disclosing that information.

*Piecemeal Opinion*
The inclusion of CAM in the audit opinion will not only dramatically change the format and the length of the auditor's report, but also result in piecemeal CAM opinions which compromises the pass/fail model of the audit. Under AU Section 508 *Reports on Audited Financial Statements*, the auditor has a responsibility to express an opinion on the financial statements taken as a whole, or to state that an opinion cannot be expressed. Due to the prominence of presentation of the CAM, the auditor's conclusions on CAM audit areas may overshadow the auditor's opinion on the financial statements taken as a whole.

*Significant Costs*
Although the level of audit evidence and audit work required to reach a qualified or unqualified opinion should not change, a significant increase in hours would be necessary for the auditor to draft the CAM language in the auditor's report and to document their conclusions in the audit work papers on why or why not something was deemed a CAM. The opinion, which would now include language outside of the audit firm's standard template language, will undoubtedly require additional levels of review by others outside of the audit engagement team including, but not limited to, the management of the audited entity; national consulting partners for the audit firm; and the legal counsel of both parties. The additional hours incurred would have significant associated costs given the senior level of the parties involved in the drafting and review of the opinion. These costs likely will be tacked onto existing audit fees which, in the case of most investment funds, will translate into higher fund expenses borne by investors. It should also be noted that these additional hours most likely would be incurred at the conclusion of the audit when filing deadlines are looming and the stress level is at its highest for all parties involved. While the associated costs would be significant, we do not see an appropriate corresponding benefit derived from CAM. We actually feel that inclusion of CAM weakens the audit report as it is likely to draw investor attention away from the auditor's opinion on the financial statements taken as a whole and re-direct investor focus to a few specific financial statement areas. Further, we would note that there is already significant, required financial statement disclosure on areas that may be identified in CAM.

For the reasons enumerated above, we do not support the inclusion of CAM in the auditor's report. Fundamentally, we believe that the overall goal of requiring auditors to disclose CAM is unclear. If the information that the PCAOB intended to be conveyed in CAM is information about the audited entity, we believe that many of the areas which would be identified as CAM already are subject to significant disclosure requirements in the notes to financial statements. If additional disclosure related to these areas is warranted, we believe that management should be required to provide this disclosure (in the notes to financial statements or elsewhere) rather than requiring the auditor to make the disclosure in its audit opinion. Also, in addition to the very tangible increase in audit cost that will result from the drafting, documentation and review of CAM, we believe that the number of CAM (along with the reasons cited for those CAM) will have a significant indirect cost to the audited entity in that CAM will inevitably become a "yardstick" against which entities are rated by investors. In our industry, where there are any number of comparable fund offerings from which an investor can choose, we believe that the relative attractiveness of a fund to an investor should be based on its comparative financial performance and should not be unjustly disadvantaged by a benchmark that is so subject to variability based on the audit team.

<u>Auditor Tenure</u>
Under the Proposed Standards, the auditor's report would be modified to include a statement containing the years that the auditor has been serving consecutively as the entity's auditor. The requirement to disclose tenure in the auditor's report implies that tenure plays a role in the auditor rendering its opinion on the financial statements; however, despite extensive research on the subject, no conclusive link has been established between auditor tenure and the quality of the audit in terms of auditor independence, objectivity and professional skepticism. It should also be noted that in the context of an investment company complex in which new funds are often launched each year, the tenure disclosure may be confusing to investors as the auditor tenure dates may differ significantly fund to fund based on each fund's unique inception date. At MFS, for example, we have roughly 140 funds, substantially all of which have a different inception date and, therefore, a different auditor tenure date. We feel that there are other, more appropriate means of disclosing tenure, if information on tenure is indeed important to the investor. In fact, many public companies already disclose auditor tenure as part of their proxy statements.

Other Information

Under the Proposed Standards, the auditor would be required to state in the auditor's report that they neither audited nor expressed an opinion on the other information[2], but instead evaluated the information based on their audit work to conclude whether the other information contains a material inconsistency with the financial statements, a material misstatement of fact or both. Based on that evaluation, the auditor also would be required to make a statement whether they have or have not identified a material inconsistency and/or a material misstatement of fact in the other information that has not been appropriately revised by management.

Based on our review of the Proposed Standards, it appears that the scope in terms of the specific elements of other information and the expected level of auditor effort and documentation has not been sufficiently defined. Without further definition, we believe that the elements to be evaluated as well as the level of auditor effort and documentation are subject to interpretation and, therefore, may differ greatly among audit teams. As such, the PCAOB's objective of clarifying the auditor's responsibility for other information would not be met. Additionally, we believe that requiring the auditor to perform procedures over other information for which the auditor has little or no expertise would add significant regulatory and litigation risk for the auditor, while providing little, if any, value to the investor.

In order to ensure that the benefits to investors exceed the costs in terms of additional hours that will be incurred by the auditor and management in evaluating other information, we believe that the scope of this requirement to evaluate other information should be well-defined and limited to other information that is directly related to the financial statement audit. There is little value in requiring the auditor to evaluate other information (e.g., Code of Ethics) in which the auditor has neither training nor expertise as the very real increase in costs related to additional auditor hours incurred would have little, if any, corresponding benefit in terms increased assurance for the investor. Whatever the scope, this requirement will undoubtedly result in additional work by management and the auditor which will translate into increases in costs. Whether borne by management or passed along directly to shareholders, those cost increases will negatively impact the return to shareholders.

The need for a scope clarification is especially important in the context of an investment company complex due to the number and year-round nature of the filings involved. In contrast to a corporate entity where there is generally one filing annually that would constitute other information, we prepare roughly 35 filings annually which include the audited financial statements and the auditor's report for one or more of our 140 funds. That number would be slightly larger for years in which fund mergers or other events occur. Even if the scope of the auditor's evaluation were limited solely to other information that is financial in nature (e.g., portfolio holdings; valuation, derivative and purchase and sales disclosures; fund expenses, expense ratios and returns), the additional work required by the auditor to complete their evaluation would be significant. The auditor's evaluation would be further complicated by the fact that filings deadlines are very tight and that these filings are made at the trust level (i.e., a trust generally includes multiple funds). Under the two audit provider model discussed above, a portion of the funds in a trust may be audited by one audit firm with the remainder audited by a second firm, with the result that not just one but two sets of auditors would be required to evaluate the other information in a trust's filing. With our fund year-ends staggered throughout the year for operational efficiency, our auditors' evaluation of other information would be practically non-stop.

Given the significant level of additional hours that would be involved and the perceived lack of clarity with respect to the scope of the auditor's responsibility for evaluating other information, we suggest that the PCAOB consider gathering more information before proceeding with this requirement. Public roundtables may help to determine the specific elements of other information that are most important to investors. Armed with that investor feedback, the PCAOB would then be able to determine which areas that auditors have the necessary expertise to evaluate. Once the types of other information have been sufficiently narrowed down, then auditor field testing of clients could provide a better understanding of the level of

[2] Other information in the Proposed Standards refers to information in an entity's annual report filed with the SEC under the Securities Exchange Act of 1934 that also contains the entity's audited financial statements and the related auditor's report.

effort required and the additional costs to be incurred. The overall objective of this fact gathering should be to define a scope for which the perceived benefit to investors exceeds the very real costs associated with the increase in auditor and management efforts.

Conclusion

MFS and the MFS Funds Board Audit Committee appreciate the opportunity to provide comments on the PCAOB's proposed changes to the auditor's report. We support the PCAOB's goals, and specifically support the proposed changes to the auditor's report related to clarification of auditor independence as well as the auditor's responsibility for fraud and the notes to the financial statements. We do, however, have significant concerns on certain other items outlined in the Proposed Standards. In response to those concerns, we encourage the PCAOB to:

- Reconsider the inclusion of CAM in the auditor's report because CAM would (i) introduce subjectivity into what should be an objective process; (ii) cause an investor to concentrate on piecemeal information and conclusions rather than the financial statements taken as a whole; (iii) considerably change the role of the auditor as defined in AU Section 110; and (iv) significantly increase audit cost with no corresponding benefit, only the potential downside of negatively impacting the comparability and investor appeal of a fund relative to its peers based on different audit teams' unique thoughts on what constitutes a CAM and the reasons why.

- Consider using public documents more appropriate than the auditor's report on financial statements for any required disclosure of audit firm tenure (e.g., proxy statements), as there is no evidence that tenure has a bearing on the auditor's ability to render an opinion.

- Gather information through mechanisms like public roundtables and field testing to understand (i) the types of other information on which investors are most interested in obtaining additional auditor assurance and which types of information that an auditor has the necessary expertise to evaluate as well as (ii) the relative costs-benefits of increasing the auditor's responsibility for each specific type of other information. With this level of detail, the proposed scope of the auditor's responsibility for other information then can be defined in a manner that provides an appropriate benefit in consideration of the additional costs that inevitably would be incurred by management and the auditor.

Should you have any questions about our comments regarding the Proposed Standards, please feel free to call Bob Uek or John Corcoran at 617-954-5637.

Sincerely,

John Corcoran

*Note: This comment letter is based partly on a synthesis of the literature on the audit reporting model (Mock, Bédard, Coram, Davis, Espahbodi and Warne 2013). This comment letter is written by a subset of the synthesis authors, it expresses the views of these authors and does not reflect an official position of the American Accounting Association, the Auditing Section of the AAA, or any other organization.

# Comment letter to respond to the PCAOB invitation to comment on its Exposure Draft Concerning the Auditor's Report on an Audit of Financial Statements

## I. INTRODUCTION AND COMMENT OBJECTIVES

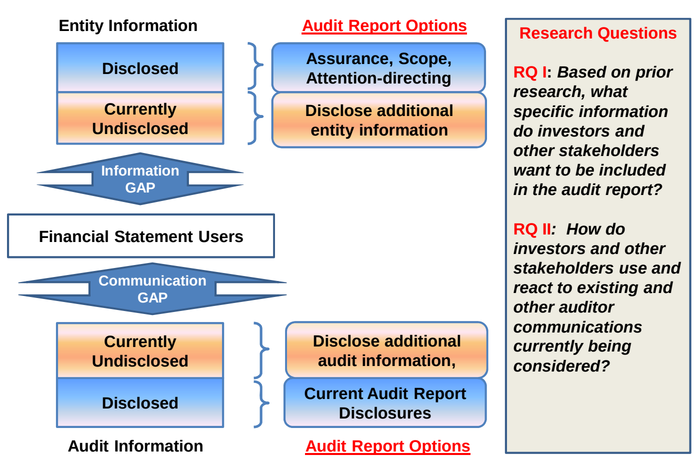
The PCAOB has invited comments concerning its Exposure Draft: *Proposed auditing standards – the auditor's report on an audit of financial statements when the auditor expresses an unqualified opinion; the auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report; and related amendments to PCAOB standards* [PCAOB Release No. 2013-005].

The proposed standards include the disclosure of additional information highlighting matters important to users' understanding of audited financial statements or the audit, information which may help close the information and communication gaps depicted in Figure 1 below. In this comment letter, we augment a synthesis of academic research [Mock, Bédard, Coram, Davis, Espahbodi and Warne, 2013] by providing an updated synthesis of academic research; indicating to what extent we believe prior research suggests that the proposed additional information is likely to close the gaps; indicating the amount of prior research evidence that is available; and identifying research gaps, that is areas where little or no prior research evidence is available.

## II. FRAMEWORK, APPROACH AND COMMENT RESEARCH QUESTIONS (CRQs)

Mock et al. (2013) provide a framework based on communication theory to illustrate the basic options concerning the content of the audit report (see Figure 1). This framework separates the *expectation gap* into two components: the *information gap*, which relates to information about the entity, and the *communication gap*, which relates to information about the audit.

Figure 1: Information Gap, Communication Gap, Audit Report Options and Research Questions



In terms of research questions addressed, we focus on three Comment Research Questions (CRQs):

> CRQ1. *What additional research has been published and are there findings that either significantly support or weaken the synthesis findings in Mock et al. (2013)?*
>
> CRQ2. *To what extend is the PCAOB ED responsive to specific information investors and other stakeholders want to be included in the audit report? What information that research indicates stakeholders use and react to, is currently not provided? To what extent can the proposed disclosures be expected to close the 'gaps' identified in our prior Synthesis?*
>
> CRQ3: *To what extent is there a "Research Evidence Gap?"*

III. FINDINGS WITH RESPECT TO CRQ 1: *What additional research has been published and are there findings that either significantly support or weaken the synthesis findings in Mock et al. (2013)?*

Our prior synthesis built on a previous research review developed by Church, Davis, and McCracken (2008) and synthesized approximately 90 studies published between 2007 and 2011. To prepare this section, we considered an additional 30 research studies and reflect on whether the prior synthesis findings are supported (strengthened) or possibly weakened. As many of these studies relate to international settings or are not directly related to topics included in the PCAOB ED, they are not considered directly to prepare this comment.

*What Specific Information Do Investors and Other Stakeholders Want Included in the Audit report*?

There are two main recent studies that have examined the information desired by financial statement users. Carcello (2012) conducted a survey of over 300 diverse knowledgeable, financial statement users. The results indicate that 91% of participants did not read the standard audit report (SAR), and 18% reported that the auditor's report is useless. Participants also expressed a desire for more information from the auditor. For example, 79% of survey participants desired greater disclosures regarding management's significant judgments and estimates. Also, 77% wanted more auditor disclosures related to risk. Overall, the results indicate that a sizeable majority of experienced financial statement users desire more disclosures from the auditor.

Vanstraelen et al. (2012) conducted semi-structured interviews lasting 30-60 minutes each with a small number of auditors and professional financial statement users to assess the information gap associated with the auditor's report. Results indicate that neither auditors nor financial statement users want the auditor to release engagement statistics or information about the audit process. However, financial statement users state a desire for more information related to the entity's risk and internal controls. Furthermore, they express a desire for the auditor to provide an "evaluation of accounting policies and practices, critical accounting estimates, and accounting judgments" (p. 207). Based on the findings of their research, the authors propose an auditor reporting model that consists of the following elements:

1) Audit scope. Include a listing of items that are part of the audit. Additional educational material could be linked to a website.
2) Audit findings. Unequivocal conclusions on each part of the audit.
3) Auditor discussion and analysis. Discussion and analysis of the auditor's findings of each part of the audit.
4) Information about the auditor. To assist users to evaluated audit quality. This could be a reference to the firm's transparency report.

Mock et al. (2013) summarize prior research with respect to stakeholders' desired information in the audit report, which is based primarily on survey data and focus groups, as follows: "Stakeholders deem the audit report as important, but they desire more information about the auditor, the audit, and the financial statements including MD&A. Audit related information desired include auditor independence, audit process, materiality, level of assurance the auditor is providing, and entity-related information including accounting policies and risk-related information."[1]

In summary, the findings from the Carcello (2012) and Vanstraelen et al. (2012) studies are broadly consistent with Mock et al. (2013). That is, users want more information about the audit. However, one difference noted by Vanstraelen et al. was that more information about the audit process was not particularly important to either group they studied.

*How do investors and other stakeholders use and react to existing and other auditor communications currently being considered?*

Many prior studies have investigated the above research question using archival, survey, interview, focus group, and verbal protocol methods. In our prior synthesis, we categorized research into the following areas:

1) The impacts of information currently included in standard public company audit reports;
2) The impacts of information included in other types of assurance reports, such as sustainability reports;
3) The effects of auditor's association with MD&A or other information outside the financial statements;
4) Additional auditor report content explicitly contained in PCAOB Release No. 2011-003, mainly an Auditor's Discussion & Analysis, expanded use of the emphasis paragraph, and information which is intended to clarify audit terminology; and
5) The engagement partner signing the audit report or being individually identified otherwise.[2]

Recent research has examined issues related to four of the above five categories. We summarize these studies and discuss their impact on our prior findings below. In addition, we discuss the results of studies that have examined Mandatory Audit Firm Rotation/Audit Tenure and disclosure of "Critical Audit Matters," two categories not covered in our prior synthesis, but that are included in the proposed standard.

[1] Mock et al., 2013, p. 331
[2] Mock et al. 2013, p. 333

**The Impact of Information Currently Included in a Standard Public Company Audit Report: Information Concerning Going-Concern Opinions**.

A recent US research study by Kaplan and Williams (2013) shows that when auditors issue a going-concern opinion and they subsequently face litigation, legal settlements are lower than when the auditor did not issue a going-concern opinion. Mock et al. (2013) find that the value for financial statement users of audit reports modified for going concern to be somewhat mixed. The above recent research does seem to suggest that these reports have value for the auditors as they reduce their litigation risk.

**The Impacts of Information Currently Included in a Standard Public Company Audit Report: Information Concerning Internal Control over Financial Reporting**

Asare and Wright (2012a) conducted two experiments to determine whether an adverse opinion for the internal control over financial reporting (ICOFR) affects investors' and analysts' confidence in the standard audit report. They find that investors' and analysts' confidence in the standard audit report [SAR] is highest when it is accompanied by an unqualified ICOFR report, and lowest when an adverse IFCOR report contains an entity-wide material weakness. In a separate study, Asare and Wright (2012b) find that equity analysts view "reasonably possible" entity-wide material weaknesses as more predictive of a future material misstatement than an account-specific material weakness. Additionally, the authors find that analysts view reasonably possible account-specific material weakness as more predictive of a future material misstatement than an unqualified opinion. These two studies suggest that analysts and investors find value in the ICOFR opinion.

Chen et al. (2013) examined the association between ICOFR audits and earnings-return associations. They find that firms with first-time, clean ICOFR audit reports have higher earnings informativeness than in the year preceding these reports when they only received financial statement audit reports. This study also suggests there are some benefits from these ICOFR audit reports.

This recent research confirms the findings as reported in Mock et al. (2013) that investors value ICOFR audits.

**Additional auditor report content: Critical audit matters**

Mock et al. (2013) highlight a lack of research evidence on the communication of critical audit matters. A recent study by Bédard and Gonthier (2013) provides information on the nature of the disclosure of justifications of assessment by French auditors. For the 40 largest French companies, they find that auditors disclose an average of 3.2 critical matters per audit report, and that accounting estimates are the most frequent matters referred to followed by accounting methods. They also find that over the eight years studied, only 20 percent of the matters disclosed in the audit report were new matters. The other 80 percent were on same theme and most of the time were a simple "cut and paste" of the previous year's description of the critical audit matter.

**The engagement partner signing the audit report or being individually identified otherwise**

Mock et al. (2013) highlight a lack of audit evidence on this topic and referenced a commentary by King et al. (2012) that applied insights from three academic frameworks of source credibility, accountability, and the theory of affordances. From their analysis they note that there may be unintended consequences from the proposed changes in this area. While they find that the changes will increase perceived audit quality, they highlight that there is scarce empirical evidence on whether the changes will increase audit quality in actuality.

A recent study to address this question by Carcello and Li (2013) examined a number of consequences associated with the engagement partner signing the audit report in the United Kingdom. The results indicate higher audit fees as a result of the requirement, but also higher audit quality and earnings information. The authors also compared a sample of U.K. firms with a sample of similar U.S. firms, and the results suggest higher audit quality related to the audit partner signature. This study provides evidence of possible benefits of the audit partner signing their name. However, it does not address the question of whether the benefits exceed the costs. Of course, the other point to note that was highlighted by Mock et al. (2013) is that many countries around the world have had this requirement for years with no apparent adverse effects.

**Mandatory Audit Firm Rotation/Audit Tenure**

Prior academic research has documented possible advantages and disadvantages of mandatory audit firm rotation (e.g., Stefaniak et al. 2009). Possible advantages include auditors becoming more independent in fact and/or in appearance, and increased access of smaller audit firms into the audit market. Possible disadvantages include less questioning of management by auditors, a loss of client-specific audit information, which could lead to an audit failure, increased costs, and a greater concentration of large audit firms (Ewelt-Knauer et al. 2012).

Though prior research has investigated the topic of mandatory audit firm rotation, it is difficult to draw conclusive public-policy recommendations for at least three reasons. First, as noted by Li (2010), most research in this area contains an endogeneity problem, such as a self-selection bias of firms who voluntarily switch auditors. Also, the research findings are mixed, both between academic studies and often within specific studies. The research often examines samples, for example non-U.S. companies, that might have characteristics differing from U.S. companies.

Casterella and Johnston (2013) and Ewelt-Knauer et al. (2012) synthesize the academic literature regarding mandatory audit firm rotation. Casterlla and Johnston (2013) caution the use of academic research results that may not generalize into the setting of mandatory audit firm rotation in the U.S. However, they find that eight of the 11 studies conducted in a mandatory rotation setting provide evidence that lends support to a mandatory rotation policy. This contrasts with Eqelt-Knauer et al. (2012) who conclude, “Given the lack of evidence linking mandatory rotation with an improvement in audit quality, regulators need to carefully determine the long-term objectives of a mandatory rotation requirement before implementing a costly measure” (p. 9).

**Summary**

The results of the academic papers published recently largely support the findings of Mock et al. (2013). Recent research documents that investors continue to desire additional disclosures from the auditor specifically related to the financial statements, the audit, and the auditor. Questions persist regarding the value of the current standard audit report. Results of recent research regarding ICOFR opinions generally conclude that investors value these opinions, which is also consistent with Mock et al. (2013). With regards to the auditor’s going-concern opinion, Mock et al. (2013) note that earlier published archival papers question the value of the auditor’s going-concern opinion while later papers find such opinions useful to the market. The recent research discussed above provides more evidence that financial statement users find the auditor’s going-concern opinion useful. Mock et al. (2013) report little empirical evidence regarding the effects of an engagement partner’s signature on the audit report. However as noted above, Carcello and Li (2013) find that such a requirement is related to improved audit quality but also to increased fees. Finally, Mock et al. (2013) report that the provision of assurance on MD&A presentations—at least on the verifiable components such as financial information, key resources, and risks—is perceived to be value-relevant. No recent research has examined this issue.

IV. FINDINGS WITH RESPECT TO CRQ 2: *To what extend is the PCAOB ED responsive to specific information investors and other stakeholders want to be included in the audit report? What information that research indicates stakeholders use and react to, is currently not provided? To what extent can the proposed disclosures be expected to close the ‘gaps’ identified in our prior Synthesis?*

> *“The proposed auditor reporting standard is intended to provide investors and other financial statement users with potentially valuable information that investors have expressed interest in receiving but have not had access to in the past”* (PCAOB 2013, 6).

In this section, we address CRQ2. Our evaluation is based on research cited in Mock et al. (2013) updated to include additional published academic research since 2011. The evaluation is organized around the line items in Table 2 of our prior synthesis, but is somewhat rearranged so that they correspond more closely to the requirements of the PCAOB proposed standard.

Most importantly, the Board's proposed standard would require the auditor to communicate in the auditor's report "critical audit matters" (CAMs) that would be specific to each audit. The auditor's required communication would focus on those matters the auditor addressed during the audit of the financial statements that involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence or forming an opinion on the financial statements.

The proposed standard also would enhance the auditor's responsibility with respect to “other information”[3] by adding procedures for the auditor to perform to evaluate the “other information.” The evaluation is intended to identify material misstatements of fact as well as material inconsistencies with amounts or information, or the manner of their presentation, in the audited financial statements, and would be based on relevant evidence obtained and conclusions reached during the audit. Finally, the proposed standards would (1) add new elements to the auditor's report related to auditor independence, auditor tenure, and the auditor's responsibility for, and evaluation of “other information,” and (2)

[3] "Other information" in the proposed other information standard refers to information in a company's annual report filed with the SEC under the Exchange Act that also contains that company's audited financial statements and the related auditor's report.

enhance certain standardized language in the auditor's report, including the addition of the phrase "whether due to error or fraud," when describing the auditor's responsibility to obtain reasonable assurance.

Information gap items concerning the financial statements items stakeholders are interested in

Tables 1 and 2 summarize our evaluation of whether the PCAOB proposed standard responds to specific entity (client) information concerning the financial statements stakeholders want to be included in the audit report and possibly help close the information gap. The 19 entity information gap line items in Tables 1 and 2 are those in Panel A of Table 2 of Mock et al. (2013), somewhat rearranged so that they correspond to the requirements of the PCAOB proposed standard. Table 1 focuses on information concerning the client's financial statements, and Table 2 contains information concerning 'other' information in the annual reports or other client communications that relate to the client's financial statements such as management forecasts.

Each table contains three columns, with Column 1 listing in total 19 possible information gap items. Column 2 summarizes the requirements contained in the Exposure Draft (ED) and our belief as to whether the ED will be responsive to stakeholder needs and will possibly help close the information gap, using a three-level scale (Yes, Possibly, No). In some cases, such as additional communications regarding going concern, the item is indicated as being one on the PCAOB agenda to be considered separately.

Column 3 indicates our assessment of the level of academic research that bears on the information item and to what extent significant research opportunities exist. We use a four-level scale (Ample, Moderate, Minimal, None) to signify the level of research on the information item, and a two-level scale (Moderate, Significant) to signify the extent of research opportunities. This column is discussed in Section V.

**Items 1 to 9:** As indicated in Table 1, the proposed requirement for communication of "critical audit matters" (CAMs) could potentially and significantly respond to stakeholders' demands for financial statements information items number 1 through 9 since the proposed standard requires that the description of critical matters identify, describe the considerations, and refer to the relevant financial statement accounts and disclosures. This outcome assumes that the auditor would consider these items as potentially "critical audit matters" in every audit. This assumption would hold for some entity information items, but not all. For example, the auditor would almost always view difficult or contentious issues (item number 3) as "critical audit matters," but may not view many of management's judgments and estimates (item number 2) as such.

One potential issue relates to what stakeholders may infer if an item they consider important is not explicitly discussed in a CAM communication. The most likely inference is that the auditor did not consider that particular item to be "critical," indirectly inferring the item was deemed "not critical."

**Item 10:** The proposed standard does not require any new procedures or information relative to going-concern evaluation. This topic is on a separate PCAOB agenda. The gap in this area will largely remain, although CAM communications on critical audit matters may highlight risks related to the going-concern assumption.

Information gap items concerning other information included in financial statements or related to the financial statements that interest stakeholders

Table 2 summarizes our evaluation of nine information gap items. More specifically, it considers whether the PCAOB proposed standard responds to *other* information concerning the financial statements (or in some cases beyond the financial statements) that some stakeholders believe might benefit from auditor assurance.

**Items 11, 12, 13, and 14**: These entity information gap items are not addressed by the proposed standard. They may be addressed in the future. Thus, the existing gaps in these areas remain.

**Items 15, 16, and 17**: These entity (client) information gap items are addressed by other PCAOB standards. However, the proposed standard, if adopted, may change the language in these other reports. For example, AS 5 will be amended to assure consistency of the audit report on internal control effectiveness with an unqualified audit report on financial statements. Those changes can be expected to help narrow the information gap.

**Items 18 and 19**: Since non-GAAP information and MD&A are included in companies' annual reports, they would be considered "other information" in the proposed other information standard. As such, auditors will be responsible to look for material misstatements of fact and material inconsistencies with amounts or information in the audited financial statements. This information, however, will not be audited. Thus, while the exposure draft will narrow the information gap in these areas, it does not respond to the users' demand for assurance on them.

**Summary**

In summary, the proposed standard will likely close the information gap relative to some financial statement items of interest to various stakeholders. The proposed standard does not require any new procedures or information relative to going concern, which is on a separate agenda. The information gap on information other than financial statements is not generally addressed and thus will largely remain. The exceptions include non-GAAP information and information in the MD&A. The proposed auditor's responsibilities for these items likely will close the information gap.

Communication gap items concerning the auditor

Table 3, items numbered 1, 2 and 3 and column 2, summarizes how the PCAOB ED responds to the "communication gap" concerning the auditor and indicates our belief that the item will be responsive to stakeholder needs and will possibly help close the communication gap. Column 3 indicates our assessment of the level of academic research that bears on the information item and to what extent significant research opportunities exist. This column is discussed in Section V.

**Item 1:** The proposed standard does not require signature or identification of the audit partner in the audit report. The existing gap in this area remains**.**

**Item 2:** Because it requires a new element in the auditor's report stating that the auditor is independent with respect to the company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the SEC and the PCAOB, the proposed standard has the potential to reduce the communication gap by providing users information on which requirements the auditor followed. However, the reduction in information gap will be limited because users may lack knowledge of the requirements referenced, and the auditor may refer to multiple requirements. In addition, research studies show that users' perceptions of independence is affected by the level of non-audit services provided, their nature, and the length of the auditor relationship with the company. Although the proposed standard requires disclosure of audit tenure, and fees for non-audit services are disclosed in filing documents, the nature of non-audit services will not be known by users. Accordingly, the information gap may not be significantly reduced.

**Item 3:** The proposed standard adds a new element to the audit report to provide information on auditor tenure. Although this information has been available through the SEC filings, its appearance on the audit report might close the communication gap.

Communication gap items concerning the audit

Table 4, items numbered 4 through 13 and column 2, summarizes how the PCAOB ED responds to the "communication gap" concerning the audit and indicates our belief that the item will be responsive to stakeholder needs and will possibly help close the communication gap. Column 3 indicates our assessment of the level of academic research that bears on the information item and to what extent significant research opportunities exist. Again, this last column is discussed in Section V.

**Item 4:** The proposed standard does not address the role of other auditors involved in the audit; this item is on the PCAOB agenda as a separate project. Thus, unless use of other auditors constitutes a CAM, which may be the case in some audits, the existing communication gap in this area remains.

**Items 5-6:** The proposed standard does not address materiality and the level of assurance given that these matters are already addressed to some degree in other standards. Implicitly, this seems to imply that the PCAOB sees these items as expectation gaps, and not communication gaps. Nomenclature aside, the proposed standard will not close these gaps.

**Items 7-8:** The proposed standard will likely close the gaps related to these items by clarifying the auditor's responsibilities for fraud and financial statement disclosures. The auditor's responsibility for fraud is clarified by adding the phrase, "whether due to error or fraud," to the auditor report, and that for disclosures via enhancements to the auditor's report related to the auditor's responsibility for the notes to the financial statements.

**Items 9-10:** Non-GAAP information and MD&A are included in companies' annual reports, and thus would be considered "other information" in the proposed other information standard. As such, auditors will be responsible to look for material misstatements of fact and material inconsistencies with amounts or other information in the audited financial statements. This information, however, will not be audited. Thus, while the exposure draft may narrow the information gap in these areas, it does not respond to the users' demand for assurance on them.

**Items 11-12:** Significant audit risk, issues of significance related to the audit scope or strategy, difficult or contentious matters, and audit procedures responsive to these risks can be expected to be addressed as "CAMs." The ED requires auditors to "communicate critical audit matters" [CAMs] – matters that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty in obtaining sufficient appropriate evidence; or (3) posed the most difficulty in forming the opinion on the financial statements. The description of critical matters can be expected to identify, describe the considerations, and refer to the relevant financial statement accounts and disclosures.

**Item 13:** The proposed standard enhances certain standardized language in the auditor's report, including the title of the report and audit clients. As such, the standard possibly may reduce communication gaps related to these two items.

**Summary**

In summary, the proposed standard will likely close the communication gap relative to many audit and auditor items of interest to various stakeholders. The proposed standard does not require any information or new procedures relative to audit partner signing the audit report or being individually identified otherwise, the role of other auditors, materiality, and level of assurance. Thus, the communication gap relative to these items will remain.

V. FINDINGS WITH RESPECT TO CRQ 3: *To what extent is there a "Research Evidence Gap?"*

Tables 1, 2, 3 and 4 also summarize in column 3 our evaluation of to what extent a "research evidence gap" exists. We indicate the level of evidence from reviewed published research supporting our conclusion on a four-level scale (Ample, Moderate, Minimal, None) and the extent of research opportunities on a two-level scale (Moderate, Significant). The research reviewed includes approximately 120 published academic research studies beginning in 2007.

<u>Information gap items concerning the financial statements items that interest stakeholders (Table 1)</u>

**Items 1 to 9:** As Table 1 indicates, there is minimal to no prior research on most of the listed items that may be communicated in the auditor's statement concerning critical audit matters. The onus will be on auditors to select the critical audit matters (CAM) to include. The newness of these disclosures creates significant research opportunities, for example to conduct studies to determine the frequency of items which are included in the CAM or to assess which included items affect the users' decisions. Also, the variability of disclosure will create opportunities for researchers to examine the decision making process of auditors in this task and their impacts on various audit variables such as litigation risk, audit delay, audit costs, and financial statements quality. Researchers could also examine the benefits of having the auditor provide this information rather than management or the audit committee as in the U.K.

**Item 10:** Recent research does seem to suggest value in going concern reports and the likelihood that the auditor's CAMs will include factors related to the going concern assumption and going concern risk. Thus, there exits significant opportunities to conduct studies to determine which items will be included in the CAM,  which items will stakeholders actually use and in what context, which items might be confusing or misleading, which items affect the users' decisions, and in what form the information should be disclosed. Research is clearly needed to ascertain what set of items will be investigated/considered by the auditor and whether the inference of factors not being communicated are indeed "not critical" factors.

<u>Information gap items concerning other information included in financial statements or related to the financial statements that interest stakeholders (Table 2)</u>

**Items 11, 12, 13, 14:** Table 2 indicates there has been some, but a minimal amount of, research on all four listed items, and thus significant research opportunities. Among other things, research can investigate the effect of assurance on the quality of information such as management forecasts.

**Items 15, 16, 17**: Prior archival research from the 1990s on quarterly financial statements for U.S. companies shows that auditors' reviews of these statements have value. Opportunities exit to examine whether their value has changed in a post-SOX environment. For example, a recent paper by Bédard and Courteau (2013) finds that for Canadian companies in the years 2004-2005, auditors' reviews are not associated with greater financial statements reliability. There is minimal prior research on earnings releases, and thus significant research opportunities. In contrast, many studied have investigated ICOFR, mostly relating to large audit clients. Similar research could yield value concerning ICOFR for small firms.

**Items 18 and 19:** Concerning MD&A, although sparse, the evidence from survey, focus group, and archival studies indicates that users demand the information in MD&A and find it useful. However, a significant research gap exists with respect to auditor identifications of material inconsistencies with the company's audited financial statements and material misstatements of fact. Thus, significant research opportunities exist, for example, to document identified inconsistencies and misstatements and to study market effects and effects on stakeholder decisions.

Communication gap items concerning the auditor (Table 3)

**Item1:** Archival and experimental studies on the impact of signature on audit quality offer mixed results as do some of the related studies. Carcello and Li (2013) find that such a requirement is related to improved audit quality but also to increased fees. Future research should address the research limitations identified in Blay et al. (2011), such as obtaining direct evidence on the effect of the signature on user decisions or judgments, and exploring other potential benefits of a mandatory partner-level signature requirement. It can also address the question of whether the benefits exceed the costs.

**Items 2 and 3:** The proposed disclosures related to auditor independence are somewhat novel and are disclosures in the U.S. related to auditor tenure. The mixed results of audit research concerning auditor rotation and tenure also suggest additional research. Thus significant research opportunities also exist related to these two items.

Communication gap items concerning the audit (Table 4)

**Item 4 - 10:** Although being addressed elsewhere, the role of other auditors in complex, multi-country audits presents significant research opportunities. Other proposed communications include disclosure of materiality and methods of determining its level, disclosure of circumstances or relationships that might affect the auditor's independence, disclosure of the identities and roles of other auditors, disclosure of the level of assurance, and potential changes in the auditor's responsibilities for detecting fraud. Experiments, surveys, and protocol analyses could help identify changes that would potentially affect users' decisions, or improve the communicative value of the audit report or the quality of the audit.

**Items 11-13:** Users request additional communications concerning significant audit risks and information related to the audit scope or strategy. Significant research opportunities exist is all of these areas. For example, experiments, surveys, or protocol studies can examine whether the disclosure of audit procedures designed to address identified risks affect and more importantly improve users' decisions.

**Conclusion concerning the research evidence gap**

In summary, Column 3 of the tables documents gaps in research evidence upon which to either assess the responsiveness of the ED or the likelihood of it reducing. In some cases the research is mixed, but many items have essentially no prior research that is directly relevant. Given that most of the research evidence is at best moderate, it is difficult for standard setters and regulators to base their standards on sufficient research results.

Several factors may explain this lack of evidence published in academic journals. The most critical seems to be insufficient access to evidence collected by audit firms themselves or by external inspection and quality control activities. Also, researchers face significant challenges in accessing appropriate participants in experimental, survey, interview, and process-tracing studies which could generate useful research evidence.

If one uses the publication process to filter out the most useful research, then another factor relates to timing as the time span from genesis of an academic research project to publication is usually quite lengthy. Also, some of the items being considered by the PCAOB proposals are relatively new. While researchers may be studying them, the output of these studies may still at the working paper stage. As noted above, we have not considered such working papers in this comment.

This research evidence "gap" suggests the need for the PCAOB to more closely work with the auditing research community and to provide or facilitate increased support to auditing researchers to study matters that will be subject to standard deliberations, including facilitating the study of the impact of both proposed and implemented standards.

Table 1: An analysis of how the PCAOB ED responds to the “information gap” concerning entity financial statement information. Items listed derived from Mock et al. (2013)

| | PCAOB ED requirements and whether the PCAOB proposals respond to the information line items on a three-level scale (**Yes, Possibly, No**) [**CRQ2**] | Level of prior research (**Ample, Moderate, Minimal, None**) [**CRQ1**] and Research Evidence Gap opportunities (**Moderate, Significant**) [**CRQ3]**) |
|---|---|---|
| 1. Accounting policies and practices<br>2. Management’s judgments and estimates<br>3. Difficult or contentious issues, including “close calls.”<br>4. Material Matters<br>5. Component of a larger business enterprise.<br>6. Significant transactions with related parties<br>7. Unusually important subsequent events<br>8. Accounting matters affecting the comparability of the financial statements<br>9. Most significant matters in the financial statements | “Communicate critical audit matters” [CAMs] specific to each audit<br><br>**Yes** for all items included by the auditor in each client’s CAM communications.<br><br>Also, not being included implies items are not critical, thus the audit process did not uncover critical information that should be communicated. | **Minimal** or **No** prior research on all of the 9 listed items<br><br>**Significant opportunities**. For example, studies to determine the frequency of items which are included in the CAM and which included items affect the users’ decisions. Also, the variability of CAM disclosures will create opportunities for researchers to examine the decision making process of auditors and their impacts on various variables such as litigation risk. |
| 10. Going concern assumption | Will be addressed as a separate agenda item<br><br>**No** | **Ample.** Prior research on some aspects – earlier archival studies question the value of the auditor’s going-concern opinion while later papers found such opinions useful to the market. Recent research provides more evidence that financial statement users find the auditor’s going-concern opinion useful.<br><br>**Significant opportunities.** In some areas, for example, the value of positive assurance on the going concern assumption when there are no identified problems, or the impact of explicit auditor’s assessment of the appropriateness of management’s use of the going concern assumption on auditor behavior. |

Table 2: An analysis of how the PCAOB ED responds to the "information gap" concerning entity 'other' financial statement information

| | PCAOB ED requirements and whether the PCAOB proposals respond to the information line items on a three-level scale (**Yes, Possibly, No**) [**CRQ2**] | Level of prior research (**Ample, Moderate, Minimal, None**) [**CRQ1**] and Research Evidence Gap opportunities (**Moderate, Significant**) [**CRQ3**] |
|---|---|---|
| 11. Management forecasts | Not addressed by the proposed standard and not on the PCAOB agenda<br><br>**No** | **Minima**l prior research on the value of assurance on most types of non-financial information. **Moderate** prior research on assurance of sustainability reports. **Significant opportunities** abound, e.g., investigating the impact of assurance on the quality of management forecasts. |
| 12. Key performance indicators | | |
| 13. Corporate governance arrangements | | |
| 14. Sustainability information | | |
| 15. Quarterly financial statements | Addressed in other standards; the proposed standard modifies the auditor report slightly by requiring the report to be addressed at least to investors in the company and the board of directors and changing the title of the report<br><br>**No** | **Ample** prior research, including a recent study.<br><br>**Moderate opportunities.** For example, investigating whether addressing the report to investors has an impact on the quality of quarterly financial statements. |
| 16. Internal controls over financial reporting | Addressed in other standards; the proposed standard modifies the auditor report slightly by adding new elements to the auditor's report on internal control related to auditor independence and auditor tenure<br><br>**No** | **Ample** prior research, including many recent studies.<br><br>**Moderate opportunities** focusing on the effects of additional communication requirements. |
| 17. Earnings releases | Addressed in other standards<br><br>**No** | **Minimal** prior research<br><br>**Significant opportunities**. For example, investigating current auditors' practices regarding earnings release and the impact of assurance of the quality of earnings releases. |
| 18. Non-GAAP information | "Identify material inconsistencies with the company's audited financial statements and material misstatements of fact"<br><br>**POSSIBLY** due to expanded auditor's responsibility for information outside financial statements | **Moderate** prior research<br><br>**Significant opportunities**, for example, to document identified inconsistencies, auditors' practices, market effects and effects on stakeholder decisions. |
| 19. MD&A | | |

Table 3: An analysis of how the PCAOB ED responds to the "communication gap" concerning the auditor

| | PCAOB ED requirements and whether the PCAOB proposals respond to the information line items on a three-level scale (**Yes, Possibly, No**) [**CRQ2**] | Level of prior research (**Ample, Moderate, Minimal, None**) [**CRQ1**] and Research Evidence Gap opportunities (**Moderate, Significant**) [**CRQ3]** |
|---|---|---|
| 1. Audit partner name | Item not addressed in the proposed standard<br><br>**No** | **Moderate** prior research with mixed results. Recent research suggests higher audit fees, audit quality and earnings information quality. Overall, these imply signature requirement may be beneficial.<br><br>**Moderate opportunities**. For example, future research could further explore benefits, especially in relation to costs. |
| 2. Auditor independence | Explicit requirement that audit firm be independent with respect to the client in accordance with federal securities laws and the rules and regulations of the SEC and the PCAOB<br><br>**Yes**, explicitly required | **Moderate** prior research. Survey results indicate that stakeholders desire information on auditor independence.<br><br>**Significant opportunities.** For example, researchers could examine the impact of such disclosure about independence on users' perception of the independence. |
| 3. Other [items not listed in synthesis table] such as auditor tenure | Adds new element to the auditor's report related to auditor tenure<br><br>**Possibly** will close this gap, although information on auditor tenure has been available through SEC filings | **Moderate** prior research concerning mandatory rotation with mixed results.<br><br>**Moderate opportunities.** Researchers could examine the effect of this disclosure on users' perception of independence and firm rotation rate |

Table 4: An analysis of how the PCAOB ED responds to the "communication gap" concerning the audit.

| | PCAOB ED requirements and whether the PCAOB proposals respond to the audit information line items on a three-level scale (**Yes, Possibly, No**) [**CRQ2**] | Level of prior research (**Ample, Moderate, Minimal, None**) [**CRQ1**] and Research Evidence Gap opportunities (**Moderate, Significant**) [**CRQ3**] |
|---|---|---|
| 4. Role of other auditors involved in the audit | Will be addressed as a separate agenda item<br><br>**No** | **Minimal** prior research<br><br>**Significant opportunities** exist to expand this line of research to the use of other auditors |
| 5. Materiality | Not addressed in ED [addressed elsewhere]<br><br>**No** | **Moderate** level of prior research with mixed results.<br><br>**Significant opportunities**, for example to identify effects on users' decisions. |
| 6. Level of assurance | Not addressed in ED [addressed elsewhere]<br><br>**No** | |
| 7. Auditor's responsibility for fraud | Enhancements related to the auditor's responsibilities for fraud by adding the phrase, "whether due to error or fraud"<br><br>**Yes**, statement as to responsibility explicitly required | |
| 8. Auditor's responsibility for financial statement disclosures | Enhancements to the auditor's report related to the auditor's responsibilities for the notes to the financial statements<br><br>**Yes**, statements as to responsibility explicitly required | |
| 9. Management's responsibility for the preparation of the financial statements | | |
| 10. Auditor's responsibility for information outside the financial statements | Must identify material inconsistencies<br>Responsibility is limited<br><br>**Yes** | **No** prior research<br><br>**Significant opportunities.** For example, examining auditor work in this area and its association with the quality of the MD&A. |
| 11. Significant audit risks, audit procedures responsive to these risks, and results of these procedures | Required to "communicate critical audit matters" [CAMs] – matters that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty in obtaining sufficient appropriate evidence; or (3) posed the most difficulty in forming the opinion on the financial statements. The description of critical matters would identify, describe the considerations, and refer to the relevant financial statement accounts and disclosures<br><br>**Yes**, CAMs would likely involve these risks | **Moderate** Prior Research<br><br>**Significant opportunities.** For example, to conduct studies to determine the frequency of items included in the CAM and study which included items affect the users' decisions. |
| 12. Significant risks, issues of significance related to the audit scope or strategy, difficult or contentious matters noted during the audit | | |
| 13. Other information about the audit [not listed in synthesis table] | Enhance certain standardized language in the auditor's report, including the title of the report, and addressee<br><br>**Possibly**, by clarifying the language and specifying audit clients | |

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//

Subject: PCAOB Rulemaking Docket Matter No. 034

Board Members:

Thank you for the opportunity to comment on PCAOB's Proposed Auditing Standard and Proposed Other Information Standard (also referred to herein as "Proposed Standards").

***Background***

For the last 13 years, my occupation has been that of an Investor/Director. As an investor, I have invested in numerous public companies and private enterprises. I serve or have served on four public company boards listed on either the NYSE or NASDAQ generally as the Audit Committee Chairman and Audit Committee Financial Expert (ACFE). Prior to that time, I spent 37 years (29 years as a partner) with KPMG LLP. My primary experience at KPMG included serving many types of clients as an audit partner, managing and area partner, and international partner.

***Perspective of My Comments***

As a former KPMG partner, I am precluded from serving on boards of companies they audit. As a result, KPMG does not perform audits for any of the three boards I currently serve, but I have used and had exposure to all the "Big Four" CPA firms and several smaller CPA firms in various capacities. My comments in this letter are solely mine and not attributable to any public accounting firm or the boards that I serve. Having sat on both sides of the table and being a sophisticated investor provides me with a somewhat unique perspective to comment on the matters in the PCAOB's Proposed Standards.

***Position Overview***

As an experienced audit committee chairman and investor, I am not opposed to changing the annual external auditor's report and expanding the external auditor's scope of work if both can be accomplished in a meaningful manner and on a cost effective basis. Further, I appreciate and agree with the PCAOB's proposed retention of the standard pass/fail model in the external auditor's report and that other proposals were considered during its process. However, the PCAOB's Proposed Standards usurps the audit committee's responsibilities, generally serves to confuse and perhaps misleads stakeholders and users of financial statements, and adds unwarranted costs for public companies.

Further, while I appreciate reviewing the matters set forth in the Proposed Standards, I do not believe these are the major issues of the day. Some suggestions of areas where the PCOAB could spend its valuable time are set forth at the end of this letter.

***Position Major Reasons***

The major reasons for my position on the key aspects of the Proposed Standards are set forth in the following paragraphs.

***Proposed Auditor Reporting Standard:***

- Addressee of Auditor's Opinion – the PCAOB is proposing that the external auditor's (referred to herein as "auditor") report be addressed to the shareholders and board of directors of the company. While I have not performed a review of public company annual reports, my boards already follow this practice. Therefore, I do not foresee this as a major issue that requires a change to current reporting.

- Addition of Notes to Financial Statements in Auditor's Opinion – the PCAOB is also proposing to have the auditor's opinion include the notes to financial statements and refer to both as financial statements thereafter in the auditor's opinion. The notes are an integral part of financial statements and the basic financial statements generally contain a footnote indicating that they should be read in conjunction with the basic financial statements, but notes are not financial statements. What is the purpose of this change and why is it needed? Required disclosures are necessary in the notes to financial statements and are read along with the financial statements. Accordingly, I do not believe the notes need to be mentioned in the auditor's report; certainly not in the way it is currently proposed.

- Auditor Independence – requiring the auditor to state its independence requirement is repetitive during a time when we should be looking for ways to reduce and make additional disclosures more meaningful. Auditors already provide audit committees with letters stating their independence and appropriate disclosures are made public in the audit committee reports. Other key elements are an audit committee's oversights and management's determinations of independence. In addition, since an existing auditing standard requires that the title of the auditor's report is "Report of Independent Registered Public Accounting Firm," that is sufficient to communicate the auditor's independence and that the audit firm is registered with and meets all of the applicable legal and regulatory requirements of the PCAOB.

- Audit Tenure – Determining and disclosing the number of years that the auditor has audited a company should generally be an easy exercise. However, this is a backdoor attempt to addressing mandatory auditor rotation and would certainly be misleading and confusing to investors and users of financial statements. For example, if an audit firm had served a company for say 20 years, an investor might jump to the conclusion that something is wrong which could be far from the truth. Audit committees are required by law to evaluate, engage, and compensate the audit firm because they have all the facts to make such determinations, not investors and users. An audit firm serving a company is evaluated each year by the audit committee, and a determination is made whether to seek proposals from other qualified audit firms. In addition, there are substantial safe guards in this process. In my example of 20 years' service, there would have been four different audit lead partners and numerous staff serving on these audits. Restrictions on other prohibitive services to the audited company and non-selling of other services by the auditor also safeguard independence. Further, disclosing the audit tenure as XX number of years without disclosing any context around and reasons for such tenure (which context and reasons would not be practical to disclose, given the many factors that go into the audit committee's decision as to the selection of the audit firm that is engaged) would be an incomplete disclosure that at a minimum would not be meaningful, and likely would be misleading and confusing.

Accordingly, the proposal for disclosing audit tenure should be abandoned and removed from the Proposed Standard.

- Critical Audit Areas – the Proposed Standard would require that the auditor provide a description of the critical audit areas, describe the considerations that led to auditor to determine that the matter is a critical audit area, and refer to the relevant accounts and disclosures. Listing the critical audit areas is one thing, but providing additional discussion would be less relevant and less useful to investors, expanding the audit report in a nonsensical fashion where the key elements get lost, and adding significant and meaningless costs to enterprises. Of greater concern, is how does an investor or user of the financial statements bridge the gap between the critical audit areas disclosed by the auditor and the major risk factors disclosed by a company in its filings? Perhaps the only users of such information would be potential litigants, academic research, and the PCAOB in its inspection process. Further, one citing of academic research over 10 years old is very weak support for such a change.

  Requiring all of the Proposed Standard's disclosures also usurps an audit committee's oversight responsibilities during the audit process. Bear in mind that a company already discloses its major risk factors and critical accounting policies in various sections of public filing documents that provides ample information for investors and others.

  Accordingly, the proposal for critical audit areas requirement should be abandoned and removed from the Proposed Standard.

- Use of Explanatory Paragraph – the PCAOB is proposing that while it would not require the auditor to emphasize a matter (except for matters already proscribed in its existing standards), but it would permit the auditor to add such explanatory language paragraphs based upon the auditor's judgment and used a subsequent event disclosure as an example. Despite the PCAOB's intention, adding an explanatory paragraph further convolutes the auditor's opinion and serves only to confuse investors and other users. What if the auditor's judgment differs from a management's judgment? Further, explanatory paragraphs may draw undue attention to a particular matter as opposed to the overall financial statements where the reader should be focused. The PCAOB would be better served to limit explanatory paragraphs to specific areas set forth in its current standards.

- Fraud Language – the addition of the phrase, "whether due to error or fraud" is generally understood by investors and users of financial statements, and again could be viewed as repetitive which should be guarded against. Of equal importance, the PCAOB should be assured that by adding this phrase, no additional time would have to be spent by the auditor. If the PCAOB cannot be assured, then the phrase should be deleted from the Proposed Standard.

- "Evaluating" Accounting Principles and Financial Statement Presentation – the auditor performs an "assessment" of the accounting principles used and significant estimates made by management and evaluates the overall financial presentation during each audit. The PCAOB proposes to change from assessing to evaluating. What is the purpose of this change, and does this substitution of "evaluating" require more work by the auditor? If so, the PCAOB should rethink this proposed change.

***Proposed Other Information Standard:***

- "Evaluation" of Other Information - audit committees, preparers, investors, and users of financial statements understand that the auditor reads information outside the financial statements and notes thereto in filings for any inconsistency and misleading disclosure. Should an inconsistency or misleading disclosure occur, the auditor would discuss that matter with management, and if not satisfactorily resolved, it would bring the matter to the audit committee for resolution. The auditor also communicates to the audit committee that no inconsistency or misleading information was found. This process works very well in practice today and has done so for decades.

  Why then is it necessary for the auditor to add "evaluation" language on other information to its opinion? The fear here is that "evaluation" turns into increased auditing and documentation, which would be fueled by the PCAOB's future inspection efforts requiring additional work. As a result, the key issue becomes one of cost/benefit.

  Further, the addition of this requirement, if needed, should be undertaken by the Securities and Exchange Commission (SEC) as a part of its rulemaking process, not the PCAOB. The SEC could decide whether to proceed or not by addressing if this is the best way to protect investors and whether the benefit of such a requirement exceeds the costs to companies and their shareholders, or alternatively whether current practice is sufficient. Only after this process is complete, should the PCAOB address expanding the auditor's report.

In summary, I do not foresee the PCOAB's Proposed Standards adding value to the auditor's opinion. If adopted in their present form, some of the proposed requirements would impinge on an audit committee's responsibilities and incur unnecessary costs. Indeed, a few of the Proposed Standards would serve to confuse and perhaps mislead shareholders and other potential investors and users of financial statements. My suggestion is that the PCOAB end this project and move on to more worthwhile undertakings. At a minimum, the Proposed Standards should omit requirements relating to Audit Tenure, Critical Audit Areas, and Evaluation of Other Information for the reasons cited herein.

Before closing my comments on the Proposed Standards, let me take this opportunity to provide some constructive comments that are intended to be helpful to the PCOAB in other areas where the PCOAB could directly or indirectly be a catalyst for change.

- The PCOAB inspections are important to our public companies and audit firms. The auditor advises an audit committee when an inspection will be performed. However, it mystifies me that as part of the inspection process, the PCOAB does not undertake to discuss any improvements resulting from the inspections with the audit committee chair. I believe that both the PCOAB and the chair could benefit from the inspection process.

- As an investor, I believe a qualified ACFE should serve on each audit committee of every public company. SOX listed the proper requirements for a qualified ACFE when the Act was passed, but unfortunately this was changed due to public comments received by the SEC. Long before SOX was enacted, my audit experience with companies is they were far better served when a CPA sat on the audit committee. Much still needs to be done, and the PCOAB could work as a catalyst with the SEC to revisit this matter.

- The PCOAB could be proactive and assist in addressing disclosure overload and achieving fewer complexes in accounting and reporting.

- While I appreciate that the PCAOB's responsibility is to regulate the auditors of entities reporting to the SEC, my impression about the mindset used in the inspection process gives me concern. Too often, we hear about criticism of auditors and the audit firms or disagreements about judgmental matters. These comments are not recent but have existed since the formation of the PCAOB. I do not believe that was SOX's intent for the role of the PCAOB, and it is certainly not helpful to the profession or shareholders.

  Like the PCAOB, I believe in a zero tolerance for improper audits and that appropriate actions should be taken. However, as to subjective decisions where multiple answers are acceptable and handled through a proper audit process under the prevailing requirements at the time, I find it inappropriate for the PCOAB to insist that its determination is the only correct result in a given situation. Proactive work with the audit firms to enhance audit quality should be the goal. Revisiting these areas internally might be of value to the PCOAB and to the public companies its serves.

I appreciate the opportunity to provide my comments to the PCOAB and trust you will find them helpful in your pursuits for improving the audits of public companies.

Sincerely,

Cecil H. Moore Jr

MUTUAL FUND DIRECTORS FORUM
*The* FORUM *for* FUND INDEPENDENT DIRECTORS

December 11, 2013

Office of the Secretary
PCAOB
1666 K Street, NW
Washington, DC 20006

PCAOB Rulemaking Docket Matter No. 034

Dear PCAOB Board Members:

The Mutual Fund Directors Forum ("the Forum")[1] welcomes the opportunity to comment on the proposed auditing standards dealing with the auditor's report, PCAOB Release No. 2013-005 dated August 13, 2013 ("Proposal").

The Forum, an independent, non-profit organization for investment company independent directors, is dedicated to improving mutual fund governance by promoting the development of concerned and well-informed independent directors. Through continuing education and other services, the Forum provides its members with opportunities to share ideas, experiences, and information concerning critical issues facing investment company independent directors and also serves as an independent vehicle through which Forum members can express their views on matters of concern. As fiduciaries charged with protecting the interests of mutual fund shareholders, we are deeply interested in fund disclosure. Further, fund directors value and wish to preserve the benefits of the relationship with their independent auditors.

I. Introduction

We appreciate the PCAOB's goal to "increase the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report." We are concerned, however, that key provisions of Proposal will not achieve these goals with respect to investment companies that file under the Investment Company Act of 1940 and the Securities Act of 1933 ("Registered Investment Companies").

Specifically, we have two primary concerns with the Proposal. The first is that disclosure of "critical audit matters," as proposed, has the potential to disrupt the relationship between a Registered Investment Company's independent auditors and the board's audit committee, making the audit committee less effective. Audit committee members should have the freedom to discuss a wide variety of topics, issues and concerns, without consideration of how and whether such matters might be discussed in an audit report. Second, the additional disclosure that would be required under the Proposal would not be beneficial to shareholders and is unnecessary in light of currently required financial statement disclosure for Registered Investment Companies. We therefore do not believe the proposal should be applied to Registered Investment Companies.

---

[1] The Forum's current membership includes over 775 independent directors, representing 105 independent director groups. Each member group selects a representative to serve on the Forum's Steering Committee. This comment letter has been reviewed by the Steering Committee and approved by the Forum's Board of Directors, although it does not necessarily represent the views of all members in every respect.

II. Requiring Disclosure of Critical Audit Matters Will Result in Reduced Communication Between Audit Committee Members and Auditors

Audit committees play a central role in the protection of investors. Specifically, audit committee meetings, and particularly executive sessions, provide directors and their auditors opportunities to explore openly a wide variety of issues, no matter how large and no matter how seemingly immaterial. A free give-and-take between the audit committee members and the auditors regarding the fund's risk control environment, accounting processes, the quality and sufficiency of resources devoted to accounting and compliance functions and other matters is critical. Frank discussion of these and other issues can help directors gain a deeper understanding of the funds they oversee and the management companies that serve those funds.

These discussions are effective in part because the participants, and particularly the independent directors, do not need to worry whether the topics will be disclosed in any public fashion, and hence whether they will later be analyzed and second-guessed by regulators, plaintiffs' attorneys or others. Once a disclosure regime is imposed on top of these communications, the focus will inevitably shift to managing discussions in a way that insulates the parties by minimizing the necessary disclosure. The proposed requirement that critical audit matters be disclosed will thus likely chill this highly beneficial, free-flowing communication between auditors and directors.

Reducing the quantity and quality of communications in audit committee meetings as a by-product of regulatory reform will harm fund investors. Indeed, such a result runs counter to the express goal of PCAOB audit standards such as Auditing Standard No. 16, Communications with Audit Committees, which expressly sought to encourage effective two-way communication between the auditor and the audit committee. As regulators have long recognized, a healthy working relationship between a fund's audit committee and its independent auditors is critical to foster a good financial reporting environment.[2]

III. Disclosure of Critical Audit Matters in Audit Reports Should Not Apply to Registered Investment Companies

We do not believe the disclosure of critical audit matters should be applied to Registered Investment Companies. Unlike operating company investors, Registered Investment Company shareholders are primarily retail investors who need clear and concise information. We believe the proposed disclosure of "critical audit matters" in this context is both unnecessary and potentially misleading to fund shareholders.

A. Registered Investment Companies Are Transparent And Their Material Accounting Policies Are Fully Disclosed

With respect to auditing and accounting issues, Registered Investment Companies are transparent and inherently less complex than operating companies. Substantially all of an investment company's assets are investments, with income from returns on those investments. The financial statements contain a detailed schedule of investments. Expenses are in the form of contractual arrangements with third parties, which are approved and overseen by fund independent directors.

The Proposal seeks disclosure of critical audit matters in the audit opinion because "company management is typically aware of the auditor's most challenging areas in the audit because of regular interactions with the auditor

2 As the SEC has noted, "By effectively carrying out its functions and responsibilities, the audit committee helps to ensure that management properly develops and adheres to a sound system of internal controls, that procedures are in place to objectively assess management's practices and internal controls, and that the outside auditors, through their own review, objectively assess the company's financial reporting practice." Release 33-8220, Standards Relating to Listed Company Audit Committees, effective date April 25, 2003.

as part of the audit, but this information is not usually known to investors."[3] While operating companies may have complex operations, off-balance sheet items and other accounting issues less visible to investors, such issues do not arise in the Registered Investment Company context. Registered Investment Company financial statement disclosures are comprehensive and already adequately identify areas of risk and complexity, including valuation of investments, as well as identification of all significant contractual relationships and related party transactions. As a result, fund shareholders now have information about the most challenging areas of the audit, and there is no clear benefit from additional discussion in the audit opinion.

For many Registered Investment Companies, the only potential "critical audit matter" is auditing the valuation of hard to value investments that do not have readily available market prices. While fair valuation matters may require a significant time commitment from the audit team regardless of materiality, prospectuses and financial statements currently include extensive disclosure about valuation policies and procedures, including a description of the inputs used in fair valuations. Thus, while the auditor's evaluation of fair values may, in fact, "involve the most difficult, subjective or complex auditor judgments" in the audit of a Registered Investment Company, we do not believe there is benefit to investors to re-stating what is currently fully disclosed elsewhere. Disclosure of fair valuation as a "critical audit matter" under these circumstances will wrongly imply that the already fulsome disclosure in the financial statements is incomplete or inadequate in some manner.

B. Uneven Disclosure Will Mislead Fund Shareholders

Many investment company complexes offer funds with strategies and investment portfolios that are similar to funds offered by other complexes. Indeed, fund investors often look to a "peer group" of funds in order to evaluate their own fund selection. However, should audit firms interpret and apply disclosure of "critical audit matters" differently, shareholders risk being affirmatively misled.

For example, in a peer group of funds with similar investments and strategies, one audit firm may identify fair valuation as a "critical audit matter" because it involved "the most difficult, subjective or complex auditor judgments." Two other audit firms may not identify any critical audit matters for funds in the same peer group because, although time consuming during the audit, the firms conclude that the issues did not rise to a level requiring additional discussion in the audit opinion.

As a result, shareholders will be presented with significantly different audit reports for a peer group of funds with similar investments and strategies, not because of real differences in the funds but because of the differing audit firm interpretations of the rule. Investors may attribute the substantial differences in the auditors' evaluations of how one of the funds in the peer group fair values its securities, to the amount of risk inherent in a particular fund's portfolio. This erroneous conclusion could lead to poor investment decisions, as investors shun funds within a peer grouping that appear to have issues connected with fair valuation of securities.

One potential solution to inconsistent application of the PCAOB standard to different fund audits could be to standardize disclosure so there are virtually no differences between audit reports on funds with similar investments and strategies. The resulting boilerplate, while adding additional disclosure, will not add useful information of value to investors.

C. Disclosure of Critical Audit Matters Will Reduce the Utility of Audit Reports for Fund Shareholders

Investment company complexes do not file a single set of quarter or year-end statements, as do other reporting entities. Different funds within a single complex may have different year-ends. Funds within the same investment company complex generally will share accounting and valuation functions and therefore will be included in a combined annual report. Accordingly, one audit opinion will generally cover numerous funds in a

[3] PCAOB Release No. 2013-005 (August 13, 2013) ("Release") at p. 6.

complex that share the same year-end. Disclosure of critical audit matters, however, would likely only involve some subset of the funds opined on, and thus would have to occur on a fund-by-fund basis. Shareholders, rather than having a crisp statement of audit conclusions for all funds in the complex sharing the same year-end, would have to wade through pages of audit reports seeking one that is applicable to their fund. This additional layer of complexity in fund disclosure does not seem to be in shareholders' best interest.

D. Disclosure of Audit Procedures Performed on Critical Audit Matters For Investment Companies Is Not Useful

The PCAOB asks if including the audit procedures performed, including resolution of the critical audit matter, in the audit report would be helpful to investors. We believe such disclosure would not be helpful in the Registered Investment Company context.

As noted above, Registered Investment Companies currently are required to disclose policies and procedures for significant accounting issues such as fair valuation of securities. Audit procedures for obtaining independent verification of individual fair values are simply not susceptible to a short explanation in the auditor's report. In order to provide context for the decisions made, the auditor would need to include a level of detail that would overwhelm the audit report.

Given the fact that the policies and procedures followed by the fund are fully disclosed in the financial statements, adding pages of additional information to the audit report about how values are tested will not add to shareholders' understanding of the accounting issues presented. Rather, such detail will likely make it less clear to fund investors whether the auditors are satisfied with the policies and procedures followed by the fund.

IV. Other Issues

A. The PCAOB Should Be Clear that Some Audit Entities Will Routinely Have No Critical Audit Matters

Should the Proposal be adopted and require Registered Investment Companies to comply with the new disclosure, the PCAOB should make clear that an audit may not generate any critical audit matters. This will occur when the issues that require the most audit effort (such as fair valuation of securities in the case of a Registered Investment Company) are fully disclosed in the financial statements. We see no additional value to fund shareholders of providing additional information as to how fully disclosed matters have been addressed in the audit. To the contrary, such a discussion may result in shareholder confusion as to whether the auditors are satisfied with the information disclosed in the financial statement footnotes.

B. The PCAOB Should Engage in Investor Testing Before Requiring Additional Information in the Audit Report

The Proposal includes two new auditing standards that would each increase substantially the volume of information conveyed to investors through the auditor's report. Registered Investment Companies, unlike operating companies, have a primarily retail shareholder base. As the SEC has realized, disclosure intended to inform retail shareholders should not be overwhelming. In 2009, for example, the SEC adopted a "summary prospectus" rule requiring all open-end funds to use a summary prospectus format in the first few pages of a fund prospectus. The rule requires presentation of a short list of critical items relevant to shareholders, including investment objectives, costs, principle investment strategies, risks and performance, and so on. The SEC's summary prospectus rule is a result of investor testing showing that short, crisp, clear disclosure improves fund shareholder comprehension.

Both of the proposed audit standards, the "critical audit matters" and the "other information," will result in more information in the auditor's report. The PCAOB should conduct investor testing, as the SEC did in adopting the short form prospectus, prior to adoption of these audit standards to assess whether in fact the additional information is useful to fund shareholders and whether any incremental benefits will outweigh the additional audit fees shareholders will bear.

C. Disclosure of Auditor Tenure

The Proposal also seeks comment as to whether information regarding the tenure of the audit firm would be so useful to investors and other financial statement users that it should be highlighted in the auditor's opinion. With respect to Registered Investment Companies, we believe the answer is "no" because the inclusion of this single fact in the audit opinion would wrongly imply that it is a factor of singular importance.

Auditor tenure is, in the context of Registered Investment Companies, simply not such an overwhelmingly critical factor in the selection of auditors by a fund's audit committee to deserve special focus in the auditor's report. To the extent that disclosing in the audit report the tenure of the audit firm will imply that auditor tenure outweighs any other considerations in the selection of auditors, we believe this requirement is not in the best interest of fund shareholders.

*****

We look forward to continuing to participate in this ongoing discussion, as independent directors have an important role to play in fostering healthy communications with fund shareholders. If you would like to discuss our comments further, please feel free to contact us at 202-507-4488.

Sincerely,

Susan J. Wyderko

**ENCOURAGING LARGE CPA FIRMS TO FULFILL THEIR HIGHEST POTENTIAL IN THE CONTEXT OF NEW PROPOSED AUDITOR RESPONSIBILITIES**

The National Asian American Coalition has commented on a number of occasions on the PCAOB's laudable efforts to ensure public support for the highest auditing standards and ethics.

We believe that, in general, the vast majority of large CPA firms, including all of the Big Four, support the highest auditing and ethical standards. The PCAOB has now embarked upon, through this rulemaking, a once-in-a-lifetime effort to enhance the credibility of auditor reports and thereby enhance the reputation of the accounting profession.

As the Chairman of the PCAOB stated and many publications have noted, this could be the most major and significant change in the responsibility of auditors since the Second World War.

Because of the importance of the suggested new responsibilities of the Big Four and other audit firms, the African American AME churches join the National Asian American Coalition in this effort.

We support the changes suggested by PCAOB Chairman James Doty and the entire Board. Particularly, we support the changes requiring information on the auditor's independence from management, the duration of the CPA firm's work with the corporation, and on the need for CPA firms to offer independent and relevant observations on the potential for fraud.

As distinguished long time Board Member Steven Harris stated in his concurring remarks, "These are welcome changes, especially in light of the history of concerns about the impact on independence of the issuer-pay model, the potential for auditor capture in long-running engagements, and the need for clear understanding of the auditor's role. In addition, and most significantly, the proposals require an auditor to report on what he or she has identified as 'critical audit matters.'"

We would urge that the Board take seriously all of Board Member Harris' perceptive observations about the infirmities and weaknesses of the proposed changes.

As Board Member Harris states, these proposals are a step in the right direction, as we attempt to protect ratepayers and investors who depend on the accuracy of these reports.

In California, for example, three major utilities audited by Big Four firms have sought to have over $15 billion in additional costs be imposed on the ratepayers. These additional charges rely on the so-called independence and accuracy of CPA audit reports.

**PG&E as an Example**

To the great credit of Pacific Gas & Electric (PG&E) and its CEO, it has decided to reexamine one key aspect of the auditor relationship even before these proposed rules were issued. It has determined that its long time auditor, Deloitte & Touche, will be forced to compete in the marketplace if it is to be a future auditor for PG&E. That is, Deloitte & Touche must prove by a combination of the accuracy of its audit reports and the costs of its audit reports that it can compete in the marketplace with other large CPA firms.

This PG&E effort is a welcomed first step.

Our groups intend in all future California Public Utilities Commission ratepayer cases to raise this issue relating to Southern California Edison and Sempra (SoCal Gas and SDG&E) auditors.

**Need for PCAOB Independent Audit Fund**

Besides these reforms, we also strongly support other related reforms by the PCAOB. For example, we strongly urge an historic change from the past as to how auditors should be paid. Rather than being paid by the corporation they audit, all payments should come from a central PCAOB-controlled fund. This would enable the auditors to be totally free of corporate influence, at least as it affects the level of compensation for services. We estimate that this PCAOB central fund would be approximately $2.5 billion just for Fortune 500 corporations who would contribute to the fund based upon the complexity and size of the audit.

We believe that many large CPA firms would prefer this if the general level of compensation to them was fair and related to the size and complexity of the audit. Please note, we do not contend that present compensation is excessive. We are merely trying to maximize the independence of and perceptions of independence from management.

**Diversity Goals**

Further, as part of these historic changes, we would urge the PCAOB to once again examine the diversity and lack of diversity at most large CPA firms. In an increasingly complex and diverse world, particularly in the United States, where minorities will soon be the majority and the vast majority of college graduates are women, it might be appropriate for CPA firms, with guidance from the PCAOB, to set aspirational goals for diversity.

For example, within twenty years, 40 percent of senior partners should be women, including women of color, and 40 percent of senior partners should be minorities. We note with particular alarm, the present virtual absence of African American or Latino senior partners at the largest CPA firms and the surprisingly small number of Asian American senior partners even among Vietnamese Americans, Korean Americans and Filipino Americans (these are three of the five most populous Asian American sub-ethnic groups in the United States).

This type of diversity would also enable CPA firms to substantially increase the number of young people who turn to accounting as a profession. And, it would help fulfill Dr. King's dream on full economic and employment integration as articulated by President Obama in his August 28, 2013 speech. (We note that two of America's greatest failures regarding our youth are the absence of sufficient scientists and CPAs among minority youth.)

**Conclusion: Using the Bully Pulpit**

The Chairman and many Board Members have recognized not only the power of rules and regulations, but the power of the bully pulpit.

The bully pulpit can and should be used to encourage CPA firms to aspire to the goals of dedicated and objective independent service that motivated most CPAs when they entered the profession. That is, we believe that most CPAs share Dr. King's dream of equal opportunity and President Obama's desire to encourage upward mobility. We hope that this support will be reflected in the comments CPA firms file herein and the actions they subsequently take to fulfill Dr. King's dreams.

Dec. 11, 2013

Office of the Secretary
Public Company Accounting Oversight Board
1666 K St. NW
Washington DC 20006-2803

Re: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments (PCAOB Rulemaking Docket Matter No. 34).

Dear Office of the Secretary:

On behalf of the board of directors of the National Association of Corporate Directors (NACD), we are pleased to submit our comments on the above-named Exposure Draft of the Public Company Accounting Oversight Board (PCAOB or Board). Founded in 1977, NACD is the only national membership organization created for and by directors. Given the close interaction between the auditor and the audit committee of a corporate board, and because many of our more than 13,500 members are audit committee members and chairs, NACD believes it is appropriate to provide our views on these issues. We commented earlier (Sept. 27, 2011) on the PCAOB's Concepts Release on the same subject.

**Primary Role of Management to Assert and Auditors to Attest**

As noted in our earlier letter, NACD believes any changes to the auditor's reporting model or expansion to the role of the auditor should preserve the established relationship between management and the auditors, namely, the role of management to *present* and *assert* information, and the role of the auditor to *attest* to that information. We believe that any change that would require or allow the auditor to disclose original information about the company would undermine management's responsibility for the financial statements (including the required certifications under the Sarbanes-Oxley Act. Further, such a change would significantly interfere with the well-established audit committee role in overseeing financial reporting, and could introduce the inappropriate situation of the auditor assuming principal responsibility for certain accounting and disclosures of the registrant. While NACD strongly supports effective independent auditing of financial statements, we would oppose any new standard that blurs the roles of asserting, attesting, and overseeing. These roles and their proper owners must be kept in mind when considering possible changes in reporting on such audits.

In our earlier letter, we expressed significant concerns about the possibility of requiring an auditor's discussion and analysis as part of the standard auditor's report. Thus, we are pleased that the Board has determined that this possibility is not being proposed for adoption.

We are also pleased to note that the Board has decided not to require "emphasis paragraphs." As we noted in our earlier letter, without a framework for defining what requires emphasis, this requirement could have resulted in overly broad disclosures intended to reduce litigation risk, rather than generating any disclosures of interest to investors.

**Critical Audit Matters**

The most significant change to the auditor's report proposed in the Exposure Draft would be the inclusion of critical audit matters (CAM). As described in the Exposure Draft, these could include matters already communicated to audit committees under the existing PCAOB auditing standard (No. 16, Communications with the Audit Committee, effective December 2012). In addition, CAMs could include matters that were already in the engagement review memo and/or discussed with the audit firm's executive office. Thus, in other than extremely simple businesses, multiple CAMs will be added to the standard auditor's report, lengthening it and literally burying the important "pass/fail" language that most readers key into.

Setting aside the issue of whether users will find much longer reports to be truly helpful, we return to our fundamental issue of management's vs. the auditor's role. While we have not performed a formal study, during our discussions in the development of this letter, we found that most of those who have served on audit committees believed that a very high percentage of the matters discussed with them by auditors and included in those required communications are already well disclosed in annual 10-Ks' management discussion and analysis (MD&A) and/or footnotes. Thus, requiring them to be included in the auditor's report is redundant, requiring a second or third level of highlighting for important matters in management's financial statements. Furthermore, it is not in the PCAOB's proper domain. Rather than have the PCAOB introduce such an arguably unnecessary additional financial reporting requirement, we believe it would be far more appropriate for the U.S. Securities and Exchange Commission (SEC) or the Financial Accounting Standards Board to consider whether such emphasized reporting is useful in the first place. Or, perhaps audit committee reports could be enhanced to serve such a purpose. In any event, we do not support having the auditor use its report to initiate what is essentially a management reporting function.

Furthermore, the Exposure Draft delves into the matters of significant deficiencies in internal control, certain going concern considerations, and even certain legal contingencies; all these too would have to be disclosed in the auditor's report as CAMs when present. This would be the case according to the new audit requirement even when there are other accounting rules that say the opposite and do not require management to make such disclosure.

We are also concerned about the impact of an expanded auditor's report on the preparation of year-end financial statements under tight SEC deadlines when management and auditors would be developing separate descriptions of similar matters. When financial management, legal counsel, audit committees, audit engagement partners, reviewing partners, and perhaps national office partners are all asked to provide their thoughts on identical company disclosures and auditor CAM descriptions of the same matters, a fair amount of contradiction could emerge, given the fact that these participants all have different roles and types of expertise. Having to reconcile these competing positions near the critical filing date for the annual report seems to be an unnecessary complication. It could also trigger meritless litigation focusing on discrepancies, even though these arose out of good-faith efforts to comply with this challenging new standard.

**Auditor's Responsibilities Regarding Other Information**

In our earlier letter we indicated that NACD is not opposed to having the auditor provide some level of assurance around management's assertions contained in the MD&A if—and only if—such information is *auditable* and within the *expertise* of the auditor. Nevertheless, we also noted that we believed cost and timeliness were important considerations as well, and that the benefit provided would need to outweigh the cost of the auditor performing such procedures.

According to the current Exposure Draft, the PCAOB has proposed a heightened standard of auditor responsibility for "other information." Previously, the auditor was charged with the responsibility to read the other information and "consider" whether it was consistent with the audited financial statements in material respects. The Exposure Draft changes the "consider" part of this procedure to require the auditor to "evaluate" the information, and specifies the procedures that should be followed in order to meet such a requirement. While those procedures appear on the surface to be very similar to what many auditors are doing under current practice, at least some of the major accounting firms believe that this change will trigger substantially more work in the future.

We hope that this will not become a déjà vu of the PCAOB's first attempt to mandate the auditing of internal controls. Auditing Standard No. 2 was applied in a way that required auditors to apply far too many procedures and incur far too much time than was necessary. While the Board ultimately addressed this through the issuance of Auditing Standard No. 5, many companies and audit committees continue to have a negative attitude toward their audit firm and the PCAOB because of that unfortunate experience. At a minimum, the Board should do careful testing of this aspect of the Exposure Draft to ensure that there is a clear understanding of how a final standard would actually be applied in practice.

**Auditor Tenure**

"A statement containing the year the auditor began serving consecutively as the company's auditor," would be another, major addition to the auditor's report. This matter was not in the original Concepts Release so we did not comment on it in our earlier letter. In the Exposure Draft and accompanying comments by Board members, the PCAOB explains that academic and other research is mixed as to whether audit quality is enhanced by shorter or longer auditor tenure. There apparently are also mixed views among users as to whether they would find such information to be meaningful in making investment decisions.

While disclosing this information would seem to be essentially costless, we question whether including it in the auditor's report is appropriate. We are concerned that without some additional context, simply including a year of commencing an audit relationship could be misconstrued by readers. For example, some financial press accounts could focus on a very long relationship (and imply too "cozy" a situation) without also reporting the many other factors to ensure auditor independence and objectivity such as:

- Continual change among key members of financial management of the company during the audit firm's tenure.
- Mandatory rotation of the audit firm's lead partner and other key partners, as well as other changes in the members of the audit team.

- Careful oversight of the relationship by the audit committee.
- Critical evaluation of audit quality by the audit committee (see the audit firm evaluation tool created by NACD as part of a broader initiative led by the Center for Audit Quality).

We are aware of certain companies that have provided auditor tenure information in proxy statements either in the audit committee report or in information provided in connection with a shareholder ratification vote on the selection of the independent auditors for the coming year. We recognize that these disclosures are presently voluntary and not required. If there is, however, truly sufficient investor interest in the auditor tenure information, we suggest the SEC should consider requiring it to be provided as part of proxy statement disclosures. We do not support including it in the auditor's report.

**Other Proposed Changes to the Auditor's Report**

In addition to those major changes, the Exposure Draft suggests a number of things that we consider to be "cosmetic" changes to the standard report including:

- A statement describing the audit (paragraph 6m).
- Clarifying that the statements are free of material misstatements *whether caused by error or fraud*.
- Addressing the report to both shareholders and the board.
- Referring to footnotes, as well as the financial statements.
- Stating in the report that the auditor is independent.

We have no objections to these changes.

**Summary**

As noted above, we have significant reservations about the three major changes proposed in the Exposure Draft: CAMs, Auditor's Responsibilities Regarding Other Information, and Auditor Tenure. As noted in our earlier letter, NACD urges the PCAOB to thoroughly consider how the changes proposed in this Exposure Draft could impact how the audit committee and management—equally important parties in the financial reporting process—carry out their responsibility to investors. We note, with full agreement, that the Board has urged companies and auditors to test the application of the CAM proposal using recent experience. We believe that such testing will demonstrate that the vast majority of CAMs in practice will repeat similar disclosures by management as noted in our comments above. We also urge testing of the "other information" provisions of the Exposure Draft as we believe it will demonstrate that such a proposal is not cost beneficial.

As also mentioned in our earlier letter, we urge the Board to make special efforts to reach out to the investment community to ascertain clearly how the proposed changes to the auditor's report would be used in their investment decisions.

NACD appreciates the opportunity to comment on this Exposure Draft, and would be pleased to respond to any questions regarding the views expressed in this letter.

Sincerely,

Ken Daly

**Re: PCAOB Rulemaking Docket Matter No. 034**

Dear Board Members:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) in response to the solicitation for public comment by the Public Company Accounting Oversight Board (PCAOB or Board) with respect to its *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements (PCAOB Release No. 2013-005, August 13, 2013, PCAOB Rulemaking Docket Matter No. 034)* (the Proposal).

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate and finance income-producing real estate, as well as those firms and individuals who advise, study and service those businesses.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT All REITs Index, which covers both Equity REITs and Mortgage REITs. This Index contained 193 companies representing an

1875 I Street, NW, Suite 600, Washington, DC 20006-5413
Phone 202-739-9400 Fax 202-739-9401 REIT.com

equity market capitalization of $659.6 billion[1] at September 30, 2013. Of these companies, 154 were Equity REITs representing 90.7% of total U.S. listed REIT equity market capitalization (amounting to $598.5 billion). The remainder, as of September 30, 2013, was 39 publicly traded Mortgage REITs with a combined equity market capitalization of $61.1 billion.

This letter has been developed by a task force of NAREIT members, including members of NAREIT's Best Financial Practices Council. Members of the task force include financial executives of both Equity and Mortgage REITs, representatives of major accounting firms, institutional investors and industry analysts.

NAREIT appreciates the PCAOB's efforts toward improving audit quality since its inception in 2002. NAREIT acknowledges the PCAOB's substantive consideration of the feedback it received on its *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, Notice of Roundtable, (PCAOB Release No. 2011-003, June 21, 2011, PCAOB Rulemaking Docket Matter No. 34*[2]*)* (the Concept Release) that discussed alternatives for changing the auditor's reporting model. In particular, NAREIT supports the PCAOB's decisions to retain the current pass/fail model of auditor reporting and to reject the requirement for an auditor's discussion and analysis. However, NAREIT does not support a requirement for the auditor to report on "critical audit matters" (as that term is defined in the Proposal). In our view, such a requirement would not meet the PCAOB's objective of providing users of financial statements with additional meaningful information. As discussed further below, it is our view that the PCAOB's proposal for auditor reporting of critical audit matters would largely result in generic disclosures that are duplicative of information that is provided by management while simultaneously increasing audit cost.

**NAREIT Comments on Critical Audit Matters**

We understand that the PCAOB is trying to add value to the audit report and enhance its decision usefulness by requiring that the auditor identify and discuss critical audit matters as a part of the annual audit report. However, we believe that a requirement to disclose critical audit matters in the audit report would potentially:

- Confuse and mislead users with a piecemeal discussion of audit procedures that readers of the financial statements have no context or basis to understand;

- Introduce situations when the auditor is disclosing sensitive information that is not otherwise required to be disclosed by the issuer;

- Duplicate information already disclosed by the issuer;

[1] http://returns.reit.com/reitwatch/rw1310.pdf at page 21
[2] http://pcaobus.org/Rules/Rulemaking/Docket034/Concept_Release.pdf

- Increase audit fees for, among other things, the senior level time the auditor would incur describing the critical audit matters for purposes of drafting the proposed disclosure and incremental time discussing those matters and the related disclosure with management and the audit committee; and,

- Exacerbate existing time pressures to meet financial reporting deadlines.

Each of these concerns is further discussed below.

*Confuse and mislead users with a piecemeal discussion of audit procedures that readers of the financial statements have no context or basis to understand*

In reporting critical audit matters, auditors would likely feel compelled to describe the audit procedures they performed, consistent with the examples in the proposal. NAREIT questions whether the substantial majority of financial statement users are likely to understand a discussion of audit procedures. When the auditor discusses its audit process with the audit committee, the auditor has the opportunity to answer questions and provide additional information to the audit committee members, thus limiting the risk of confusion or misunderstanding about the nature and extent of audit procedures performed. Further, when the audit committee and auditor are discussing the audit work in discrete areas, they are doing so in the context of the audit taken as a whole. In this context, there is no potential for confusion about whether the auditor is, in some way, effectively providing a piecemeal opinion on an individual line item within the financial statements.

NAREIT believes that users would likely be confused by the discussion of audit procedures in an audit report not only because they lack an understanding of the audit process as a whole but because they lack the context for the discussion of discrete audit procedures on an individual financial statement line item. We are therefore concerned that the Proposal would widen the existing expectation gap regarding the nature and extent of audit work required by the PCAOB's auditing standards.

*Introduce situations when the auditor is disclosing sensitive information that is not otherwise required to be disclosed by the issuer*;

One of the examples in the Proposal (Hypothetical Auditing Scenario #3) illustrates a fact pattern in which the auditor discloses a "control deficiency less severe than a material weakness noted in the Company's internal control system."[3] This information is part of the auditor's required communication to the issuer's audit committee, under current PCAOB standards, but there is nothing in securities law that requires public reporting of either significant deficiencies in internal controls or audit adjustments.

[3] http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf at page A5-77

The Proposal acknowledges a fact pattern whereby control deficiencies that are not material weaknesses would be disclosed by the auditor. For example, Appendix V of the Proposal states:

> Because a deficiency or deficiencies in the company's internal control over financial reporting could have a significant effect on the conduct of the audit and on the level of difficulty in gathering audit evidence or forming an opinion on the financial statements, an internal control deficiency might be an indicator of a critical audit matter.[4]

This would mean that the auditor would be disclosing sensitive information that is not otherwise required to be reported by the issuer. Furthermore, unlike the existing audit requirement to discuss such matters with the audit committee, the information is being presented to users of financial statements with limited context and no opportunity for the clarifying discussion that occurs during most audit committee meetings.

We strongly believe that an audit firm should not report sensitive information that is not required to be disclosed under existing securities laws and/or generally accepted accounting principles. We believe that existing U.S. securities laws and existing U.S. GAAP are sufficient to provide users with the appropriate amount of information to make investment decisions. Further, the expansion of existing disclosure requirements is the purview and responsibility of the SEC and the FASB. Accordingly, if the PCAOB were to go forward with this Proposal, we believe the auditor should be prohibited from disclosing any information that is not otherwise required to be disclosed by the issuer.

*Duplicate information already disclosed by the issuer*

We believe that the most difficult, subjective and complex audit matters encountered by the auditor are highly likely to be the critical accounting policies and estimates that the issuer is already disclosing in its Management Discussion and Analysis (MD&A). Given that the sections of MD&A that cover critical accounting policies and estimates provide the reader with management's assessment of the most judgmental aspects of the financial statements, NAREIT questions why the Board would require auditors to duplicate this information. If the PCAOB believes that this existing information is not sufficiently robust or transparent, NAREIT recommends that SEC or the Financial Accounting Standards Board (FASB) evaluate this aspect of financial reporting and provide additional guidance through the comment letter process. Another possibility would be to request that the FASB evaluate these disclosures as part of its Disclosure Framework Project.

*Increase audit fees for, among other things, the senior level time the auditor will incur describing the critical audit matters for purposes of drafting the proposed disclosure and incremental time discussing those matters and the related disclosure with management and the audit committee*

[4] http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf at page A5-32

NAREIT acknowledges that the current audit standards require the auditor to identify and communicate significant audit matters to the audit committee. However, NAREIT believes that requiring the auditor to report critical audit matters in the audit opinion would lead to increased audit fees. At a minimum, each and every audit engagement team would incur additional senior level time in order to determine the critical audit matters (CAMs) for purposes of drafting the proposed disclosure and discussing both the CAMs and the related disclosure with management and the audit committee.

Further, given the significant degree of subjectivity involved in determining which significant audit matters are "the most critical" and the inevitable second guessing of that determination by audit committees, management, PCAOB inspection teams, SEC staff and litigators, NAREIT anticipates that audit partners would need to consult others in the firm regarding both the selection of CAMs as well as the report language. The added time and related increased risk incurred by the audit firm would directly translate into an unnecessary and avoidable increase in annual audit fees. Further, we believe that there is a risk of inconsistent disclosure of CAMs both within and among the audit firms. We sense that the added disclosure in the audit report would open both audit firms and issuers to increased litigation risk, the cost of which will be passed on to issuers (and thus investors) in the form of increased audit fees.

*Exacerbate existing time pressures to meet reporting deadlines*

Given the nature of the audit process, auditors are unlikely to be able to conclude definitively on "the most" significant, judgmental or complex audit matters until substantially all the audit work has been completed. That necessarily places the decisions and discussions surrounding CAMs into the very final stages of the audit and just prior to the release of the audited financial statements on Form 10-K. If the Board moves forward with this Proposal, NAREIT foresees the addition of a very time consuming step into the late stages of what is already a tight deadline for many issuers.

In light of time pressures, liability concerns and fee issues, audit firms may feel compelled to develop standardized audit report language for common critical audit matters. Thus, stepping back and looking at the sum total of our concerns, we believe there is a significant risk that the PCAOB's proposal will result in boilerplate, duplicative disclosures that add to the cost of the audit without adding to the information available to users of financial statements.

**NAREIT Comments on Auditor Tenure**

NAREIT understands that there is some interest amongst financial statement users about auditor tenure. We observe that for many issuers, the tenure of an audit firm can be determined by a review of the issuer's public filings. However, NAREIT does not support the Proposal that auditors report on their tenure because that information, placed in the audit report, infers a direct relationship between auditor tenure and the quality of the audit or the content of the audit report that does not exist. NAREIT is unaware of evidence indicating that auditor tenure has a direct correlation to audit quality.

Perhaps more importantly, NAREIT considers auditor tenure to be a corporate governance matter under the direct purview of the issuer's audit committee only. A statement regarding auditor tenure placed in the audit report would provide no information about how the audit committee assesses the quality of the audit work and determines that a change in auditor is appropriate. It also would provide no information regarding the most recent tendering of the audit. Some users might incorrectly infer that longer auditor tenure indicates that the audit has not been retendered when, in fact, the audit committee's decision to retain the incumbent audit firm was made after an extensive retendering process.

Therefore, NAREIT recommends that information regarding auditor tenure continue to be excluded from the audit report. If users of financial statements believe this information would provide significant value, the SEC should consider adding relevant disclosure requirements to proxy statements that are filed coincident with audit committee reports or in connection with company shareholder ratification of auditor appointments.[5]

**NAREIT Comments on Other Information**

We do not understand the purpose of expanding the audit report to explicitly address information that is not audited and that is often outside the expertise of an auditor. More importantly, NAREIT believes the proposed language that would be included in the audit report regarding other information would mislead users into believing that the auditor has an authoritative basis to conclude on the sufficiency, accuracy or completeness of the other, unaudited information. This, in turn, would cause auditors to do additional work and invest additional resources into the reading of the unaudited information beyond what may be required by the standard because they would be perceived as being more closely associated with that information. Inevitably, this exercise would increase the cost of the audit as well as the cost of preparing the unaudited information. The result would be more cost to shareholders without additional assurance to those same shareholders.

In NAREIT's view, there is no need to change the existing audit standard related to other information contained in a report that includes audited financial statements. We are unaware of any evidence indicating that auditors are either not meeting their existing (albeit very limited) responsibilities for other information or that users are misinformed about which elements of an SEC filing are audited and which are not. In fact, in its Proposal, the PCAOB notes that "investors generally were not supportive of auditor assurance on other information outside the financial statements."[6] To the extent that the audit committee or external third parties (*e.g.,* underwriters, institutional investors, or analysts) believe it is appropriate to obtain additional assurance on other information included in SEC filings, the PCAOB's existing standards provide auditors with the tools to meet those requests. Accordingly, nothing more is needed.

[5] In its Proposal, the PCAOB notes that the UK-listed companies are "required to provide information about auditor tenure in a separate section of the annual report" (page A5-16.) The approach used by the UK is consistent with our view that information about auditor tenure, while potentially of interest to investors, is a matter of corporate governance.
[6] http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf at page 25

The PCAOB states that

> The required procedures under the proposed other information standard would focus the auditor's attention on the identification of material inconsistencies between other information and the company's audited financial statements and on the identification of material misstatements of fact, based on relevant evidence obtained and conclusions reached during the audit.[7]

NAREIT views these requirements as largely consistent with the existing audit standard which states that the auditor "should read the other information and consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation appearing in the financial statements."[8] However, the proposed changes to the standard, and the related proposed language in the audit report, suggest that the auditor's responsibility should extend beyond what has been historically required. Specifically, under the Proposal the auditor would be required to state that, "in addition to auditing the financial statements and the Company's internal controls over financial reporting," the auditor would also be required to "evaluate" the other information in the filing, an evaluation that was "based on relevant audit evidence obtained and conclusions reached during the audit." What level of assurance is provided by an "evaluation?" Absent clarification by the PCAOB, users of financial statements could mistakenly perceive the audit firm's work and the level of assurance provided surrounding other information as something substantial, with no meaningful understanding as to the distinction between an "evaluation" and an "audit." This perception gap could have severe ramifications on the investment community as well as the audit profession. Instead of adding more clarity to the audit report and narrowing the expectation gap, we view this Proposal as significantly obfuscating the nature and scope of an audit and dramatically widening the expectation gap.

In NAREIT's view, this aspect of the Proposal is fraught with many issues involving each financial statement users' perspectives, and would likely lead auditors by default to performing a far more significant amount of unnecessary work on other information than under current standards due to the lack of clarity regarding the nature and scope of the auditor's responsibility. This would cause increases in audit fees when there is absolutely no demand or requirement for any type of assurance on this information and could lead to less useful information being provided to investors.

**Summary**

NAREIT does not believe that the changes recommended by the Proposal with respect to the audit report, disclosure of auditor tenure, and the auditor's responsibility for other information are warranted. These requirements would add costs without improving the quality of the audit. Furthermore, these proposals would be likely to confuse and in some cases even mislead users of

[7] http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf at page 7
[8] See AU 550.04

financial statements. Therefore, NAREIT recommends that the PCAOB suspend its efforts on the Proposal, and instead focus its time and resources on improving aspects of the audit procedures that would enhance audit quality so as to provide investors with more confidence that the audited financial statements are, indeed, free of material misstatement.

In the event that the PCAOB decides to move forward with the Proposal, NAREIT recommends that the Board consider conducting robust field testing. In our view, field testing should involve not only the preparer and auditor community, but also representatives from the investment community in order to fully assess both the costs and the benefits of the Proposal. This would provide the Board with evidential matter in evaluating whether the Proposal is operational, whether additional guidance is needed, whether the implementation costs outweigh the perceived benefits, and if the Proposal's objectives could actually be achieved.

* * *

We thank the PCAOB for the opportunity to comment on the Proposal. If you would like to discuss our views in greater detail, please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at gyungmann@nareit.com or 1-202-739-9432, or Christopher T. Drula, NAREIT's Vice President, Financial Standards, at cdrula@nareit.com or 1-202-739-9442.

Re: "Proposed Auditing Standards: The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards," PCAOB Rulemaking Docket No. 34.

Dear Members of the Public Company Accounting Oversight Board:

We appreciate the opportunity to provide comments on "Proposed Auditing Standards: The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion, The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report, and Related Amendments to PCAOB Standards" (the Proposal) issued by the Public Company Accounting Oversight Board (PCAOB or the Board). The National Association of State Boards of Accountancy's (NASBA) mission is to enhance the effectiveness of the licensing authorities for public accounting firms and certified public accountants in the United States and its territories. Our comments on the Proposal are made in consideration of our ability as state regulators to adjudicate based on the proposed standards. In furtherance of that objective, we offer the following recommendations.

We support the Board's efforts to modify the auditor's report so that it is more useful to investors. The more information of value auditors are able to provide to the users of audited financial statements, the greater the value and relevance auditors can provide to the capital markets.

Specifically, we are supportive of the following changes to the auditor's report:

1. Providing clarity regarding the responsibilities for other information included within the 10-K.

2. Including a statement that the auditor is required to be independent under the applicable rules and regulations.

3. Additional standardized language regarding the auditor's responsibilities with respect to the detection of error or fraud and performing procedures to assess the risks of material misstatement.

4. Making it clear that the audit includes the notes to the financial statements.

## Critical Audit Matters

### General Support

With respect to the disclosure of Critical Audit Matters (CAMs), we support the underlying principle of providing meaningful and useful information to investors and other financial statement users. Certain disclosures, however, will potentially be at odds with the historical reporting model, which has management being responsible for the company's financial statements and disclosures and the auditor attesting to that information.

In responding to the Board's request for comments on the proposal, we also offer the following overall observations:

1. We have been following the International Auditing and Assurance Standards Board's (IAASB) proposal and applaud the Board's efforts in working with the IAASB on this proposal as it is important they be aligned.

2. With such significant changes being proposed, an important fiduciary duty exists to ensure that any changes adopted narrow the expectation gap between the understandings/perceptions by users regarding the audit and the reality of what an audit, which provides reasonable assurance, can achieve.

3. Changes that are market driven add value for users of financial statements, but they should be made with appropriate consideration of costs and benefits.

4. As the State Boards will be adjudicating based upon the PCAOB's rules, we would like to avoid requirements that would result in challenging implementation issues. Consequently, we ask the Board to give added consideration to including:

   a. Unique disclosures over time becoming boilerplate and, as a result, whether the Board's objectives of providing useful information to investors will be achieved.

b. The questioning of what is considered to be a CAM through the PCAOB inspection process and whether restatements of auditors' reports may be required as a result. We note that a failure to report a CAM does not mean that the financial statements were not fairly presented in accordance with generally accepted accounting principles, or that the audit procedures applied to determine whether or not the financial statements were determined in accordance with such principles were not in accordance with generally accepted auditing standards issued by the PCAOB.

We have concerns that the proposed requirements may result in matters being reported by the auditor that are not required to be reported by management which could lead to investor confusion.

We also have concerns that:

- Trying to describe the procedures related to CAMs in an extensive way that is understandable to readers will be challenging and may not add value.

- The sample reporting examples in Appendix 5 of the Proposal do not illustrate the reporting requirements as stated in the proposed standard (e.g., discussion of audit procedures, use of specialists, national consultation, etc.).

As state laws reference or adopt these requirements, we see potential practical implementation challenges, including:

- Suppose the auditor encounters a potentially illegal act. Arguably, this could meet the definition of a CAM; however, including discussion regarding an illegal act in the auditor's report may not be either sufficient or appropriate.

- The same matter may be considered a CAM in one year, but not another. Consequently, comparative disclosures may become very complicated.

- Continued use of emphasis of matter (EOM) paragraphs: As proposed, it is unclear how an overlap between CAM and EOM paragraphs would be addressed.

Based on the above, we offer the following suggestions:

1. Provide greater clarity regarding what should be considered a CAM.

   a. Narrow the starting population of potential CAMs to only those matters discussed with the Audit Committee - under AS 16 and other applicable PCAOB standards (the proposed IAASB standard has a similar requirement to this).

b. Provide additional guidance, beyond that included in paragraphs 9 and 10 of the proposed auditor reporting standard, that provides further clarity on how the auditor should filter potential CAMs to those that are ultimately reported in the auditor's report.

c. Recommend that the extent of communications with the audit committee about a potential CAM be an additional filter to apply in the final determination of what the CAMs are.

d. Limit CAMs to those matters already disclosed in the financial statements.

2. Provide greater clarity regarding the communication of CAMs in the auditor's report and guidance if the communication of CAMs should include a discussion of audit procedures performed. If it is the Board's intent for the auditor to include a discussion of procedures, suggest that an explicit statement be added to the auditor's report that states the CAM disclosure is not the totality of all procedures performed on a CAM and/or additional guidance for the procedures the auditor should include.

3. Provide additional guidance for the documentation requirements with respect to matters ultimately concluded not to be CAMs.

4. Include a statement in the standard that, in a situation where there is overlap between a CAM and an EOM, they should be integrated so as to avoid duplication/repetitiveness in the auditor's report.

5. Include the concept that each year the auditor takes a fresh look at CAMs and does not maintain a "rolling inventory" of CAMs.

## Matters Not Required to be Disclosed in the Financials but by Definition are CAM

The Proposal uses an example of a loss contingency that was a complex matter but which management and the auditor concluded did not have to be disclosed in the financial statements. The Proposal says that the matter should be disclosed in the audit report as CAM. If GAAP does not require disclosure of a matter, regardless of the complexity of the matter, from a regulatory standpoint, we question the appropriateness of the audit report requirement as CAM. In addition, such disclosure in the audit report would likely confuse readers because there would be no explanation of the matter in the financial statements.

## References to Relevant Financial Statement Accounts and Disclosures

The Proposal requires the auditor to: "Refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable." The norm for references to financial statements in the auditor's report today is for the auditor to refer to a footnote disclosure in the financial statements, not financial statement accounts, as the footnote disclosures will typically reference to the amounts in the financial statement accounts. We suggest that references in the auditor's report to CAM be limited to reference to disclosures.

## Conformity with International Standards

The IAASB's recently issued an exposure draft, "Reporting on Audited Financial Statements Proposed New and Revised International Standards on Auditing (ISAs)" that uses the term "Key Audit Matters" in the same manner that the PCAOB uses the term "Critical Audit Matters." We suggest that the PCAOB, the IAASB and the Auditing Standards Board use similar terminology, definitions and requirements wherever possible.

## Communication of CAM in Writing by the Auditor to the Audit Committee

Under present standards, when an auditor communicates with the audit committee, the communication does not have to be in writing. The auditor only has to document the information that was communicated orally. The Board has recently issued an auditing standard that enhances communication of auditors with audit committees. We believe that the Board should revisit the issue of permitting only oral communication and require in the instance of CAM that, because of its significance, CAM be communicated in writing.

## Other Information

The Proposal updates the current PCAOB auditing standard for "Other Information" and adds a section in the auditor's report that addresses the auditor's responsibility for evaluating "Other Information." We support the addition of this section to the auditor's report.

The proposed new paragraph says that the auditor has evaluated whether the "Other Information" included in the annual report filed with the SEC contains a material inconsistency with the financial statements in the annual report, a material misstatement of fact, or both.

The proposed auditor's report does not include a definition of "Other Information." We suggest that the commonly understood Auditing Standards Board's definition of what constitutes "Other Information" (AU-C 720) be retained. Consider limiting auditor involvement to Management's Discussion and Analysis, including Critical Accounting policies.

We are suggesting this change, as there are several practical challenges with the proposed audit procedures, including:

1. The auditor does not have a basis or the knowledge to evaluate all qualitative statements in the 10-K. Examples include backlog, executive compensation, marketplace position, etc.

2. It is unclear what will be expected in terms of documenting the procedures with respect to other information.

3. The standard does not address the documentation aspect: How does an auditor document that he/she "read and evaluated"?

4. It is unclear if the auditor is obligated to aggregate immaterial inconsistencies with the financial statements or immaterial misstatements of fact and evaluate them on a collective basis.

## Retention of Pass/Fail Model

We agree that the Pass/Fail Model should be retained. As noted earlier with such significant changes being proposed, an important fiduciary duty exists to ensure that any changes adopted narrow the expectation gap between the understandings/perceptions by users regarding the audit and the reality of what an audit, which provides reasonable assurance, can achieve.

## Auditor Independence

We support the proposed addition of a paragraph addressing auditor independence. Stating in the auditor's report that the auditor is independent in accordance with federal laws and regulations and the rules of the Securities and Exchange Commission and the PCAOB will help financial statement users understand that the auditor must comply with these laws, regulations and rules, and not rules issued by other organizations.

## Tenure of Service

### Proposed Sentence Regarding Tenure of Service

The Proposal includes a sentence addressing tenure of service at the end the proposed new paragraph in the auditor's report addressing auditor independence. The sentence is: "We or our predecessor firms have served as the Company's auditor consecutively since [year]."

The Proposal also cites a rule adopted by the UK Financial Reporting Council that requires UK companies to provide information on the length of auditor tenure in a separate section of their annual report and not in the auditor's report.

**<u>Proposed Placement of Tenure of Service Sentence</u>**

We believe that the placement of the proposed sentence on auditor tenure as the last sentence in the paragraph on auditor independence clearly creates a link between auditor independence and tenure of service.

Yet, as the Proposal states, the PCAOB has not reached a conclusion regarding the relationship between audit quality and auditor tenure, and the PCAOB's inspection process has not been designed to determine such relationship.

Please consider the potential negative implication of the placement of the sentence on tenure in the last sentence in the auditor independence paragraph. We suggest that the sentence on tenure of service be placed in a paragraph immediately above the auditor's signature.

We appreciate the opportunity to respond to the Proposal referenced above.

Sincerely,

Carlos E Johnson

Submitted via electronic mail: comments@pcaobus.org

**Re: PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 034**

Natural Alternatives International, Inc (NAI) is a leading formulator, manufacturer and marketer of nutritional supplements. Our Company stock is traded under the symbol NAII on the NASDAQ Global Market Stock exchange.

Thank you for giving us the opportunity to share our thoughts and comments on *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion, the Auditor's Responsibilities regarding Other Information in Certain Documents containing Audited Financial Statements and the Related Auditor's Report, and Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting Standard.*

While we support the PCAOB's efforts to improve financial reporting for investors and other financial statements users, we cannot support these Board proposals as currently outlined. In our opinion, these Board proposals will potentially create investor confusion that may lead to false conclusions on the quality of a Company's financial statement information and the audit work performed.

**Critical Audit Matters (CAM's)**

We believe the Board's proposal to require the auditing firm to determine and disclose CAM's will create unnecessary disclosures and generate increased reporting costs for all registered companies. In our opinion, the key CAM's are already required disclosure in public filings and are included under Part I, Item 1A – "Risk Factors", Part II, Item 7 - "Management's Discussion and Analysis of Financial Condition and Results of Operation" and "Critical Accounting Policies and Estimates." We believe CAM's are inherent at some level for all companies and are the basis for the development of the independent

CORPORATE OFFICE • 1185 LINDA VISTA DRIVE • SAN MARCOS, CA 92078

www.nai-online.com

auditor's auditing process. These auditing firms possess extensive industry experience and technical knowledge that allows them to identify CAM's surrounding financial reporting issues and design their audit plans and strategies to accommodate these risks. As such, the audit process and auditor's opinion on financial statements should remain a pass/fail model that is all inclusive rather than create a perception that the "taken as a whole perspective" does not apply to "X, Y and Z." We also believe that requiring the auditor to include CAM's in their audit opinions will result in increased and unnecessary disclosures and auditing fees as the auditing firms attempt to include any and all known audit risk items in their reports (after extensive negotiations with company management, audit committee board of directors and Regional/National Firm offices) in an effort to reduce their exposure to potential deficiencies identified during subsequent PCAOB audit reviews and increased premiums from their E&O insurance underwriters.

**Reporting on Other Information**

On the surface we agree with the Board's desire to create more clarity around the auditor's responsibilities for the "other information" included in financial statements filed with the Securities and Exchange Commission. However, we are concerned that this requirement will also unduly increase the costs associated with the auditing process and create confusion for the investing public related to the primary ownership and responsibility for this information. We believe the SEC rules and regulations surrounding the requirements for the content of "other information" included in public filings are well defined and properly fall under the responsibility of the company's management. Additionally, "other information" which is included in the MD&A discussion often includes forward looking statements and management's predictions of future events. These items will create difficulty for the auditing firm to reach definitive conclusions and may lead to investor confusion surrounding independence as the auditing firm purports to support or reach alternative conclusions on management's representations.

As an alternative to the Board's proposal, we would support a modification to the standard auditor's unqualified opinion to include a separate paragraph that clearly states that the auditor's opinion does not encompass the "other information" included in financial statements filed with the Securities and Exchange Commission.

Thank you for your consideration.

Respectfully,

Kenneth Wolf

Reference: Request for Public Comment: *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; the Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards;* PCAOB Release No. 2013-005; PCAOB Rulemaking Docket Matter No. 34

Dear Members of the Board:

The Accounting and Auditing Standards Interest Group of the New Jersey Society of Certified Public Accountants (NJSCPA) is pleased to provide its comments on the above referenced proposed standards. The NJSCPA represents over 15,000 certified public accountants and prospective CPAs. The comments herein represent those of some of the individuals of our Accounting and Auditing Standards Interest Group only and do not necessarily reflect the views of all members of the NJSCPA.

We commend the PCAOB's effort to make improvements to reports on audited financial statements, and appreciate the opportunity to provide the following comments on the questions contained in the Proposed Auditing Standards.

As a result of our review of the proposed standards we have summarized our overall views in additional to addressing the Board's specific questions below.

**Overarching Comments**

While we understand the difficulty facing the Board with balancing the need from investors for more information specific to the audit of the company's financial statements with the practical concern of what is appropriate for the auditors to share that provide relevant and useful information to the investors, we have the following concerns regarding the proposed standards:

- We agree with the retention of the pass/fail model since it gives the clearest message to investors. Our concern with the inclusion of critical audit matters in the auditor's report is the possible incorrect perception of investors that there are varying degrees of an unqualified opinion. An unqualified opinion that includes the disclosure of several critical audit matters may be viewed as less unqualified than an unqualified opinion where only one or no critical audit matters are identified.

- Since there is no conclusive correlation between auditor tenure and audit quality, auditor tenure should not be included in the auditor's report as it may encourage investors to make incorrect assumptions. If an investor needs to know about the tenure of the current auditor, the information is readily available in EDGAR.
- Since the proposed standard may require that the auditor disclose a critical audit matter that the client is not required to disclose under existing financial reporting standards, the auditor could be faced with the dilemma of complying with auditing standards and violating client confidentiality laws and regulations if the client does not give the auditor permission to disclose such matter.
- The example report language included in the proposed standard indicates that the auditor evaluated all other information for material inconsistencies and material misstatements of fact when the proposed standard does not require it and the auditor is often in the position of not being qualified to make that evaluation. In addition, we do not understand what level of assurance is given by the auditor "evaluating" the other information and neither will the investors.
- It is inconsistent with current standards to require auditors to evaluate other information that was not available as of the audit report date after their audit report date.

**APPENDIX 5 – Additional Discussion Related to the Proposed Auditor Reporting Standard**

***II. Objectives***

*1. Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?*

We do believe that the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report since it highlights the overall context for the requirements of the standard. However, as we will discuss in more detail later, our concern is with the subjective nature of the term "critical audit matters". Though the term is later defined in the standard, we believe the identification of critical audit matters is highly subjective. With any new standard, it is critical that the PCAOB ensures that auditors can apply this standard consistently. Though the objective is clear, due to the subjective nature of critical audit matters, we do not believe there can be consistent application.

***IV. Basic Elements***

*2. The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or* *equivalent body. Are there others to whom the auditor's report should be required to be addressed?*

No, we believe that it is appropriate to address the auditor's report to the investors/ shareholders and the board of directors of the company.

*3. The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?*

We believe it is appropriate to revise the description of the nature of an audit to better align it with the risk assessment standards and do not believe that any additional requirements are necessary.

*4. The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?*

We do not believe that the additional independence statement is necessary but do no object to its inclusion in the auditor's report.

5. *The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.*

a. *Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?*

   As discussed in the proposed standard, research related to the correlation between auditor tenure and audit quality has been inconclusive. Some research points to short-term tenure having an adverse impact on audit quality where other research indicates that long-term tenure has an adverse impact and other studies point to both as having detrimental effects on audit quality. In addition, the Board has not been able to reach a conclusion regarding the relationship between audit quality and auditor tenure after significant outreach. Considering that there are so many differing opinions on the topic and no conclusive evidence to support either opinion, we believe that the disclosure of auditor tenure will result in unintended consequences, such as users making inappropriate and inconsistent assumptions and/or conclusions based on the length of auditor tenure.

b. *Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?*

We are not aware of additional challenges.

c. *Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?*

Though we acknowledge that investors and other users can obtain auditor tenure information from EDGAR and other sources if that information is useful for them, we believe that by including that information in the auditor's report it is encouraging investors and other users to draw a conclusion on whether the tenure has a positive or negative impact on audit quality when there is inconclusive support for either opinion. As a result, we do not believe audit tenure should be included in the auditor's report.

*6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?*

We do believe that it would be helpful to investors and other users to describe the auditor's responsibilities for other information outside the financial statements in the auditor's report so as to make the auditor's responsibilities clear and dispel incorrect assumptions and misconceptions. However, as we discuss more fully below, we disagree with the proposed standard since we believe it may lead to investors' incorrect assumptions and misconceptions instead of reducing them and significantly expands auditor's responsibility.

*7. Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?*

We believe that the board should provide a specific order in order to facilitate comparability and consistency for users of financial statements. We also suggest that section titles be included in the standard auditor's report.

*8. What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?*

We do not have any suggestions for other changes to the basic elements of the auditor's report.

*9. What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.*

We do not believe that the proposed basic element changes related to auditor independence and auditor tenure will cause significant additional costs except for first year training and implementation costs that would not be material. However, due to the additional responsibilities created by the proposed changes to auditor's responsibilities regarding other information, we believe there will be significant incremental costs to comply with the new requirements.

### *V. Critical Audit Matters*

*10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?*

We do not believe that communication of critical audit matters in the auditor's report will be relevant or useful to the users of financial statements. Primarily this relates to the inability for such a standard to be appropriately applied on a consistent and comparable basis which is necessary for the information to be useful. The identification of critical audit matters is dependent on significant auditor judgment and the identification is not made in contemplation of the specific needs of individual investors. Investors are not familiar enough with auditing techniques, procedures and principles and the risk is that investors will only focus on the areas identified as critical audit matters and may overlook other important financial information that may be important to their investment decision. Finally, the proposal mentions that the communication of critical audit matters could lead to improved financial statement disclosures related to areas that give rise to critical audit matters because of increased attention to those areas by management and the audit committee after the communication in the draft auditor's report of the critical audit matters. However, these critical audit matters are already communicated as part of PCAOB Auditing Standard No. 16 so we don't agree that would be any incremental attention paid to these same areas just by their mention in the auditor's report. In addition, investors' need for additional disclosures should be addressed through changes to Generally Accepted Accounting Principles (GAAP) or SEC Regulation S-K and not through changes in the auditor's reporting model.

*11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?*

It is likely that auditors will broaden their critical audit areas if they will be communicated publically to avoid having their judgment questioned which could significantly increase audit time and fees to offset increased auditor's litigation liability. In addition it is likely that investors and users will form conclusions based on information that is not comparable or consistently applied and potentially incomplete if they only focus on the areas identified as critical audit areas and not all of the financial information available to them.

Another concern is that investors will only see the identification of the critical audit matter without the benefit of knowing how the auditor addressed that matter, the evidence they obtained, and how persuasive the evidence was. Therefore, it may appear to investors that an issuer that has several critical audit matters in the auditor's report is riskier when that might not be the case.

*12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?*

We believe that the definition of a critical audit matter is sufficiently clear to most experienced auditors to determine what would be a critical audit matter. Auditors currently determine critical audit areas in determining the nature, timing and extent of audit procedures, evaluating sufficient appropriate audit evidence and forming an opinion on the financial statements. However, what is not clear is if the definition is clear to investors that are not familiar with auditing standards and whether the identification of critical audit matters would provide relevant and useful information to investors and other users in making their investment decisions. In addition, we believe that the identification of critical audit matters is subject to substantial auditor judgment, therefore, the proposed standard would not be able to be applied consistently.

*13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?*

Auditors already focus their time on the critical audit areas during their audits so we do not believe that the additional time incurred to report on the critical audit matters will increase audit quality. However, we do believe there is the potential that the additional time needed to be spent on the reporting of the critical audit matters may take away from time spent on actual audit procedures which could decrease audit quality.

*14. Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?*

The proposed requirements regarding the auditor's determination and communication of critical audit matters is clear but what remains unclear is how this standard can be applied consistently when there is significant auditor judgment involved.

*15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?*

We do not believe that including the audit procedures performed on critical audit matters would be informative and useful to investors that are not sufficiently knowledgeable on auditing procedures and techniques. Independent auditors are professionals that are experts in accounting and auditing that are engaged to attest to information prepared by management. Investors should not need to know the specific audit procedures performed by the independent auditor to come to the conclusion that the financial statements present fairly, in all material respects, the financial position of the company. Plus, including resolution of the critical audit matters in the auditor's report could be seen as concluding on specific areas instead of the financial statements as a whole. We also believe that including the audit procedures performed would jeopardize audit quality by reducing the element of unpredictability in an audit and providing a roadmap for potential management manipulation of those procedures.

*16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?*

The factors are helpful but not sufficient to ensure consistent and comparable preparation and reporting of these items by auditors due to the professional judgment involved.

*17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?*

We do not believe any other factors are necessary.

*18. Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?*

The documentation requirement in the proposed standard is sufficiently clear.

*19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?*

The proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter is consistent with the requirements of PCAOB Auditing Standard No. 3.

*20. Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?*

The proposed documentation requirement is sufficient.

*21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?*

We agree with the proposal that the auditor's determination, communication and documentation of critical audit matters will increase costs and time expended by auditors, companies and audit committees. These costs will include one-time and recurring costs.

*22. What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?*

The development of the critical audit matters by the auditor and the drafting of the language to be included in the auditor's report will likely be completed towards the end of the audit engagement and will also need to be reviewed by management and the audit committee. This additional time incurred at the end of the engagement, which is already a busy time for all involved, may adversely impact the timeliness of filings.

*23. How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?*

We believe that audit fees will increase in order to compensate the auditing firms for expansion of their procedures, documentation and drafting of the language. In addition, there will be increased communication required with management and the audit committee.

*24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?*

Though we disagree with the communication of critical audit matters in the auditor's report, if communication is required, we agree that it should only be required for the current period. We also agree that communication of critical audit matters for all periods presented should be limited to initial public offerings and re-audits when the predecessor's opinion can no longer be relied upon.

*25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?*

The illustrative information is useful but we believe is insufficient to provide auditors with enough guidance to prepare this information on a consistent and comparable basis.

*26. What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.*

We do not believe this information can be applied on a consistent and comparable basis, nor will it be useable or reliable for users of the financial statements.

*27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise* *would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?*

The primary unintended consequence would be that any such disclosures may impair the auditor's independence and may violate existing client confidentiality laws and regulations of the PCAOB, SEC, AICPA, State Societies and State Boards of Accountancy. It is unclear how Certified Public Accountants can comply with these standards without changes to existing independence and ethics rules of these and other organizations.

*28. What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?*

We believe that by communicating critical audit matters in the audit report, it is changing the auditor's role of attesting on information prepared by management to the preparer of new information regarding the company that will ultimately be relied upon by investors and this will increase auditor's liability. It will open up additional avenues for investors to question the professional judgment of the auditor when they are looking to place blame for an incorrect investment decision.

***VI. Explanatory Language***

*29. Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?*

We believe it is appropriate for the Board to include a description of such circumstances.

*30. Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?*

Yes. We believe that retaining the auditor's ability to emphasize a matter in the financial statements is valuable to users of financial statements.

*31. Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?*

We agree that the proposed standard should retain the current list of circumstances in which the auditor is required to add explanatory language to the auditor's report required by other PCAOB standards related to going concern, reference to another auditor and consistency. The decision to emphasize any other matters should be left to the discretion of the auditor.

*32. Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?*

We would not object to the addition of additional examples of possible matters that might be emphasized in the auditor's report but do not have any suggestions.

***VII. Amendments to Other PCAOB Standards***

*33. Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?*

Overall, we do not have objections to the proposed changes to other PCAOB standards that relate to the proposed auditor reporting standard except for the following:

- Consistent with our comments above, we do not believe that auditor tenure should be included in the auditor's report on internal control over financial reporting
- We do not believe that an auditor should be able to reference the use of a specialist in the auditor's report in connection with the auditor's communication of critical audit matters. Even though the communication of critical audit matters is not supposed to alter the auditor's unqualified opinion, we believe the perception of the investors would be that the auditor is dividing their responsibility.

*34. What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.*

The potential costs related to the proposed amendments are consistent with what is discussed above.

***VIII. Considerations Related to Audits of Specific Entities***

We have no comments on the applicability of the proposed auditor reporting standard to the audits of specific entities, including brokers and dealers, investment companies, and employee stock purchase, savings, and similar plans.

***IX. Consideration Related to Effective Date***

*41. Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?*

We believe the effective date of any final proposal should provide a minimum of two years from the issuance date to allow auditors sufficient time to train staff, develop changes to quality control procedures, and educate clients and users of financial statements. We also believe sufficient time will be required for other regulatory bodies to potentially make changes to auditor independence and ethics rules and regulations which may need to be amended as a result of these standards in order for auditors to be permitted to comply.

*42. Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?*

Yes, we believe that a delayed compliance date of at least one year should be adopted for smaller reporting companies.

**APPENDIX 6 – Additional Discussion Related to the Proposed Other Information Standard**

### *I. Introduction*

1. *Is the scope of the proposed other information standard clear and appropriate? Why or why not? Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?*

The proposed scope is clear but as discussed more fully below, we have concerns about the significantly increased level of auditor responsibility proposed in the standard. There are no additional Exchange Act documents that the Board should consider including in the scope of the proposed other information standard.

2. *Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?*

We believe it is appropriate to apply the proposed other information standard to information incorporated by reference that is available to the auditor prior to the issuance of the auditor's report. However, we do not believe that the proposed other information standard should apply to information incorporated by reference that is not available to the auditor prior to the issuance of the auditor's report, such as information in the company's definitive proxy. Since neither the auditor's report nor a consent letter is required to be filed with the company's definitive proxy, the auditor may be unaware when the company files the proxy. In addition, there appears to be a conflict with performing the proposed procedures to the other information after the date of the auditor's report.

3. *Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?*

It is appropriate to apply the proposed other information standard to amended annual reports when the amended annual report contains revisions to the previously issued financial statements. When an amended annual report does not contain revisions to the previously issued financial statements, the proposed standard says that the auditor would treat the other information in the amended filing as not available prior to the issuance of the auditor's report. What is not clear is if that means that the auditor needs to perform the procedures under the proposed other information standard or if it is excluded.

4. *Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are there practical issues with applying the proposed other information standard to the other entity's audited financial statements?*

We believe that if audited financial statements of another entity are required to be filed in a company's annual report, the other entity's auditor should have responsibilities under the proposed other information standard for the other information as it relates to the other entity.

## *II. Objectives*

5. *Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?*

The addition of the objectives to the proposed standard is helpful to auditors applying the procedures required. However, as discussed more fully below, we are concerned about the additional procedure that has been added to the standard that requires the auditor to evaluate the other information for a material misstatement of fact.

## *III. Evaluating the Other Information*

6. *Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?*

Overall, we agree with the addition in the proposed standard of performing procedures to help the auditor identify whether the other information contains material inconsistencies and material misstatements of fact. We believe in practice most auditors already perform specific procedures to the other information such as comparing numbers in the other information to the audited financial statements, recalculating amounts for mathematical accuracy and providing various input to management on the other information. Therefore, including these procedures in the proposed standard will increase consistency among auditors. However, it is not clear how auditors could evaluate if other information that is not directly related to the financial statements contains a material misstatement of fact. There are many disclosures in the company's annual report that are not directly related to the financial statements or the relevant audit evidence obtained so an auditor would have no basis to evaluate that information. In addition, how will it be clear to an investor which other information was evaluated by the auditor and which other information was not evaluated since the auditor had no basis to evaluate that information. We believe the proposed standard should retain the existing responsibility that is conditioned on the auditor "becoming aware" of a material misstatement of fact related to information that is not directly related to the financial statements instead of being responsible for evaluating information that is not directly related to the financial statements for a material misstatement of fact.

We also have a concern with the term "evaluate". The existing standard requires that the auditor read and "consider" whether the other information is materially inconsistent with the financial statements. The proposed standards now require that the auditor "evaluate" the other information and report on that evaluation. It appears to us that "evaluate" is a higher level of assurance than "consider", however, we believe more explanation is needed in the standard about what "evaluate" means in the context of professional standards. It is clear in the proposed auditor's report language that the auditor did not "audit" the other information but it does say that the auditor "evaluated" the other information. What does that mean to an investor? We don't believe it will be clear to an investor what level of assurance that entails.

7. *Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?*

We believe that the addition of the required procedures to the proposed standard would increase the quality of information available to investors to the extent that those procedures are not already being performed by certain auditors, however, as mentioned above, we believe most auditors already perform most if not all of the required procedures in the proposed standard. Since we don't think it is clear to investors what "evaluate" means, we are unsure if it will sufficiently contribute to greater confidence in the other information. We are concerned that since we don't believe it is clear to an investor what "evaluate" means, they will interpret it to mean a higher level of assurance than the procedures performed warrant and will create undue reliance upon such information which will remain unaudited.

8. *Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information? Would applying this definition represent a change to the materiality considerations auditors currently use under AU sec. 550?*

It is unclear how any definition of materiality will be able to be applied to misstatements of fact in the same manner that it is applied to historical financial results.

9. *Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?*

The proposed procedures are clear and appropriate for evaluating consistency with the exception of paragraph 4.c. which says to evaluate other information that is not directly related to the financial statements by comparing it to relevant audit evidence obtained. Since it is highly likely that the auditor may not have any audit evidence with respect to other information that is not directly related to the financial statements, what does the auditor compare to be able to evaluate for consistency? We believe the standard should remain conditioned on the auditor "becoming aware" and not be required to "evaluate" other information that is not directly related to the financial statements since how can the auditor come to a conclusion on consistency based on the performance of the procedure when there may not be anything to compare.

We do not believe that the procedures are appropriate and sufficient in order for the auditor to evaluate whether there is a material misstatement of fact.

10. *Is it understood which amounts in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?*

Per paragraph 4.d. in the proposed standard, the auditor would be required to recalculate amounts in the other information for mathematical accuracy using amounts that are in the other information, in the audited financial statements or in the auditor's audit evidence if the formula is described in the other information, there isn't a need to refer to a formula or if the formula is generally understood. We believe that it would be clear to the auditor, which amounts in the other information that they would be required to recalculate as they performed the procedure. Our assumption from the proposed standard is that the auditor would not be required to recalculate certain amounts that don't meet the requirements listed above, therefore, our conclusion is that some of the amounts may not be required to be recalculated. Since the language in the proposed auditor's report only refers to "other information" how will it be understood by an investor/user which amounts have been recalculated and which ones have not been recalculated?

11. *Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?*

We are not aware of any additional costs beyond those described in the Appendix.

12. *Are the proposed auditor responses under paragraph 5 appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If not, why not?*

Yes, it appears appropriate to discuss such matters with management and perform additional procedures, as necessary.

13. *Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?*

We are not aware of any additional costs beyond those described in the Appendix.

### ***IV. Responding When the Auditor Determines That the Other Information Contains a Material Inconsistency, a Material Misstatement of Fact, or Both***

14. *Are the proposed auditor's responses under paragraphs 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?*

Yes, we believe the proposed auditor’s responses are appropriate.

15. *Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? Under what circumstances would such a report be appropriate or not appropriate?*

No, we believe all such material misstatements should be revised in the filing before an auditor’s report is issued.

16. *Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?*

    We believe the proposed auditor’s responses are appropriate except we need more clarification on why the auditor would be required to notify each member of the company’s board of directors after the auditor communicated to the audit committee and the other information was not appropriately revised before deciding that the auditor’s report must no longer be associated with the financial statements. We believe that communication with the audit committee should be sufficient. As discussed above, we do not believe it is appropriate for auditors to evaluate other information that was not available prior to the issuance of the auditor's report. Application of AU sec. 561 *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report* in this situation seems inconsistent with that standard since the material inconsistency or material misstatement of fact did not exist at the date of the auditor's report.

### V. ***Responding When the Auditor Determines That There is a Potential Misstatement in the Audited Financial Statements***

*17. Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed other information standard, the auditor determines that there is a potential misstatement in the financial statements? Why or why not?*

If as a result of the procedures performed under the proposed other information standard, the auditor determines that there is a potential misstatement in the financial statements; the auditor should follow the same procedures they would follow if they identified the potential misstatement as a result of their audit procedures assuming the auditor's report has not been issued. If the auditor's report has already been issued, we agree that the auditor should refer to AU sec. 561, however, as stated above, we do not believe it is appropriate for auditors to evaluate other information that was not available prior to the issuance of the auditor's report.

### ***VI. Reporting in the Auditor's Report***

*18. Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?*

No, we do not believe that the proposed reporting is clear to investors since we don't believe investors understand what it means that the auditor "evaluated" the other information and the proposed reporting does not acknowledge that the auditor may not have obtained evidence or reached a conclusion regarding all of the other information.

*19. Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.*

One of the concerns that we have with the proposed auditor's reporting language is that it refers to all other information and does not acknowledge that there is likely other information for which the auditor did not have relevant audit evidence to evaluate against. However, we don't know how the auditor could practically identify such information in the auditor's report. As anyone who has ever prepared a comfort letter and has dealt with the "circle ups" and numerous tickmarks can attest to, it would be impossible to segregate the different procedures performed on the other information in a standard audit report paragraph.

*20. What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?*

There would be increased costs associated with the additional communication with various members of management and the audit committee as well as review of any revised other information.

*21. Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?*

We do not believe that the proposed reporting provides sufficient information to investors so that they have an appropriate understanding of the auditor's responsibilities. We like that the proposed reporting makes it clear to investors that the other information has not been audited, however, we do not believe that investors understand what it means that the auditor "evaluated" the other information and the proposed reporting does not acknowledge that the auditor may not have obtained evidence or reached a conclusion regarding all of the other information.

*22. Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?*

No.

***VII. Responsibilities of a Predecessor Auditor***

*23. Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?*

We believe the proposed responsibilities of the predecessor auditor are appropriate. Additional guidance on the auditor's reporting language is needed.

***VIII. Other Considerations***

*24. What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related* *to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?*

These regulations will increase an auditor's potential liability because users of financial statements may assume that the auditor has evaluated all other information which is not true.

*25. Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?*

Yes.

## *IX. Proposed Amendments to PCAOB Standards*

*26. Are the proposed amendments to PCAOB standards, as related to the proposed other information standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed other information standard that the Board should consider?*

The proposed amendments to PCAOB standards are appropriate.

*27. In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?*

Yes, we believe that the Board should require the auditor to include a statement in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report.

## *X. Considerations Related to Audits of Broker Dealers*

*28. Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?*

We do not have a comment on this question.

## *XI. Considerations Related to Effective Date*

*29. Is the Board's effective date appropriate for the proposed other information standard? Why or why not?*

We believe the effective date of any final proposal should provide a minimum of two years from the issuance date to allow auditors sufficient time to train staff, develop changes to quality control procedures, and educate clients and users of financial statements. We also believe sufficient time will be required for other regulatory bodies to potentially make changes to auditor independence and ethics rules and regulations which may need to be amended as a result of these standards in order for auditors to be permitted to comply.

*30. Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?*

Yes, we believe that a delayed compliance date of at least one year should be adopted for smaller reporting companies.

***XII. Considerations Related to Securities Act Documents***

*31. Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?*

We do not believe that the Board should extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act.

*32. Are there some elements of the proposed other information standard that the Board should consider requiring the auditor to perform related to other information contained in filings under the Securities Act, such as the auditor's responsibility to evaluate the other information? If so, which elements of the proposed other information standard should the Board consider including in the procedures currently required for Securities Act documents under AU sec. 711? If not, why not?*

No.

*33. What costs or other challenges should the Board consider when assessing whether to propose extending some elements of the proposed other information standard to other information contained in documents filed under the Securities Act?*

We do not believe that the Board should consider extending any elements of the proposed other information standard to documents filed under the Securities Act.

Thank you for the opportunity to comment. We are available to discuss our comments at your convenience if you require additional information.

Respectively submitted,

**Re: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments**

**Release No. 2013-005, Docket No. 034**

The New York State Society of Certified Public Accountants (NYSSCPA), representing more than 29,000 CPAs in public practice, industry, government and education, welcomes the opportunity to comment on the above captioned proposed auditing standard.

The NYSSCPA's Auditing Standards, SEC and Stock Brokerage Committees deliberated the proposed standard and prepared the attached comments. If you would like additional discussion with us, please contact Julian Jacoby, Chair of the Auditing Standards Committee at (646) 644-4482, or Ernest J. Markezin, NYSSCPA staff, at (212) 719-8303.

Sincerely,

N Y S S C P A

J. Michael Kirkland
President

## General Comments

The New York State Society of Certified Public Accountants (NYSSCPA) is pleased to submit the following comments on the above-captioned release (the Release) issued by the Public Company Accounting Oversight Board (PCAOB or the Board). Our responses to the questions contained in Appendices 5, 6 and 7 of the release are presented below.

**Appendix 5** – **Additional Discussion Related to the Proposed Auditor Reporting Standard**

### Question Related to Section II

**1.** ***Do the objectives assist the auditor in*** **understanding** ***the requirements of what would be communicated in an auditor's unqualified report? Why or why not?***

We believe the first objective, as set forth in paragraph 4a of the proposed standard, has always been and continues to be implied and obvious and need not be expressly articulated. The second objective, as set forth in paragraph 4b of the proposed standard, refers to communicating critical audit matters, the benefits and advisability of which we have significant reservations that are expressed in our responses to Questions 10-28 of Section V of Appendix 5.

### Questions Related to Section IV

**2.** ***The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?***

The Board, in its discussion of the proposed standard, states that the shareholders are the auditor's "ultimate customer." It is our preference that the Board should specify shareholders or stockholders rather than "investors." We believe that in addition to the Board of Directors or equivalent body, the proposed standard should require the report be addressed to current shareholders. The basis for the "Board of Directors" inclusion is that the engagement letter is contractual and a legal obligation of the Board of Directors. The parties to the contract should be the parties issuing and receiving the report. We do not strongly oppose using "investors," because investors in short sales, option holders, debenture holders, holders of mutual funds who hold the company's securities, *etc*., are all investors.

**3.** ***The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?***

We believe that the proposed language in paragraphs 6(j) through 6(n) captures the spirit of the auditor's responsibility. We do not believe that every time the phrase "material misstatement" is used it needs to be followed by "whether due to error or fraud." Material misstatement can only occur intentionally or unintentionally. The inclusion of "whether due to error or fraud" is a redundant statement and is not necessary in the same section.

In addition, while paragraph 6(m) states that an audit includes among other things, examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements. The word "appropriate" may be unclear to readers. Audit evidence is required to be sufficient and appropriate with the former relating to the quantity of evidence and the latter related to the quality of evidence. Because audit evidence by definition must include elements of both characteristics, the paragraph should read "Examining on a test basis, evidence regarding the amounts and disclosures in the financial statements."

Finally, the standard should include a reference to the auditor's responsibility to consider the company's internal controls when assessing risk and designing procedures to address identified risks. Whether the company is subject to Section 404 of the Sarbanes-Oxley Act, the auditor is required at a minimum to consider the design and implementation of the company's internal controls when designing an appropriate response to identified risks of material misstatement. This insert should be part of the auditor's responsibilities section of the auditor's report.

**4.** ***The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?***

Because independence is the prime tenet of auditing the fact that a separate statement that the auditor is public accounting firm registered with the PCAOB (United States) and is required to be independent with respect to the company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities Exchange Commission (SEC) and PCAOB is additive. The general idea of this information is included in the title of the auditor's report. We appreciate the Board's overriding concern with independence but a boilerplate statement added to all reports will not affect or remedy concern for the quality of this matter.

**5.** ***The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.***

*a.* ***Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?***

*b.* ***Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?***

*c.* ***Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?***

As audit partners and engagement quality reviewers are required to rotate on each public company every five years (with limited exceptions for small audit firms), we do not believe that the length of time that firms have audited clients is relevant to the audit opinion on any given year's financial statements. This issue has surfaced and resurfaced from time to time. The PCAOB oversight regime and the firm's own quality controls would have more of an influence on poor audit quality than the premise that long- term tenure affects audit quality. Quality issues may be more influenced by personnel failure which we believe will always occur.

**6.** ***The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?***

Providing auditors with objectives links the procedures to what the auditor is trying to achieve; so we support this consideration.

Paragraph 2(b) should be revised as follows: When issuing an auditor's report on the other information and *when the other information includes* whether, based on relevant audit evidence obtained and conclusions reached during the audit, the other information contains a material inconsistency or material misstatement of fact, *or both to describe these in the auditor's report.* We disagree with the requirement for the auditor to make a positive statement or conclusion about the absence of any inconsistencies, material misstatements or both discussed in paragraph 13(e). Also see our response in Question 18 of Appendix IV).

**7.** ***Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?***

We believe this is not a substantive matter. If left out of the standard, firms may have more flexibility in highlighting or emphasizing specific matters for users to consider.

**8.** ***What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?***

See our response in Question 3 above. The Board's discussion of the other elements of the report is satisfactory.

**9.** ***What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.***

We are uncertain if the drafters are categorizing critical audit matters as a basic element. That section will take the most time and effort relative to any other changes being proposed.

**Section V**

**General Comment**

We commend the Board for responding to the concerns expressed by many respondents to Release No. 2011-003 dated June 21, 2011, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (the Concept Release) by proposing a discussion of "critical audit matters" in audit reports in lieu of the "Auditor's Discussion and Analysis" (or AD & A) suggested in the earlier Concept Release. We responded to the Concept Release in a letter dated September 27, 2011, and understand those concerns to be rooted in a desire to preserve the purity of the attest function by not requiring auditors to speak about financial statement matters in a way that should be reserved for management. The critical audit matters discussion currently proposed is apparently intended to be limited to matters of auditor judgment which we believe (despite our reservations set forth in our responses to Questions 10-28 of Section V of Appendix 5 of the current Release) would be far more appropriate than the broader AD & A described in the Concept Release.

**Questions Related to Section V**

**10.** ***Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?***

No, the auditor's communication of critical audit matters would not be relevant and useful to investors and other financial statement users. Our view is that the expressions of demand for this kind of information by analysts and investor groups are largely exaggerated, lack credibility and are likely attributable to the "*if you build it, they will come*" syndrome. We believe that despite the perceived demand, there is little persuasive evidence that securities analysts and other investor groups will actually find such disclosures in audit reports useful or will rely on it for making or recommending investment decisions or that it will result in more informed and better investment decisions.

We do not believe it would be productive or appropriate for auditors to provide information in audit reports that is intended to help investors or other users to assess an audit. Auditing is a highly complex, professional discipline that requires years of education and training, experience, intimate knowledge of the issuer's business and seasoned professional judgment to enable appropriate audit scope (*i.e.*, the nature, timing and extent of auditing procedures) and related judgments (*e.g.*, those regarding risk assessment) as necessary to support an auditor's opinion. Moreover, as we have seen historically, there are numerous opportunities for legitimate disagreements on such judgmental matters between or among experienced and knowledgeable professionals (including, for example, regulators, expert witnesses and authors of non-authoritative professional guidance).

Accordingly, we believe that public disclosure of details of critical auditor judgments would not help users make investment or credit decisions or enhance transparency in any meaningful way or serve any other useful purpose but rather would negate or dilute the pass/fail message and, therefore, diminish the value of an audit report. Without the opportunity for two-way dialogue with auditors about such matters, (which is not practicable), such details would likely not contain enough information to help users to make meaningful assessments and useful judgments and quite probably would be misunderstood by many of them. We believe that financial statement users could never reasonably and meaningfully assess the effectiveness of such professional judgments, in relation to possible alternatives, without all the factual and technical knowledge that is available to the auditor.

Should the potential for misunderstanding be partially mitigated for institutional financial statement users by employing trained experienced audit advisors to assist in their analyses, we believe the inherent limitations on the extent of detailed information that could be communicated effectively in writing is likely to prevent the realization of any meaningful potential benefit, and the costs to such users would exceed the value thereof substantially.

Therefore, it is unreasonable to create expectations that any form of written report that is inherently limited, no matter how expanded it might be from the current model, would contain communications of sufficient factual and circumstantial details so as to help otherwise uninformed users, who do not have direct access to the auditors for two-way dialogue to make meaningful judgments as to such complex matters as risk assessments, audit scope and other auditor judgments.

Assessing audit quality is not the job of investors and other financial statement users; it is the job of the engagement quality reviewer, regulators such as the PCAOB (both its standard setters and inspectors) and licensing authorities (to a lesser extent). Additionally, and perhaps most significantly, audit committees upon whom investors should be able to place their reliance as to such matters. Although not the responsibility of the PCAOB, we see regulation of audit committees as the most relevant and, therefore, the best alternative way to assure that investor needs are served effectively.

**11.** ***What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?***

We see little, if any, opportunity for user benefit from this additional verbiage in audit reports. The obvious risk to auditors of providing regulators and others, (*e.g*., litigants and regulators such as the SEC or PCAOB inspectors) with additional opportunities for second-guessing critical auditor judgments is likely to lead to excessive self-protective, obtuse and unwieldy language in audit reports (see also our response to Question 28), as well as other unintended adverse consequences. These would include (1) increased audit fees, and (2) impairment of timely financial reporting due to delays in issuing audit reports (both resulting from cautious analysis to determine reportable critical audit matters) the documentation, communications, and additional layers of review, and of draft report language by audit firms and frequently by their attorneys.

In Appendix 5 of the Release (first paragraph, page A5-29), the Board suggests that the proposed requirement to report critical audit matters "could increase the auditor's focus on critical audit matters which could result in enhancing the quality of auditing." We firmly believe that other auditing and quality control standards already in place provide maximum assurance that such matters will be adequately addressed so that the achievement of any significant incremental assurance to be obtained from this proposal is highly unlikely. Accordingly, we see this statement as pure speculation, unsupportable, and potentially misleading to investors and other users.

Nevertheless, we do believe there is considerable probability that non-standardized reporting of critical audit matters under this proposal would serve to pressure auditors to report more rather than less. At first, variability among audit reports would likely reduce their comparability and their understandability, and the added language would tend to contradict an unqualified opinion, confusing users and diluting the value of the opinion. As time goes on (if this proposed requirement were adopted), we believe a tendency for the critical audit matters language in reports would evolve to look more similar, diluting their value (if there ever were any).

We also foresee that there may be pressure on auditors to skew their procedures based on how they would affect readers' perception of the description of the critical audit matter, rather than based on their own professional judgment as to what would minimize the risk of material misstatement.

**12.** ***Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?***

As noted in our responses to the foregoing Questions, we do not believe reporting critical audit matters would contribute in any meaningful way to achieving the objectives of providing relevant and useful information to investors and other financial statement users. However, in the event that the proposal for auditors to report critical audit matters is retained in a final standard (which we oppose), we believe the definition in paragraph A2 of Appendix A of the Proposed Auditor Reporting Standard (Appendix 1 of the Release), when considered in relation to the guidance contained in paragraphs 8 and 9 of the proposed standard (Exhibit 1 of the Release) is sufficiently clear for determining what would be reportable as a critical audit matter except for the implication of a one-directional limitation in the "Note" appended to such definition (*i.e.*, that it suggests that the definition contemplates that there could be more but not less than one reportable critical audit matter). According to the Note to paragraph 7 of Appendix 1 of the Release and the examples in paragraphs 12 and 13 of Appendix 1 of (and illustrated on pages A5-68, 73 and 77 of Appendix 5), the one-directional limitation appended to the definition is not the intent of the Board. Therefore, in the event that the proposal to report critical audit matters is retained in a final standard, the Note to paragraph A2 of Appendix A should be clarified.

**13. *Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?***

No, the additional time incurred regarding critical audit matters could not have an effect on the quality of the audit of the financial statements. We have seen no credible evidence or suggestion that audit quality would be affected, one way or the other, by adopting this proposed requirement. Conversely, as stated in our response to Question 11, we firmly believe the utility and the quality of the typical audit report would be substantially diminished if this requirement is adopted.

**14. *Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?***

Should the proposal for auditors to report critical audit matters be retained in a final standard (which we oppose), we would concur with the determination criteria set forth in paragraph 13 of Appendix 1.

**15. *Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?***

No. See our response to Question 10.

**16. *Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?***

Should the proposal for auditors to report critical audit matters be retained in a final standard (which we oppose), we would concur with the determination criteria set forth in paragraphs 8 and 9 of Appendix 1 of the Release except that we believe the expression "nature and amount of available and reliable evidence" in paragraph 9c should be revised to read "nature, quality (*i.e.*, relevance and reliability) and amount of available evidence."

**17. *Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?***

See our response to Question 14.

**18.** ***Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?***

The documentation requirement set forth in paragraph 14 of Appendix 1 of the Release clearly reflects the applicable portion of the general documentation standard (AS No. 3). Accordingly, should the proposal for auditors to report critical audit matters be retained in a final standard, we would be in favor of retaining paragraph 14 substantially as written, with one exception. That is, so as not to overburden auditors, we believe more guidance than that afforded by Appendix 5 of the Release (Part E2, pages A5-39 to 40) is necessary as to the nature and extent of documentation necessary for "non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters."

**19.** ***Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?***

As indicated in our response to Question 18, we believe more guidance as to the nature and extent of documentation necessary for "non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters" than that afforded by Appendix 5 of the Release (Part E2, pages A5-39 to 40) is necessary. Nevertheless, we find these documentation requirements unnecessary because we are opposed to the inclusion of critical matters in an audit report and, as indicated in our response to Question 11, we believe that other auditing and quality control standards already in place provide maximum assurance that critical matters is likely to be adequately addressed in the audit scope.

**20.** ***Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?***

See our response to Question 18.

**21.** ***What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?***

See our response to Question 11.

**22.** ***What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?***

We do not perceive any incremental costs for companies (other than audit costs, as discussed in our response to Question 11) or their audit committees that is likely to be incurred if this proposal were adopted. There could be costs associated with potential litigation.

**23.** ***How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?***

See our response to Question 11.

**24.** ***Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so under what circumstances?***

As indicated in our response to Question 10 and elsewhere, we are opposed to communicating critical audit matters in audit reports. However, should the proposal for auditors to report critical audit matters be retained in a final standard, we believe audit reports on comparative financial statements should be complete and should stand alone for all periods presented in all circumstances. Therefore, all critical audit matters included in the original audit report issued on prior period financial statements should be included when the statement is presented subsequently in comparative form. In the event prior period financial statements have been restated, we believe the subject matter of the restatement should be included in the discussion of critical audit matters for that period and should not be included in an emphasis paragraph as is the current practice.

**25.** ***Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?***

The examples presented in the Exhibit to Appendix 5 of the Release appear adequately responsive to the proposed requirements of Appendix 1 if adopted in a final standard. Nevertheless, we believe these brief examples serve to illustrate the inherent lack of utility of such limited discussions as to reinforce our views set forth in response to Question 10.

In addition, the first sentence of the illustrative introductory report language that would be mandated by paragraphs 12 and 13 of Appendix 1 (and also illustrated on pages A5-68, 73 and 77 of the Exhibit to Appendix 5) is unnecessary "boilerplate" and would only overburden the proposed standard report with excessive verbiage. Consequently, we believe this sentence should be removed from all examples presented in a final standard.

**26.** ***What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.***

As previously stated and in our response to Question 11, we are opposed to the communication of critical audit matters. But should the proposal for auditors to report critical audit matters be retained in a final standard, variability among audit reports is likely to reduce their comparability and their understandability at first, and the added language is likely to tend to appear contradictory to an unqualified opinion thus confusing users and diluting the value of the opinion. The reduction in comparability, in and of itself, might not inherently be dire except that users will likely be ill-equipped to make useful assessments of the significance (or lack thereof) of the differences. We see this challenge as equally applicable, more or less, without regard to the size or type of the reporting entity. In time, we believe a tendency for the critical audit matters language in reports would likely evolve to look more similar (especially for companies in similar industries or audited by the same firm) diluting their purported value.

**27. *What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?***

See our response to Question 11.

**28. *What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?***

The following paragraph expands our response in this regard to Question 11.

While we do not see the proposal as likely to lead to additional liability, *per se*, we do see the additional language in audit reports as likely to increase the number of incidents and the costs of litigation. This is because ultimately, audit quality will be attacked and defended largely on its performance merit rather than on the content of the report but for any material omissions or statements that are deemed to be knowingly false and/or misleading. In short, these disclosures are likely to inspire and provide new opportunities for assertions of omissions and inadequacies with respect to audit reports as well as affording additional avenues for plaintiffs to pursue in discovery that will add to an auditor’s defense costs.

**Questions Related to Section VI**

**29. *Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?***

Yes, it is appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard. It is helpful to bring the approximately ten requirements into one standard; especially for auditors who do not have significant experience in auditing issuers or investors who need a basic understanding of the purpose of such disclosures in auditor's reports.

**30.** ***Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?***

Emphasis disclosures could be valuable to users, but less so if the critical audit matters section is included in the audit report, because as noted in the Release, these types of issues would most likely qualify for inclusion in both sections. [Note: We are using critical audit matters as a default here irrespective of our comments in another section of this letter.] This duplication may not be all negative; however, because what we believe will occur is that the critical auditing matters will reference back (perhaps in a single reference) to the emphasis section without complete reiteration. The auditor should always have the ability to discuss matters that are deemed important. This standard retains that option.

**31.** ***Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?***

Certain matters should not necessarily be required to be emphasized in the auditor's report but rather left to the auditor's discretion. As to the ten matters that are now required to be included when they are evident, they should continued to be required as they are significant for the achievement of the basic objectives of reporting. Other matters to be included at the auditor's discretion should be evaluated on a client specific basis. This is a subtle but important difference, and these other issues could be included by the auditor after review and analysis as needed. The latter evaluation would include the client's presentation and disclosure of these matters (the auditor perhaps having a different perception).

Because the language in the Release is open-ended about including other matters at the auditor's discretion though an emphasis paragraph (or explanatory language in another report paragraph), we do not believe it is necessary to add any recommendations to the examples listed as matters that could be considered as well.

**32.** ***Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?***

No, see our discussion in Question 31.

**Questions Related to Section VII**

**33.** ***Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?***

See our comments with regard to inclusion of firm's registration, independence, audit tenure, and our responses on reporting on other information.

We are in agreement with changes to AS No.6 and No.7, (although we are opposed to the inclusion of critical audit matters) and the changes in AS No. 7 which presupposes this change.

We agree that it would be in the purview of the audit committee to discuss the draft auditor's report, but the auditor should be wary of changes that might dilute positions taken by the auditor.

We are not opposed to referring to the work of a specialist(s) in resolution of matters discussed in critical audit matters.

Our views on other proposed amendments would be consistent with our responses on the basic elements discussed in this comment letter.

**34.** ***What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.***

Implementation costs would likely include training and audit methodology changes on a firmwide basis; and preparation time, added review and supervision time, as well as additional time for those in corporate governance. Additional costs could also be incurred in related litigation defense.

Overall, the time and effort involved would be relatively insignificant when measured against total audit fees.

**Questions Related to Section VIII**

**35.** ***Are the proposed reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?***

We believe it is worthwhile to draw attention to the following facts as considerations (some of which have been mentioned in the pages of the Release that precede this question).

- Per the PCAOB's Office of Research and Analysis, there are no issuers among the brokers and dealers that filed annual audited financial statements with the SEC for fiscal periods ended during 2012. Approximately 9% of the 4,230 brokers and dealers that file are subsidiaries of issuers. The remainder are not owned by issuers.
- Regulators such as the SEC and Financial Regulatory Authority (FINRA) have ongoing programs to monitor and examine the books and records of registered broker-dealers.
- Broker-dealers file Financial and Operation Combined Uniform Single (FOCUS) reports at least quarterly; many file monthly if their minimum net capital is at a high level. The level of minimum net capital is a reflection of perceived operational risk. FOCUS reports include balance sheets, income statements and other operational measurements of financial condition. In addition, all brokers and dealers have been filing quarterly Statements of Supplemental Income that include more details about results of operations. It is not unusual for responsible personnel at broker-dealers to receive inquiries from

regulators about the reasons for fluctuations and unusual amounts that are disclosed in these reports.

- There is public disclosure of the regulatory records of most brokers and dealers and of most individual registered representatives that deal with the public.
- The most recent amendment to SEC Rule 17a-5 requires that broker-dealers that are carrying brokers must provide permission to the SEC to see auditors' workpapers.

As a practical matter, the great majority of brokers and dealers are not issuers and have no public investors. Therefore, members of the public, when using the annual audited financial statements, are not making investment decisions, but rather are using the annual audited financial statements in considering whether to conduct transactions using the broker-dealer, and in some fewer cases, for the broker-dealer to have custody of its funds or securities.

In addition, there is a high level of interaction between brokers and dealers and the regulators and public disclosure about businesses and individuals that deal with the public.

Upon considering the above, we believe that the additional costs involved do not justify the additional reporting requested of auditors in the Release. However we believe that if the PCAOB decides that these standards be applied to brokers and dealers, that they should only be applied to those brokers and dealers that have custody of customer funds or securities.

**36.** ***Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report critical audit matters appropriate for auditors of brokers and dealers? If not, why not.***

For the reasons explained in our response to Question 35, we believe that the additional costs involved do not justify the additional reporting requested of auditors in the Release. However we believe that if the PCAOB decides that these standards shall be applied to brokers and dealers, that they should only be applied to those brokers and dealers that have custody of customer funds or securities.

**37.** ***Since a broker or dealer may elect to file with the SEC a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?***

As we have discussed in our response to Question 35, we believe that the additional costs involved do not justify the additional reporting requested of auditors in the Release. However we believe that if the PCAOB decides that these standards shall be applied to brokers and dealers, that they should only be applied to those brokers and dealers that have custody of customer funds or securities. If the proposed reporting standard is adopted for broker-dealers, any additional reporting obligations of the auditor should be limited to the contents of the complete set of financial statements (as opposed to the separately bound balance sheet). As most users of the financial statements of brokers and dealers are primarily interested in the financial well-being of the broker or dealer, an audited statement of financial condition and notes are typically all that should be required to be made available to them.

**38.** ***Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?***

We have no response to this question at this time.

**39.** ***Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?***

We have no response to this question at this time.

**40.** ***Should audits of certain companies be exempted from being required to communicate critical audit matters in the auditor's report? Why or why not?***

As we previously stated, our position on this issue is that reporting of critical audit matters should not be required.

**Questions Related to Section IX**

**41.** ***Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?***

Although a concerted effort would be needed to make all changes that are proposed in the Release, we believe the effective date is appropriate, provided that the PCAOB's efforts and adoption (including the SEC's approval) will not be unduly delayed.

**42.** ***Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?***

If the Board decides to extend the proposed standards and amendments to brokers and dealers we believe a year delay from the effective date used for issuers be implemented because an acclimation period for auditors of these entities using PCAOB auditing standards, and basic changes in several filing forms is now underway (under recent regulation changes).

**<u>Appendix 6</u> – Additional Discussion Related to the Proposed Other Information Standard**

**Questions Related to Section I**

**1.** ***Is the scope of the proposed other information standard clear and appropriate? Why or why not? Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?***

The Board should, in consultation with the SEC, extend the reporting and procedure standard for other information to other Exchange Act forms such as Form 10. It should also extend these proposed requirements to Exchange Act filings where audited information is contained by reference, for example proxy filings under Regulation 14A.

**2.** ***Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?***

See response to Question 1 above.

**3.** ***Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?***

If the standard was applied to a filing for which an annual report was filed or incorporated by reference and was subsequently amended, but the amendment did not affect the financial statement information content, the auditor should nevertheless evaluate whether it should or should not have changed. If no changes were needed, the auditor should not reperform original procedures and update the audit report for the other information content.

**4.** ***Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are there practical issues with applying the proposed other information standard to the other entity's audited financial statements?***

For a number of practical reasons, the proposed "other information standard" should not be required for entities filing financial statements or condensed financial statements under Article 3 of Regulation S-X.

- Auditors of acquired companies may not be the same as auditor of the acquirer. The acquiree's auditors may not be registered with the PCAOB. We believe in this circumstance the acquiree's auditor would not be able to satisfy the proposed reporting obligations.
- The purpose of several subsections of Article 3 are designed to provide information that is specific to a specific risk or concern—for example the guarantor financial statements requirements help investors determine if a guarantor is able to meet the guarantee obligation. In this scenario, there would be little or no added value based on the reporting objective stated.

**Question Related to Section II**

**5. *Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?***

We are in favor of providing an objective within the proposed standard that would assist auditors in understanding what needs to be achieved through the performance of the proposed required procedures. However, we believe paragraph 2.b. should be revised as follows:

> b. When issuing an auditor's report, to communicate in the auditor's report the auditor's responsibilities for the other information and *when the other information includes* a material inconsistency, a material misstatement of fact, or *both, to describe these in the auditor's report*.

Further, we disagree with proposed requirement for auditors to make positive statements or conclusions about the absence of any inconsistencies, material misstatements of fact or both, as contained in paragraph 13(e) (see our response to Question 18 of Section VI of this Appendix).

**Questions Related to Section III**

**6. *Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?***

We are concerned that the use of the term "evaluate" could imply a more in-depth level of analysis than should be required to enable a determination of whether other information contains a material inconsistency with amounts or information or the manner of their presentation or a material misstatement of fact exists. We believe that auditors' responsibility should be limited to reading the other information in the context of their understanding of the entity, its environment, activities and financial performance and condition, as acquired during the audit, and to consider whether there may be a material inconsistency, misstatement of fact, or both.

**7. *Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?***

Notwithstanding our response to Question 6 above, we believe it is likely that that the overall quality of information available to investors and other financial statement users might improve—including an understanding and appreciation for the limitations on the auditor's procedures and responsibilities. It is important for investors and other users to understand that while overall quality of the other information may improve; little or no assurance is provided on the other information because of the limited procedures performed and responsibility taken.

**8.** ***Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information? Would applying this definition represent a change to the materiality considerations auditors currently use under AU Sec. 550?***

We agree that the appropriate standard for the auditor's responsibility to "evaluate" other information would be that afforded by the federal securities laws' definition of materiality and that this is consistent with current practice under AU Sec. 550 and Staff Accounting Bulletin 99.

**9.** ***Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?***

We agree that the procedures set forth in paragraph 4 of the proposed standard, *i.e*., to compare the amounts and qualitative statements in the other information to the financial statements and verify the mathematical accuracy of calculated amounts, are appropriate and consistent with the procedures many practitioners already perform. However, as stated in our response to Question 6 of Section III of this Appendix, we do not believe the use of the term "evaluate" is appropriate and suggest revising the requirement in paragraph 4 to delete that term and state instead that the "auditor should read the other information and perform the following procedures."

Additionally, we believe that paragraph 3 of the proposed standard, which sets out what would be the auditor's overall responsibilities, should be revised to delete the term "evaluate" so that the paragraph would state that "the auditor should read the other information and perform certain procedures to determine whether there appears to be a material inconsistency or misstatement of fact, or both."

We recommend that all references to "evaluate" be replaced with "to read" or "consider", in the standard due to all the possible interpretations of "evaluate."

**10.** ***Is it understood which amounts are in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?***

We believe that the guidance in paragraph 4.d. along with the related Note provides an appropriate explanation about which amounts in the other information the auditor would be required to recalculate.

**11.** ***Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?***

We believe the additional costs described in Appendix 6, including costs relating to (1) those incurred by some firms that might not currently be performing similar procedures as set out in paragraph 4, (2) strengthening the auditor's responsibilities from being "aware" to the performance of specific procedures relating to determining whether a material inconsistency or misstatement of fact appears to exist, and (3) one-time implementation costs that might be incurred by a few firms would, nevertheless, not likely be significant.

**12.** ***Are the proposed auditor responses under paragraph 5 appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If not why not?***

The proposed auditor responses described in paragraph 5, which consist of inquiry of management and the performance of additional procedures, are appropriate. However, we suggest recognizing that the nature and extent of the additional procedures should be sufficient to resolve the apparent discrepancy as determined based on the auditor's professional judgment.

**13.** ***Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?***

We believe the incurrence of such costs invariably would be warranted in the circumstances. See our response to Question 11 of Section III of this Appendix.

**Questions Related to Section IV**

**14.** ***Are the proposed auditor's responses under paragraphs 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?***

We believe that the proposed auditor's responses are appropriate and consistent with current practice in circumstances in which the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, misstatement of fact, or both.

**15.** ***Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? Under what circumstances would such a report be appropriate or not appropriate?***

In certain circumstances, it may be appropriate for an auditor to issue an audit report that states the auditor identified a material inconsistency or a material misstatement of fact, or both, in the other information. However, we suggest providing additional guidance that explains that in determining the appropriate action, consideration should be given to the extent to which a material misstatement of fact in the other information could reasonably be expected to influence the economic decisions of the users for whom the auditor's report is prepared and the auditor's understanding of the rationale given by management and the audit committee for not making the correction.

**16.** ***Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of***

***the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?***

The proposed auditor's responses for those circumstances when the auditor determines that the other information that was not available prior to the issuance of the auditor's report contains a material inconsistency, misstatement of fact, or both, are appropriate.

We believe that in this circumstance consultation with counsel is a recommendation that should be added to paragraph 11 of the proposed statement.

**Question Related to Section V**

**17. *Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed information standard the auditor determines there is a potential misstatement in the financial statements? Why or why not?***

We agree with the auditor's responses set out in the proposed standard that would require reference to Auditing Standard (AS) No. 14, *Evaluating Audit Results* and AU 508 *Departures from Unqualified Opinions and Other Reporting Circumstances*, when the auditor discovers that there is a potential misstatement in the financial statements. However, we also believe that the standard should refer to AS No. 12, *Identifying and Assessing Risks of Material Misstatement,* since there may be implications related to the auditor's understanding of the entity and its environment, indicating a need to revise the auditor's initial risk assessment and audit scope.

**Questions Related to Section VI**

**18. *Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?***

We are in favor of expanding the standard audit report to include language in the discussion of auditor's responsibilities that would better inform investors and other users regarding auditor's limited responsibility for other information. However, we do not support requiring the auditor to make any positive statement or conclusion about the absence of any material inconsistencies or material misstatements of fact in the other information because we believe that such a statement is likely to mislead users to incorrectly believe that such information had been subjected to sufficient procedures to form a conclusion. We believe providing such a statement would have the undesired effect of widening the expectations gap.

**19. *Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.***

We do not believe that the auditor should identify in the auditor's report other information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against since such a statement would imply erroneously that the auditor had an obligation to examine supporting evidence for such other information beyond what would be necessary to express an opinion on the financial statements.

**20.** ***What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?***

While we do not believe that there would be significant direct additional costs incurred related to reporting under this proposed standard, we believe that additional indirect costs (such as defense costs in disputes or litigation) might be incurred because investors misunderstand the scope and nature of the work performed by the auditor on the other information and adversely affect investment decisions.

**21.** ***Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?***

See our responses to Questions 9 of Section III and 18 of Section VI of this Appendix.

**22.** ***Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?***

We are not aware of any practical considerations except for considering whether the detected inconsistency or misstatement, even though corrected, is indicative of a weakness in the issuer's internal controls over financial reporting or other disclosure controls that might also require revisions to management's statements made about such controls.

**Question Related to Section VII**

**23.** ***Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?***

The requirements in the proposed other information standard with respect to a predecessor auditor are similar to extant guidance, and we believe the proposed responsibilities are appropriate and sufficiently clear.

**Questions Related to Section VIII**

**24.** ***What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?***

We believe that if a contentious matter were to arise subsequent to report issuance which was not discussed in critical audit matters that the matter might be the subject of litigation, especially if there were other serious matters such as significant misstatements that were not identified, it is less likely that an issue that was not identified in other information or was misstated would become part of  a securities litigation, unless it was listed as a matter that was included in a compendium of issues.

**25.** ***Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?***

We have no response to this question at this time.

**Questions Related to Section IX**

**26.** ***Are the proposed amendments to PCAOB standards, as related to the proposed other information standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed other information standard that the Board should consider?***

The proposed amendments appear appropriate.

**27.** ***In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?***

We believe that requiring the auditor to include a statement in the auditor’s report that the auditor was not engaged to examine management’s assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management’s report is appropriate. Such reporting would improve consistency between auditor reports and provide clarity to users with respect to the auditor’s responsibility.

**Question Related to Section X**

**28.** ***Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?***

Other information is not relevant to brokers and dealers that are not issuers.

**Questions Related to Section XI**

**29.** ***Is the Board's effective date appropriate for the proposed other information standard? Why or why not?***

We believe that the effective date for the proposed information standard, audits of financial statements for fiscal years beginning on or after December 15, 2015, is appropriate.

**30.** ***Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?***

We support delayed compliance dates for any proposed standard on other information to provide auditors of smaller companies with sufficient time to incorporate the guidance into their methodologies and educate their clients about the proposed standard and its impact on the nature and timing of procedures relating to other information.

**Questions Related to Section XII**

**31.** ***Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?***

Auditors have historically made a conscious attempt to have clients avoid cross-referencing content from "other information" (such as MD&A) directly into financial statements being filed. This was meant to avoid the implied direct responsibility which would attach to the integrated content. The risk increases under Securities Act filings as audited financial statements are "expertized" and the attendant liability concerns under Section 11 of this law.

One of the issues we discussed was that the report language dealing with required "supplemental" information and other language dealing with "other" information is much different in form and content. It is important that these terms be easily identified by making sure that each schedule or other supplementary information be listed, and that the same thing be done for other information.

The main issue we see is MD&A usually contains much forward looking information and does not lend itself to consistency with the underlying client financial statements on many levels. For instance, information may be based on cash flow management or budgeting analysis. Making a statement about not being inconsistent or that an omission of a material magnitude has occurred is problematical especially in a Securities Act filing.

**32.** ***Are there some elements of the proposed other information standard that the Board should consider requiring the auditor to perform related to other information contained in filings under the Securities Act, such as the auditor's responsibility to evaluate the other information? If so, which elements of the proposed other information standard should the Board consider including in the procedures currently required for Securities Act documents under AU sec. 711? If not, why not?***

See our comment in Question 31, which suggests deletion of coverage for MD&A. We do not propose to add any other content.

**33.** ***What costs or other challenges should the Board consider when assessing whether to propose extending some elements of the proposed other information standard to other information contained in documents filed under the Securities Act?***

We believe there will be time costs but we do not have estimates at this time.

**<u>Appendix7</u> – Emerging Growth Companies**

**Questions**

**1.** ***Should the proposed standards and amendments be applicable for audits of EGCs? Why or why not?***

To the extent the proposed standards and amendments are retained in a final standard (which we oppose in many respects as noted above), we believe they should be applicable for audits of EGCs as a matter of consistency. As any standards, auditing standards should be consistently applied and comparable, in this case, for all audits. Although we do not believe the intended goals of the proposed standards and amendments will be achieved; excluding certain entities (other than non-issuers) from such requirements would be inconsistent and illogical.

**2.** ***Are there any other considerations related to competition, efficiency, and capital formation that the Board should take into account with respect to applying the proposed standards and amendments to audits of EGCs?***

We do not believe special consideration should be given to EGCs related to competition, efficiency, and capital formation. As we have stated in Question 1 of this Appendix, despite our opposition to the proposed standards and amendments, application of auditing standards and amendments should be consistent and comparable for audits of all issuer entities.

**3.** ***Are there any special characteristics of EGCs that the Board should consider related to the proposed auditor reporting standard, including the communication of critical audit matters?***

We do not believe special characteristics of EGCs should be considered in the applicability of such standards. As we have stated in our responses to various questions in Appendix 7 of the Release, despite our opposition to the proposed standards and amendments, application of auditing standards and amendments should be consistent and comparable for audits of all entities.

**4.** ***Would audits of EGCs be more, less, or equally likely to have critical audit matters?***

Based on the characteristics of EGCs, they are equally or more likely to have critical audit matters than non-EGCs. For example, as noted in Appendix 7 of the Release, data suggests that

"EGCs are 10 times more likely than the population of companies in the Russell 3000 Index to have a management report on internal control over financial reporting stating that the company's internal control over financial reporting was not effective."

**5.** ***Are there any special characteristics of EGCs that the Board should consider related to the proposed other information standard and amendments?***

No.

**6.** ***What costs would audit firms incur when implementing the proposed auditor reporting standard, including the communication of critical audit matters, for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?***

Related costs to prepare the necessary communications will vary and such costs could be significant. Audit firms would incur initial costs in developing new audit methodologies to address the requirements of the proposed auditor reporting standard. Costs would also be incurred to train staff regarding the new methodologies and in changing the presentation of the auditor's report. With respect to communication of critical audit matters, implementation costs for audits of EGCs would not likely vary from that of larger and more established companies.

**7.** ***What costs would audit firms incur when implementing the proposed other information standard for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?***

Should the proposed standards and amendments be retained in a final standard (which we oppose), audit firms would incur additional and unnecessary costs in developing and maintaining separate audit methodologies for EGCs as opposed to other SEC registrants. In terms of costs specifically relating to implementing the proposed other information standards for audits of EGCs, it would be minimized as a result of the provisions in the Jumpstart Our Business Startups Act (the "JOBS Act") which allow for reduced disclosure requirements in IPO registration statements and the gradual phase-in of certain post-IPO disclosures and other requirements.

***8. Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed auditor reporting standard and amendments to EGCs?***

See our response to Question 6

**9.** ***Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed other information standard and amendments to EGCs?***

See our response to Question 7

**10.** ***For auditors of both EGCs and other SEC registrants, would it be more costly not to apply the proposed standards and amendments to audits of EGCs because the firms would need to develop and maintain two audit methodologies?***

We believe the proposed standards should be applicable for audits of EGCs as a matter of consistency. As consistency is always the most efficient approach, it would be more costly to have to maintain different audit methodologies for EGCs and other SEC registrants. Costs of maintaining different audit methodologies could be significant.

**December 10, 2013**

Public Company Accounting Oversight Board,
Office of the Secretary,
1666 K Street, NW,
Washington, DC 20006-2803

**RE: PCAOB Rulemaking Docket Matter No. 34**

Dear Members of the Board,

NextEra Energy, Inc. ("NextEra Energy") respectfully submits its comments on the Public Company Accounting Oversight Board's ("PCAOB" or "the Board") proposed audit standards included in Release No. 2013-005 addressing both *The Auditor's Report on an Audit of the Financial Statements when the Auditor Expresses an Unqualified Opinion* (the "proposed auditor reporting standard") and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "proposed other information standard").

NextEra Energy is a public company with 2012 revenues of more than $14 billion. Its rate-regulated subsidiary, Florida Power & Light Company, serves approximately 4.6 million customer accounts in Florida. Additionally, NextEra Energy Resources, LLC, NextEra Energy's competitive energy business, is a leader in producing electricity from clean and renewable fuels in 24 states in the U.S. and 4 provinces in Canada.

At NextEra Energy we are committed to integrity and accountability in all aspects of our business. Providing accurate and complete information, and having the proper internal controls in place to ensure appropriate oversight, is a responsibility that we have always taken seriously. We believe that our shareholders, as well as investors and potential investors of every other publicly held company, are entitled to no less.

NextEra Energy is pleased to submit its views in response to the PCAOB's request for comments in connection with the above referenced proposals.

While we appreciate the PCAOB's efforts to enhance the auditor's reporting model and increase the relevance of financial statements for investors, the capital markets and the public, we do not support the Board's proposals as currently drafted. We believe the proposals have the potential to alter the roles and responsibilities of management, the audit committee, and the auditor, undermine the usefulness of the auditor's report and create investor misunderstanding. Furthermore, we believe that the proposals would be time consuming and costly to implement without providing any incremental benefit to financial statement users. Our rationale is presented below.

**Proposed auditor reporting standard**

The proposed standard requires the disclosure of critical audit matters ("CAMs") in the auditor's report. CAMs are defined as matters involving the most difficult, subjective or complex auditor judgments, including areas that posed the most difficulty to the auditor in obtaining audit evidence and/or forming an opinion on the financial statements. This area is of particular interest and concern to us and we have therefore limited our response on the proposed auditor reporting standard to this matter.

**The proposal would alter the roles of management, audit committee and the auditor**

We are concerned that this proposal would blur the roles and responsibilities of management, the audit committee, and the auditor. Management is responsible for preparing and filing all financial reports including determining the appropriate accounting for an entity's transactions, making the required judgments needed to calculate estimates, and providing meaningful disclosures in compliance with U.S. GAAP and SEC rules. The financial reporting process is overseen by the audit committee. However, the proposed standard significantly alters this paradigm by potentially requiring the auditor to disclose information, not otherwise required to be disclosed by management and notwithstanding the views of the audit committee, directly to financial statement users through the auditor's report. Auditors should not be the original source of disclosure about an entity. The role of the auditor should remain that of attesting to the fairness, in all material respects, of the financial statements presented by management. Management has the knowledge and business context for information most relevant to the financial statement users and they should retain the responsibility for communicating this information to the public through the financial statements and other investor communications.

**The proposal would undermine the usefulness of the auditor's report**

We have concerns that the inclusion of CAMs would undermine the confidence in and the usefulness of the auditor's report. Currently, the auditor's report expresses an opinion on the financial statements taken as a whole. However, the inclusion of CAMs may be interpreted by some financial statement users as the auditor expressing a different level of assurance on certain areas of the financial statements or as the auditor providing an implicit qualification of the financial statements. Furthermore, by focusing the attention of users on aspects of the company's financial statements that the auditor found to be challenging, there is the potential for investors to over-emphasize certain risks as a result of them being disclosed as a CAM and under-emphasize other important risks that may not meet the CAM criteria. A business that, by its nature, requires more judgment and/or the use of more estimates in its accounting may be inappropriately viewed by investors as more risky due to a higher number of CAMs in the auditor's report. Accordingly, this proposal could potentially mislead investors by inadvertently leading them to draw incorrect conclusions about the risk associated with an entity.

Another concern is that the auditor's determination of what is considered to be a CAM would involve a considerable amount of professional judgment which could have unintended consequences. We believe there is the potential for auditors to include more CAMs, rather than less, in order to avoid having their judgment on what is considered to represent a CAM challenged during a PCAOB inspection. This would result in voluminous disclosure within the auditor's report, potentially obscuring the overall opinion. We believe that the auditor's opinion will continue to be of primary importance to financial statement users and care should be taken to not let that opinion get "lost" among pages of information about which audit areas required the most time and judgment. Moreover, different audit firms would clearly have different judgments on what is considered to represent a CAM resulting in lack of comparability between auditor's reports for similar companies or industries.

**Potential for duplicate disclosure**

We are concerned that many matters that could be potentially disclosed as CAMs are already disclosed by management in the financial statement footnotes as required by U.S. GAAP and SEC rules (e.g., significant accounting and reporting policies). We therefore believe that an auditor's discussion of CAMs in the auditor's report would result in duplicative or irrelevant disclosure serving only to decrease the relevance of either the auditor's report or disclosures within the financial statements. This requirement would appear to contradict the Board's overall objective of making the auditor's report more informative for investors and other financial statement users.

**Potential implementation challenges and cost considerations**

Finally, the Board needs to consider the cost and additional time requirements for both auditors and companies in order to implement the proposed standard. A significant amount of additional time would be required by audit firms to develop, review and present CAMs resulting in increased audit fees. Extensive discussion and consultation with company management, legal and the audit committee would also be required, resulting in increased internal costs.

Furthermore, as CAMs may not be identified until late in the audit process, this additional work would be required during an already busy period within the audit and financial reporting cycle, which could potentially impact the ability of entities to file annual reports ahead of the SEC deadlines and, consequently, the ability of investors to obtain financial information in a timely manner.

In summary, the PCAOB has stated that the objective of the proposed auditor's reporting standard is to make the auditor's report more informative, thus increasing its relevance and usefulness to investors and other financial statement users. We do not believe that the auditor's reporting of CAMs, as defined and required under the proposed standard, would meet this objective. Instead, we believe the proposed standard would fundamentally change the content of the auditor's report, alter the roles and responsibilities of management, the audit committee, and the auditor and may cause investors to draw incorrect conclusions about the risk associated with an entity. The proposal would also be time consuming and costly to implement while providing little incremental benefit to financial statement users.

We suggest that, if current financial reporting is not meeting the needs of financial statement users and additional disclosures are considered necessary, this matter should more appropriately be considered by the SEC and FASB as part of the financial reporting standard setting process.

**The proposed other information standard**

We agree that financial statement users would benefit from clearer articulation in the auditor's report about the auditor's current responsibility for other information included in the annual reports filed with the SEC. However, we have concerns that including the results of the auditor's evaluation of other information in the auditor's report could be perceived by some financial statement users as the auditor providing an *opinion* on this information. Furthermore, many of the disclosures outside of the primary financial statements contain subjective or forward-looking information which may not be objectively verifiable as many of these disclosures are based on management's analysis and insights. This would make it extremely difficult for the auditor to evaluate this information effectively.

We also believe that the requirements of the proposed standard would result in significant additional audit effort and cost. Currently, AU Section 550, *Other Information in Documents Containing Audited Financial Statements* ("AU Sec. 550") requires only that the auditor "read and *consider*" other information for inconsistencies with the financial statements. Under the proposed standard the auditor would be required to "read and *evaluate*". We believe the proposed requirement would prompt auditors to expand their audit procedures in this area, resulting in increased audit fees with no discernable benefit to financial statement users.

We therefore recommend that the Board retain its existing requirement to "read and consider" under AU Sec. 550 and ensure that the language in the auditor's report clearly articulates the auditor's responsibilities for other information contained within the annual report.

**Conclusion**

NextEra Energy, Inc. appreciates this opportunity to respond to the Board's proposals. As discussed above, we do not support the inclusion of CAMs in the auditor's report or expanded procedures on other information contained within the annual report. We urge the Board to reconsider these proposals.

We would be happy to respond to any questions or to participate in any discussions relating to these important issues.

Sincerely,

Chris N. Froggatt

**Re: PCAOB Rulemaking Docket Matter No. 34**

NIKE, Inc. ("NIKE") appreciates the invitation to comment on the Proposed Auditing Standards regarding The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report, and Related Amendments to PCAOB Standards (collectively, the "Proposed Standards") issued on August 13, 2013, by the Public Company Accounting Oversight Board ("PCAOB").

NIKE's principal business activity is the design, development, worldwide marketing and selling of high quality footwear, apparel, equipment, accessories and services. We are the largest seller of athletic footwear and athletic apparel in the world, employing over 48,000 people worldwide. Revenues for our fiscal year 2013 ended May 31, 2013, were over $25 billion. We sell our products to retail accounts, through NIKE-owned retail stores and internet websites, and through a mix of independent distributors and licensees, in virtually all countries around the world. NIKE prepares consolidated financial statements in accordance with accounting principles generally accepted in the United States ("U.S. GAAP") and files financial statements with the Securities and Exchange Commission ("SEC"). Our securities are listed and traded on the New York Stock Exchange.

We appreciate the PCAOB's continued efforts to improve audit quality and provide better reporting for investors and other users of the financial statements since the enactment of the Sarbanes-Oxley Act in 2002 ("the Act"). In particular, we believe making the independent audit committee directly responsible for appointing, compensating and overseeing our auditors has improved audit quality. Due to their experience and knowledge of NIKE and our business, our Audit Committee is in the best position to assess the quality of the audit we receive, the risks associated with the financial statements and the independence of our auditor. The ongoing relationship between our Audit Committee and our auditors allows for a frank evaluation of the quality of our financial statements and our system of internal controls, as well as the overall audit process, allowing the Audit Committee to act in the best interest of our shareholders. In short, we believe the current system has worked well and is effective.

We do not object to certain components of the Proposed Standards, such as including the auditor's statement of independence in the audit report. However, we do not agree with other proposed changes, such as the auditor's discussion of Critical Audit Matters ("CAMs"), the disclosure of the auditor's tenure in the audit report, and the auditor's evaluation of other information in annual reports containing the audited financial statements. In our view, these proposed changes would not provide material benefits to investors and in some cases would create confusion and increase costs. Our support for these conclusions is included below.

*Critical Audit Matters*

The Proposed Standards would require the auditor's report to include discussion of CAMs. CAMs are described as those areas that involve the most difficult, subjective or complex auditor judgments, posed the most difficulty in obtaining sufficient appropriate audit evidence, or posed the most difficulty to the auditor in forming an opinion on the financial statements. The Proposed Standards cite possible sources of CAMs as: i) items included in the auditor's engagement completion document, ii) items reviewed by the engagement quality reviewer ("EQR"), iii) items included in audit committee communications, or any combination of the three.

Our concerns regarding the proposed discussion of CAMs can be summarized as follows:

- The benefits to investors of these specific disclosures are unclear.
- Significant accounting matters already require disclosure in the financial statements, and in many cases management is required to disclose highly subjective accounting estimates or assumptions. Therefore, these new disclosures do not provide significant new information or insight for investors.
- Discussion of accounting and internal control matters that did not require disclosure under U.S. GAAP or affect the auditor's opinion may create investor confusion, undermine existing accounting and disclosure requirements and weaken investor confidence in the auditor's opinion on the financial statements and the effectiveness of internal controls.
- Determination of what matters are "critical" and should therefore be included in the auditor's report involves a high degree of subjectivity. As a result of this uncertainty, this proposal could result in significant additional disclosures, increasing investor confusion and requiring substantial additional work by the auditors and Company employees, increasing costs and time constraints. This proposal could also inhibit candid, open communications between the auditor, management and the audit committee as the parties consider in advance which matters might ultimately end up in the auditor's report.

The Proposed Standards cite certain academic studies that conclude that increased information provided to investors results in better capital allocation and a lower cost of capital. However, these studies do not link the proposed discussion of CAMs to the type of information that would result in such improvements. We do not believe the proposed disclosures would materially benefit investors.

Significant accounting matters already require disclosure in the financial statements. Furthermore, there are numerous examples in current U.S. GAAP where management is required to disclose highly subjective accounting estimates or assumptions. For example, the valuation of Level 3 investments requires a robust discussion of how fair value is determined, including the assumptions and subjective estimates. If an accounting matter includes one of these attributes for the reporting company, it is presumed to include the same challenges for auditors. A reiteration of the assumptions or subjectivity provides no additional insight to the investor beyond what is already required to be included in the financial statements.

The discussion of CAMs could also serve to undermine investor confidence in the auditor's opinion that the financial statements are free from material misstatement, as well as the auditor's opinion on the effectiveness of internal controls over financial reporting. The retained pass/fail form of the audit opinion should provide assurance to the reader of the financial statements that the financial statements are in accordance with U.S. GAAP and materially correct. A separate discussion from the auditor on accounting matters or potential control deficiencies that ultimately had no impact on the financial statement disclosures or the auditor's opinion, even if there are caveats that the discussion does not contradict the audit opinion, may undermine investor confidence in the financial statements by suggesting the disclosures are incomplete or inaccurate, or that internal controls are inadequate.

The discussion of CAMs could in some cases be inconsistent with existing accounting pronouncements, creating investor confusion. For example, current accounting rules require disclosure of material pending or threatened litigation, a judgment that often involves subjective evaluation. Such litigation matters, immaterial individually and in the aggregate, but involving substantial judgment or difficult estimates, might be considered by the auditor to be a CAM. In that event, the proposed auditor disclosure would introduce items not disclosed by management in its financial statements, creating investor confusion and potentially compromising the company's position on those matters. This would directly undermine the rationale behind the SEC's materiality threshold in financial statement disclosure.

More generally, we do not believe that it is appropriate for the audit report to be a source of new information about the reporting company's business provided by an outside party. Consistent with much of the commentary on the previously proposed Auditor Discussion and Analysis, we believe all information about our business should be provided by company management.

A similar issue could arise in the context of the auditor's opinion on the effectiveness of internal controls. The evaluation of control deficiencies can be complex and the final classification of a control weakness as a significant deficiency or material weakness requires discussion with the audit committee. The current description of CAMs in the proposed rule could result in including discussion of such a control deficiency in the auditor's report. Given that significant deficiencies are not required to be publicly disclosed, this would contradict the current reporting guidance.

As noted above, the Proposed Standards specify three possible sources of CAMs. While the Proposed Standards do not require all items included in these categories to be considered "critical," the list of topics included in this population can be extensive, driven by several factors. First, the increase in the quality of audit documentation has resulted in more exhaustive documentation of issues at varying levels of materiality, which has increased the number of items discussed with the EQR. Second, an open and productive relationship between the auditor and the audit committee has allowed for more frank discussion about a broader range of issues. This gives the audit committee valuable insights into the audit process and into the auditor's views on accounting principles, internal controls and quality of management, but also increases the number of issues discussed.

Because the determination of what items in this population are considered "critical" requires a high degree of subjectivity, there are several, possible unanticipated consequences of this requirement. First, because there is likely to be significant scrutiny of CAMs included in the audit opinion by both the public and the PCAOB, auditors may include unnecessary information in the auditor's report which would give undue prominence to such information and increase cost with no benefit. Another possible consequence is that the requirement for auditors to consider items discussed with the audit committee as possible CAMs could lead them to "edit" their communications with the audit committee, compromising the effective oversight function of the audit committee.

We are also concerned about the additional costs that would likely result from the proposed discussion of CAMs. At minimum, the auditors would need to document their judgments regarding which issues were considered CAMs and which were not. In addition, because statements made by the auditor regarding a position on individual elements of the financial statements would be perceived to increase risk, we believe auditors will increase audit procedures in these areas, increasing audit fees and costs for company personnel. This type of documentation would add little value to investors.

Furthermore, it is reasonable to assume that the majority of the auditor's work regarding the CAM report will come at the end of an audit, putting significant strains on already tight reporting deadlines for most public companies.

*Auditor Independence and Tenure*

The Proposed Standards would require that the auditor include in the audit opinion a statement of independence and a disclosure of the length of time their firm has audited the Company.

With respect to the proposed requirement that the auditor include a statement of independence in the auditor's report, we do not object to providing such a statement to the reader of the financial statements. Although the independence requirements for auditors are publicly available, a reiteration of the fact that the auditor must maintain a required level of independence may serve as a good reminder to the reader of those requirements.

However, we believe inclusion of the auditor's tenure seems unnecessary and may suggest to investors that the auditor is not independent based on the length of tenure. In response to the PCAOB's previous concept release regarding mandatory auditor rotation, most respondents expressed the view that mandatory auditor rotation would not reduce audit risk by improving auditor independence but on the contrary, would increase audit risk, and consequently, investor risk, due to a new auditor's unfamiliarity with the company. We agree with that position. Current auditor independence rules are robust and include mandatory partner rotation, limitation of non-audit services, regulatory review of a firm's audits and of a firm's independence procedures, and other effective rules that ensure that auditors remain independent.

*Auditor's Requirements Related to Other Information*

Lastly, the Proposed Standards include a requirement that the auditor include a discussion of the auditor's responsibilities for, and the results of the auditor's evaluation of other information included in annual filings that include the auditor financial statements. The auditor would not opine on the accuracy of the other information, but would only state that there are no material inconsistencies between the other information and the audited financial statements based on the audit of those statements. If material inconsistencies exist, and have not been corrected in the other information, a description of such inconsistencies would be included in the auditor's report.

Currently, the auditor is only required to "read and consider" the other information. It is our experience that with the current requirement, the auditor is already reviewing the other information for inconsistencies, which would be corrected prior to the issuance of the financial statements through discussions between the auditor and management and as a result of the auditor's (already) mandated communications to the Audit Committee. Therefore, we believe such inconsistencies would be rare. However, there are inherent difficulties associated with a reporting requirement that should be considered before such a change in the auditor's report is enacted.

The other information included in an annual report covers both financial and non-financial matters, as well as forward looking information. The PCAOB is not proposing that the auditor actually audit non-financial or forward looking information. Yet the statement that no material inconsistencies exist between the audited financial statements and the other information may cause confusion for readers of the annual report as to what other information is covered by such a statement and what procedures were applied by the auditor. In fact, no standards currently exist to guide auditors in making such a determination. As a result, the most likely outcome is that the auditor would significantly increase its procedures, increasing costs for the auditor and the Company as well as increasing the difficulty of meeting current filing deadlines.

*Summary*

We do not believe the Proposed Standards would improve the quality of our financial statements or deliver significant value for investors, but would result in increased cost and potential investor confusion.

Thank you for your consideration of the points outlined in this letter and we look forward to monitoring the project developments in the future. If you have questions or would like to discuss our responses further, please contact me at (503) 671-6453.

Sincerely,

Bernard F. Pliska

**Re: PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 034**
I am Bruce Nordstrom, President and Certified Public Accountant with Nordstrom & Associates, P.C. and Chairman of the Audit Committee for Pinnacle West Capital Corporation ("Pinnacle West"). Pinnacle West is the NYSE-listed parent company of Arizona Public Service Company, the largest electric utility company in Arizona, serving more than a million customers. It is in my capacity as Audit Committee Chair for Pinnacle West that I respectfully submit comments on the PCAOB's Release No 2013-05; Proposed auditing standards on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* and *Related Amendments to PCAOB standards.*

I commend the PCAOB's efforts to improve information provided to investors and financial statement users. However, I do not support the PCAOB's proposals included in PCAOB Release No. 2013-005. I most strongly disagree with the proposals to include critical audit matters (CAMs) within the audit report and to expand the auditor's responsibilities regarding other information presented with audited financial statements. The proposed changes would unnecessarily alter the auditor's responsibilities from an attest function to a financial communication role, infringe upon the audit committee's oversight, and result in additional costs without commensurate benefits. Following is a detailed discussion of these specific concerns.

## Critical Audit Matters

The proposed guidance requires auditors to include a discussion in the audit report of CAMs that the auditor deems to have involved the most difficult, subjective or complex auditor judgments, posed the most difficulty to the auditor in obtaining sufficient audit evidence, and posed the most difficulty to the auditor in forming an opinion on the financial statements. The auditor will be responsible for identifying and disclosing information on these topics.

Financial statements and the communication of financial information is management's responsibility; with oversight provided by the audit committee. The auditor's role is to attest and opine on the financial information presented by management. The requirement for auditors to prepare and disclose CAMs within the audit report will distort these fundamental roles, resulting in auditors becoming a source of financial information.

This information may also be redundant, as existing SEC and US GAAP standards task management with disclosing many of the matters that would be CAMs; including: accounting estimates and policies, critical management judgments, risks and uncertainties. Topics that would be included in CAMs, if relevant to investors in making investment decisions, should already be disclosed by management as required by existing standards.

The audit committee is comprised of members of the shareholder-elected Board of Directors, and provides oversight of accounting policies, internal controls, financial reporting, and the audit process. This oversight role helps identify key audit matters and the communication of such matters to investors through management's financial disclosures. The inclusion of CAMs in the auditor report will usurp the audit committee's oversight role; as auditors will essentially have direct communications with investors. Ultimately, these disclosures will impede the audit committee's duties and diminish the oversight provided by the audit committee.

My primary concerns with the inclusion of CAMs in the audit report are the distortion of the auditor's function from an attestation role to a reporting role, and the undermining of the audit committee's oversight. Management should have the sole responsibility for reporting financial information, with oversight provided by the audit committee. Other issues with this proposed guidance include the subjective nature of determining CAMs, the risk of CAMs overshadowing the audit opinion, and the additional audit costs that will be incurred.

**The Other Information Standard**

I support adding language to the auditor's report to *clarify* the auditors' responsibilities and procedures regarding other information presented with the audited financial statements; however, I do not agree with expanding the auditor's responsibilities regarding other information. The existing standards require auditors to "read and consider" other information presented with audited financial statements to ensure the information is consistent with the audited financial statements. These existing procedures have proven to provide sufficient and reliable audit evidence for investors. The proposed guidance will require auditors to "read and evaluate" other information. The term "evaluate" is distinctly different from "consider" and will result in expanded audit procedures. Expanding auditor's responsibilities relating to other information will result in additional costs with no commensurate benefit to investors.

**Conclusion**

I appreciate the opportunity to comment on the PCAOB's proposals. I strongly urge the Board to reconsider their proposal to include CAMs in the audit report. Auditors should not be tasked with communicating financial information or information that can be perceived as financial information. Further, I urge the Board to re-evaluate the changes they have proposed regarding other information and consider retaining the existing audit requirements, but clarifying in the audit report the procedures that are performed on other information.

I would be pleased to discuss my comments in further detail or to provide any additional information you may find helpful in addressing these important issues.

**Sincerely,**

**Bruce J. Nordstrom**

NUCOR®
CORPORATE OFFICE

December 10, 2013

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street NW
Washington, DC 20006-2803

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Office of the Secretary:

Nucor Corporation appreciates the opportunity to provide comments to the Public Company Accounting Oversight Board (PCAOB) on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report (together the "Proposed Standards")*.

Nucor is a large accelerated filer with approximately $15.1 billion of assets as of the end of our third quarter of 2013. Nucor is a manufacturer of steel and steel products. We also process and broker ferrous and nonferrous metals and manufacture Direct Reduced Iron. We are the largest recycler in North America, using scrap steel as the primary raw material in producing steel and steel products. Most of our operating facilities and customers are located in North America.

We have the following comments on the PCAOB's proposals outlined in the proposed standards:

<u>Critical Audit Matters (CAM)</u>

We are strongly opposed to the inclusion of CAMs in the auditor's report. We believe that management, with oversight provided by the audit committee, is best suited to provide information about the company's financial condition. Since management is responsible for making all judgments and estimates in a company's application of accounting policies and practices and resolving difficult accounting and disclosure issues, it should be exclusively responsible for communicating information about these matters to readers. Auditors should not be the original source of any disclosure about a company. Regardless of how extensive audit procedures are now or will be in the future, an auditor's knowledge about the company will never be as extensive as management's.

We are also concerned that the criteria for determining which matters should be designated as CAMs is too broad and could lead to the disclosure of classes of items that are not disclosed under the current reporting model. For example, some of the criteria that the proposed standards list for identifying CAMs are "the nature and significance, quantitatively or qualitatively, of corrected and accumulated uncorrected misstatements related to the matter" and "the severity of control deficiencies identified relevant to the matter." We are concerned that uncorrected misstatements or control deficiencies that are currently accumulated by the auditor solely for review by management and the audit committee, but that do not reach the level of materiality that would cause an auditor to issue an other than unqualified opinion, may now be incorporated into the auditor's report as CAMs. Additionally, even if the aforementioned items are not listed as CAMs in the auditor's report, we believe that significant effort will be required by auditors in documenting and defending why those matters are not CAMs. Although we believe that CAMs are not necessary, if they do become a requirement we believe that the criteria for identifying them should be narrowed and should focus more on significant transactions or events.

The broad criterion for identification of CAMs also leaves significant room for inconsistency amongst audit firms about which matters should be identified as CAMs. We can easily foresee situations in which two publicly traded companies operating in the same industry could face virtually identical risks and audit issues. However, due to the subjectivity and breadth of the CAM identification factors, one auditor could list CAMs in its report on one company while the other auditor does not list any CAMs for the similar peer company. The proposed standards state that one of the benefits of having additional information in the auditor's report is to provide additional information to investors which "could result in more efficient capital allocation." An investor comparing those two companies may infer that the company whose report contains the CAMs is a riskier investment and thus chose to allocate its capital to the company whose report does not contain CAMs even though the audit risks were virtually identical.

Another important consideration is the amount of time and cost involved in the documentation and approval of the CAMs and the resulting impact on audit quality. Because the CAMs will be about audit matters that are more complex or subjective, they will inherently require resolution by more experienced auditors and firm experts and by upper level company management and the audit committee. The involvement of more experienced auditors who command higher compensation will mean even greater costs associated with complying with the proposal. Also, the CAM documentation process will take a considerable amount of time during the critical final phases of an audit engagement so that all matters identified during the course of the audit may be considered together in a comprehensive matter. Given the rapid pace with which accounting guidance, required disclosures, and filing deadlines have accelerated over the past decade, it is already very difficult under current standards for auditors to complete their procedures and create adequate documentation by the filing deadline. This time scarcity would be even greater with the additional burden of crafting language around the CAMs and reviewing it with management and the audit committee.

We are also concerned that the inclusion of CAMs in the auditor's report would potentially obscure the pass/fail conclusion or appear to qualify the auditor's unqualified opinion.

Auditor Tenure

We do not support the proposed auditor reporting standard requiring the auditor to include in its report a statement containing the year it began serving consecutively as the company's auditor.  As the proposed standard points out, academic studies do not provide definitive conclusions about how the length of auditor tenure impacts audit quality.   Therefore, we believe that providing the tenure information will provide little proven benefit to the reader and will be evaluated subject to the readers' biases. Additionally, a company is already required to file a Form 8-K when there has been a change in its auditor, so the information is already available to readers.

Auditor's Responsibility Regarding Other Information

We do not support requiring additional auditor procedures on information outside the financial statements (e.g., MD&A, business overview, and documents incorporated by reference).  Under current auditing standards, the auditor is already required to read pertinent other information included in documents containing audited financial statements and consider whether such information is materially consistent with the audited financial statements.  We believe that including additional other information in that requirement would significantly increase the scope of auditor procedures and cause many unintended consequences.  There are many documents that are incorporated by reference that are non-financial in nature such as corporate governance documents that were previously not evaluated but may need to be evaluated in detail under the new proposed standards.  Performing additional procedures on these often very lengthy and sometimes partially outdated documents would provide limited value to readers.  The additional requirement may also cause timing issues.  For example, a company may incorporate its proxy disclosures by reference into its Form 10-K.  However, a company may finalize its proxy statement long after it files its Form 10-K, so it would be impossible for an auditor to include procedures over proxy disclosures prior to the filing of the 10-K.

We note that the proposed standards also state that the auditor must evaluate the "consistency of any qualitative statement in the other information" and "other information not directly related to the financial statements."  We are concerned that evaluating additional qualitative statements (e.g. company's share of the market, qualitative forward looking statements, etc.) will be extremely time consuming, very subjective, and go significantly beyond the scope of existing audit procedures. Requiring that the auditor provide any form of assurance on additional other information would be costly while providing little, if any, incremental benefit to readers. In addition, requiring that this other information be evaluated would further compound the timing issues noted in the CAM section above.

Other Matters and Conclusion

We believe that the main provisions of the proposed standards (inclusion of critical audit matters, auditor tenure, and responsibility for additional other information) will provide little additional information of value to readers while being very time consuming and costly for the auditor and the company. While it is difficult for us to quantify the costs associated with the additional effort, we understand that the Center for Audit Quality (CAQ) is currently conducting field testing on the proposed standards. We encourage the PCAOB to take the CAQ findings on additional cost and unintended consequences into consideration prior to making final determinations on the proposed standards.

Also, we believe that the auditor's report should remain concise and continue to follow the current "pass/fail" model. The language of the auditor's report should continue to use standardized language that provides consistency, comparability and clarity of auditor reporting. However, we do believe that readers would benefit from the following changes that are included in the proposed standards:

- Describe the auditor's responsibility to provide assurance whether due to error or fraud.
- Describe the auditor's responsibility with respect to other information in documents containing audited financial statements.
- Add additional information related to the auditor's independence.

Thank you for your consideration of these comments.

Very truly yours,

James D. Frias
Chief Financial Officer, Treasurer
and Executive Vice President

Mr. John Doty
1666K Street NW
Washington, D. C. 20006-2803

Dear Mr. Doty

I have just read today's WSJ article on *Audit Reports Changing.* I failed to verify what is reported with what was stated by you and your Board colleagues . I am however quite surprised about the comment "The Public Company Accounting Oversight Board. . . . . is pushing the accounting industry to disclose more about its views on a company, which some say will make the document attached to each public company's annual report more useful, albeit a little longer." This statement seems to imply that the auditor will be more than an auditor. The auditor will make judgments about what they obtain in evidence and what they believe is true.

I recall some years ago when the auditors were expected to make a forecast of the client's future success. We discussed that new rule in the auditing class I was teaching. The students and I were stunned at such a rule. It wasn't long until that rule was deleted.

Auditing has a clearly specified task: to *verify* what is presented through the use of clearly established criteria. The early auditors understood well the specificity of their responsibility. If the financial statements are not providing what is wanted by the investors, why aren't the accounting standards reviewed? The accounting standards must not be complete. To what extent has the FASB been involved in the current concern about the adequacy of the auditor's report and the extent to which what is needed is related to accounting and not to auditing?

The article, noted above, points out that AuditAnalytics.com commented on the increase in earnings restatements at larger companies in the past three years. Also noted were that your inspections of the Big Four in 2012 included 36 percent that were determined to be deficient, "which was up from 14 percent two years before that."

Why are audits deficient? When the first Board chairman announced that the inspection would have a supervisory context, I assumed that model would be used for a limited time. However, a decade after the functioning of the PCAOB, the gentle, supervisory inspection continues. There is a clear disclaimer that the public report is not to be used as a basis of evaluating the company. From time to time, there is a reference to the *rigorous* inspection process, but that seems totally different from the reality of an inspection. I wonder why the inspection doesn't now result in a clearly determined assessment of the quality of the firm's audits? (Any conclusion could be maintained confidential to the firm and not made public.)

I trust as you finalize your new reporting requirements there is clearly identified the role of the auditor.

Sincerely

Mary Ellen Oliverio

Mary Ellen Oliverio
moliverio@pace.edu

Dear Public Company Accounting Oversight Board,

I find that the proposal of Public Company Accounting Oversight Board to implement two new reporting standards in order to align the information held by the auditor with the information needed by an investor is a great initiative to make the auditor's statement not only indicative of the pass/fail status of a company's annual statement, but also more communicative.

The newly proposed standards imply that the auditor identifies critical issues, which he/she have been working at with a management of a company. In case when the auditor finds inconsistency or material misstatement of fact, the auditor is proposed to request management to revise the other information to address the issues. to make informed decision on a company's financial standing.

First, I particularly support the standard of highlighting the issues of auditor's main concern while working with a company's management. My five-year experience in financial statement analysis has taught me that sometimes the most important information is not contained in financial statements, which financial analysts use to conduct valuations and make investment decisions. While an auditor develops a close relationship with a company and a deep understanding of its operation processes, a financial analyst does not have such an advantage. Therefore, including highlights of the possible problematic issues of a company in the auditor's report will help an analyst to draw upon the profound expertise of an auditor and his/her knowledge of a specific company.

Second, many important issues of a company's operations and financial performance are hard to find in the statements themselves. They are often included in the notes to financial statements. Sometimes they do not even have a clear uniform structure for all public companies, which makes benchmarking and financial analysis difficult.

Third, there are several issues which could be used for manipulation of a company's results, and which are not included in financial statements at all. For example, transactions between a company and its franchisees could be recorded in several different ways, which will ultimately affect costs and net income from operations. While an auditor, who works with the management obtains information on the nature of the company's relationships with its franchisees, an analyst does not. The other example is an acquisition of a subsidiary and consolidated financial reporting. A financial analyst often does not have information on the nature of the acquired business, while the auditor has a chance to request it. The nature of contracts and the timing of payments is also not explained in the reports and could be used to manipulate the results.

Having mentioned these advantages of the new reporting standards proposed by the Public Company Accounting Oversight Board, I would like to also mention a concern with the incentives provided under the new reporting standard.

I believe that the proposed informative disclosure might lead to a disincentive for management to cooperate with an auditor in cases when the reporting is fair and transparent. In other words, cooperative management will be penalized under the proposed auditor reporting format. Under the new standard, the auditor lists all the areas, in which he/she cooperated with the management of a public company to make audit reporting more transparent. If the cooperation between the two parties was extensive, the shareholders will see a long list of issues, which might alarm them. Thus, management can be penalized by the shareholders' discontent for cooperating with an auditor and providing documents for more transparency.

In conclusion, I hope that the new initiative will quickly gain momentum, so that auditors' expertise could be drawn upon by the investor community.

Best Regards,
Svitlana Orekhova

Re: PCAOB Release No. 2013-005 Docket 034: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments

The Accounting and Auditing Procedures Committee (the committee) of the Pennsylvania Institute of Certified Public Accountants (PICPA) appreciates the opportunity to comment on the proposed auditing standards revisions. The PICPA is a professional association of more than 20,000 members working to improve the profession and better serve the public interest. Founded in 1897, the PICPA is the second-oldest CPA organization in the United States. Membership includes practitioners in public accounting, education, government, and industry. The committee is composed of practitioners from both regional and small public accounting firms, members serving in financial reporting positions, and accounting educators.

**Section I. Require the auditor to communicate in the auditor's report critical audit matters that were addressed during the audit of the current period's financial statements.**

The committee understands that financial statement users would like greater transparency from companies and are looking to the auditors for this additional information. However, the committee disagrees with the underlying concept and role being proposed for the auditor in this proposal. The committee believes that the proposed communications are fundamentally flawed, are in direct conflict with professional ethics standards, and would not result in meaningful communication to the financial statement user.

1. As the requirement to communicate critical audit matters would likely greatly increase the auditor’s practice management exposure, it is unclear which risk areas that an auditor would be willing to leave out. As a result, the audit report would likely become a lengthy document noting all risk areas material and immaterial. Standardization would likely result, as each firm looking to manage its practice risk would centralize and standardize the communication process. The value of the proposed communications is questionable, as the end result would be a lengthy document that would read like an audit textbook.

2. The auditor is not permitted by many state statues and the AICPA Code of Professional Conduct to release confidential client information without the client’s permission. The Code defines confidential client information as follows:

PICPA
Pennsylvania Institute of Certified Public Accountants

**"ET Section 92 – Definitions .05 Confidential client information.** Confidential client information is any information obtained from the client that is not available to the public. Information that is available to the public includes, but is not limited to, information

- in a book, periodical, newspaper, or similar publication;
- in a client document that has been released by the client to the public or that has otherwise become a matter of public knowledge;
- on publicly accessible websites, databases, online discussion forums, or other electronic media by which members of the public can access the information;
- released or disclosed by the client or other third parties in media interviews, speeches, testimony in a public forum, presentations made at seminars or trade association meetings, panel discussions, earnings press release calls, investor calls, analyst sessions, investor conference presentations, or a similar public forum;
- maintained by, or filed with, regulatory or governmental bodies that is available to the public; or
- obtained from other public sources.

Unless the particular client information is available to the public, such information should be considered confidential client information.

Members are advised that federal, state, or local statutes, rules, or regulations concerning confidentiality of client information may be more restrictive than the requirements contained in the Code of Professional Conduct."

3. As the audit firm would be precluded from communicating any confidential client information, the client would have to approve the final wording of the audit report, including information about audit difficulties, negating the overall value of the communication. The auditors would likely involve their attorneys and the final audit opinion would result from a negotiation process involving the auditor, attorneys representing both parties, public relations specialists, and key members of a client's management. The process for issuing an audit opinion would not only be untenable, but if the process results in an adversarial situation, the auditor could lose independence and become unable to issue the opinion.

The auditor's role is to provide an opinion on the fairness of the financial statement presentation, not to provide communications regarding the overall health of the audited entity. If greater transparency is needed, the committee believes that financial statement users should look to the company's management for additional information (e.g., the "important information concerning the company, the company's environment, and the preparation of the company's financial statements" that is noted in the introduction to the proposal). If the financial statement users cannot ascertain this important information from the financial statements, then the communications included in the financial statements should be enhanced. The committee does not agree that the fundamental role of the auditor should change to correct a deficiency in financial reporting requirements.

Ultimately, the committee is supportive of proposed changes that would better communicate to the financial statement user the nature and limitations of an audit. The committee, for example, suggests that any proposed change to the audit report seek to minimize the gap between what financial statement users expect from the audit and what the audit is designed to accomplish. For example, improvements to the opinion could focus on further explaining the roles and responsibilities of the auditor and the audited entity's management, and that the audit is not designed to detect fraud due to the nature of fraud and the scope of the audit. The committee recommends that the PCAOB consider the findings included in the 103rd American Assembly Report, "The Future of the Accounting Profession," The American Assembly, Columbia University, which included tailoring the attestation level for the nature of the financial statement to remove the "illusion of exactitude." Two specific suggestions are as follows:

- More limited attestation on subjective judgments (e.g. accounting estimates and fair value determinations) instead verify reasonableness of process used.
- A new audit opinion to permit the external auditors to adhere to different attestation standards for different parts of the financial statements.

**Section II. Add new elements to the auditor's report related to auditor independence, auditor tenure, and the auditor's responsibility for, and evaluation of, other information in annual reports containing the audited financial statements and the related auditor's report.**

The question infers that the length of the auditor's tenure has a definite and measurable impact on the quality of the audit, with the longer the tenure the less the quality. The committee disagrees with this premise and believes that audit quality is lessened with mandatory firm rotation.

**Section III. Enhance certain standardized language in the auditor's report, including the addition of the phrase "whether due to error or fraud," when describing the auditor's responsibility under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether due to error or fraud.**

The committee supports the changes included in this area.

We appreciate your consideration of our comments, and members of the committee are available to discuss any of these with you at your convenience.

Sincerely,

Richard E. Wortmann, CPA

December 10, 2013

Office of the Secretary
PCAOB
1666 K Street, NW
Washington, D.C. 20006-2803

**Reference: Rulemaking Docket Matter No. 34**

Board Members:

At Pfizer, we apply science and our global resources to bring therapies to people that extend and significantly improve their lives. We strive to set the standard for quality, safety and value in the discovery, development and manufacturing of health care products. Our global portfolio includes medicines and vaccines as well as many of the world's best-known consumer health care products. Every day, Pfizer colleagues work across developed and emerging markets to advance wellness, prevention, treatments and cures that challenge the most feared diseases of our time. Consistent with our responsibility as one of the world's premier innovative biopharmaceutical companies, we collaborate with health care providers, governments and local communities to support and expand access to reliable, affordable health care around the world. For more than 150 years, Pfizer has worked to make a difference for all who rely on us. The Company's 2012 total revenues were $59.0 billion and its assets were $185.8 billion.

We appreciate the opportunity to present our comments on the Board's proposed auditing standards on the auditor's report (PCAOB Release No. 2013-005), and we recognize the Board's ongoing work in service to financial statement users. We acknowledge and commend the Board's efforts to reflect the advice and input of the many stakeholders in this process. In these proposals, the Board has addressed some of the most significant concerns expressed in our comment letter on the related concepts release. Several of the proposals in the release will likely improve the value of the auditor's report for financial statement users, but we also have reservations about some significant elements of these proposed standards.

We understand that it is sometimes difficult to strike the appropriate balance between investor "wants" and the concerns of preparers, but the Board also must recognize that the standards it promulgates have an impact not only on auditors, but also on auditee's resources, management time and audit committees. Below, we offer our comments and suggestions, which we hope will be helpful to the Board in moving forward with this project.

The proposed changes to the auditor's report which we considered to be most beneficial include:

- explaining that the audit is intended to provide reasonable assurance that the financial statements are free of material misstatement, whether caused by error or fraud;
- describing management's responsibility for the financial statements and related footnote disclosures;
- stating that the auditor is registered with the PCAOB and is required to be independent, although we would go further and have the auditor state explicitly that he complies with all SEC and PCAOB rules regarding independence;
- clarifying the nature of the auditor's responsibilities regarding information outside of the financial statements, if those responsibilities can be more clearly limited to information directly related to the financial statements and related disclosures, and supported by work the auditor would have performed to support his opinion (avoiding scope expansion and an expectations gap related to the meaning of "evaluate");
- disclosing the tenure of the auditor, only if the company has <u>not</u> already disclosed this information in the proxy (recognizing the increased value of providing this information earlier and in the appropriate context, we would expect most issuers to choose disclosure in the proxy).

We have several concerns and reservations about other aspects of the proposed standards. Broadly, we are concerned that these far-reaching changes are likely to present difficulties in application, costs and unintended adverse consequences, without producing actual substantive benefits to users of the financial statements. Although propelled by statements from investors indicating that they want these changes, they are not clearly supported by convincing evidence of the benefits that investors would receive from them. It is not clear to us that these changes will provide information beyond that which is already provided by management, or that additional, previously undisclosed information, can be provided without exposing the company and its shareholders to additional costs and other negative consequences. The costs, on the other hand, are real.

As expressed in our letter in response to the concept release, <u>we believe these uncertainties could best be addressed by a field-test designed to determine how these proposals could best be operationalized to balance costs and benefits, and to avoid unintended or undesired consequences</u>.

We see the added work and time related to the evaluation and documentation of critical audit matters (CAMs) and the evaluation of other information, as a diversion of time and attention of members of the audit committee, management, and the auditors during a critical phase of the audit, when everyone is already busy with essential tasks related to wrapping up the audit and meeting tight deadlines for reporting. The added time to appropriately document and discuss CAMs will not result in improved quality of the audit and in fact, may cause other quality checks done by auditors to receive less focus as they undertake this new work at a critical time.

As expressed in our previous letter in response to the concept release, we see potentially serious problems resulting from the shift of some reporting and disclosure roles to the auditors, and would much prefer to maintain the principle that management is the source of disclosures about the company's accounting. We question whether the net impact on audit cost and quality will be acceptable in view of the uncertain benefits. Again, in view of these uncertainties and potential consequences, the value of field-testing these proposals cannot be overstated.

We note that strong support has been expressed for retaining the pass/fail model for audit opinions, and that the proposed changes, taken together, will add significantly to the length of the report and will add language, particularly in connection with the discussion of critical audit matters, that could have the effect of communicating implicit qualifications to the auditor's opinion. Those who understand auditing will also understand that the auditor must have fully satisfied himself to have issued an unqualified opinion, but those who do not have an understanding of the process may misinterpret CAMs to be "trouble spots" or areas where the company was "aggressive" in its accounting. The potential for such confusion ought to be weighed carefully in framing the final version of these standards and we offer some suggestions in the Appendix to this letter.

In addition to these broad concerns, we have specific comments on the proposals for reporting critical audit matters and the evaluation of other information.

**Critical Audit Matters**

With respect to the inclusion of critical audit matters (CAM) in the auditor's report, we are particularly concerned about the potential for excessive disclosures that would be harmful to the company and its shareholders. The proposed standard should follow the IAASB example and make clear that the CAMs ought to be chosen from those matters discussed with the audit committee, and that only the most significant matters should be chosen to be included in the report (not all such matters). If a CAM does not rise to the level of an audit committee discussion, it should not be included in the auditor's report. Otherwise, it can reasonably be expected that auditors will "throw in the kitchen sink" to prevent any potential issues in later inspections by the PCAOB, or even litigation.

To demonstrate the reality of this behavior, we only have to look at the current "risk factors" section of SEC filings, where even obvious risk items are put in to guard against possible second guessing and to decrease the risk of potential litigation. The inspection process will drive behavior and therefore, we would recommend an ongoing monitoring mechanism be put into place that will help the PCAOB see if there is an increase in CAMs after the first inspection cycle and correlate whether investors are finding increased value from the increased listing of generic issues. As a large, global company, we are concerned with not only the increased effort and resources needed for this effort, but also whether investors will truly be getting relevant and more than tangentially useful information.

The standard should make clear that CAMs discussed in the auditor's report would not be expected to include specific disclosures of trade secrets or other proprietary information that would be harmful to the company's competitive position, a significant deficiency not required to be disclosed by the company under SOX, or sensitive information that would prejudice the company's position in respect of potential litigation. The auditors have access to confidential information that can harm a company's shareholders without providing any tangible benefit to other potential investors – there have to be some reasonable limits to avoid such unintended adverse effects and provide an acceptable balance. We continue to believe that management, not the auditors, should be responsible for providing the original source of such information.

It is also important that the presentation of CAMs in the auditor's report must make clear that CAMs are not indicators of "aggressive" accounting by management. If the auditor is commenting on an area of the company's accounting that is inherently challenging for both management and the auditor, because the rules for accounting in that area involve complex or subjective assessments, that should be made very clear. We suspect that as many readers will be confused by the addition of CAMs to the report as will find it enlightening, and that many will perceive the CAMs as equivalent to qualifications of the auditor's opinion.

We ran a quick field test to determine what issues we might surface in dealing with CAMs, but did not include input from other senior management or the Audit Committee members. What we determined was:

- the report grew to 6 pages in length;
- the report contained information that aligned with our critical accounting policies which did not add additional useful information;
- the report contained items that we were surprised were considered CAMs as they had never been a subject of significant discussion with the Audit Committee;
- the report contained some added useful information regarding additional steps the auditor undertook to audit the CAM; and
- context setting of the CAM was particularly important as otherwise a reader could easily misinterpret that the CAM was the result of a company-specific anomaly or accounting interpretation.

Given that we and our auditor were reading the same document and coming up with different views as to what a CAM was, I believe that the definition of a CAM is too far-reaching and will result in a large number of items considered CAMs without adding significant value. When coupled with the current proposal's requirement that the auditor document why audit matters that would appear to meet the definition of a critical audit matter were not communicated, the likelihood of an auditor putting in all matters is high. They will err on the side of putting too much in so as not to be criticized later. There is no "upside" for an auditor to use judgment and face an "audit failure". Because our current accounting model has evolved to be very complex and requires the use of estimates that inherently have uncertainty, and these estimates are throughout the financials, the number of CAMs will be very high for many companies, and not very meaningful for investors.

Some of our concerns are as follows:

- For example, the auditor relies on an actuarial expert for a pension plan, and, as we know, pension plan accounting is complex. It includes many assumptions, so the auditor reports that as a CAM. While this might appear to be a CAM on its face, the Board should recognize that it is likely that every company that has a pension plan will wind up with a CAM like this. We question the usefulness of such a CAM as it is not unusual or specific to the nature of the plan or the company, but is merely based on the complexity of required (there are no other alternatives) accounting. This will become a "boilerplate" disclosure.
- We can easily see CAMs covering all areas where level 3 fair values must be provided. These inputs are defined as unobservable or based on a hypothetical market participant; therefore, by their very nature they are difficult to determine, even for the preparers who must come up with a way to produce such values. Valuation specialists are very often used in these areas due to their inherent complexity. While investors might express usefulness in "knowing" that this is difficult to determine, we are surprised they don't already know that since they are the same people who drove this model with the FASB, and this information is in the company's financial statements and MD&A.
- Likewise, investors have played a role in making estimates a significant part of the process in areas like revenue recognition where future deductions must be determined at the time the sale is made. CAMs will show up in these areas as revenue is critical for every company and these will be boilerplate disclosures as well.
- Another example of a possible CAM that could lead an investor to misinterpret standard auditing practice for some anomaly that created additional scope changes has to do with the way many multinational companies are organized. Most global, multinational companies have instituted shared services organizations to streamline costs and standardize practices in financial accounting. Auditors must appropriately scope and determine the impact of such shared services on their audit procedures and the nature of work that will be performed in the shared service and that which will be performed in a local market. Such scoping requires judgment and can be difficult. We can foresee CAMs being created for such items which, in our view, do not add any additional value to an investor's view of the financial statements.

We are concerned that there could be unanticipated adverse impacts resulting from the auditors being required to discuss critical audit matters in the audit report. It seems very likely that the transformation of the auditor's report into a vehicle for separate disclosures about a broad range of sensitive and otherwise confidential matters will lead to less openness between management and the auditors. Rather than have a discussion with the auditor about a matter which we are struggling with which could then possibly trigger a CAM, we might delay that discussion until we have fully worked out a documented solution and final arguments to support the position, to avoid the audit team viewing it as "difficult". It must be well understood that, along with the perceived benefits, there will certainly be costs to the shredding of the confidentiality that currently exists in the auditor's role.

**Other Information**

It is sufficient that the auditors read this information and consider whether such information or its presentation is materially inconsistent with the financial statements they have audited. A statement to this effect, clarifying the extent of the auditor's responsibilities for such information, should be included in the audit report, to enhance the understanding of users. However, as the proposed standard is written, with the "read and evaluate" concept, we are concerned that auditors will have to perform substantial additional procedures that would be very costly relative to the benefit of added assurance thereby obtained, and would add significantly to the time required to issue annual reports.

We also are concerned with setting an expectation gap with investors about what "evaluate" means in this context. As you are aware, the definition of "evaluate" is "to judge the value or condition of (someone or something) in a careful and thoughtful way." We also note that the general layperson's definition of the term "audit" means "a complete and careful examination of the financial records of a business or person, or a careful check or review of something. These terms are very difficult to distinguish from a general meaning perspective and the term "evaluate" sets a much higher bar than the current "consider" language.

One example given has been for an auditor to evaluate the statement: "is the leading company...." We see this as being problematic for the auditor to have to correlate all data to understand whether it is leading in revenues, assets, manufacturing throughput or some other measure. Further, an investor will not understand what statements were or were not evaluated, thereby providing a false sense of comfort.

We believe the standard should only apply to other information directly related to the financial statements covered by the audit opinion; and it should be very clear that auditors should not be expected to perform additional procedures to verify other information. For example, in our own MD&A, there is an extensive discussion of non-financial information about research and development. As discussed in our earlier comment letter, significant time and effort would be spent verifying what phase a clinical trial is in, obtaining and documenting FDA approvals, etc.

There is a significant risk that this additional work would adversely affect the timeliness of reporting and put added pressure on management to not only answer inquiries, but also to formally document them for the auditors at a level sufficient for PCAOB inspectors. Our view is that this exercise would add significant audit time and cost as well as management time without resulting in any added benefit -- most companies already have extensive disclosure controls and procedures in place to review such information, incorporating a high level cross-functional team that will include senior management, finance, business leaders, legal, investor relations, internal audit and others.

As with critical audit matters, we believe that these proposals would benefit from field testing to better define what an investor will truly find useful around CAMs, the likely impacts on cost and timeliness of reporting, the potential unintended consequences, and the anticipated benefits of changes in this area.

* * * * *

In summary, as described above, we recommend a robust field test of the proposed standards to provide insight into the costs and benefits and to guide the clarification and enhancement of these proposals, prior to issuance of the final version of the proposed standards. We continue to be very concerned that the proposed approach to critical audit matters and the evaluation of other information would be very costly and would adversely affect the quality of the audit and timeliness of corporate reporting.

More importantly, they would also undermine the important principle that management is responsible for the company's financial reporting and blur the responsibilities between auditors and management. The unintended effects and practical and legal consequences of such a fundamental change and expansion of auditor responsibilities are a significant cause of concern.

Once again, we appreciate this opportunity to comment on these proposed standards and encourage the Board to continue to engage its constituents. We would be pleased to discuss our perspective on these issues with you at any time.

Very truly yours,

Appendix: Specific suggestions on the proposal

The Auditor's Report:

- Paragraph 5i, change requested to delink the notion of independence from the tenure of the auditor: <u>If not disclosed in the proxy statement of the company,</u> a statement containing the year the auditor began serving consecutively as the company's auditor;

- Paragraph 8 change requested to ensure that any of these items are communicated to the audit committee and that an appropriate level of significance is obtained: Critical audit matters ordinarily are matters of such importance that they are included in the matters required to be ~~(1) documented in the engagement completion document; (2) reviewed by the engagement quality reviewer;~~ ~~(3)~~ communicated to the audit committee <u>as part of an audit planning document, interim update or as part of the year end-process</u>; ~~or (4) any combination of the three~~.

- Paragraph 9, changes requested as "the most difficult" seems to imply only one item and the context of the complexity of the accounting principles is an important consideration, severity of deficiencies should only be addressed in the case of a material weakness: Certain factors might affect whether a matter addressed during the audit of the financial statements (1) involved very ~~the most difficult~~ <u>significant</u>, subjective, or complex auditor judgments; (2) <u>had an very high level of</u> ~~posed the most~~ difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the ~~most~~ difficulty to the auditor in forming an opinion on the financial statements. In determining whether a matter is a critical audit matter, the auditor should:

    - <u>consider the complexity of the accounting principles that are required to be applied and whether there are any unusual circumstances that would make the audit of such an area more difficult for the specific entity being audited,</u>

    - <u>whether the matter is unusual in nature,</u>

    - <u>whether the matter has been the subject of a robust discussion with the audit committee</u>

    - <u>whether the matter is company-specific (in terms of accounting, obtaining of audit evidence, requiring of specialists, etc) or is it a matter that is generic in nature, that is, similar efforts and procedures would be undertaken in any company and such a matter is no unusual circumstances (for example, pension accounting might use estimates and a specialist, but may have no special circumstances, so there would be no incremental effort by any other auditor).</u>

    - <u>and take into account the following factors, as well as other factors specific to the audit:</u>

        a. The degree of subjectivity involved in determining or applying audit procedures to address the matter or in evaluating the results of those procedures;

        b. The nature and extent of audit effort required to address the matter;

        c. The nature and amount of available relevant and reliable evidence regarding the matter or the degree of difficulty in obtaining such evidence;

        ~~d. The severity of control deficiencies identified relevant to the matter, if any;~~

e. The degree to which the results of audit procedures to address the matter resulted in changes in the auditor's risk assessments, including risks that were not identified previously, or required changes to planned audit procedures, if any

f. The nature and significance, quantitatively or qualitatively, of corrected and accumulated uncorrected misstatements related to the matter, if any;

g. The extent of specialized skill or knowledge needed to apply audit procedures to address the matter or evaluate the results of those procedures, if any; and

h. The nature of consultations outside the engagement team regarding the matter, if any.

Auditor's Report – paragraph on critical audit matters

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are those matters addressed during the audit that (1) involved our most difficult, subjective, or complex judgments; (2) posed the most difficultly to us in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to us in forming our opinion on the financial statements. The critical audit matters communicated below do not alter in any way our opinion on the financial statements, taken as a whole. <u>Critical audit matters are normal during the course of an audit and generally occur as a result of the inherent complexity in the required accounting standards and the uncertainties and assumptions surrounding estimates required to be made to comply with generally accepted accounting standards in the United States of America.</u>

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//

Public Company Accounting Oversight Board

Re: Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting Standard

Members of the Board:

I appreciate the opportunity to comment on The *Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*. I am an investor in various stocks and have worked in public accounting. As an investor, I would like to provide my opinion on some of your proposed changes.

**Critical Accounting Matters:**

I am concerned that the proposed prominence given to the critical accounting matters will add confusion to the readers of the financial statements and distract from the primary purpose of the auditor's report. The auditor's opinion on the fair presentation of the financial statement should receive prominence and not be diluted.

**Independence:**

Including a statement as to the auditor's independence does not provide any meaningful information. If an auditor is unethical enough to give an opinion on an audit and that auditor is not independent, why would that same auditor have any qualms about stating they were independent as a part of their report.

**Auditor's Years of Service:**

I would not clutter up the auditor's report with information such as the years of service of an auditor. Such information could easily be included in the proxy statement of a public company, although there is no evidence that multiple years of service has any negative effects on the quality of the audit performed.

The PCAOB needs to focus on how to make opinions meaningful in instances like jurisdictions that do not allow inspections by the PCAOB and audits of certain industries that have typically had a lack audits of quality audits.

I appreciate the opportunity to share my viewpoint on the Proposed Standards.

Sincerely

**John Pierschbacher, Investor**

Re: Rulemaking Docket Matter No.34

Proposed Auditing Standards –

1. The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion;
2. The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

We write to comment on the proposed auditing standards included in PCAOB Release No. 2013-005, dated August 13, 2013. Our comments come from the perspective of management of a public registrant and are based on our experience, information included in the proposed standards and viewpoints expressed in the discussion to date.

**Critical Audit Matters**

We understand that the board believes that the proposed standard could provide financial statement users with potentially valuable information that investors have expressed an interest in receiving. While we are proponents of full and fair financial disclosure in financial statements and related communications by SEC registrants, we believe that there is an abundance of disclosure currently included in public filings. These existing disclosures include significant accounting policies, critical accounting estimates and overall risk factors to the business. We believe the sophistication of the investing community and the wealth of information publicly available regarding auditing standards cast doubt on the potential real benefit that will be gained in adding a significant amount of incremental, but similar disclosure to already lengthy 10-Ks.

Further we believe that the proposed standard is likely to result in either lengthy audit reports that are difficult to compare between registrants, or more likely, lengthy audit reports that are standardized and include boilerplate language that is the same for all companies across an industry. One of our most significant concerns is that the description of the considerations regarding critical audit matters could include information about the company that is not otherwise required to be disclosed by the registrant, which will result in the auditor becoming responsible for disclosure rather than auditing disclosures made by management. We believe that the proposed standard should be revised so that the role of the auditor is not changed in this way.

We also believe that adding discussion of audit procedures performed on critical accounting matters would create additional voluminous disclosure. Expansive details and a significant amount of discussion would be required to provide sufficient context to understand the audit procedures performed and we do not believe that this additional disclosure will facilitate a better understanding of the financial statements.

In addition, we believe there is a strong likelihood that the proposed standard will result in significant increased costs associated with the time invested by the audit engagement partner and manager, the audit firm's national office accounting and technical experts and senior accounting and finance management of the registrant. We are further concerned that the increased focus by all of these parties will occur in the critical final phase of the audit and the 10K preparation process, which could have a detrimental impact on the quality of audit work performed and an overall negative impact on the process.

In summary, we do not believe the proposed standard is cost beneficial – the benefit is at best questionable with a likely outcome an increase in "boiler plate" disclosure – what isn't questionable is the increased audit fees for all public registrants associated with preparing and "negotiating" the disclosure and the potential increased exposure to the auditors.

**Expansion of Auditor's Responsibilities Regarding Other Information**

We understand that under existing PCAOB standards, the auditor has a responsibility to read and consider whether other information in documents that also contain the audited financial statements and the related auditor's report is materially inconsistent between the other information and the financial statements. Based on the feedback that you have received regarding confusion or a lack of understanding of the auditor's responsibility for this other information, we are not opposed to adding clarification to the auditor's report that specifies the auditor's responsibility to "consider" such information. However, we do not support expansion of the auditor's responsibility to evaluate and report on the other information.

We have two primary concerns with this proposal. First, we believe that audit firms would need to perform a significant amount of additional procedures to support their conclusion about the auditor's evaluation of other information and believe over time that the auditors practice will evolve to be to "audit" the other information due to the perception of increased exposure associated with the requirements of the proposed standard. We do not agree that the benefits of expanding the auditors reporting outweigh the costs associated with such changes. Additionally, time spent "auditing" the other information in a 10-K, may reduce time spent auditing the financial statements and ultimately reduce audit quality. In addition, we believe that the additional procedures that the auditors will need to perform have the potential to delay filing timelines. The delay in disseminating information to the public runs contrary to the priority of timely access to information for investors. Second, we believe that the proposed expansion of the auditor's responsibility is beyond the professional competence of the auditor. As experts in accounting and auditing, the audit firms are appropriately situated to perform audits of financial statements. However, evaluating qualitative statements and non-financial data and determining the accuracy of the factual content of the various disclosure requirements throughout an SEC filing requires expertise above and beyond accounting and auditing expertise.

Thank you for the opportunity to comment on this concept release.

Sincerely,

Al Swanson
Executive Vice President and Chief Financial Officer

Chris Herbold
Vice President - Accounting and Chief Accounting Officer

Ms. Phoebe Brown
Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, DC 20006-2803

File Reference: PCAOB Rulemaking Docket Matter No. 34

Dear Ms. Brown:

The PNC Financial Services Group, Inc. ("PNC") appreciates the opportunity to comment on PCAOB Release No. 2013-005, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditors Responsibilities Regarding Other Information in Documents Containing Audited Financial Statements* (the "ED").

PNC is one of the largest diversified financial services companies in the United States. We take this opportunity to present the Public Company Accounting Oversight Board ("the PCAOB" or "the Board") with a large Securities and Exchange Commission ("SEC") filer's perspective on the Board's initiative intended to enhance the existing auditor's report and expand the auditor's responsibilities. The ED appears to be based upon an implied presumption that information needed by investors is not being disclosed, or that management is not willing to disclose it. Further, it appears that the PCAOB has not given an appropriate amount of credit to the positive results of the Sarbanes-Oxley Act. Specifically related to this, PNC management has developed strong internal controls over financial reporting to ensure adequate information is publicly disclosed. Accordingly, it is unclear to us, what is not working within the current financial reporting process, and what the PCAOB is trying to address/correct.

Additionally, our concerns regarding the proposal relate to weakening the boundaries between the roles of the auditor, the board of directors and management, increasing the possibility of disclosure of non-public information that may be detrimental to the investors of a company through an auditor's discussion of critical audit matters, and lengthening of the financial reporting time-frame in conjunction with incremental costs.

Further, the likely result of the ED will be an increase in disclosures of a lesser significance. When considering the factors an auditor should take into account when determining a critical audit matter, we note that certain factors related to the degree of subjectivity, the nature and extent of effort, and the amount of evidence regarding a specific item are already considered in management's determination of its key disclosures. These disclosures address risks and uncertainties to its operations, as well as the subjectivity of estimates. Ultimately, whatever marginal improvements are presumably gained will be outweighed by their costs.

In general, we support efforts to increase transparency and simplify financial statement disclosures; however, we believe that any additional disclosures resulting from the ED are management's responsibility and increasing the auditor's responsibility to add more disclosure to the annual report is counter to the auditor's role as attesters of the overall financial statement presentation. We also believe the Board's proposal will be a step back from the progress that has been made in making boards and audit committees more empowered. Today, matters related to the audit and financial information are discussed at length by management, audit committees and auditors in an open and constructive environment, which we feel would be at risk under the proposal.

*Recommendations*

PNC believes that the proposal will cause a fundamental change in the role of the auditors from a role of attesting management's information to a role of authoring information that management has not already disclosed and determining which issues are more critical for the company. Therefore, we respectfully disagree with the PCAOB's conclusion that its proposal would not change the auditor's role.[1] While critical audit matters will highlight areas of an audit that may have been challenging to the auditor, these matters do not necessarily provide any additional decision useful information to investors about the business and prospects of the company, particularly when the auditor agreed with management's judgment. Additionally, disclosure of critical audit matters by the auditor may even be detrimental to investors if prejudicial information is disclosed. Finally, an auditor's review of information outside the financial statements, including the MD&A, would increase the cost of the audit without a benefit that outweighs the cost and may result in a restriction of information that is deemed useful to investors by management. As such, we recommend that the Board reconsider and not move forward with the proposal to expand the auditor's report. Conversely, contrary to our view that adequate public information is disclosed, if an auditor has critical information that is not required to be disclosed by management, we recommend that changes be made to public disclosure requirements, which we respectfully submit falls within the SEC's and FASB's jurisdiction.

*Critical Audit Matters Section in Proposed Report*

Although we agree that the proposed requirements for auditors to identify critical audit matters, and to describe the considerations that led them to that designation, would provide more information about the audit, we question the ultimate value of that information to investors and users of financial statements. Critical audit matters would reflect matters that may have required more judgment by an auditor in reaching a conclusion, but from a management and investor perspective could be a standard business activity. In addition, an investor would also expect and rely upon the auditor to be sufficiently capable of resolving such matters to its satisfaction. Discussion of such matters would detract from more relevant disclosures that provide decision useful information. For example, PNC may issue debt instruments as part of our standard business activities, which may have embedded derivatives or other structured elements. As accounting for structured debt transactions can vary between debt, equity and fair value accounting, and impact our reported financial results, management would spend a significant amount of time in ensuring accurate accounting for these items, and consequently, the auditor would also be required to exercise judgment. However, in most cases, issuance of debt is generally a routine transaction which would be discussed by management in Management's Discussion and Analysis ("MD&A"). We do not believe that such transactions should be unduly emphasized as critical audit matters; however, the proposal could be construed as requiring the auditor to include discussion of such transactions in its audit report.

In addition to the distraction created in financial reporting, the proposal to require auditors to describe critical audit matters could potentially harm investor interests. For example, a company may have a pending lawsuit where the plaintiff is asking the company for an unreasonable amount in damages. Although the company may not believe that a legal liability exists and may conclude that, under accounting principles generally accepted in the United States of America ("GAAP"), an accrual is not required, the company's auditor would need to obtain evidential support for management's

[1] *Ibid.*, Summary page 27

position and may spend significant time and resources assessing the evidence collected[2]. Even if the auditor were to agree with the company's conclusion after the auditor's assessment, adoption of the critical audit matter reporting requirement could cause the auditor to make a determination that this issue, although resolved consistently with the company's viewpoint, was one of the most critical accounting matters that occurred during the reporting timeframe. Accordingly, the auditor would discuss this as a critical audit matter in compliance with the ED, thus providing more disclosure than what management would believe prudent or necessary. In this potential scenario, the company may not be required to provide any disclosure about the litigation under GAAP and may have strong and legitimate reasons for not wanting to explain its reasons for not accruing any amounts related to the litigation because such disclosure might result in information that would prejudice the litigation and adversely affect the company's ability to limit any adverse consequences of the litigation. The identification of this matter as a critical audit matter by the auditor would, accordingly, likely result in a prolonged process with additional costs incurred, as well as disclosures not required by GAAP.

The proposal would require auditors to explain variations in their audit approach surrounding critical audit matters that were caused in part by control deficiencies that would otherwise not arise to the level of a qualification in the Internal Controls over Financial Reporting ("ICFR") opinion, nor require such matters to be disclosed by management, therefore exceeding current SEC reporting requirements. In effect, the proposal would lower the bar for assessment and disclosure of internal control deficiencies that was set under the Sarbanes-Oxley Act.

As shown by examples above[3], the proposal would require disclosure in excess of GAAP and rules promulgated by the SEC under the Sarbanes-Oxley Act. The Board should consider that this proposal would override laws that establish reasonableness of disclosures and delineate responsibilities between management, the board of directors and the auditors. We do not believe that the Board should promulgate rules that allow for disclosures to be made that would otherwise not be required and as such provide a back-door to more disclosures at the discretion of the auditor. Further, in order for audit firms to limit their liability, or limit challenge from the PCAOB, it is inevitable they will insist on additional disclosures that are not required by the SEC.

Lastly, the ED requires the auditors to look to their engagement completion document, the work of engagement quality reviewers, and communications to the audit committee for the source of critical audit matters[4], and to document their determination of critical audit matters including why matters addressed in the audit that could meet the definition of critical audit matters were not reported as critical audit matters[5]. We believe this documentation requirement would result in the need for the auditors to document a large number of items, which would likely delay the completion of the audit. In addition, this requirement could lead to a significant demand on management's time and resources to 1) further document for its auditor why items are not critical audit matters and/or 2) assess the auditor's requests to include such items as critical audit matters and support the auditor's documentation efforts, while also increasing audit hours and overall costs of the audit. We believe these additional efforts and the associated costs will provide no value to the auditors, board of directors, management, analysts or investors. However, we believe the press agencies would value this information in order to create headline stories which would have little substance and could be taken out of context. In our case, extensive communications already exist between our auditor and PNC's Audit Committee. As we stated in our introduction, if a premise for this standard is that a company's process for disclosing higher risk or critical items is insufficient, a study of those practices

---

[2] Based on the criteria in the proposed standard, an auditor might identify this matter as a critical audit matter. ED at §9(b), (c), (g) and (h) of Appendix 1, page A1-7 and A1-8.

[3] The Board also acknowledged possibility of additional disclosures. ED at Appendix 5, page A5-42-43.

[4] *Ibid.*, §8 of Appendix 1, page A1-6

[5] *Ibid.*, §14 Appendix 1, page A1-10

and recommendation for improvements should be conducted in order to improve financial reporting instead of this proposed standard.

*Other Information Section in Proposed Report*

The Board proposes to require that auditors also assess "consistency of any qualitative statement in other information, and the manner of its presentation"[6] based on relevant audit evidence obtained[7]. We believe this would result in the auditor imposing its views within MD&A. In our view, the purpose of the MD&A is for management to have complete authority and ability to determine the need and manner of presentation of qualitative information. The auditor should not be able to change management's qualitative analysis of information, as long as the information that is presented is reasonable and accurate. Therefore, we believe that the Board should not increase the auditor's responsibility to assess qualitative information presented within the MD&A. For example, management may discuss causes and effects of relationships between certain performance metrics and economic data in MD&A. The auditor may have noted an empirical relationship between economic data and the company's results as part of their substantive data analytics; however, the auditor may have developed a divergent opinion as to the likelihood of an outcome of an economic trend and therefore determine the qualitative statement to be inconsistent with audit evidence. Based on their interpretation, an auditor may ask the company to modify such statements. Because the proposed standard could potentially result in a modified audit report as it relates to other information, the company would not have any choice but to limit its discussion to what its auditor deems supportable and deprive investors of information that management considers relevant to the business.

*Incremental Costs*

We appreciate that the Board has already acknowledged that as a result of these proposals, the costs of performing the Audit will increase [8] and significant other costs will also be incurred by the company. We agree with auditors' views, described in the proposal document, that these costs would include costs to identify, draft, discuss and resolve issues around the critical audit matters and other information, as well as costs related to an increase in auditor's liability[9]. We recognize that the proposal document notes that investors have also acknowledged an increase in audit related costs. We believe, however, that the PCAOB, auditors and investors may not have fully realized the total impact of implementing the proposal.

Despite acknowledgement of additional costs, we believe there are other significant factors that need to be included in the analysis of this proposal. To the extent the auditor adds a comment on any critical audit matters not currently covered within the financial statements, it is unclear what management's responsibility would be to certify that information for SOX purposes[10]. We believe that a consequence of the proposal is that control processes that meet design and operating effectiveness criteria would need to exist related to any financial information being discussed as a critical matter. This would apply to information that is disclosed in MD&A today or information that is not discussed in the financial statements. Furthermore, it is unclear whether this information would then need to be included within the financial statements. In addition, typically, such matters would arise within the financial reporting time-frame (quarter end close through issuance of the Form 10-K/10-Q) and would

---

[6] *Ibid.*, §4(b) Appendix 2, page A2- 3

[7] The ED would supersede current AU Sec 550, which does not include a specific requirement to review qualitative statements.

[8] *Ibid.*, Summary page 8, 12, 17 and 21

[9] *Ibid.*, Appendix 5, page A5-41 and Appendix 6, page A6-35

[10] i.e. under rules promulgated by the SEC under Section 404 of the Sarbanes-Oxley Act of 2002

not allow companies time to adequately establish, evaluate and document control processes appropriately for SOX purposes, leading to a further issue regarding internal control certifications.

Finally, we believe that the ED will place a significant burden on the time and resources of management and the audit committee to assist the auditor in completing the audit, which would lead to unnecessary added stress on the financial reporting time-frame. This process is already completed in a minimal amount of time (e.g., a large accelerated public company's Form 10-K is filed with the SEC within 60 days of quarter-end) given the voluminous amount of information provided in a filing. The additional documentation required by the proposal as well as discussions regarding the critical audit matters and any auditor observations about the information outside the financial statements will exacerbate the challenges in meeting current filing deadlines. We also believe that the proposed expansion of the audit report may increase the auditors' legal liability regarding information contained in the MD&A under the Securities Act of 1933,which imposes liability at a negligence level, given the incorporation by reference of the Form 10-K, including the MD&A, in registration statements for the public offer of securities.

In today's economic environment, where audit fees have already been significantly increasing because of additional audit work due to PCAOB inspections, some measure needs to be taken to directly link audit fees to value-added work by audit firms and limit annual fee increases to reasonable amounts. We believe the proposed additional costs are neither warranted nor necessary and that the additional costs will not support the benefits, if any.

******

We appreciate the PCAOB's request for feedback on this matter and appreciate the opportunity to share our views with the PCAOB Board and staff. We welcome any questions or comments you may have. Please contact me with any questions about PNC's comments at 412-762-7546.

Sincerely,

Mr. Robert Reilly

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Office of the Secretary:

PNM Resources, Inc. appreciates the opportunity to respond to the Proposed Auditing Standards contained in PCAOB Rulemaking Docket Matter No. 34.

PNM Resources, Inc. is a diversified energy company in the United States with approximately \$5.4 billion of assets, \$1.6 billion in annual revenues, and a market capitalization in excess of \$1.8 billion. Our subsidiaries and affiliates are involved in the generation, transmission and distribution of electricity, as well as energy management and other energy-related services primarily in New Mexico and Texas.

We appreciate the PCAOB's efforts to enhance the current auditor's reporting model. Although we support certain aspects of the proposed standards, we do not believe that the proposed standards taken as a whole are an overall improvement in the reporting model. Therefore, we do not support the adoption of the proposed standards in their current form.

We commend the PCAOB for retaining the basic "pass/fail" model of the auditor's report. We believe that is the primary purpose of the audit process and what is of the most concern to users of audited financial statements. However, we believe the additional disclosures set forth in the proposed standards regarding critical audit matters will add many pages of language to the existing report model. These additional disclosures will detract from the basic intent of the auditor's report, which is to communicate the results of the audit under a "pass/fail" approach. These additional disclosures may have the unintended consequences of confusing the users of financial statements and implying that the additional language is qualifying the audit with respect to the items discussed. Additional comments regarding the disclosure of critical audit matters are provided below. We also believe that the PCAOB has underestimated the cost impacts of the proposals to disclose critical audit matters and to expand the auditor's responsibility with respect to other information in documents containing the audited financial statements. We believe there will be significant cost increases if the proposals are adopted while providing essentially no benefit for preparers and what will ultimately be of very little benefit to users of financial statements. Accordingly, we do not support the adoption of the proposed auditing standards.

We do support the proposed requirements to add "and the related notes" to the description of the financial statements being audited and "whether due to error or fraud" in the basis of opinion portion of the report. These are improvements in communication of the auditor's responsibility without adding to the auditor's responsibility or procedures and should not have impacts on the cost/benefit relationship. Also, we do not object to the additional discussion of independence although we do not think it adds information that will be meaningful to users of financial statements that is not already conveyed by having "independent' in the title of the report. Discussion of areas where we have concerns is presented below.

Critical Audit Matters

We do not support including a discussion of critical audit matters in the auditor's report. As mentioned above, we believe the additional discussion will be confusing and detract from the basic premise of the auditor's report, which is to communicate the "pass/fail" results of the audit.

The required description of critical audit matters will likely consist of many pages of lengthy disclosure for most entities. The audit firms will undoubtedly err on the side of more disclosure than less in order to protect their interests, which will exacerbate the extent of their reports. Auditors will not omit any matter that, in hindsight, might be considered critical in litigation or an investigation. Furthermore, over time, we believe the disclosures of critical audit matters will become somewhat standardized by industry and the language will evolve into boilerplate. For example, the reserve for loan losses for all banks and other lending institutions and the determination of mineral reserves for all oil and gas and mining entities will likely be critical audit matters. The descriptions of these matters will become relatively standard even though, in actuality, every entity and every audit is different.

The proposal allows for the discussion of the audit procedures applied to each critical matter and the PCAOB asks if such a description should be included in the audit report. We do not believe a description of the audit procedure should be allowed or required and suggest that it be prohibited if the requirement to disclose the critical audit matters is retained in a final auditing standard. We believe such description would only increase the length of the disclosures and add to the confusion of the audit report, while not adding any meaningful information.

While we do not support the inclusion of critical audit matters in the auditor's report, we find it curious that the proposal is to only include such a description for the most recent year. This seems inconsistent with the requirement for the audit report to cover all years presented and to the references to "audits" in the example wording of the auditor's report.

The PCAOB indicates that it believes there will only be a modest increase in cost to include a description of the critical audit matters in the auditor's report since it would just involve reporting on work already performed. We respectfully disagree with that premise. While additional detailed audit procedures would not be required, the time involved in the drafting and review of the auditor's report will significantly increase. That increased effort will primarily involve partners and managers of the audit firms and would be billed to their clients at much higher rates per hour than the overall rate for the entire audit. Furthermore, this effort will essentially all occur at the very end of the audit process, when the time of the partners and managers should be devoted to more substantive aspects of completing the audit.

The definition of critical audit matters contained in the proposals and the surrounding discussion indicates that most of the matters identified as critical will likely be very similar to matters management now identifies as involving critical accounting estimates, which are disclosed and discussed in the Management's Discussion and Analysis section of an entity's Form 10-K.

Therefore the discussion in the auditor's report will be somewhat duplicative of management's disclosures.

For the reasons set forth above, we do not support the requirement to include a discussion of critical audit manners in the auditor's report, and suggest this requirement be deleted from any final auditing standard.

Auditor's Responsibility Regarding Other Information

We do not object to clarifying the auditor's report with respect to their responsibility regarding other information in documents containing audited financial statements. However, we believe the requirements of the proposed auditing standards significantly increase the responsibility of the auditor's for such information. We do not support an increase in the auditor's responsibility since we do not think it will result in sufficient additional meaningful information to justify the costs involved with the additional responsibility of the auditor.

The current auditing standards require the auditor to "read" and "consider" the other information contained in documents including audited financial statements. The proposed auditing standard would require the auditor to "read" and "evaluate" such information. We believe there is a significant difference in those terms that will require auditors to perform fairly extensive additional audit procedures in order to meet the "evaluate" requirement. These procedures will increase the costs and such increases may be significant to some entities. For example, the proposals would seem to require the auditor to review and evaluate all of the information contained in the Compensation Discussion and Analysis section of an entity's proxy statement. The CD&A typically includes extensive tabulations of information related to compensation of the named executive officers of an entity. This information not only includes basic salary information, but also incentive compensation, perquisites, equity awards, retirement benefits, and termination benefits. Evaluating the CD&A information will require a substantial effort, which will increase the cost of an audit.

The proposals would require auditors to read and evaluate information that is not yet available, such as proxy information, when the audit is completed and the audit report is signed and dated. This requirement seems to place an unrealistic burden on auditors and the entities being audited. It is not appropriate to require an auditor to include something in the audit report that is not available at the completion of the audit. The proposals address how the auditor is to deal with such items, but we do not believe the proposals provide a practical framework. We would be surprised if the audit firms would be willing to accept such a proposal without at least identifying what they have not seen. Furthermore, the inclusion of information not yet available will likely confuse users of financial statements since they cannot make informed decisions, or place reliance on an auditor's involvement, regarding information that is not available.

In addition, the proposals cover all information incorporated by reference into the document not just information that is not available. We believe this would further expand the auditor's procedures for very little benefit to users and should not be required.

As mentioned above, we would not object to an addition to the auditor's report that simply explains the current auditing standard covering the responsibility of the auditor for information included in documents containing audited financial statements. However, we do not support the proposed auditing standards because they significantly expand the auditor's responsibilities, which would significantly increase audit costs without justified benefits.

Auditor Tenure

The proposed auditing standards would require the auditor to state the year the auditor began serving as auditor. We do not support this requirement as we do not think it adds meaningful information and could detract from the audit report or imply that a problem exists when one does not exist.

If there has been a change in auditors within the period covered by the financial statements, it will be obvious to users of financial statements since a report of the prior auditor would be included with the financial statements in almost all cases. In addition, a change in auditors requires the filing of a Form 8-K that discusses the change and whether there were any disagreements between the entity and the prior auditor. The audit relationship is also discussed in an entity's proxy statement. Many entities disclose how long the existing auditor has served the entity in their proxy statement, as well as factors relative to the retention and relationship of the auditors. The proxy statement provides a much better context for users to evaluate the tenure of the auditors rather than the mere inclusion in the audit report of the year the auditor began serving as auditor. Therefore, we suggest this requirement not be included in any final auditing standard.

Effective Date

The proposals indicate they would be effective for audits of financial statements for fiscal years beginning on or after December 15, 2015. We believe that the PCAOB may need to do extensive outreach efforts after responses to the proposals are received. We believe there will be substantial questions raised in the responses regarding the inclusion of critical audit matters in the auditor's report, the expansion of the responsibilities of the auditor regarding other information included in documents containing audited financial statements, and the cost of the proposals relative to the benefits obtained. For these reasons, we question whether the proposed effective date is realistic.

Presumably, the wording that the effective date would be would be "for audits of financial statements for fiscal years beginning on or after December 15, 2015" implies that a final standard would be applied only prospectively and that years prior to the year of implementation would not be included. This could have significant impact in situations where there has been a change in auditors. If the prior auditor has resigned, it might be virtually impossible to have the prior auditor involved in a manner that would increase the auditor's responsibility for other information. Even in situations where the change in auditors was not contentious, the need to involve the prior auditor beyond the re-issuance of the auditor's report on the prior financial statements would be less than desirable. We suggest the PCAOB add clarification that any final auditing standard would only apply prospectively.

*****

As set forth above, we do not support the proposals in their current form. We suggest that the requirements to disclose critical audit matters and the tenure of the auditor be removed from any final auditing standard. In addition, we suggest that the requirement to clarify the auditor's responsibility regarding other information contained in documents including audited financial statements be limited to a clarification of the auditor's responsibility under existing auditing standards and that the auditor's responsibility not be expanded. Furthermore, we believe that the requirements, as proposed, would significantly increase audit fees while providing essentially no benefit to the preparers and little benefit to users of financial statements.

Sincerely,

Henry A Ingalls

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Ms. Brown:

PPL Corporation ("PPL") appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or "the Board") proposed auditing standards included in PCAOB Release No. 2013-005 ("the Release"), *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*. PPL is an energy and utility holding company that, through its subsidiaries, owns or controls nearly 19,000 megawatts of generating capacity in the United States, sells energy in key U.S. markets, and delivers electricity and natural gas to about ten million end users in the United States and the United Kingdom.

PPL supports the PCAOB's initiative of developing standards that enhance audit quality and protect investors' interests. We also support the Board's intentions to increase the informational value, usefulness and relevance of the auditor's report. We do not support, however, auditing standards that require auditors to provide financial statement users with information that could be misinterpreted, is irrelevant or duplicative of information that is already contained in the financial statements, or whose benefits do not justify the additional costs of preparation. We, therefore, strongly disagree with aspects of both of the proposed auditing standards included in the Release. Specific observations related to each of the standards included in the Release are provided below.

## Proposed Changes to the Auditor's Reporting Model

### *Critical Audit Matters*

The proposal would require auditors to communicate "critical audit matters" ("CAMs") in the auditor's report to "help investors analyze any related financial statement accounts and disclosures more closely." CAMs are defined as those matters addressed during the audit of the financial statements that (1) involved the most difficult, subjective or complex auditor judgments, (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence, or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements.

*Relevance / Usefulness of Proposed Disclosure*
We do not believe that including a discussion of CAMs in the auditor's report would assist a financial statement user in making informed investment decisions. In fact, we believe such a discussion could potentially be misinterpreted by the reader as the auditor expressing reservations regarding the affected accounts or disclosures. In the example CAM disclosures included in Appendix B of the proposal, the auditor communicates the various challenges and complexities encountered while auditing certain accounts, but does not ultimately conclude on whether or not the amounts recorded and disclosures made related to those accounts were appropriate. We believe financial statement users would view this disclosure as a form of qualification of their opinion. If the auditor issues an unqualified opinion on the financial statements taken as a whole, we question the relevance and purpose of communicating in the auditor's report those matters that presented challenges to the auditor and the procedures that were performed to audit them.

The determination of what is considered a CAM is a matter of significant auditor judgment. We foresee a lack of consistency in the reporting of CAMs in auditor's reports for companies with similar accounts and transactions. This could lead to financial statement users believing one company contains more or less risk than another, simply due to different audit firms (or even different engagement teams from the same firm) making different determinations of what are CAMs.

In addition, most matters that would be considered a CAM because of subjective or complex accounting transactions would already be required to be disclosed within the financial statements due to standards established by the SEC and the FASB. We strongly support that such information should reside within the Company's disclosures and not the auditor's report, as described below.

*Sufficiency of Current Accounting Standards*
It is the responsibility of the SEC and the FASB to create standards to ensure transactions are appropriately recorded and disclosed by management in the financial statements in a manner that is most useful for financial statement users. If additional information is needed in order for financial statement users to analyze or understand financial statement accounts and disclosures, new accounting standards should be created, or existing standards amended, by the SEC and FASB.

We do not feel it is appropriate for the PCAOB to set audit standards that require auditors to communicate accounting related items that are the responsibility of management. As written, the proposal would likely result in auditors becoming an original source of disclosure about an entity. Independence rules prohibit the auditor from determining amounts and creating disclosures in the financial statements. We believe that if it is inappropriate for an auditor to be an original source of disclosure in the financial statements under the premise that they would be functioning in the capacity of management, it would be inappropriate for an auditor to be the original source of disclosure in any document, including the auditor's report.

*Sufficiency of Current Auditing Standards*
Audits of publicly traded companies typically involve complex accounts, transactions or disclosures that are difficult to audit. It is the responsibility of the auditor to opine on whether the financial statements, taken as a whole, are presented fairly, in all material respects, in conformity with the applicable accounting standards.

We believe the current auditing standards related to CAMs are sufficient to ensure that the amounts recorded and disclosures made in the financial statements related to those matters are appropriate. These matters are of such importance that they (1) are included in the audit engagement team's engagement completion document, which summarizes the significant issues and findings from the audit, (2) are reviewed by the audit team's engagement quality reviewer and, (3) most importantly, in our view, are communicated by the auditor to the company's audit committee. The audit committee has the requisite knowledge, perspective and authority to ensure that significant judgments made by management are appropriate and complex transactions are properly reflected in the financial statements. We believe that such matters are thoroughly vetted by management, the auditor and the audit committee to ensure they comply with the applicable accounting standards. Communication of CAMs by the auditor in the auditor's report is, therefore, not necessary and would seem to undermine the role of the audit committee and management.

*Cost / Benefit Concerns*
The increased costs of compliance with this aspect of the proposal will outweigh any perceived benefits. A significant amount of additional time will be required by audit firms in order to develop, review and present CAMs, which will result in increased audit fees. Extensive discussion and consultation with Company management, legal and the audit committee would also be required, resulting in increased internal costs. Further, because some CAMs may not be identified until late in the audit process, this additional work will be required during an already busy period within the audit and financial reporting cycle which could impact the timing of SEC filings and, consequently, the ability of investors to obtain financial information in a timely manner.

### *Amendments to the Basic Elements of the Auditor's Report*

We are not opposed to the Board's proposal to clarify the existing language in the auditor's report regarding auditor independence, audit tenure, the auditor's responsibilities related to fraud and the financial statement footnotes, and the auditor's responsibilities related to other information. The basis for requiring disclosure of an auditor's tenure, however, is unclear, as the Board has stated in the past that they have not reached a conclusion as to whether a relationship exists between audit tenure and audit quality.

**Proposed Standard on Other Information**

Currently, under AU sec. 550, *Other Information in Documents Containing Audited Financial Statements*, auditors are required to "read and consider" whether other information is consistent with the financial statements or contains a material misstatement of fact. The proposed standard would require the auditor "read and evaluate" other information on the basis of relevant audit evidence obtained and conclusions reached during the audit, and expands the definition of other information to include information incorporated by reference in the annual report that is available to the auditor before the issuance of the auditor's report. The proposed standard would also require a separate section in the auditor's report related to the auditor's evaluation of other information.

We do not support expanding the auditor's responsibilities regarding other information or including language in the auditor's report that could be perceived as an expansion of the auditor's responsibilities. The "read and evaluate" requirement in the standard will result in auditor's performing additional procedures beyond those that are performed currently under AU sec. 550. We believe the procedures currently being performed by auditors are commensurate with the nature and purpose of that information and, therefore, do not believe financial statement users will benefit from auditor's performing additional procedures on such information. Accordingly, we do not feel the additional costs and potential delays in the issuance of the financial statements, as a result of these additional procedures, would be justified.

As noted above, we do support clarifying in the auditor's report the auditor's responsibilities related to other information contained in audited financial statements.

We would be pleased to discuss our comments in further detail and provide any additional information that you may find helpful in addressing these important issues.

Very truly yours,

Vincent Sorgi
Vice President & Controller

**Re: PCAOB Rulemaking Docket Matter No. 034**

Dear Board Members,

Thank you for the opportunity to comment on the significant proposed changes to the accounting and auditing profession through the introduction of two new auditing standards, *The Auditor's Report on an Audit of Financial Statements when the Auditor expresses an Unqualified Opinion* and *The Auditor's Responsibilities regarding Other Information in certain documents containing Audited Financial Statements and the Related Auditor's Report* as well as related amendments to PCAOB Standards.

I am analyzing these proposed changes primarily as a private investor in shares of publicly traded companies but also as a business professional who has had experience dealing with auditors, preparing annual reports and appraising the financial statements of companies in a professional capacity.

**Overview**

I understand that the impetus for these proposed new auditing standards and amendments is the Board's findings that at present the audit report provides little, if any, additional useful information for financial statement users on the conduct of a particular audit. As such, the majority of users only refer to the report to check that it is unqualified. These new auditing standards and amendments are designed to address these apparent shortfalls by increasing the informational value of the audit report and thus promote the usefulness and relevance of the audit conducted and the associated audit report.

However, I have some grave reservations about some of the methods being proposed to achieve the desired outcome and in particular the unintended consequences that may follow. Below I have addressed each of the main aspects of the proposed changes.

**Critical Audit Matters**

The biggest proposed change to the requirements of the auditor's report is the inclusion of critical audit matters ('CAMs'). According to the Board, inclusion of these matters in the audit report is expected to increase the relevancy of the auditor's report and communicate meaningful information to investors regarding the most significant issues encountered during the audit as well as the nature and extent of the auditor's work in forming an opinion on the financial statements of the company.

The Board defines CAMs as the audit matters that, (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence;

and (3) posed the most difficulty to the auditor in forming an opinion on the financial statements. These CAMs are typically of such importance that they are required to be: (1) included in engagement completion documents; (2) reviewed by the engagement quality reviewer; and/or (3) communicated to the audit committee.

By being very prescriptive as to the potential sources of CAMs, the Board has effectively mandated that all auditors must include any issues raised through those three mediums in their CAM disclosure on the audit report. No auditor would want to take the risk of subsequently having to justify failing to include a matter communicated to the audit committee as a CAM. An unintended consequence of this, is that auditors may now think twice before raising a matter in the engagement completion document or to the audit committee, if they do not think the matter is necessarily serious enough to warrant disclosure as a CAM. In my view, such second guessing can only be detrimental to overall audit quality and auditor/management relationships.

A more common malady to the new CAM requirement however, will be the inclusion of too many CAMs not too few, just to be conservative. I am very critical as to how creating multi page audit reports is going to enhance its relevancy or allow it to communicate more meaningful information to the financial statement user. As rightly pointed out, users still primarily focus on the opinion in the audit and burying it in pages of CAMs may obscure it. Another risk, is that users will interpret the CAMs as ‘except for’ clauses where the audit may have received an unqualified, clean opinion, except for the significant issues raised in the CAMs. This completely undermines the value of providing an unqualified opinion on the financial statements as a whole. At best the reader is confused as to the extent to which the financial statements represent fairly, and at worst, the auditor appears contradictory and thus undependable in their final report.

The reality is, extensive disclosure of critical accounting policies, areas which require management judgment and significant uncertainty are already being made in the pages and pages of notes to the financial statements and are specifically drawn to the attention of the user in the MD&A. Including these issues as CAMs is essentially a duplication in an already lengthy and unwieldy report. If the Board believes there can be more information disclosed to better inform readers, I am not inclined to disagree, however I think that should be enforced through changes to the accounting standards that govern the preparation of financial statements, not by requiring auditors to summarize once again issues already raised elsewhere.

If this proposed new standard on CAMs ever goes live, I think there is serious potential to compromise the independence between auditors and management as management will inevitably try and influence what the auditors include as CAMs. Management would not want an issue to be included as a CAM that is omitted from the MD&A. Thus management and auditors will find themselves working ever more closely on the preparation of the financial statements and associated disclosures. The other danger of course, is that lawyers will be so heavily involved in drafting these CAMs to be watertight legally, that their intended purpose as a specific comment on a particular audit disappears. Companies in the same industries may all end up with the same half a dozen CAMs resulting in the same situation as present, where the user just scans for the opinion on the audit report and ignores the rest.

There is likely to be extensive negotiations on CAMs at a senior level and this is going to be very costly and time consuming for all parties involved. Auditors will be much more focused on mitigating their potential liability should an issue ever arise with an audit client and so will likely devote an inordinate amount of time to drafting CAMs instead of actually focusing on performing quality, core audit procedures. As such, as with most other proposed changes, the Board should solicit the input of audit firms, financial statement users and senior management to gauge their reactions before proceeding with an overhaul of this nature.

Currently, the auditor has the latitude to issue an unqualified audit report with an emphasis of matter. If an issue was deemed critical enough to warrant an emphasis of matter than by all means it should be included in that section, but to require additional broad disclosures of CAMs seems to add little value to the user who is trying to determine how fairly statements present based on the auditor's report.

At the end of the day, as an investor, I want the auditors to focus on getting sufficient appropriate audit evidence to form their opinion. Additional information that is largely duplicative may be confusing and unnecessary and may detract from the quality of the audit procedures performed. Not to mention the real or perceived risks from increased management and auditor interaction in drafting their relevant disclosures consistently. However I do agree wholeheartedly with the need to make the auditor's report more meaningful, relevant and useful to financial statement users and will share my preliminary thoughts on a more effective way to go about achieving these goals at the end of this letter.

**Statement on Auditor Independence**

The Board proposes to add a statement to the Audit Report that clearly articulates the auditor's requirement to be independent so as to enhance users understanding of auditors' requirements to be independent and also function as a reminder to the auditors of their obligations.

I agree with the inclusion of statement regarding auditor independence as it more closely aligns US GAAP with a practice that has been occurring under IFRS for several years, to the best of my knowledge. In that way, I support any amendment that standardizes the reporting requirements across regulations and minimizes confusion to financial statement users. In addition, the marginal cost of requiring an additional statement pertaining to auditor independence is essentially nil.

Whether I think a statement regarding auditor independence will actually result in increased independence or additional comfort to users in the opinion expressed is a completely separate matter. This wording is likely to just form part of a standard template that auditors will now utilize and so it is highly unlikely to increase any critical thought on their part regarding their conduct throughout the audit. Without wanting to appear cynical, auditors who are willing to compromise their professional integrity and certification by breaching independence, are unlikely to baulk at signing an audit report that contains a statement of independence. Users of financial statements will quickly notice the use of standard 'legal' language regarding independence in all audit reports and so will soon begin to dismiss it as evidence suggests they dismiss the majority of the current audit report except for the opinion.

In Australia for example, auditors are required by the Corporations Act to submit an 'Auditor's Independence Declaration' to the directors of an audit client. It is a one page letter separate and distinct from the Audit Report and is required to be included in the financial statements and annual report of a company (sometimes it is included as part of the Director's Report). This declaration is in addition to the statement of independence already contained in the audit report in accordance with IAASB requirements. I respectfully suggest that the Board work with the SEC to make an independence declaration necessary for auditors as it is a more profound statement (with heavier penalties given it is a requirement of the Corporations Act) that is made to the client's board of directors (who are often mostly non-executive). It is likely to be more effective as a tool to enhance users' understanding of auditor requirements and also remind auditors of their obligations.

**Statement on Auditor Tenure**

The Board proposes to add a requirement that the auditor disclose the consecutive years they have served as auditor in the Audit Report. The Board acknowledges that there is mixed evidence as to the impact on audit quality of longer versus shorter tenures, but believes that this information is important to disclose as investors and other report users have indicated a keen interest in it.

At first glance, I was largely indifferent to this proposed inclusion. It seems like a very low cost measure to implement and it does provide additional factual data for users to interpret as they see fit, whether they view long tenure as a threat to independence or short tenure as a risk to auditor competence. So my initial view was that it does not do any harm to include additional information that provides a more complete picture of a company's auditor.

However, after more considered thought, I respectfully submit that the Board is perhaps being halfhearted in its approach in this instance. Why provide information that is completely open to interpretation and consequently diminished in any value it may have to a user? Including information on audit tenure will only cause users to call into question either the auditor's statement of independence or their competence. Neither of these consequences are particularly helpful, when they are completely uninformed. I believe the underlying rationale for inclusion of any data regarding tenure is to allow users to determine the competence and independence of a particular auditor and thus allow the following financial statements to be viewed with additional context. The Board could propose a number of changes that would do a significantly better job of achieving this policy objective than the un-contextualized disclosure of the number of consecutive years of audit tenure. These changes should perhaps include some or all of the following;

1) *Reasons as to why an audit firm has been changed*

Any time a public company changes its auditors, it is inevitably noted with interest by the investor and banking community. This usually results in increased scrutiny by stakeholders in the company as they try to ascertain the reasons for the change. There a multitude of reasons for a change in auditor, some practical or innocuous, other reasons are far more concerning, such as disagreements over accounting treatments or financial statement disclosures. At present a company need not provide any reason as to why a change in audit firms occurred except in special situations. In 2006, this meant that reasons were given for only 28.4% of auditor changes. As part of the overarching goal to increase the usability of the auditor report and financial statements generally to users, I think there is some value in requiring disclosure, most likely in the director's report of the reasons for a change in auditor. The reasons provided should be clear enough to be meaningful to users, as such, standard legal verbiage should be avoided.

2) *Credentials of first year auditor firm*

Related to the proposal above to provide details of why an audit firm has been changed, it would be useful to provide information to financial statement users as to the credentials of the incoming auditor. This would allow the user to form a subjective view of the level of reliance that can be placed on the opinion expressed in the financial statements. Obviously the auditor must exercise due care, be competent and satisfy the requirement of obtaining sufficient appropriate audit evidence, but the reality is that corporations are undertaking increasingly complex transactions and global operating models and it takes time for a new audit firm to become intimately familiar with the organization. It is pertinent for users to be aware of the audit firms' past experience with competitors in the same sector, organizations of similar scale and global reach and similar data.

3) *Forced auditor rotation after 5 number of years*

I realize this has been a contentious issue that the Board has proposed in the past and received huge congressional opposition, most recently in July 2013 where a Bill to prevent the PCAOB from forcing public companies to rotate orders was upheld in the House of Representatives by a huge margin. However, I do not think that indicates that the regulation is without merit. Forced auditor rotation could be structured to take place every five years and pertain to lead partners and review managers on a particular client. It does not necessarily have to require a completely new firm to be hired. In that way, it allows firm and partner specific knowledge on a particular client to be shared through appropriate succession planning and thus minimize any loss of audit quality due to lack of experience or familiarity with a particular client. Lead and review auditor rotation does substantially reduce the risk of compromised independence as it would require open collusion between incoming and outgoing partners and managers, a deliberate act that would force most to reconsider the consequences. Forced auditor rotation is consistent with practices in many Commonwealth countries and was ratified by the EU last month, albeit on different terms to what I am proposing. As previously mentioned, anything that aligns PCAOB standards with global best practices should be seriously considered.

**Reporting on 'Other Information'**

Currently the auditor is required to read and consider other information provided in documents that contain the audited financial statements, such as a company's annual report. The auditor is essentially trying to identify material inconsistencies with the audited financial statements and if found, will address them with management.

It appears that the proposed new standard on Other Information is far more onerous. It requires the auditor to read and <u>evaluate</u> other information provided in documents that contain the audited financial statements. The Board believes this will allow the financial statement user to obtain useful information such as: (1) the nature and scope of the auditor's responsibilities with respect to the other information; (2) clarification of what other information was evaluated by the auditor; and (3) a description of the results of the auditor's evaluation of the other information.

The Board's expectations in regard to this proposed new standard appear somewhat contradictory. On the one hand, "The Board believes that, in practice, some auditors currently perform procedures related to other information similar to the procedures in the proposed other information standard" and that "The auditor's evaluation would be based on relevant audit evidence obtained and conclusions reached during the audit. The auditor would <u>not</u> be required to perform procedures to obtain additional evidence regarding other information not directly related to the financial statements that was not required to be obtained during the audit." However, the Board also states that the proposed new standard would, "Enhance the auditor's <u>responsibility</u> with respect to other information by <u>adding procedures</u> for the auditor to perform in evaluating the other information based on relevant audit evidence obtained and conclusions reached during the audit."

This is unclear to me. It appears that the Board is reticent to create extra work for auditors and is convinced the work is already being performed by many, but at the same time they acknowledge that the significantly higher standard of assurance and responsibility placed on the auditor for other information will likely require additional procedures to be performed. My view is that auditors are likely to adopt a conservative approach and expend significant time and resources 'evaluating' other information outside the financial statements seeing as they are going to be held responsible for it. Given the already limited time frame auditors have to meet all regulatory deadlines, my concern as an investor, is that the quality of their primary financial statement audit procedures will suffer.

There would need to be a significant favorable outcome from a cost/benefit analysis for me to support this proposed new standard as written. Indeed, as the Board suggests, there are likely to be cost implications of this new proposed standard and they should fully evaluate the nature and extent of those costs as submitted by a range of audit firms before deciding to proceed.

I think a more appropriate proposal is for an auditor to merely clarify for the financial statement user the level of work performed on other information outside of the audited financial statements. This shifts the onus back to management to take responsibility for the assertions and claims made in annual reports and other documentation that contains the audited financial statements. Financial statement users should be savvy in knowing that with the auditor clarifying the scope of work performed on the other information they need to analyze all management claims with an appropriate amount of skepticism.

**Additional standardized language in Auditor's Report**

I support the proposed improvements regarding the standardized language in audit reports. I believe the phrase "whether due to error or fraud" adds clarity that the intent of management is irrelevant when the auditors consider their responsibility to users of financial statements. However if I were to be cynical, I would suggest that additional standard legal jargon adds little real value to the users of financial statements.

**Other Matters**

1) *The relationship between IAASB and PCAOB*

I have mentioned it on a couple of occasions throughout this letter, but I think it is worth reiterating that wherever possible, it is of significant value to users of financial statements to be able to compare like with like. In an increasingly global world where investing and transacting across borders is becoming easier and cheaper, there is untold value in increasing comparability across jurisdictions. To the extent the Board can be mindful of this as the IAASB concurrently considers changes to its auditor reporting standards, I think financial statement users only stand to benefit.

An example would be the proposed IAASB disclosure requirements of key audit risks (their version of CAMs) along with key audit procedures performed in response to them. The PCAOB proposed standards appear silent on the requirement to state key audit procedures conducted, though the examples provided do contain them. While I may not necessarily agree with the concept of CAMs as proposed, I do think that the final design of the PCAOB standards should harmonize with the final version adopted by the IAASB for its key audit risks.

2) *The pass/fail model*

Given the rationale for the substantial changes proposed to audit reports, it was a surprise to see the perfunctory review given to the merits of the pass/fail model of auditing. While it has stood the test of time, I believe that it may be worthy of a more critical review. If we operate from the assumption that the vast majority of auditors are diligent and competent professionals I believe the PCAOB should be empowering them to exercise their professional judgment in awarding companies a specific rating when they receive an unqualified audit. Just as bonds are capable of having several ratings above junk bond status, not all unqualified audits are created equal.

Rather than taking the disciplinary approach of forcing an auditor to prove that they have done sufficient work through CAMs, and that they are competent and independent through the audit tenure requirement, would it not be preferable to empower auditors by giving them the latitude to exert their professional judgment. CAMs essentially shifts responsibility from the auditor to the end user as the auditor's primary role becomes one of disclosure and the end user is tasked with absorbing and interpreting increasingly voluminous amounts of complex language. However with a rating system, financial statement users will undoubtedly benefit from the increased information conveyed through each rating and perhaps even more importantly, the rating will be easy to identify and interpret.

Obviously a change like this would need to be thoroughly considered and extensively field tested, before it could even be drafted, but I believe that prima facie it may have some merit that warrants further exploration.

**Conclusion**

Thank you for the opportunity to comment on the proposed new standards in relation to audit reports and the related amendments. I have the utmost faith in the Board's ability to arrive at the most efficacious resolution on these matters for all stakeholders.

Sincerely,

S. Prabhakaran

**Re: PCAOB Rulemaking Docket Matter No. 34**

We appreciate the opportunity to provide our comments on the PCAOBs Proposed Auditing Standards relating to (i) the Auditor's Report, and (ii) the Auditor's Responsibilities relating to Other Information. Praxair, Inc. is a Fortune 250 U.S. public company that produces, sells and distributes atmospheric, process and specialty gases, and high-performance surface coatings with 2012 sales of over $11 billion. About 62% of our sales are non-U.S. and we operate in over 40 countries.

***Praxair's Position on the Release***

We have reviewed and very much support the views expressed in the comment letter to the PCAOB issued by Financial Executives International (FEI). For the reasons stated, we do not support the requirements in the Release, as proposed. Please refer to the FEI letter for detailed comments.

Thank you for the opportunity to express our comments. We would be pleased to discuss our views with the PCAOB or with its staff. Please contact me at 203-837-2158 (chuck_jacobson@praxair.com) or Elizabeth Hirsch (VP & Controller 203-837-2354, liz_hirsch@praxair.com) if you have any questions.

Very truly yours,

Charles L. Jacobson
Assistant Controller and Chief Accountant

**RE: PCAOB Rulemaking Docket Matter No. 034, *Proposed Auditing Standards —The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards***

Dear Madam Secretary:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or "Board") proposed new auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* ("proposed auditor reporting standard") and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* ("proposed other information standard"), and related amendments to PCAOB standards ("proposed amendments"), collectively "the proposals."

The proposals represent the culmination of several years' work by the Board that has taken place in the context of a global re-examination of the auditor's reporting model. While the Board affirms the value of the pass/fail model, the objective of the proposals is to increase the informational value of the auditor's report by including information specific to the particular audit.

We support changes to the auditor's report, and the auditor's responsibilities regarding other information, that will be responsive to the feedback provided by users while maintaining or improving audit quality. We believe there is much in the Board's proposals that has merit, and we commend the Board in making this significant step forward. At the same time, the fundamental changes included in the proposals pose significant challenges. We offer herein our suggestions to achieve the intended outcomes and help reduce any unintended consequences as the Board moves to the next phase of this project.

In that regard, we are pleased that the Board intends to hold a public roundtable in 2014 to discuss the proposals and the comments received from various stakeholders. We are in the process of conducting field testing to evaluate the benefits and challenges of certain aspects of the proposals, including whether application of the framework to identify and communicate critical audit matters can be executed in a consistent manner; practical issues that may arise; unintended consequences that may occur; and the audit effort and costs required in executing the proposals. We hope to share any relevant information from our field testing as the Board continues to evaluate the feedback on the proposals.

We believe that the determination and communication of critical audit matters and enhanced responsibilities related to other information will increase audit effort, and therefore costs. Perhaps more importantly, this audit effort will primarily occur late in the audit process when remaining open issues are being resolved and final reviews and analyses are occurring. This raises potential ramifications for the quality of audits and financial reporting, in addition to the monetary costs. We believe our field testing will

*PricewaterhouseCoopers LLP, 400 Campus Drive, Florham Park, NJ 07932*
*T: (973) 236 4000, F: (973) 236 5000, www.pwc.com/us*

help us to identify and better understand these issues. However, we recommend the Board conduct a robust cost/benefit analysis of the proposals, including both the potential impact on audit quality and whether there is sufficient demand for the proposed changes to justify the incremental costs. This is not to imply change should not occur, but rather that appropriate changes be made to help reduce the potential unintended consequences of the proposals.

We have evaluated the proposals by applying the overarching principles that we developed in responding to the PCAOB's 2011 *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* ("concept release") which are summarized below.

- Changes made to auditor reporting should:
  - maintain or improve audit quality
  - enhance the value of the audit to users
  - increase the reliability of information the entity provides in public reports
- Changes should maintain or enhance the effectiveness of the relationships and interactions of auditors, audit committees and management in the financial reporting process
- Auditor reporting should be sufficiently comparable
- Auditor reporting can provide greater insight based on the audit, but the auditor should not be the original source of factual data or information about the entity

We have organized our recommendations into the following topical areas:

- Critical audit matters
- Other information
- Auditor tenure
- Legal considerations related to the proposals

Finally, we have included other specific comments on the proposals in the Appendix to this letter.

**Critical audit matters**

*Overview*

One of the most significant proposed changes is the introduction of a new section in the auditor's report describing critical audit matters. We commend the PCAOB for moving away from the Auditor's Discussion and Analysis alternative in the concept release and for instead developing the critical audit matter concept. We support including critical audit matters in the auditor's report and believe that they will enhance the report's informational value. Deciding which matters should be considered for inclusion as critical audit matters and the auditor's related reporting responsibilities are essential to getting this new model right. In accord with the principles outlined above, we believe that critical audit matters should be the most important matters that, in the auditor's judgment, would be relevant to users' understanding of the financial statements.

We are pleased that there is a high degree of consistency between the critical audit matter proposal and the International Auditing and Assurance Standards Board ("IAASB") proposal related to key audit matters included in its exposure draft, *Reporting on Audited Financial Statements* ("IAASB proposal"). In our view there is room for further convergence and we encourage the PCAOB to work with the IAASB in this regard, as different models would be confusing to users. We also believe there are other areas in which convergence would be beneficial, which we discuss throughout our response.

We believe that there are unintended consequences to implementing the requirements as currently proposed, most importantly for audit quality, but also in terms of unnecessary costs. As acknowledged in question 27 on page 46 of Appendix 5 of the release (Q27), the proposed auditor reporting standard would require auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards. This is in conflict with one of our fundamental principles that the auditor should not be the original source of factual data or information about the entity, a principle which has broad acceptance by various stakeholders. As explained further below, we believe that diverging from this principle is likely to have a negative impact on audit quality.

We believe our recommendations below, including requiring that critical audit matters be material to the financial statements, strike an appropriate balance and will result in the communication of critical audit matters that provide meaningful information while limiting the unintended consequences.

*Unintended consequences related to determining critical audit matters as proposed*

Critical audit matters are defined in paragraph A2 of the proposed auditor reporting standard as "those matters the auditor addressed during the audit of the financial statements that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements."

The proposed definition of critical audit matters is anchored to the audit, rather than the financial statements. As a result, this will likely require the auditor to communicate original information about the entity. This will blur the line between an entity's disclosure and auditor reporting, which is a fundamental distinction in our view, and has the potential to chill the dialogue between auditors and management. As discussed on pages 16 and 17 of the release, some commenters on the concept release were similarly concerned that it is the entity's or the audit committee's responsibility, not the auditor's, to provide information, including any analysis, about the entity's financial statements to financial statement users. We understand that the Board believes the proposed reporting of critical audit matters would address this concern because the auditor would be reporting information about the audit, based on audit procedures the auditor performed. However, anchoring the critical audit matters to the audit rather than to the financial statements will result in instances in which a matter addressed in the audit will meet the definition of a critical audit matter, but management will not have a related disclosure requirement. This will cause the auditor to have to cross the line from reporting to disclosure and communicate previously undisclosed information about the entity. As mentioned in Q27, examples of this could include a possible illegal act or resolved disagreements with management. Another example not discussed in the release is specific concerns related to fraud risk. The unintended consequences of each of these is discussed below.

- <u>Possible illegal acts</u>: Section 10A of the Securities Exchange Act of 1934 establishes protocols for auditors to communicate potential illegal acts, including fraud, to the appropriate level of management and the audit committee and to escalate the matter when timely and appropriate remedial action is not taken. We believe including such matters in the auditor's report would undermine the proper functioning of these established processes. It may also not be in the public interest for the auditor to publicly report it because the alleged illegal act may ultimately be found to be inconsequential or have no basis in fact; therefore, it was not disclosed. If, however, it is determined that disclosure by the entity is required under the federal securities laws or the applicable financial reporting framework, the matter would most likely meet the definition of a critical audit matter and reporting by the auditor would be appropriate.

- Resolved disagreements with management: An effective, quality audit depends upon open dialogue among management, the audit committee, and auditors. In the early years after adoption of Section 404 of the Sarbanes-Oxley Act, there were concerns that entities could no longer ask their auditors about accounting and internal control matters before they were resolved because such consultation might be viewed as making the auditor part of the entity's internal controls, or that the matter discussed might automatically be deemed to be a control deficiency that would need to be evaluated from that perspective. Requiring the auditor to report publicly on resolved disagreements with management has the potential to bring back these concerns and negatively impact open dialogue. If management is deterred from engaging in early discussions with the auditor due to concerns that a change in viewpoint might be interpreted as being a disagreement between auditors and management that lack of open and frank dialogue can diminish audit quality.[1] We believe that in many situations, the issue subject to discussion would likely be reported as a critical audit matter and provide meaningful information to users. However, characterizing the discussion as a resolved disagreement can have unintended consequences for audit quality.

- Specific concerns related to fraud risk: As part of the auditor's annual risk assessment, the auditor is required to identify factors that may be indicative of a fraud risk and to plan and perform an appropriate audit response. Auditors may identify a fraud risk based upon limited information because they want to perform additional testing to evaluate whether a fraud is occurring. Due to the sensitivity of these risks, they are typically discussed only with senior level executives and/or the audit committee to avoid compromising the audit. Because fraud risks may involve the most difficult, subjective or complex auditor judgments, they would appear to meet the proposed definition of a critical audit matter regardless of whether a fraud actually occurred. We believe communicating such a matter in the auditor's report would have a negative impact on audit quality because it would reveal where the auditor is considering the risks of fraud, which will make the detection of fraud more difficult. Auditor reporting of fraud risks might also be misinterpreted by users to imply that a fraud has occurred and/or that the fraud materially impacts the entity's financial statements, when in fact there would be no basis for such a conclusion.

---

[1] Although there is currently a requirement for companies to publicly disclose disagreements with their auditors, it applies only in the limited context of changing auditors as opposed to an on-going auditor engagement. Separately, the auditor is also required to communicate disagreements with management to audit committees, but that circumstance is also different because it includes the opportunity for input by management and promotes the kind of open dialogue which leads to a quality audit.

*Recommendations to improve the framework for determining critical audit matters*

We believe the unintended consequences discussed above can largely be avoided if critical audit matters are required to be matters that are material to the financial statements.

Specifically, we recommend that critical audit matters be those "significant audit matters" (see below for further explanation) that, in the auditor's judgment,

(1) Were material to the financial statements,
(2) Involved the most challenging, subjective, or complex auditor judgments, posed the greatest challenge to the auditor in obtaining sufficient appropriate audit evidence, or posed the greatest challenge to the auditor in forming an opinion on the financial statements, and
(3) Resulted in the most significant interaction (in terms of nature or extent) with the audit committee.

The factors described in (2) are consistent with the definition in paragraph A2 of the proposed auditor reporting standard, except that we propose changing "difficult" to "challenging" because we believe "difficult" has negative overtones that suggest critical audit matters are necessarily problematic. We are recommending that (3) be included because we believe that the matters involving the most significant interaction with the audit committee are those which would be most relevant to users' understanding of the financial statements.

Before the auditor determines the critical audit matters, we believe the auditor should first identify the significant audit matters. The significant audit matters could be defined as matters that are both significant to the audit of the financial statements and that were required to be communicated to the audit committee (we discuss this further below). We believe that the auditor's identification of significant audit matters in the first instance will assist the auditor in determining which are critical audit matters. In identifying significant audit matters, the auditor should take into account the factors identified in paragraph 9 of the proposed auditor reporting standard. The auditor would then apply the above framework to determine which of them meets the definition of critical audit matters. We discuss below the sources from which significant audit matters should be selected.

Determining critical audit matters in accordance with our recommendations will in most cases naturally overlap with the Board's proposed definition of critical audit matters and the illustrative examples in Appendix 5, all of which make reference to management's related disclosures in the financial statements. Explicitly requiring that critical audit matters be material to the financial statements will also promote consistency in their identification, thereby resulting in more comparable reporting across entities. Finally, we also believe this will result in reporting that is most useful to users' understanding of the financial statements. This is because critical audit matters will be providing information about the most important financial statement matters the auditor addressed in the current year, including, for example, the more subjective areas in the financial statements involving significant management judgments. Reporting the most important financial statement matters as critical audit matters is consistent with the preliminary views of engagement teams across our network when considering the criteria for the selection of key audit matters to form our response to the IAASB proposal.

pwc

The "Recommendations for improving the reporting of critical audit matters" section below discusses what can be communicated in a critical audit matter, which goes beyond the emphasis of matter paragraph approach described in the concept release.

*Sources from which significant audit matters are selected*

Paragraph 8 of the proposed auditor reporting standard states that critical audit matters "ordinarily are matters of such importance that they are included in the matters required to be (1) documented in the engagement completion document; (2) reviewed by the engagement quality reviewer; (3) communicated to the audit committee; or (4) any combination of the three."

We believe that matters required to be communicated to the audit committee should be the sole source of potential significant audit matters (and therefore the source of all critical audit matters).

The auditor will have already considered matters in the engagement completion document or reviewed by the engagement quality reviewer in determining the matters to communicate to the audit committee. If a matter is not important enough to require communication to the audit committee, it seems very unlikely that it will be important enough to merit reporting as a critical audit matter. Furthermore, the possibility that the auditor may be required to include information in the audit report that is not required to be communicated to the audit committee appears to be taking a step backwards from the enhanced dialogue that has occurred with audit committees in recent years and that will continue under Auditing Standard No. 16, *Communications with Audit Committees*.

Therefore, we recommend deleting the references in the proposed auditor reporting standard to matters required to be documented in the engagement completion document or reviewed by the engagement quality reviewer as sources for potential critical audit matters, and limit the sources to matters required to be communicated to the audit committee.

*Recommendations for improving the reporting of critical audit matters*

Subparagraph 11(b) of the proposed auditor reporting standard requires the auditor to describe the considerations that led the auditor to determine that a matter is a critical audit matter.

First, we believe that the auditor's reporting of a critical audit matter can provide information into why the matter was important from an audit perspective by describing the principal considerations that led the auditor to conclude that the matter was a critical audit matter and a brief description of its effect on the audit. We recommend revising paragraph 11(b) to require that it is only the *principal* considerations that should be communicated in the auditor's report. As it relates to which considerations are communicated, we believe that requiring the auditor to communicate each factor identified from paragraph 9 that is relevant to the auditor's determination of the critical audit matter, as is done in the illustrative examples of critical audit matters in Appendix 5, would encourage a checklist approach that will lead to boilerplate language and diminish the communicative value of the critical audit matters. Furthermore, some of these factors require disclosure of original information about the entity, therefore raising the same concerns discussed above.

As it relates to the effect on the audit, we believe this would be a high level summary of how the auditor addressed the principal considerations that led the auditor to conclude that the matter was a critical audit matter. Similar to the Board's illustrative examples, the effects on the audit may include aspects of the financial statement line item which resulted in the most challenge to the auditor (*e.g.*, the significant assumptions in an estimate, and a brief description of how the auditor responded). However, we question whether statements about the extent of specialized skill or knowledge to address the matter, or the nature of consultations outside the engagement team regarding the matter, would be useful. These considerations in many instances are required by an audit firm's policies and methodologies rather than by existing standards and thus will lack comparability across audit reports.

Second, we recommend that paragraph 11 be clear that the auditor should not disclose information about the entity that is not required to be disclosed by management. As stated above, paragraph 9 of the proposed auditor reporting standard identifies eight factors that the auditor should take into account in determining whether a matter is a critical audit matter. Although we believe these factors are appropriate for assisting the auditor in identifying significant audit matters, certain of them, if communicated in the auditor's report when describing the considerations that led the auditor to determine that the matter is a critical audit matter, would result in the communication of original information about the entity, thus raising the same concerns about blurring the line between an entity's disclosure and auditor reporting. Severity of control deficiencies and corrected and accumulated uncorrected misstatements are examples of such information. For instance, the illustrative critical audit matter disclosure in the auditor's report pursuant to Hypothetical Auditing Scenario #3 on pages 77-78 of Appendix 5 shows the auditor reporting a control deficiency less severe than a material weakness. We do not believe it is appropriate to communicate in the auditor's report information about the entity that the entity itself is not required to disclose. This would give such information undue prominence and may serve to create confusion among users about the materiality of those matters. It may also inappropriately call into question the quality of management's disclosures, especially given that the auditor reports only on an annual basis. Communication by the auditor at the end of the period may call into question the adequacy of management's interim disclosures even though there is no requirement for management to disclose the information.

Third, we agree with the proposed auditor reporting standard in not requiring that individual conclusions about the critical audit matters be included in the auditor's report, as users may inappropriately infer from such a conclusion that a separate opinion is being expressed or additional assurance is being obtained with respect to the critical audit matter. For purposes of clarification, however, we recommend that paragraph 11 include an explicit requirement that the auditor's communication of a critical audit matter not convey that the auditor is providing a separate opinion or conclusion on a critical audit matter.

Finally, paragraph 12 of the proposed auditor reporting standard describes standardized language that should precede the discussion of the individual critical audit matters communicated in the auditor's report. Consistent with our recommendations above, we believe this should also include language:

- Conforming the reporting to the recommended definition of critical audit matters described above
- Stating that the audit included performing procedures designed to address the risks of material misstatement associated with the critical audit matters; such procedures were designed in the context of the audit of the consolidated financial statements, taken as a whole, and do not express an opinion on individual accounts or disclosures
- Stating that the communication of critical audit matters is not intended to identify all matters considered to be significant to the audit

- Stating that the auditor discussed other matters with the audit committee during the course of the audit that are not being reported as critical audit matters

*Documentation of critical audit matters*

Paragraph 14 of the proposed auditor reporting standard includes a requirement that the auditor document the basis for the auditor's determination that "non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters." We believe this requirement should not be included in the proposed auditor reporting standard because it would present implementation challenges. If the auditor identifies a matter that "would appear to meet the definition of a critical audit matter," then the auditor should communicate it as a critical audit matter. If this requirement is retained, we believe the proposed auditor reporting standard should provide more guidance on how it is to be applied. We also believe our recommendation of first identifying significant audit matters and then critical audit matters will assist in meeting the documentation requirement for the auditor to document the basis for the auditor's determination of critical audit matters.

*Cost/benefit considerations*

Additional coordination among management, the audit committee, and the auditor will be required to address critical audit matters included in the auditor's report. Although critical audit matters will be identified from matters that are already required to be documented, there will be incremental costs in analyzing and documenting which matters should be reported as critical audit matters, drafting communications about critical audit matters, and consulting with the national office when questions arise about the wording of critical audit matter reporting. These costs should not be underestimated. Communicating with audit committees and management with regard to the selection and reporting of critical audit matters will involve their time as well as the auditor's time. In addition to these recurring costs, there will be significant initial costs in educating and training auditors to execute on the new standard. As noted above, much of this work will occur at the end of the audit when remaining open issues are being resolved and final reviews and analyses are occurring. This timing may also have a negative effect on audit quality. We anticipate that our field testing will provide some insight to the potential costs and impact on audit quality, but we also recommend that the Board perform a robust cost/benefit analysis on these significant changes to the auditor's report.

*Considerations related to audits of specific entities*

In response to question 40 on page 64 of Appendix 5, we believe that audits of brokers and dealers, investment companies, and employee stock purchases, savings, and similar plans ("benefit plans") should be exempted from being required to communicate critical audit matters in the auditor's report for the reasons discussed on pages 57-63 of Appendix 5. For example, research conducted by the Board's Office of Research and Analysis indicates that ownership of brokers and dealers is primarily private, with individual owners generally being part of the management team. In addition, we agree with commenters that the financial statements of investment companies are less complex than operating companies' financial statements and that the limited nature of an investment company's operations entails fewer estimates and judgments. Similarly, we agree that the primary objective of the financial statements of a benefit plan is to provide information about the plan's assets, liabilities, and ability to pay benefits, and we believe the plan financial statements meet this objective without the auditor reporting critical audit matters. For these reasons, we believe the aforementioned entities should be excluded from the scope of the requirement to communicate critical audit matters in the auditor's report.

**Other information**

*Overview*

We support the Board's intent to enhance the existing standard by requiring communication about the nature of the auditor's responsibility in the auditor's report. As currently drafted, however, we believe the proposed other information standard will increase rather than decrease the expectation gap by requiring language in the auditor's report that is ambiguous and susceptible to widely varying interpretation by users. In addition, we believe the proposed other information standard will result in a significant increase in audit effort, particularly with respect to information not directly related to the audited financial statements (i.e., "nonfinancial information"), with a corresponding significant increase in costs that in our view will exceed the benefits. Our recommendation above that the Board conduct a robust cost/benefit analysis of the proposals is of particular importance with respect to the proposed other information standard should the Board move forward with it as currently proposed.

We believe the changes we suggest below will (i) align the nature of the audit effort with the auditor's responsibilities, in particular by differentiating the work performed on material other information directly related to the audited financial statements from that performed on nonfinancial information, and (2) resolve significant issues with respect to the communication in the auditor's report of the auditor's responsibilities related to other information.

*Expectation gap*

In our comment letter on the concept release, we stated that "describing the procedures performed by the auditor on information outside of the financial statements would clarify the auditor's responsibility with respect to such information, and help reduce the expectation gap by addressing the misperception that the auditor's opinion covers such information."

We believe the reporting in the proposed other information standard, however, may serve to increase rather than decrease the expectation gap. Notwithstanding the disclaimer of opinion, we are concerned that the language "we evaluated" is ambiguous and could be read to mean that the auditor is expressing an opinion on the other information or performing audit-type procedures. The term "evaluate" is more commonly associated with the auditor's responsibility in an audit to determine whether the evidence obtained is sufficient and appropriate to support the opinion to be expressed in the auditor's report. This is the context in which "evaluate" is used in Auditing Standard No. 14, *Evaluating Audit Results* and, more recently, in Auditing Standard No. 17, *Auditing Supplemental Information Accompanying Audited Financial Statements* (AS 17), which states on page 12 of Appendix 3 that "the evaluation should encompass, among other things, whether the information: is complete and accurate, is consistent with the audited financial statements, and complies with relevant regulatory requirements, if applicable." As a result, to evaluate typically includes consideration of completeness, which if applicable here would significantly change the auditor's responsibility and audit effort; this task is better placed with respect to other information as the responsibility of the entity and its securities counsel. If the Board retains "evaluate" either a separate examination engagement under the attestation standards should be considered or the proposed other information standard should explain specifically what is expected of the auditor in this context, including with respect to documentation.

We are also concerned that the statement in the report that "our evaluation was based on relevant audit evidence obtained and conclusions reached during the audit" is ambiguous and suggests that the audit effort with respect to other information is more extensive than the proposed procedures, particularly with respect to nonfinancial information. For instance, users may erroneously infer that the auditor obtained audit evidence and reached conclusions on all nonfinancial information. In addition, saying audit "evidence obtained" and "conclusions reached during the audit" seems to indicate that the nonfinancial information was subject to audit procedures. In reality the opposite is true, as the nonfinancial information is not in the scope of the audit. As indicated in the release and further discussed below, such information may coincidentally be gathered by the auditor during the course of risk assessment and other planning procedures, but this differs significantly from information subject to audit procedures. This may lead to an "over reliance" on the auditor's proposed statement that he or she has not identified a material inconsistency or material misstatement of fact. This issue may be exacerbated as companies expand the amount of nonfinancial information not directly related to the financial statements they disclose. For example, the Sustainability Accounting Standards Board has encouraged companies to consider disclosing sustainability topics within MD&A of the Form 10-K.

In order to mitigate the expectation gap, we believe the language in the auditor's report should clearly communicate the auditor's responsibilities by describing the nature of the procedures the auditor is required to perform, as further discussed below.

*Cost/benefit considerations*

We are concerned that the audit evidence obtained that is referred to in the proposed other information standard seems to include *all* information gathered during an audit, not just the information subject to audit procedures. Without making these distinctions, we believe the proposed other information standard typically would require the auditor to first search the audit file to determine whether information was gathered during the audit, and if so, to perform procedures in an effort to determine whether a material inconsistency or material misstatement of fact exists if the information in the audit file does not agree to management's disclosure, and finally, to document the findings from this exercise. We believe this will be a costly exercise that far exceeds the benefits.

For example, on page 13 of Appendix 6, the Board discusses how management might state in the other information that the entity has the largest market share in the entity's industry. In this example, the auditor may or may not have obtained information during the audit indicating whether management's statement is a material misstatement of fact. More importantly, the example suggests that the auditor would need to do a search of the audit file for nonfinancial information to determine whether there is something in the file about this issue regardless if it was subject to audit procedures. If the information is included in the audit file, then the auditor would need to consider whether it reconciles to the entity's filing. Searching for the information in the audit file and then determining whether there is a material misstatement of fact in the other information would involve significant audit effort with little obvious value to users as the information to which it is being compared was not subject to audit procedures. In addition, it will be difficult for the auditor to determine whether the other information truly contains a material misstatement of fact because the comparable information in the audit file (1) is not subject to audit procedures and (2) may have been gathered early in the audit and is no longer current.

Consistent with existing standards and with paragraph 5 of the proposed other information standard, we agree that if the auditor becomes aware of a potential material misstatement of fact in the other information, the auditor should discuss the matter with management and perform additional procedures, as necessary, to determine whether there is a material misstatement of fact. Our concern rather relates to the question of what audit effort should be required in searching for a potential material misstatement of fact in nonfinancial information. We believe our recommendations below with respect to nonfinancial information strike an appropriate balance from a cost/benefit perspective. If the Board believes there is value for the auditor to perform procedures on nonfinancial information, then a separate attestation engagement with separate reporting should be considered.

*Auditor's procedures*

Our recommendation is to replace the proposed "read and evaluate" proposal with one that is in our view more likely to result in consistent execution and more efficient in terms of the value provided for the audit effort involved. Specifically, we believe the proposed other information standard should include an overall requirement that the auditor read *all* of the other information (see below for comments related to scope), regardless of whether the other information is directly related to the audited financial statements. The auditor should then perform a prescriptive set of procedures, based in part on PCAOB AU 634, *Letters for Underwriters and Certain Other Requesting Parties*, with respect to material other information directly related to the audited financial statements, including qualitative statements.

The procedures to be performed on material other information directly related to the audited financial statements would compare the material other information to (1) the financial statements or (2) accounting records that are subject to the audit or have been derived directly from such accounting records by analysis or computation, and, where applicable, recalculating the mathematical accuracy of the other information. In addition, we agree that the auditor could recalculate the amounts in the other information when the formula is described in the annual report, the formula is generally understood, or the recalculation can be performed without referring to a formula as described in paragraph 4(d) of the proposed other information standard. However, we believe these procedures should be performed only on "material" other information directly related to the audited financial statements, as some other information directly related to the financial statements is not material when considered in the context of other information compared to the materiality of the financial statements. We believe that limiting these procedures to material other information directly related to the audited financial statements will reduce costs but maintain the benefits.

For other information not directly related to the audited financial statements, we believe the auditor's responsibility should continue to be consistent with that in PCAOB AU 550, *Other Information in Documents Containing Audited Financial Statements*. That responsibility is to read the other information and, if the auditor becomes aware of a potential material misstatement of fact in the other information, based on knowledge gained in the course of conducting the audit, to respond appropriately.

*Auditor's reporting*

We recommend replacing the report language in paragraphs 13 and 14 of the proposed other information standard with language that explicitly describes the limited procedures the auditor performed, as described below, and therefore will more clearly communicate the auditor's responsibility with respect to other information. In addition, we believe the statements in paragraph 13(e) of the proposed other information standard that the auditor has or has not identified a material inconsistency, a material misstatement of fact, or both should be replaced with a statement of our responsibility to report such matters in the audit report if they have not been appropriately revised. As discussed below, we believe that including a statement of fact describing our responsibility instead of stating a conclusion at a point in time will (1) help mitigate the practical challenges related to the timing of when information becomes available, (2) still provide relevant information about what would occur if the auditor becomes aware of a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both that is not resolved; and (3) eliminate the ambiguity in the report language currently proposed. We would also note that the proposed changes would also help to mitigate some of the increased litigation risks associated with the proposed other information standard.

Specifically, we believe the report should include the following:

- A statement that the auditor is required to read the other information and, with respect to material other information directly related to the audited financial statements, perform limited procedures including comparing the material other information directly related to the audited financial statements to (1) the financial statements or (2) accounting records that are subject to the audit or have been derived directly from such accounting records by analysis or computation, and, where applicable, recalculating the mathematical accuracy of the other information
- A statement that these limited procedures do not constitute an audit or review of the other information
- A statement that in the event the auditor becomes aware, based on the limited procedures performed, that the other information contains a material inconsistency with the audited financial statements, a material misstatement of fact in the other information or both, that has not been appropriately revised, the auditor is required to describe the misstatement or inconsistency in the audit report

*Timing issues*

Under the proposed other information standard the auditor would not generally be responsible for information incorporated by reference that is not available to the auditor prior to the issuance of the auditor's report. However, the proposed other information standard would apply to information incorporated by reference in a Form 10-K from the entity’s definitive proxy statement filed within 120 days after the end of the fiscal year covered by the Form 10-K.

The information in the definitive proxy statement is not subject to the original reporting requirement, but the proposed other information standard would require the auditor to apply PCAOB AU 561, *Subsequent Discovery of Facts Existing at the Date of the Auditor’s Report* (AU 561). However, AU 561 is based on information the auditor has already reported on and was not meant to apply procedures to information that is planned to be received subsequent to issuance of the auditor’s report. Therefore, it appears the proposed other information standard arguably has in essence established “prospective” reporting on information that is not available at the time of report issuance, which is not feasible. At the very least this would likely create confusion as to what information is in or out of the scope of the auditor’s report. We believe that describing the auditor’s responsibilities instead of stating a conclusion at a point in time will help mitigate some of these concerns.

If the proposed other information standard continues to require a conclusion, we believe it should either exclude the proxy from scope or provide guidance on how the auditor should report with respect to the proxy when it is available to the auditor at a date later than when the 10-K is filed. We also believe the Board should provide guidance on how the auditor should report in situations in which the audited financial statements with the auditor's report thereon are issued prior to the 10-K filing, and therefore prior to the availability of most, if not all, of the other information that is within the scope of the standard. For example, some entities first complete an annual report to shareholders before the 10-K is filed and other companies file audited financial statements on a separate 8-K at the time of their earnings release. Also, for investment companies the Form N-CSR is not required to be filed until ten business days after the financial statements are transmitted to shareholders. In these circumstances, we believe this could be confusing to users because what is being reported on is dependent on when the entity issues its audited financial statements and, in the example of audited financial statements issued at the same time as the earnings release, there may be no other information, or very little other information, available to the auditor. The reporting on other information in this example would be inconsistent with most other entities purely as a result of the timing of issuance of the audited financial statements.

As stated above, we believe that describing the auditor's responsibilities instead of stating a conclusion will help mitigate these concerns. If the proposed other information standard continues to require a conclusion, we believe it should also address these practical considerations as part of a final standard.

*Scope*

The scope of the proposed other information standard includes all the exhibits listed in an entity's annual report except for XBRL. We believe the scope should be limited to exhibits that are directly related to the audited financial statements, that is, information from the accounting records subject to the audit, or which has been derived directly from such accounting records (e.g. ratio of earnings to fixed charges). Other exhibits, such as material contracts, would continue to be evaluated for purposes of the audit as deemed necessary. For example, the auditor would read a material contract during the audit to determine whether its terms were being accounted for appropriately in the financial statements. If the contract is included as an exhibit in the annual report, it would seem unnecessary for the auditor to further evaluate it for purposes of determining whether there is a material inconsistency or a material misstatement of fact as the proposed other information standard would require. We also question what would constitute a material misstatement of fact for the many exhibits that are executed contracts or final documents or what the material inconsistency with the financial statements might be when its terms were already considered in evaluating whether the accounting was appropriate. We believe our recommendation to limit the scope to exhibits that are directly related to the audited financial statements helps mitigate these concerns.

In addition, we agree with the Board's statement on page 9 of Appendix 6 that "Audited financial statements of an entity other than the company … may be required to be included in the company's annual report. The Board does not intend for the other entity's financial statements to be considered other information in the company's annual report, under the proposed other information standard, because they are not the company's financial statements and were already subject to a separate audit." We further believe that the company's annual report should not be considered other information from the perspective of the auditor of other entity, and that this is the Board's intent as page 9 of Appendix 6 also states, "The proposed other information standard would apply to the other information in the annual report of the company that is making the filing." We recommend that this point be clarified.

*Documentation*

We believe the proposed other information standard should provide guidance on the nature and extent of required documentation. Our recommendations above to limit the auditor's incremental procedures to material other information directly related to the audited financial statements should reduce the audit effort compared to what is currently proposed. Nonetheless, it still represents greater involvement by the auditor regarding other information than is required under existing standards, and we believe documentation guidance would be appropriate. If the proposed other information standard is finalized as it is currently proposed, we believe it is even more essential that documentation guidance be provided, as determining and documenting whether all other information is part of the audit file and then documenting consideration of each statement would be a significant increase in audit effort for what appears to be of limited value.

*Considerations related to audits of brokers and dealers*

In response to question 28 on page 45 of Appendix 6, we do not support the application of the proposed other information standard to audits of brokers and dealers because we believe the SEC's recently adopted amendments to Rule 17a-5 provide users of brokers' and dealers' financial statements with sufficient information that makes additional auditor reporting unnecessary. Furthermore, the PCAOB recently adopted attestation standards that address the auditor's examination of compliance reports and the auditor's review of exemption reports which, together with AS 17, provide sufficient auditor involvement in reporting of brokers and dealers.

**Auditor tenure**

Paragraph 6(i) of the proposed auditor reporting standard requires the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the entity's auditor. As noted on page 16 of Appendix 5, the Board has not reached a conclusion related to a relationship between audit quality and auditor tenure. We believe that including auditor tenure in the audit report would create the false impression that such a relationship exists and would give undue prominence to this information. Moreover, the responsibility for hiring and dismissing the auditor rests with the audit committee, not the auditor. Accordingly, we do not believe that auditor tenure should be included in the audit report. However, if audit committees and management believe it is useful information given their specific facts and circumstances, we would not object to disclosure by them of tenure elsewhere. This would allow for the disclosure to be provided in the proper context related to oversight of the auditor.

**Legal considerations related to the proposals**

The release asks what effect the proposals would have on an auditor's potential liability in private litigation. We believe there will be a significant increase in litigation risk for the profession.

First, the proposed auditor reporting standard greatly expands the number and variety of statements which will be attributed to the auditor and under applicable federal securities laws, an entity can only be subject to suit relating to statements that are made by and properly attributed to it. The additional statements will thus greatly expand the possibilities for plaintiffs' lawyers to allege auditor misconduct, irrespective of the merit of such allegations. Second, the proposed other information standard use of the word "evaluate" is problematic given how it is used in other auditing contexts as described above, and will encourage claims that the auditor should have identified omissions in the other information, regardless of the merits of those claims. This goes well beyond what we believe the Board intended and blurs significantly the line between the roles of the auditor and those of the issuer's securities counsel. Third, the additional statements regarding critical audit matters will allow plaintiffs to parrot and mischaracterize those statements to create an incorrect appearance of specificity as required to plead scienter and survive dismissal. Finally, if these cases are not dismissed at the outset, the enormous litigation and particularly discovery costs often drive a settlement regardless of merit. The proposals will likely mean more spurious claims will be brought, fewer meritless cases will be properly dismissed at an appropriate stage, and more unwarranted settlements will need to be reached.

The changes we have proposed help mitigate some of these risks, primarily by grounding the auditor's statement in a concept of materiality, by not blurring the lines of responsibility for reporting of original information about the entity related to critical audit matters, and by describing the auditor's responsibilities instead of providing a conclusion related to other information. However, even with these changes, the incremental liability risk to the auditing profession is expected to be significant.

* * * * *

We appreciate the opportunity to express our views and would be pleased to discuss our comments or answer any questions that the PCAOB staff or the Board may have. Please contact Michael J. Gallagher (646-471-6331) or Marc Panucci (973-236-4885) regarding our submission.

Sincerely,

PricewaterhouseCoopers LLP

**APPENDIX**

This appendix provides additional comments on specific requirements in the proposals for the Board's consideration.

**Basic report elements**

*Descriptions of the auditor's responsibilities and the nature of an audit*

Overall, we support proposed changes to enhance the description in the auditor's report of the auditor's responsibilities with respect to the notes to the financial statements; material misstatement, whether due to error or fraud; and independence. We also support proposed changes to better align the description of the nature of an audit with the Board's risk assessment standards.

In addition, we continue to encourage the PCAOB to work with other standard setters, in particular the IAASB, to eliminate unnecessary differences in describing the auditor's responsibilities and the nature of an audit in the auditor's report. The auditor's responsibilities and the nature of an audit are generally the same regardless of the auditing standards being followed; therefore, having different descriptions runs the risk of confusing rather than informing users of the financial statements.

*Addressees of the audit report*

Paragraph 6 of the proposed auditor reporting standard identifies the basic elements that must be included in the auditor's report. Subparagraph 6(b) states that the auditor's report must include "addressees that include, but are not necessarily limited to, (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body." Footnote 8 related to this subparagraph states that, "For example, addressees might include other appropriate parties depending on the legal and governance structure of the company," and page 9 of Appendix 5 identifies bondholders as an example of such "other appropriate parties."

The proposed auditor reporting standard does not provide sufficient guidance on what investor other than a shareholder should be an addressee and in which circumstances an auditor would be required to address its report to bondholders, and we cannot think of any.

There could also be legal risk in expanding the required addressees. As a practical matter auditors may already include "shareholders" as an addressee of the auditor's report. Indeed, we do this in recognition of the fact that shareholders are frequently users of financial statements, and so support the report being addressed to the shareholders and the Board of Directors or equivalent body. However, we do not do this out of any obligation and this practice does not reflect the auditor's legal duty of care which runs solely to the client. While the law differs from state-to-state, as a general matter where courts have found exceptions, it is because the plaintiff has been able to show that the auditor has exhibited its intent to accept an expanded duty of care through its conduct.

A standard which creates requirements in terms of the addressee of the auditor's opinion could cause courts incorrectly to hesitate in properly applying the privity rule and risk improperly expanding the auditor's duty of care based merely on the report's addressees.

*Opining on the schedules to the financial statements*

Subparagraph 6(d) requires that the auditor's report must include "a statement identifying each financial statement and related schedule, if applicable, that has been audited" and related footnote 9 states that "various SEC rules and forms require that companies file schedules of information and that those schedules be audited if the company's financial statements are audited." Pages 10-11 of Appendix 5 also state that "the proposed auditor reporting standard would require specific references to the related notes and, if applicable, schedules because those are identified as part of the financial statements pursuant to SEC Rule 1-01(b) of Regulation S-X."

We agree with the above requirements identifying SEC-required schedules as part of the financial statements covered by our opinion. However, paragraph A(4) in the General Instructions to Form 10-K provides that ". . . all schedules required by Article 12 of Regulation S-X may, at the option of the registrant, be filed as an amendment to the report not later than 30 days after the applicable due date of the report."

We ask that the proposed auditor reporting standard clarify that when a registrant files the schedules pursuant to the instructions above or other situations when the schedules are finalized separately from the financial statements, auditors may, consistent with current practice, issue a separate report.

*Basis of opinion*

Paragraphs 6(j)-6(n) identify the required statements that comprise the Basis of Opinion section of the auditor's report. We believe that subparagraphs (m)(1) and (m)(2) should be combined into a single subparagraph as shown below to be more consistent with the presentation in the illustrative report on pages 15-16 of Appendix 1 (proposed additions are in ***boldface italics***; deletions are in ~~strikethrough~~:

m. A statement that an audit includes:
   (1) Performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks; ***such procedures include examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements***
   ~~(2) Examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements~~

*Ordering of the basic elements of the auditor's report*

We support the statements in footnotes 12, 21 and 24 of the proposed auditor reporting standard that require explanatory paragraphs, if any, to follow the Opinion on the Financial Statements section of the auditor's report, unless otherwise required by other PCAOB standards; the Critical Audit Matters section to follow the Opinion on the Financial Statements section and any explanatory paragraphs; and the Auditor's Responsibilities Regarding Other Information section to follow the Opinion on the Financial Statements section, any explanatory paragraphs, and the Critical Audit Matters section. We also support the requirements in paragraphs 21 and 59 of the proposed amendments to PCAOB AU 508, retitled *Departures from Unqualified Opinions and Other Reporting Circumstances* (AU 508), that the paragraph(s) describing the reasons for a qualified or an adverse opinion, respectively, should precede the opinion paragraph in the Opinion on the Financial Statements section of the auditor's report. We do not believe any further specific order for the presentation of the auditor's report should be required.

We do, however, believe the proposed auditor reporting standard and related amendments should require the use of section titles throughout the report, not just for the Critical Audit Matters and Auditor's Responsibilities Regarding Other Information sections of the report, as we believe section titles will help users in reading the report and bring some consistency to the format of the audit report. The section titles in the illustrative report on pages 15-16 of Appendix 1 are a good start but could be another area where convergence with the IAASB may be helpful.

**Explanatory language in the auditor's report**

We support including in the proposed auditor reporting standard a description of the circumstances in the PCAOB's auditing standards that would require explanatory language or an explanatory paragraph along with references to the relevant PCAOB standards that establish such requirements. We believe that keeping this information in a single place facilitates consistency in execution.

We also support retaining the auditor's ability to add a discretionary explanatory paragraph (an "emphasis of a matter" paragraph in extant AU 508) to emphasize a matter regarding the financial statements in circumstances when the matter does not meet the definition of a critical audit matter. Paragraph 16 of the proposed auditor reporting standard identifies examples of matters, among others, that the auditor may choose to emphasize in the auditor's report. We believe that items (a) "significant transactions with related parties" and (e) "an uncertainty relating to the future outcome of significant litigation or regulatory actions" should be removed from the list because we believe these two items are more likely to be determined by the auditor to be critical audit matters.

We do not, however, support the discussion on pages 47 and 49 of Appendix 5 stating that a matter that is the subject of an explanatory paragraph, whether required or discretionary, might also be communicated as a critical audit matter. We believe discussing the same matter both in an explanatory paragraph and in the Critical Audit Matter section of the report could be confusing to users and, accordingly, we do not support that practice. We believe the auditor should determine whether the subject matter of the explanatory paragraph meets the definition of a critical audit matter and if so, limit the discussion to the Critical Audit Matter section of the auditor's report. If the matter does not meet the definition of a critical audit matter, then it should be included in an explanatory paragraph. See below for further details related to modified opinions.

**Amendments to other PCAOB standards**

We appreciate that the PCAOB has proposed amendments to its standards by marking its existing standards to show the additions and deletions. This facilitates reviewing the amendments and we encourage the Board to continue this practice going forward.

Proposed new paragraph 58A of AU 508 would require an auditor's report expressing an adverse opinion to include The Auditor's Responsibilities Regarding Other Information (other information) section of the auditor's report. If the proposed other information standard continues to require a conclusion statement related to other information, we do not believe this conclusion should be required when an adverse opinion is expressed. We agree with the statement on page 55 of Appendix 5 that "the most important matter to investors and other financial statement users would be the reason for the adverse opinion;" in such circumstances, we believe the other information section should be omitted because its inclusion may overshadow the importance of the matter(s) giving rise to the adverse opinion.

A proposed new note to paragraph 21 of AU 508 states, "The auditor would refer to Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, to determine if the matter for which the auditor qualified his or her opinion is also a critical audit matter." We believe that a matter giving rise to a qualification of the opinion is a critical audit matter and the proposed note should be revised to be consistent with that position. Furthermore, we do not believe it is clear from the proposed amendments to AU 508 whether the Board would expect the reason for the qualification to be discussed both in the "basis for departure from an unqualified opinion" paragraph(s) which, along with the opinion paragraph, comprise the Opinion on the Financial Statements section of the report, and also in the Critical Audit Matters section of the report. We believe, as stated above, that discussing the same matter in two different sections of the auditor's report would be confusing and should not be required. We believe the discussion of a matter giving rise to a qualified opinion should be discussed in the "basis for departure from an unqualified opinion" paragraph(s) in the Opinion on the Financial Statements section of the report. A cross reference should also be made from the Critical Audit Matter section to the Opinion on the Financial Statements section of the report, such as the following example which is adapted from the IAASB's proposal: "In addition to the matter described in the Opinion on the Financial Statements section of our report, we have determined the matters described below to be critical audit matters."

RE: Comments on Proposed Auditor Reporting Standards

To Whom It May Concern:

I am writing today in support of *The Auditor's Report on an Audit of Financial Statements When Auditor Expresses an Unqualified Opinion* (the "proposed auditor reporting standard").[1] Auditors are granted a rare, unadulterated view of a company's financial position and the assumptions that go into creating the "estimated" values that are reported on the financials. Many minority shareholders, such as myself, will never have such an opportunity. A majority of this valuable knowledge is lost in the auditor's overly simplified binomial decision as to whether a company's financials are reflected fairly or not. The remainder of this letter is intended to add additional support to my position by addressing some of the PCAOB's proposed questions. Specifically, I will focus on questions regarding the critical audit matters section within the proposed auditor reporting standard.

Definitive Benefits:

One of the first questions proposed by the PCAOB is "[w]ould the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users?"[2] As expressed earlier, I obvious feel that the addition of a critical audit

[1] See, Proposed Auditor Reporting Standard, PCAOB Release No. 2013-005, August 13, 2013.
[2] Appendix 5 of Proposed Auditor Reporting Standard, PCAOB Release No. 2013-005, August 13, 2013, at A5-44.

matters section would add tremendous value to investors and users of financial statements. This conclusion stems from three lines of reasoning.

The first line of reasoning revolves around the notion of minimizing the effects of the principal/agent problem at play within public companies. Investors rely on executives and management of an organization to conduct business in a way that is profit maximizing for the shareholders, not for themselves. The financial statements are the primary way shareholders can evaluate an executive's performance. Audit firms are granted rare insight into the actual happenings within these public companies. As part-owners in these public companies, shareholders pay a significant amount of money to have audit firms verify that the information they are receiving in the financial statements is a fair assessment of the financial health of the company. Should an auditor have difficulty or concerns verifying certain aspects of the financial statement, why should the investors not be entitled to this information? I feel they should be, and doing so will help inform investors about the inner operations of their companies and reduce implications arising from the principal/agent problem.

The second line of reasoning for my option partly extends from my first. Should investors have a better understanding of the context around the difficulties encountered during an auditor's investigation, they will have a better idea of where to concentrate their efforts when evaluating a company's performance. This could save a tremendous amount of time and money for the typical investor.

The last line of reasoning for my option revolves around the notion that adding a critical audit matters section could provide more motivation for public companies to be as forthcoming and honest on their estimates and financials as possible. Certain accounting standards allow for some flexibility on how companies report certain line-items. By allowing auditors the ability to call into question the appropriateness of these subjective accounting decisions, management will be more likely to record these line-items in the most appropriate manner from an investor's view point.

Example of Potential Benefits:

To help provide context to the benefits, consider a recent company evaluation that I conducted regarding a publicly traded snack foods conglomerate. This snack foods company had been involved in a tremendous amount of M&A over the past several years. As a result, over 69 percent of their assets were within the goodwill and other intangible assets accounts.

Moving forward, management of the snack foods company will have a lot of influence over the assumptions that go into re-evaluating those assets for impairment. A critical audit matters section would have allowed an auditor to explain the subjectivity involved within these calculations and address the potential issues to shareholders. Thus, I would have been in a much better informed position regarding the financial state of the company moving forward.

Potential Obstacles to Implementation:

The PCAOB additionally raised many questions regarding the potential obstacles for the proposed auditor reporting standard. In particular, many of these questions revolved around the additional cost concerns for both the auditing firm and its client. Audit firms could face additional direct costs should they need to hire more personnel, increase the duration of the audit process with each client, or add training programs related to complying with the new standard. Client companies could incur additional direct costs relating to their audit committees reviewing the necessary matters included within the critical audit matters section.[3]

[3] PCAOB exposure draft lists this cost along with many other direct costs. See, Appendix 5 of Proposed Auditor Reporting Standard, PCAOB Release No. 2013-005, August 13, 2013, at A5-41.

Ultimately, I find little merit in arguments that these direct costs would outweigh the potential gains. First, as addressed in the PCAOB exposure draft, the changes made within the proposed auditor reporting standards are designed to ensure an "unduly burdening"[4] in the financial reporting process. Little to no additional time and resources will be used in complying with these reporting standards. The audit firm as already invested significant time and energy into verifying their client's financials. Any additional reporting within the critical audit matter section would not increase this initial sunk-cost imposed on the audit firm.

The second reason these direct costs will not outweigh the benefits to the proposal is that, ultimately, neither the audit firm nor its client will bear the full cost. Any additional direct costs that might be encountered by an auditing firm will most likely be passed along to the client. However, the proposed auditor reporting standards will instill more confidence in potential investors, thus lowering the overall cost the capital for the client. Any increase in direct costs for either the audit firm or its client would eventually be off-set.

Skeptics of the proposed auditor reporting standards also refer to the related indirect costs. These costs might not be initially tangible, but could cause major issues later on. For example, some argue that there could be a decrease in the quality of the audit of the financial statements due to the resource constraint imposed by the need to fulfill any new auditor obligations. However, I feel my previous comment regarding no additional "unduly burdening" adequately rebukes that concern.

Others argue that an additional indirect cost might include issues arising from auditors disclosing information that otherwise would not have required disclosure and could potentially be beneficial for the auditor's client's competitors. Understandably, some managers and senior

[4] See, Appendix 5 of Proposed Auditor Reporting Standard, PCAOB Release No. 2013-005, August 13, 2013, at A5-22.

executives will be hesitant to publicly disclose business sensitive information. However, any information discussed or potentially exposed in the critical audit matters section will not be of any particular advantage to a competitor. This section would not expose product secrets or covert corporate strategies, but merely discuss where the auditor had a difficult time verifying assumptions or receiving information. While this type of knowledge could be extremely beneficial to a potential investor, it should have no influence on the business practices of a competitor.

An additional challenge facing the proposed auditor reporting standard is that of standardization. In theory, standardization could help minimize many of the costs associated with the transition. From the view point of the auditor, standardization of the critical audit matters section could help to reduce any necessary training and help create more economies of scale within the process. From the financial statement users' prospective, standardization would allow for less time and energy to read and examine the difference and similarities between companies. However, over standardization of a critical audit matter section would completely nullify the purpose of the exercise. While it is a noble idea to provide a general outline and formatting instructions for the section (as is currently done within the PCAOB exposure draft), you must allow the auditor the necessary autonomy to disclose whatever matter he/she finds important. Thus the current proposed outline seems to be a good compromise.

All of the previous obstacles/implications to implementing the proposed auditor reporting standards are not valid or have an easily implemented solution. As an investor, however, there is one issue that is concerning regarding the roll out of the proposed auditor reporting standard. This proposed practice could reinforce the already high conflicts of interest existing in the auditing industry. The audit industry currently faces numerous conflicts of interests. Anytime an auditor is paid to verify the financial integrity of another organization, the auditor will feel pressure (if not an obligation) to sign-off on the related financials. Else, the auditor could feel they will be terminated and/or replaced. In a way, these proposed standards could reinforce those pressures. An auditor could feel pressure not to discuss any issues related to the audit. Given that no critical audit matters were disclosed in the new appropriate section, investors would feel more assured about the financially integrity of the company. Thus the results could be exponentially worse.

Many other potential issues still face the proposed auditor reporting standard (such as specific term definitions, documentation requirements, additional audit fees, or potential for liability in private litigation). However, these issues seem fairly minuscule and I would be unqualified to comment. As indicated earlier in this letter, I am a concerned personal investor, not an attorney or a classically trained accountant. Regardless, I strongly feel that the proposed auditor reporting standard and its critical audit matters section as it currently stands is a step in the right direction and will add significant value for the typical investor.

Thank you for considering these points.

Respectfully,

Tyler L. Prince

Re: PCAOB Rulemaking Docket Matter No. 034
Proposed Auditing Standards on the Auditor's Report and the Auditors Responsibilities Regarding Other Information and Related Amendments

Dear Sir/Madam:

QUALCOMM Incorporated (Nasdaq: QCOM), a large accelerated filer, develops, designs, manufactures and markets digital communications products and services. QUALCOMM is a leading developer and supplier of integrated circuits and system software based on CDMA ("Code Division Multiple Access"), OFDMA ("Orthogonal Frequency Division Multiple Access") and other technologies for use in voice and data communications, networking, application processing, multimedia and global positioning system products to device and infrastructure manufacturers. QUALCOMM also grants licenses to use portions of its intellectual property portfolio. At September 29, 2013, QUALCOMM employed approximately 31,000 full-time, part-time and temporary employees and occupied over 80 facilities in the United States and over 100 facilities internationally. QUALCOMM's revenues for the fiscal year ended September 29, 2013 were $24.9 billion, and net income attributable to QUALCOMM was $6.9 billion.

We respectfully submit this response to the request for comments from the PCAOB on its proposed auditing standards on *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion* ("the Proposed Auditor's Reporting Standard") and *The Auditors Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "Proposed Other Information Standard") *and Related Amendments to PCAOB Standards* (together, the "Proposed Standards"), PCAOB Rulemaking Docket Matter No. 034, dated August 13, 2013.

While we recognize that some investors and other financial statement users have expressed an interest in changing the current pass/fail model of the auditor's report such that it provides more information, we do not believe that the Proposed Standards would increase the reliability of the information that is currently provided or that the Proposed Standards would enhance the value of the auditor's report.

QUALCOMM

*Proposed Auditor's Reporting Standard*

We believe it is already understood by investors and other financial statement users that certain financial statement accounts and disclosures may involve complex accounting issues and that auditing such accounts and related disclosures may pose difficulties for the auditor. We believe that requiring auditors to report on such difficulties as Critical Audit Matters ("CAM") provides little benefit to investors and other financial statement users when (i) the CAM have been appropriately addressed enabling the auditor to issue an unqualified opinion, and (ii) the Proposed Auditor's Reporting Standard retains the pass/fail model of the auditor's report, and thus, continues to require the auditor to conclude whether the financial statements as a whole are fairly presented or not. Including CAM in the auditor's report could be confusing to investors and other financial statement users and could lead them to believe that financial statements with an unqualified auditor's report that includes a certain number (and/or types) of CAM are somehow less reliable than financial statements with an auditor's report that includes fewer (or does not include such types) of CAM. Investors and other financial statement users might also place undue reliance on CAM that pertain to certain accounts and/or disclosures when considering the financial statements as a whole.

Furthermore, including CAM in the auditor's report introduces subjectivity into the auditor's report and decreases comparability between companies' auditors' reports, as auditors will apply varying judgments in deciding what CAM to include in their report. For example, the auditor of Company A may decide to include certain CAM in the audit report while the auditor of Company B decides not to include the same CAM, despite the facts and circumstances of the two companies being similar. This may be disadvantageous to Company A if investors and/or other financial statement users make certain decisions based on which CAM and/or the number of CAM included in its auditor's report. The decreased comparability that results from auditors applying such judgment is not in the interests of investors and/or other financial statement users.

We believe that it is likely that the inclusion and/or exclusion of CAM in an auditor's report will become the subject of legal actions against auditors. While we recognize that such actions will not arise as a result of including CAM in the audit reports of the vast majority of companies, even a relatively small number of legal actions (compared to the total number of audit reports issued) will increase the auditor's costs. To recuperate these costs, and/or to be compensated for the increased risk of litigation that auditors face as a result of this proposed standard, audit fees will likely increase across the board without any benefit to companies, investors and/or other financial statement users.

Lastly, auditors' inclusion of CAM may result in the auditor disclosing confidential information that is not included in the company's financial statements and notes. We believe that companies should prepare their own financial statements and notes, and that the auditor's role is to audit, not to provide additional disclosures based on their subjective determination of CAM.

For the reasons described above, we do not believe the PCAOB should require auditors to report on critical audit matters.

The following comments are in response to certain questions set forth in the Proposed Auditor's Reporting Standard.

QUALCOMM

*3. The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?*

*4. The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this requirement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?*

We do not believe these proposed changes provide investors or other financial statement users with any information that they do not already have available to them. In addition, such changes would likely result in standard or template information about the auditor and auditing requirements being provided and would unnecessarily lengthen the auditor's report.

*Proposed Other Information Standard*

Through performing an audit, the auditor obtains a general understanding of the other information the company discloses in certain documents containing audited financial statements and the related auditor's report ("Other Information"). However, auditors do not have the in-depth understanding that management has of matters that are disclosed in Other Information as auditors are not involved in the company's day-to-day operations. For example, Other Information includes risk factors and may include technical information regarding the technology used in the company's products. Auditors typically do not possess the legal, engineering and other expertise that management uses in preparing portions of Other Information. For these reasons, we do not believe that the auditor can properly evaluate everything that may be included in Other Information without performing significant additional work and adding expertise to their engagement teams.

We believe that we would need to allocate significant additional resources to support the incremental procedures that an auditor would perform under this proposed standard. Furthermore, audit fees will increase as a result of the auditor's responsibilities regarding Other Information.

For the reasons described above, we do not believe the PCAOB should require auditors to evaluate and report on Other Information as contemplated in this standard. We believe that the current PCAOB standard (AU 550) provides investors and other financial statement users with appropriate assurance that the Other Information is consistent with the financial statements.

Sincerely,

George S. Davis
Executive Vice President and Chief Financial Officer

Re: Rulemaking Docket No. 34

To the Board:

This letter is issued to state my views on the above-referenced proposed auditing standard regarding the auditor's report. (PCAOB Release No. 2013-005, dated August 13, 2013.)

What has been proposed in the document is of lower strength than the proposals put forth in the 2011 auditor's report concept release, but in fact, I believe some of the most important ideas in that release have been refined and made their way into this proposal. I believe the most useful – and controversial - part of the 2011 release was its suggestion for the inclusion in the report of an "Auditor's Discussion & Analysis," (AD&A) as well as its suggestion for the required inclusion of emphasis of matter paragraphs. Both of these suggestions were roundly disliked by preparers and by auditors. The information they would have provided, however, would have added more information than the simple pass/fail information provided by the current auditor's report. Furthermore, the information would have been presented from a point of view that would be symmetrical with shareholders' interests.

Currently, investors only receive assurance that financial statements conform to generally accepted accounting principles. That assurance totaled $4.8 billion for the S&P 500 in 2012 – quite a price tag for letting investors know only that financial statements met the requirements expressed in thousands of pages of GAAP literature. Some investors believe they should get more value for their audit fees. Some investors might even be willing to see audit fees increase if they were getting more valuable information from the auditor; after all, the audit is supposed to be executed for the benefit of the investors, not for the benefit of the auditors or the managers. The proposed AD&A and required emphasis of matter paragraphs of the concept release would have presented better information to investors than the current standard report.

I consider the "Critical Audit Matters" (CAM) part of the current proposal to be a direct descendant of both the AD&A and required emphasis paragraphs proposals of the 2011 concept release. In fact, I think the CAM proposal is an improvement over either of the two prior proposals. It would be the combined essence of both the proposed AD&A and the inclusion of emphasis of matters paragraphs. It *should* be a concise summarization of the most critical issues encountered by the auditor – something that would capture the interest of investors.

In my view, the main problem with the CAM is that it's very much of a free form document; it is not based on a strict template like the current auditor's report. It might be omitted by auditors who claim there were no critical audit matters, and it could become a telephone book - full of facts, long in volume but containing little true information. This is where the PCAOB and its inspections process are necessary to provide enough tension in the process to keep it working honestly. It is not sufficient to simply put the CAM disclosure requirement on the backs of the auditors; the PCAOB must also be ready to make sure it is being applied properly. From outside of the PCAOB, it is not possible to judge whether the PCAOB will be able to provide that needed tension. The inspection process will be more involved if the PCAOB inspectors are looking for evidence of audit matters that perhaps, in their judgment, should have been addressed as critical, but were omitted. Conversely, PCAOB inspectors may have to spend more time considering why certain CAMs were considered to be "critical" in the first place.

I am not suggesting that CAM requirements be somehow forced into a template. I am only suggesting that for it to work as intended, auditors will have to learn to write differently than in the past, and the PCAOB will have to regulate differently than in the past. Change creates friction in processes, and friction in processes can increase costs. One argument that I suspect will be used by those who do not support the CAM proposal: it will raise audit fees. In my view, added cost that produces investor-usable information is not wasteful. As pointed out earlier, investors might be willing to pay more to get more information.

Investors might not even notice if costs rose. The most-watched measure in the investment world is probably earnings per share, and for 2012, there were 80 firms in the S&P 500 for which the after-tax audit fees did not matter even one penny per share. If audit fees were to increase for every firm in the S&P 500 to just under the point at which earnings per share would be rounded off by one penny, audit fees in the S&P 500 would increase by $2.4 billion – a 50% increase in revenues, and without affecting earnings per share. The point: there is room to increase audit fees and deliver a service to investors that they want.

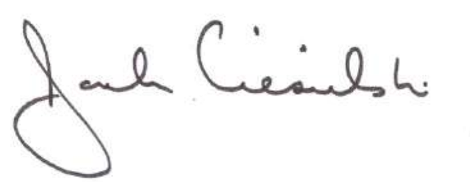
The other parts of the proposal seem far less important to investors, in my view. I support the changes to the auditor's responsibilities for other financial information included in the financial statements. The basic financial statement package, on its own, is not completely sufficient to convey financial information about the modern corporation; that is why other financial information has evolved over the years. Investors should have had at least minimal assurance that the auditor has considered it. The added reporting section on other financial information will finally provide that assurance. Though the added reporting section doesn't provide much in the way of investor-usable information, I hold that its importance lies in the fact that it will compel auditors to do sufficient work on the other financial information because their name will be attached to it.

I also support the inclusion of the auditor tenure information. I do not believe that such information will resolve the question of whether auditor tenure is a detriment to audit quality, but making the tenure information publicly and completely available will at least provide information to be used in developing objective analysis of such a hypothesis.

That concludes my comments. I have also attached a recent report my firm has published on the proposal, which includes some information about audit fees, and the "headroom" available for increase, that you may find interesting.

If you have any questions, do not hesitate to contact me. Best regards.

Sincerely,



Jack Ciesielski

# Rewriting The Audit Report: The PCAOB Moves Closer

*In the summer of 2011, the Public Company Accounting Oversight Board issued a concept release intended to improve the way auditors communicate with investors. It wouldn't take much to improve it: the current audit report is the text equivalent of a light switch, which is either on or off. The current audit report is either a pass or fail grade: the financial statements conform to generally accepted accounting principles, or they don't conform. Investors, who foot the bill for the auditor's fees, have long wanted more benefits from the auditor's inside view of a firm's inside workings.*

*The 2011 concept release was ambitious enough. It proposed the inclusion of an Auditor's Discussion and Analysis; would have required and expanded the use of "emphasis paragraphs" in the report; proposed auditor assurance on other information outside the financial statements; and would have clarified language in the standard auditor's report, particularly with regard to auditor responsibilities.*

*Two years later, the PCAOB has issued a pair of proposed auditing standards – one on the auditor's report, the other on the auditor's responsibilities for other information in documents containing the auditor's report. Neither one completely embodies the concept release's proposed changes, but some of the 2011 proposal's DNA shows through in the proposed standards.*

*The PCAOB doesn't intend to change the actions of the auditor, only the way they tell investors how they did their work – and in theory, should not cause further cost increases to companies and their shareholders. In practice, auditors are likely to be very cautious about any "new and improved" information they provide to shareholders and will take care to insulate themselves from any additional liability; you can reasonably expect costs to increase. In this report, we take an educated guess at how much costs can increase before investors will notice.*

## I. What Do The Auditors Know?

If you're an investor, your greatest hope is that they know what they're doing. You'll receive assurance that the financial statements are presented in accordance with generally accepted accounting principles (GAAP), and apart from that you don't know much else. You won't be privy to any of the findings of the auditors that led them to conclude that indeed, the covered financial statements comport to tens of thousands of pages of text relating to accounting principles. That's not a lot of comfort to most investors. That's all that auditors are willing to provide under their government-granted monopoly, even though investors expect more. Those expectations can sometimes border on a wish for a guarantee, but almost universally, investors want more than just an on/off switch of an audit report. They'll always want information of a market-moving nature, something that auditors just aren't about to start providing separately from the company.

The 2011 concept release floated some ideas that might have been more market-moving than what we see in the current reports, but they were, as one would expect, wildly unpopular with an indignant audit profession. By comparison with the current reporting model, the suggestions in the concept release were downright edgy.

## Executive Summary

- To investors, the auditor's report has long been a minor element of the financial statement package. It merely assures an investor that the financial statements comply with thousands of pages of accounting standards.
- That's not a lot of assurance, and in a post-financial crisis world, investors wonder why auditors cannot play more of an investor's advocate role in their reporting to them.
- In 2011, the PCAOB issued a Concept Release on modifying the auditor's report. It proposed several bold changes: for instance, the inclusion of an "Auditor's Discussion & Analysis," and requiring the inclusion of "emphasis of matters" paragraphs in the report. It also proposed numerous modifications that were less dramatic, but contributed to an overall stronger and clearer message from the auditor to investors.
- Two years later, the PCAOB has issued a proposal after much feedback on the Concept Release. The two changes above do not appear in the same form in the proposed rule, but in their place, perhaps, the PCAOB has proposed the auditor disclose "Critical Audit Matters" (CAMs). Essentially, the auditor would be required to report to investors the particular audit matters that keep them awake at night.
- This is the most contentious part of the proposal, for it will put the auditor in a difficult spot. Discuss matters too openly, and they may raise investor concerns about the veracity of client accounting; discuss too little, and they may provoke PCAOB inspections to investigate a lack of CAMs.
- The proposal is likely to be opposed on the grounds that it will "add to audit costs." In the S&P 500, however, the Big Four auditors could add another $2.4 billion to their annual fees without nicking EPS another penny.

A quick recap of what might have been, from the 2011 concept release[1]:

**1. Auditor's Discussion and Analysis (AD&A).** An AD&A would be a document that lets the auditor express views on the firm's overall preparation of the financial statements, and would give the auditor a forum to present investors with views on the audit process. This is a document that could provide leverage with the firm's management in contentious matters: clients would have an interest in not seeing an AD&A addressing, say, auditor concerns over management's estimates in particularly income-sensitive accounts.

**2. Required and expanded use of emphasis paragraphs.** While emphasis paragraphs already exist, they're not required – and they're rare. The concept release would have made their appearance mandatory, and put a spotlight on the most significant financial statement issues and their geography within the financial statements. They could have illuminated investors about the areas bearing significant management judgments and estimates, areas of measurement uncertainty, and any other areas the auditors felt needed clarification.

**3. Auditor assurance on other information outside the financial statements.** The concept release teed up the idea that auditors express assurance on information other than the basic financial statement package: things like the Management's Discussion & Analysis; non-GAAP information and earnings releases. Given that the audit happens only once a year, but investors act on information all through the year, there's merit to the idea.

**4. Clarification of language in the standard auditor's report.** While this part of the proposal wouldn't have expanded the audit report much, it would have cleaned up fuzzy concepts about what the auditor's job entails in the first place. This alternative would be less of an expansion of the auditor's report compared to the others, and provide more of an incremental description about the nature of an audit and the auditor's responsibilities. Clarifications pondered: the meaning of "reasonable assurance;" the auditor's responsibility for fraud; the meaning of auditor independence; and management's responsibility for financial statement preparation.

Two years later, the PCAOB has issued two proposed standards based on the 2011 concept release: *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, and Reports on Audited Financial Statements*, and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.* Neither will appear on the Amazon "most downloaded" list – the titles alone are almost a standard – but they do draw on some elements of the earlier proposal and they will provide investors with some new information to digest. A review of the basics of the two proposals is next.

[1] A concept release is a kind of trial balloon, or a testing of the water temperature, before a standard setter like the PCAOB publishes a proposal of something they intend to issue as a rule. See Volume 20, No.9, "A PCAOB Proposal: Not Your Father's Audit Opinion," for a full discussion of the concept release's provisions.

***Proposed Auditor Reporting Standard***

The proposed auditor reporting standard would continue the current pass/fail audit report model, yet it would add some very different information to it, in these three particular areas:

- Communication of critical audit matters.
- Basic elements of the audit report: added information about the auditor's independence, tenure, and responsibilities for other information in annual reports.
- Explanatory language: clarification of the auditor's responsibilities for fraud and financial statement footnotes.

**Communication of critical audit matters.** This is destined to be the most controversial element proposed. As described in the proposal, "critical audit matters" (CAMs) are those which involve the most difficult, subjective, or complex auditor judgments; pose the most difficulty to the auditor in obtaining sufficient appropriate evidence; or present the most difficulty to the auditor in forming the opinion on the financial statements. Critical audit matters are expected to be issues so important that they would ordinarily be included in the engagement completion document[2], or reviewed by the firm's engagement quality reviewer, or communicated to the audit committee, or any combination of these three. The auditor is not expected to perform new work to communicate CAMs; no new audit work is required by the proposed standard. The information about critical audit matters in the auditor's report would:

- Identify the critical audit matter;
- Describe the considerations that led the auditor to concluded that the issue is a critical audit matter; and
- Refer to the financial statement accounts and disclosures related to the critical audit matter, if applicable.

<u>If there are no critical audit matters, the audit report must give a statement to that effect as well.</u> It's not hard to see why auditors will resist modifying the audit report this way: the requirement puts them in a no-win situation. Presentation of CAMs could cast clients – who pay the auditor - in an unflattering light, and arouse short-selling activity as an unintended result of the auditor's actions. If they merely state there are no critical audit matters, or present safe, uninformative CAMs year after year, the auditor runs the risk of PCAOB admonishment. Take your pick: would you like a rock, or perhaps you prefer a hard place?

Other aspects of this provision may complicate the lives of auditors. Critical audit matters would best be captured and evaluated towards the *end* of the audit. That means there would be additional time pressure placed on the auditor when they are trying to wrap up the audit and deliver an opinion to the client, who is more concerned about filing their annual report with the SEC and releasing it to the public. It will complicate the audit firm's own work, and even though it won't require the performance of new audit tasks, it will certainly lead to more time spent on costly word-smithing with legal counsel. Expect "unintended consequences" to be a mainstay argument of the opponents of this proposal during the comment period, which ends December 11, 2013.

*Yet investors could benefit from the disclosures; at the very least, they'll be getting something more for the money they authorize to be forwarded to the auditors every year. If auditors discuss control deficiencies as critical audit matters - even if they are resolved to their satisfaction – they'll be adding some color to the internal control opinions. The audit report receives criticism for disclosing little to investors but a pass/fail grade; the internal control opinion is no more informative to investors than the audit report. The DNA from the 2011 concept release is evident in this proposed requirement: though there is no "audit discussion & analysis," or required and expanded emphasis paragraphs, this proposed addition captures precisely the kind of insider insight that auditors should possess, and brings it into the open for investors.*

**Basic Elements of the Auditor's Report.** The PCAOB's proposal would clarify the language in the auditor's report in order to improve the public's understanding about the audit and auditor's responsibilities, including the auditor's responsibilities for other information beyond the financial statements. While the existing report is retained, the proposal would require a description of some of the auditor's responsibilities, such as the auditor's responsibility for the notes to the financial statements and for finding fraud.

[2] This is a required PCAOB document summarizing the significant issues and findings resulting from the completion of the audit.

The PCAOB's proposed reporting standard would add several new elements to the auditor's report:

- Auditor independence - a statement about the auditor's current requirements to be independent of the company, to improve financial statement users' understanding about the auditor's independence obligations and to remind auditors of their obligations;
- Auditor tenure - the year the auditor began serving as the company's auditor, so as to provide financial statement users with information about the length of ties between the auditor and the company; and
- Other information - the auditor's responsibilities for, and the results of, the auditor's evaluation of other information in annual reports filed with the SEC containing the financial statements and the related auditor's report. Think of supplementary information, or most commonly, the Management's Discussion & Analysis. The auditor does not audit this information and will explicitly say so in the audit report.

In a way, the independence clarification is reminiscent of Sarbanes-Oxley's Section 302 requirement, which made CEOs and CFOs attest to the integrity of the financial statements filed with the SEC – something that probably caused sweaty brows and shaky hands for many officers. Here, the PCAOB is requiring the auditor to explain more about the legal concept of auditor independence and to declare that they are required to be independent as a firm registered with the PCAOB. Sweaty brows and shaky hands may spread to audit offices, too; in the current reporting model, the *only* mention of independence is in the phrase "Report of the Independent Auditor."

The auditor tenure disclosure will not likely have any discernible impact on the work of financial statement users. The PCAOB has been shouted down on its 2011 Concept Release suggesting mandatory auditor rotation, and this seems to be a way of dropping the subject and managing to declare some sort of victory. Having the tenure information available will give ammunition to those who want to pursue the rotation subject from either side of the debate; they will at least have tenure data for arguing their position, and it would doubtless make academic researchers happy as well.

*The auditor need not perform any additional steps to have grounds for making these statements in the audit report. Yet there will probably be "tighten up" costs made by auditors to make sure that any assertions they make – particularly any assertions about independence, whether explicit or implied – do not return to bite them. The PCAOB anticipates there may be cost-related implications for both auditors and companies.*

**Explanatory Language.** Currently, auditor reports are required to include explanatory language or paragraphs in the auditor's report, when necessary. For instance, such additional information is needed when there is substantial doubt about the ability of a company to function as a going concern, or when there has been a correction of material misstatements in previously issued financial statements. The proposed auditor reporting standard does not change this, nor does it expand the scope of the requirement. It does, however, include a clearer delineation of the auditor's responsibilities for material misstatements of the financial statements – including misstatements due to error or fraud, and including disclosures in the financial statements.

*Again, there's nothing here that directly improves the lot of financial statement users.*

***Proposed Auditing Standard on Other Information***

The audit report proposal doesn't stand alone; the PCAOB issued it simultaneously with a proposal on "other information (OFI) outside the financial statements." Examples of other information, beyond a company's financial statements and auditor's report, included in SEC 10-K filings are the "Selected Financial Data" tables and Management's Discussion & Analysis. Currently, auditors are charged with reading and considering the other information – but they don't have a reporting responsibility for what they may find.

That will change if this proposal passes. As proposed, the auditor will have increased responsibility for examining other information, and will have a reporting duty for the other information in a separate section of the audit report. The auditor will still need to read the other information, looking for material inconsistencies, material misstatements of fact or both. That determination will be made by comparing the other information to audit evidence already obtained. The auditor will need to evaluate 1) the consistency of amounts in other information and the manner of presentation; 2) consistency of any qualitative statements in the other information and its manner of presentation; 3) other information not directly related to financial statements, as compared to relevant audit evidence obtained and conclusions reached; and 4) amounts in other information calculated using amounts therein, or from the financial statements, or from relevant audit evidence.

The auditor's report will contain a brand new section entitled "The Auditor's Responsibilities Regarding Other Information," and it will contain:

- A statement that the auditor evaluated whether the other information contains a material inconsistency with the financial statements, a material misstatement of fact, or both;
- Identification of the annual report that contains the other information, and the audited financial statements and the auditor's report;
- A statement that the auditor's evaluation of the other information was based on relevant audit evidence obtained and conclusions reached during the audit;
- A statement that the auditor did not audit the other information and does not express an opinion on the other information; and
- A statement that, based on the evaluation, the auditor:
  - Has *not* identified a material inconsistency or a material misstatement of fact in the other information; or
  - *Has* identified a material inconsistency, a material misstatement of fact, or both in the other information that has not been revised, and a description of the inconsistency, misstatement of fact, or both.

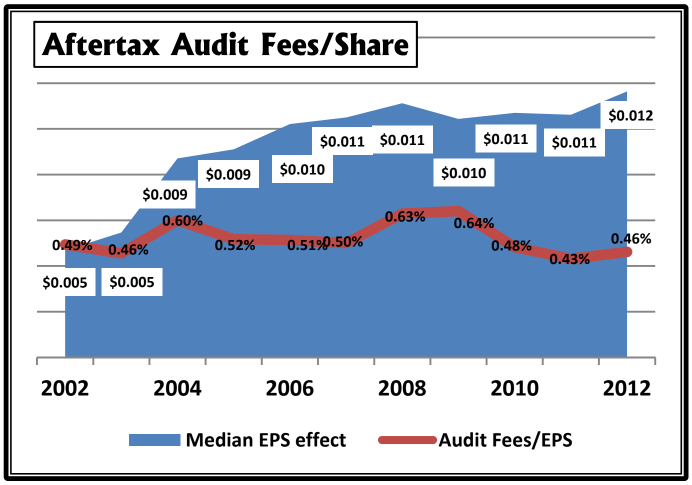
*Is the proposed improvement for other financial information better that the current situation, where the auditor "reads and considers" OFI behind the scenes, and gives no assurance to financial statement users that they did anything? Yes. At the same time, though, there's not a lot of new or ground-breaking information provided to financial statement users in the report on other financial information. The only time it would really be of interest to financial statement users is when the auditor really has identified problems with the OFI and states so in the report. That's a situation that should be exceedingly rare; the ability of the auditor to contradict management in their own report is a powerful lever that should persuade managers to appreciate the auditor's point of view.*

* * * * * * * * * * * * * * * * * * * *

**Throughout the proposal, the PCAOB takes pains to point out that the changes do not require the auditor to perform new audit procedures. The changes are aimed at the reporting by the auditor, not the work done by the auditor. Theoretically, there should be no additional costs incurred by the auditor, but the PCAOB also admits in the document that costs will nevertheless be likely to increase. The auditor is expected to say more in the report, which means a foundation has to be built in order to support their statements – and that will lead to increased file-stuffing and memo-writing, at the very least. How much additional audit cost can be supported before investors even notice? This is explored in the next section.**

## II. If An Auditor Increases Fees…

Would an investor notice? It all depends on earnings per share, which gets investor attention like nothing else.



The graph at left tells an important story about the total audit fees for 450 companies[3] in the S&P 500 since 2002. The shaded plot shows the median total after-tax audit fees per share for the firms, carried out to three places to make the trend more visible. From less than a penny a share in 2002 – only $0.005 per share – the median total fees have tripled to $0.012 in 2012. In absolute dollar terms for the 450 firms, total pretax audit fees have grown at an annual clip of 8.4%. (See table below.) Auditing: a growth industry?

*There's less than meets the eye. The line plot in the graph shows the median after-tax audit fees divided by median diluted EPS. The 2012 percentage of audit fees to EPS is just less than 2002's level – 0.46% versus 0.49%.*

When looking at absolute dollars, be careful. Despite increased audit fees, it's no more onerous a piece of EPS than in the days before Sarbanes-Oxley. In 2002, the Act was passed; audit fees increased, as can be seen in the following table. Sarbanes-Oxley's burden increased the work done by auditors, and decreased the kind of services they could perform for their clients: no more consulting engagements. The total fees drawn down by auditing firms did not increase at nearly the same rate as the total audit fees – an annual rate of only 3.8% per year over the ten-year stretch, not much more than the 2.5% inflation rate over the same period.

### Audit & Audit-Related, Tax & Other Fees For The S&P 500: 2012 - 2002

| *($ in millions)* | 10 Yr. CAGR | 2012 | 2011 | 2010 | 2009 | 2008 | 2007 | 2006 | 2005 | 2004 | 2003 | 2002 |

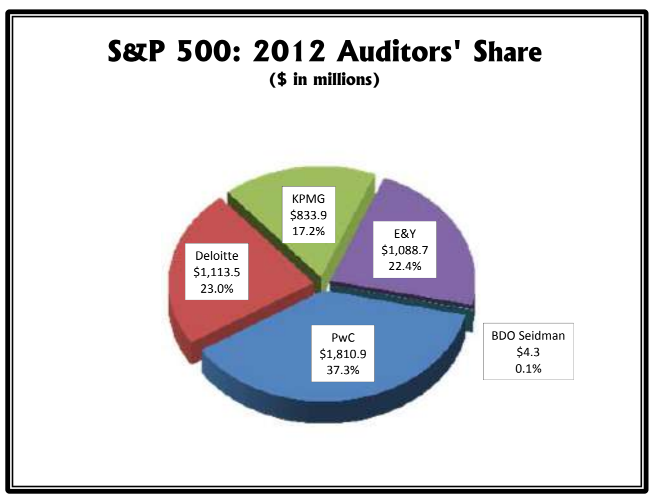
*Source: Audit Analytics, company proxy filings.*
*Table is for 450 S&P 500 firms only, prepared on basis described in footnote 3 below.*

The chart at right shows how the 2012 audit-and audit-related fee pie was divided among the S&P 500's auditing firms. Total audit and audit-related fees were $4.85 billion for 496 firms; four of them were involved with spinoffs[4] and did not have separate audit fees in their proxy.

*All hail PwC! There's no contest: PwC is the clear leader with 37.3% of all the audit and audit-related fees for the S&P 500. Deloitte and E&Y are nearly tied for a distant second. PwC has the most clients in the S&P 500 (155) and the highest average total audit fees ($11.68 million). There's a huge gap between PwC and last place Big Four member KPMG: almost $1 billion. Oddly, that's even bigger than the $829 million gap between KPMG and diminutive BDO Seidman.*



---

[3] Total audit fees are composed of audit and audit-related fees as stated in a firm's annual proxy statement. Audit-related fees are charges for services indirectly related to the annual audit. Examples would be reviews of interim financial statements, and due diligence on mergers and divestitures. There are 450 firms in the example because 50 firms did not have proxies as far back as 2002, and to include them for part of the time span would have distorted the trend. Firms did not always have proxies because they may have not been public as long ago as 2002. This was frequently the case with "spin-off" firms.

[4] AbbVie (an R.G. Associates, Inc. holding – see back page of report), ADT, Kraft Foods, and News Corp. did not report audit fees independently of the firms from which they were spun (AbbVie and News Corp.) or were spinning off (the other two).

*Source: Audit Analytics, company proxy filings.*

*Above is a breakdown of the audit and auditing-related fees for the S&P 500 by industry, and by auditing firm. Auditing firms often seem indistinguishable from one another, due in no small measure to the monotony of the auditor's report under reconsideration. They've often tried to distinguish themselves from each other, however, by pursuing an industry specialization. The financial effects of that specialization are evident in the table above: there are quite a few firms that garnered 50% or more of all the audit/audit-related fees for a particular industry. (Highlighted figures above.) The greatest dominance occurred in the Food & Staples Retailing industry, where Ernst & Young took home 61% of all audit and audit-related fees; next was the Automobiles & Components industry where PwC accounted for 59% of such fees.*

Audit fees have risen, and they're certainly concentrated in the hands of a few powerful firms. Yet investors do not often complain about high audit fees. They're expecting that auditors are delivering something of value to them, even if they don't often fawn over the service they've received. (It's hard to get excited about an auditor's clean opinion on financial statements.) In addition, audit fees are a relative bargain in a couple of ways. First, they're fractionally over a penny a share – and they've only mattered a penny a share since 2003. (See the graph on the preceding page; though the median audit fees as a component of EPS is carried out to three places for clarity, it would be a penny per share for all of the last ten years on a two-place basis, just as it is reported.) Audit fees are a relative bargain in another way: total annual fees are usually less than the total annual pay packages for just the top five executives. In fact, at many firms, they're less than just the cash paid to the top five executives. [5]

# Audit Firm Fees For The S&P 500: 2012 - 2002

| ($ in millions) | 10 Yr. CAGR | 2012 | 2011 | 2010 | 2009 | 2008 | 2007 | 2006 | 2005 | 2004 | 2003 | 2002 |

| **Annual % change:** | | *5.1%* | *2.9%* | *0.6%* | *-0.4%* | *0.8%* | *3.6%* | *7.6%* | *5.0%* | *47.2%* | *18.8%* | |

*Source: Audit Analytics, company proxy filings. Table is for 450 of the S&P 500 firms: only those with available data for all 11 years were used to keep the trend intact.*

*PricewaterhouseCoopers' growth is the most striking of the Big Four – almost a billion dollars of added revenues over 10 years of Sarbanes-Oxley Act repercussions – client consulting restrictions, increased oversight from PCAOB, internal control reporting – caused a near-doubling of audit and audit-related fees between 2002 and 2004. Yet from 2004 through 2012, fees have increased at a gradual annualized rate of 3.1% per year. In fact, during the financial crisis years of 2007-2009, the fees scarcely budged. It's hard for anyone to say auditor fees have run amuck.*

[5] See Volume 22, No. 9, "2012 S&P Executive Pay: "I'll Pour. You Say When." August, 2013. Page 8 discusses the comparison between executive pay in the S&P 500 and the auditors' fees.

At what point would investors sit up and notice audit fees? If they ever became a factor in missing earnings estimates, investors would probably rebel. These days, one does not usually hear of an earnings miss due to increasing audit fees. Though the PCAOB proposal doesn't require time-consuming new audit procedures – for instance, a requirement to physically inspect foreign-domiciled assets or to increase accounts receivable confirmation procedures to a specified minimum threshold – it will doubtless cause firms to engage in more prophylactic documentation of audit judgments and decisions. File cabinets will be more stuffed than ever if the "critical audit matters" reporting comes to fruition. Maybe as a result of increased auditor reporting, audit fees may take a bigger nick out of earnings than a penny a share, and auditors might start getting blame in earnings calls. (Of course, that might draw more attention to the new reporting done by the auditor, and managers might not want to go there, either.)

For now, assume that investors are calm about audit fees when they're at an average of a penny a share. Assume further that they won't stay calm if earnings per share are nicked by another cent per share, regardless of whatever the current level may be. For firms at the 2012 median of one cent per share, that may sound like there's room for auditors to double their fees, but it isn't so. If the audit fees increase beyond $0.0049 per share, their effect on EPS will actually be *one* whole cent.[6]

*For an individual firm, figuring out the EPS maximum effect is a minor exercise in reverse-engineering. Simply multiply $0.0049 by the diluted shares outstanding, and divide the result by an after-tax effect of 65%. The result is the audit firm's "room to cover." How much room to cover exists for auditors to raise their fees without impacting EPS by one more penny - in the whole S&P 500?*

| | Incremental Revenue Realization: | |
|---|---|---|
| *($ in millions)* | Increase by $0.0049/share | Increase Current Fee to $0.0049/share |
| PricewaterhouseCoopers | $798.1 | $61.1 |
| Ernst & Young | 618.5 | 96.6 |
| KPMG | 475.2 | 36.3 |
| Deloitte | 462.6 | 53.5 |
| BDO Seidman | 3.0 | 0.2 |
| | $2,357.3 | $247.9 |

*The answer is "quite a bit." The table at left shows how much additional revenue would be realized by each of the current auditing firms of the S&P 500 if their extra file-building can be billed to the client, up to the point where it won't affect EPS. There could be a potential $2.4 billion of additional revenues for the auditors to capture before EPS "rounding" forces budgetary control.*

The second column of numbers is interesting, in that it represents the portion of the total where the auditors aren't even currently realizing $0.0049 of audit fees per share. Surprisingly, there are 80 firms in this category. They're listed in the table on the next page.

* * * * * * * * * * * * * * * * * *

Take a moment to review the lessons of the above exercise. It's not intended to show how much auditors could grab for themselves before shareholders feel like they're pockets are being picked. Nor is it intended to imply that because audits are relatively cheap – and some might be *really* cheap – that auditors aren't doing a good job. The idea that "you get what you pay for" isn't always accurate. Bargains can be found in all walks of life! (Ask any active investment manager. It's their raison d'etre.)

*It would help investors if there were some uniform indicators of audit quality so there could be a better assessment of "getting what you pay for" than just being vaguely contented with a lack of audit failures. Developing a uniform set of audit quality indicators is one thing the PCAOB has not accomplished yet, and there's no telling if they ever will.*

The reason the above exercise is worth doing: in any financial standard-setting area, whether accounting standards or auditing standards, the "cost of a change" argument is always used as a justification by some parties for doing nothing. Without a doubt, that argument will be trotted out by opponents of this reporting proposal. The existing costs for auditors are fairly explicit, however. In this exercise, the cost information has been used to frame a level of tolerable (unnoticeable?) cost increase.

**That doesn't mean that the proposal is good or bad. It just means that when commenters start balking at a change – *any* change - because of "added costs," it's helpful to know how much additional cost might affect shareholders.**

[6] Prove it to yourself: open Excel and type .0049 into a cell with currency formatting set for two places. The result will be $.00. Change it .005, and the result will be $.01.

# Where 2012 Total Audit Fees Are Less Than $.01/Share

| *($ and shares in millions)* | Auditor | Diluted Shares | ($0.0049 x Shares)/65% | Current Total Fees | Incremental Potential | Incremental Potential % |
|---|---|---|---|---|---|---|
| Fastenal | KPMG | 297.2 | $2.24 | $0.69 | $1.55 | 226.4% |

# Highest Dollar Potential Increases

| *($ and shares in millions)* | Auditor | Diluted Shares | (0.0049 x Shares)/65% | Current Total Fees | Incremental Potential % |
|---|---|---|---|---|---|
| Bank Of America | PwC | 10,840.9 | 81.7 | 104.4 | 78% |
| General Electric | KPMG | 10,564.0 | 79.6 | 92.5 | 86% |
| Coca-Cola | Deloitte | 4,584.0 | 34.6 | 35.2 | 98% |
| Ford | KPMG | 4,015.0 | 30.3 | 40.8 | 74% |
| JPMorgan Chase | E&Y | 3,822.2 | 28.8 | 83.6 | 34% |
| Merck | PwC | 3,076.0 | 23.2 | 33.4 | 69% |
| Citigroup | Deloitte | 3,015.5 | 22.7 | 84.3 | 27% |
| Procter & Gamble | E&Y | 2,930.6 | 22.1 | 33.5 | 66% |
| Verizon Communications | KPMG | 2,862.0 | 21.6 | 27.2 | 79% |
| Johnson & Johnson | PwC | 2,812.6 | 21.2 | 44.0 | 48% |

The table at left shows the firms with a potential increase of more than 20 million in total audit fees before affecting EPS by another penny. Obviously, these are some of the largest firms in the S&P 500 by any measurey – but their huge shares outstanding make large audit fee increases possible without affecting shareholders. Below: the 30 S&P 500 firms with the largest percentage difference from their current total audit fees, *if* the fees were raised by 0.0049 per share.

# Greatest Percentage Change From 2012 Total Fees

| *($ and shares in millions)* | Auditor | Diluted Shares | (0.0049 x Shares)/65% | Current Total Fees | Incremental Potential % |

## III. What Next?

The comment period for the PCAOB's proposal closes on December 11, 2013. So far, there are few comments – but that's typical. The bulk of comments on proposals like this usually arrive in the last days of the comment period - and very often, in the week following the comment period's close.

Should investors care enough to peck out a response? The answer is a guarded "yes." What's actually proposed in the document is of much lower strength than the proposals put forth in the 2011 concept release, but that doesn't make them worthless. The most controversial part of that release was the call for an "Auditor's Discussion & Analysis," which was widely disliked, yet would have presented a point of view that should properly be symmetrical with that of the shareholders. So it is with the AD&A's direct descendant, the "Critical Audit Matters" part of this proposal. It won't be the auditors supporting this – if investors want it, they're going to have to provide the support for it. The Critical Audit Matters section is not going to happen by default.

One point of the AD&A critics was that it could all too easily become a "phonebook[7]" – full of facts, long in volume but holding little true information. That was a valid concern about the AD&A, and it's a valid concern about its direct descendant, the "Critical Audit Matters" section put forth in the current proposal. The "Critical Audit Matters" is the single most important change proposed: narrower in scope the AD&A, it should cut directly to the heart of matters. Maybe the auditor's interests are not always be aligned with the investor's interests – but the investor is always interested in the auditor's point of view.

*There's "phonebook potential" in the Critical Audit Matters presentation, for sure. Yet that doesn't hold up as a reason not to give it a try. Any financial reporting disclosure has the potential to be lame boilerplate when it's not executed conscientiously. It would be ridiculous to argue that no disclosures should ever be made just because they could be neutralized by semi-malicious intent. Besides, with the PCAOB conducting examinations of audits, investors would have to hope their presence might prevent firms from going down the path of seemingly safe, say-nothing reports on CAMs.*

Beyond the proposal to present critical audit matters, the remainder of the proposal doesn't bring much new information to investors. The auditor tenure data is new information, but it surely isn't information that will directly lead to investor action. The proposal can't be criticized for clarifying auditor independence, or criticized for more clearly stating the auditor's responsibility related to misstatements due to error or fraud. Nor can it be criticized for better stating the auditor's responsibility for other financial information. It's hard to get too worked up about these improvements, however. They seem to be minute changes that should have been done long ago; it's hard to call them ground-breaking.

**You might call the Critical Audit Matters ground-breaking, however – which is exactly why it will be stoutly opposed by the auditing community. We'll know how much they opposed it, in roughly another month.**

[7] "Phonebook" is a somewhat anachronistic term. In pre-internet days, telephone companies published thick, weighty books listing the phone numbers of people with telephones in a certain locale, including their legal names and addresses. Ripping them in half was a test of strength for body-builders, in fact. It is used here to denote a thick hard-to-read book, in much the same way the term "Sears catalogue" was once used.

Office of the Secretary
PCAOB
1666 K Street, N.W.
Washington, D.C,

Response to Release No. 2013-005
Auditor's report on an audit of financial statement
when the auditor expresses an unqualified opinion
PCAOB Rulemaking Docket Matter No. 034

I am commenting on the above proposed standard ( the "Proposal"), which I believe it should not be adopted as it would add no information for users of financial statements and cost issuers money.

I am concerned by the increasing cost of disclosures required by the various legislative and regulatory bodies affecting financial reporting. A major issue facing the United States is operating efficiency and cost control so we maintain our international competitiveness. Congress has attempted to address some of this issue with the JOBS Act.

These issues have bothered me for some time. I have had the following articles published in the New York State Society of Certified Public Accountants monthly magazine The CPA Journal:

Have We Created Financial Statement Overload? – November 2007
PCAOB Proposal for Greater Disclosure from Auditors – January 2012
The Effects of Regulatory Overload – February 2013.

In line with my comments in my articles, I believe that the Proposal creates significant additional costs. In the description of the Proposal, the costs of the disclosure are not treated in detail and the benefits are not quantified or even justified in a material way. I believe that the Proposal should not be adopted as the benefits do not justify the costs.

I am not commenting on the proposal relating to "other information in certain documents containing…the audit report" as I do not believe that that proposed standard creates costs beyond those created by AU 550, although I am not sure that the proposed standard improves AU550.

**Costs**

First the costs. The Proposal refers to them in a few places with no specificity. I believe that the additional costs relating to this proposal include the following:

- Training maybe 100,000 auditors on the requirement and how to apply it;
- Training the same number of members of management in the same issues;
- Training possibly fewer attorneys in the requirements and their implication;
- Current auditing practice would entail requiring all Registered auditors to create a section in all audit programs with instructions for field auditors to complete and sign off;
- The time on each audit for the staff to complete the applicable portion of the audit program;
- Staff and partner time parsing the issues to determine which belong in and out of the auditor's report;
- Documenting the areas where the decision was not to include the item in the auditor's report;
- Discussions with management as to what issues, why the auditor included them in the report, negotiation with management of the inclusion or exclusion of items;
- Three-way discussion among management, and auditors and counsel as to the disclosures, including writing the disclosure and working details with management and counsel; and
- Cost of paper and postage.

I have left out the cost of having anyone closely reading the entire Form 10-K having to read additional pages and maybe wonder why an item is in the MD&A but not the auditors' report.

These costs are not insignificant. Assuming annually 12 hours of accountants' time, five hours of attorneys' time, one hour each for three members of the audit committee and ten hours of management time at an average of $200 per hour it is $6,000 per registrant per year. For the 10,000 public companies, that comes to $60,000,000 burden, per year, on the US economy for a proposal that there is no evidence that it will have a value. On page A5-41 the Proposal briefly differentiates between one time and ongoing costs. I suggest that one-time costs are a misnomer as manuals have to be continuously updated and employee turnover means new employees have to be continuously trained.

In response to your questions 21 through 23 of Appendix A5 I am unable to determine the relationship between costs and size of companies and I believe that audit fees will rise to cover the additional auditor time.

**Benefits**

Of the 78 pages in Appendix A, the benefits are glossed over in three paragraphs. I note that the benefits start based on academic research and are all, I believe, (1) modified with the words "should" or "could" and (2) unclearly defined as to a specific benefit. For example the sentence "the communication of critical audit matters could help to alleviate the information asymmetry that exists between company management and investors" on page A5-23, does not:

- Indicate why the reduction in the "information asymmetry" is good,
- Give an evaluation of the present "information asymmetry" and whether the extent it could be reduced is significant, or
- Any support that the proposal would in fact reduce the "information asymmetry".

There other examples of similar thinking. The three paragraphs describing the logic of the proposal on pages A5-22 and A5-23 use the words "should", "can" "may" and "could" twelve times. No sentence I read seems to say "the proposal does definitely help this issue". As none of the benefits, if existent, seem definite, are the changes worth the cost?

Three examples are given in the Proposal: Allowance for Sales Returns, Valuation of Deferred Tax Assets and Recurring Fair Value Measurements. They raise the following questions:

- Does the proposed addition say anything more than the proposed footnote and the required reference from MD&A as to critical accounting policies?
- Is a reader of the financial statements helped to know that I consulted with my national office, another partner in my office, or in my case another CPA who may have experience in the matter?
- Would these examples reduce the "information asymmetry"? If so, how?
- I am unconvinced that these are difficult matters, e.g. it appears to me that for example one it is clear that the registrant should not record sales until ultimate sale is known under 605-15-5.

**Duplicative disclosure of matters**

The issue of whether the information being proposed to be required in the Auditor's Report adds additional information to that which is already being disclosed is not addressed. The three examples in Appendix A start with a detailed footnote with the auditor add little, if anything, to the discussion in the footnotes. I agree that with the length of published reports on public companies (see Have we Created Financial Statement Overload? suppra.) it would be useful to have a place to go to find significant items. The SEC's approach is to add more and more disclosure, much of it repetitive. A far more useful approach is to determine what disclosures are significant and those of little or no use should be discarded.

**Disclosure of matters that would otherwise not be disclosed**

I have been unable to think of an example where an item would be disclosed by the auditors but is not otherwise required to be disclosed. It would be useful to have an example of such an item. If there is none, I believe that the lack of such an example is evidence that additional disclosure is not useful.

Question 27 refers to the issue of an item that would be in the auditors' report that would not otherwise be disclosed. I have racked my brain but been unable to think of one. Would the Proposal require the following disclosure:

> We, the auditors, determined that the difficulty of finding invoices to support inventory costs was a critical audit matter. The inventory clerk had quit just before the audit and the new staff had difficulty locating the invoices. As a result the completion of the audit was delayed a week and the auditor's fee was increased by $3,000. All invoices were ultimately located and the inventory found to be appropriately priced. We obtained the approval of audit committee for the additional fee involved.

For me to think that the Proposal will be an improvement over current reporting, it would need to indicate that both (a) additional matters would be disclosed and (b) such disclosure would be both useful and justify the additional costs.

**Does anybody read this stuff?**

As I wrote in my article, Have We Created Financial Statement Overload?, the length of financial statement and other annual reporting requirements turns off reasonable readers. While I have been told that some professional analysts read every word, I sincerely doubt it. Who can read every word of all 400 pages of one company's annual report and proxy statement?

My favorite example of over disclosure is the current rules on executive compensation in the proxy statements. The disclosure in a great reform went from a comprehensible page to many pages with tables and a description of the compensation committee's process. Do you know anyone, but attorneys, who have actually read the detailed disclosures; I do not.

The additional disclosures requested in your Proposal would make the matter of length worse.

**What is necessary**

In many areas of our society, the concept that "less is more" has produced improvements. We have made financial statements unreadable as the volume is just overwhelming. I have been told that security professionals actually read them all; the ones I have spoken to try to pick and choose so they do not waste a lot of time. My article in The CPA Journal "Have we Created Financial Statement Overload" (November 2007) lists a number of suggestions, none earth-shaking, to reduce disclosure. I believe that is the direction in which we should be going.

**Other changes to the Auditor's report**

Other than the inclusion of Critical Audit matters the proposal adds about 21 lines to audit reports for the approximately 10,000 reporting companies. I do not believe that the cost of adding the 210,000 lines of type annually justifies the improvement. I have always believed that a pass/fail model should be succinct. I recommend "We have performed an audit in accordance with professional auditing standards and believe that the accompanying financial statements are in accordance with prescribed standards." It could have made it shorter. I appreciate that courts might take an approach different from mine.

Very truly yours,

Arthur J. Radin

**PCAOB Rulemaking Docket Matter No. 034**

Dear PCAOB Board,

I am writing to communicate my perspective as an individual investor regarding the PCAOB's proposed auditing reporting standard. As articulated in the PCAOB Release No. 2013-005, the major purpose of these changes would be for the auditor to communicate critical audit matters addressed during the audit of a company's financial statements. Furthermore, these critical audit matters include mention of those topics the auditors found "most difficult, subjective or complex," as well as those which were the hardest for the auditor to obtain sufficient evidence for and proved the most challenging in providing an opinion on. While I recognize that the opinions and perspectives of all of the various stakeholders that are party to the auditing report must be considered and duly weighed, I felt compelled to express my perspective as one of the many individual investors who utilize the auditing report as a factor in making investment decisions.

The PCAOB Release No. 2013-005 articulates that one of the motivations behind the proposed rule changes is to make the auditor's report more relevant to investors looking to gain insights useful for potential financial decisions concerning the audited company. Since one of the main purposes of audited financials and the auditor's report is to alleviate the asymmetry of information between company management and investors, the PCAOB reasons that by increasing the relevance of the document to investors, the audits' mission is furthered. On the other hand, there is a counter-argument to making changes to the auditor's report which reasons that it is not the responsibility of the auditors to communicate clear information about a company's financial position, but rather that of management. However, I argue that because a company's management is not an independent third party, it is not capable of objectively mitigating the information asymmetry which exists for investors. Therefore, the auditors alone should be charged with addressing this. After all, there is a benefit to the entire financial system to providing investors with clear, objective information about companies' financial positions which can be used by them to better understand and to price risk. These include a lowering of the cost of capital and increased availability of financing.

There are several other reasons for increasing information regarding an auditor's unqualified opinion. First, there is little disagreement that the current auditing environment is quite different from the one in which the auditing system was developed in the 1940s. Globalization and increased financial and operational complexity have created greater ambiguity in accounting and led to increased utilization of estimates and judgment by management in the creation of financial statements. As a result, financial statements that received a passing grade could still have misrepresentations that significantly affect the economics of a company's current and future financial position. Secondly, the spate of accounting scandals over the past decade, many of which went unnoticed, or unexposed, by auditors have changed investors' attitudes towards auditors' opinions and reports. I believe these two factors are intertwined and ultimately serve to reduce the value that investors derive from the pass/fail rating system currently in use.

While I do not argue the pass/fail standardization should be reevaluated at this juncture, I do believe that these two factors give credence to the argument that the current environment dictates a need for pass or fail opinions to be supported by a broader discussion or recognition of challenges, such as is currently proposed by the PCAOB. Such a discussion of critical matters would serve to better inform investors who currently derive little to no comfort around risk levels based upon audited financial statements.

I agree with the auditors' opinions that any additional reporting which is required, such as around critical auditing matters, should be objective and factual. Page 10 of the PCAOB Release No. 2013-005 outlines alternatives for changing the auditor's report. I agree with the possible use of all of those listed except for the option which proscribes "auditor assurance on other information outside the financial statements." I believe that this option places auditors outside of their current, well understood role, and is a line that should not be crossed. As regards the other three options, as long as they do not place significant additional costs on auditors of time or resources, and if they adhere to objective and factual statements, each should be considered equally.

I believe that success or failure of PCAOB's recommendation to include a discussion on critical audit matters within the audit report will hinge upon how these changes are communicated to auditors and enforced. There are likely a large number of accounting matters which by definition may be quite subjective, complex, and difficult to obtain sufficient evidence around. Should all of these be termed critical auditing matters? If so, any discussion of critical auditing matters within the auditor report may risk becoming standardized and comprised of stock language, which would in turn take away from the effectiveness and relevance to investors which the PAOCB is hoping to achieve. Or, should the number of critical auditing matters addressed in the audit report be limited in order to really focus on the most pressing issues? If a limit is placed, how might this affect investors' understanding of a company's financial position if a significant issue is not included simply because it is the $4^{th}$ most important matter, for example? I believe more guidance and detail needs to be given to how the PAOCB's recommendations will be implemented in order to know whether this will ultimately prove beneficial to investors.

| **Subject:** | PCAOB RULEMAKING DOCKET MATTER NO. O34 |
| **Date:** | Wednesday, December 11, 2013 7:55:07 AM |

To the members of the Board,

I am writing to encourage a small firm exception from the Docket Matter No.034. As the President of a small Broker Dealer, I feel that this Rule will impose significant additional costs to my firm and the thousands of other Broker Dealers that have fewer than 50 employees. I believe it is appropriate for the PCAOB to exempt small firms from this Rule.

Thank you for your time,

Joseph A. Hemphill III

**Re: PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 034**

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (the "PCAOB" or the "Board") proposed rule, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report, and Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting Standard* (the "proposal"). Regions Financial Corporation ("Regions"), with nearly $120 billion in assets, is one of the nation's largest full-service providers of consumer and commercial banking, wealth management, mortgage and insurance product services. We serve customers in 16 states across the South, Midwest and Texas, and through our subsidiary, Regions Bank, operate approximately 1,700 banking offices and 2,000 ATMs.

We have significant concerns regarding both the proposal's requirement to discuss Critical Audit Matters ("CAM" or "CAMs") and the proposal's more stringent standard of auditor involvement in other information presented within the financial statements ("other information").

In an article published in their September 2013 issue of Heads Up, Deloitte and Touche noted that, "The proposal represents the most significant expansion of tailored information provided about a financial statement audit by auditors to the user community in the profession's history". In our opinion, these disclosures, along with the expanded responsibility for other information, will not promulgate decision useful information, will inappropriately infringe on management's disclosure responsibilities, will weaken and obscure the audit report, will create confusion among users, will impair an auditor's ability to meet filing deadlines, and will result in significant increases in audit fees. Consequently, we cannot support the Board's proposal as it currently exists.

**CAM**

The proposal would require auditors to disclose, in their report, matters that the auditor deems "critical" to the audit. As defined, CAMs are, "Those matters the auditor addressed during the audit of the financial statements that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements"[1]. For each CAM, auditors would describe the considerations that led them to identify the matter as a CAM and, when applicable, refer to the financial statement accounts and disclosures that relate to the CAM[2]. The proposal also seems to implicitly prefer the inclusion of language describing the audit procedures related to the CAMs[3].

When considering matters that may qualify as CAMs, we noted topics that were highly duplicative of issues extensively covered within existing company disclosures. The required disclosure of critical accounting policies, significant estimates, business and operating trends, financial and operating risk factors, and other required disclosures adequately address matters that may be considered CAMs. Considering this, it is unclear what would be gained by adding CAMs to the audit report.

Also, as noted by the Board on pages A2-42-3 of the proposal, in certain cases (e.g., significant deficiencies in internal controls, certain going concern considerations), the auditor would be required to disclose information in the report that would not otherwise be disclosed by management. This reverses the normal relationship of management and auditor. Management, not the auditor, is solely responsible for preparing and filing financial reports. The auditor should not be the first source of information, provide disclosure of information not disclosed by management or have the appearance that it is making financial reporting decisions on behalf of management.

Next, we are concerned that CAMs may lead users to construe implicit qualifications of the audit report creating a perception that there may be weakness or deficiencies in management's judgment, financial statement estimates or internal control environment, when none exists. The description of such complex matters would be necessarily abbreviated, given the forum; therefore, it is very likely that the enumeration of such matters will be taken out of context or simply misunderstood. Because the proposal would result in a large gap between private company audit reports and public company audit reports, we believe confusion would be particularly poignant among users of both report types.

[1] PCAOB Release No. 2013-005, Page A1 – 7, paragraph 9
[2] PCAOB Release No. 2013-005, Page A5-38, paragraph E – "[In addition to identified CAMs, auditors are also required to document] non-reported audit matters that would appear to meet the definition of a critical audit matter that were not critical audit matters".
[3] We say "implicitly" because, although the matter is discussed within the background section, the actual proposal is silent on the matter. However, the three illustrative examples on pages A5 – 67-78 all include illustrative language of auditing procedures performed to deal with the CAMs in question. This matter needs further clarification from the Board if CAMs are included in the final rule.

These misunderstandings or confusions could lead to several unintended conclusions. For example, users may equate the number of CAMs to inherent risk, users may conclude that auditors are expressing piecemeal opinions on individual accounts or matters, or users may conclude that auditors are expressing reservations about the matters in question. These conclusions would be understandable, yet inappropriate.

To further illustrate potential confusion among users, take, for example, the discussion of significant deficiencies in internal control within CAMs. Any such discussion necessarily challenges the current definition of significant control deficiencies, which is understood to have a less than material impact on the overall financial statements. Can a matter be both immaterial and "critical" to the auditor's report? This seems very confusing to us. We contend that if a matter is immaterial, then it is functionally irrelevant to the user. Thus, any discussion thereof only serves to weaken and obscure the auditor's opinion.

In light of the reasons outlined above, we believe CAMs should be omitted from the Board's final rule.

**Other Information**

The proposal's description of auditor responsibility for other information will significantly expand the scope of work by introducing required audit procedures to support the auditor's conclusion about the evaluation of other information. Specifically, under PCAOB AU Section 550, the auditor is required to "read" and "consider" other information, whereas under the proposal, the auditor is required to "read" and "evaluate" the other information on the basis of relevant audit evidence obtained and conclusions reached during the audit.

We don't believe most users of financial statements will be aware of the additional procedures required to meet this change. Where some users are aware, we are concerned that they might perceive the auditor's "conclusion" on the evaluation of other information as an opinion on this information. The proposed "negative assurance" report structure does not allow the user to know, exactly, what was independently verified and what was not. Some disclosures within other information involve forward looking financial information or insights that often are not objectively verifiable. The proposed "negative assurance" structure may, however, cause this information to appear subject to auditor procedures, when it was not. As such, we believe the proposed rules regarding other information will confuse users, thereby weakening and obscuring the auditor's opinion.

**Conclusion**

The purpose of the audit report is to definitively state whether the financial statements are fairly presented, in all material respects. The user community is best served when the audit report clearly and concisely communicates the auditor's singular, final conclusion. In other words, the user simply wants to know, "Are the financial statements fairly presented? Yes or no." We believe the current audit report effectively answers this question. Consequently, we do not believe the changes in the proposal are warranted.

Again, we appreciate the opportunity to comment on this proposal and we thank you for considering our views. If you have any questions about our comments or wish to discuss this matter further, please contact me at (205) 326-4972.

Sincerely,

Brad Kimbrough
Executive Vice President, Controller and
Chief Accounting Officer

**To:** Comments
**Subject:** FW: Docket 034: Proposed Auditing Standards on the Auditors" Report
**Date:** Tuesday, December 03, 2013 7:40:41 PM

I appreciate the opportunity to respond to the PCAOB's Release 2013-005 regarding proposed changes to the Auditors Report. I have several specific concerns about the proposal and they are enunciated below.

PERSPECTIVE

To put my comments into context, I am a former Audit Partner with one of the Big Four having served for over thirty years in various offices in both line and leadership positions. Following that, I was in the venture capital business for over ten years and financed a number of technology companies that became publicly listed during the mid to late 90's. Currently, I am the Chairman of the Audit Committee of Cray Inc. (CRAY), Chairman of the Enterprise Risk Committee of Columbia Banking System Inc. (COLB) where I also serve as a member of the Audit Committee and designated financial expert. I am the immediate past Chairman of the Board and member of the Audit Committee of ART Technology, Inc. (ARTG). I also sit and have Chaired several investment committees for endowed foundations and do so as General Partner of our private investment vehicle, Regis Investments, LP. I have, therefore, a broad background as both a provider and user of audit services.

CRITICAL AUDIT MATERS (CAM)

By far my greatest concern is with the expansion of the audit report to include commentary upon CAM's. The present Pass/Fail test of the auditor's report has served us well for many years and should not be degraded. CAM's profile and auditor involvement would undoubtedly become a very comprehensive list and will dominate the report by sheer volume because auditors will be very reluctant to omit anything that could later be used as a basis for oversight deficiency or litigation. And for what? Most of the commentary will likely concentrate on matters already full vetted either in the Footnotes to the Financial Statements under Significant Accounting Policies or in the MD&A (where such policies are repeated and further explained as to impact). I am also concerned that there will be an unintended consequence because there will be an understandable reluctance by auditors and management to routinely and openly discuss matters requiring a robust dose of judgment with Audit Committees for fear or raising matters to the level of CAM's that heretofore were considered of secondary or tertiary importance . I submit that the present results-oriented rather than process-oriented reporting process is superior and should be retained.

ADDITIONAL INFORMATION

Auditors have long considered other information contained in documents filed with the SEC and that practice is codified in AU 550 which states that the auditor shall “read” and “consider” whether such information is consistent with the audited financial statements on which an opinion is rendered. While the proposal appears, on the surface, not to change that responsibility significantly, the requirement to “read” and “evaluate” as well as develop a conclusion that there are no “material inconsistencies with the financial statements” and/or a “material misstatement of fact” proposes a significant new burden on auditors. Furthermore, the proposal extends that responsibility beyond the immediate-filed report (e.g. 10K) to anything to which it references (e.g. Proxy) and pertains not just to information that is contained or derived from the audited financial statements but to other data as well. While I have not canvassed all of the major accounting firms, at least two have suggested that this change will require significant additional audit work and extended procedures. I sincerely doubt the cost/benefit of this proposal and suggest that it be dropped. If the PCAOB were, in the alternative, to require language in the auditor’s report of the type that auditors now give under AU 550, I would not oppose that suggestion.

AUDITOR TENURE

The issue of auditor tenure should be left in the hands of the Audit Committee which is responsible for this matter under Sarbanes Oxley. The tenure of the auditor is already available to anyone who wishes to do some modest research and the facts are that it is not perceived by investors as an important data point. Furthermore, it is not the real issue that Audit Committees deal with when they are considering appointment or reappointment. It is far more important to know the tenure, skill set and industry-specific credentials of the specific engagement team than the duration of the business association. I am not satisfied that this provides any meaningful information and believe it should simply be dropped. In the alternate, I would suggest a more thorough discussion in the annual Audit Committee report as to the process by which auditor selection is accomplished.

Thank you for your consideration.

Daniel C. Regis

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and

The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

To the members of the Board:

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, nonpublic, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. The majority of these small firms have fewer than 50 employees. Rhodes Securities, Inc has approximately 5 full time employees and less than $1mm in annual revenues. We also have about 15 1099 independent Financial Consultants.

For these small independent and privately owned businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is appropriate and consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight. It is important that regulation for small firms remain relevant to the business model and investing public; we encourage the Board to seriously consider the matter of small firm exemption.

Thank you for your consideration,

**Subject:** Fwd: PCAOB Release No. 2013-005; Rulemaking Docket Matter No. 034
**Date:** Friday, December 06, 2013 6:51:10 PM

Board Members and Staff of the PCAOB;

Thank you for providing me with an opportunity to share my views on the above referenced Release and Rulemaking Docket Matter. Over the last ten years I served at various times as the Audit Committee Chairman of three public companies listed on the New York Stock Exchange. I clearly recognize the importance of fairly presenting the financial position and results of operations of any enterprise and the auditors role in providing assurance. I do have some serious concerns with the proposed standards which would expand the standard audit report and add additional assurance on other information in documents containing audited financial statements. I must point out these are my personal views and not necessarily the views of the companies on whose Boards I serve. I will attempt to be brief.

The Responsibility for Full and Fair Disclosure Rests with Management

It has always been and will remain a registrant's responsibility for the accuracy of the financial statements and full and fair disclosure in accordance with FASB and SEC rules and regulations, which are voluminous and intended to be all encompassing. Significant risks and judgments must also be disclosed in order to properly inform a user of financial statements. As a result of a constantly growing set of requirements, financial statements and the notes thereto have become overly lengthy and complex. Further, the use of judgments and estimates pervades almost every element of the accounts in the statements. Since judgments and estimates are by their very nature imprecise, financial statements must be viewed in their totality, as has always been the case. To single out "critical audit matters" would, in my opinion, cause a focus on certain elements rather than the statements taken as a whole. Additionally, I am concerned that the proposal could be misinterpreted and could lead to unintended consequences such as restricting the critical open dialogue between the Audit Committee and the auditors over concern that such matters might become a matter of public record even if there was no impact on financial reporting.

The role and work of the PCAOB has significantly strengthened the audit process. These proposals do little, if anything, to further that process and it is difficult to see what real value is being added to the operation of the capital markets for the additional cost of this proposal. See below also.

What consideration has been given to a situation where a PCAOB examination results in a requirement that an auditor modify its report to add (or delete) a critical audit matter? Would the auditor be required to withdraw the existing report, thus invalidating the company's filings that include such statements. This could have a material impact on a company that might be in the midst of a transaction or registration even if there is no change to the financial statements or other information included in the filed documents.

Historical Financial Statements Play a Somewhat Limited Role in a Company's Market Valuation

While additional information about a company is provided in Management's Discussion and Analysis and other commentary in filed documents, the market (investors, analysts, etc.) values an enterprise based upon expectations for the future. Many, but not all, companies provide earnings guidance or other information, good and bad, that may impact future earnings. How would auditors be expected to give assurance on management's view of the future and what standards would be used?
While always being mindful of Regulation F-D, many companies follow earnings releases with earnings calls which are open to all interested parties. Many companies also hold investor days, speak at

industry conferences or participate in meetings sponsored by investment bankers. To what extent would auditors be required to give assurance on matters discussed at these meetings and what would be the basis for such assurance?
Investors and analysts use all of the above information as well as their knowledge of trends in the market (broadly and company specific), peer company performance, impact of existing and proposed regulations, geopolitical impacts, etc., in order to make decisions or recommendations regarding the value of a particular company. Historical and projected future earnings are then subjected to an estimated multiple in arriving at perceived value.
Thus a large variety of factors (only some of which I have attempted to outline above) enter into a valuation upon which investors may or may not act. In my opinion, it is highly doubtful that the proposed modifications to the standard auditors' report would have any meaningful impact on the market, thus any cost to implement would far outweigh its value.

I appreciate the opportunity to comment on these proposals and thank you for taking the time to consider my views.

Most sincerely,
John R. Roberts

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Sir or Madam:

As a member of the financial community and investor, I am in agreement with the Board's proposal that the following auditing standards will likely be beneficial particularly in firm and financial statement analysis.

***1) The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion***

***2) The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report***

While I agree that these amendments will be advantageous to investors, they should be executed with a degree of caution so that auditor opinions maintain their level of objectivity and are not tainted by subjective rationale. Requiring auditors to provide more detail of their unqualified opinions can quite easily push the appearance of the report into the realm of subjectivity and consequently stray from the view as an unbiased opinion. Following is a discussion of my thoughts on both of these new auditing standards.

The existing auditor report is not useful for investors beyond the confirmation of whether the opinion is unqualified. The general 'boilerplate' type language is likely not even read by members of the financial community, so requiring auditor's to supplement the pass/fail recommendation with backup is a logical amendment. In particular I believe the 'Critical Audit Matters' section will help investors understand what actually went into the audit, which is a process that they are likely blind to at this point. Highlighting areas of difficulty can help investors pursue their own analysis of the areas of concern and potentially help them make better investment decisions. Additionally, and possibly more importantly, this may motivate companies to avoid confusing or irrational accounting practices which currently may be flying under the radar but would be exposed under this new reporting standard. For example, stock analysts currently have no insight into what auditors found difficult during an audit, or where there had to be subjective judgment. Increasing the level of transparency may potentially have an impact on stock analyst recommendations which ultimately finds its way back to the way the company is reporting its financials. Overall, having multiple eyes analyzing a firm's audit is more likely to unravel areas of concern as opposed to a single and secret auditor opinion.

Two specific aspects of this proposed amendment which I also feel will be valuable to investors and the financial community are the sections detailing the auditor's experience as well as the 'other information' portion. Accepting an auditor's opinion as valid could have a lot to do with that auditor's experience, given information about their experience is provided. At this point users of financial statements accept the auditor's opinion and have no idea how experienced or knowledgeable the auditor is. This amendment will require auditors to state their tenure so investors will be aware of how much experience the auditor has analyzing the specific company's financials. Similar to when selecting a doctor, individuals likely look at the doctor's experience (years in occupation, school, etc.). I believe the same process would be helpful in analyzing financials. The 'other information' section also seems helpful as it will bring to light any issues outside of the financial statements which may go overlooked otherwise. Things such as material misstatements in the manager discussion and analysis will be addressed by the auditors, which could be extremely helpful to investors who are not so experienced at reading the actual financial statements and focus more on other information.

While this is a logical step in financial reporting, I believe it comes with the risk of portraying auditors outside of their role as providers of unbiased opinions, and could potentially lead to backlash from the financial community. Currently these auditors experience issues during audits that require a degree of judgment or subjectivity. They are not required to disclose this information which, from the perspective of investors simply looking to see if the opinion is unqualified, maintains the auditor's reputation as a third party and independent analyst. With the proposed reporting amendment, investors will be able to see where these auditors applied subjective rationale which these investors may not necessarily agree with. In addition, companies may also disagree with the rationale which could lead to challenges from the financial community. Depending on how much power or influence these community members and firms have, there could be lobbying and regulatory action to amend the way audits are done which may or may not be beneficial to the community as a whole. Of course challenges and amendments to the subjectivity of auditors which enhance the integrity and usefulness of auditor reports would be considered improvements, but not all challenges are improvements when there are multiple special interest groups with varying degrees of power over regulation. Therefore while I feel this type of transparency is important, it could also lead to an array of new issues that the PCAOB and regulators should be prepared to deal with.

While I do understand the resistance from auditors in regards to this reporting amendment, I believe this may eventually make the jobs of auditors easier as well. Currently there is backlash from these professionals as they feel the explanation of financial statements is a job for the firm and its management, and not the auditors. However as an investor and member of the broader financial community, I am well aware that firms and their management often have an inclination to hide tricky items within their financial statements. Therefore there is a misalignment of interests between investors and firms, and auditors are ultimately the only intermediaries that can help to alleviate this issue of information asymmetry. Firm management typically has to work closely with auditors so they are typically aware of what items the auditor has significant issues with. However, there is no incentive on the firm's part to make life easier for the auditor if the process of working through these tricky issues will never be publicized to investors. With the rollout of this reporting amendment, management will know that their confusing or suspicious activity is likely going to end up in the auditor's report. This creates an incentive for the firms to keep their books clean, and eventually makes life easier for auditors.

Sincerely,

Faraz Saleem

**RE: PCAOB Rulemaking Docket No. 034**
**Release No. 2013-005**
**(the "Proposed Auditing Standards" or the "Release")**

Members of the Board:

We appreciate the opportunity to respond to the Proposed Auditing Standards.

This letter represents a group response from several of the largest Engineering & Construction (E&C) companies, which are primarily SEC registrants, ("we", "us" or "Industry"), all of whom provide long-term construction related services to project owners around the world. Although each of the undersigned has its own individual perspective on the Release, we are unified in our view that there are aspects of the Proposed Auditing Standards that require revision for the reasons expressed herein.

**Summary:**

With respect to the proposed changes to the auditor's standard report:

- We *agree* that the current pass/fail model be retained as the foundation of the auditor's report on his or her audit of financial statements;
- We *agree* that the auditor's report be modified to include a statement that the auditor is required to be independent with respect to the company in accordance with the United States federal securities laws and the applicable rules and regulations of the SEC and the standards of the PCAOB;
- We *agree* that the auditor's report be modified to include a statement that PCAOB standards require the auditor to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud;
- We *disagree* with the proposed requirement that the auditor's report be modified to include a statement regarding the year the auditor began serving consecutively as the company's auditor;
- We *disagree* with the proposed change to the auditor's standard report to include a description and discussion of critical audit matters.

With respect to the proposed changes to the auditor's responsibilities regarding other information included in an annual report filed with the SEC under the Securities Exchange Act of 1934, as amended (the "Exchange Act") (the "Proposed Other Information Standard"):

- We *disagree* with the proposed requirements to expand the auditor's responsibilities regarding such "other information", and to modify the auditor's report to include a section discussing the results of the auditor's evaluation of such other information.

*****

For the remainder of this response, we focus on only those elements of the Proposed Auditing Standards with which we disagree.

**Proposed Changes to the Auditor's Standard Report:**

*Auditor Tenure*

We are unconvinced that disclosing the tenure of the independent auditor in the auditor's report provides useful information to the readers of our financial statements.

Consider the following excerpt from the Release (page A5-15):

> "Auditor tenure has been the subject of discussion for decades and continues to be a topic of discussion today. Some academic research indicates that engagements with short-term tenure are relatively riskier or that audit quality is improved when auditors have time to gain expertise in the company under audit and in the related industry. Meanwhile, other academic research indicates that investors that participated in a study view long-term auditor-company relationships as adversely affecting audit quality. Other academic research suggests that both short and long tenure can have detrimental effects on audit quality."

And consider the following comment from PCAOB Board Member Jay D. Hanson at the Board's open meeting on August 13, 2013:

> "I also question whether it is appropriate for the Board to require disclosure in the audit report of the auditor's tenure with the particular client. We explained in the release that in developing the proposed requirement, the Board has not reached a conclusion regarding the relationship between audit quality and auditor tenure and that the Board's inspection process has not been designed to determine a relationship between audit quality and auditor tenure. Thus, we do not have, at this point, any data indicating that audit tenure has any correlation with audit quality. The mere fact that the Board requires a disclosure about auditor tenure, however, might suggest that the Board believes the information to be meaningful."

As specious as it is, the above excerpt from the Release lays the only foundation for the proposed change to the auditor's standard report to include auditor tenure. There is no evidence to support that auditor tenure has any relationship with audit quality. The "support" is in fact mere suspicion held by a small element within the investing community that the longer an auditor has been providing audit services to a client, the poorer the quality of the audits. The lack of any real data linking audit tenure to audit quality is confirmed by Member Hanson in his August 13 comments. In spite of this, the Board seems willing to throw-up its hands and proposes the modification to the auditor report to include tenure in a "What could it hurt?" approach. Disclosure of auditor tenure in the auditor's report conveys a linkage between auditor tenure and audit quality that simply does not exist.

We believe this proposed change to the auditor's standard report is unnecessary. The Board should only adopt those changes to auditing standards that have been properly vetted, are supported by empirical evidence, and are justified based on a cost/benefit analysis.

We also wish to point out that the SEC's rules regarding the preparation and content of proxy statements already require information regarding a company's independent auditors. Therefore, auditor tenure may be better disclosed in a company's proxy statement as part of the other auditor-related disclosures rather than as a random, disembodied statement in the auditor's opinion.

*Disclosure and Discussion of Critical Audit Matters ("CAMs")*

The Proposed Auditing Standards would create a new section in the auditor's report in which CAMs would be communicated. CAMs are defined as those matters addressed during the audit of the financial statements that:

- involve the most difficult, subjective, or complex auditor judgments;
- pose the most difficulty in obtaining sufficient appropriate audit evidence; or
- pose the most difficulty to the auditor in forming an opinion on the financial statements.

The Release suggests that CAMs would ordinarily consist of those matters of such importance that they are documented in the engagement completion document (pursuant to AS 3), or are reviewed by the concurring / quality review partner, or are communicated to the Audit Committee.

We disagree for the need of this new section, for the following reasons:

First, we do not believe our shareholders and users of our financial statements will view any discussion of CAMs as particularly meaningful. Although they will see CAMs as something interesting, and initially "novel", our shareholders and other stakeholders will invariably gloss over the discussion and place their reliance on the straight pass/fail opinion of the auditor, "because it clearly conveys the auditor's opinion regarding whether the financial statements are fairly presented" (page A5-5 of the Release). Including several pages in the auditor's opinion discussing CAMs will only detract from the auditor's opinion. We also believe there is a significant risk that the CAMs discussion will become rote over time as auditors realize that the readers of our financial statements value their *opinion* over any soon-to-become-boilerplate *discussion*.

Second, existing rules promulgated by the SEC require issuers to disclose and discuss critical accounting principles and estimates applied in the preparation of their financial statements. We find it hard to believe that the matters determined by the auditor to be CAMs would vary from the company's list of critical accounting principles and estimates. These disclosures are quite lengthy and often include, in the case of estimates, a sensitivity analysis based on changes in assumptions. Accordingly, the requirement to include in the auditor report a discussion of CAMs would be largely redundant and would not increase the reader's understanding of those matters nor their impact on the financial statements.

Third, and following the discussion in the preceding paragraph, we believe the proposed rule regarding CAMs *may in fact* lead to the auditor disclosing matters *not* covered by the issuers' disclosure of critical accounting principles and estimates. We believe that, in an abundance of caution and partially in response to concerns of being second-guessed by the PCAOB through the Board's inspection process, auditors may decide to over-disclose CAMs. To err on the side of caution may be viewed as prudent by our auditors and an easy way to avoid outside criticism of their audits and their reports. Disclosure overload has been the bane of issuers for years and is only getting worse. It is costly, often confusing, and reduces, rather than adds, value to the readers of our financial statements. To allow disclosure overload to creep into the area of auditing and reporting would be a profound mistake.

Fourth, we believe a discussion of CAMs will be confusing to the readers of our financial statements as users try to interpret how CAMs, which represent matters that are significant to the *audit process*, should be used or applied when evaluating a company's financial statements.

And last, we believe there is a significant risk through the CAMs discussion for the auditor to disclose company information not found elsewhere in the financial statements. We do not believe as a matter of principle that auditors should be the original source of information about an entity, its business, financial condition or results of operations.

**The Proposed Other Information Standard:**

The Release significantly changes the auditor's responsibilities related to other information contained in documents that include a company's audited financial statements.

First, the Release expands the definition of "other information" to include information that is incorporated by reference into a company's annual report. Second, the Release expands the responsibilities of the auditors vis-a-vis such other information to include an "evaluation" to determine whether such other information contains (i) a material inconsistency with data or information contained in the audited financial statements, or (ii) a material misstatement of fact.

We disagree with the proposed Other Information Standard.

PCAOB AU Sec. 550 already requires auditors to "read and consider" other information included in documents containing audited financial statements. AU Sec. 550 provides guidance to the auditor if he or she determines such other information is materially inconsistent with information contained in the financial statements or is an outright misstatement of fact. The guidance in AU Sec 550 is reasonable, practical, and focuses on communication between the auditor, management, and the company's audit committee to resolve the auditor's concerns.

Had the Release included a modest reporting requirement based on AU Sec 550, we may have supported it as we understand that many users of financial statements are not aware of the auditor's current responsibilities with respect to such other information. But as proposed, the Release is, frankly, over the top. If adopted, the Proposed Other Information Standard would greatly increase audit costs without providing any benefit to the readers of our financial statements. We believe auditors would need to increase their procedures to conduct their evaluation of other information included in, or incorporated by reference into, a company's annual report, not only due to the expansion of information to be considered by the proposed standard, but also due to a need to perform additional procedures necessary to "evaluate" such information for a material inconsistency or material misstatement of fact. These procedures will increase the costs of our audits.

Much like that section of the Release discussing CAMs, there is scant evidence supporting the need to expand the auditor's responsibilities over other information. We are sure the Board realizes that most changes affecting the auditor and his or her audit process invariably impacts the companies being audited, increasing audit costs and putting additional pressure on companies to meet their very tight filing deadlines.

Like the proposed requirement over CAMs, expanding the auditor's responsibilities over other information will require companies to institutionalize another layer of processes necessary to facilitate the additional procedures auditors will feel obligated to perform. Too much of the Release is devoted to addressing vague investor curiosity regarding insight into the audit process and the auditor's overall responsibilities without considering the additional audit costs. Such curiosities need to be vetted much more by the Board prior to making significant changes to current audit standards.

We'd be pleased to discuss our concerns with the Board. Please feel free to call Geoff Sanders of Jacobs Engineering Group at +1.626.578.6833, or by email to geoff.sanders@jacobs.com.

Office of the Secretary, PCAOB
1666 K Street, N.W.,
Washington, DC 20006-2803
Subject: PCAOB Release No. 2013-005/ Rulemaking Docket Matter No. 034

Dear PCAOB Board:

Please find my commentaries below on the two proposed auditing standards "The auditor's report on an audit of financial statements when the auditor expresses an unqualified opinion" and "The auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report."

We understand from Page 2, your comment "that the auditor's report in the United States has changed very little since the 1940s and that the existing pass/fail model is thought by many to be useful, because it provides a clear indication of whether the financial statements are presented fairly." In my opinion and that of many highly qualified risk management practitioners and especially those from outside of the United States, the auditor's report has had serious deficiencies for a long time and as such, I reject the notion that the financial statements present fairly, as most of the major business risks that a company incurs, evolve from the strategic planning process and not the financial statements. The financial statements are one of the culminating documents from the strategic planning process.

As an example of the above, British Petroleum (BP) to date has paid out some $42.5 billion in penalties, fines and claims related to the Macondo oil spill in the Gulf of Mexico in April 2010. It is fair to say the external auditors focused on the financial statement audit prior to the spill but completely ignored the strategic plan/objectives and most of the critical risk management aspects of the company. The way that the external audit and Sarbanes Oxley in particular are conducted, is a "top down" risk assessment but top down in the context of the financial statements. This is consistent with the COSO Internal Control Framework and with AS5. A risk assessment following the guidelines of ISO 31000 and further the implementation guidelines of HB 436 from Australia as well as leading practices in Canada and the United Kingdom, commences from the strategic objectives.

The bottom line is to identify the uncertainties that could impact the business objectives of the company, upon giving consideration to the company's stakeholders. It is the analysis of such uncertainties for likelihood of occurrence and significance to the company's business objectives, which produces the risk. In the case of BP, it is unlikely that both management of the company and its external auditors, clearly identified the potential for a major spill as an uncertainty and thus a risk. The test of this is whether there would have been an accrual on the balance sheet for this pending disaster. We know that under existing generally accepted accounting principles, there was no such accrual and yet there was a major risk. This comprised a risk clearly not identified by the external auditors and as well by the company's risk management system and internal auditors.

For many years now, the external audit has been broken primarily evidenced with the Enron debacle and the subsequent roll out of Sarbanes Oxley. Use of the COSO framework as the backbone of Sarbanes Oxley was a huge mistake because this internal control model was constructed built on a flawed interpretation of the financial statement risks. It considers the "game" to be opining of the financial statements when the "game" is providing assurance to a wide variety of stakeholders. There were more suitable internal control/risk management frameworks available than COSO.

Unfortunately, in the United States unlike the United Kingdom, Canada and Australia/New Zealand, research in risk management was outsourced to the large accounting firms and their agents. So what exists in the United States is a product by the public accounting profession for the public accounting profession instead of a product produced by worldwide experts in internal audit, control, risk management and governance for use by all companies.

Just prior to the Enron disaster, there already existed in the marketplace leading internal control, risk management and governance frameworks from the countries of Canada (CoCo-1995; QSA 850-1997); United Kingdom (Turnbull, Cadbury, Combined Code ) and Australia/New Zealand (AS/NZS 4360:1999). Such guidance was ignored and instead, COSO was rolled out as the backbone to Sarbanes Oxley and then we witnessed introduction of COSO ERM in 2004 (also flawed). Simultaneously to COSO ERM, was the introduction world wide of the third edition of AS/NZS 4360(2004) from Australia/New Zealand, which served as the foundation for issuance of ISO 31000 in 2009. Enron was not a disaster on financial statement fraud. It was about corruption, tone at top issues and greed. A well constructed risk management program including an independent review of board performance, would have impeded significantly, issues resulting in the collapse of Enron. The internal control model represented by COSO is quite deficient and the COSO ERM framework is just a further representation of this deficiency.

The turbulence created as a result of such deficiencies in the framework being used and continued marketplace disasters, allowed for a variety of other non value services to be created such as GRC in 2003. When you analyze precisely what these materials contain, you will in the best possible scenario walk away with the impression that there is further distraction from the main issues that companies needed to be dealing with. In no other major English speaking country other than the United States, would this have been possible. In addition, the plethora of vendors hawking software which purportedly will manage risk, is staggering. None of these however, are founded on robust established principles of good risk management.

So when you state on page six of the release, that "the auditor's required communication would focus on those matters that the auditor addressed during the audit of the financial statements that involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence or forming an opinion on the financial statements", I think that you are missing the big picture. I thus concur with PCAOB Board Member Steve Harris's comment that "the proposal would not provide as much useful information for investors as he had hoped". The point is not about those matters that are addressed by the audit of the financial statements but about those issues that are not being addressed per my commentaries of above. In other words, you need to be thinking about all of the stakeholders in a company and not just the investors.

When Chairman James Doty's comments that "the proposed standards would make the audit report more relevant to investors by establishing criteria and a framework providing deeper insights from the audit, based on information the auditor already knows from the audit", I say, that this is quite miniscule and not worth the bother. Thinking about the range of miscues we have experienced over the past ten years and the modifications as represented by these proposed changes to the auditor's report, I believe these modifications would have made minimal difference to these previous events.

Below is a summary of some of the key deficiencies of both the COSO and COSO ERM frameworks.

In conclusion, your proposed releases will accomplish very little. While we recognize the good work being done by the PCAOB, we will continue to see disaster after disaster in the corporate world in the United States. What needs to change is the way the external auditors perform their audit. Instead of commencing from the financial statements, they need to work off of the risk management plan of the company including the strategic objectives and then filter this information down to the financial statements. This involves intensive coordination with several other groups in the company, including internal audit. This is a much different approach to risk assessment than that currently being deployed.

The approach I am describing is integrated in nature whereas the public accounting model is linear. Just as you made the switch from rules based thinking to principles based thinking, so too is the switch needed that I am describing.

I reference you as well to the Financial Reporting Council in the United Kingdom and their recently released draft at the following link http://frc.org.uk/Our-Work/Publications/FRC-Board/Consultation-Paper-Risk-Management,-Internal-Contr-File.pdf. You will note how they now wish to interpret the audit of the financial statements. I l also reference you to a case study just prepared with two other colleagues that is being published shortly by John Wiley & Sons, and this will provide useful information for you. This book will be part of a best in class book of case studies on enterprise risk management as a companion to the highly successful *Enterprise Risk Management: Today's Leading Research and Practices for Tomorrow's Executives* (Wiley: 2010). Finally, I reference you to HB 436 just released by Australia/New Zealand which is worthy of a gold medal in terms of how risk management should be implemented by a company and this encompasses the audit of the financial statements. This is a product of a working group under the Standards Australia and Standards New Zealand Joint Risk Management Committee. This is referenced at:

http://shop.standards.co.nz/catalog/436%3A2013%28SA%7CSNZ+HB%29/view or http://infostore.saiglobal.com/store/Details.aspx?productID=1694350

Thank you for consideration of my comments.

Sincerely yours,

Arnold Schanfield

**Appendix**

**Some of the Key Deficiencies in the COSO and COSO ERM frameworks**

- COSO was originally issued in 1992 and was a rule based document until the new release in May 2013. So for a 21 year period, implementation of internal controls followed rules based thinking
- The COSO framework just released in May 2013 as did the framework of 1992 and the COSO ERM framework, only defines risk in the "downside". But where does the upside of risk get reflected? For example, where does the risk get captured if we fail to properly monitor competition which does not allow our company to capture their customers in the event say that our major competitor goes out of business?
- There is almost no reflection in any of these documents on the role of the stakeholder in a company but plenty of attention focused on a company's investors. This is a very narrow interpretation of internal control and to my example above of British Petroleum, what about the fishermen that lost their livelihoods, the contractors that lost their lives, the environmentalists, the many local businesses that went bankrupt
- There is no reflection in any of these document of the slow demographic shifts from around the globe that create risk for a company
- The principle based approach of COSO ERM feels like a bolt on at the back instead of being woven into the material throughout the document. There is no mention of principles until you reach back of the book and then are confronted with 120 principles. The majority of these principles sound like more rules than principles and in any event, there is not attempt to tie these principles back to the literature.
- There is no distinction in any of these documents and especially that of COSO ERM, as to the difference between the risk management process and the risk management framework. In fact the COSO ERM cube completely ignores the risk management framework in a company and hence subjects such as stakeholders, communication process, commitment and mandate by the board, risk management policy, and context are completely ignored.
- No attempt is made to provide a completely integrated example either in the internal control framework or in the enterprise risk management framework. What appears are numerous disjointed examples

- No attempt is made to identify what constitutes effective risk management. See HB 436 which does a splendid job of this
- The authors  of these documents appear to comprise  a broad array of individuals but at end of the day, this initiative ignored the key risk management practitioners from around the globe and especially the material that such practitioners previously issued
- The subject of risk appetite to a company is not well understood and certainly not communicated in a way that can allow a practitioner to implement this effectively in a company. The leading professionals are now opting to use risk criteria and we encourage you to follow up HB 436 as I had indicated above

Re: PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 034
The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards

Ladies and Gentlemen,

Sempra Energy appreciates the opportunity to respond to the request for comment by the Public Company Accounting Oversight Board (the Board) regarding *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* (the Proposal).

**Sempra Energy** is a Fortune 500 energy services holding company whose subsidiaries provide electricity, natural gas, and energy products and services. Through our subsidiaries and joint ventures, we serve more than 31 million consumers worldwide. The Sempra Energy Utilities, indirectly owned subsidiaries of Sempra Energy, include Southern California Gas Company, a regulated natural gas utility that serves 21.1 million consumers through 5.7 million natural gas meters in central and southern California, and San Diego Gas & Electric Company, a regulated utility that provides service to 3.4 million consumers through 1.4 million electric meters in San Diego and southern Orange counties, and 840,000 natural gas meters in San Diego County.

Sempra Energy supports the Board's objective to improve the auditor's reporting model by increasing its usefulness and relevance to financial statement users and enhance the auditor's responsibilities with respect to other information to protect the interests of investors and further the public interest in preparation of informative, accurate and independent audit reports. However, overall, we do not support this standard-setting Proposal to modify current auditing standards resulting in an increase in scope or a significant expansion of the independent auditor's reports. We believe the historic relationship between management, the audit committee, and the auditors should be retained. Reported financial statements are management's responsibility, not the auditors, and management should continue to provide the original source for operating and financial information.

The auditor should be responsible for providing assurance surrounding the completeness and reliability of the financial information.

Sempra Energy has several concerns about the proposed rules as discussed further below. Our comments are organized in the following sections as set forth in the rulemaking release:

1. Reporting "Critical Audit Matters" (CAMs) as part of the Auditor's Report
2. Auditor's responsibilities regarding other information in an annual report
3. Other changes to the Auditor's Report, including information about fraud and auditor tenure

***Reporting "Critical Audit Matters" as Part of the Auditor's Report***

The proposed standard requires the auditor to report on audit specific "critical audit matters". CAMs are defined as those that (1) involved the most difficult, subjective or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements.

We are most concerned about the proposed requirement to discuss CAMs in the auditor's report. CAMs may be construed as an implicit qualification of the audit, creating a perception that there may be weakness and deficiencies in management's judgment, financial statement estimates or internal control environment. Auditor judgment may not be consistent among audit firms when reporting on audit specific CAMs as the identification of CAMs is subjective. Reporting on audit specific CAMs may not be sufficiently comparable and may be a detriment to market confidence in audited financial statements. The credibility of the audit process and perceptions of audit quality and consistency should be paramount. If the perception of the audit opinion is compromised, all stakeholders will be ill-served as corporate governance, auditor independence and user investment decisions could be adversely impacted. We believe that an unqualified opinion is just that, and there should not be varying degrees of "unqualified".

We believe an audit report is not the proper place for financial statement users to identify transactions that involve significant judgments and estimates. Reporting and disclosure of significant transactions, risks and uncertainties are addressed by the SEC, U.S. GAAP and other regulations. Among the disclosures required by U.S. GAAP, ASC 275-10-50-1 addresses disclosures about risk and uncertainties, including the use of estimates and certain significant estimates.

Users of the financial statements should be expected to read and understand disclosures provided by management. These users also understand that extensive information related to the matters that may qualify as CAMs is already available in existing disclosures and filings. We believe any user frustration or confusion regarding the audit process are issues the Board should address with the SEC and other standard setters and regulators to develop a more robust, transparent and user friendly disclosure framework. Investor or other financial statement user views about the reporting and disclosure of significant transactions, risks and uncertainties should be addressed by the standard setting process of the SEC and other standard setters and regulators and not through a modification of the auditor's report.

Financial statement users may confuse the roles of the auditor, management and the audit committee. Management is responsible for its internal control environment and preparation and filing all financial reports. The audit committee oversees a reporting entity's accounting policies, internal controls, financial reporting and audit process. The auditor plans and performs audit procedures to obtain sufficient appropriate audit evidence to provide a reasonable basis for their opinion. However, the auditor should never be the first source of information and provide disclosure of information that is not otherwise required to be disclosed by management or have the appearance that it is making financial reporting decisions on behalf of management. The expansion of the auditor's role to report on audit specific CAMs is inconsistent with expectation that the auditor should not be the original source of disclosure.

The reporting and disclosure of financial information is the responsibility of management, and disclosure about significant transactions, risks and uncertainties are most appropriately provided by management. CAMs may exclusively represent transactions with complex reporting issues (i.e., transactions with significant judgments and estimates, and measurement uncertainty). However, CAMs may also represent difficult audit processes that have no correlation with transaction risks and uncertainty. Such information may lead a user to believe that the auditor is expressing a "piecemeal" opinion on individual matters or accounts in the financial statements, and any audit procedures enumerated may be taken out of context or misunderstood given their necessarily abbreviated descriptions.

Further, the Proposal, by requiring the auditor to report on audit specific CAMs may bring to question the appropriateness of audit evidence and question audit quality, with potential negative impact on the relationship between the auditor, management and the audit committee.

***Auditor's Responsibilities Regarding Other Information in an Annual Report***

The Proposal requires the auditor to report on the auditor's responsibilities regarding other information, including a statement that the auditor's evaluation of the other information was based on relevant audit evidence obtained and conclusions reached during the audit, and a statement that the auditor did not audit the other information and does not express an opinion on the other information.

The Proposal would increase the audit scope and substantially increase the cost and effort to complete the audit, which could result in jeopardizing the timely filing of the financial statements. Because the procedures necessary to provide such assurance can be extensive, such assurance should only be required on information that is most important to investors and where auditor assurance can provide increased confidence in such disclosures (i.e., the benefit to investors is greater than the cost).

Other information is based on management's perspective, which an auditor would not be able to reasonably attest. We believe that Sarbanes-Oxley made it very clear to investors that management is responsible for the financial statements. An expectation gap that other information has been subject to audit may result with investors or other financial statement users, increasing engagement risk to the auditor. It would be necessary for the auditor to manage this risk, and the cost of the audit would increase.

Requiring auditors to expand their audit report to evaluate and comment on such information would potentially place them in potential conflict with their clients as to what must be disclosed or reported in the information outside of the financial statements. While other governance entities (SEC, national exchanges) require that management be legally responsible for their filings, this will now make it more difficult for management of a company and its board of directors to fulfill this requirement if the auditors are now placed in the role of assessing and determining what's to be included in areas of reporting outside of the financial statements. Further, auditors' expertise is over financial and reporting matters and the requirement to comment on other information may be outside of their expertise. This may require auditors to supplement their engagement teams invariably leading to increased costs.

***Other Changes to the Auditor's Report, Including Information about Fraud and Auditor Tenure***

The Proposal changes the auditor's report, including the addition of the phrase "whether due to error or fraud," when describing the auditor's responsibility under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether due to error or fraud. We are not certain if this approach is helpful.

An auditor's responsibility is limited to performing the audit and to obtain a reasonable assurance about whether the financial statements are free of material misstatements. Reasonable assurance is a high level of assurance, but not absolute assurance.

An investor with a lack of knowledge of auditing standards and a misunderstanding of the essential role of external auditors may already have an expectation gap over the auditors' responsibilities. The addition to the phrase "whether due to error or fraud" would only widen this gap. Defining reasonable assurance, a high level of assurance, but not absolute assurance, within the standardized language in the auditor's report may better narrow the expectation gap.

The Proposal adds a statement to the auditor's report: the year the auditor began serving consecutively as the company's auditor. The basis to include a statement in the auditor's report containing the year the auditor began serving consecutively as the company's auditor is unclear. The statement implies auditor tenure has an impact on audit quality. There is no research that implies auditor tenure has an impact on audit quality. The Board has also expressly stated that it has not reached a conclusion that such a relationship exists.

**********

We appreciate the Board's careful consideration of our comments, and fully support the Board's effort to enhance the auditor's reporting model and increase the value of the audit. If you have any questions regarding our comments or other information included in this letter, please do not hesitate to contact me.

Thank you for your consideration.

Sincerely,

Trevor I. Mihalik
Senior Vice President, Controller
and Chief Accounting Officer

**Subject:** PCAOB Rulemaking Docket Matter No. 034
**Date:** Wednesday, December 11, 2013 12:40:20 PM

Re: PCAOB Rulemaking Docket Matter No. 034: Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members:

I appreciate the chance to address the board in this matter. I am writing to you from a very small FINRA Broker-Dealer that is already weighed down by the many draconian rules imposed by the regulatory authorities that be. Although we are privately held, have fewer than 2 dozen employees, and are non- custodial, we have to jump through the same hoops as the biggest firms in the industry. In short, virtually no public entities review our financial information. The majority of firms fit this profile. I'm asking you to not inflict further impositions on our firms.

The change in rule for small firms to get a PCAOB audit caused my long time auditor to withdraw and my cost to increase approximately 5 figures. For our small, privately held entities, the proposed rules would inflict yet greater costs, with no relevance to the mission of the PCAOB or to the public investor. Indeed, the "investors" in these companies are the owners themselves, my company being owned solely by myself.

As members of the board, please take appropriate action and exercise your authority under the Dodd Frank Act to exempt the auditors of small privately held companies from its oversight. In the spirit of relevance, rationality and suitability, please consider heavily the matter of a small firm exemption.

Regards,

**Joseph M. Lawless**

**Re: PCAOB Release no. 2013-005, PCAOB Rulemaking Docket Matter No. 34**

Dear Members of the Board:

The Global Financial Institutions Accounting Committee of the Securities Industry and Financial Markets Association ("SIFMA")[1] appreciates the opportunity to provide comments on the Public Company Accounting Oversight Board's ("PCAOB's" or the "Board's") proposed auditing standards; *The auditor's report on an audit of financial statements when the auditor expresses an unqualified opinion; The auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report; and Related amendments to PCAOB standards* ("Proposed Standards").

We support the PCAOB's objective to enhance auditor communications and to provide useful information to the users of financial statements, as these goals enhance the trust and confidence within the financial markets which rely upon these financial statements. However, we believe that the Proposed Standards will not achieve these objectives and, in fact may have a negative impact on audit quality.

As described below, we have significant concerns about the disclosure of critical audit matters and how they will be interpreted by users, and on the new responsibilities of auditors to evaluate other information presented outside of the audited financial statements.

We believe the Proposed Standards would cause significant changes in certain current roles. For example, Audit Committees would become involved in a level of detail that could be construed as management rather than oversight. Also, sections of the report that are currently used by Investor Relations to communicate messages (for example, the President's Letter) would become subject to negotiation with the auditor.

[1] SIFMA brings together the shared interests of hundreds of securities firms, banks and asset managers. SIFMA's mission is to support a strong financial industry, investor opportunity, capital formation, job creation and economic growth, while building trust and confidence in the financial markets. SIFMA, with offices in New York and Washington, D.C., is the U.S. regional member of the Global Financial Markets Association. For more information, visit www.sifma.org.

www.sifma.org

The increased time and effort to prepare, review and obtain approval for audit report disclosures, required by the Proposed Standards, will either increase the current time lag between the period end date and the reporting date, or will take focus away from the quality of the audit and the audit conclusions reached, or on the adequacy of the company's financial disclosures – the more important responsibilities of the auditor.

The changes that would occur as a result of adoption the Proposed Standard are so significant that we suggest the Board view this current exposure draft more as a discussion paper. After considering these comments and the many similar comments we believe interested parties will submit, the Board should expose a new draft for comment, as we believe there are many details that merit comment.

In addition to the specific comments below, we are concerned that the Proposed Standards represent a potentially substantial increase in the scope of the PCAOB's mission to oversee the audits of public companies. Regulations as to what information must be audited are set forth in securities laws (for public companies), and are the domain of the SEC. We believe the proposed requirement to expand the auditor's responsibility to report on "other information" goes beyond the PCAOB's mandate of establishing audit standards, and is a first step on the path towards a requirement for an audit opinion on MD&A and other information prepared by companies. We believe this is inconsistent with the spirit, if not necessarily the letter, of the mandate of the PCAOB's mission. If the proposed requirement is to be put in place, it should originate with the appropriate regulatory institution, namely the SEC and not the PCAOB. Without doing so, a new proposed regulatory requirement would not be subject to the SEC's extensive due process requirements.

We have focused our current comments on the most significant concerns rather than provide a detailed response to questions or a paragraph-by-paragraph review.

**Critical Audit Matters**

We are concerned that significant judgment will be required to determine if an item should be disclosed as a critical audit matter ("CAM"), which could lead to inconsistent application and insufficient comparability of auditor reports among industry peers. We are also concerned with how the average user of the financial statements will interpret the meaning of CAMs disclosed in the audit opinion. The requirement for auditors to report on CAMs already exists, though the reporting is to the Board of Directors through the Audit Committee. These representatives have a clear responsibility to understand the results of the audit and oversee the decisions about disclosures and, in order to fulfill this responsibility, there is a requirement for at least one "financial expert" on an audit committee. We therefore believe that the interests of financial statement users are adequately represented and protected, and we question the utility of providing disclosure of CAMs more broadly, especially when there is (and can be) no such financial literacy requirement for users in general.

More specifically, the disclosure of CAMs in the audit opinion could inappropriately:

- cast doubt over the quality of the financial statements, the audit procedures, or both. If the auditor ultimately issues an unqualified (or "clean") opinion, it means the issues raised were appropriately resolved. We are concerned that this outcome will not be clearly understood by users of financial statements.
- dilute the meaning and power of a "pass/fail" audit opinion covering the entire financial statements by providing a series of different opinions on specific matters; highlighted items will be interpreted as deficiencies or weaknesses in financial reporting. We see this as a direct follow-on from the previous comment.
- provide information in the financial statements for the first time. Financial statements already include complex and detailed disclosures, often over hundreds of pages, to provide insight into management's view of critical accounting policies and estimates, business performance and trends and various financial and operating risks. We do not believe it is appropriate for auditors to disclose new information within the audit opinion that is not already provided elsewhere in the financial report. Additionally, if the information is already provided in the financial statements, we do not believe it needs to be repeated again in the audit opinion.
- increase the "expectations gap" between what an auditor is required to do and what an auditor is expected to do. We believe it will be exceedingly difficult for a reader to understand the decision-making process for including or omitting items from the list of CAMs, and that the comments could be construed by readers as opinions or disclaimers on specific elements of the financial statements, or as a qualified opinion regardless of the language of the actual opinion paragraphs. In addition, we believe the concerns auditors will have with the proposal will lead to the emergence of generic language used in all audit opinions (i.e., "boiler plate"), diminishing the usefulness of the additional disclosure. For example, within financial institutions, the valuation of level 3 assets will be a significant and highly judgemental aspect of any audit, and will be for all financial institutions. Including this in the audit report would not add any value to the audit report, particularly if the same disclosure is made by every financial institution.
- require additional audit procedures and effort. The Proposed Standards do not explicitly require additional procedures; however, it is highly likely that the enhanced audit opinion will require significant additional effort from auditors, preparers and audit committees, and during the busiest times of the year. As noted above, auditors already report this type of information to the Audit Committee, but including such comments in a publicly available report will inevitably cause an auditor to perform additional procedures and to increase the search for matters to report. For preparers, this additional cost will manifest itself both through increased audit fees as well as through increased internal resource requirements, calling into question whether the limited benefits will outweigh the added costs.

Given the concerns noted above, we cannot support the Board's proposal.

**Reporting on Other Information**

We agree that users would benefit from a clear and transparent disclosure of the auditor's responsibilities for the other information presented along with the audited financial statements. However, we are concerned that the Proposed Standards increase, rather than clarify, the auditor's responsibility and performance requirements for the other information, specifically the requirement to "evaluate" other information rather than "consider" other information. This is particularly troubling for forward-looking information included in the financial reports as we do not believe it is the role of the auditors, nor will they have the expertise, to evaluate management's forward-looking statements. Similar to the CAMs above, we believe this requirement will increase the "expectations gap" between what an auditor is required to do and what an auditor is expected to do, as users will not be able to distinguish between the information that the auditor has evaluated as being consistent with information obtained as part of the audit and information that is wholly outside of the audit scope.

The Proposed Standard requires a statement that, based on the evaluation of other information, the auditor (1) has not identified a material inconsistency or a material misstatement of fact in the other information, or (2) has identified a material inconsistency. The evaluation of "materiality" in regards to certain other information (especially that which is not directly related to the audited financial statements) may be difficult to apply in practice and cause inconsistencies in application.

Given this proposed increase in auditor responsibility and performance requirements, the cost of audits is likely to increase if auditors are now required to search the full audit file to evaluate every statement made by management outside of the audited financial statements. Although this cost cannot be definitively quantified, we do not believe this increased cost is worth the limited benefit provided by the Proposed Standards.

Given the above, we are concerned that the additional auditor responsibilities and performance requirements may lead to less disclosure, particularly as it relates to other information that cannot be sourced systematically and is not subject to the same level of controls and review as the data presented in the financial statements. For example, management may want to disclose the existence of cost savings programs along with anticipated cost savings and costs to achieve over time. Management could believe this type of information is relevant to investors, but if the estimates are subject to audit procedures or review, it might be easier to refrain from the extra disclosure. In fact, such items may be based on budgets and expectations and they are unlikely to be auditable at all. Additionally, this information is often provided as insight into management's analysis and expectations, and is not objectively verifiable, making it very difficult for the auditors to evaluate the information effectively. The accuracy and reasonableness of this information should remain the responsibility of management.

**Auditor Tenure**

We do not object to the requirement to disclose auditor tenure in the audit report, but we believe it is not necessary because we reject the assumption that auditor tenure and audit quality are related.

We hope you find our comments helpful. Should you have any questions or require further information concerning any of the matters discussed in this letter, please do not hesitate to contact me (mscucci@sifma.org; 212-313-1331).

Very truly yours,

Mary Kay

**Re: PCAOB Release (No. 2013-005) on Proposed Auditing Standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information In Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (PCAOB Rulemaking Docket Matter No. 034)**

Ladies and Gentlemen:

The Society of Corporate Secretaries & Governance Professionals appreciates the opportunity to provide comments on the Proposed Auditing Standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "Auditor Reporting Standard") and *The Auditor's Responsibilities Regarding Other Information In Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "Other Information Standard", and together with the Auditor Reporting Standard, the "Proposed Auditing Standards"), PCAOB Release No. 2013-005 issued on August 13, 2013 by the Public Company Accounting Oversight Board .

Founded in 1946, the Society is a professional membership association of more than 3,100 corporate and assistant secretaries, in-house counsel, outside counsel and other governance professionals who serve approximately 1,600 entities, including 1,200 public companies of almost every size and industry. Society members are responsible for supporting the work of corporate boards of directors and the executive managements of their companies on corporate governance and disclosure matters.

**General Comment**

The Society appreciates the PCAOB's efforts to improve the relevance and quality of public company audits for investors; however, the Society believes that the Release fails to achieve this objective. The Release states that the Proposed Auditing Standards are "intended to increase the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report" while seeking "a balanced approach that would not unduly burden the financial reporting process." However, the Society believes that the Proposed Auditing Standards—by requiring auditors to disclose "critical audit matters" —would fundamentally change the role of the auditor from an independent analyst to an original source of information for investors. In addition, the significant time and cost burdens to companies under the Proposed Auditing Standards would greatly outweigh any corresponding benefit for investors. For these reasons, the Society cannot support the Release. These and other concerns are discussed in greater detail below.

## Critical Audit Matters

***Mandatory communication of critical audit matters will alter the fundamental relationship of auditor and audit client; may require the auditor to disclose confidential information of the client, resulting in harm to the client; and may lead to duplicative and potentially conflicting disclosures.***

As set forth in the Release, the auditor must: (i) identify the critical audit matter; (ii) describe the considerations that led the auditor to determine that the matter is a critical audit matter; and (iii) refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter. The Society believes that requiring the auditor to communicate critical audit matters will require the auditor to make substantive disclosures concerning the company and will thus change the role of the auditor in ways that will not benefit companies, auditors or investors.

An essential feature of the public company reporting system is that the company is responsible for disclosure about the company, just as it is responsible for preparing its own financial statements. The company's disclosures are made by management under the oversight of the company's board of directors and the audit committee of the board of directors. The role of the auditor is to attest to certain information provided by management and to report separately to the audit committee. These distinct roles have been a critical part of the audit report since the 1940s.[1] In fact, the Release states that the Proposed Auditing Standards are not intended to change the role of the auditor from attestation to being an original source of disclosure concerning the company, and that the intent of the Auditor Reporting Standard is to require the auditor to discuss matters pertaining to the audit process, rather than making original disclosures about the company.

While the Society appreciates that the auditor's communications of critical audit matters would be based on information known to the auditor and procedures that the auditor has already performed as part of the audit, the auditor's discussion of critical audit matters would likely result in the disclosure of sensitive information such as significant deficiencies, internal

[1] AU Section 508.08 ("A statement that the financial statements are the responsibility of the Company's management and that the auditor's responsibility is to express an opinion on the financial statements based on his or her audit").

investigations and going concern considerations that would otherwise not be required by the company to be disclosed, that the company may determine not to disclose and that could damage the company if disclosed. For example, the determination that a deficiency in internal controls is a significant deficiency rather than a material weakness may be deemed a "critical audit matter." By law, depending on the circumstances, the company may not have to disclose a significant deficiency, but the critical audit matter discussion in the audit report may cause that information to be disclosed. Similar non-required disclosures could result in connection with going concern considerations.

Contrary to the stated objective of the Proposed Auditing Standards to promote the informational value of the auditor's report, the Society believes that the Auditor Reporting Standard, if adopted, would have negative unintended consequences. First, we believe the disclosure of critical audit matters will chill communications between the auditor, on the one hand, and members of management and the audit committee, on the other. Companies will be reluctant to discuss matters with their auditors until they have fully considered the implications for disclosure. A company's management or audit committee must be able to raise and resolve matters with the auditor without fear that the communications will be publicly disclosed even if the matter is satisfactorily resolved.

We are also concerned that the Auditor Reporting Standard could result in two sets of disclosures of the same facts, one made by the company and the other made by the auditor. Aside from creating duplicative disclosures and thus exacerbating disclosure redundancy, which is among those issues identified by SEC Staff as problematic and slated for potential reform[2], this poses the substantial risk of inconsistent narratives concerning the company on matters critical to it.

Appendix 5 of the Release illustrates how the reporting of critical audit matters might take place in certain situations. Hypothetical 3 shows the auditor disclosing in the audit report a significant deficiency in the controls employed by the company's pricing and valuation committee, which was not disclosed (or required to be disclosed) by the company. Hypothetical 2 shows the auditor describing in the audit report the competition experienced by a technology company with respect to its "first generation" software products and a determination (by the auditor) that the company's return to profitability will depend on the launch of "next generation" products in the future. Hypothetical 2 reflects how a discussion of critical audit matters causes the auditor to become an independent source of disclosure concerning the company's business and strategy.

Making the auditor, in effect, a source for substantive disclosure about the company may also increase its liability to investors, supporting the misconception (which, ironically, the

[2] See Chair Mary Jo White, Address at the National Association of Corporate Directors - Leadership Conference 2013 (Oct. 15, 2013) available at www.sec.gov/News/Speech/Detail/Speech/1370539878806#.Uq3hN4bTmM8 and Commissioner Daniel M. Gallagher, Remarks at the 2nd Annual Institute for Corporate Counsel (December 6, 2013) available at www.sec.gov/News/Speech/Detail/Speech/1370540462287#.UqXJTYbTmM8.

Release is intended to dispel) that the auditor's role is, in effect, to guaranty the accuracy and completeness of the financial statements. Whatever the nature of the auditor's disclosure, however, the fact that there may be two sets of disclosures about the same matters, driven by differing standards and interests, is likely to create disharmony between the auditor and the company. Investors could be confused as to whether auditors are merely attesting to management's assertions or providing additional information that management has elected not to disclose.

***The compilation and disclosure of critical audit matters would require significant time and attention from the auditor, the company's audit committee and management.***

The Society is concerned that auditor disclosure of critical audit matters will increase the time burden for the auditor, the company's audit committee, and management during an otherwise already time-constrained period as management is finalizing the issuer's Annual Report on Form 10-K. The Sarbanes-Oxley Act shortened the Form 10-K filing requirement for many public companies to 60 days after the end of the fiscal year. During this compressed period, management must, among other things, compile its financial statements, including financial statement footnote disclosure, prepare its management discussion and analysis, and complete its assessment of internal control over financial reporting. Management must coordinate this process with its auditor while allowing sufficient time to review the proposed disclosures with, and be responsive to input from, the audit committee. The auditor must, among other things, complete its audit of the financial statements and the attestation of the internal control over financial reporting, review its work with the audit committee and management, and finalize its reports.

Adding to this heavy workload, the PCAOB proposal would require the auditor to draft and review internally and with the audit committee very sensitive disclosure. Realistically, this is likely to entail negotiations among the audit committee, management, and the auditor over the proposed substantive content disclosures, not unlike the interactions that often take place today with regard to footnote disclosure, management's discussion and analysis, and risk factors. These additional burdens may diminish the time available to assure the accuracy and completeness of these disclosures in order to devote more time to critical audit matters, in some cases not only adversely impacting the financial statements and management's discussion and analysis but also potentially delaying the filing of the Form 10-K.

For example, under today's regulatory regime, assume that management completes its complex fair value analysis in connection with its goodwill and determines that its fair value exceeded its carrying value. It reviews that determination with its auditor, which concurs, and with its audit committee. Management also drafts appropriate management's discussion and analysis disclosure relating to its critical accounting estimates. As the current rules require, it reviews this disclosure with both its auditor and audit committee. The Auditor Reporting Standard then would additionally require the auditor to assess whether this was a critical auditing matter and, if so, prepare the required disclosure. Due to the nature and content of the auditor's critical auditing matter disclosure as contemplated by the Auditor Reporting Standard, this last step will almost certainly encompass the audit team's review and behind-the-scenes dialogue and negotiation with the auditor's local and potentially national office, presentation of draft disclosures to management and the audit committee, meetings between management and the audit committee to review and discuss, further meetings between the auditor, management and the audit committee to review the issuer's proposed wording changes to the auditor's proposed disclosure and re-review of the document for potential internal inconsistencies based on the inclusion of the auditor's disclosure, etc., which ultimately is likely to add, at a minimum, several days – if not a week or more to the process.

***The cost of reporting critical audit matters would greatly outweigh any actual or perceived benefits.***

The costs associated with the additional steps described above will greatly outweigh any benefits to investors. The Release states that the discussion of critical audit matters would be "based on information known to the auditor and procedures that the auditor has already performed as part of the audit," which theoretically would significantly limit the increase in audit costs. In practice, however, communication of critical audit matters will increase time spent by the auditor on field work, increase the time and focus of the auditor's national office, and increase the auditor's potential liability on each audit engagement. As we learned from the implementation of the attestation requirement over management's assessment of internal controls, when an auditor must spend more time on an audit and faces increased liability, those costs are passed on to the company to absorb (ultimately reducing shareholder returns).

The cost of an audit will increase to the extent that the auditor communicates more critical audit matters. Magnifying this concern is that auditors will almost certainly be inclined to over-report critical audit matters rather than under-report them for at least two reasons. First, auditors may be fearful of being second-guessed during the PCAOB's review of the audit firm's work.[3] It will be in the auditor's best interest (rather than the best interests of the company or users of the financial statements) to err on the side of over-inclusion. Second, in the event a company declares bankruptcy or finds a material misstatement in its financial statements, if the auditor had not listed the potential financial issue as a critical audit matter, it would potentially face increased malpractice liability regardless of whether the audit was adequately planned and carried out. Thus, the Society foresees each auditor identifying excess critical audit matters just to provide some "cover" in the event a potential risk materializes. To the extent that an otherwise lower risk audit matter is deemed to be "critical" by the auditor, additional field work may have to be performed to demonstrate that sufficient audit evidence was gathered or that the matter was not a critical accounting matter. Both of these will directly increase audit fees.

The Society strongly believes that adding complexity to the auditor report will not simplify or otherwise benefit the users of the financial statements. The disclosure of critical audit matters would frustrate the PCAOB's stated intention that "the Board's proposed auditor reporting standard would retain the pass/fail model." In effect, the disclosure will transform the

[3] See Appendix 1 to the Release ("Note: it is expected that in most audits, the auditor would determine that there are critical audit matters").

current binary pass/fail model into a qualitative report. Depending upon the nature and extent of critical audit matters and the auditor's comments on those matters, the report will constitute and will be perceived as the equivalent of "high pass," "medium pass," "low pass," and "fail" or similar "grades" – which would add complexity and uncertainty for investors that does not exist with the current pass/fail system. Further, if two companies had similar issues that involved auditors' complex judgments or posed difficulty for the auditors to obtain evidence or form an opinion, but one company's auditor elected to over-report critical audit matters, then it would appear that the company with more reported critical audit matters was a riskier investment despite the companies posing substantially similar risks. At a minimum, this would confuse investors.

Finally, we believe that the Auditor Reporting Standard will result in a substantial increase in litigation risk for both the auditor and for the company. As noted above, the role of the auditor is not to be a guarantor of the financial statements. However, the Auditor Reporting Standard will change the perception of the auditor's responsibility, and the auditor's litigation risk is likely to increase accordingly.[4] To the extent that an auditor's legal risk increases, the cost of that risk will be passed on to the issuer in the form of higher rates. In addition, the inclusion of critical audit matters in the audit report will create a "road map" for plaintiffs to sue the company when, in hindsight, a critical judgment turns out to have been faulty. Arming potential plaintiffs with this information will increase the litigation risk for the auditor and the company as well as its management, which will increase costs to the company

The Society strongly supports policies that provide investors timely and accurate financial information; however, the Auditor Reporting Standard would not contribute meaningful data to the mix of information already available to investors. The Society believes that much of the reported critical audit matters will be duplicative to what the issuer already discloses as critical accounting estimates in its financial statement footnote disclosure and in its management's discussion and analysis. Further, providing detailed information to financial statement users "with previously unknown information about the audit that could enable them to analyze more closely any related financial statement accounts"[5] not only lacks a benefit, but also may be counterproductive. The markets rely on professionally trained certified public accountants to make professional judgments in auditing an issuer's financial statements. Providing additional information to help alleviate information asymmetry about the audit may be a worthy objective if the Auditor Reporting Standard actually required auditor disclosures about the audit rather than requiring the auditor to hone in on, and provide information about, certain auditor-identified aspects of the issuer's financial reporting. If the Auditor Reporting Standard required that the auditor describe the parameters of the audit (e.g., audit procedures employed, what an audit does and does not consist of), then this would enhance users' understanding of the

[4] See Appendix 1 to the Release ("Note: Language that could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for the critical audit matters or the auditor's opinion on the financial statements is not appropriate and may not be used").

[5] See Appendix 5 of the Release.

audit and the auditor's role, and ensure that that role is clearly distinguishable from the issuer's financial reporting obligations. Instead, however, the disclosure requirements will create competing issuer and auditor narratives about the same financial reporting matters (whichever critical auditing matters the auditor chooses to discuss), confusing users about the accuracy of the financial statements.

**Auditor's responsibilities regarding other information in certain documents**

***Expanding the auditor's role with respect to "other information" will require auditors to evaluate information in areas where they are not considered experts.***

Under existing PCAOB standards (AU Section 550), the auditor has a responsibility to "read and consider" other information in certain documents that also contain the audited financial statements and the related auditor's report; however, there is no related reporting requirement to describe the auditor's responsibility with respect to other information. The Other Information Standard would expand the auditor's responsibilities with respect to certain types of information outside the financial statements, but included or incorporated by reference in annual reports filed under the Securities Exchange Act of 1934, such as the selected financial information, management's discussion and analysis, exhibits and other information incorporated by reference into the filing, and require the auditor to make a public statement that it has affirmatively evaluated that information but did not discover any material inconsistencies or misstatements of fact. The Society believes that expanding the role of the auditor to areas of the annual report for which it does not have expertise puts the auditor at risk and provides false comfort to investors.

As an overarching principle, auditor involvement and attestation should be limited to areas for which an auditor has the appropriate expertise. This Other Information Standard would take the auditors beyond their traditional role of verifying a company's numbers by, among other things, requiring that they "evaluate" (in itself, a new and vague standard) not only numeric information, but also qualitative information. Moreover, the Society is concerned whether an auditor will be able to provide negative assurances on portions of the annual report contained in the proxy statement when that information may not be finalized until after the annual report is filed. Would the auditor be given de facto veto rights as to what can or cannot go into an issuer's proxy statement? If the stated goal of the Release is to increase the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report, then having an auditor provide any comfort on information for which it is not trained to evaluate seems to fall short of that goal (or to miss it entirely).

***By expanding the responsibility of the auditor, investor confusion over the role of the auditor is increased, not reduced.***

As discussed in the Release, one of the primary motivators for proposing new auditing standards was that "some investors indicated that if they had a better understanding about the audit and how the audit was conducted relative to a particular company, then they would have a better perspective regarding the risks of material misstatement in a company's financial statements."[6] The Society supports working to fulfill the need of investors to fully understand what an audit entails and, more importantly, what it does not entail; however, the Other Information Standard does not meet this goal. Any changes to the reporting model should narrow, or at least not expand, the expectations gap between auditors and investors. Instead, in our view, the Other Information Standard substantially widens the gap.

The auditor's responsibilities are limited to basing its evaluation on relevant audit evidence obtained, and conclusions reached, during the audit. Since some of the Other Information that is not directly related to the financial statements may be non-financial in nature or related to the company's operations, the auditor may not have tested that information during the audit.

In our view, most investors will not understand the limited universe of information and documents to which the Other Information Standard would apply, will not understand what the auditor actually did with respect to the Other Information, and will not understand that the auditor is unlikely to have information or audit evidence to substantiate some of the numbers and other information reflected in the Other Information, thus widening the expectation gap.

The concept of the auditor "evaluating" the Other Information has the potential to cause confusion. The auditor's work to "evaluate" the information will not constitute what is normally understood to be an "audit," nor is it the same as a "review." So it is unclear what level of assurance the auditor would be providing by conducting these procedures - which will also serve to increase the expectation gap with investors.

***Having an auditor report on information outside of the financial statements adds cost to the audit without providing a clear benefit to financial statement users.***

Expanding the current role of the auditor to providing assurance on "the other information included in an annual report" will be costly and not provide a meaningful benefit to financial statement users. Currently, an auditor is required to "read and consider" the Other Information, and, in practice, an auditor reviews parts of the annual report, including the management's discussion and analysis, to verify that the numbers tie to the financial statements and that the explanation is consistent with the evidence gathered in the audit. The Society believes the current standard strikes the proper balance of providing sufficient comfort to investors relative to the additional cost imposed on the issuer.

Ultimately, expanding the responsibilities of the auditor will increase audit fees because of the significant increase in potential liability to the auditor. The Society appreciates the PCAOB's intention that an auditor rely solely on audit evidence obtained and conclusions reached during the audit and would specifically disclaim an opinion on the other information. But requiring an auditor to provide negative assurances to investors will have the unintended consequence of the auditor having to perform significant additional field work in this case. The

[6] See Release, at page 9.

Society believes that the Other Information Standard creates the potential that, under the Supreme Court's decision in *Janus Capital Group, Inc. v. First Derivative Traders,* the auditor will be subject to a private right of action under Rule 10b-5 predicated on the material inaccuracy of that statement, to which it would not have been subject if such statement were not made.

The Society believes that an auditor would therefore be forced to perform additional specific procedures to provide support for the auditor's conclusion that it could provide the negative assurance. An auditor, whether due to fear from being second guessed by the PCAOB or by a plaintiff in a lawsuit, will be required to plan and perform procedures for each section of the annual report to assure that all information is consistent with the audit. These procedures (presumably similar to the procedures an audit firm performs when issuing a comfort letter to underwriters) will likely require involvement from the concurring partner as well as the audit firm's national office. This will add cost to the audit. Thus, the potential for increased liability will likely cause auditors to err on the side of over-inclusiveness with respect to implementation of evaluation procedures, other information evaluated, and communications and reporting about potential inconsistencies.

While the audit would expand to reach areas of an issuer's annual report not traditionally involving the auditor, the Society sees no benefit – much less a commensurate benefit – from this process. If there is confusion as to the auditor's role with respect to the annual report, the Society believes that it would be more appropriate for an auditor to disclaim all responsibility for any information outside of the financial statements while maintaining the current "read and consider" standard. The "read and consider" standard is an important part of gathering audit evidence to assure that management's discussion and analysis is consistent with its assertions in the financial statements; however, providing assurance to investors on the other information goes beyond what investors should reasonably expect to receive.

**Auditor Tenure**

***The reporting by the auditor of its tenure as the company's auditor in the audit report is not appropriate because it implies that tenure has significance.***

Given the lack of evidence associating auditor tenure and audit quality, the Society believes that requiring disclosure in the audit report of the auditor's tenure with the company is inappropriate. The inclusion of this information, together with the negative connotation associated with auditor tenure that the PCAOB acknowledges in its commentary and footnote disclosures in the Release, implies a correlation between tenure and audit quality, and has significant potential to trigger unintended and damaging inferences, including calling into question the independence of the auditor.

Moreover, if auditor tenure is included in the audit report, as proposed, this information coupled with the negative connotations discussed above will prompt issuers to add disclosures (e.g., mandatory audit partner rotation requirements and other independence and quality safeguards) to their Form 10-Ks simply to counter the potential, unwarranted negative implications - thus further exacerbating the information overload problems that have already been identified and the topic of discussion by the Commission.[7] Approximately two decades of information about auditor changes is already publicly available for many companies on the SEC's EDGAR database.

However, to the extent there is deemed to be investor interest in this information that justifies its disclosure in a manner comparable to that contemplated by the PCAOB, it is more appropriately characterized as a governance matter that should be considered by the company and its audit committee, rather than the auditor, for inclusion in the proxy statement as part of the audit committee report or in connection with shareholder ratification of the appointment of the auditor.

We appreciate this opportunity to share our views with you, and would be happy to provide you with further information to the extent you would find it useful.

Respectfully submitted,

Darla C. Stuckey

Re: PCAOB Rulemaking Docket Matter No. 034; Proposed Auditing Standards, The Auditor's Report on an Audit of Financial Statements, When the Auditor Expresses an Unqualified Opinion, and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;
Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, nonpublic, non-custodial broker-dealers. These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees. For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves. I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.
Best regards,
Amy Beattie

Washington, D.C. 20006

Re: PCAOB Release No. 2013-005; Rulemaking Docket Matter No. 034; Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards

Dear Mr. Baumann:

In Release No. 2013-005 (the "Release"), the Public Company Accounting Oversight Board (the "Board" or "PCAOB") solicited public comment about a proposed standard-setting project on the content and form of reports on audited financial statements. Southwestern Energy Company ("Southwestern" or "We") appreciates the opportunity to comment on the Release. We have not previously participated in the PCAOB's rule promulgation process and believe the concepts set forth in the Release warrant the response of both Southwestern and other financial reporting participants and consumers.

Our perspective in considering the Rule is informed by our public company status (we are a well-known seasoned issuer, as defined by the Securities and Exchange Commission ("SEC"), with an equity capitalization of approximately $13 billion). We are dedicated to full and fair disclosure, transparency to financial statement users and capital markets, and responsible improvements in financial reporting and disclosure. Our comments on the Release are provided below.

## I. OVERALL COMMENTS

We believe that any new promulgation should not change the basic relationship and responsibilities of an issuer's management, audit committee, and auditors. Accordingly, we believe that (1) management should continue to be responsible for preparing the financial statements, adopting appropriate accounting policies, and establishing and maintaining internal controls that report transactions in accordance with Generally Accepted Accounting Principles ("GAAP") and applicable federal securities laws, (2) the audit committee should continue to have the responsibility to oversee management's financial reporting process, and (3) the auditor should continue to have the responsibility to express an opinion on whether the financial statements and disclosures (taken as a whole) are presented in conformity with GAAP (in all material respects). With strong emphasis, we continue to believe that the auditor may make suggestions around the form or content of the financial statements; however, the auditor's responsibility should remain confined to an expression of an opinion on them.

## II. CERTAIN RECOMMENDED AUDITOR REPORT CHANGES

We believe the single most important outcome produced by the audit is the auditor's report and have chosen to comment below on the three topics of most concern to us that relate to the contemplated auditor report changes. First, the current pass-fail model is succinct and clearly communicates that an audit of the company's financial statements and internal controls has taken place and that the issuer has presented financial statements in accordance with GAAP, unless disclosed otherwise. We believe that an audit expectation gap exists between what a financial statement user expects and the actual assurance provided by an audit. This expectation gap exists because auditors are not guarantors against fraud and their audit provides reasonable assurance, rather than absolute assurance, on the accuracy of an issuer's financial statements. Any responsible improvement to the auditor's report that appropriately resolves this expectation gap would be supported by Southwestern.

Secondly, the Release addresses the inclusion of an emphasis paragraph. Although rarely used, we believe that the current auditor's framework provides for the inclusion of an emphasis paragraph in AU Section 508.19. We believe that any new requirement to include an emphasis paragraph will most likely result in boilerplate verbiage and not improve financial reporting, absent improved guidance about its use. If the Board determines that it is appropriate to mandate the use of an emphasis paragraph, we encourage the Board to ensure that any added paragraph will improve the financial reporting process and the usefulness of the audit report for financial statement users, rather than add boilerplate language that provides little value to financial statement users.

Finally, the Release addresses the inclusion of an auditor's discussion about difficult or contentious audit issues. It is important to note that an auditor already discusses difficult or contentious audit issues with the audit committee, in addition to estimates, accounting policies and practices. We do not believe that a discussion of these topics necessarily improves a financial statement user's understanding of an issuer's financial statements. Rather, we believe additional disclosure may confuse the user because it may introduce one or more competing acceptable accounting treatments. If an accounting treatment adopted and disclosed by management conforms to GAAP, then, by definition, such treatment is acceptable accounting and, under the standard of the auditor's report, must fairly present the issuer's financial position. We firmly believe that issuers – not auditors – are responsible for accounting policy election and application and should therefore be responsible for explaining those choices. We believe this is consistent with the primary and secondary roles of the issuer and its auditor, respectively, in connection with financial reporting. Accordingly, we do not support the use of a discussion paragraph about management's judgments and estimates, accounting policies and practices, and difficult or contentious audit issues.

## III. AUDITOR DISCUSSION AND ANALYSIS AND OTHER INFORMATION

Included in the Release is a proposal to include an Auditor Discussion & Analysis ("AD&A") in the auditor's report in order to provide financial statement users with a view of the financial statements and audit "through the eyes of the auditor." We believe this proposal would most likely result in the communication of original information about the company by the auditor, rather than the issuer. In our opinion, management has the best insight and ability to provide written commentary about the financial statements and financial condition of a company. We firmly believe that management is best suited to make judgments about market conditions, risks and other factors that might be relevant to financial statement users. The role of the auditor is to provide assurance, not information about an entity. We do not support the use of an AD&A.

Furthermore, the Release addresses auditor assurance on other information outside the financial statements, in particular Management Discussion and Analysis ("MD&A"). With emphasis, we would like to highlight that the auditor already reviews other information in documents containing audited financial statements and considers whether such information, or the manner of its presentation, is materially inconsistent with the financial statements or represents a material misstatement of fact. Expanding the audit process to include assurance for MD&A would substantially increase audit fees. If financial statement users do not understand the roles and responsibilities of the auditor with respect to information outside the financial statements, we support additional discussion in the audit report about the auditor's role and responsibilities.

******

Thank you for the opportunity to comment on the Release. If you have any additional questions, please contact us at (281) 618-4700.

**Re:** **PCAOB Rulemaking, Docket Matter No. 034, "The Auditor's Report On An Audit Of Financial Statements When The Auditor Expresses An Unqualified Opinion" and "The Auditor's Responsibilities Regarding Other Information In Certain Documents Containing Audited Financial Statements And The Related Auditor's Report,"** the "Proposed Auditing Standards"

**IAASB Exposure Draft, "Reporting on Audited Financial Statements: Proposed New and Revised International Standards on Auditing (ISAs),"** the "Exposure Draft"

Dear Sir/Madam:

Standard & Poor's Ratings Services appreciates the opportunity to provide the Public Company Accounting Oversight Board (PCAOB) and the International Auditing and Assurance Standards Board (IAASB) (together the "Boards") comments on their exposure drafts on changes to the auditor's reporting model.

The views expressed in this letter represent those of Standard & Poor's Ratings Services and do not address, nor do we intend them to address, the views of any other affiliate or division of Standard & Poor's Financial Services, LLC. We intend our comments to address the analytical needs and expectations of our credit analysts.[1]

[1] The opinions stated herein are intended to represent Standard & Poor's Ratings Services' views. Our current ratings criteria are not affected by our comments on the exposure drafts.

Standard & Poor's Ratings Services wholly supports the efforts of the Boards to increase the value of the audit and the auditor's report for analysts, investors, and other financial statement users. We believe the improvements the Boards propose will add value to the audit, the auditor's report, and the related financial statements by disclosing potentially useful information specific to each entity that will help inform our analysis on issues identified in the audit that were significant to the auditor. This improved communication about the audit will likely enhance audit credibility and quality beyond the current pass-fail opinion, increasing usefulness and transparency for credit analysts and other financial statement users.

Highlights of our letter include:

- We support the Boards' work to improve the auditor's report by providing additional information specific to each entity.
- We encourage the PCAOB and IAASB to develop standards consistent with each other.
- In addition to the proposals, we believe the auditor's report should evaluate and report on the appropriateness of accounting practices companies applied when alternatives were available.
- We also favor an improved format and structure of the auditor's report for more effective delivery of key messages. For example, the use of titles, headings, and subheadings is a good way to organize and identify sections of the auditor's report.

**An Enhanced Auditor's Reporting Model Is Favorable**

The auditor's report is how auditors communicate their work to financial statement users, and those financial statements are our primary source of information regarding an enterprise's current and past financial condition and performance. A company's financial statements are the starting point of our financial analysis. Our analysis of a company's financial statements begins with a review of the accounting features to determine whether the data in the statements accurately measure a company's performance and position relative to its peers and the larger universe of corporate entities. The analysis of footnote disclosures—e.g., detailed schedules, contingent liabilities, and assumptions used—can provide a better understanding of an enterprise's financial risks.

The auditor's work and report are clearly valuable in our analysis. We rely on the auditor's report, and are skeptical in its absence or qualification. As financial statement users, we believe we will benefit from information beyond the assurance currently provided by the pass-fail auditor's opinion. While the auditor's report will maintain its pass-fail element, we believe the expanded disclosures about critical or key audit matters will increase the usefulness of the auditor's report and enhance audit discipline. The PCAOB's critical audit matters (CAM) and the IAASB's key audit matters (KAM) should provide clear and concise entity-specific information; this is how the proposed auditor's report will likely provide significant value for users.

The CAMs and KAMs potentially will include important matters communicated to the audit committee or those charged with governance, respectively. We believe the CAMs and KAMs should include specific descriptions of how the auditor addressed each matter, and not be boilerplate language. For example, we emphasize the importance of the auditor addressing management's specific policies, practices, and processes used to: account for significant unusual transactions; determine highly subjective significant assumptions applied in critical accounting estimates; and present financial statements and related disclosures. In our view, by communicating such information in CAMs and KAMs, the auditor's report would make desirable strides towards increased usefulness and transparency for financial statement users.

With the information and understanding gained through the audit process, the auditor has the ability to provide entity-specific information and insight beyond the binary pass-fail opinion in areas of significant risks, judgments, estimates, and assumptions. This information would be especially meaningful to credit analysts and other financial statement users if it provides relevant information that helps to better understand financial risks, including future cash flows and prospects. Financial statements are increasingly complex, so we believe users will benefit from an independent and objective view of areas where preparers applied judgments and prepared estimates, and how auditors were able to obtain sufficient, appropriate audit evidence.

**Develop Consistent Standards For The Auditor's Report**

As a global rating agency, and users of financial statements across the globe, we ideally would like to see a fully converged auditor reporting model. We appreciate that the Boards are concurrently developing standards to improve the auditor's report and that they are monitoring each other's progress. We favor the many similarities between the PCAOB and IAASB projects, such as bringing transparency to judgmental areas and the rationale behind the considerations made. However, quite importantly, the Boards define the criteria to determine CAMs and KAMs differently. We believe this proposed addition to the auditor's report is most relevant to financial statement users, and believe the Boards should avoid the possibility of different standards that could generate different audit matters reported simply because of the definitional distinctions.

We urge the Boards to strive for greater consistency, not only in the definitions, but also in the disclosure requirements. In some areas, one proposal may be more developed than the other (e.g., the PCAOB's Proposed Auditing Standards has fully developed the auditor's responsibilities regarding "other information" included with the audited financial statements, whereas the IAASB included a placeholder with requirements to be developed). On the other hand, the IAASB's Exposure Draft robustly explains and discloses the auditor's responsibilities for the audit. We urge the Boards to use the best from each other's work and to develop consistent requirements for the auditor's report: we do not believe the lack of harmony in auditor's reports will aid global reporting and analysis, and it may lead to varying levels of regulatory enforcement.

**Evaluate Alternative Accounting Practices**

When accounting standards provide alternative accounting practices, we believe the enterprise's accounting choices should best reflect the underlying economics of its business transactions. An enterprise's accounting choices should depict information in the financial statements that is consistent with the intent and the economic drivers of significant transactions of the business, for example, the effect of its asset-liability management models, inventory methods, and construction contract accounting. We recommend the Boards consider auditing standards that would provide financial statement users with auditor views on the symmetries between the economic basis and accounting depiction of transactions when the enterprise has made accounting choices. Currently, as part of an audit, the auditor evaluates the appropriateness of the accounting policies the company used in the context of an established materiality. We believe the auditor's report should go further by concluding whether the accounting policies used are the most appropriate (not just in accordance with the accounting standard), in light of the entity's specific circumstances, and that they best reflect economic reality of the company. This disclosure should also include areas in which the accounting--while appropriate--did not fully meet the standard-setting intent or masked the economics (e.g., repo 105, synthetic leases, and other “unique” arrangements). We believe that evaluating and reporting on the quality of accounting practices would likely lead to entities selecting more relevant accounting policies and, consequently, to greater consistency in financial reporting.

**Format And Headings**

The audit report format is important to ensure that auditors can communicate key messages effectively. Because a well-defined format and structure for the auditor’s report will help users, we believe the Boards should define the format and structure. The use of titles, headings, and subheadings, as required by the IAASB’s Exposure Draft, is an excellent example of identifying the purpose of each section and paragraph within the auditor’s report.

**Reporting On “Other Information”**

We support potentially expanding auditors’ responsibilities to address evaluating any “other information” included with, but outside the financial statements, for material inconsistencies or misstatements. Further, we believe financial reporting is negatively affected if companies provide material to investors through other means (e.g., investor presentations) that is inconsistent with the audited financial statements.

**Going Concern Disclosures**

The going concern assumption is inherent in every audit and justifies valuing assets and liabilities using historical cost; otherwise, a liquidation (or fair value) perspective should be employed. Nevertheless, following the financial crisis, the going concern issue has become a greater worry, and accordingly, addressing it explicitly in the audit report may add accountability and comfort for this aspect of the audit.

**Private- Vs. Public-Entity Auditor’s Reports**

We believe financial statement users of public- and private-sector reports will better understand the financial statements and audit results if the auditor’s reports are more informative. In our credit analysis, we seek the same level of information from all entities, whether large or small, public or private, not-for-profits or governments. Because the PCAOB standards do not apply to private entities in the U.S., we encourage the American Institute of Certified Public Accountants to adopt auditor reporting model standards for private entities that are similar to the PCAOB and IAASB proposals.

Ms. Phoebe W. Brown, Secretary
Public Company Accounting Oversight Board
Office of the Secretary
1666 K Street NW
Washington, D.C. 20006-2803

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Ms. Brown:

The State Board of Administration (SBA) of Florida welcomes the occasion to provide comments to the Public Company Accounting Oversight Board's (PCAOB) Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; the Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Amendments to PCAOB Standards (Release). The SBA manages the assets of the Florida Retirement System (FRS), one of the largest public pension plans in the United States with 1.1 million beneficiaries and retirees. The SBA's governance philosophy encourages companies to adhere to responsible, transparent practices that correspond with increasing shareowner value.

The SBA's views on the Release are consistent with the opinions we expressed in response to the PCAOB's 2011 Concept Release on Proposed Auditing Standard Related to Communication with Audit Committees.[1] Our policies have long reflected the principle that the auditor's role in safeguarding investor interests is critical and that independent auditors have an important public trust, for it is the auditor's impartial and professional opinion that assures investors that a company's financial statements are accurate. Investors must be able to rely on the auditor's evaluation of a company's accounting policies and practices for, not only accuracy and acceptability, but also for quality. It is necessary that auditors report on the qualitative aspects of management's estimates, process, and judgment.

Proposed Auditor Reporting Model

SBA staff supports the proposed auditor reporting model that requires the independent auditor to communicate 'critical audit matters' in the auditor's report. SBA staff finds the requirement for the outside auditor to communicate significant unusual transactions to the audit committee to be an appropriate standard. Additionally, it is correct to require the auditor to communicate to the audit committee his or her views regarding significant accounting or auditing matters when the auditor is aware that management has consulted with other accountants about such matters and the auditor has identified a concern regarding these matters.

[1] Letter from Ashbel C. Williams, Executive Director and CIO, SBA, to Office of Secretary, PCAOB (February 29, 2012), available at http://pcaobus.org/Rules/Rulemaking/Docket030/033b_SBA_of_FL.pdf.

Also, if the auditor determines that there are no critical audit matters, the auditor should state in the auditor's report that the auditor determined that there are no such matters to communicate.

Proposed Other Information Standard
SBA staff supports the proposed 'other information' standard and the approach that the PCAOB has taken in specifying the types of communications that should occur between the outside auditors and the audit committee. We believe that the proposed specific procedures for the auditor to perform with respect to evaluating the other information will provide consistent disclosure for investors. We agree with the PCAOB that those procedures and the resulting communication of any potential material inconsistencies or misstatements of fact to the company's management "could promote consistency between the other information and the audited financial statements, which in turn could increase the amount and quality of information available to investors and other financial statement users."

Proposed Standards and Amendments to Emerging Growth Companies
SBA staff believes the proposed standards and amendments should be applicable to audits of all public companies regardless of their revenue base or market capitalization, including emerging growth companies (EGC). We agree with the PCAOB that the application of the proposed standards and amendments to EGCs could provide useful information that "could contribute toward investors making more informed decisions, resulting in more efficient capital allocation and lower average cost of capital."

As a member of the Council of Institutional Investors (CII), the SBA echoes their recommendations for the PCAOB to consider as it develops new auditing standards. The SBA looks forward to the potential benefits of additional auditor reporting. Thank you for your consideration and if you have any questions, please feel free to contact me at (850) 413-1252, or at governance@sbafla.com.

Sincerely,

Michael P. McCauley

**Re: Invitation to Comment:** ***PCAOB Rulemaking Docket Matter No. 34: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments***

Dear Board Members:

State Street Corporation ("State Street") appreciates the opportunity to comment on the Public Company Oversight Board's (PCAOB or Board) *Proposed Auditing Standards on The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; the Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards (the Proposed Standards).* With $27.48 trillion in assets under custody and administration, and $2.38 trillion in assets under management as of March 31, 2014, State Street is a leading financial services provider serving some of the world's most sophisticated institutions. As a "Systemically Important Financial Institution" and a "Global Systemically Important Bank" as designated by the Financial Stability Board and the Basel Committee on Banking Supervision, State Street plays a key role in the global financial market infrastructure.

While we support the efforts to improve audit quality and auditor communication to enhance stakeholder confidence, we have a number of comments regarding the Proposed Standards that we believe should be addressed in order to achieve the proper balance of ensuring that additional information in the form of auditor communications is both reliable and relevant to the users of financial statements.

We are primarily concerned that the Board's proposal to add critical audit matters (CAMs) to the audit report may result in a perceived weakness in financial statement reporting process, including management's competence or effectiveness of the control environment. Requiring auditors to provide information on the company's financial reporting process may force independent auditors to consistently hold (or "assume") the most conservative view on matters of accounting judgment, resulting in more CAMs being included in the auditor's report. As this exercise of caution will vary between auditing firms, comparability will likely be adversely affected and will weaken the report's main message.

State Street believes that auditors should not be the original source of disclosure specifically related to management judgments and estimates, or accounting policies and practices, including areas of significant judgment. Providing information to investors with respect to our accounting policies and their application is the responsibility of State Street's management, not the independent auditor. Sophisticated stakeholders are aware that information that would be disclosed as CAMs by the auditor is already included in disclosures made by management. The auditor's role is to evaluate whether the financial statements taken as a whole are presented fairly in accordance with generally accepted accounting principles (GAAP). Requiring the auditors to disclose this information would unnecessarily convolute the financial statements, as they would need to sort through information provided by both management and the independent auditors. The auditor's responsibility to communicate such matters should be limited to situations in which the financial statements are not in conformity with GAAP in all material respects.

The Proposed Standards require the independent auditors to summarize to investors the same level of detail and context that is provided to a company's Board of Directors, the independent elected body representing stakeholders. In the absence of appropriate context and two-way communication, we believe that such information would be potentially misleading, incomplete, and would not enhance the overall understanding of the readers of the auditor's report and financial statements. Additionally, we note that requiring supplemental reporting such as the proposed CAMs likely will lengthen the time to complete the audit, as there may not be sufficient time for the auditor to complete the audit of the financial statements and provide assurance in additional areas and therefore adversely influence filing timelines for large accelerated filers.

We do not object to the concept of requiring auditors to provide assurance on certain information outside the financial statements, provided that the scope of such assurance is clearly defined. However, we are unclear on the incremental benefits to investors from the elevated level of assurance proposed to be provided by auditors over management's discussion and analysis (MD&A), including the critical accounting estimates currently discussed in MD&A, given the likely significant increase in audit procedures and audit-related costs that will ultimately be borne by our company's shareholders.

State Street believes that the current auditor's report ("pass/fail model") clearly communicates the nature of the audit and whether the financial statements are presented fairly, in all material respects, in accordance with GAAP. The concept of clarification of the standard auditor's report would further lengthen the auditor's report unnecessarily and create redundancies with management disclosures without achieving the objective of enhancing communication between auditors and the users of audit reports, thereby compromising the report's effectiveness. With respect to the proposed approach related to the required and expanded use of emphasis paragraphs, we note that existing standards allow auditors to add areas of emphasis at their discretion, based on circumstances. We believe that mandating the requirement for an emphasis paragraph would result in standardized language over time and would therefore not achieve the proposed objective.

We appreciate your consideration of these matters and welcome the opportunity to discuss them with you.

Sincerely,

Michael W. Bell

Re: PCAOB Rulemaking Docket Matter No. 34 – Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Ladies and Gentlemen:

This letter is in response to the proposed auditing standards relating to auditor's reports on financial statements issued by the Public Company Accounting Oversight Board (the "Board") in PCAOB Release No. 2013-005 (August 13, 2013) (the "Release"). We appreciate the opportunity to submit these comments for the Board's consideration.

We previously commented to the Board's 2011 Concept Release on the audit report. Those comments, based on our perspective as lawyers regularly engaged advising issuers on disclosure and reporting matters, were animated by two key considerations:

- the issuer must be the original source of any disclosure about the issuer or its results of operations or financial position, and

- the best way to capture, for the issuer and its shareholders, the benefits of the auditor's insights and experience is for the auditor to have full and open interaction with the audit committee.

The proposed auditing standards do not reflect some of the more troubling potential changes considered in the Concept Release – such as the proposed "auditor's discussion and analysis" – but do include elements that in our view are likely to have unintended consequences that increase costs and are detrimental to the quality of issuers' disclosure and their governance processes.

The proposed requirement to include discussion of "critical audit matters" in the audit report significantly implicates these concerns. On a very basic level, in the context of an audit report that continues to state a "pass/fail" conclusion, we do not understand how a discussion of critical audit matters truly serves a useful disclosure purpose. The discussion appears to be pointing out areas of uncertainty, but we assume that it is not meant to convey uncertainty as to the basic "pass/fail" conclusion of the audit. Is it then intended to indicate uncertainty as to the information disclosed by the issuer? It seems to us that disclosure as to this sort of uncertainty is best left to the issuer itself. Indeed, issuers are required to disclose known trends and uncertainties in management's discussion and analysis of financial condition and results of operations (MD&A), and MD&A also includes a discussion of critical accounting estimates. Areas of uncertainty addressed in the audit process are at best a second-order indicator of the quality of the issuer's disclosed information. Someone engaged in direct discussions with the issuer – such as underwriters conducting due diligence discussions, or an audit committee overseeing the issuer's financial reporting – could follow-up on this sort of indicator and ask further, targeted questions as to the underlying state of affairs. But an investor reading financial statements does not have that opportunity to follow-up. For the investor, the significance of the critical audit matters disclosed seems uncertain and questionable, at best.

At the same time, any discussion of critical audit matters will, we think, necessarily expand disclosure about the issuer, and in particular about the issuer's internal control over financial reporting. For example, we would expect a critical audit matter requirement to lead to extensive disclosure and discussion of "significant deficiencies" in internal control. Indeed, the proposed standard provides that the "severity of control deficiencies identified" is a factor that the auditor should take into account in determining a critical audit matter. While some might view that as useful disclosure, for present purposes we think the key point is that any expansion (or effective expansion) of disclosure requirements in this area should be the result of Securities and Exchange Commission rule-making, with notice and comment, and not the by-product of new PCAOB auditing standards.

We are also concerned that a requirement to discuss critical audit matters may have, as an unintended consequence, a tendency to discourage free and open communication between the auditor and management and between the auditor and the audit committee and, to the extent issuers and audit committees may have an influence, between auditors and their respective national offices. As we read the proposed auditing standard, such communications could be taken as indicators of critical audit matter status. For any number of reasons, issuers and auditors may wish to limit, or otherwise influence, the number of critical audit matters that must be addressed, and seek to do so by limiting such communications. This would obviously be a most unfortunate effect, but we are quite concerned that it would be a real motivating factor for issuers and their auditors operating under the proposed standard. We are also concerned that discussion of critical audit matters in the audit report will lead issuers to feel compelled to make reactive disclosures, resulting in added costs and burdens to them. At the same time, it will have the effect of causing the auditor to be a source of disclosure about the issuer and its financial reporting rather than an independent auditor of the issuer's financial information, thus both changing and blurring the role of the auditor.

Our principal concern with the proposed "other information" standard also relates to unintended consequences. This standard would require addition to the audit report of a very simple, blanket confirmation. We expect most readers would understand that confirmation to provide additional "comfort" as to the other information covered or worse, that the other information is somehow being "expertised". Notwithstanding the contemplated disclaimers (as to the basis of the evaluation, and that no opinion is being expressed on the other information), we are therefore concerned that a requirement to provide such confirmations will provide auditors a powerful incentive to do more work to support the statement. On the other hand, if that is not the result, given the impression conveyed by the confirmation, we are concerned that the new requirement will have effectively widened the "expectations gap" between what investors believe the auditors are doing, and what they in fact do. As an example, the proposed standard would treat as "other information" any documents in the list of exhibits to the annual report on Form 10-K[1]. Putting aside the time and expense associated with having an auditor read and evaluate the information in those documents, we question whether the auditor has any particular expertise with respect to evaluating many of the documents so filed. Moreover, although the proposed standard would have the auditor state that her

1 Appendix 6 of the proposed standard, page A6-6.

evaluation of the other information was based on the relevant "audit evidence obtained and conclusions reached", we doubt the average investor will appreciate the limits that statement is intended to convey, thereby aggravating the "expectation gap".

We are also concerned that the new requirements, as to both "critical audit matters" and "other information", may expose the auditors to additional potential liability, unfairly in our view, since the auditor would be required to make comments on the basis of information acquired incidentally in the course of the audit, as opposed to as a result of procedures designed specifically to develop such disclosure. And we fear that auditor disclosures of the sort contemplated would likely enhance the issuer's liability profile, as well.

We continue to believe it is quite important that issuers (and derivatively, their shareholders) get the full benefit of the auditor's insights acquired through the course of the audit. But we feel strongly that requiring the auditor to make public substantive disclosures about "critical audit matters" and "other information" will not promote that objective, and may well inhibit the audit and governance processes now in place to oversee financial reporting. Auditors should be encouraged to have the fullest and frankest conversations possible within their firms and with the audit committee. The best way to promote that objective is to allow those conversations to be conducted on a confidential basis. We continue to be quite concerned that if the auditor's discussions within the firm and with the audit committee are conducted with the anticipation of subsequent public disclosures being made by the auditor, these internal and auditor/audit committee discussions may be seriously inhibited. Auditors may be more cautious in raising concerns, and audit committee members may be more circumspect in probing such concerns with the auditor.

* * *

We appreciate this opportunity to comment on the proposed auditing standard. You may direct any questions with respect to this letter to Robert E. Buckholz at (212) 558-3876, Robert W. Downes at (212) 558-4312 or William G. Farrar at (212) 558-4940.

Very truly yours,

Re: PCAOB Rulemaking Docket # 034

I am writing to express my opinions regarding the above referenced Proposed Auditing Standard (Proposal) - *The Auditor' s Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion;, The Auditor' s Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor' s Report; and Proposed Amendments to PCAOB Standards.* While I would be supportive of the Board's efforts to enhance investors understanding of the current audit process and the auditor's responsibilities as it relates to providing an attestation on management's assertions regarding its Company's financial statements and internal control over financial reporting, I do not support some of the requirements contained in the Proposal.

**Critical Audit Matters**

The Proposal would require the auditor to determine each critical audit matter (CAM), describe the considerations that led the auditor to make such determination and refer to the relevant financial statement accounts and disclosures to which each CAM relates. The Proposal includes a list of certain factors to be considered by the auditor in determining each CAM for an audit. The Proposal states that disclosure of the CAMs is not intended to change the auditor's traditional role of attesting to management's assertion regarding the conformity of its Company's financial statements being in accordance with GAAP, and will not require the auditor to provide an analysis of the matters in the financial statements when communicating CAMs. These assertions of the Board are not correct. The determination and description of CAMs has the auditor going beyond an attestation on management's financial statements, as a CAM ultimately provides disclosure regarding the nature and extent of the procedures performed by the auditor, and in many cases may result in the auditor's disclosure of information regarding the Company that is otherwise not required to be included in the Company's financial statements (including the footnotes) or in other areas of periodic SEC filings. The auditor should not be the source of any disclosure regarding a Company; if the auditor believes additional disclosures are required in the financial statements or other parts of a Company's periodic filings, existing auditing standards address the auditor's responsibilities in such an event, including communicating such concerns with the audit committee.

The disclosure and discussion of CAMs would also result in confusion on the part of investors as to the subject matter of the CAMs, and is inconsistent with the "pass/fail" model which the Board appropriately determined should be retained. The illustrative examples of hypothetical disclosures of CAMs in the Proposal essentially say "here is a CAM, here is why we determined it was a

CAM, we consulted with our national office on the nature, timing and extent of our audit procedures concerning the financial statement elements related to the CAM, and here is where such financial statement element is disclosed in the financial statements." The auditor's disclosure and discussion of each CAM would likely be viewed as a qualification to their overall opinion, despite the required disclosure that "the CAMs communicated do not alter in any way our opinion on the financial statements, taken as a whole."

It appears that the Board's objective in disclosing CAMs is to essentially highlight areas where a Company's management, in preparing its financial statements, has to apply significant judgment and/or make significant accounting estimates. Current SEC rules already require disclosure of such financial statement areas – the Critical Accounting Policies section of MD&A. This is the appropriate place for such financial statement areas to be disclosed, by MANAGEMENT.

The proposal for disclosure and discussion of CAMs should not be included in any final Standard.

**Reporting on Other Information**

I agree that there may be some benefit from a clearer articulation in the auditor's report of the auditor's responsibility for information outside of audited financial statements that are contained in SEC filings. However, the Proposal would enhance the auditor's responsibilities in this regard by changing the current requirement of "read and consider" to a new requirement of "read and evaluate" whether other information is materially consistent with the audited financial statements. The Board acknowledges that the enhanced requirement to "read and evaluate" is likely to increase the nature and extent of the auditor's procedures as it relates to such information, and therefore increase audit costs. I do not think the Board had adequately documented the cost/benefit analysis of the proposed "read and evaluate" responsibility.

I also do not believe the Board has adequately documented the need for such enhanced auditor responsibility in this regard. Management is already required to provide CEO and CFO certifications for a Company's periodic filings, as well as the establishment of disclosure controls and procedures. SEC registrants are also subject to audit committee oversight. In addition, certain disclosures outside the financial statements, such as forward looking information in MD&A, would be very difficult, if not impossible, for the auditor to objectively "evaluate." For the auditor to provide any level of attestation/assurance on such information, which a "read and evaluate" requirement would essentially encompass, would be totally inappropriate and call into question the independence of the auditor.

Other than having a disclosure of the auditor's CURRENT responsibility and requirement to "read and consider" information outside of the audited financial statements that are contained in SEC filings, the proposal in this regard should be dropped.

**Audit Tenure**

The Proposal would require disclosure of the auditor's tenure. The Board acknowledges that there is no agreement as to any correlation between the length of an auditor's tenure and audit quality. The Board admits that the Board itself has not reached a conclusion in this regard. This is a more than sufficient reason for this aspect of the Proposal to be abandoned.

Statutorily, the decision on which audit firm to engage is the sole responsibility of the audit committee. The audit committee is in the best position to make that decision, taking into consideration all factors the audit committee deems relevant. Some factors may generally be consistent from Company to Company, while other factors may be unique to a specific Company. Regardless, the audit committee ultimately makes the decision. Disclosure of audit tenure by the auditor in a vacuum without any additional disclosure regarding what factors went into the committee's determination on what firm to engage (and for whatever period of time the committee has determined to engage such firm) would be an incomplete disclosure, at a minimum, and potentially misleading. For these reasons, it is inappropriate for the auditor to disclose in its audit report the audit tenure as contained in the Proposal.

**"Assess" Versus "Evaluate" Accounting Principles Used and Significant Estimates Made**

The Proposal would change the current audit report from indicating that the auditor has "assessed" the accounting principles used and significant estimates made by management to "evaluated" the accounting principles used and significant estimates made by management. The Proposal contains no discussion of the reasons for or what the Board intended by such change. If the Board intends that the change from "assessed" to "evaluated" is solely to more effectively communicate the auditor's current requirements, then the Board should explicitly state such intention and expectation in any final Standard. However, if the Board intends that the change from "assessed" to "evaluated" is intended to impose additional requirements on the auditor, then the Board should explain its reasons behind such change, and justify the enhanced requirements with a cost/benefit analysis.

**Explanatory Paragraphs**

The Proposal notes that existing auditing standards provides examples of matters the auditor may decide to emphasize in an explanatory paragraph to their audit report. But rather than just incorporate the existing examples of such matters, the Proposal adds new examples of matters that may be called out in an explanatory paragraph. However, the Proposal contains no discussion of the Boards reasoning behind the inclusion of the new examples, and why such new examples would be appropriate. Any final Standard should just retain the existing examples of explanatory paragraph matters from the current auditing standards.

Thank you for your consideration of these comments and suggestions.

Sincerely,

Greg Swalwell

Re: Rulemaking Docket 034

Board Members:

We appreciate the opportunity to comment on two new proposed auditing standards in PCAOB Release No. 2013-005 (the "Release"):

- The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion (the "proposed auditor reporting standard"), and

- The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report (the "proposed other information standard")

. . . and on other matters or questions raised in the Release.

Our comments are primarily from the perspective of an audited public company based on our experience with the traditional auditor reporting model, generally accepted auditing standards ("GAAS"), generally accepted accounting principles ("GAAP") as codified in the Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") and public registrant reporting requirements of the Securities and Exchange Commission ("SEC").

In developing our comments, we have given consideration to the roles of the following entities and perspectives relative to the content of the Release to address the proposed reporting standard, proposed other information standard and other matters and questions.

- The SEC has oversight authority over the PCAOB and appoints the accounting standards setting body, the FASB, which establishes GAAP.

- The PCAOB has authority to regulate registered public accounting firms ("auditors" or "audit firms") and "oversee the audits of public companies in order to protect investors and the public interest by promoting informative, accurate, and independent audit reports."[1]

- Registered public accounting firms audit entities that file reports and financial statements with the SEC.

[1] See PCAOB Mission, http://pcaobus.org/About/History/Pages/default.aspx

TARGA

- Audit Committees of public companies are required to be independent of management and are "directly responsible for the appointment, compensation, and oversight of the work of any registered public accounting firm employed by that issuer (including resolution of disagreements between management and the auditor regarding financial reporting) for the purpose of preparing or issuing an audit report or related work, and each such registered public accounting firm shall report directly to the audit committee."[2] Further, audit committees have oversight over an audited entity's financial reporting and related activities.

- Investors (i.e., company share or unit holders and note holders), creditors and the investing public have an interest in the financial statements of a public company and the related audit reports issued by a registered public accounting firm.

The following sections address the proposed auditor reporting standard, proposed other information standard, and other matters or questions raised in response to the Release.

**Proposed Auditor Reporting Standard**

The proposed auditor reporting standard includes two major features: (a) retention of the historical pass/fail model incorporated in the standard auditor's report and (b) addition of auditor disclosure of any deemed critical audit matter(s) ("CAM").

Pass/Fail Model

The premise of the pass/fail model is the financial statements reported upon by the auditor are fairly presented, in all material respects, in conformity with GAAP ("pass" or unqualified opinion) or not ("fail").

The pass/fail model has been the basis of the auditor reporting standard with very little change for more than 70 years[3] and a historical focus of financial statement users. We believe that most financial statement issuers will continue to maintain their focus on whether a company received an unqualified opinion as it relates to the financial statements presented and support the decision of the PCAOB to retain the pass/fail model.

Critical Audit Matters

The PCAOB defines a CAM as those matters addressed during the audit that:

- Involved the most difficult, subjective, or complex auditor judgments;

- Posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or

- Posed the most difficulty to the auditor in forming the opinion on the financial statements.[4]

[2] See Sarbanes-Oxley Act of 2002, Sec 301. (2)
[3] See PCAOB Release 2013-005, page 2, Introduction, paragraph 2
[4] See PCAOB Release No. 2013-005, page 15

TARGA

The PCAOB's underlying presumption is that auditors would encounter multiple CAMs in most audits, and on a recurring basis, with the source of the CAMs identified as being:

- Documented in the engagement completion document, which summarizes the significant issues and findings from the audit;
- Reviewed by the engagement quality reviewer;
- Communicated to the audit committee; or
- Any combination of the three.[5]

It is our belief that the proposed disclosure of CAMs will most likely become a corollary of management's existing disclosures of critical accounting policies ("CAP"), use of estimates or other significant events and matters in Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A"), which are required under the SEC Regulation S-K, Item 303 and related SEC interpretations and guidance, or in the notes to the financial statements.

Our concerns with the proposed inclusion of CAMs in the auditor's report include:

- The underlying PCAOB presumption that auditors will encounter multiple CAMs in most audits will most likely result in items being classified as CAMs that otherwise would not have previously been considered by auditors to be CAMs.
- Auditor judgments which could result in more CAMs in a report due to auditors erring to inclusion of items that may not otherwise rise to the level of a CAM to avoid a later challenge by PCAOB inspectors.
- Increased auditor workload and client billings to justify why CAM treatment is appropriate for certain items but not appropriate for other items.
- The potential for financial statement users to interpret a CAM as an issue indicative of an issue with the quality of the financial statements, conflicting with management's assessment of internal control over financial reporting, or as a qualification of the auditor's opinion.
- The potential for the use of CAMs over time to become repetitive "boilerplate" language included in the auditor's report.
- The potential for the use of CAMs over time to become an abbreviated version of the Auditor's Discussion and Analysis alternative which has been rejected by the PCAOB.
- The inclusion of CAMs in the auditor's report may result in situations where an auditor is required to disclose information in an audit report that is not required to be reported by management.

[5] See PCAOB Release No. 2013-005, page 15

- Management already discloses CAP, use of estimates or other significant events and matters extensively in MD&A as well as in the notes to the financial statements. There is no gain in clarity to financial statement users from a restatement of these items as CAMs in the auditor's report.

We do not support inclusion of CAMs in the auditor's report for the reasons noted above and believe that this item should not be implemented as part of a new proposed auditor reporting standard.

**Proposed Other Information Standard**

Other information is described as information other than the audited financial statements and related auditor's report in a company's audited financial statements filed with the SEC under the Securities Exchange Act of 1934 ("Exchange Act").[6] This information would include, among other items, business and property description and related statistics, selected financial data, MD&A and certain information incorporated by reference filed on SEC Form 10-K.[7]

In the existing standard, the auditor's responsibility is to "read and consider" other information in the SEC Form 10-K with no audit report requirement describing the auditor's responsibility with respect to other information. If the auditor concludes there is a material inconsistency between other information and the financial statements, the auditor performs certain procedures to respond to the material inconsistency. If the auditor becomes aware of a material misstatement of fact in the other information, the auditor would discuss with management and perform other procedures based on the auditor's judgment.

The proposed other information standard expands auditor responsibilities related to non- financial statement information included in SEC Form 10-K and would:

- Apply the auditor's responsibility for other information specifically to a company's annual reports filed with the SEC under the Exchange Act that contain that company's audited financial statements and the related auditor's report;

- Enhance the auditor's responsibility with respect to other information by adding procedures for the auditor to perform in evaluating the other information based on relevant audit evidence obtained and conclusions reached during the audit;

- Require the auditor to evaluate the other information for a material misstatement of fact as well as for a material inconsistency with amounts or information, or the manner of their presentation, in the audited financial statements; and

- Require communication in the auditor's report regarding the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information.[8]

[6] See PCAOB Release No. 2013-005, page 19
[7] ibid
[8] See PCAOB Release No. 2013-005, pages 20 and 21

TARGA

The auditor's responsibilities for other information contained in a SEC Form 10-K are changed from "read and consider" to "read and evaluate" based on relevant evidence obtained and the conclusions reached during the audit.

Our concerns with the proposed change from "read and consider" to "read and evaluate" other information include:

- Increased auditor workload, which could include substantial audit procedures, and client billings to evaluate and report on other information.
- Assumption by users of financial statements that the auditors have a greater degree of accountability for other information than warranted under the particular circumstances.
- Presumption by users of financial statements that the auditors have a greater degree of understanding of the business or industry described in the other information than is required or warranted.
- Confusion on the part of users of financial statements due to inclusion of disclaimer language as it relates to other information within the auditor's report.

We do not support changing the auditor's other information responsibilities to "evaluate" from "consider" for the reasons noted above and believe that the proposed other information standard not be implemented as written. It would appear more appropriate to clarify auditor responsibility for other information in SEC Form 10-K within the auditor's report.

**Other Matters**

Auditor Tenure

While there may be some investor interest in auditor tenure, there is no evidence that associates audit tenure with audit quality. There are circumstances where disclosure of auditor tenure makes sense; for example, in a proxy statement related to an Audit Committee report or a ratification action that requires a shareholder vote. However, a statement of when the audit relationship began incorporated in the auditor's report with no context would appear to be of limited or no value; especially given the mandatory rotations of engagement and concurring audit partners on a five (5) year basis.

We do not support inclusion of auditor tenure in the auditor's report.

Materiality

In Appendix 6 of the Release, the PCOAB asks the question:

> "Is the federal securities law definition of materiality the appropriate standard for the auditor's responsibility to evaluate other information?"

TARGA

The federal securities law definition of materiality is incorporated within the SEC guidance[9] and operates in two dimensions – quantitative and qualitative. The application of materiality is based on the concept of assessments of the inferences a reasonable shareholder' would draw from a given set of facts and the significance of those inferences to him.[10] Similarly, the FASB states "the magnitude of the item is such that it is probable that the judgment of a reasonable person relying upon the report would have been changed or influenced by the inclusion or correction of the item."[11] Additionally, the FASB has made it clear that "[M]agnitude by itself, without regard to the nature of the item and the circumstances in which the judgment has to be made, will not generally be a sufficient basis for a materiality judgment."[12]

Materiality as addressed by SEC relates directly to financial statements and, presumably, all other information filed in SEC Form 10-K that is derived from the financial statements. Thus, it would appear that the federal securities law definition of materiality would be directly applicable to certain other information (e.g., selected financial data and MD&A) and arguably to any other information a reasonable shareholder or person may rely upon in a SEC Form 10-K.

Although we do not support the change from "consider" to "evaluate", we believe that the federal securities law definition of materiality as incorporated in the SEC guidance is not only the appropriate standard for the auditor's responsibility to evaluate other information but equally is applicable to financial statements.

Auditing Standards

In the Release, the PCAOB shows proposed amendments to current audit standards based on the proposed auditing standards. We note in PCAOB Rulemaking Docket No. 40 that the PCAOB has proposed a framework for reorganizing the existing interim and PCAOB issued auditing standards into a topical structure with a single integrated numbering system as well as proposing (a) certain conforming amendments, (b) certain related amendments to the PCAOB auditing standards and (c) to rescind certain interim auditing standards that the Board believes are no longer necessary under the proposed reorganization.

While we applaud these administrative actions, we also believe the PCAOB should begin a review of all auditing standards to modernize audit practices and processes to recognize the significant changes in the business environment, business practices and technology since many of the auditing standards were developed. We also believe that the PCAOB should give due consideration to the differences in industry sectors when it revises auditing standards as the current one size fits all approach is not an effective or efficient approach to delivering high quality audit results.

**Conclusion**

We appreciate the opportunity to comment on the proposed auditor reporting standard, proposed other information standard, and other matters or questions raised in response to the Release. If the

**Re: PCAOB Rulemaking Docket Matter No. 034: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments**

Dear Office of the Secretary:

Tesoro Corporation[1] is pleased to submit comments on the Public Company Accounting Oversight Board's (the "PCAOB" or the "Board") Rulemaking Docket Matter No. 034, *Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments* (the "Proposed Standards"). Certain comments provided herein reference those outlined in our letter[2] dated September 30, 2011 (the "Initial Letter") on the proposed changes to the auditor reporting model as originally set forth in Concept Release No. 2011-003 ("Concept Release").

**Overall**

We commend the Board for their efforts to address concerns raised by constituents about the Concept Release. However, we continue to disagree with the manner in which the Board is attempting to enhance audit quality and transparency of information concerning entities' financial statements. As currently outlined, the Proposed Standards, while pared down from the Concept Release, will not achieve the Board's goals. Rather, the Proposed Standards will likely result in additional confusion for investors and other financial statement users as it may promote users' undue focus on certain areas of an entities' financial statements, result in subjectivity being incorporated into the audit opinion, and cause unnecessary uses of time and expense for preparers and auditors to comply with little or no added value.

**Critical Audit Matters ("CAMs")**

We do not support the requirement to communicate CAMs in the auditor's report as outlined in the Proposed Standards. We understand that the Board's intent with the CAM disclosure within the auditor's report is to remedy the information asymmetry that exists between a company's management and investors. Conceptually, this appears to provide financial statement users the same information available to the audit committee and

[1] Tesoro Corporation is one of the largest independent petroleum refiners and marketers in the United States. We primarily manufacture and sell transportation fuels. We own and operate six refineries in the western United States that refine crude oil and other feedstocks into transportation fuels, such as gasoline, gasoline blendstocks, jet fuel and diesel fuel, as well as other products, including heavy fuel oils, liquefied petroleum gas, petroleum coke and asphalt. Both Tesoro and our consolidated master limited partnership, Tesoro Logistics LP (together with Tesoro Corporation, "Tesoro"), are publicly traded companies requiring periodic reporting with the Securities and Exchange Commission ("SEC"). The commentary provided herein represents opinions expressed on behalf of both Tesoro Corporation and Tesoro Logistics LP.
[2] http://pcaobus.org/Rules/Rulemaking/Docket034/119.pdf

management. However, we believe the Board is not sufficiently considering the negative implications of including discussion of CAMs in the audit report.

Constituents view the current pass/fail audit opinion model as an objective tool by which they can understand if the financial statements as a whole are free of material misstatement. While we agree that users typically just look to the audit opinion to ensure an unqualified opinion was provided by the auditors, we do not believe adding elements of subjectivity will provide better transparency to users as sought by the Board. Rather, we believe that discussion of CAMs in the audit opinion would only further the problem referred to as disclosure overload. Similar to comments we made in a letter[3] submitted to the Financial Accounting Standards Board ("FASB"), we believe the current state of financial reporting requirements, whether issued by the FASB, SEC or through the Proposed Standards outlined by the Board, have caused a significant overload of information which users have trouble deciphering in order to make investment and credit decisions. The subjective discussion that will result from the inclusion of CAMs in the audit opinion will only add to the level of confusion inherent in current financial reporting requirements. Users may inappropriately focus attention on CAMs as being matters of greater importance than the financial statements a whole. Such focus should not be generated by the auditor, but rather management through its disclosures. Thus, the Proposed Standards would undermine the significant disclosures made by management throughout their financial statements about complex areas of the business.

Additionally, auditors typically encounter areas throughout the course of their audit for which complex or subjective audit procedures are necessary to evaluate the inherent judgments and representations made by management. Incorporating discussion of these matters into the audit report would likely never provide a complete picture of the procedures performed by the auditor. To discuss these matters with enough detail would require significant amounts of wording which could further confuse users. Auditors would also likely default to excess disclosure of matters that management and others may not consider CAMs due to the litigious nature of the U.S. financial reporting and audit environment and fear of repercussions from the Board during the inspection process.

As demonstrated by our points above, we do not believe the audit report is the venue for enhancing transparency of financial statements. Rather, we highly recommend that the Board not proceed with including CAMs discussion in the audit report and, instead, begin a collaborative effort between the Board, SEC, FASB and other regulatory bodies to perform a comprehensive review and revision of the current financial reporting and disclosure environment in which U.S. public companies operate. One-by-one revision to the current financial reporting and disclosure framework does little to address the evident issue of disclosure overload and limits improvement of financial statement transparency. Meaningful change in financial reporting will not occur unless all regulatory bodies view an entity's financial statement as a singular item and work to enhance all of the parts to arrive at one set of enhanced financial reporting and disclosure requirements to address the issues that the Board along with the other agencies currently have on their agendas.

[3] See our letter dated November 26, 2012 submitted to the FASB in response to their invitation to comment on the disclosure framework project.
http://www.fasb.org/cs/BlobServer?blobkey=id&blobnocache=true&blobwhere=1175825129506&blobheader=application%2Fpdf&blobheadername2=Content-Length&blobheadername1=Content-Disposition&blobheadervalue2=584378&blobheadervalue1=filename%3DDISFR.DP.0018.TESORO_CORPORATION_G._SCOTT_SPENDLOVE.pdf&blobcol=urldata&blobtable=MungoBlobs

**Other Information**

We do not concur with the expansion of the auditor's responsibilities from "read and consider" to "read and evaluate" with respect to other information in certain documents containing audited financial statements, including selected financial data, management's discussion and analysis ("MD&A") and other information incorporated by reference. It is our belief that such a requirement is not appropriate because the auditor's responsibilities to evaluate as used in this context implies the auditor is providing a certain level of assurance over the information. The degree of assurance perceived will differ due to the varied nature of information included. Additionally, forward-looking information is incorporated in these areas and would be difficult to audit thus resulting in increased costs to the preparers of financial statements. We believe audit firms would struggle significantly to determine the level of work to be performed on forward-looking information thus leading to comparability issues in reporting, which we believe contradicts the goal of enhanced financial reporting that the Board and other agencies are trying to address. Having audit procedures required over forward-looking information also would reduce the usefulness of such information as management would need to adjust its disclosures and estimates to ensure the amounts can be easily audited.

Consistent with our comments expressed in the Initial Letter, within the PCAOB attest standards, there is the option that few companies exercise for the auditor to be engaged to attest on MD&A. This indicates financial statement users have not requested auditor involvement to that extent. If it is believed that such information outside the financial statements and footnotes should be subject to an audit, review, or the focus of additional assurance procedures, then such requirements should be mandated by the SEC, and not indirectly by the Board. Likewise, if further assurance on this information were deemed necessary, then the FASB or SEC could require such information to be included within a company's audited financial statements and footnotes. We surmise the reason such requirements have not been mandated is due to the scope limitations inherent in forward-looking information contained within MD&A. It would be very difficult for an auditor to provide an objective evaluation of prospective information. In our opinion, an auditor providing any level of assurance on other information may be misleading and cause financial statement users to place undue reliance on certain information, assumptions, projections or other estimates included within MD&A. Current disclosures outlined by the SEC adequately address these limitations and advise users of the risks of relying on the other information.

While we object to any requirement which implies a level of assurance is being expressed by the auditor, we do not object to an auditor clarifying the objective procedures that they currently perform. Such an approach would bridge the expectations gap between the investing public and the audit report by facilitating an understanding of the extent of an auditor's involvement over other information while addressing the public's misperceptions that such information is subject to an audit. We believe this approach is reasonable as it is premised on our belief that increased auditor involvement over this area is not needed and should not be required for those companies who demonstrate adequate controls, due diligence and level of care performed in the financial reporting process.

**Additional Items**

We do not necessarily object to some of the other objective wording changes outlined in the Proposed Standards. However, we do struggle to understand how the Board hopes to address investor concerns by disclosing auditor tenure. With the significant changes in independence and audit requirements over the past decade, we do not believe that a strong enough correlation exists to demonstrate that audit quality is impacted by auditor tenure. We would recommend that the Board review this requirement and perform additional research to evidence its concerns before finalizing the Proposed Standards.

* * * * *

We appreciate the opportunity to comment on the Proposed Standards. While we understand the intent of the Board in developing the Proposed Standards, we do not believe the required changes, as currently outlined, would help enhance transparency for financial statement users. Rather, the primary components of the Proposed Standards will likely result in further disclosure overload and thus magnify the level of confusion currently experienced by users. We would be pleased to discuss our comments with the Board.

Sincerely,

G. Scott Spendlove
Senior Vice President and Chief Financial Officer

**Re:** PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards the Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of a small, independently owned, nonpublic, non-custodial broker-dealer.

My firm is one of the approximately 4,000 firms that are not public companies and is one of 1,800 firms that generate less than $1mm in annual revenues. Further my firm has only 4 employees. As a small independent business, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Regards,

Donna DiMaria
CEO / CCO

RE: Proposed Auditing Standards—*The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards*

To Whom It May Concern:

One of the expressed goals of the Texas Society of Certified Public Accountants (TSCPA) is to speak on behalf of its members when such action is in the best interest of its members and serves the cause of Certified Public Accountants in Texas, as well as the public interest. The TSCPA has established a Professional Standards Committee (PSC) to represent those interests on accounting and auditing matters. The views expressed herein are written on behalf of the PSC, which has been authorized by the TSCPA Board of Directors to submit comments on matters of interest to the committee membership. The views expressed in this letter have not been approved by the TSCPA Board of Directors or Executive Board and, therefore, should not be construed as representing the views or policy of the TSCPA.

After a thorough review of the contents of the above referenced proposed auditing standards we decided to focus our attention on the issues therein that we consider most germane to our membership. The auditor's standard report represents the most critical communication link between the auditor and those third parties who use the auditor's report as a basis for their reliance on a client's published financial statements. We believe any proposed changes to the wording of the standard auditor's report should be viewed and evaluated in the context of this all-important communication link.

Thus, our response to this proposed auditing standard is focused solely on the recommended changes in the content and wording of the auditor's report. Our primary concern was directed to Appendices 1 and 5, and the following 12 questions posed in the Exposure Draft: 4, 5, 10, 12, 14, 15, 16, 25, 26, 27, and 28. We hope the Board understands our reasons for the focus of our efforts in responding to this Exposure Draft.

**4. The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?**

Based on the fact that the current auditing literature requires that the auditor's report have a title that includes the word "independent," we believe additional reference to the auditor's independence is

14651 Dallas Parkway, Suite 700 • Dallas, TX 75254-7408 • 972/687-8500 • 800/428-0272 • Fax 972/687-8646

redundant. This requirement has been in effect for a number of years, and most knowledgeable and competent financial statement users are keenly aware of the importance of auditor independence. Thus, we see no reason for multiple references to this issue.

**5. The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor. (a) Would the information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report? (b) Are there any additional challenges the auditor may face in determining or reporting the year the auditor began serving consecutively as the company's auditor? (c) Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

The purpose of the auditor's report is to communicate the auditor's opinion on the client's financial statements. The auditing standards that apply to the performance of an audit engagement are basically the same for the auditor whether he or she has performed the audit for a number of years or only one or two. Thus, what important inferences does the Board see the user drawing from information regarding the tenure of an auditor? We believe the implementation of such a requirement could only lead to spurious inferences by a user resulting in irrelevant conclusions. Also, if such information is deemed to possess some relevance, wouldn't it be more appropriate to have it come from client management in the proxy statement or other related communication?

**6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

Yes, the proposed auditor reporting standard would be beneficial to users of the financial statements, provided that the statement is qualified and indicates (a) the auditor evaluated the information based on evidence obtained in the normal course of the audit, and (b) no opinion is expressed on the other information.

***Due to the fact that the following questions (10-16 and 25-28) focus exclusively on the "communication of critical audit matters," we have chosen to provide one combined response that addresses our opinion regarding the issues raised in these questions. The questions are listed below and our combined answer is provided after the listing of the questions.***

**10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

**11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

**12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?**

**13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

**14. Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?**

**15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

**16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

**25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?**

**26. What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.**

**27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**

**28. What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?**

**COMBINED RESPONSE TO QUESTIONS 10—16 & 25—28**

We strongly believe, as have many others who have commented on the proposed guidance regarding "communication of critical audit matters," that the required disclosure of critical audit matters (CAMs) be eliminated from any final standard that may evolve from this proposal. Our reasons for this position are presented below.

**Summary**

Under the federal securities laws, including The Sarbanes-Oxley Act (Section 302 (a)), the responsibility that the financial statements fairly present, in all material respects, the financial condition and position of the company rests exclusively with company management. This fair presentation extends to the disclosures required to render the financial statement not misleading. In addition, the SEC has required certain other disclosures and relevant and useful information such as specific footnote disclosures and in Management's Discussion and Analysis (MD&A). The auditor is responsible for conducting the audit and issuing their opinion.

We believe that requiring the auditor to include in their report discussions of matters critical to the company and the audit supplants management's responsibility to make full and fair disclosures. We further believe the proposed disclosure of CAMs in the audit report blurs the bright line between auditor and management responsibilities. These disclosures may also impinge on the auditor's independence by putting them in the position of acting in the capacity of management in determining what information should be disclosed.

In addition, the communication of CAMs would put the auditor in a more adversarial rather than cooperative relationship with management. Such a situation would most likely confuse rather than educate financial statement users. The implementation issues associated with this proposal would surely add considerable cost to an audit engagement without a commensurate benefit to users. Thus, our conclusion regarding the issue of CAMs boils down to increased costs coupled with confusion and unintended consequences. The paragraphs below amplify on these conclusions.

**Management's Responsibilities vs. Auditor's Responsibilities**

The guidance in the proposed auditing standards is based on an attempt to alleviate the "information asymmetry" between company management and investors. The proposed auditing standard clearly states on page A5-23, "reducing the level of information asymmetry between company management and investors could result in more efficient capital allocation and, as academic research has shown, could lower the average cost of capital." While we both understand and appreciate the indicated goal, we believe that compromising the auditor and the audit process to accomplish this goal is totally inappropriate. Isn't management responsible for reducing the level of information asymmetry? We strongly question the Board's decision to place this burden on the auditor and basically weaken the credibility of the audit process.

It is a well-recognized fact that management is responsible for preparation of an entity's financial statements and related disclosures. In addition to the disclosures in the financial statements and related footnotes, management discloses other relevant and useful information to investors in the form of "business risks" and "management's discussion and analysis." The auditor's responsibility is to attest to management's assertions in the financial statements and related disclosures. Additionally, the auditor is required to identify any material inconsistencies between the financial statements and other information communicated by management outside the financial statements. To change the auditor's role to that of originating the disclosure of company information is a complete reversal of the auditor's responsibility, as well as the model that capital markets have relied upon for nearly a century. This doesn't even address the impact such a change would have on the auditor's appearance of independence.

Management is currently aware of these critical matters as was noted in the proposed auditing standard. Thus, if the Board and the SEC feel that these disclosures are important, it appears that company management should make the disclosures. In those cases where such disclosures are being made by management, we feel it would serve no useful purpose for the auditor to also make such disclosures.

**Alternatives**

We believe the Board could consider alternative measures to reduce or eliminate information asymmetry. One possible alternative would be to recommend to the SEC and/or FASB improvements in the Critical Accounting Policies and Estimates, or additional footnote disclosures regarding matters they consider beneficial to investors. Another alternative could involve increased disclosures or improvements to MD&A communications. While these recommendations involve actions by other organizations (SEC, FASB, etc.), we believe these organizations would be sympathetic to changes that benefit investors and their quest for relevant information.

While we are strongly in favor of enhancements in audit quality, we don't consider the disclosure of sensitive judgments made by an auditor or specific procedures performed by an auditor to represent such enhancements.

**Management vs. Auditor**

Company management and its legal counsel will always conduct a review of an audit report with the auditor prior to its issuance. Such a meeting to conduct this review is valuable in heading off any potential misunderstandings or misinterpretations that might have gone unnoticed. However, the inclusion of CAMs in an auditor's report would reduce this management/auditor meeting to a full-blown negotiation of the issues that should or should not be included.

Given the sensitive nature of such disclosures, it appears likely that the potential for an adversarial relationship between the parties involved is quite possible. There would obviously be concerns about confidentiality, relevance of an issue such as a CAM, and what constitutes "critical" in defining a critical audit matter. By its very nature, an audit engagement has the potential to be confrontational and contentious for many reasons. To propose an addition to the auditor's report which would most likely enhance this contentious relationship, without much benefit, seems to be an ill-advised decision.

**Cost vs. Benefit**

While most might contend that more is better than less, we are not willing to embrace that conclusion when it comes to the communication of critical audit matters. We believe the cost associated with providing this information far outweighs any benefits that may result. We anticipate the following should this proposed auditing standard gain acceptance.

We believe the proposal is not sufficiently clear as to what constitutes a CAM. In addition, we are troubled by references to "most," as the definition of this word is highly subjective and can be interpreted in a variety of ways. Auditors will naturally err on the side of disclosing more CAMs rather than fewer. This will, most likely, be done to head off circumstances where PCAOB inspectors and others ask why the auditor did not disclose what they feel (in their judgment) is a CAM when the auditor decided the issue did not rise to that level. As the auditor will document reasons why those issues were not CAMs, the inspectors will be able, with perfect hindsight, to argue the opposite conclusion. Thus, it would appear that the auditor is more likely to conclude that an item is a CAM rather than having to defend not identifying the item as a CAM.

A decrease in audit quality could be a possible unintended consequence as an auditor could also intentionally omit various issues from the engagement completion document, discussion with the engagement quality reviewer, or communicate with the audit committee to avoid having to document the decision regarding a CAM. As any matters subject to consultation may fall within CAM disclosure rules, auditors may be discouraged from consulting.

The required disclosure of CAMs will add many pages to the auditor's report. This added length has the potential to blur the intended message of the auditor's report, which is the auditor's opinion on the financial statements. CAMs may include items of discussion between management and the auditor that have been resolved. However, such disclosure may be interpreted as ongoing disagreements.

Matters identified as audit risks may not be significant investing risks. However, investors may interpret these issues as errors in the financial statements and consider them more significant than the unqualified opinion issued on the financial statements. Investors may question how an unqualified opinion could be issued with so many critical matters. Also, the more CAMs identified, the greater the potential for investors to question management reports citing no material weaknesses in internal controls.

Auditors will now be required to revisit all significant matters, first to determine risk and audit response, second to determine if disclosure in the audit report is required, and finally to document their conclusion as to required disclosure. This will add time to the audit process. Much of this time will occur during the critical wrap-up phase when an audit client is facing SEC filing deadlines.

**Disclosure of Audit Procedures Performed**

We believe the inclusion of audit procedures performed on any matters would not be beneficial to the users because knowing how the auditor tested certain accounts or assertions does not give the users any additional information regarding a registrant's financial position or results of operations. Adding information on the audit procedures performed would significantly increase the length of the auditor's report and decrease the clarity of its message. The negative impact on the reader's ability to understand the intended message of the report will be significant. Also, it is unlikely that the auditor will identify all the procedures performed or considerations of mitigating factors in the design of audit procedures, which will intensify the lack of understanding on the part of those to whom the audit report is intended. Further, we believe auditors will be prone to spend additional time performing procedures, not to assess the risks associated with the client but rather, to be compatible with audit procedures included in the audit reports issued by other auditors.

**Auditor Liability**

We believe the disclosure of CAMs could lead to increased litigation related to auditor judgment. Companies in similar industries could have significantly different CAMs. It is our belief that this would provide greater incentive to litigants to seek damages based on non-disclosed CAMs. Alternatively, if stock prices decline after disclosure of CAMs, litigants may look to the auditor for those potential damages.

Also, the existence of CAMs may result in the performance of an excessive amount of audit procedures that are not necessary under the risk assessment model. These procedures would be performed to avoid second guessing by investors who wonder why certain procedures performed by other auditors were not performed by the auditor in question. This kind of comparison could lead to unnecessary litigation.

We appreciate the opportunity to provide input into the standards-setting process.

Sincerely,

Sandra K Brown

Re: **PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 34, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* (the "Proposal")**

Members of the Board of the PCAOB:

The Clearing House Association L.L.C. ("The Clearing House"),[1] an association of major commercial banks, appreciates the opportunity to comment on the above-referenced Proposal. We support efforts to improve audit quality that will enhance investor confidence in and understanding of the audit process and the auditor's responsibilities. However, we believe that key aspects of the Proposal will not achieve the PCAOB's stated objective: "to make auditor reporting more relevant and useful to investors and other financial statement users."[2] Accordingly, we do not support the Proposal in its current form. In summary, our principal concerns are as follows:

- The proposal to add a discussion of critical audit matters ("CAM") to the auditor's report may result in investors assuming that auditors are effectively qualifying their audit opinion on selected areas of the financial statements as compared to the current "pass/fail" system; instead of providing investors with more useful information it may simply create confusion about the report. The onus to prepare and provide such information should continue to be on management rather than originating with auditors;

- requiring the auditor to evaluate other information will require additional audit procedures that are unnecessary in light of existing management certification disclosure requirements and it will

[1] Established in 1853, The Clearing House is the oldest banking association and payments company in the U.S. It is owned by the world's largest commercial banks, which collectively employ over 2 million people and hold more than half of all U.S. deposits. The Clearing House Association L.L.C. is a nonpartisan advocacy organization representing—through regulatory comment letters, amicus briefs and white papers—the interests of its owner banks on a variety of systemically important banking issues. Its affiliate, The Clearing House Payments Company L.L.C., provides payment, clearing, and settlement services to its member banks and other financial institutions, clearing almost $2 trillion daily and representing nearly half of the automated-clearing-house, funds-transfer, and check-image payments made in the U.S. *See* The Clearing House's web page at www.theclearinghouse.org.

[2] Proposal, page 10.

be very challenging for auditors to develop and perform audit procedures on forward-looking information; and

- the Proposal will result in increased costs to both preparers and auditors and are not justified by the benefits of the Proposal.

**1. Including CAMs in the audit report is unnecessary, will reduce the clarity of the audit and internal control opinions, and may increase confusion regarding the auditor's responsibility.**

We are concerned that the proposal to add a discussion of CAMs to the auditor's report may actually increase investor confusion regarding the audit report. By definition, the audit report would be discussing issues that were satisfactorily resolved and deemed not material to the financial statements. We believe most investors will continue to look only to see whether a company has received an unqualified ("clean") opinion and has no material deficiencies in internal controls. The proposed discussion of CAMs in the audit report may serve to obscure those conclusions and may provide a less clear picture to investors about the financial statements taken as a whole and the overall effectiveness of the system of internal controls.

We fully support the existing "pass/fail" model as it provides consistency, clarity and comparability of reporting, and is well understood by investors and users of financial statements. An unqualified opinion means that all material matters have been resolved and that the auditors are in agreement with management that the financial statements do not contain any material misstatements. In contrast, disclosure of CAMs, which would describe those areas that posed the most difficulty to the auditor and why they were difficult, could create the impression that the auditor is uncomfortable with or "second-guessing" management's decisions; as a result, users may perceive that the auditor is effectively qualifying their opinion on different areas of the financial statements.

At the same time, disclosure of CAMs could increase the audit "expectation gap" by blurring the line between management and the auditor's responsibility. The fact that such disclosures originate with the auditor could suggest that the auditor, rather than the company, has the responsibility to prepare financial statements and disclosures in compliance with U.S. Generally Accepted Accounting Principles ("U.S. GAAP").

We strongly believe that the audit report should be limited to describing the auditing procedures performed and related matters. It should not be presumed that expanding the report to include CAMs would serve as guidance for investors and other users of financial statements and annual reports to better understand how the audit was performed or the effectiveness of the audit. We believe the example disclosures provided in the proposal that discuss the extent of national office consultations, highlight internal control deficiencies that were less severe than a material weakness, and errors that were corrected, could easily be interpreted in multiple ways and illustrate the confusion that may arise when users are presented with an unqualified opinion. Moreover, auditors should not be responsible for disclosing information for which they are not the original source, or even have the appearance of doing so; rather, the onus to prepare and provide financial reporting information should continue to be on management, and the auditor's role should be limited to opining on such information.

It appears that the primary purpose of the Proposal is to highlight significant accounting disclosures and risks for users of financial statements. We believe the sections of Management's Discussion and Analysis (MD&A) covering critical accounting policies and use of estimates are already quite informative. However, to the extent that this and other financial reporting needs improvement, we would be happy to work with the Financial Accounting Standards Board, Securities and Exchange Commission (the "SEC"), and other parties as appropriate.

2. **Requiring the auditor to evaluate other information will require additional audit procedures that are unnecessary in light of existing management certification requirements and it will also be challenging for auditors to develop and perform audit procedures on forward-looking information.**

We note that the PCAOB has proposed that, in place of the current requirement for the auditor to read the other information and "consider" whether it is materially consistent with the audited financial statements, the auditor would now be required to read and "evaluate" the consistency of the information. Further, paragraph 4 of the Exposure Draft states in part, "The auditor should read the other information and, **based on relevant audit evidence obtained** and conclusions reached during the audit, **evaluate** the ..." (emphasis added).

Thus, it appears that the PCAOB is proposing a different standard of auditor involvement with other information, and additional auditing procedures would be necessary to satisfy this new standard. It is unclear what additional procedures would be required, but we are concerned that they could rise to the level of detailed comfort letter-type documentation and procedures.

We do not support changing the auditor's responsibility for other information that is associated with the financial statements, as there are robust procedures already in place to ensure that other information is materially consistent with the audited financial statements, such as CEO and CFO certifications of disclosures in the annual and quarterly reports, requirements for disclosure control processes, and independent audit committee oversight of the financial reporting process.

In addition, MD&A often includes forward-looking information which by definition may not always be objectively verifiable. Accordingly, we believe it will be challenging for auditors to evaluate and conclude on such forward-looking information. However, eliminating this information from MD&A would substantially reduce the usefulness of the quarterly and annual reports to investors; and carving this information out from the auditor's evaluation would prove extremely cumbersome.

3. **The Proposal would be costly to implement with little incremental benefit.**

The proposed requirements to disclose CAMs and auditor evaluation of other information could increase – perhaps significantly – the time needed by management, the Audit Committee, and the audit firms to determine how best to present all of this additional information in a way that will be clear and unambiguous to financial statement users. In addition, the Proposal would likely result in an increase in the amount of time required to issue audited financial statements, putting further pressure on meeting SEC reporting deadlines, and would likely lead to a commensurate increase in audit fees as well.

Because we do not see any substantial incremental benefit to users from the PCAOB's Proposal, as described above, coupled with the likely increase in time and costs, we do not believe the benefits of the Proposal outweigh its costs, and, therefore, we do not support its issuance.

# The Goodyear Tire & Rubber Company

Akron, Ohio 44316 – 0001

December 11, 2013

Office of the Secretary, PCAOB
1666 K Street, N.W.
Washington, D.C. 20006-2803

RE: PCAOB Rulemaking Docket Matter No. 034

This letter is being submitted in response to the Public Company Accounting Oversight Board's (the "Board") request for comments related to the Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendment contained in PCAOB Release No. 2013-005. The Goodyear Tire & Rubber Company ("we", "us", "our") appreciates the opportunity to comment on this topic. We are one of the world's largest tire companies, employing about 69,000 people and manufacturing our products in 52 facilities in 22 countries around the world.

We support the Board's efforts to improve audit quality that will ultimately enhance investor confidence in the audit process and their reliance on financial statements. However, we do not fully support the Board's proposal in the current form. Although we do not object to the proposed additional elements of the auditor report related to independence and tenure and the standardized language "whether due to error or fraud," we do not perceive these changes to be a significant enhancement to the usefulness of the auditor's report. Overall, we do not support the remaining elements of the proposal, specifically, requiring the auditor's report to disclose "critical audit matters" and changing the auditor's responsibility for other information included in a company's Annual Report on Form 10-K ("10-K"), as 1) we do not believe the benefits to users of such changes outweigh the potential costs, 2) our external auditors may be required to disclose information that is not currently required to be disclosed by preparers of financial statements, and 3) with respect specifically to the changes to the auditor's responsibility for other information, we believe the changes will not serve to improve, and potentially detract from, users' understanding of information evaluated by the auditor. Our views are explained further below.

Critical Audit Matters (CAMs)

We do not support the proposal as it relates to CAMs as we believe management should be the source of a company's disclosure of financial information and the current proposal may put the auditor in a position of disclosing information that is not currently required to be reported by management under GAAP, SEC reporting rules or PCAOB guidance (with respect to management's report on internal control over financial reporting). Specifically, items concluded to be immaterial by management, the auditor and the audit committee, such as potential significant deficiencies in internal control over financial reporting and "passed" audit adjustments could be disclosed by auditors as CAMs under the current proposal. Further, even in the case of material items disclosed by management in the 10-K, we envision that the added requirements of the proposal may result in auditors disclosing additional details surrounding such matters that are not required to be reported by management, and such information could serve to be harmful to the company. For example, to the extent our auditors are required to provide additional details surrounding the audit process of certain legal contingencies, such disclosures could be detrimental to our legal position. For example, we disclose certain contingencies, including open legal proceedings, for which we have lengthy discussions with legal counsel to ensure compliant disclosure without disclosing privileged information or information that could jeopardize our legal position. Our auditor currently reviews such disclosures, as discussed above, and is required to challenge all factors, in order to reach a conclusion on the sufficiency of the disclosure; however, is currently not required to provide discussion of its audit approach or facts of any individual such matters in its opinion on the financial statements.

We also note that for material items that may be identified as CAMs by our auditors, existing financial statement disclosures provide a good source of information for financial statement users. We conducted preliminary due diligence on potential CAMs by reviewing our 10-K for the year ended December 31, 2012, management's report to the audit committee of significant accounting and reporting matters and internal controls, and our auditor's report to the audit committee. Based on this review, we expect there would be very strong alignment of material CAMs disclosed in the auditor's report with disclosures of critical accounting policies prepared by management in the Critical Accounting Policies section of Management's Discussion and Analysis ("M,D&A") and, to a lesser extent, matters disclosed in other sections of M,D&A and the Notes to the Consolidated Financial Statements. Although these disclosures are prepared by management and disclosures beyond the financial statement footnotes are not covered by the auditor's opinion, the auditors must review these disclosures and ensure there are no material inconsistencies with the audited financial statements. Given the expected alignment between material items required to be disclosed as CAMs in the auditor's report with information already disclosed by management (e.g. subjective areas of accounting with greater levels of management judgment and estimation), we do not see sufficient benefit to justify incremental auditor efforts and related costs. However, to the extent the Board proceeds with this element of the proposal, we recommend the reporting of CAMs be limited to items of a material nature.

Auditor's Responsibility for Other Information

We do not support the proposal as it relates to the auditor's responsibility for other information as we do not believe the benefits of the auditing standard will outweigh the potential related costs of making specific reference to other information in the audit report. We believe that our auditor's review of other information is sufficiently comprehensive under current guidelines given their obligation to review the disclosures for material inconsistency with information included in the financial statements covered by the audit opinion. As a practical matter, we believe auditors already perform a detail review of M,D&A. In addition, we believe that providing additional, somewhat vague, assurance on qualitative and quantitative information in the other information will likely result in unintended additional procedures being carried out by our auditors as our external audit firm will have additional perceived responsibility and risk pertaining to their opinion, especially as it relates to our projections for the future. We forsee these additional procedures, including additional substantive testing and the validation of information included in the auditors body of audit evidence obtained in the course of its audit will, in turn, increase audit fees. Further, we believe that this additional assurance will cause confusion to the users of our financial statements as it will be unclear as to which specific information has been evaluated by our auditors (as users have no knowledge of the audit evidence obtained by our auditors during the audit process) and, therefore, the level of reliance they should place on such other information. In summary, we do not see these extra procedures and auditor's disclosure providing benefit to our investors or users of our financial statements and, thus, do not justify the expected related costs.

To the extent the Board decides to proceed with this element of the proposed standard, we would suggest editing the auditor report to provide greater clarity on the scope and level of procedures performed by the auditor in conducting the evaluation, as well as the level of comfort provided to users.

Again, we thank the Board for the opportunity to comment on the proposed auditing standards. If you have any questions regarding the comments provided in this letter, please contact me at 330-796-2775.

Sincerely,

Richard J. Noechel

Richard J. Noechel

Our ref: ICAEW Rep 172/13

Your ref: PCAOB Rulemaking Docket Matter No. 034

Office of the Secretary
PCAOB
1666K Street NW
Washington
DC20006-2803

Dear Sir

**PCAOB Release No 2015-005: The PCAOB's Auditor Reporting Proposals**

ICAEW is pleased to respond to your request for comments on:

*PCAOB Release No.2013-005:*

*The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion;*

*The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and*

*Related Amendments to PCAOB Standards.*

Please contact me should you wish to discuss any of the points raised in the attached response.

Yours sincerely

Katharine E Bagshaw FCA
ICAEW Audit and Assurance Faculty

ICAEW REP 172/13

ICAEW REPRESENTATION

**PCAOB RELEASE NO 2015-005: THE PCAOB'S AUDITOR REPORTING PROPOSALS**

**Memorandum of comment submitted in December 2013 by ICAEW, in response to the following PCAOB consultation published in August 2013:**

***PCAOB Release No 2015-005*:**

***The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion;***

***The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and***

***Related Amendments to PCAOB Standards.***

| **Contents** | **Paragraph(s)** |
|---|---|

## INTRODUCTION

**1.** ICAEW welcomes the opportunity to comment on the following auditor reporting proposals published by the PCAOB in August 2013, a copy of which is available from this link:

*PCAOB Release No 2015-005:*

*The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion;*

*The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report;*

*Related Amendments to PCAOB Standards.*

## WHO WE ARE

**2.** ICAEW is a world-leading professional accountancy body. We operate under a Royal Charter, working in the public interest. ICAEW's regulation of its members, in particular its responsibilities in respect of auditors, is overseen by the UK Financial Reporting Council. We provide leadership and practical support to over 140,000 member chartered accountants in more than 160 countries, working with governments, regulators and industry in order to ensure that the highest standards are maintained.

**3.** ICAEW members operate across a wide range of areas in business, practice and the public sector. They provide financial expertise and guidance based on the highest professional, technical and ethical standards. They are trained to provide clarity and apply rigour, and so help create long-term sustainable economic value.

**4.** The Audit and Assurance Faculty is a leading authority on external audit and other assurance activities and is recognised internationally as a source of expertise on audit issues. It is responsible for technical audit and assurance submissions on behalf of ICAEW as a whole. The faculty membership consists of nearly 8,000 members drawn from practising firms and organisations of all sizes from both the private and public sectors. Members receive a range of services including the monthly Audit & Beyond newsletter.

## MAJOR POINTS - A: AUDITOR REPORTING

### Investors would benefit from renewed efforts by standard-setters to converge auditing standards on auditor reporting

**5.** We are particularly grateful for this opportunity to comment on the PCAOB's auditor reporting proposals. The changes that will take place in auditor reporting over the next few years are unparalleled, and they constitute a rare, once in a generation opportunity to enhance the transparency of the audit process and investor confidence in the value of audit. We encourage the PCAOB, as we have encouraged other standard-setters, to seize this opportunity.

**6.** The PCAOB is an excellent position to exercise leadership in this area. We urge it and other standard-setters to take whatever steps are necessary to ensure that their auditor reporting requirements benefit investors, and are seen to do so, by streamlining those requirements globally. The growth in cross border capital flows over the last twenty years mean that the current, entrenched diversity in auditor reporting practices no longer reflects the needs of US and other global investors.

**7.** In our 30 September 2011 response to the PCAOB on its Concept Release on possible revisions to auditor reporting standards (Rep 91/11), we noted the effect of different corporate governance practices in different jurisdictions on convergence. We encouraged the PCAOB and IAASB to be diligent in their attention to each other's work in this area and urged them to co-operate as much as they could on their respective consultations. We remain hopeful that both bodies will seek further dialogue before finalising their proposals because we firmly believe that there is more scope for convergence.

**8.** Genuine convergence achieved through dialogue and understanding will help raise standards of auditing globally. Standard-setters such as the PCAOB can, if they chose to do so, drive this convergence in the interests of investors. If they do not, international standard-setters risk being ignored locally, and national standard-setters will simply impose additional costs on local investors without corresponding benefits, and may weaken their own position internationally.

**9.** The methodologies of firms required to report under UK, US and international standards are based on ISAs. We understand that a principal objective of their field testing in this area is to establish the extent to which the requirements and proposals under the different regimes can be accommodated either within one audit report or with a minimum of variation across different audit reports. We also understand that they are finding that in most cases, there are no significant reporting differences when different reporting regimes are applied to the same companies. Risk management dictates that firms will seek to align their reports across different regimes as far as possible.

**10.** In our recent response to IAASB on its auditor reporting proposals , we urged it to take a pragmatic approach by working directly with other major players, especially the PCAOB, in order to achieve as much global consistency as possible. We now also urge the PCAOB, as the standard-setter in the largest capital market in the world, to take positive steps to deepen its dialogue with IAASB.

**11.** Leadership amounts to a great deal more than acting unilaterally and if leading standard-setters do not work together on these radical changes, there is a real risk that history will judge their efforts to find the right answers, however well-intentioned, to have been a waste of resources by people who should have known better. Together, leading standard-setters have the opportunity to leave a lasting legacy of genuine improvements in auditor reporting standards that will help rebuild trust and confidence in the financial reporting supply chain. Both are sorely needed even in economies that are beginning to recover, and they remain in short supply globally.

## The PCAOB's consultation

**12.** We congratulate the PCAOB on its proposals. They are a substantial improvement on the preceding Concept Release not least because the basic principles, if not the detail, are aligned with the direction of travel internationally.

**13.** We have answered most of the PCAOB's questions regarding the proposed standard on auditor reporting. We have covered those issues that we believe to be important points of principle on other information. There is a total of 87 questions in the current consultation and with the best will in the world, developing a high quality response to all of them is a tall order, even for well-resourced respondents.

**14.** We encourage the PCAOB, going forward, to consider how best to obtain the widest range of input possible, especially on points of principle. Specifically, it might consider whether questions can be consolidated to make the overall task seem less daunting to those respondents with fewer resources, such as investors in smaller entities. We doubt that the PCAOB intends to over-burden its respondents with an excess of questions, but we fear that in this particular case, given the number of bodies that have recently published parallel and consecutive consultations and proposals, a certain amount of 'auditor-reporting-response-fatigue' is setting in. We therefore caution against taking silence in response to specific questions for assent to the proposals.

### Apparent differences between the proposed reporting regimes

**15.** We encourage the PCAOB to do what it can to ensure that the apparent areas of difference between the different proposed reporting regimes are minimised. US investors send large amounts of money abroad, and foreign investors spend large amounts of money in the US. Neither group, however different their needs and desires, is likely to have the time or inclination to distinguish between ‘key’ audit matters and ‘critical’ audit matters, whatever the purported virtues of either regime, particularly where dual listed entities include audit reports prepared under both local and PCAOB standards in their filings.

**16.** Investors are well aware that wording differences in audit reports will not, in the long run, result in any significant differences in what is communicated in audit reports. The depth and quality of auditor reporting will be driven less by detailed wording differences in auditing standards, and more by investor demands, the regulatory approach to monitoring auditors, the approach taken by reporting firms and common practices that develop within and across industry sectors in the next few years. We think it unlikely that it will become clear that reporting under the PCAOB’s regime is superior to reporting under other regimes, or vice versa, regardless of their respective virtues on paper.

**17.** In the UK, the FRC has chosen to introduce new reporting requirements before an international consensus has emerged. ICAEW is an international body and we have made our commitment to ISAs clear to the FRC. Our support for IAASB’s proposals is not unqualified though and we have made it clear to IAASB that we believe its proposals could be improved and that IAASB must consider the need to make pragmatic changes, if they are necessary to achieve global consistency. Auditors and companies are making these changes for the benefit of investors and it is incumbent on all concerned to do whatever they can to make sure that investors do in fact benefit.

### Auditor reporting is only the start

**18.** We note above the importance of the changes currently taking place in auditor reporting. This is the beginning of a journey whose outcome depends on the willingness of all of those with an interest in auditor reporting to co-operate constructively. Investors are a heterogeneous group with a range of information needs and we encourage them to lead the way by stepping up their level of engagement with audit committees and being clear about what they need to know. We encourage regulators to focus on fostering genuine innovation in communications as well as sanctioning non-compliance, and we encourage audit committees to seek better quality communications with both auditors and investors. Last, but not least, we encourage auditors to play their part by producing genuinely informative, high-quality audit reports and by resisting pressures to hide behind boilerplate.

## RESPONSES TO SPECIFIC QUESTIONS/POINTS

### Question Related to Section II:

### Q1. Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?

**19.** The objectives summarise the requirements of the proposed standard. To that extent they assist auditors in understanding the requirements. We have noted in past responses to the PCAOB and IAASB our belief that objectives should be more than mere summaries of the requirements, and that they should show the outcome that is to be achieved as a result of complying with the requirements. Real objectives, such as improving communications or enhancing transparency, are hard to measure, but they are a better measure than measuring whether auditors have complied with the requirements. At present, achievement of the objective is synonymous with having complied with the requirements.

**Questions Related to Section IV:**

**Q2. The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?**

**20.** There are no others to whom the auditors' report should be required to be addressed.

**Q3. The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?**

**21.** We do not believe that enhancing descriptions of auditor responsibilities will prove to be critical to enhancing transparency or improving communications with investors. There are no additional auditor responsibilities that should be included to further describe the nature of an audit.

**Q4. The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?**

**22.** We do not believe that requiring auditors to include a statement on their independence will result in any significant changes to their behaviour. Nevertheless, confidence in the independence of auditors is important and a statement in the auditors' report to this effect is unobjectionable, if superfluous.

**23.** The fact that the word 'independent' already appears in the audit report means that the bald statement to the effect that auditors are independent, a little further down in the report, manages to say very little and look repetitive at the same time. The statement does not add much to the word in the title and we have doubts as to whether it will in fact improve confidence in auditor independence. Merely stating that auditors are required to be independent does not make them so. The auditors' report should not be cluttered with poor quality information, particularly if it is repetitive.

**Q5. The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**

**a. Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**

**24.** We have yet to be convinced that such evidence as is available regarding audit firm rotation clearly shows that there is any relationship between auditor tenure and audit quality, regardless of the proxies that are used to measure it. The evidence, such as it is, is mixed. Nevertheless, while we agree that information regarding auditor tenure is of *interest* to investors, we do not believe that the auditors' report is the right home for it. Decisions regarding when and whether to replace auditors are based on policies that are in turn based on the reporting entity's corporate governance strategy. A better home for this information might therefore be the MD&A, or its equivalent.

**b. Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**

**25.** The terms 'mergers, acquisitions and changes in ownership structure' do not cover all of the possible changes in firms either in substance or in form. We doubt any watertight form of words could be devised to cover every eventuality and without an explanation of the basis on which the calculation had been performed, misunderstandings and inconsistencies will be hard to avoid. There is certainly scope for genuine disagreement as well as abuse and we see little value in debates about whether a firm has been in place for thirty, fifty or eighty years, when the firm name, staff and offices as well as the audited entity itself have changed out of all recognition during the shortest of these periods.

**c. Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

**26.** We believe that the information about firms currently available outside the auditors' report is sufficiently widely available for investors to be able to make informed choices. We note above our belief that the auditors' report should not be cluttered with poor quality information, even if it is interesting.

**Q6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

**27.** The proposed description of the auditors' responsibilities for other information and the results of the evaluation of other information will make the report more informative and useful, but as we note in our major points on this issue below, we have serious reservations about the proposed requirements in this area.

**Q7. Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?**

**28.** Yes, there should be a requirement for a specific order for the presentation of the basic elements required in the audit report. Audit reports are likely to be significantly longer under the new regime and a specific order will make it easier for experienced readers to navigate reports. We urge the PCAOB to align this order with the order proposed by IAASB as far as possible. Without this, reports will be less comparable.

**Q8. What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?**

**29.** There are no other changes to the basic elements the Board should consider adding at this time.

**Q9. What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.**

**30.** It is important that the costs of these changes are recognised. The example reports produced by the PCAOB are far longer than those proposed by IAASB or implemented by the UK's FRC. While the length of the report and the cost of producing it are not directly related, it is inevitable that the sheer length of some of these reports will, of itself, result in additional cost, regardless of the substance of what is actually reported. The most important issue here is not the absolute quantum of costs, even though they will be far from negligible, but the benefits which need to be evaluated by standard-setters in due course, particularly in terms of enhanced investor satisfaction.

**Questions Related to Section V:**

**Q10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

**31.** The auditors' communication of CAM will be relevant and useful to investors and other financial statement users if:

- investors continue to engage with audit committees and auditors, and are clear about what they want to know;
- auditors avoid boilerplate where possible;
- regulators, companies and investors do not drive auditors into the defensive reporting of boilerplate with threats of sanctions and litigation.

**Q11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

**32.** The main threat to enhanced transparency is that CAM disclosed will be irrelevant to investor needs, or will degenerate into boilerplate. We note in our main points above the behavioural changes needed among all stakeholders, and the fact that investors, audit committees and auditors need to step up their level of engagement with each other.

**Q12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter?**

**33.** We do not believe that CAM as defined by the PCAOB and KAM as defined by IAASB are significantly different. The range, depth and detail of reporting will be similar, whichever regime is applied. Firms, needing to be efficient, will seek to align the requirements even if standard-setters do not.

**34.** IAASB's definition of KAM starts with the population of items communicated to the audit committee. The PCAOB casts a much wider net as a starting point and includes matters reviewed by the engagement quality control reviewer and matters included in the engagement completion document, as well as matters communicated to the audit committee. This list of potential issues for disclosure is, nevertheless, very likely to be whittled down quickly by applying the PCAOB's other requirements.

**35.** We understand that field testing within some firms suggests that CAM identified under the PCAOB's requirements are all matters already communicated to the audit committee. The PCAOB states that its wider net is intended to safeguard against auditors not communicating matters to audit committees to avoid having to classify them as potential CAM, but we believe that this is very unlikely in practice. If the PCAOB believes that its existing standards would somehow permit such important matters not to be communicated to the audit committee, which we doubt, there is a deficiency in existing standards that needs to be remedied. We therefore believe that the PCAOB can afford to consider the benefits of further alignment of its requirements in this area with those of IAASB. PCAOB's net of potential CAM is currently cast unnecessarily wide.

**Q13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

**36.** The disclosure of CAM is intended to benefit investors. Benefits have costs, and costs have to be absorbed somewhere. The additional time incurred on CAM is likely to have a neutral or beneficial effect on audit quality provided that the costs can be passed on to the audited entity. Where this is not possible, there will be a risk of an adverse effect on audit quality overall, i.e. a risk that auditors will seek to cut costs elsewhere, in order to make up for the additional expenditure on CAM.

**Q14. Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?**

**37.** The proposed requirements regarding the auditors' determination and communication of CAM are reasonably clear.

**Q15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

**38.** We noted in ICAEW Rep 91/11 the need to cut clutter. While this is less of an issue in the US than it is elsewhere, the PCAOB would not wish to see US investors join the ranks of those jurisdictions in which investors have to navigate excessively lengthy and complex auditors' reports. It is clear, at least in Europe, that investors want better information, and not necessarily more information.

**39.** There is such a thing as too much information and we note below our belief that the example reports as they stand, are unwieldy. That said, auditors in the UK appear to be providing some high-level information of this nature voluntarily. If the PCAOB believes investors are calling for information about the procedures performed, it should consider whether to mandate it. If it chooses to do so, it should first make some effort to clear up some of the repetition in the existing examples and require auditors to report a summary of the principal procedures performed, rather than a full list.

**Q16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

**40.** IAASB's definition of KAM specifically refers to the use of auditor judgment. It is less prescriptive than the PCAOB's definition of CAM and includes more application material. The PCAOB's list of 8 factors to consider in paragraph 9 may encourage a checklist mentality and discourage the use of judgement. We understand that field testing in this area involves the use of spread-sheets with the factors across the top and 'high/medium/low' assessments in the respective columns for each potential CAM. We think the PCAOB could go further to allow for and encourage the use of judgement in this area.

**Q17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

**41.** Once again, we strongly urge the PCAOB to consider how it can align its requirements further with those of IAASB in this area.

**Q18. Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?**

**42.** IAASB's requirements for documentation focus on why KAM are KAM, with an option to describe why possible KAM were not considered to be KAM. PCAOB's requirements have more focus on documenting why possible CAM are not considered to be CAM, which seems to be more about preparing audit files for inspection than communicating information to investors. The requirements are tolerably clear, but they are not right.

**Q19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?**

**43.** We believe that auditors will invariably start with a very long list of potential CAM because of the subjective definition, and because of concerns regarding the approach taken by audit inspectors.

**44.** We understand that in field testing, the starting point under the PCAOB's requirements sometimes involves a very high number of potential CAM - over 100 in some cases. While these are very quickly whittled down, the need to document why something is not a CAM is a potentially onerous requirement. This is unlikely to make auditors more thoughtful or careful. Either the documentation requirement needs to be changed or the starting point for the determination of CAM needs to be narrowed, as suggested above.

**Q20. Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?**

**45.** The proposed documentation requirement is potentially excessive, as noted above.

**Q21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?**

**Q22. What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?**

**Q23. How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?**

**46.** We note above our belief that there are additional costs associated with these requirements and that in some cases it may have an adverse effect on audit quality.

**Q24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?**

**47.** We do not comment on this question.

**Q25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?**

**48.** The PCAOB's requirements for reporting CAM have resulted in some very unwieldy example audit reports that appear repetitive, pedantic and cumbersome. They are a hard read and as general communications, they do not score well. The PCAOB would do well to revisit the details of required disclosures in this area. They all include references to consultation with a 'national office' which may not be particularly meaningful to some investors: 'consultation with internal experts' might be more appropriate.

**49.** We note that the example reports in the UK proposals, which were useful in demonstrating the FRC's intentions, were dropped from the final standard to avoid boilerplate and artificially constraining the nature and style of reporting. We have suggested to IAASB that it follows suit.

**Q26. What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.**

**50.** There is a trade-off between boilerplate and consistency. Anything that does not use the same words is likely to be described as inconsistent and lacking in comparability and anything that does use the same words is likely to be described as boilerplate. The comparable and consistent reporting of critical audit matters within the same companies and across different companies is not therefore necessarily desirable. Evaluating comparability and consistency in the absence of boilerplate is likely to be difficult. Not all boilerplate is bad. Auditors should not change the description of a CAM if the substance has not changed simply to avoid writing boilerplate. New investors not having read it before will find value in reading what to others is boilerplate.

**Q27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**

**51.** It is inappropriate to require auditors to disclose information about the company that is not already disclosed by management. We therefore encourage the PCAOB to work with other regulators to avoid such situations. The proposed requirements as they stand are very likely to result in auditors and companies working together, harder than they do now, to avoid the need to disclose illegal acts or similar matters in the audit report that are not disclosed elsewhere in the filing. This may be a good thing.

**28. What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor’s potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor’s potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor’s potential liability in private litigation?**

**52.** We do not comment on this question.

**Questions Related to Section VI:**

**Q29. Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?**

**53.** Yes, it is appropriate for the PCAOB to include the description of the circumstances that would require explanatory language or an explanatory paragraph.

**Q30. Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?**

**54.** Yes, retaining the auditor's ability to emphasise a matter in the financial statements is valuable not least because it allows for the use of judgement, for auditors to deal with unusual situations in an appropriate manner, and for alignment with IAASB’s requirements to be maintained.

**55.** We believe it would be helpful to provide guidance on situations in which a matter may both be a CAM and appropriate for inclusion as an emphasis of matter.

**Q31. Should certain matters be required to be emphasized in the auditor’s report rather than left to the auditor's discretion? If so, which matters? If not, why not?**

**56.** Matters to be emphasised in the audit report should be left to the auditors’ discretion as far as possible.

**Q32. Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?**

**57.** Additional examples of matters that might be emphasised are not required, but the standard should emphasise the fact that an emphasis of matter is not a CAM.

**Questions Related to Section VII:**

**Q33. Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?**

**Q34. What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.**

**58.** We do not comment on these questions.

**Questions Related to Section VIII:**

**Q35. Are the proposed auditor reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?**

**Q36. Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report critical audit matters appropriate for audits of brokers and dealers? If not, why not?**

**Q37. Since a broker or dealer may elect to file with the SEC a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?**

**Q38. Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports unaffiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?**

**Q39. Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?**

**Q40. Should audits of certain companies127/ be exempted from being required to communicate critical audit matters in the auditor's report? Why or why not?**

**59.** We do not comment on these questions.

**Questions Related to Section X:**

**Q41. Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?**

**60.** We believe that the PCAOB's effective date for 2016 year-ends could be brought forward. While we would not expect discussions between companies and their auditors on the audit report to commence after the year-end, they would be addressed after planning has commenced. In the UK, the FRC provided a limited grace period which does not appear to have caused any significant difficulties, although the requirements are applicable to a much smaller population. There may be some merit in phasing in the requirements, firstly for large accelerated filers whose auditors have more resources to address the new requirements to help establish best practice, and then for all other issuers.

**Q42. Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer**

**status? Are there other criteria that the Board should consider for a delayed compliance date?**

**61.** We do not comment on this question.

## MAJOR POINTS - B: OTHER INFORMATION

**62.** The time is not yet right for auditing standard-setters to make significant changes to auditor responsibilities for other information.

**63.** Accounting standard-setters are currently grappling with several difficult and interrelated issues, all of which affect other information. Accounting standard-setters have specific projects on materiality and disclosures, including projects on materiality in the context of qualitative disclosures and on non-GAAP quantitative disclosures. Other information typically contains a large amount of both.

**64.** The projects undertaken by accounting standard-setters need to be progressed further before auditing standard-setters can address these difficult issues in earnest. Clarity regarding the materiality of qualitative disclosures and non-GAAP measures in other information is critical if auditors' responsibilities regarding other information are to be changed. These proposals, which would significantly extend auditor responsibilities, are quite simply a step too far at this time.

**65.** While IAASB may re-expose a revised ISA 720 in this area shortly, the proposed guidance is likely to be high level and auditors will be left to use their judgement in determining whether, for example, non-GAAP financial measures or qualitative disclosures are materially misstated or misleading. We did not support IAASB's proposals when they were first issued for public consultation for these and the other reasons, and are unable to support the PCAOB's proposals now for similar reasons.

### The scope of the proposed other information

**66.** The scope of the proposed other information standard is not clear. Information is now linked electronically and cross-referenced to an extent never before possible, and we do not believe that the boundaries proposed are sufficiently clear. Cross-referenced exhibits include thousands of pages of legal agreements relating to mergers and acquisitions, for example, and we do not believe that the PCAOB intends auditors to include these within the scope of the audit or even within the scope of the required 'evaluation'.

**67.** While we understand some of the problems caused by the SEC's integrated disclosure system, it seems difficult to justify requiring auditors to consider other information in an annual report but not in a registration statement in an IPO, when users arguably place greater reliance on the other information.

**68.** Is it not appropriate to apply the proposed other information standard to information incorporated by reference. Much of that information is likely to lie outside the auditors' competence, it may be unclear who has responsibility for it, and auditors may have no relationship with those who do have responsibility.

### Requiring auditors to evaluate other information for material misstatements of fact

**69.** We have serious reservations about the PCAOB's and IAASB's current proposals to require auditors to 'evaluate' other information for material misstatements of fact. We remain of the view that this is tantamount to requiring auditors to provide assurance on the other information. The proposed requirements would substantially increase the scope of the audit, its cost, and the expectation gap. The current requirements to 'read and consider' other information for material misstatements of fact represent a much lower hurdle. 'Evaluation' implies some benchmark against which auditors can perform the evaluation and no such benchmark exists.

Work on other information has always been a by-product of the audit of the financial statements and if standard-setters wish to change that, they must recognise the extent of work involved in providing a meaningful level of assurance on the front half of the annual report. We noted in Rep 9/11 our belief that there is merit in exploring the provision of assurance on the front half of the annual report, and we remain of that view.

**70.** If the PCAOB does not intend to require auditors to provide assurance on the front half of the annual report, and we do not believe that it does, it needs to find some other form of words to express what auditors do. In practice, many auditors do a great deal more than the current standards require: they 'tick' statements that can be 'tied' to the financial statements and they often 'check' statements that cannot be ticked and tied, to other supporting evidence. It is after all in their interests to ensure that the audited financial statements do not go out accompanied by misleading or erroneous other information. But requiring auditors to 'evaluate' all of the other material, including the enormous amount of material now routinely incorporated by reference, while maintaining that this is part of the audit rather than a substantial separate engagement, is another matter altogether, partly because of the sheer volume of information covered, and partly because there are some important figures and statements in other information that cannot be 'ticked and tied' or 'checked' to anything at all, such as the Pillar 3 disclosures for banks.

Re: JICPA Comments on the PCAOB Rulemaking Docket Matter No. 034

The Japanese Institute of Certified Public Accountants ("we", "our" and "JICPA") is grateful for the opportunity to comment on the Public Company Accounting Oversight Board ("PCAOB") Rulemaking Docket Matter No. 034: *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report, and Related Amendments to PCAOB Standards* ("the Proposed Standards").

The discussion enhancing the information value of the auditor's report takes place around the world. In addition, due to globalization of the reporting entities' activities, consistency between the auditors' reports is becoming more critical. If the auditors' reports significantly differ in form or content according to the auditing standards with which auditors comply, auditors and users alike may be seriously confounded. The resulting confusion would surely not be in the public interest. We encourage the PCAOB to collaborate with the IAASB, a body engaged in a similar project focused on revisions for auditor reporting, and to align both standards by reducing unnecessary differences insofar as possible.

JICPA is responding to the Proposed Standards for two principal reasons. First, any JICPA members registered with the PCAOB would be directly affected by new standards. Second, we believe it is important to seek international solution as possible to maintain the consistency in the auditor's report globally, in order to protect the interests of investors and further the public interest. Below we provide comments to specific questions from Appendix 5 of the Proposed Standards: *Additional Discussion of the Proposed Auditor Reporting Standard, Proposed Amendments to PCAOB Standards, and Comments on the Concept Release* that we consider especially relevant from Japanese or international perspective.

Sincerely yours,

Sayaka Sumida
Executive Board Member - Auditing Standards
The Japanese Institute of Certified Public Accountants

**Our Comments to Specific Questions in Appendix 5**
***Additional Discussion of the Proposed Auditor Reporting Standard, Proposed Amendments to PCAOB Standards, and Comments on the Concept Release***

**Definition / Determination of Critical Audit Matter**

12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?

14. Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?

16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?

We understand that paragraphs 7 to 9 of the proposed Auditor Reporting Standard, in conjunction with the definition of a "critical audit matter", are designed to guide the decision-making process by which the auditor determines critical audit matters. Critical audit matters seem to be similar, conceptually, to the "key audit matters" that the IAASB proposed. Yet the two concepts do not appear to be identical, and it is not clear whether or not there are any substantial differences. Any unnecessary differences would confuse not only an investor who read and analyzes financial statements and auditors' reports, but also any auditor who audits a company listed on more than one market and accordingly needs to issue the auditor's report in accordance with both the PCAOB standards and the ISAs. We believe that unnecessary differences should be eliminated insofar as possible, and that any necessary differences should be explicitly clarified and explained.

**Audit Procedures, including Resolution of the Critical Audit matter**

15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?

We do not believe that it would be informative or useful to include the audit procedures performed, including resolution of the critical audit matters in the auditor's report. Following are our reasons for this opinion:

- It is difficult to avoid the impression that the auditor expresses an opinion on that individual matter, even if the language preceding the Critical Audit Matters section explains otherwise.
- It is difficult to summarize the procedures performed in succinct way, particularly in complex, judgmental areas of the audit. Information which summarized only parts of the procedures performed is likely to mislead the users about a complete picture of the auditor's response to the identified risks.
- If the auditor is allowed to include the audit procedures and the results of the procedures in the description of critical audit matters, it creates a situation where only some descriptions include the procedures and the results of the procedures, and as a result users may misinterpret that there are unresolved issues on the critical audit matter where the audit

procedures and the results of the procedures are not included in the description of the critical audit matter.

To avoid these unintended consequences, the PCAOB should clearly state that inclusion of the audit procedures, including the auditors' approaches and the result of the audit procedures should not be allowed. Likewise, the PCAOB should remove the descriptions of the audit procedures from the illustrative examples.

**Audit Documentations**

19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?

We do not believe the proposed documentation requirement for non-reported audit matters would produce the outcome that the PCAOB expects. The Note to paragraph 14 of the proposed Auditor Reporting Standard and Section V. E. of Appendix 5 state that the auditor would not be expected to provide an explanation for each matter documented in the engagement completion document, reviewed by the engagement quality reviewer, or communicated to the audit committee. They also state that the auditor would be expected to document only those matters that would "appear to meet the definition of a critical audit matter."

However, whether or not an audit matter "appears to meet the definition of a critical audit matter" depends on the auditor's professional judgment, which is inherently subjective. As such, we do not believe that this condition would work effectively. Given the possibility that the auditor's judgments are second-guessed, the auditor would, for example in a preventive manner prepare an extensive amount of unnecessary documentation, or increase the number of critical audit matters disclosed in the auditor's report, and this may result in a considerable burden.

Critical audit matters are those matters the auditor addressed during the audit of the financial statements, which are selected in light of relative significance in the particular period's audit. The auditor must identify all significant findings or issues in an engagement completion document in accordance with Auditing Standard No. 3, and the engagement quality reviewer should review the engagement completion document in accordance with Auditing Standard No. 7. Therefore, requiring documentation of the basis for the auditor's determination that each reported matter was a critical audit matter would be sufficient to achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters. We believe the proposed documentation requirement for non-reported audit matters is not necessary and accordingly, should be deleted.

**Illustrative Examples of Critical Audit Matters**

25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?

We have a comment on the status of the illustrative examples, which are included in the Exhibit to Appendix 5 but not in the proposed Auditor Reporting Standard. We believe that the illustrative examples play an important function in both informing the auditor's decision-making process and helping stakeholders' reach a common understanding. We also support the PCAOB's approach to include the illustrative examples with the information regarding the company's related notes to the financial statements. The examples give the auditors and other relevant stakeholders guidance on the level of description that can reasonably be expected, by showing the relationship between the individual critical audit matter and the related disclosure in the financial statements. We therefore recommend that the PCAOB update the illustrative examples and include them in the final standard together with the information on the company's related notes to the financial statements.

We comment on the contents of the illustrative examples in our responses to questions 15 and 27.

**Disclosing Information that Otherwise would not Have Required Disclosure under Existing Auditor and Financial Reporting Standards**

27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?

First, absent a requirement for the entity to disclose such information, we expect that the auditor would encounter considerable difficulty in disclosing the information in the auditor's report unless the company agreed to disclose the information voluntarily. Given that such matters are likely to be sensitive information for the company to disclose, the company would not be likely to agree to disclose the information in its financial statements.

Second, if information that would not otherwise have to be disclosed under the existing auditor and financial reporting standards would be disclosed as a critical audit matter, a contradiction would emerge between the requirements regarding the communication of critical audit matters and other disclosure mechanisms already in place in the financial reporting system. The example in the Appendix suggests that a deficiency in internal control over financial reporting could be disclosed in the description of critical audit matters in the auditor's report, even if it was not otherwise determined to be a material weakness in accordance with the SEC rule and PCAOB auditing standards under Section 404 of the Sarbanes-Oxley Act of 2002 (internal control reporting requirements). This means that the requirements for critical audit matters would effectively defeat both the purpose of and expected benefits from the internal control reporting requirements. Under internal control reporting requirements, for example, management is required to assess internal control over financial reporting as of the year-end rather than throughout the entire period. We understand that this provides an incentive for management to remedy identified deficiencies before the year-end. The description of critical audit matters, however, could include information about a material weakness that had been remedied before the year-end or a significant deficiency that had been identified during the year, even when the disclosure of the deficiency was not required by the internal control reporting requirements.

We do not believe that the auditor should provide original information about an entity that otherwise would not have required disclosure under financial reporting standards, through the communication of critical audit matters. However, if such disclosure is envisaged, the PCAOB should more clearly describe the cases when it would be necessary to disclose such information. Specifically, it should clarify the relationship between the requirements in the auditing standards regarding the communication of critical audit matters, and the ethical requirements regarding confidentiality. The PCAOB should also clarify, at minimum, it is inappropriate to disclose information in the description of critical audit matters that other existing reporting requirements have already dealt with. From this standpoint, we believe that the reference to the control deficiency in the illustrative examples should be deleted.

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Board Members and Staff:

The Laclede Group, ("Laclede") appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or "the Board") proposed auditing standards and amendments, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* ("the proposed auditor reporting standard") and; *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* ("the proposed other information standard") and we respectfully submit our comments and recommendations thereon.

On December 11, 2013 the American Gas Association ("AGA") responded to PCAOB Release NO. 2013-05 with regard to the Board's proposed auditor reporting standard and the proposed other information standard included. Laclede strongly supports the comments made by the AGA and disagrees with the Board's proposed changes. A copy of AGA's response is included for reference.

Specifically, we disagree with the following provisions:

- We believe that the proposed auditor reporting standard would decrease the usefulness of the audit report and the clear separation of duties between management and our auditors.

- We believe the proposals undermine the role of the Audit Committee.

- We believe critical audit matters ("CAM") should be discussed directly with the Audit Committee in their role of overseeing the audit and controls over financial reporting, and that the discussion of CAM's in the audit report could cause confusion to the readers of the financial statements.

- Finally, we believe that the costs associated with the proposals and the inefficiency caused by the added work on the part of the auditors and our staff far outweigh the benefits of the proposals.

THE LACLEDE GROUP, INC.
720 OLIVE STREET
ST. LOUIS, MISSOURI 63101

We appreciate the opportunity to weigh in on this matter and look forward to continuing discussion on this vital topic.

Respectfully submitted,

Steven P. Rasche
Chief Financial Officer

American Gas Association

December 11, 2013

Office of the Secretary
File Reference: Docket Matter No. 034
PCAOB
1666 K Street, N.W.
Washington DC 20006-2803

**File Reference:** PCAOB ~~Rulemaking Docket~~ Matter No. 034

Dear Ms. Brown:

The American Gas Association ("AGA") respectfully submits our comments on the Public Company Accounting Oversight Board's ("PCAOB" or "the Board") proposed audit standards included in Release No. 2013-005 addressing both *The auditor's report on an audit of the financial statements when the auditor expresses an unqualified opinion* (the "proposed auditor reporting standard") and; *The auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report* (the "proposed other information standard").

The American Gas Association, founded in 1918, represents 202 local energy companies that deliver clean natural gas throughout the United States. There are more than 70 million residential, commercial and industrial natural gas customers in the U.S., of which almost 93 percent – more than 65 million customers – receive their gas from AGA members. AGA is an advocate for natural gas utility companies and their customers and provides a broad range of programs and services for member natural gas pipelines, marketers, gatherers, international gas companies and industry associates. Today, natural gas meets almost one-fourth of the United States' energy needs.

**Overall concerns**

The AGA appreciates the PCAOB's efforts to enhance the information provided to investors and financial statements users. We agree that financial statement users should have access to timely, accurate, objective and relevant information for purposes of making investment decisions. However, we strongly disagree with the proposed auditor reporting standard and proposed other information standard included in PCAOB Release No. 2013-005. We believe a company's financial information and the communication of that information is management's responsibility. We believe the SEC and the FASB should continue to serve as the standard setters for establishing the requirements for information to be provided to investors, and that management should be the sole party responsible for communicating such information.

The SEC has enacted various regulations over time (including designation of FASB as the organization responsible for promulgating US GAAP) on *what* information needs to be disclosed. Importantly, these rules designate management as the responsible party to determine *how* to communicate this information to most accurately reflect a company's financial results and position. The role of the external auditor is to verify that the information presented by management complies with the applicable SEC / FASB requirements and is presented fairly in all material respects. The audit committee, comprised of a company's shareholder-elected Board of Directors, is charged with oversight of both the auditor and management's financial reporting.

The SEC and PCAOB provide additional oversight of management, the audit committee and external auditors by reviewing the financial statements and the audits thereof to ensure these parties are performing their duties appropriately. If management, the audit committee, and the external auditors fulfills their respective responsibilities to communicate timely, accurate, objective and relevant information to financial statement users that is audited in accordance with existing professional standards, we believe the additional communications and requirements outlined in the proposed auditor reporting standard and the proposed other information standard are unnecessary.

In addition to these overall concerns, we provide the following specific observations regarding each proposal.

**The proposed auditor reporting standard**

Of the various requirements proposed in the auditor reporting standard, we most strongly disagree with the requirement that the auditor disclose critical audit matters (CAMs) within the audit report. As such, we have limited our response on the auditor reporting standard to this matter. We believe the proposed standard would be detrimental to the usefulness and relevance of the audit report and would undermine the role of the audit committee. Further, we believe the proposed standard would result in lack of consistency and comparability of auditors' reports across companies while increasing the cost of regulatory compliance.

*The proposal would undermine the usefulness of the audit report and the role of the audit committee*

The auditor is expected to conduct an audit to obtain reasonable assurance that the financial statements are materially correct when taken *as a whole*. The auditor's report does not include, nor do we believe it would be appropriate or practical to include, all of the factors considered by an auditor when forming the overall audit conclusion. Therefore, without the full context of a company's financial transactions, business environment and internal controls obtained by the auditor throughout the audit process, an investor may inappropriately over-emphasize the importance of a CAM when making an investment decision. Likewise, highlighting CAMs in the audit report may lead investors to over-emphasize certain risks because they are disclosed as a CAM and under-emphasize other important business risks that may not meet the proposed CAM disclosure criteria. Additionally, disclosure by the auditor of the most difficult aspects of the audit may be interpreted by some as the auditor expressing reservations in their report on those transactions or accounts affected by a CAM, or as the auditor providing a "piecemeal" opinion on the financial statements which would undermine the usefulness, authority, and credibility of the audit report.

Currently the audit committee, as part of the shareholder-elected Board of Directors, has the authority to oversee the audit and ensure the financial statements contain appropriate disclosure on behalf of shareholders. Under current rules, the auditor already discusses difficult, judgmental, complex and other key aspects of the audit with the audit committee. With its access to auditors, management and the Board of Directors, the audit committee has the requisite knowledge, perspective and authority to ensure the various risks faced by the entity are disclosed in a manner commensurate to their materiality and relevance to investors. The Board's proposal would undermine this oversight role by requiring the auditor to effectively bypass the audit committee and disclose CAMs directly to shareholders in the audit report. We believe that the auditor's role should remain that of attesting on information prepared by management, and the Audit Committee should retain its function as providing primary oversight of the audit process.

*The proposal would undermine the relevance of the audit report/financial statement disclosures*

The matters that would be required to be disclosed as CAMs are already provided in the financial statements or are not relevant to investors in making investment decisions. The proposal states that CAMs are those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements. Many of those matters meeting the criteria above relate to subjective or complex accounting areas which are already disclosed within the financial statements as required by US GAAP or SEC rules. Examples include critical management judgments, risks and uncertainties, and accounting estimates and policies. Repeating these disclosures in the audit report would result in duplicative disclosure and would undermine the relevance of either the audit report or the financial statement disclosures. Further, if the auditor identifies a significant lack of internal control as part of the audit, the audit report on internal control already describes it as a material weakness. If any additional information or disclosure is deemed necessary, such disclosure should be addressed by the SEC and the FASB as part of the financial reporting standard setting process.

The proposed standard would also require that auditors disclose certain audit matters that we do not believe would be considered relevant to investors when making investment decisions. Examples include the level of audit effort applied to a particular account, immaterial or corrected misstatements, change in auditor risk assessment, and an auditor's use of a specialist. Such items may provide information on a business's accounting operations or an auditor's approach, but do not impact the underlying economics of the business and therefore may not be considered relevant by investors.

*Auditor reporting would no longer be comparable or consistent across entities*

Under the proposed standard, the auditor's determination of what is considered to be a CAM will involve a considerable amount of professional judgment and will decrease comparability of the auditor's report. There is a risk that auditors may take a conservative approach and include numerous CAMs in order to avoid potential PCAOB inspection findings or litigation, resulting in voluminous disclosure within the audit report and thereby obscuring the overall opinion. Further, investors may incorrectly interpret longer auditors' reports as an indicator of higher investment risk rather than as a matter of an auditor's professional judgment or reporting policy. There is also the risk that each audit firm's interpretation of what meets the definition of a CAM will differ, resulting in lack of comparability between audit reports for similar companies or industries. We therefore have concerns that the auditor's subjective determination of what is considered to be a CAM could be used erroneously as the basis for, or at least influence, differences in investor decisions among otherwise comparable entities.

*Potential implementation challenges and cost considerations*

The increased costs of compliance with the proposal will outweigh any perceived benefit. A significant amount of additional time will be required by audit firms in order to develop, review and present CAMs, which will result in increased audit fees. Extensive discussion and consultation with Company management, legal and the audit committee would also be required, resulting in increased internal costs. Further, because some CAMs may not be identified until late in the audit process as the audit is performed, this additional work will be required during an already busy period within the audit and financial reporting cycle which would impact the timing of SEC filings and, consequently, the ability of investors to obtain financial information in a timely manner.

While we do not support the inclusion of CAMs in the auditor's report, if the Board ultimately determines to implement the rule as proposed, we request that the effective date be delayed to allow companies and auditors to field test how the CAM provision would be applied in practice and provide an opportunity to mitigate the potential issues identified above.

**The Other Information Standard**

We support adding language to the auditor's report that will *clarify* the auditor's procedures and responsibility for other information contained in SEC filings (such as the MD&A). We do not support *expanding* the auditor's responsibilities regarding other information, or including language in the auditor's report that could be perceived as an expansion of the auditor's responsibilities. We believe the proposal would lead to higher costs with no commensurate benefit to investors. Further, we believe the proposal as written would result in several practice issues that would result in inconsistent application among audit firms.

Management should continue to prepare and present the other information contained in the annual reports of public companies, with over-sight from the Audit Committee, without the additional costs of such information being subject to additional procedures by the auditors. We support the retention of existing procedures contained in AU sec. 550, *Other Information in Documents Containing Audited Financial Statements,* which require auditors to "read and consider" other information to ensure the information is consistent with the audited financial statements. We believe AU 550 provides an appropriate level of assurance for the other information considering both the costs and benefits of such assurance.

We believe the "read and evaluate" language included in the proposed standard implies, and is likely to result in, a level of additional procedures that is substantively different from and greater than the requirements set forth in AU sec. 550. We do not agree with this change in the proposed language as it will have far reaching impacts on the procedures currently being applied to other information. We believe that, in carrying out their professional responsibilities, auditors presently are conducting a sufficient level of review commensurate with the nature and purpose of that information.

In our opinion, the use of the term "evaluate" will prompt auditors to expand their procedures substantively beyond the existing requirements in AU sec. 550 resulting in unnecessary procedures and increased costs. Similar to the timing of CAMs, the additional work over other information will be required during an already busy period within the audit and financial reporting cycle and would lengthen the timing of a company's SEC filings to the detriment of investors.

Alternatively, we recommend that the Board retain the existing procedures in AU sec. 550 but ensure that the language presented in the auditor's report clearly communicates what those existing procedures entail. If the Board believes further clarity is warranted to differentiate the level of assurance provided within the financial statements, we request the Board consider a more cost effective approach. For example, the Board could consider adding headers or other disclaimers on each page of the audited financial statements that indicate if the information is audited.

While we disagree with the proposal, we believe several practice issues that would need to be addressed within the standard if the Board determines to adopt the standard as proposed. These practice issues include determining what information would be subjected to the expanded procedures, what procedures to perform on forward-looking statements, and how an auditor should determine materiality of non-financial information.

**Conclusion**

We appreciate the opportunity to comment on the Board's proposals. As discussed above, we do not support the inclusion of CAMs in the auditor's report or expanded audit procedures on other information contained in the annual report. We urge the Board to reconsider the proposals. We believe that auditor reporting of CAMs would decrease the relevance of the audit report, the role of the audit committee, decrease audit report comparability and increase costs of compliance all to the detriment of investors. Further, we believe guidance currently contained in AU sec. 550

appropriately addresses the audit procedures to be performed over other information contained in the financial statements and the benefits arising from any further audit scrutiny would not justify the costs.

We would be pleased to discuss our comments in further detail and provide any additional information that you may find helpful in addressing these important issues.

Very truly yours,

Joseph L. Martin

PCAOB Rulemaking Docket Matter No. 034

Board Members,

The Accounting & Auditing Committee and the Public Companies Subcommittee of the Accounting & Auditing Committee of The Ohio Society of CPAs are pleased to provide comment on the proposed auditing standard dealing with the auditor's report (PCAOB Release 2013-005, dated August 13, 2003).

While we generally concur with the direction of this recent release and the proposed changes, including retention of the pass/fail model in the auditor's report, elimination of the supplemental narrative report (described as an auditor's discussion and analysis (ADA)), and the proposed enhancements to certain standardized language in the auditor's report, there are several areas where we would recommend alternatives be given further consideration by the Board, including:

- **Critical Audit Matters**--The proposal includes a requirement that Critical Audit Matters be delineated by the auditor in their report. We believe this proposed expansion of the auditor report will most likely mirror the detailed disclosures already included in the Critical Accounting Policies and Use of Significant Estimates area of the Form 10-K filed annually by publicly held companies with the Securities and Exchange Commission (SEC).

  Redundant inclusion of this type of information within the auditor's report will add to the length of that report without providing any truly unique information to the investor or other user of the financial statements. In an attempt to satisfy PCAOB expectations, we believe auditors will likely err on the side of including more, not less, of such identified Critical Accounting Matter disclosures and that such narrative in the end will therefore become watered down and boilerplate. Since the auditor already reviews similar disclosures prepared by management within the Form 10-K, we believe the onus should remain with the company within the existing Critical Accounting Policies disclosures in the Form 10-K. No further repeating of this information in the form of Critical Audit Matters in the auditor's report is beneficial. We also believe that this will add to the costs of the audits and for the negligible benefits to the users of the financial statements we do not believe these additional costs are warranted.

- **Auditor Independence**-- The proposal includes adding a statement regarding auditor independence. The auditor's report already includes the word "independent" and states that the audit was performed in accordance with PCAOB standards, which sets the independence standards. The proposed wording of "United States federal securities laws and the applicable rules and regulations of the SEC and the PCAOB" does not provide any further clarification.

- **Auditor Tenure**-- The proposal includes adding references to the year the auditor began serving as the company's auditor, to provide investor and other financial statement users with information about the length of the relationship between the auditor and the company. We do not believe this information is relevant within the auditor's report on annual financial statements, but would be more appropriate, within a company's proxy statement filed on Form 14-A (Proxy).

  With Proxy rule changes made on broker voting of shares, it is fairly common to have a proposal reconfirming the appointment of the external auditor included in the Proxy. In this context (as part of the Proxy), citing auditor tenure is relevant and useful to the investors in support of their vote on an external auditor. As a reference within the auditor's report, we believe this information is not relevant and could serve to inadvertently overshadow the pass/fail opinion being expressed by the auditor.

Beyond the areas of concern above, we would also express our support and suggestions for these particular aspects:

- **Field Testing**--We believe the Board should undertake field testing as a part of the process in finalizing any changes contemplated in the auditor's report and that such field testing should include participation from the auditor, investor and reporting company communities.

- **Other Information** --We also note changes are contemplated for dealing with other information in annual reports filed with the Securities and Exchange Commission. We understand those changes would include:

  1. Apply auditor responsibility to other information contained in a company's annual report as filed with the SEC, that contain the company's audited financial statements and related auditor report.
  2. Enhance auditor responsibility on that other information by added procedures for the auditor to perform in evaluating that information based on relevant audit evidence obtained and conclusions reached during the audit.
  3. Require auditor evaluation on other information for any material misstatement of fact or material inconsistency with amounts or information or in the manner of presentation in the audited financial statements.
  4. Require communication in the auditor's report on their responsibility for reviewing other information and the results of such auditor evaluation.

  We believe that auditors currently perform procedures on this other information and that the proposed change is only beneficial if the intent is to standardize practice in this area across audit firms and to clarify for users what the auditors' responsibility and results of their procedures are. The primary objective in evaluation of this information should be to ascertain that no material discrepancies or misstatement of fact exist with regards to the other information as presented versus related views as provided in the audited financial statements and related footnote disclosures.

This is a focused and cost-beneficial objective for the auditor as part of their review. Currently, the auditors have a responsibility to read and "consider" the other information. We do not believe it is clear as to what the difference between "consider" and "evaluate" would be. In addition, we question whether there would be a separate materiality for the other information. Financial statement materiality is based on the financial statements taken as a whole, including qualitative factors. Will this same materiality be used for the other information? Finally, some other information may not relate to the historical results reported in the audited financial statements, such as projections and proposed changes by the Company. How will the auditor "evaluate" this information?

If through interpretative application by the PCAOB, this process results in this other information becoming the end focus of audit work and part of the scope of the auditor's opinion on the fairness of the financial statement and footnotes, we believe the impact will be to add notable cost to the audit process and potential delays in filing. It is not clear such expanded audit process in this area would be cost beneficial; we would recommend any changes in this area be specifically defined by the PCAOB as to purpose. We believe this goal should be standardization of existing practice for reviewing other information outside the financial statements as opposed to significant expansion of the audit process to encompass other material as part of the overall audit process and audit opinion rendered by the auditor.

We would welcome any opportunity to further assist the PCAOB in its deliberations on this proposal and to answer any questions you may have on the above comments and recommendations.

Re: PCAOB Rulemaking Docket Matter No. 034 (Release No. 2013-05)

Dear PCAOB Board Directors:

We would like to thank the Board for the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) two new proposed auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*. While we agree with the Board's objective of providing more useful information to investors to assist them in making their investment decisions, we share the concerns of many of the respondents and participants in the public meetings that the proposals are too broad and could infringe on management and the audit committee's role in financial reporting. Our two specific concerns with the proposal are:

1. The proposed requirement to include "critical audit matters" in the audit report is not sufficiently clear and is overly broad, and

2. The proposed requirement to increase the auditor's responsibility over other information outside of the financial statements in certain filings with the Securities and Exchange Commission (SEC) is unnecessary and would be problematic as it would require skills other than accounting and auditing.

As discussed below, we have concerns with the proposals contained in Release No. 2013-05. However, if the Board concludes that new audit guidance is needed to address the concerns discussed in the release, we also offer some suggested changes to the audit standards that we believe would satisfy the intent of the proposals, without crossing the lines of responsibility of management and auditors.

**Critical Audit Matters**

We are concerned that the critical audit matters (CAM) proposal is not sufficiently clear and is overly broad and will lead to disclosure that may conflict with or duplicate disclosure that is the responsibility of and already provided by management. The conflicting or new disclosures would be due to the lack of clarity regarding what critical matters the auditor is required to disclose. As currently drafted, one could conclude that any matter that may be difficult for the auditor to audit or includes significant subjectivity in the estimate would be reported upon in the CAM even though the matter is not material to the financial statements. We are concerned that if a requirement for the CAM is created without squarely framing it in the context of materiality, the auditor's report will likely be viewed as conflicted and confusing rather than aiding investors' understanding of the company's financial position and results of operations.

Additionally, we believe that it is management's responsibility to disclose the most significant accounting and valuation estimates the in the Critical Accounting Estimates (CAE) section of Management's Discussion and Analysis (MD&A) and not that of the auditor. We do, however, believe that it may be helpful to have the auditors provide an assertion as to whether they agree that management has appropriately identified the areas that pose the greatest risk of material misstatement in CAE and adequately described the uncertainties associated with those estimates. We believe that the Board could leverage the requirements in Auditing Standard No. 16, *Communication with Audit Committees* (AU No. 16), which requires the auditors to communicate to the audit committee the critical accounting estimates and significant unusual transactions, or where management makes that communication to confirm whether management adequately communicated these matters. Including this information in the audit report would be a natural extension of the communications that auditors are required to make to the audit committee under AU No. 16.

**Auditor's Responsibility over Other Information**

While we completely agree that all information provided to investors should be consistent, we do not believe that it is necessary for auditors to perform enhanced audit procedures on the other information. As currently required by Interim Standard AU Section 550 (AU 550), auditors are required to read the information and consider whether the information is materially consistent with the information within the financial statements and related notes. We have observed that in practice auditors appropriately do more than just "read the information" but also compare and, where appropriate, determine whether such other information is in agreement with the company's financial statements and notes to financial statements. Additionally, there is a process in AU 550 that details considerations for the auditor if there is a material inconsistency or if the auditor becomes aware of a material misstatement of fact. This process includes notifying management and the audit committee of the issue, as well as consideration of withholding the audit report and withdrawing from the engagement if the company does not address the issue.

In addition to the auditor's review of the information, there are other mechanisms which provide penalties for companies that do not provide consistent information. The first is the discipline that comes with filing information with the SEC and responding to the SEC staff's comments during the review process. The second is the market itself, where investors will penalize companies for providing conflicting and incomplete information.

We also believe that it would be problematic for auditors to perform enhanced audit procedures on other information that falls outside of the accounting and auditing profession as such information may require skills from other technical professions, e.g., an electrical engineer may be required to review certain information provided by a micro-chip or computer manufacturer. With the mechanisms currently in place, we do not believe that the costs of requiring auditors to perform enhanced procedures would outweigh the marginal benefits, if any, that may be derived. It may be beneficial to inform investors as to the responsibility of auditors to review other information outside of the financial statements under current auditing standards. This can be done by including language in the audit report that describes the auditor's responsibility with regard to such information and a caution as to the limitations of that review.

**Recommendations**

If the Board concludes that new audit guidance is needed to address the concerns discussed in Release No. 2013-05, we recommend the Board:

- Revise the proposal on Critical Accounting Matters to require auditors to provide assurance in the audit report on whether they believe the company has appropriately identified the areas that pose the greatest risk of material misstatement in the Critical Accounting Estimates section of the MD&A, and whether the company has adequately described the uncertainties associated with the estimates; and

- Expand the audit report to include a description of the auditor's responsibility to review other information outside of the financial statements and the limitations of the auditor's review.

We would be pleased to discuss our views with the Board at your convenience. Please feel free to call me if you have any questions or would like to discuss our comments further.

Sincerely,

D. Keith Bell

The Walt Disney Company

December 11, 2013

Ms. Phoebe W. Brown
Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, DC 20006-2803

**Re: PCAOB Rulemaking Docket Matter No. 034**

Dear Secretary:

The Walt Disney Company is pleased to have the opportunity to comment on two auditing standards recently proposed by the Public Company Accounting Oversight Board (the "Board"):

- *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*

- *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*

While we are supportive of the Board's efforts to improve audit quality and increase the informational value of the auditor's report, we recommend the Board reconsider certain aspects of the proposed standards before they are finalized. We believe there are a number of undesirable collateral consequences flowing from certain aspects of what is proposed, particularly related to the disclosure of "critical audit matters[1]," that outweigh any benefits sought to be achieved.

**Critical Audit Matters or "CAMs"**

We do not believe that the proposed disclosure of CAMs will, in the end, make the audit report more useful. This is so for a number of related reasons:

- The breadth of the definition of a CAM and the requirement to document the rationale for non-disclosure of potential CAMs combine to create a dynamic that could well motivate auditors to disclose numerous CAMs to avoid the risk of being second guessed by third parties for non-disclosure. This would lead to a more voluminous auditor's report, which will both distract from the unqualified opinion and lead to doubt about the essential pass/fail objective of the audit. Such an outcome would be unfortunate as by definition the auditor would have resolved all CAMs to its satisfaction in order to render its opinion. In other words, the proposed disclosure may be read as creating doubt which, in the auditor's mind, does not fairly exist.

[1] The proposed standard defines CAMs as "those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements." In addition, the proposed standard places the responsibility with the auditor of determining which matters to communicate as CAMs and indicates that "critical audit matters ordinarily are matters of such importance that they are included in the matters required to be (1) documented in the engagement completion document, which summarizes the significant issues and findings from the audit; (2) reviewed by the engagement quality reviewer; (3) communicated to the audit committee; or (4) any combination of the three."

- CAMs may be misinterpreted by financial statement users as issues for concern rather than simply information about the conduct of the audit—a "piecemeal" audit report rather than a report on "the financial statements taken as a whole." Further, if the information in the auditor's CAM discussion is misinterpreted and/or leads to questions from the investment community, there is no disclosure venue for the auditor to respond. This would put the company in the position of explaining after the fact (in a Regulation FD compliant disclosure) what the auditor meant—potentially requiring management to "put words in the auditor's mouth."

- The definition of a CAM is sufficiently broad that there will be diversity in practice across audit firms in determining and describing CAMs. Such diversity will make it difficult for financial statements users to interpret the CAMs across companies, and users may make inappropriate inferences based on the number of CAMs reported for a company. For instance, numerous CAMs might be interpreted as an indication that there was contentiousness with the audit firm or extensive use of aggressive accounting practices when in fact, it was simply indicative of an audit that involved novel issues on which ultimately there was little or no dispute between the auditor and the company. Conversely, very few CAMs may be interpreted as an indication that the auditors were not thorough or are too comfortable in their relationship with management when in fact, it was simply indicative of an audit with few novel issues.

- Although the inclusion of CAMs in the auditor's report is intended to improve the mix of information available to investors and enhance their understanding of the financial statements, we believe that management's discussion and analysis (which is reviewed by the auditor) along with the footnotes to the financial statements (which are audited) is the most efficient way to highlight the most important factors investors should consider with respect to the evaluation of business performance. We don't believe investors are interested in understanding the audit process and requiring them to cross reference between management's disclosures and the auditor's disclosures to get a complete picture is not an efficient approach for increasing their understanding of the company's financial performance.

- In order to avoid incremental legal liability, there is a potential for auditors to make CAM disclosures boilerplate and redundant to standard accounting disclosures made by management, which will not aid investors in better understanding the financial statements of a company.

The CAM proposal also carries with it a number of undesirable collateral consequences that outweigh any perceived incremental value to the audit report.

***The requirement will result in a chilling of communication between the auditor, management and the audit committee.***

- We believe that open and candid dialogue between the three parties in the financial reporting process (i.e. the auditor, management and the audit committee) is integral to promoting the reliability and integrity of the audited financial statements and that the Board should avoid introducing any requirements that unduly interfere with that level of candor. We fear that the proposed CAM disclosure requirement would have precisely that effect. Management or the audit committee may hesitate to raise matters with the auditor on which they would otherwise seek input in order to minimize the risk of a matter unnecessarily becoming a CAM and triggering the disclosure of competitive or proprietary information, which would not be disclosed aside from the fact that it was discussed with the auditor. Auditors themselves may hesitate to discuss matters with management or the audit committee to minimize the risk that non-disclosure of a CAM would be second guessed or the risk that the auditor would be thrust into a position of having to disclose competitive or proprietary information that management would not otherwise be required to disclose. For these reasons, the proposed standard would inhibit the open, transparent and timely communications between auditors and audit committees that we believe the Board should strive to promote.

***The auditor will become a primary source of disclosure for companies and may disclose information, which would not otherwise be required for disclosure.***

- The communication of CAMs in the auditor's report may blur the roles of management and the auditor with respect to communication of information about the company. The auditor could be put in a situation of being required to disclose original information, including confidential information or information that management would otherwise have no obligation to disclose. For example, the auditor may disclose as a CAM, a weakness in internal control over financial reporting which was appropriately determined to be a significant deficiency rather than a material weakness. Or, the auditor may disclose a litigation contingency that was determined to be a remote probability rather than a reasonable possibility. In such cases, companies may feel compelled to preemptively disclose matters that otherwise would not be required (nor informative for investors) in order to avoid initial disclosure by auditors. This will lead to more voluminous management disclosures, which will obscure important disclosures, and lead to redundancy between management disclosure and the auditor disclosure.

***Disclosure of CAMs will increase audit cost without a clear benefit to financial statement users.***

- The inclusion of CAMs will place pressure on achieving tight filing deadlines while increasing the cost of the audit. Auditors will spend incremental resources on CAM identification, documentation, drafting and the related reviews. At the same time, companies will be required to devote resources to provide additional information to auditors in respect of potential CAMs, increase disclosures beyond that which is required, and debate and review auditor CAM disclosure language internally and with the auditor. Much of this effort will be concentrated at the time when both the auditor and the company are focused on the accuracy of the financial statements and meeting the financial statement filing deadlines.

**Reporting on "Other Information"**

We support clarification within the audit report of the auditor's existing responsibility for other information in documents which contain the audited financial statements. However, we do not support an increase in the auditor's current scope of responsibilities since we don't believe there have been significant issues with investor use of information outside the financial statements.

Current reporting requirements provide comfort that "other information" has been verified by the company through the Section 302 certifications. The Board's proposal to change the standard of auditor involvement to "evaluate" from the current standard (read and note inconsistencies) will require the auditor to perform substantial additional procedures, increasing audit costs without a clear benefit to financial statement users.

**Auditor Tenure**

We don't believe the PCAOB has identified any linkage between auditor tenure and audit quality. In the absence of such linkage, including tenure in the auditor's report will not provide financial statement users with helpful information about the audit conducted, nor the information presented in the financial statements. If auditor tenure should be disclosed, the most appropriate place for such disclosure would be in the proxy statement materials discussing auditor fees and/or auditor appointment.

Based on these factors, we do not believe that the disclosure of CAMs or the increase in the auditor's responsibility for other information is an effective or cost efficient solution to enhance the informational value of the auditor's report.

If the PCAOB continues to believe a change of this type is required to improve auditor reports, we recommend that the PCAOB explore whether increased use of "matters of emphasis" paragraphs in auditor reports would be a suitable alternative. With matter of emphasis paragraphs, the auditor could point to the management disclosures that the auditor believes would be of most interest to investors.

I would be pleased to respond to questions you have regarding this response.

Sincerely,

Brent A Woodford

Re: Docket Matter No. 034 - Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments

Ladies and Gentlemen:

TIAA-CREF appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB") proposal for *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*; *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* ("the Proposal").

TIAA-CREF is the leading provider of retirement services in the academic, research, medical and cultural fields. We manage over $540 billion in retirement assets as of September 30, 2013 on behalf of approximately 3.8 million participants and serve more than 15,000 institutions.

In particular, Teachers Insurance and Annuity Association of America ("TIAA"), along with its two subsidiaries, TIAA-CREF Investment Management, LLC ("TCIM") and Teachers Advisors, Inc. ("TAI"), each registered investment advisers under the Investment Advisers Act of 1940, as amended, manage approximately 79 registered investment vehicles, which include investment companies registered under the Investment Company Act of 1940, as amended (the "Investment Company Act"), and a real estate life insurance separate account that is a registrant under the Securities Exchange Act of 1934, as amended (the "Exchange Act") and makes a continuous offering of its securities registered under the Securities Act of 1933, as amended (the "Securities Act"). In particular, TIAA, TCIM and TAI manage investment vehicles registered with the U.S. Securities and Exchange Commission (the "Commission") under one or more of the Commission's reporting regimes above totaling approximately $297 billion in assets under management.

As a large investment manager, TIAA-CREF is in a position to provide commentary on certain aspects of the Proposal both from the perspective of a preparer and a user of financial statements. Overall, we support the PCAOB's efforts to provide additional transparency to financial statement users. However, we are concerned as to the precise manner in which the Proposal intends to accomplish this goal. Over the past few years, there has been a proliferation of disclosure requirements from regulators and standard setters seeking this exact objective. Generally, these enhanced standards, including the certification requirements, which have resulted from the Sarbanes-Oxley Act of 2002, have increased the investing public's confidence in the quality of registrants' financial statements and more generally, non-financial statement disclosures upon which informed investment decisions rely.

Given these positive developments over the past decade, we feel that investors currently have far more insight into the operating businesses and funds in which they invest, including increased confidence in the internal and disclosure control environment which underlies the preparation of filings with the Commission. While we support and seek to provide comprehensive and transparent information to investors, we believe that any new proposed standards that impact registrants and other key stakeholders, such as independent registered public accountants, should take into account the incremental additional clarity for, and confidence gained by, the investing public associated with the proposal, while at the same time assess the risk of investor confusion, disclosure overload and redundancy, and the application of resources in support of such efforts. In the case of the Proposal, we are concerned that certain of the proposed standards do not provide meaningful benefit, in particular as the Proposal seeks to further push existing disclosures into the hands of auditors, which further blurs the lines as to management's and the auditor's ultimate involvement and areas of responsibility.

## *I. Critical Audit Matters*

As users of financial statements, we support the concept of communicating critical audit matters. However, we believe the enhanced communication should be more targeted than the Proposal appears to contemplate. Such communication should manifest itself in the expansion of the auditor's "emphasis of a matter" in its report. The communication of certain matters related to one time transactions would be useful and is typically well disclosed in the notes to the financial statements, but would gain further prominence if included as an emphasis of a matter in the auditor's report.

TIAA CREF
Financial Services

As a practical matter, we are concerned that the Proposal's communication of critical audit matters will become "boilerplate" and not useful. It would seem for the most part a registrant's or fund's financial statements would remain relatively static, outside of specific nonrecurring transactions as discussed above (which may or may not result in a critical audit matter). It would therefore stand to reason most companies would have no critical audit matters or would substantially have the same critical audit matters after the initial year of adoption of the Proposal, withstanding nonrecurring transactions. If this would be the ultimate evolution of the Proposal, we believe this required communication would not be useful for investors.

In order to avoid boilerplate language, we encourage the PCAOB to clarify that routine matters discussed with boards of directors or audit committees and comprehensively disclosed in the financial statements may not be considered as a critical audit matter. While matters such as these may require substantial audit effort or significant auditor judgment they may not represent significant audit issues.

Further, we are concerned that some investors may misinterpret the communication of a critical audit matter as a de-facto qualification of the auditor's opinion even though the proposed auditor's report would state that the opinion on the financial statements is not modified with respect to any of the critical audit matters described, or an investor may take exception as to the overall quality of the financial statements or entity (company, institution or fund). In the case of registered investment companies with the same investment objective, we feel this could be most pronounced in situations in which an investor is reviewing two similar funds, ultimately making an investment decision based on one fund having a specific critical audit matter or critical audit matters versus another.

From a preparer's perspective, it is not unusual for fund complexes to file multiple funds in one joint filing or book (as discussed below) with a single auditor's report covering multiple funds within such book. Notwithstanding the discussion as to the boilerplate nature of critical audit matter disclosures, we would request the PCAOB provide additional consideration and guidance as to an auditor's report in such circumstances.

Finally, we believe there will be a substantial increase in time and effort associated with the auditor's gathering of and providing of information in connection with the auditor's required assessment, reporting of and documentation of critical audit matters. Even more so, the Proposal would require the auditor to document why other possible critical audit matters were not included as critical audit matters in the auditor's report. These efforts combined with the increased efforts associated with the auditor's evaluation of other information (as discussed below) will most certainly translate into increases in audit expense, ultimately borne by the investor. We would encourage the PCAOB to perform additional outreach, specific to the investing community in order to gain an understanding of their perceived benefits in light of the potential for boilerplate language and/or inconsistent disclosure and increased expenses.

### *II. The Auditor's Responsibilities Regarding Other Information*

As preparers of financial statements, we support including a description in the auditor's report that clarifies the auditor's responsibility for other information in documents containing financial statements. However, we do not support changing the auditor's responsibility to "evaluate" such information versus the current requirement to "consider" the information. This change seems to imply the same level of analysis be required as that in the audit of the financial statements. While the Proposal would require the auditor state they did not audit the other information, the auditor will also state their evaluation was based on relevant audit evidence obtained and conclusions reached during the audit. We believe these disclosures will inherently be confusing to the reader with the reader potentially placing the same level of reliance on the auditor's evaluation of other information as that placed on the audited financial statements.

Further we believe an auditor's required evaluation of other information will inevitably transform into the expansion of the auditor's scope. This is based on the Proposal's expansion to evaluate "other information not directly related to the financial statements" as well as additional audit procedures, as the emphasis of the term "evaluate" will press auditors to perform additional procedures to ensure compliance and to avoid unsatisfactory inspections. As an example, we do not understand how evidence obtained during the audit would provide the auditor with information to evaluate forward looking information, overall macro-economic analysis or market analysis. Inherently the evaluation of such information will force the auditor to opine on matters of management judgment of future events or economic conditions. Such additional required evaluation and the need for further procedures by auditors could have a chilling effect on registrants' disclosure of helpful information for the benefit of the investing community in, for example, the "Management's Discussion and Analysis of Financial Condition and Results of Operations" section of an Annual Report. For many years, the Commission has encouraged registrants to provide more detail regarding key trends impacting the registrant's business and while registrants will and must continue to

TIAA CREF Financial Services

disclose all material information relevant to such trends, additional helpful disclosure may be omitted as registrants and their auditors weigh the cost/benefit analysis of the expanded audit procedures on such disclosures.

### *III. Disclosure in Respect of Auditor Independence*

The Proposal would require the auditor to add additional language as to the auditor's independence, namely that it is registered with the PCAOB and is required to be independent in accordance with the federal securities laws and the rules and regulations of the Commission. As a user of financial statements, we understand and rely on the fact the auditor of the financial statements is in compliance with rules under current PCAOB standards which require an auditor registered with the PCAOB to be independent[1]. We believe that those standards are now well-established and understood in the investing community without specific reference to those standards. As the auditor's report is currently titled "Report of Independent Registered Public Accounting Firm" in accordance with standards of the PCAOB, we do not believe an additional statement in the auditor's report relating to auditor independence provides any additional comfort to the investing community.

### *IV. Additional Standardized Language*

The Proposal would require the auditor to include the phrase "whether due to error or fraud" in the auditor's opinion as part of the auditor's statement describing the auditor's responsibility under PCAOB standards. As a user of financial statements, we believe the proposed additional disclosure better informs the reader as to the scope of the auditor's responsibility or financial statement review and thus, we support the addition of this phrase in the auditor's opinion.

### *V. Disclosure in Respect of Auditor Tenure*

As a user of financial statements, we do not object to the inclusion in the auditor's report of the year in which the auditor began serving consecutively as the company's auditor and believe it may provide incremental benefit to the investing community. However, we believe that the disclosure would be better located if it were included in another regulatory filing made by a registrant, such as a fund's prospectus or, if the registrant files periodic reports under the Exchange Act, in the section of the Form 10-K (or equivalent) where audit and audit committee matters are required to be disclosed.

---

[1] Rule 3520. Auditor Independence

TIAA CREF
Financial Services

As a preparer, we would ask the PCAOB to provide additional guidance specifically related to registered investment companies having one auditor over multiple funds for a given fund complex. Various mutual fund complexes will organize a business or trust having separate funds under the same business or trust. It is not unusual for these funds' audited financial statements to be organized and filed with the Commission in one combined filing or "book." As the business or trust adds new funds, these funds are added to the book. We would ask the PCAOB to better clarify how an auditor would treat its disclosure of tenure as it relates to these fund complexes. We believe the auditor's tenure would begin at such time the auditor first began auditing the fund complex, which is consistent with the application of the Commission's audit partner rotation requirements.

*******

We appreciate the opportunity provided by the PCAOB that allows TIAA-CREF to comment on the Proposal. Should you wish to discuss the contents of this letter, please contact Phillip Goff at 704-988-5244 or pgoff@tiaa-cref.org.

Very truly yours,

/s/ Phillip G. Goff

Re: Docket 034: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments

Ladies and Gentlemen:

Tim Hortons Inc. ("Tim Hortons" or "we") appreciates the opportunity to provide comments to the Public Company Accounting Oversight Board (the "PCAOB") with respect to its Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments.

Tim Hortons is one of the largest quick service restaurant chains in North America by market capitalization and the largest in Canada based on system-wide sales and number of locations. Our common shares are listed on the Toronto Stock Exchange and the New York Stock Exchange. We file annual reports on Form 10-K, quarterly reports on Form 10-Q and periodic reports on Form 8-K with the U.S. Securities and Exchange Commission (the "SEC") as well as with Canadian securities regulators.

We share the PCAOB's goal of improving the quality and transparency of financial reporting, but we are concerned about certain aspects of the new proposals, as described below.

Critical Audit Matters

The proposed auditing standard entitled, *The Auditors Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion*, requires the auditor to disclose "critical audit matters" in the auditor's report. Critical audit matters are those that: involve the most difficult, subjective or complex audit judgments; pose the most difficulty to the auditor in obtaining sufficient appropriate evidence; or pose the most difficulty in forming an opinion on the financial statements. The description of critical audit matters in the auditor's report would require the auditor to: identify the critical audit matter; describe the considerations that led the auditor to determine that the matter is a critical audit matter; and refer to the relevant financial statement items and disclosures that relate to the critical audit matter, when applicable.

We are concerned that this:

(1) could require auditors to disclose information that is not required to be disclosed by the company and may be of a sensitive or confidential nature;

(2) could shift the role of the auditors from attesting information provided by the company to becoming an original source of disclosure, with negative effects for companies, auditors and investors; and

(3) could result in increased costs, from additional auditor procedures, that in our opinion would greatly outweigh any actual or perceived benefits to investors, companies or regulators.

*1. Auditor Disclosure of Information Not Required to Be Disclosed By the Company*

Critical audit matters would include, not surprisingly, those issues that involve the most sensitive judgments for the company, including items that are not required to be disclosed by the company under existing accounting and regulatory requirements. For example, critical audit matters could include the resolution of a significant deficiency in internal control over financial reporting, the existence or results of an internal investigation, alternate considerations for accounting treatment, materiality judgments, or similar matters that are not required to be disclosed by the company in reports filed with the SEC. In many cases, these are highly sensitive items that the company is not currently required to disclose. In the case of an internal investigation, for example, the effectiveness of the investigatory process may depend on the assurance of confidentiality for certain communications; in other cases, the information may be competitively sensitive.

Requiring disclosure of a critical audit matter that is not required to be disclosed by the company changes the disclosure regime for companies without giving due consideration to the policies permitting nondisclosure by the company. Knowing that the auditor may be required to disclose confidential information may cause company officials to limit their discussions with auditors, and may limit the willingness of audit committee members to hold frank and candid discussions regarding sensitive topics during their meetings. The chilling effect on communications between the company and its auditors and potentially during audit committee meetings, could impede the audit process and potentially result in lower quality audits.

*2. Shifting the Role of Auditors from Attestation to Original Source of Disclosure*

Requiring auditors to disclose critical audit matters could create confusion over the roles of auditors and the company and interfere with effective communication between the auditors, on the one hand, and the company and its audit committee, on the other hand.

An essential feature of the reporting system governing public companies is that the company is responsible for disclosure about the company and is responsible for its disclosure controls and procedures, just as it is responsible for preparing its own financial statements. The company's disclosures are made by management through specific policies and procedures, including a disclosure committee and a comprehensive disclosure policy, and under the oversight of the company's audit committee and full board of directors. The systems of internal control over financial reporting are the responsibility of management as well. The role of the auditor is to attest to certain information provided by management and to report separately to the audit committee. The current content of the auditor's report on the financial statements of the company, and management's assessment of the company's systems of internal control, reflect the fact that the auditor is not responsible for the reporting of specific information concerning the company. Rather, the auditor's role is to attest that overall financial results are free from material misstatements and whether effective internal controls over financial reporting are maintained in all material respects.

The proposals are not intended to change the role of the auditor from attestation to being an original source of disclosure concerning the company; they are intended to require the auditor to discuss matters pertaining to the audit process. We nonetheless believe that requiring the auditor to address critical audit matters in the audit report in the manner contemplated by the proposed standard will, in fact, require the auditor to make substantive disclosures concerning the company and will thus change the role of the auditor in ways that will not benefit companies, auditors or investors.

A frequent problem will be the development of two sets of disclosures of the same facts, one made by the company and the other made by the auditor. This poses the substantial risk of dueling narratives concerning the company on matters critical to it.

The fact that the auditor will become, in effect, a source for substantive disclosure concerning the company may increase the auditor's liability to investors, with the role of the auditor subtly shifting in the minds of investors. The auditor's need to protect itself from this liability is likely to affect the nature and substance of its disclosures. This could cause the auditor to, among other things, err on the side of over-inclusiveness and highlight issues involving subjective accounting and materiality judgments. In the alternative, auditors may fall back on standardized, boilerplate disclosures that vary little from company to company.

Whatever the nature of the auditor's disclosure, however, the fact that there will be two sets of disclosures about the same matters, driven by differing standards and interests, is likely to change the dynamics between the auditor and the company. This, in turn, is likely to have a chilling effect on communications between the company and the auditor, resulting in a more difficult audit process and potentially lower quality audits.

Determining what is a critical audit matter and how it should be disclosed will require the auditor to make significant subjective judgments that have not been part of the auditor's role in the past. The high degree of subjectivity could lead to a loss of investor confidence in the auditor's report.

*3. Cost/Benefit Analysis*

The additional responsibilities of the auditor with respect to critical audit matters will increase audit costs. Review and comment on the critical audit matter disclosure will also result in increased costs in terms of management time and legal costs, and will place increased time burdens on audit committee members.

The increased costs of critical audit matter disclosure, in our opinion, greatly outweigh any related benefits. While the volume of disclosure will increase, there is little indication that the quality of disclosure will improve. Instead, investors will face disclosure overload, with long boilerplate narratives and the confusion of largely duplicative disclosure. Much of the discussion of critical audit matters will repeat matters already disclosed in the MD&A or financial footnotes, and investors will find it burdensome and duplicative to review all three sets of disclosure. In addition, disclosure may be required of matters that, despite their complexity, are not material to the company, which may result in investor confusion.

Other Information

The proposed audit standard entitled, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, requires the auditor to "review and evaluate" other information included in or incorporated by reference in the company's annual reports filed with the SEC, such as selected financial data, MD&A and exhibits to the annual report. The auditor is then required to explain its responsibilities with respect to such information in the audit report. Under the current standard (AU Section 550), the auditor has a responsibility to "read and consider" other information in documents that contain the audited financial statements and related auditor's report, but there is no related reporting requirement to describe the auditor's responsibility with respect to other information. In our view, the additional work that the auditor may need to do to be satisfied that it has fulfilled its obligations under the enhanced standard will add to the audit costs without improving the quality of disclosure and may require the auditor to make subjective judgments about company disclosure that have not been part of the auditor's role to date.

Conclusion

For all of the foregoing reasons, we have significant concerns about the proposed auditing standards. Tim Hortons thanks the PCAOB for this opportunity to share its views.

Very truly yours,

Jill Aebker

Re: PCAOB Rulemaking Docket Matter Number 034

Dear Madam Secretary,

I am a member of the Board of Directors of:

* – Transocean Ltd. (NYSE:RIG; SIX: RIGN), Chair of the Audit Committee and member

of the Finance Committee;

* – Tullow Oil (LON:TLW);

– African Barrick Gold plc; and

* – Essar Energy Limited.

I was the Group Finance Director for National Grid plc from 2002 to 2010 and also served in finance and treasury roles in various global, industrial and natural resource companies.

I am pleased to submit my comments on the Public Company Accounting Oversight Board's ("PCAOB") proposed audit standards included in Release No. 2013-005 on Rulemaking Docket Matter #034 ("Proposal") addressing both the auditor's report when expressing an unqualified opinion and the auditor's responsibilities regarding other information in certain documents containing audited financial statements and the auditor's report. I appreciate the PCAOB's efforts to consider these improvements.

Proposed Auditor Reporting Standard

I believe that management is responsible for a company's financial information and the communication thereof. The Securities and Exchange Commission ("SEC") and the Financial Accounting Standards Board ("FASB") are the standard setters for what financial information requires disclosure while management determines how that information is presented and disclosed.

The shareholder-elected Board of Directors delegates the Audit Committee with the oversight of both the auditor and management's financial reporting. I believe the additional communications and requirements proposed in both the Auditor's Report and Other Information Responsibilities are unnecessary if management, the Audit Committee and the auditors fulfill their respective responsibilities.

The proposed auditor reporting standard undermines the role of the Audit Committee and usefulness of the Auditor's Report because the Critical Audit Matters ("CAM") could:

* – Cause some investors to misinterpret the CAM disclosures as indicative of an issue undermining the quality of the audit and implying less assurance on the financial statements and disclosures, taken as a whole;

* – Result in over- or under-emphasis of certain audit and business risks;

* – Burden the audit report with recurring disclosure of certain critical but routine matters with standardised language since companies in similar industries are likely to have some of the same CAMs;

* – Duplicate the disclosure of Critical Accounting Policies and Estimates made by management, that is already included in the Form 10-K and therefore required to be considered by the auditor;

* – Override the value provided by the Audit Committee's requisite knowledge, experience and perspective in overseeing the various risks and financial reporting matters.

Proposed Auditor Responsibilities of Other Information

The PCAOB's proposal to report the Auditor's Responsibility with respect to Other Information is commendable if the responsibilities remain unchanged from the current standard of "read and consider" procedures. However, the Proposal requiring the auditor to "evaluate" other information contained in SEC filings will likely cause the auditor to expand significantly the documentation of the evaluation procedures resulting in increased costs and audit effort during the year end reporting at a time when there is significant pressure to meet reporting deadlines. Moreover, the auditor may not have the knowledge nor expertise to evaluate certain of the other information, especially if it is subjective, qualitative or forward-looking in nature.

Additional Changes

The Proposal requires that the Auditor address their independence and tenure. The Audit Committee's Report included in the Proxy Statement already comments on the independence of the registered public accounting firm. I suggest that the Audit Committee's report could be expanded to include the tenure of the firm.

Finally, I support the Board proposal to include clarifications in the auditor's report of the auditor's responsibilities related to the notes to the financial statements, independence and fraud.

Thank you for considering my views.

Yours sincerely,

Steve Lucas
Audit Committee Chair Transocean Ltd.

Re: PCAOB Release No. 2013-005, *The Auditor's Report On An Audit Of Financial Statements When The Auditor Expresses An Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements And The Related Auditor's Report; and Related Amendments to PCAOB Standards* (together "The Proposed Standard")

Dear Members and Staff of the Public Company Accounting Oversight Board:

TRW Automotive Holdings Corp. ("TRW") appreciates the opportunity to comment on the Proposed Standard. TRW is among the world's largest suppliers of automotive systems, modules, and components to global automotive manufacturers and related aftermarkets. TRW is also a large accelerated filer with the Securities and Exchange Commission ("SEC") and thus subject to audit under the standards issued by the PCAOB.

TRW supports the stated objectives of the Proposed Standard, and believes that enhanced auditor communications and augmented information would be useful to financial statement users and management. However, we do not support certain aspects of the Proposed Standard and have some significant concerns, many of which are the same concerns presented in our comment letter on the original 2011 Concept Release. Our primary concerns are summarized below, and detailed responses to select questions posed by the PCAOB are contained in Appendix A.

**Critical Matters**
First, while we support possible clarifications to the auditor's report, we do not support the communication of critical matters to financial statement users by the auditor. Such a change must be demonstrably meaningful to financial statement users and we do not believe there is any incremental benefit provided to users by auditors discussing critical matters. Critical accounting matters are already presented by issuers, and it does not appear likely that any such matters presented by auditors would differ from those already discussed by management.

As we previously noted in our 2011 response, management is responsible for the financial statements as stated in all applicable financial reporting frameworks and PCAOB auditing standards. As such, it does not appear beneficial, and is likely to cause confusion as to who is ultimately responsible for the financial statements, by requiring auditors to disclose the same information already disclosed by management.

We are concerned that any such discussions of critical matters will unnecessarily distract readers, who are arguably generally unfamiliar with audit theory and methodologies, such that misinterpretations of the critical matter discussion may skew their understanding of financial statements that are not deficient in any way.

**Other Information Changes**
Second, we do not support changing the auditor's responsibility for other information outside of the financial statements. We have significant concerns about the incremental cost that would be incurred related to the auditor's work around other information. Given the increased scope of audit procedures, audit fees would clearly increase, and incremental ancillary internal preparer costs could also result. Such costs borne by companies (as well as auditors and users) would significantly exceed any perceived benefit.

Furthermore, we believe users would likely perceive a level of assurance based on the auditor's responsibility for increased scope outside the financial statements, when in fact there is no such assurance. We believe the current requirement of auditors to review other information is sufficient and should remain unchanged.

**Summary**
As noted above and in our detailed responses to the questions in Appendix A to this letter, while TRW supports the stated objectives of the Proposed Standard, we nonetheless feel that the proposed changes will not adequately address such objectives in a cost efficient or effective manner.

We thank the PCAOB for its consideration of our comments, and would be pleased to discuss these issues with the PCAOB, or its staff.

Sincerely,

Tammy S. Mitchell

Tammy S. Mitchell
Vice President & Corporate Controller

Appendix A: Answers to Selected Questions for Respondents

**Appendix A: Answers to Selected Questions for Respondents**

__Critical Matter Questions__

**Question 5: The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**

a. **Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any are associated with including such information in the auditor's report?**
b. **Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**
c. **Is information regarding tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

**TRW Response:** This question seems to best illustrate some of our concerns with the Proposed Standard. We question why the Board would require information that the Board itself, on page A5-14 through page A5-16, recognizes as statistically inconclusive and therefore unhelpful to readers. We do not believe it is advantageous for any interested parties to require information for the sole purpose of having another data point in the report which, as the Board indicates on page A5-16, is the purpose of this information. In our view, this information has no substantiated meaning when it comes to understanding the financial statements. If no real relationship between auditor tenure and audit quality can be established, then we don't see how this would be helpful to an investor, but we do see how this information could unnecessarily, and subjectively, distract an investor from informative information contained elsewhere in the registrant's filing.

Any additional information included in the auditor's report should have an objective, substantive and conclusive meaning to financial statement users.

**Question 10: Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board Consider?**

**TRW Response:** We believe that the current "pass/fail" model of financial statement audits should be retained. A set of financial statements either conforms to the applicable financial reporting framework or it does not. Should the Board go forward with requiring the auditor's communication of critical audit matters and any related audit procedures performed, the usefulness of such information would be extremely limited to only a few users and audit reports would become so lengthy, that lack of clarity, conciseness and intended meaning would result. We acknowledge this communication could be useful in highlighting non-recurring transactions and/or changes in accounting policy, but this information would/should already be discussed in the footnotes to the financial statements.

Further, as noted previously, management already provides critical accounting matters. Inclusion of such information by auditors would be redundant and confusing to users, as it is likely that the critical matters discussed by auditors would be the same as those presented by management.

We are also uncertain how the discussion of critical audit matters or the related audit procedures would or should influence the decision-making process of a financial statement user. We see the audit report as an indication of whether the financial statements can be relied upon, and whether such financial statements are free of material misstatements. Thus, we believe the inclusion of such information would be misunderstood by the average investor who does not have a background in audit theory, practice or methodologies, thereby unnecessarily distracting the investor from more pertinent and useful information.

In addition, the inclusion (or exclusion) of a certain number of critical matters may cause users to perceive a difference in audit quality when there is none when comparing registrants, their financial statements and/or audit firms. Similarly, the inclusion of several critical matters could lead the average investor to believe the auditor had difficulty determining whether the financial statements were fairly stated in accordance with US GAAP, thus causing doubt when there should be none.

We see absolutely no benefit in providing audit procedures. Including audit procedures in the audit report inappropriately presumes every reader will be able to determine whether the procedures are sufficient. Further, presenting audit procedures will most certainly result in significantly increased risk of litigation to auditors. Thus, we are concerned that litigation costs, for both auditors and management, could significantly increase under the proposal.

We cannot contrive a situation where the discussion of a critical matter included in an unqualified audit report would provide any additional benefit to users above the required information already included in registrants' filings. We encourage the Board to provide examples of situations whereby including the suggested critical matter discussion would have been more informative and protective to the financial statement users.

**Questions 11 through 15: TRW Response:** See our response to Question 10 above.

**Question 21: What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?**

**TRW Response:** Since the auditor is already required to perform this work for discussion with registrants' audit committees, there should not be a significant increase in monetary costs to companies. However, in practice, we are concerned that costs could in fact increase given the now proposed public nature of such disclosures. We do believe there would be a significant indirect cost to users of the financial statements, who would need to filter through yet more information that is duplicative with other parts of registrants' filings.

**Question 25: Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?**

**TRW Response:** We are unsure how investors would use this information. Presumably, such issues are already addressed as key risk factors, critical accounting estimates or accounting policies in the registrant's filing.

Further, as noted in our response to Question 10, we believe the audit report is either an unqualified opinion or it is not. If unqualified, then the financial statement users should focus on the existing disclosures already required and contained in the financial statements and footnotes to evaluate their risks.

**Question 28: What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting Standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?**

**TRW Response:** TRW believes the new Standard, if adopted as is, will significantly increase the potential liability to auditors. Furthermore, this will likely cause the auditor to do more work than is normally necessary, thus increasing our costs.

**Other Information Questions**

**Question 1: Is the scope of the proposed other information standard clear and appropriate? Why or why not? Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?**

**And**

**Question 2: Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not?**

**TRW Response:** As we discussed in our response to the Concept Release, TRW does not support the PCAOB's proposals to extend auditor assurance on other information outside of the financial statements. While we do see some benefits associated with the Proposed Standard, TRW believes that the costs associated with the proposals would greatly exceed the benefits that users of financial statements would derive. In particular, TRW believes that extending auditor assurance would increase the workload on auditors, leading to higher audit fees, could create difficulties for the auditors in attempting to audit management opinions and forecasts, and could result in creating investor confusion about the suitability of the financial reporting framework under audit.

TRW does not support the change to the auditor's responsibility regarding other information outside of the financial statements. Again, we encourage the Board to provide examples of how such information would have proved useful in protecting financial statement users in advance of, and during, the financial crisis, which is cited by the Board as an impetus behind the Proposed Standard on page 9.

**Question 24: What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related to the other information requirement to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?**

**TRW Response:** While we are not in a position to opine on the legal liability this might pose for audit firms, similar to our response to Critical Matter question 28, we do believe there will be an increased liability exposure borne by audit firms which we believe would negatively impact our costs and those of other preparers.

---

Members of the Board,   I am in full support of the comment letter written by Paige W. Pierce President & CEO of R W Smith(dtd 12/10/13).   I spent over  thirty-five years with Chapdelaine and Co. a small, independently owned, nonpublic, non-custodial broker dealer.  I was the President from 1997-2012 prior to being acquired by Tullett Prebon a large Broker Dealer.  The proposed rule would definitely put an additional financial burden on small independently owned firms and would have very little impact on protecting the investing public.  I request most heartedly that the Board consider exempting small firm this additional requirement.  Your consideration is greatly appreciated.  Sincerely,  August J. Hoerrner SMD Tullett Prebon.

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Board Members and Staff of the PCAOB:

On behalf of Tyco International Ltd. ("Tyco" or "Company"), I appreciate the opportunity to share its views on the Public Company Accounting Oversight Board's ("PCAOB" or "Board") Release No. 2013-005, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Document's Containing Audited Financial Statements and the Related Auditor's Report* (collectively "the Release"). Tyco is a diversified publicly traded company and a leading provider of fire protection and security products and services around the world. Tyco had more than $10 billion in revenue in Fiscal 2013, and employs more than 69,000 employees worldwide.

Tyco supports continued efforts by the PCAOB to increase the informational value, usefulness and relevance of the auditor's report. Tyco believes the new elements in the auditor's report related to auditor independence as well as the standardized language around auditor responsibility for fraud are aligned in achieving these goals. There are however concerns that certain proposed changes, specifically the requirement to include Critical Audit Matters ("CAMs") and the expansion and disclosure of auditors responsibilities for other information in the annual report, are not effective in meeting the aforementioned objectives.

**Critical Audit Matters**

The PCAOB defines CAMs as "those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements." Tyco believes that many matters falling under the proposed criteria would already be disclosed under the Summary of Significant Accounting Policies and other footnotes that accompany the financial statements. Tyco does not support the proposed change to include CAMs, as adding redundant disclosures does not provide additional informational value or increase the usefulness of the auditor's report. Repetitive information may confuse investors as they try to comprehend the nature and sheer volume of the disclosures.

Tyco believes that the inclusion of CAMs in the auditor's report could potentially result in the auditor disclosing information that otherwise may not be required to be disclosed by management, such as internal control issues resulting in significant deficiencies, potential illegal acts, immaterial uncorrected errors, and going concern considerations. Citing the example of immaterial uncorrected errors, errors deemed immaterial based on a quantitative and qualitative assessment, as set forth in SAB Topic 1 (M) *Materiality,* are not required to be disclosed but could be reported as CAMs. As the financial statements are the responsibility of management, it is not appropriate that the auditor becomes the original source of this information or discloses information that is not required by accounting standards or other regulatory or authoritative bodies.

Tyco believes that the inclusion of CAMs prominently in an audit report could be perceived by investors as qualifications to the audit opinion. Adding to that perception is a description of audit procedures related to CAMs without a conclusion as to the results of testing. While the proposed standard does not require the auditor to describe the audit procedures performed related to CAMs, all illustrations in the proposed standard include examples of CAMs with a description of testing performed. This may imply a preference by the PCAOB that auditors include a description of testing. Additional information regarding the conclusion of testing performed is not required, however, it may be perceived as a piecemeal opinion which does not meet the objective of the auditor's report as an opinion on the financial statements taken as a whole.

The proposed standard does not require CAMs be included in the auditor's report for financial information of the prior period. Tyco believes that this is contrary to the objective of comprehensive financial reporting which includes disclosures for the prior period financial information. Investors should not have to refer back to prior year audit reports when analyzing comparative reports.

Tyco concurs with the Board's decision to retain the current pass/fail reporting model as we believe it effectively and clearly conveys the opinion that the financial statements are fairly presented. We believe that auditors should retain the current option to include an emphasis paragraph in the opinion, where appropriate. However, Tyco does not believe that disclosing CAMs in the auditor's report provides investors with a better understanding of the information contained with the financial statements. We acknowledge that there may be opportunities to enhance the auditor's reporting model and in lieu of including CAMs in the auditor's report, Tyco recommends adding instead information related to the audit areas of focus. The audit areas of focus are currently communicated to the Audit Committee as part of the requirements under AS 16.

If the PCAOB adopts the requirement to include CAMs in the auditor's report, Tyco recommends comprehensive field testing prior to implementing the proposed standard. The PCAOB should ensure that the time and effort to vet the CAMs by management and the Audit Committee does not have an adverse impact at critical points in the audit. Additionally, Tyco recommends that any proposal to include CAMs in the auditor's report require that only material issues that are required disclosures by management be identified as CAMs in the audit report.

**Auditor's Responsibilities Regarding Other Information**

While Tyco supports the opportunity to add clarifying language around the auditors responsibilities related to other information in the annual report, Tyco does not support the proposed change to expand the auditor's responsibilities related to other information contained in the annual report. Other information included in the financial statements is broader in scope than the traditional financial statements. The other information, such as Management's Discussion and Analysis section focuses on the business and includes non-financial performance metrics and contains prospective information. Auditors do not regularly collect documentation to support non-financial performance metrics during an audit, and to do so would require additional audit procedures.

Additionally, the auditor is required "to read the other information and, based on relevant audit evidence obtained and conclusions reached during the audit, evaluate" whether information is materially consistent with the financial statements. In order to "evaluate" the other information, additional audit procedures at additional cost to the Company would need to be performed to meet the "evaluation" standard. If it is not the intent of the PCAOB that auditors perform additional procedures in order to provide a higher level of assurance, the change in terminology may lead the reader to assume just that.

Tyco recommends that the proposed change define the auditor's role clearly with respect to the other information. We do not believe that an increase in the level of assurance is warranted and that the proposal be limited to adding clarifying language around the specifics of the auditor's role including the definition of "read and consider" and the procedures employed to obtain that level of assurance.

**Audit Tenure**

The proposal includes a requirement to disclose the year that the auditor began serving consecutively as the Company's auditor in the auditor's report. Tyco has concerns that the inclusion of the audit tenure could be perceived negatively, although there is no data that suggests a correlation between audit tenure and audit quality. As such, we believe any information regarding audit tenure should be relayed through the proxy statements where information regarding auditor reappointment is communicated.

Thank you for allowing us the opportunity to respond to this proposal.

Sincerely,

Sam Eldessouky

Re: PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 034
PCAOB Board Members:

Tyson Foods, Inc. (Tyson), founded in 1935 with world headquarters in Springdale, Arkansas, is one of the world's largest meat protein companies and the second-largest food production company in the *Fortune* 500. We produce a wide variety of brand name protein-based and prepared food products marketed in the United States and approximately 130 countries around the world.

Tyson appreciates the opportunity to submit our comments on *The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion; the Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to Public Company Accounting Oversight Board (PCAOB) Standards*. We support the PCAOB's continued focus on enhancing investor confidence and understanding of the audit process. However, we do not support the PCAOB's proposal in its current form.

**Critical Audit Matters**

We have significant concern with respect to the PCAOB's proposal that the auditor's report include a discussion of Critical Audit Matters (CAMs). The Board defines CAMs as the audit matters that:

- involved the most difficult, subjective or complex auditor judgments;
- posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; and
- posed the most difficulty to the auditor in forming an opinion on the financial statements.

The source of such matters is identified as being:

- included in engagement completion documents:
- reviewed by the engagement quality reviewer; and
- communicated to the audit committee.

Tyson Foods, Inc.

Making Great Food. Making A Difference.™

Our first objection is we do not believe it would be appropriate for the auditor to be the first source of information or to disclose information that is not otherwise required to be disclosed by management (or even exempt from disclosure). Board Member Jay D. Hanson illustrated an example in his Statement on Proposed Standards Regarding the Auditor's Report and the Auditor's Responsibility Regarding Other Information. The example he provided was a deficiency in internal controls that is classified as a significant deficiency, not a material weakness. If the auditor determined the evaluation of this deficiency was a CAM, then it would be disclosed by the auditor but not required (or exempt) from disclosure by management.

Secondly, the language of the proposal and Board member Jeanette M. Franzel's comments indicate the Board expects multiple CAMs in most cases. It seems likely auditors would err on the side of including more rather than less CAMs, and management would be compelled to address all CAMs within footnotes and/or Management's Discussion and Analysis. Like several other respondents have noted, we believe these reported CAMs would closely or exactly mirror management's existing disclosures, effectively diluting those areas of the financial statements. As a result, understanding of the information required to be presented in the financial statements would not be enhanced in any meaningful way, and the simple "pass/fail" opinion would be harder to find and interpret.

It is also quite possible the inclusion of specific audit procedures performed on these CAMs (as in all three of the Illustrative Examples of CAMs provided by the Board on pages A5-65-78), although not required, leads to the inference that the auditor has differing levels of opinions on these matters, since no conclusions are stated for the procedures performed. We do not believe a description of specific audit procedures performed is necessary nor would conclusions on those procedures be appropriate.

The potential "bright light" shined on CAMs by PCAOB inspectors and others would likely lead to additional review by the auditor's engagement leadership and national office and issuers' legal counsel, as well as requiring time for management's review of the auditor's disclosure. As a practical matter, this review would necessarily occur during the busiest few weeks prior to SEC filing, a period that is already pressured and that ought to be devoted to focused completion of the primary audit work.

Moreover, we believe that a likely consequence of adding superfluous (from the company's perspective) requirements is a potentially chilling effect on effective dialogue amongst auditors, audit committees and management. In the interest of arriving at the "best answer" when dealing with unusual, complex and/or infrequent financial reporting issues, it is not conducive to robust discussions (or discussions at all) among these groups if one of the results of such discussion is that the matter will be deemed a CAM. Ultimately, financial statement quality could become the main casualty.

Tyson Foods, Inc.
Making Great Food. Making A Difference.™

At a minimum, we agree that the proposal should be "field-tested" by accounting firms, their clients and representative investors.

**Reporting on Other Information**

We believe the proposed wording of the requirement to "read and evaluate" rather than "read and consider" will be interpreted as a higher standard by the auditors and a requirement to perform additional audit procedures, thus driving up the audit cost. Just as importantly, it leads to the inference that the auditors are undertaking a higher degree of accountability than warranted on information the auditor may not possess the expertise to perform. For example, reporting on forward-looking information that is complex or challenging for the auditor to evaluate involves complexities that could result in this standard requiring significant time and attention by auditors. At a minimum, we agree that the proposal should be "field-tested" by accounting firms, their clients and representative investors.

**Auditor Tenure**

Absent an objective correlation between audit tenure with audit independence or quality, and we are aware of none, we believe disclosing this information in the auditor's report, in which independence is already noted elsewhere, does not convey helpful information and potentially portrays an inaccurate implication to those readers. It is better suited to inclusion, if at all, in the proxy statement or other avenues.

**Conclusion**

Again, we thank the PCAOB for the opportunity to comment on these Proposed Auditing Standards. If you have any questions regarding the comments in this letter, please contact our Senior Vice President, Controller & Chief Accounting Officer, Curt Calaway at (479) 290-5576.

Sincerely,

/s/ Kevin M. McNamara

**Re: PCAOB *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* (PCAOB Release No. 2013-005, August 13, 2013; PCAOB Rulemaking Docket Matter No. 034)**

Dear Ms. Brown:

The U.S. Chamber of Commerce (the "Chamber") is the world's largest federation, representing the interests of more than three million U.S. businesses and professional organizations of every size and in every economic sector. These members are both users and preparers of financial information. The Chamber created the Center for Capital Markets Competitiveness ("CCMC") to promote a modern and effective regulatory structure for capital markets to fully function in a 21st century economy. The CCMC believes that businesses must have a strong system of internal controls and recognizes the vital role external audits play in capital formation. The CCMC supports efforts to improve audit effectiveness and appreciates the opportunity to comment on the Public Company Accounting Oversight Board ("PCAOB") *Proposed Auditing Standards—The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* ("the Proposal").

Rather than informing investors and financial statement users, the Proposal may create a tower of Babel that can sow confusion in a marketplace that SEC Chair Mary Jo White has acknowledged already suffers from "disclosure overload."[1] The CCMC is concerned that the Proposal does not address investor needs, causes investor confusion by creating overlap and competition with other regulatory mandates, increases financial reporting complexity and blurs the lines of responsibilities between auditors and businesses. This will degrade audit quality and hamper the utility of financial reports for users and issuers thereby making the capital markets less efficient.

Accordingly, the CCMC believes that the Proposal does not meet minimum thresholds required to move forward. Instead, the CCMC respectfully requests the PCAOB should work with the Securities and Exchange Commission ("SEC") and Financial Accounting Standards Board ("FASB") to move forward on a broad agenda of financial reporting modernization as outlined in the CCMC's letter October 9, 2013 to SEC Chair Mary Jo White.

Our concerns are discussed in greater detail below.

**Discussion**

The PCAOB issued a Concept Release on possible revisions to the auditor's report in June 2011 and received 155 comment letters. The CCMC provided comments on the Concept Release expressing serious concerns in a comment letter filed with the PCAOB.[2] We continue to have the same concerns regarding the Proposal, and accordingly, have attached the September 14, 2011 letter. At the same time the PCAOB also issued a Concept Release on Auditor Independence, and the CCMC responded by filing a comment letter on October 20, 2011.[3] As we continue

to have some of the same concerns on the Proposal's stance on auditor independence, we have also attached the October 20, 2011 comment letter. We respectfully request that these attachments be included as a part of the Proposal comment file.

## I. Investor Concerns

While we recognize that the PCAOB has engaged in outreach activities since the Concept Release, we are concerned that the PCAOB has not defined the investor need it is attempting to address, what investors it has consulted, and if the outreach has included a broad representative sample of the investor community. A failure to articulate specific investor needs and transparently identify the investor consultations undertaken to develop the Proposal undermines the fairness of the process, composition of the Proposal, and the need to move forward.

The CCMC believes that the articulation of investor needs and transparency of outreach in the development of the Proposal is a minimum necessary threshold for moving forward. This is particularly true since the Proposal fundamentally changes the Audit report and the role of the auditor.

The CCMC believes that these threshold requirements for moving forward with the Proposal have not been met.

## II. Alternatives to the Proposal

The Proposal would significantly change the role and responsibilities of the auditor and represent the most significant changes to auditor reporting in more than 70 years. In our September 14, 2011 comment letter, we emphasized the need to address the threshold question of whether the PCAOB should engage in such a sweeping standard-setting initiative. This threshold question still needs to be addressed with this Proposal. Simply put, why is the PCAOB proposing to fix an auditor reporting model that is not broken?

Addressing the threshold question is especially important given that the PCAOB has heard strong support from all stakeholders for retaining the current "pass-fail" model of auditor reporting. The Proposal appears to retain this model with additive reporting requirements. However, auditor reporting of CAMs essentially turns the auditor's report into a graded model.

Accordingly, the CCMC believes the PCAOB should work with the SEC and FASB to move forward on a broad agenda of financial reporting modernization as outlined in the CCMC's letter October 9, 2013 to SEC Chair Mary Jo White.[4] We would be happy to meet with the PCAOB board members to discuss these ideas further.

## III. Background of Proposal

The Proposal would require the following:

- A new section in the auditor's report describing critical audit matters ("CAMs");

- New auditor responsibilities for and reporting on other information ("OI") that include requirements to read and evaluate OI, describe the auditor's responsibilities for OI in the auditor's report and state whether the OI contains a material inconsistency, a material misstatement of fact, or both; and

- New language in the auditor's report regarding auditor tenure, auditor independence, and auditor responsibilities related to fraud and the notes to the financial statements.

The CCMC appreciates that the PCAOB has not proceeded with Auditor Discussion and Analysis ("AD&A") as articulated in the Concept Release. Unfortunately, CAMs appear substantively similar to AD&A, notwithstanding that CAMs are described as being grounded in auditing rather than financial reporting matters. Importantly, both CAMs and AD&A overturn the fundamental precepts of financial reporting, as explained below.

---

[4] *See* October 5, 2012 letter from the CCMC to the PCAOB, *Information for Audit Committees about the PCAOB Inspection Process* (PCAOB Release No. 2012-003, August 1, 2012) and October 9, 2013 letter from the CCMC to SEC Chair Mary Jo White on financial reporting modernization

## IV. Auditor Reporting on Critical Audit Matters ("CAMs")

The Proposal defines CAMs as:

- Those matters that involved the most difficult, subjective, or complex auditor judgments;

- Those matters that posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or posed the most difficulty to the auditor in forming an opinion on the financial statements; and[5]

- Further, the Proposal would require that the auditor's report identify the specific CAMs, describe the considerations that led to each matter being considered a CAM, and refer to the related financial statement accounts and disclosures in the financial statements (if applicable).

As we discussed in our letter of September 14, 2011, financial statements and disclosures are the responsibility of management. This fundamental premise also extends to OI outside the financial statements such as Management's Discussion & Analysis ("MD&A") and proxy statements—both of which management prepares in accordance with SEC requirements. In turn, the board of directors, largely through the audit committee, exercises oversight of management's reporting and disclosures. The independent audit firm's responsibility is to express an opinion as to whether the company's annual financial statements, including the notes thereto, are presented fairly, in all material respects, in conformity with generally accepted accounting principles ("GAAP").

An essential element of the fundamental premise of financial reporting is that the auditor is not an original source of information about the company. In fact, the auditor is subject to both legal and ethical requirements on confidentiality that preclude this from occurring except in certain specific circumstances. Notwithstanding these core principles, the requirement in the Proposal for the auditor to report CAMs can put the auditor in the position of stepping into the shoes of

---

[5] In addition, the Proposal lists a number of other factors that the auditor should take into accounting in determining whether a matter is a CAM (see paragraph 9 (pages A1-7 to A1-8) of the Proposal).

management, becoming an original source of information, and disclosing otherwise confidential information.

Furthermore, CAMs can require auditors to report on matters that management is not required to include or otherwise disclose in the GAAP financial statements, footnotes, or elsewhere, such as MD&A. If the Proposal is approved, management and auditors could be forced to make such disclosures, including disclosing information that would not be considered material by a reasonable and prudent investor. Thus, in multiple ways, the Proposal overturns the fundamental premise of financial reporting and corporate governance disclosures.

The PCAOB's proposed auditor reporting on CAMs also undermines the financial reporting and disclosure frameworks of the SEC and FASB. As the Proposal is currently drafted, CAMs can necessitate auditors disclosing matters that the SEC or FASB has specifically decided that companies are *not* required to disclose. If the SEC has decided that certain information is not useful for investors, thereby not meeting the threshold for disclosure, as a matter of public policy the PCAOB cannot override the SEC's decision.

Examples of this conflict include matters such as weaknesses in internal control over financial reporting ("ICFR") that were appropriately determined to be significant control deficiencies, considerations of going concern that were appropriately addressed by mitigating factors, contingent liabilities that were fully considered and appropriately found not to require disclosure, etc.

The potential to undermine the SEC and FASB reporting and disclosure requirements also occurs because the Proposal appears to preclude the auditor from referencing OI disclosed by management, including OI in MD&A. To illustrate, the Proposal states that "for each critical audit matter communicated in the auditor's report the auditor must … refer to the relevant *financial statement accounts and disclosures* that relate to the critical audit matter, *when applicable*" (emphasize added).[6] In other words, it appears that the Proposal limits the auditor's reference to information in the GAAP financial statements and footnotes covered by the auditor's opinion. Such a limitation would also exacerbate financial reporting complexity.

---

[6] *See* paragraph 11 of the Proposal (pages A1-8 to A1-9).

The Proposal provides illustrative examples of CAMs and auditor reporting thereon.[7] These illustrations are instructive. For example, among other issues, the examples suggest that investors and other users may interpret the disclosure of CAMs consistent with the auditor providing differential (lesser) assurance on some aspects of the financial statements and notes or otherwise equivocating on providing assurance on the financial statements (including GAAP notes) as a whole. This consequence appears likely notwithstanding statements in the Proposal that it is not appropriate for the auditor to use language that could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for CAMs.[8]

Other problematic aspects of the Proposal in regards to CAMs include the following:

- CAMs would require the auditor to report on matters that were adequately and appropriately disclosed by management. In turn, this will likewise unnecessarily add to financial reporting complexity. It also raises the essential question of the usefulness of this information to investors and other financial statement users. The illustrative examples of CAMs included in the Proposal only reinforce this point.

- On the other hand, circumstances will arise when CAMs lack clarity and/or raise questions and there is no mechanism or venue for the auditor to respond. Again, confidentiality restrictions will likewise constrain the auditor. As a result, this puts the company and management in the position of having to explain (after the fact and in compliance with Reg FD) what the auditor meant.

- CAMs elevate for public disclosure matters that were fully addressed and resolved to the auditor's satisfaction before the audit report was issued.

---

[7] *See* pages A5-65 through A5-78 of the Proposal.
[8] *See* the note following paragraph 11(c) (page A1-9) of the Proposal.

- CAMs are not limited to or grounded in matters communicated to or discussed with the audit committee.[9] On the one hand, it is difficult to fathom how a matter could be important enough to disclose to investors but not among those discussed with the audit committee—whether as part of required auditor communications or otherwise. On the other hand, it makes the list of potential CAMs vague, open-ended, and subject to second-guessing.

- It cannot be ruled out that mandating the disclosure of CAMs will have a chilling effect on the normal communication processes between the auditor and management and audit committees. For example, management and/or the audit committee may be more cautious and less open and/or timely in their discussions with auditors to avoid having a matter unnecessarily becoming elevated to a CAM.

- The potential for second-guessing of the auditor's determination of CAMs via PCAOB inspections, regulatory enforcement actions, and private securities actions is also exacerbated by other requirements in the Proposal. For example, the Proposal would require the auditor to document the basis for the determination that each reported matter was a CAM *and* to document the basis for determining that *non-reported* audit matters addressed in the audit, which would appear to meet the definition of a CAM, were not critical audit matters.[10]

- Auditor reporting on CAMs involves some practical considerations, including creating potential impediments to timely SEC filings by companies. Perhaps, on average, auditors will identify CAMs well in advance of SEC filing deadlines and resolve all necessary issues with the company in this regard. Nonetheless, circumstances will arise

---

[9] In this regard, the PCAOB's Proposal is unlike the guidance on auditor reporting of key audit matters (KAMs) in the exposure draft of the International Auditing and Assurance Board ("IAASB") on *Reporting on Audited Financial Statements*. The Proposal states that CAMs *ordinarily* are matters required to be documented in the engagement completion document, reviewed by the engagement quality reviewer, communicated to the audit committee, or any combination thereof (see paragraph 8 (pages A1-6 to A1-7) of the Proposal.

[10] *See* paragraph 14 (page A1-10) of the Proposal.

when this is not the case; and so, the likelihood that the Proposal will result in situations where auditor reporting of CAMs delays the timely filing of information by companies cannot be ruled out.

- The audit committee represents investors and the audit committee has the responsibility under the Sarbanes-Oxley Act of 2002 ("SOX") for oversight and monitoring of the external audit. The implication of this SOX mandate is that actionable elements of issues involving CAMs would come under the purview of the audit committee. Furthermore, the Proposal fails to appreciate that the PCAOB has only recently issued new guidance on auditor communications with audit committees.[11] The Proposal does not give adequate time for this new guidance to be implemented and assessed through post-implementation review. The PCAOB should let the audit committee communication process work before considering any external communications by auditors.

- The reporting of CAMs is unlikely to be a "free-writing" exercise at the engagement level. A number of forces, including legal forces will necessitate consistency in the drafting of CAMs over time and across companies. Thus, the likelihood is very high that this initiative would result in auditor reporting that is simply boilerplate.

- The PCAOB expects that CAMs will be disclosed for most audits. Given the heterogeneity in the circumstances of an audit, this expectation may be misplaced. For example, some audits are less complex and more straight-forward.

- Furthermore, investors and other users may make inappropriate inferences about the quality of a company's financial reporting and the nature of the audit based on the number of CAMs disclosed. For example, a "large" number of CAMs may be interpreted as consistent with a contentious audit. On the other hand, very few, if any, CAMs

[11] *See* PCAOB Auditing Standard No. 16, *Communications with Audit Committees*, effective for audits of fiscal years beginning on or after December 15, 2012.

> may be interpreted as consistent with a less thorough audit and/or auditors that lack skepticism and otherwise fail to challenge management.

## V. Other Information ("OI")

It appears the PCAOB has determined that there is no meaningful support for auditor assurance on OI, including auditor assurance on MD&A. Therefore, the Proposal focuses on enhancing the auditor's responsibilities for and auditor reporting on OI. However, once again the threshold question comes to the fore as it seems that there is no meaningful demand to clarify or enhance the auditor's current responsibilities in regards to OI or to report thereon.

The Proposal includes new auditor responsibilities to read and evaluate OI for consistency of amounts with the financial statements; consistency of qualitative statements with the financial statements; comparability with relevant audit evidence obtained and conclusions reached; and mathematical accuracy. The Proposal also includes a new requirement for auditor reporting on OI. The Proposal would require that the auditor's report describe the auditor's responsibilities for other information and state whether the other information contains a material inconsistency, a material misstatement of fact, or both (based on the relevant audit evidence obtained and conclusions reached during the audit).

Unfortunately, the proposed reporting is likely to confuse rather than inform investors. First, the auditor is providing no assurance on OI. Yet the proposed auditor report implies there is some (new) level of service—called an "evaluation"—based on which the auditor is providing at least negative assurance with respect to OI. For example, illustrative language in the Proposal for the auditor's report includes: "Based on our evaluation, we have not identified a material inconsistency or a material misstatement of fact in the other information."[12] An oddity is that the Proposal would have auditors reporting on the results of what they do not do, as the OI is neither audited nor reviewed.

[12] *See* paragraph 14(b) (page A2-7) of the Proposal.

Discussions at the PCAOB's November 2013 Standing Advisory Group ("SAG") meeting revealed very different views on what the auditor should reasonably know with regard to OI based on the relevant audit evidence obtained and conclusions reached during the audit. The Proposal does not sufficiently tie the auditor's responsibilities for OI to the financial statements. This will be a source of great confusion and may force auditors into the position of having to do additional work.

The Proposal also has auditors intruding into areas such as MD&A that are intended to be where management discusses the state of the business. In doing so, MD&A uses qualitative, non-financial, and forward looking information. Again, it makes no sense to require the auditor "to read and evaluate" these MD&A disclosures (or OI generally) not derived from the financial statements. Current PCAOB standards are appropriate in regards to the role and responsibilities for OI.

OI also includes proxy statements, which raises the practical question of how the auditor reports on information not yet issued (or necessarily fully available to the auditor) at the date of the auditor's report.

These points illustrate another of our concerns with the Proposal—namely that the PCAOB is potentially undermining the disclosure requirements of others, including the SEC.

In addition, the Proposal creates confusion as to the new performance standards. Discussions at the PCAOB's November 2013 SAG meeting suggested that the PCAOB intends to formalize current practice with respect to OI. Yet, there was a good deal of ambiguity and uncertainty expressed at the SAG meeting as to what it means to "read and evaluate" (proposed guidance) versus "read and consider" (current guidance). This confusion occurs notwithstanding the guidance in the Proposal in regards to "evaluate."

Discussions at the November 2013 SAG meeting also revealed differences of views on what constitutes a "material misstatement of fact" that falls within the intended purview of the Proposal and whether OI can involve immaterial information. All things considered, it appears that the Proposal significantly extends the auditor's responsibilities for OI and will have significant legal liability implications for auditors that need to be understood and addressed. As it stands, the Proposal will only create an expectations gap with respect to auditor responsibilities for OI.

## VI. Auditor Tenure and Independence

The Proposal calls for several other changes in the auditor's report, including disclosing auditor tenure (that is the year the auditor began serving consecutively as the company's auditor), disclosing auditor independence (that is stating that the auditor is required to be independent in accordance with federal securities laws and applicable rules and regulations of the SEC and PCAOB), and including various statements regarding the auditor's responsibilities related to fraud and the notes to the financial statements.

First, is not obvious that more information in the auditor's report on either independence or auditor tenure is necessary. As to auditor independence, the auditor's report is typically headed "Report of the Independent Registered Public Accounting Firm." Furthermore, the audit committee reports in the company's annual proxy statement about its oversight and monitoring of auditor independence matters. So, on the one hand, the need for any additional information in regards to auditor independence is not obvious. And, on the other hand, if there is a need, it is better addressed by other regulators such as the SEC.

As to auditor tenure, it is not obvious how tenure connects to the nature of the auditor's work performed or the auditor's opinion and, therefore, why this information belongs in the auditor's report. As the audit committee has the responsibility to oversee and monitor the selection and retention of the audit firm, again the audit committee report in the annual proxy statement provides a more appropriate placement for such a disclosure. And, a number of audit committees already disclose this information in the proxy statement.

By including tenure information in the auditor's report, the Proposal implies some systematic connection between audit quality and tenure. However, as explained in the Proposal and emphasized by one Board member, the PCAOB "has not reached a conclusion regarding the relationship between audit quality and auditor tenure and the Board's inspection process has not been designed to determine a relationship between audit quality and auditor tenure." Thus, the PCAOB does not have "any data indicating that audit tenure has any correlation with audit quality." Yet, "the mere fact that the Board requires a disclosure about audit tenure, however, might suggest that the Board believes the information to be meaningful."[13] By that token, as an example, anecdotal musings, by the SEC, of ethical lapses by attorneys would not pass muster for regulatory action requiring disclosure of law firm tenure by companies.

Lastly, we would like to reiterate that the CCMC supports working to achieve one set of global high quality auditing standards through the convergence of PCAOB auditing standards with those of the AICPA's Auditing Standards Board ("ASB") and the IAASB. Particularly when it comes to auditor reporting, one global model for mandated auditor reporting seems not only desirable but essential. We encourage the PCAOB to work with the IAASB and ASB to develop an appropriate model.

## VII. Cost Benefit Analysis

The Proposal recognizes that the 2012 Jumpstart Our Business Startups ("JOBS Act") now makes economic analysis a necessary pre-condition for applying new PCAOB auditing standards to an audit of any emerging growth company (EGC). Specifically, JOBS Section 103(a) (3) requires that rules adopted by the Board after the date of enactment of the JOBS Act (in April 2012) shall not apply to an audit of any EGC, unless the Commission determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation. Notwithstanding that JOBS Act exempted EGCs from any subsequent standard-setting on AD&A and, therefore, EGCs would likewise be exempted from CAMs, the need for subjecting this initiative to robust economic analysis remains.

The CCMC recognizes that the PCAOB is soliciting information on the estimated costs and burdens that will be placed upon businesses and auditors as a result of the Proposal, and to solicit other information on how the Proposal would contribute to investor protection and promote efficiency, competition, and capital

[13] *See Statement on Proposed Auditing Standards Regarding the Auditor's Report and the Auditor's Responsibilities Regarding Other Information"* by Jay D. Hanson, Board Member, PCAOB Open Board meeting on August 13, 2013.

formation. Further, the CCMC recognizes that the Proposal does not represent a final standard. Thus, additional evidence and analysis will occur and be reflected in any ensuing standard adopted by the Board and submitted for approval by the SEC.

Nonetheless, the CCMC suggests that the PCAOB needs an appropriate and transparent framework for economic analysis—one that will serve as a template for such analysis across all PCAOB rulemaking initiatives. One example of such a framework is the SEC staff memorandum, "Current Guidance on Economic Analysis in SEC Rulemakings" dated March 16, 2012.

Thus, the CCMC recommends that the PCAOB develop guidance on economic analysis for PCAOB rulemaking. Once developed, the PCAOB should expose the framework for public comment and the finalized framework should be publicly disclosed. As a starting point, the PCAOB could consider adapting the framework in the SEC staff memorandum to an audit context.

In addition, the framework should preclude reliance on generic economic arguments that could apply to almost any proposed auditing standard regardless of topic or substance. The framework should likewise discourage conjectures or speculative type arguments, including those related to reducing information asymmetries and cost of capital that are not grounded in credible evidence related to the specifics of the initiative at hand. The framework should also articulate an appropriate economic baseline against which to measure the proposed requirements likely economic impact.

Finally, in regards to this Proposal, if the PCAOB decides to proceed with this initiative in spite of all the concerns expressed about it, the PCAOB should recognized that auditor reporting of CAMs, in particular, is a giant experiment. As such, the CCMC recommends that any standard-setting that results from this initiative should include a sunset provision (of within three to five years of its effective date). Only after a robust post-implementation review of the costs and the benefits and a determination that the benefits exceed the costs should a similar or revised auditor reporting standard be allowed to be re-implemented.

## Conclusion

Once again, the CCMC appreciates the opportunity to comment on the Proposal.

The CCMC continues to have serious concerns regarding the Proposal – namely, that the Proposal blurs lines of corporate governance, may create duplicative disclosures and may raise liability for auditors and businesses which ultimately harms investors. We believe that these issues should be addressed before the Proposal moves forward.

In the alternative, the CCMC believes that the PCAOB should work with the SEC and FASB to move forward on a broad agenda of financial reporting modernization as outlined in the CCMC's letter October 9, 2013 to SEC Chair Mary Jo White.

Thank you for your consideration and the CCMC stands ready to assist in these efforts.

Sincerely,

Tom Quaadman

**Re: Request for Public Comment *on Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards and Notice of Roundtable (PCAOB Release No. 2011-003, June 21, 2011, Rulemaking Docket Matter No. 34)***

Dear Members and Staff of the Public Company Accounting Oversight Board:

The U.S. Chamber of Commerce (the "Chamber") is the world's largest federation of businesses and associations, representing the interests of more than three million U.S. businesses and professional organizations of every size and in every economic sector. These members are both users and preparers of financial information. The Chamber created the Center for Capital Markets Competitiveness ("CCMC") to promote a modern and effective regulatory structure for capital markets to fully function in a 21st century economy.

The CCMC recognizes the vital role external audits play in capital formation and supports efforts to improve audit effectiveness. We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB") *Concept Release on Possible*

*Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* ("Concept Release").

The CCMC has a number of concerns regarding the issues and concepts outlined in the Concept Release including those related to:

- The potential increase in financial reporting complexity;
- The apparent overturning of fundamental precepts of financial reporting;
- The conflict with other forms of mandated corporate disclosure;
- The fundamental shift in the role of the auditor and communications;
- The potential activities that may fall outside of the legal mandates of the PCAOB's powers and encroachment upon mandated powers of other regulators and standard setters;
- The potential increase in litigation harmful to investors and the capital markets; and
- The failure to weigh recommendations made by other entities to reduce financial reporting complexity.

In reviewing the intent and purpose behind the Concept Release, the CCMC believes that the PCAOB should work with the Securities and

Exchange Commission ("SEC") and Financial Accounting Standards Board ("FASB") to:

- Take a coordinated holistic approach to reducing financial reporting complexity;
- Create a Financial Reporting Forum allowing all stakeholders to work together to identify long-term financial reporting issues and solutions; and
- Follow transparency and disclosure standards, used by regulators, in the development of standards and concept releases.

**<u>Discussion</u>**

The stated objective of the Concept Release is to seek public comment on auditor reporting alternatives that could provide investors with more insight into the company's financial statements, or possibly other information outside the financial statements, and more transparency into the audit process.

The Concept Release presents four alternatives (auditor's discussion and analysis ("AD&A"), required and expanded use of emphasis paragraphs, auditor assurance on other information outside the financial statements, and clarification of the standard auditor's report). Nonetheless, the Concept Release makes clear that the PCAOB intends to retain the current ("pass/fail") approach of the standard auditor's report. Indeed, as recognized in the Concept Release, the PCAOB has heard overwhelming support from all stakeholder groups for retaining this long-standing approach to auditor reporting. Thus, the alternatives presented in the Concept Release would be additive to the current approach.

Before addressing any specifics in regards to the Concept Release, it is important to consider the threshold question of whether the PCAOB should undertake a standard-setting initiative. CCMC notes that standards related to auditor reporting are long-standing and have served the test of time. While this does not mean that improvements should not be considered by the PCAOB, it does suggest the need to exercise caution in doing so.

The CCMC has a number of concerns about the PCAOB's approach to this reporting project and the alternatives discussed in the Concept Release. These concerns are outlined in the remainder of this letter.

## I. Approach to Developing the Concept Release

An overarching concern is that, in developing the Concept Release, the PCAOB has not taken a comprehensive and holistic approach to considering the role of *both* auditors and audit regulators in achieving an optimal level of quality and clarity in public company financial reporting. The PCAOB has not clearly articulated the current structural audit weaknesses in public company financial reporting, which is a necessary predicate to address the threshold question of whether the PCAOB should undertake a standard-setting initiative on auditor reporting. In addition, the Concept Release does not appreciate that the PCAOB as the regulator of public company audits actually shares responsibility with auditors for audit quality. Instead, the Concept Release appears intent on transferring responsibilities to auditors when it comes to auditor reporting.

A more holistic approach to considering the interplay of audit and financial reporting regulation could likely have informed this PCAOB auditor reporting project in other ways, including by raising questions about some of the essential premises that underlie it. For example, in response to the 2008 economic crisis, FASB has promulgated new standards and the SEC has enacted new regulations. There is no indication that the PCAOB considered these FASB and SEC activities in developing the alternatives discussed in the Concept Release.

Furthermore, the project does not appear to have taken into account the insights and recommendations from prior blue-ribbon advisory committees, such as the SEC Advisory Committee on Improvements to Financial Reporting ("CIFiR"), the U.S. Department of the Treasury Advisory Committee on the Auditing Profession ("ACAP"), and the Panel on Audit Effectiveness.[1] For example, ACAP recommended that the PCAOB narrow the expectation gap and provided useful guidance to the PCAOB for exercising its responsibility to do so; whereas, the Concept Release seems intent on delegating this regulator responsibility to auditors, including through the assignment of new responsibilities.

Moreover, the reports and recommendations of previous advisory committees should have provided perspective on the feedback that the PCAOB received during its outreach activities. For example, it is financial reporting complexity, including disclosure overload, which is at the heart of some of what the PCAOB heard from its outreach activities. Calls by investors for "tell us what matters" and "give us a roadmap" should be less about asking auditors to weigh-in with their views (as the Concept Release suggests with alternatives such as AD&A and expanded and required use of emphasis of matter paragraphs), and more about the PCAOB working

[1] Recommendations of the Panel on Audit Effectiveness are discussed in a subsequent section of this letter on going concern reporting and disclosures.

with other regulators, including the SEC and FASB, to help fix the essential problem.

Disclosures for public companies and their investors are a triad that involves the SEC, FASB, and the PCAOB. It is imperative that this triad work in harmony to provide a rational coordinated system of disclosure for all public company stakeholders. A failure to do so will create competing disclosures and confusion, sowing uncertainty and doubt in the capital markets for investors and companies alike. The CCMC once again reiterates its call for a Financial Reporting Forum that will provide for coordination as well as the identification and resolution of problems that may drive complexity and obfuscation.[2]

Importantly, complexity challenges a premise for this project that expanded auditor reporting in advance of the 2008 economic crisis might have been helpful in assessing the quality of the financial statement and provided early warning signals regarding potential issues.

In its August 2008 Final Report, CIFiR recognized that over time "financial reporting has become a burdensome compliance exercise with decreasing relevance to investors" (p. 18). CIFiR identified financial reporting complexity as the key factor driving the disconnect between current financial reporting and the information necessary to make sound investment decisions. Thus, CIFiR made a number of recommendations to the SEC, FASB, and PCAOB to improve the usefulness and reduce the complexity in financial reporting. While some progress has been made, many of CIFiR's recommendations have yet to be taken up by the appropriate bodies – in particular the PCAOB.

---

[2] See CCMC testimony provided to the U.S. Senate Subcommittee on Securities, Insurance and Investment's April 6, 2011 hearing: *The role of the accounting and auditing profession in preventing another financial crisis.*

One example of a CIFiR recommendation not yet addressed by the PCAOB relates to judgment. Whereas discussions in the Concept Release indicate that some participants in the PCAOB's outreach activities expect a single "right answer," CIFiR appreciated the role of judgment and understood that there is not necessarily one right answer in accounting and auditing matters. In turn, CIFiR recommended that the PCAOB develop and articulate guidance related to how the PCAOB, including in its inspections and enforcement divisions, would evaluate the reasonableness of judgments made based on PCAOB auditing standards. CIFiR also recommended that the PCAOB's statement of policy should acknowledge that the PCAOB would look to the SEC to the extent that the PCAOB would be evaluating the appropriateness of accounting judgments as part of an auditor's compliance with PCAOB auditing standards.[3]

To summarize, CIFiR understood the need to take a comprehensive and holistic approach to overcoming the problem of financial reporting complexity. The CCMC recommends that the PCAOB adopt such an approach and redirect its efforts and resources from initiatives that will only exacerbate the disclosure overload problem. All financial reporting stakeholders would be better served if the PCAOB worked with other regulators and standard-setters, such as the SEC and FASB, to implement the CIFiR recommendations; to help update and improve existing disclosure requirements and eliminate redundant and unnecessary disclosures; to facilitate the ability of management (rather than lawyers) to drive discussions in MD&A, including those around critical accounting estimates; and to help address issues around the auditability of GAAP.

---

[3] CIFiR recommended that the SEC issue a statement of policy articulating how it evaluates the reasonableness of accounting judgments and include factors that it considers when making this evaluation. CIFiR then went on to suggest some components of an accounting policy statement related to the choice and application of accounting principles, as well as estimates and evidence related to the application of accounting principles. CIFiR's suggested components are consistent with advice on the SEC's website for consultations on accounting matters with the Office of the Chief Accountant and the Division of Corporation Finance. However, CIFiR made no such suggestions in regards to an audit judgment framework.

The CCMC also recommends that the PCAOB work with others such as the SEC and FASB to better understand the responsibilities of users when it comes to financial reporting. The Concept Release seems not to appreciate that users are heterogeneous and, therefore, their information needs vary. General purpose financial reporting, as represented by GAAP financial statements, is designed to meet the needs of the broad set of all users and not the demands of any particular special interest group.

## II. Overturning a Fundamental Premise of Financial Reporting

Another major CCMC concern is that the Concept Release overturns a fundamental premise of financial reporting—namely that the financial statements and disclosures are the responsibility of management. This premise likewise extends to other information that accompanies the financial statements, such as Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A"), which management prepares in accordance with SEC requirements, as well as other information outside the financial statements.

Management's financial reporting responsibility includes the selection and application of Generally Accepted Accounting Principles ("GAAP") and the determination of the many estimates and judgments required by GAAP and SEC financial reporting requirements, including MD&A disclosures. Management's responsibility for financial reporting extends beyond compliance with GAAP to determining the "quality" of the company's financial reporting within GAAP. In turn, the board of directors, largely through the audit committee, exercises oversight of management's financial reporting, including the company's annual (Form 10-K) and quarterly (Form 10-Q) filings with the SEC.

The independent audit firm's responsibility is to express an opinion as to whether the company's annual financial statements, including notes thereto, are presented fairly, in all material respects, in conformity with GAAP.[4] The auditor's report is the mechanism by which the audit firm communicates this opinion. The SEC does not accept filings that contain audited financial statements with qualified or adverse audit opinions.[5] Thus, for public companies, the auditor's unqualified audit opinion indicates that all material matters have been resolved.[6]

An essential element of the fundamental premise of financial reporting is that the auditor is not an original source of information about the company. Auditors' legal and ethical obligations recognize and reinforce this point by requiring that auditors treat all company-specific information as confidential.[7] Except in rare circumstances where management and the board of directors have failed to disclose certain information, as provided for under PCAOB auditing standards and SEC regulations,[8] auditors are *precluded* from disclosing any company-specific

---

[4] Quarterly financials included in Form 10-Q filings with the SEC are reviewed by the auditor, rather than audited.

[5] The Concept Release does not explore the implications of this prohibition or suggest altering it.

[6] However, auditing standards provide that audit reports with unqualified opinions can contain additional explanatory or emphasis of matter language, including when there is substantial doubt about the entity's ability to continue as a going concern, there has been a material change between periods in accounting principles or their method of application, there are significant transactions with related parties, or unusually important subsequent events have occurred.

[7] Rule 301 of the American Institute of Certified Public Accountants ("AICPA") Code of Professional Conduct states that "a member in public practice shall not disclose any confidential client information without the specific consent of the client." The PCAOB did not adopt Rule 301 as part of its interim standards. Apparently the PCAOB's decision was based on a determination that incorporation of Rule 301 was not necessary to fulfill the Board's mandate under Section 103(a)(1) and (3) of The Sarbanes-Oxley Act of 2002 ("SOX"). The PCAOB has assured that this determination did not reflect a decision that auditor confidentiality requirements imposed by other authorities were inappropriate. In adopting conforming amendments in conjunction with Auditing Standard No. 6 ("AS No. 6"), *Evaluating Consistency of Financial Statements*, the PCAOB reaffirmed that it sought neither to modify nor detract from existing confidentiality requirements. Nonetheless, in approving AS No. 6 in September 2008, the SEC encouraged the PCAOB to develop and adopt a rule addressing the auditor's responsibility with respect to maintaining the confidentiality of client information. The PCAOB has yet to do so.

[8] Examples include information under certain circumstances in reports in connection with the termination of the audit engagement and reports that may be required pursuant to Section 10A(b)1 of the Securities Exchange Act of 1934 relating to an illegal act that has a material effect on the financial statements.

information to outside parties. Nonetheless, the Concept Release includes alternatives, in particular an AD&A, that represent a radical departure from the bedrock premise of financial reporting.

Further, at first blush it would appear that the proposed AD&A would be in direct conflict with the MD&A required by the SEC. Accordingly it would seem that such a system would provide competing disclosures that will increase complexity and create confusion for investors. Seemingly, that would appear to be a situation that the SEC could not allow to develop.

As described in the Concept Release, an AD&A would provide financial statement users with a view of the audit and financial statements "through the auditor's eyes" (p. 13). Importantly, the Concept Release recognizes that the auditor's perspectives about the company's financial statements could differ from those of management.

According to the Concept Release, AD&A would give the auditor the ability to discuss significant matters, which could include such things as the auditor's views regarding management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls." The Concept Release goes on to explain that:

> *Additionally, an AD&A could provide the auditor with discretion to comment on those material matters that might be in technical compliance with the applicable financial reporting framework, but in the auditor's view, the disclosure of such matters could be enhanced to provide the investor with an improved understanding of the matters and their impact on the financial statements. And, AD&A could also highlight those areas where the auditor believes management, in its preparation and presentation of the financial statements, could have applied different accounting or disclosures* (p. 13).

Needless to say, providing auditor views and perspectives would represent a profound shift in the role and responsibilities of the independent auditor vis-à-vis management and the board of directors/audit committee. AD&A would necessitate the auditor becoming an original and competing source of company-specific information.[9] While it is not clear that the PCAOB would have the authority to enact this sea change, on principle, the CCMC strongly disagrees with any move by the PCAOB in this direction.

Investors need factual information to make decisions with their goal being a return on investment. Those decisions are premised on the health, direction and management of a company. An auditor's opinion in AD&A may be considered Monday morning quarterbacking that may not even be welcomed by investors generally. For that matter why not create a disclosure on the opinions of top financial reporter's opinions on management decisions. While everyone may have an opinion, it may not provide relevant facts or substance for investment decisions.

Moreover, any such change in the fundamental premise of financial reporting would likewise have significant implications for auditors from the standpoint of legal liability. AD&A may even create new avenues for legal actions against auditors. For example, the U.S. Supreme Court recently reaffirmed its decision in Central Bank[10] that precludes private securities fraud actions against secondary actors such as auditors. As described in the Concept Release, it appears that an AD&A would move the auditor into the position of being an original maker of statements. The auditor would have ultimate authority and control over AD&A, including its content and

---

[9] As subsequently discussed, a similar argument can be made for required and expanded use of emphasis of matter paragraphs in all audit reports as this alternative would necessitate that the *auditor* determine significant matters to highlight and reference where those matters are further disclosed by management in the financial statements.

[10] *Central Bank of Denver v. First Interstate Bank of Denver*, 511 U.S. 164 (1994).

whether and how to communicate it. As a consequence, Rule 10b-5 could then apply to auditors, as plaintiffs in private actions could allege the auditor directly or indirectly made an untrue statement of a material fact in connection with the purchase or sale of securities.

## III. Additional Practical Considerations

Setting aside disagreement on fundamentals, the Concept Release also does not appreciate the full range of practical implications from adding an AD&A requirement that go well beyond effects on the timing of the delivery of audit reports. For example, it seems unlikely that expressing auditor views on financial statement matters in an AD&A-type report could be the end of it. Investors and other third-parties would likely call for clarification, additional insights, and further explanations from auditors in order to understand the auditor's views and to help reconcile, as necessary, such views with those of management. Would auditors then need to issue press releases and hold conference calls to meet these demands for further information? Would SEC reviews by the Division of Corporation Finance come to involve reviewer comments addressed to auditors? Likewise, in putting the auditor in the position of being an original and competing source for financial information about the company, one can easily envision that an AD&A-type responsibility could create a material adverse interest with management and, therefore, raise questions about auditor independence under extant requirements.[11] And the list of problematic consequences goes on.

---

[11] The Concept Release describes one rationale for an AD&A as being to "give the auditor greater leverage to effect change and enhance management disclosure in the financial statements, thus increasing transparency to investors" (p. 13). However, as previously discussed, this rationale involves transforming the role of the auditor vis-à-vis that of management and the board/audit committee. Additionally, the Concept Release fails to appreciate that under extant arrangements, the need for the financial statements to comply with GAAP to obtain an unqualified audit opinion provides auditors with powerful "leverage." Otherwise, extant auditing standards support the auditor's role in facilitating the operation of corporate governance mechanisms related to the quality of financial reporting, via requirements such as the one on auditor communications with audit committees about the "quality" of the company's accounting principles (within GAAP), in addition to their compliance with GAAP.

Other aspects of the AD&A alternative involve suggestions for an auditor narrative with information about the audit, including audit risks identified in the audit, audit procedures and results, and auditor independence. Regarding the latter, there is no indication in the Concept Release why current disclosures on auditor independence are inadequate, including proxy statement disclosures by audit committees. Indeed, it raises the question of whether investors participating in the PCAOB's outreach activities are even reading the information now available to them.

As to more information about the audit,[12] it is a difficult to envision how the auditor could condense all the work done on each engagement related to audit risks identified, audit procedures performed, and results obtained into a few sentences or even paragraphs. It is also a challenge to understand how any such condensation would be meaningful. PCAOB auditing standards, which are publicly available, provide the basis for performing audits. PCAOB inspections review the application of and adherence to such standards on individual engagements. The Concept Release does not make the case for why or how adding a reporting requirement for auditors to provide more details about their performance on each individual engagement would provide useful information to investors and other users.

Relatedly, the Concept Release is wanting when it comes to illustrating the alternatives. Illustrative examples that only contain placeholders for substantive information are unhelpful. The PCAOB should have developed substantive illustrations or even used field testing to assist in evaluating the usefulness and limitations of the various suggestions that emerged from their outreach activities *before* issuing a Concept Release.

[12] More information about the audit is also suggested under the alternative for required and expanded use of emphasis of matter paragraphs. For example, the Concept Release states that "under this alternative, the auditor also could be required to comment on key audit procedures performed pertaining the identified matters" (p. 20).

Otherwise, legal considerations and the need for audit firms to maintain consistency across engagements and over time preclude alternatives involving auditor narratives from being "free-writing" exercises. Before mandating AD&A or the expanded use of emphasis of matter paragraphs on all audits, criteria would need to be developed by the PCAOB (and audit firms would likely need to further refine such criteria). Even information currently part of internal communications among auditors, management, and boards/audit committees cannot be moved to the public arena without such criteria. For example, PCAOB auditing standards related to auditor communications with audit committees recognize that "objective criteria have not been developed to aid in the consistent evaluation of the quality of an entity's accounting principles as applied in its financial statements" (AU 380.11).[13]

All things considered, rather than meaningful information, requirements for AD&A and the expanded use of emphasis of matter paragraphs on all audits appear more likely to add boilerplate to that already cluttering SEC filings. Boilerplate is the tip of the financial reporting complexity iceberg.

As we previously discussed, because of overly complex and detailed periodic reporting, CIFiR likewise heard that investors want to be told "what matters." However, after extensive deliberations, CIFiR did *not* recommend that auditors step-in to fill the breach; it did not recommend such things as an AD&A or required and expanded use of emphasis of matter paragraphs on all audits.[14] Rather, CIFiR recognized the importance

---

[13] Moreover, altering the auditor's responsibilities to involve external disclosure of AD&A-type information would likely transform current relationships and interactions among auditors, management, and boards/audit committees to the detriment of audit quality.

[14] Members of CIFiR included investors and representatives of other financial statement users along with financial executives and board members, auditors, and securities lawyers. In addition, the chairman of the PCAOB was an official observer on CIFiR.

of the fundamental premise of financial reporting, as previously discussed. Thus, CIFiR recommended that *management* provide a short executive summary at the beginning of a company's annual report on Form 10-K (with material updates in quarterly reports on Form 10-Q). CIFiR suggested the summary describe concisely the most important themes or other significant matters with which management is primarily concerned, along with a page index showing where investors could find more detailed information on particular subjects (p. 3).

## IV. Additional Assurance Services

The Concept Release presents another alternative that would *require* auditors to provide assurance on information outside the financial statements such as MD&A (or portions thereof, such as critical accounting estimates), non-GAAP information, and/or earnings releases. Current PCAOB auditing standards describe the auditor's responsibilities regarding other information outside the financial statements in documents containing audited financial statements. These responsibilities include reading and considering whether such information or the manner of its presentation is materially inconsistent with the financial statements or represents a material misstatement of fact. The Concept Release fails to make the case for why this current arrangement is inadequate. Likewise, the Concept Release fails to identify the flaws in earnings releases that would be fixed with auditor assurances or how such assurances would otherwise be value-added in this context.

Moreover, extant PCAOB attest standards allow the auditor to be engaged to attest on MD&A and the standards provide requirements for such engagements. Yet, few if any public companies engage their auditors for this additional assurance service on MD&A. Further, CCMC is not aware of any instances where shareholders have requested a company to do so. The lack of any voluntary demand for additional assurance services is revealing and provides a basis for concluding that proposals to *mandate* such services fail cost/benefit considerations.

## V. Adding Clarifying Language to the Auditor's Report

The fourth alternative presented in the Concept Release would provide for adding clarifying language in the existing standard auditor's report. The Concept Release suggests that language around reasonable assurance, the auditor's responsibility for fraud, the auditor's responsibility for financial statement disclosures, management's responsibility for the preparation of the financial statements, the auditor's responsibility for information outside the financial statements, and auditor independence would be potential areas for clarification. These suggestions represent refinements to the current auditor's report and, overall, are not objectionable in concept, although it is hard to argue the need for all of them individually. For example, in regards to independence, currently the audit report is labeled as the "report of the independent registered public accounting firm" and, as previously noted, proxy statements provide disclosures on auditor independence. So, it is not clear why any further disclosures contemplated by the Concept Release would be useful information rather than added boilerplate.

## VI. Going Concern Reporting and Disclosures

At the PCAOB's open board meeting on June 21, 2011 to approve the Concept Release, one board member focused on going concern reporting by auditors. For example, the statement of Mr. Harris has an entire section on "Going Concern Opinions: A Rarely Used Tool." This is curious because the Concept Release is *silent* on this topic; and, it creates some confusion about the direction of this auditor reporting initiative.

Going concern is long recognized as an area in need of FASB attention. Although the financial statements are prepared on the assumption that the entity will continue as a going concern, auditing standards contain the only real guidance on going concern. More than a decade ago, the Final Report (August 31, 2000), of the Panel on Audit Effectiveness recommended that the FASB (1) define the going concern concept and clarify that management, not the auditor, has the primary responsibility to assess whether the entity has the ability to remain a going concern, (2) consider the appropriateness of the one-year time horizon in SAS No. 59 (i.e., the FASB should evaluate this time horizon and recognize its importance to auditors in framing their audit reports), and (3) promulgate explicit going concern disclosure requirements to fit various circumstances (pp. 61-62).

The FASB has had a going concern project on its agenda for a number of years now, but the FASB has yet to finalize any guidance in this area. If the PCAOB heard from its outreach activities in response to the 2008 economic crisis that this is an area of concern for investors, it would seem that this project should have provided a golden opportunity for the PCAOB board itself to become engaged in working with the FASB and SEC to overcome this perceived deficiency in GAAP and address other issues related to the auditability of GAAP.

## VII. Outreach, Transparency, and Cost/Benefit Considerations

Chairman Doty's statement at the PCAOB's open board meeting notes the "fluid" nature of feedback from the PCAOB's outreach activities on this project. However, this raises issues about the transparency of the PCAOB's outreach activities.

On one hand, the CCMC appreciates the extensive discussion of the feedback received by the PCAOB's staff from its outreach activities contained in the Concept Release, including Appendix C. On the other hand, the discussion is mostly confined to the alternatives pursued in the Concept Release rather than those considered but dropped along the way (e.g., going concern reporting).

In addition, it is difficult to interpret the information in the Concept Release because discussions with participants were private (no transcript is publicly available of the outreach discussions) and apparently informal (the PCAOB has provided no sample questionnaire or interview script).[15] Further, the Concept Release does not identify the number of participants in the PCAOB's outreach activities or list their names and organizations. And, while overall categories of participants are given, discussions of the various views, in particular those in Appendix C, mostly just combine all categories into "outreach participants," with only qualitative information on the degree of commonality in views noted by using terms such as "some" or "many" outreach participants.

The CCMC strongly agrees that the PCAOB should consult with and have access to a full range of perspectives among all users of financial statements. However, these activities need to have transparency. The CCMC appreciates that the PCAOB has included auditor reporting issues on the agendas at various public meetings of its advisory groups, including its Standing Advisory Group ("SAG") and IAG. Public roundtables are another mechanism for conducting public outreach with transparency and the PCAOB has announced plans to hold one or more roundtables in conjunction with this project. Nonetheless, as noted, the CCMC has

---

[15] CCMC understands that the PCAOB includes the March 2011 Investor Advisory Group ("IAG") survey as part of its outreach activities and some details of participants in that survey are publicly available, including that IAG members themselves were among the survey participants.

concerns about the lack of transparency around many of the PCAOB's outreach activities that produced this Concept Release, which are consistent with concerns the CCMC has previously expressed about the transparency of the PCAOB's activities and due process generally.[16]

Finally, most of the reporting alternatives presented in the Concept Release would involve additional costs. Feedback from the PCAOB's investor outreach that informed the alternatives presented in the Concept Release appears to underplay the existence and significance of any additional costs. Indeed, in the main, it does not appear that cost/benefit considerations played a major role in the discussions with outreach participants.[17]

## Conclusion

In conclusion, the CCMC appreciates the opportunity to comment on the Concept Release. In closing, we would like to reiterate that the CCMC supports working to achieve one set of global high quality auditing standards through the convergence of PCAOB auditing standards with those of the AICPA's Auditing Standards Board ("ASB") and the International Auditing and Assurance Standards Board ("IAASB"). In this regard, CCMC notes that the Concept Release gives short shrift to activities by other audit standard-setters related to auditor reporting and fails to provide any comparison of relevant portions of PCAOB auditor reporting standards with those of the ASB and IAASB as part of considering improvements to PCAOB auditing standards. The CCMC

---

[16] For example, see the October 7, 2009 letter from the U.S. Chamber of Commerce CCMC to the Honorable Daniel L. Goelzer, Acting Chairman of the PCAOB.

[17] For example, during discussions at the March 2011 IAG meeting, some IAG members dismissed cost concerns for AD&A with assertions that no additional audit work would be required as auditors would just be disclosing to investors information currently communicated with audit committees.

encourages the PCAOB to reconsider its "go it alone" approach to audit standard-setting.

Thank you for your consideration and the CCMC stands ready to assist in these efforts.

Sincerely,

October 20, 2011

Mr. J. Gordon Seymour
Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, DC 20006-2803

**Re: Request for Public Comment** ***on Concept Release on Auditor Independence and Audit Firm Rotation and Notice of Roundtable (PCAOB Release No. 2011-006, August 16, 2011, PCAOB Rulemaking Docket Matter No. 37)***

Dear Mr. Seymour:

The U.S. Chamber of Commerce (the "Chamber") is the world's largest federation of businesses and associations, representing the interests of more than three million U.S. businesses and professional organizations of every size and in every economic sector. These members are both users and preparers of financial information. The Chamber created the Center for Capital Markets Competitiveness ("CCMC") to promote a modern and effective regulatory structure for capital markets to fully function in a 21st century economy.

The CCMC believes that businesses must have a strong system of internal controls, recognizes the vital role external audits play in capital formation, and appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB") *Concept Release on Auditor Independence and Audit Firm Rotation* ("Concept Release").

The CCMC has serious concerns about the Concept Release particularly the consideration of mandatory audit firm rotation. The premise for the Concept Release is not grounded in facts and therefore ill-conceived. Movement towards mandatory audit firm rotation will harm investors, endanger the competitive position of American public companies, degrade audit quality, and take a path that has, in the past, been explicitly rejected by Congress and the Securities and Exchange Commission ("SEC").

Additionally, the Concept Release is at odds with initiatives to reduce unnecessary and burdensome regulation as the economy struggles to recover from the recent recession and avoid another one.

Accordingly, the CCMC believes that the PCAOB should withdraw the Concept Release. The CCMC's concerns are outlined in more detail in the remainder of this letter.

## I. Discussion

The current form of audit practice and engagement is rooted in laws and regulations dating back to the passage of the Securities Act of 1933 and the Securities Exchange Act of 1934 ("the 1933 and 1934 Securities Acts"). This structure has depended upon a private firm engagement with a public company to produce audited financial reports, under SEC supervision, to provide investors with decision useful information. An important feature of this structure has been the independence of auditors.

Since the passage of the 1933 and 1934 Securities Acts and the designation of the SEC as the arbiter of financial reporting in the United States, there have been periodic reviews of financial reporting structures with the implementation of reforms when needed.

In that context, mandatory audit firm rotation is in fact an old idea. More than three decades ago, mandatory rotation was considered and rejected by the Commission on Auditors' Responsibilities (the "Cohen Commission") as costly and with no net benefit to investors. The Cohen Commission stated that the lack of auditor familiarity with a client in the early years of engagement would cause more harm than benefit for investors.[1] The Cohen Commission concluded that the audit

[1] See *The Commission on Auditors' Responsibilities: Report, Conclusions, and Recommendations* (1978), pp. 108-109. Curiously, in the end, the Concept Release acknowledges that mandatory audit firm rotation will end up lowing audit quality and then asks how to mitigate this effect (pp. 23-24).

committee is in the best position to evaluate audit effectiveness and decide if appropriate, to rotate audit firms. We believe that this conclusion remains true today.

In 1994, the SEC rejected the notion of mandatory firm rotation and stated that there was not a need for rules changes or legislation to further that goal.[2] Following significant financial reporting failures in the Enron and WorldCom incidents, Congress explicitly rejected mandated audit firm rotation instead choosing to mandate audit partner rotation and strengthening the role of audit committees in the debate and passage of the Sarbanes-Oxley Act of 2002 ("SOX").

So while Congress and the SEC have explicitly rejected audit firm rotation, in favor of other reforms, the threshold questions for the consideration of mandatory audit firm rotation are:

- What has changed to raise the issue again?
- What evidence exists to consider mandatory firm rotation?

The CCMC believes that the PCAOB has failed to provide answers to these questions and therefore also believes that the concept release should be withdrawn.

**a. Has Audit Regulation Failed?**

This is in fact the fundamental question that must be answered. To drastically change a structure that has been in place for 78 years would seemingly require pervasive financial reporting failures. Pervasive failures of this sort would require a close examination of the PCAOB's almost 10 year stewardship of audit regulation.

The Concept Release does not present any evidence of pervasive failures, and as will be discussed later, the failure to provide factual evidence is a fatal flaw in the consideration of the Concept Release.

---

[2] SEC Office of the Chief Accountant, Staff Report on Auditor Independence (1994).

With this Concept Release, the PCAOB is advancing the proposition that the level of audit quality for public companies is somehow inadequate.[3] If the system is inadequate, the PCAOB must explain how the regulatory system failed. This alleged inadequacy is in spite of all the regulatory activities of the PCAOB and others, such as the SEC (including SEC rules on auditor independence), and the efforts of audit committees. Indeed facts are not presented to support the premise that the existing regulatory and governance structures fall short of the mark.

In establishing the PCAOB as regulator for audits of public companies, with oversight by the SEC, SOX gave the PCAOB multiple powers to maintain and improve audit quality through registration, inspection, standard-setting, and enforcement. An alleged inadequacy of audit systems, by inference, means that these powers have either not been used well or not used at all. Similarly, abdicating these powers in favor of the extreme move of mandating audit firm rotation is tantamount to the PCAOB throwing up its hands and stating that audit regulation cannot work.

This implication, embedded in the Concept Release, also extends to SOX mandated corporate governance structures. SOX gives audit committees the responsibility for the appointment, compensation, and oversight of the independent audit firm, along with responsibility for resolving any disagreements between management and the auditor regarding financial reporting.[4] While SOX gives the PCAOB jurisdiction over audit firms, it does not give the PCAOB authority over audit committees; instead, that responsibility rests with the SEC.

A reading of SOX demonstrates that a fundamental reordering of the audit committee responsibilities and actions would have to emanate from the SEC and not the PCAOB. Mandating a set period for changing audit firms— which would preclude both longer and shorter periods (at least without regulatory consent of some form)— deprives audit committees of discretion and judgment, contravenes SOX and

---

[3] Advancing this proposition is curious considering that the Concept Release states that, based on its experience conducting inspections, the Board believes public company audit quality has improved post-SOX under the PCAOB (pp. 15).
[4] In addition, many public companies now require shareholder voting to ratify the retention of the audit firm recommended by the audit committee.

audit committee responsibilities for audit firm selection, and otherwise constrains and unduly complicates the work of audit committees.

It appears, therefore, that the PCAOB has failed to provide a case for moving forward and may have overstepped its authority in emasculating SOX governance mandates.

If the PCAOB is concerned about improving the level of audit quality, it would be better served to present evidence as to the nature of the problem and focus its efforts on improving its standard-setting and inspection activities in response to any such problem. For example, the CCMC notes that the PCAOB auditing and quality control standards have not been substantially changed from those applicable on public company audits pre-SOX. Concept Releases, such as this one, distract stakeholders and divert the PCAOB board and staffs focus from these other standard-setting activities that may benefit investors and the marketplace.

**b. Evidence Lacking to Support Mandatory Rotation**

The PCAOB has failed to provide evidence to issue this Concept Release or move forward with a roundtable. The PCAOB does not provide any evidence from its own activities, including from its inspection process, that audit firm tenure is an issue. Indeed, the PCAOB admits that it has no evidence from its inspection process that audit firm tenure has any systematic relationship with inspection deficiencies. To overcome this fatal flaw, the PCAOB attempts to equate Part I inspection deficiencies to audit failures, although the Concept Release acknowledges that the use of the term "audit failure" describes a situation of not obtaining (or not documenting the evidence to support) the reasonable assurance that a financial statement is free of material misstatement. It does not mean that a financial statement is in fact materially misstated.[5]

So an "audit failure" as used in the concept release is actually not a failure per se regarding the accuracy of financial reports, but rather the identification of what the PCAOB determines to be a deficiency in the process of an audit, which itself may

[5] Concept Release (pp. 5)

involve a difference of professional views as to what constitutes appropriate evidence to support reasonable assurance.

To overcome this Catch 22, the Concept Release argues that mandatory audit firm rotation will promote auditor objectivity and professional skepticism. The Concept Release only offers anecdotal evidence from PCAOB inspections that auditor skepticism is a problem. However, it is unclear that the anecdotes provided in the Concept Release even involve a lack of skepticism. It is also unclear that mandatory audit firm rotation would provide a solution to any such "skepticism problems."[6] Indeed, the PCAOB admits that the Concept Release is not based on any "root cause" analysis of its inspection findings. In fact the PCAOB readily admits that it needs to deepen its understanding of the "root causes".[7] Thus, the PCAOB offers no persuasive evidence, from its own activities, linking auditor tenure with a lack of professional skepticism that, in turn, would be mitigated by mandatory audit firm rotation.

The Concept Release is also flawed in failing to fully appreciate the nature of professional skepticism. Skepticism involves both a mindset and a critical evaluation of audit evidence with two critical components –objectivity and expertise. Distinguishing between these two components of skepticism is essential. The Concept Release admits that the instances offered from inspections as indicative of a lack of skepticism could, instead, involve issues related to technical competence or experience (i.e., expertise not objectivity). But, the Concept Release then fails to appreciate that expertise (not objectivity) as the essential issue in fact undermines any arguments presented for mandatory audit firm rotation. Mandatory audit firm rotation is widely recognized as creating expertise concerns, especially in the earlier years of auditor tenure. Thus, mandatory audit firm rotation would have the effect of exacerbating (not mitigating) the "skepticism problems" used by the PCAOB to motivate the Concept Release.

Additionally, the Concept Release posits that mandatory audit firm rotation would improve auditor skepticism because "an auditor that knows its work will be scrutinized at some point by a competitor may have an increased incentive to ensure

[6] Ibid (pp. 7).
[7] Ibid (pp. 6).

that the audit is done correctly."[8] However, this argument requires the assumption that scrutiny provided by audit committee interactions and oversight; by new lead and concurring audit partners under the SEC's rules implementing SOX for mandatory partner rotation; by audit firm quality control processes, programs, and procedures (such as the multiple formal reviews by other members of the engagement team, including reviews by the lead and quality review partners, an engagement team's consideration of prior year audit work during audits in subsequent periods, audit firm internal inspection programs, national office interactions etc.); and by PCAOB inspections (and the deterrence effects of regulatory enforcement and private litigation) somehow do not offer adequate incentives.

Inchoate potentialities of skepticism combined with a lack of understanding of root causes do not meet the minimal thresholds of issuing a Concept Release or moving forward in consideration of it. By that token, as an example, anecdotal musings by the SEC, of ethical lapses by attorneys would not pass muster for regulatory action requiring law firm rotation by companies.

From the standpoint of evidence on the implications of auditor tenure, it is also important to recognize that the weight of the evidence from academic research does ***not*** support the implementation of mandatory audit firm rotation. Indeed, a recent review of the research literature finds that the evidence suggests several attributes of audit quality improve as auditor tenure increases.[9] Further, research on fraud by a member of both the PCAOB's Standing Advisory Group ("SAG") and Investor Advisory Group ("IAG") finds that fraudulent financial reporting is more likely to occur in the first three years of the audit-client relationship and fails to find any evidence that fraudulent financial reporting is more likely given long auditor tenure. Similar to other studies, this study concludes that the results are consistent with the

---

[8] Ibid (pp. 17).

[9] For a review of academic research on mandatory audit firm rotation see "The Causes and Consequences of Auditor Switching: A Review of the Literature" by C. Stefaniak, J. Robertson, and R. Houston in *Journal of Accounting Literature* (Gainesville: 2009) Vol. 28: 47-122. The study acknowledges some evidence indicates that mandatory auditor rotation might improve audit quality in certain situations, although not without costs. Thus, even this evidence does not suggest convincingly that the benefits of mandatory auditor rotation will exceed its overall costs.

argument that mandatory audit firm rotation could have adverse effects on audit quality.[10]

The Concept Release attempts to dismiss dissenting evidence from academic research, in part, by arguing that skepticism is "unobservable," and therefore not susceptible to empirical study. This argument is circular reasoning at best. The academic literature is quite robust and the relevant evidence is obtained using multiple approaches and measures. The weight of the evidence is consistent with a lack of familiarity in early years as a problem, not over familiarity in later years. The Concept Release fails to rebut established research.

In addition, the Concept Release attempts to broadly dismiss all research evidence, nonconforming to the notion of mandatory audit firm rotation, as irrelevant because most of it is not based on a regime of mandatory audit firm rotation. According to the Concept Release, a limitation of the academic studies is that they "tend to focus on environments where auditor rotation is voluntary rather than mandatory." And, "voluntary rotation may be associated with auditor-issuer disagreements, other financial reporting, or economic issues."[11]

This argument fails to acknowledge that voluntary auditor changes involve disclosures and communications that should reveal potential problems to successor auditors (and investors) reducing the likelihood of subsequent audit failures. For the PCAOB to broadly dismiss the evidence begs the question of why the required communications and disclosures were somehow inadequate and contributed to audit failures after changes in auditors. This problem, if it exists, is one that the PCAOB can and should do something about rather than focusing on mandatory audit firm rotation.

---

[10] For example, see "Audit Firm Tenure and Fraudulent Financial Reporting" by J. Carcello and A. Nagy in *Auditing: A Journal of Practice & Theory* (Sarasota: September 2004) Vol. 23 (2): 55- 70. Also, see two monographs in 1999 and 2010 from the Committee of Sponsoring Organizations of the Treadway Commission ("COSO") using SEC Accounting and Auditing Enforcement Actions during 1987-1999 and 1998-2007 as a proxy for fraudulent financial reporting. The latter, *Fraudulent Financial Reporting 1999-2007* by M. Beasley, J. Carcello, D. Hermanson, and T. Neal, reported that 26% of fraud companies switched auditors between the issuance of the last clean financial statements and the last set of fraudulently misstated financial statements, as compared to 12% of no-fraud firms during the same time period (p. 37).

[11] Concept Release (pp. 16).

Finally, the CCMC is concerned about another way the Concept Release overreaches for evidence to support mandatory audit firm rotation. As stated earlier, an "audit failure" as argued by the PCAOB is in fact not an audit failure.

The PCAOB's misleading use of the term is evidenced by its comparison to the definition employed by the GAO in its 2003 surveys ("GAO Report") and report to Congress on the mandatory audit firm rotation concept. The GAO report defined the term as follows:

> ***"audit failure"*** *refers to audits for which audited financial statements filed with the SEC contained material misstatements whether due to errors or fraud, and reasonable third parties with knowledge of the relevant facts and circumstances would have concluded that the audit was not conducted in accordance with GAAS, and, therefore, the auditor failed to appropriately detect and/or deal with known material misstatements by (1) ensuring that appropriate adjustments, related disclosures, and other changes were made to the financial statements to prevent them from being materially misstated, (2) modifying the auditor's opinion on the financial statements if appropriate adjustments and other changes were not made, or (3) if warranted, resigning as the public company's auditor of record and reporting the reason for the resignation to the SEC.*[12]

Contrary to such an accepted definition, the Concept Release mischaracterizes findings in Part I of the PCAOB's inspection reports as audit failures. In turn, the PCAOB uses these audit failures as a "call to action." Yet, as the PCAOB well knows, the vast majority of inspection findings are not audit failures. For example, very few PCAOB inspection findings have given rise to restatements.

Instead, many of the findings described in Part I of the PCAOB's inspection reports involve differences of opinion between PCAOB inspectors and auditors over judgments on documentation and evidence acquisition. Frankly, a number of Part I inspection findings can be characterized as PCAOB inspectors' judgments that differ from auditors' judgments on managements' judgments. They are not audit failures. It is both misleading and unworthy of an audit regulator to characterize them as such to buttress a Concept Release.

---

[12] GAO 04-217 *Public Accounting Firms Required Study on the Potential Effects of Mandatory Audit Firm Rotation* (2003) (pp. 6).

**c. CIFiR Recommendations**

Further, to improve audit quality related to auditor judgments, the CCMC has urged the PCAOB to adopt the recommendation of the SEC's Advisory Committee on Improvements to Financial Reporting (CIFiR).[13] In 2008, CIFiR recommended that the PCAOB develop and articulate guidance related to how the PCAOB inspections and enforcement divisions would evaluate the reasonableness of judgments made based on auditing standards. CIFiR also recommended that the PCAOB's statement of policy should acknowledge that the PCAOB would look to the SEC to the extent that the PCAOB would be evaluating the appropriateness of accounting judgments as part of an auditor's compliance with PCAOB auditing standards.

CIFiR also recommended that the concept of materiality be used as a determinative factor if mistakes in financial statements should trigger a restatement or simply further disclosure for investors. While the CIFiR recommendations were made in 2008, they still have not been acted upon.

**d. Mandatory Audit Firm Rotation Would Be Costly and Disruptive to the Markets**

As a supporter of effective audits, the CCMC believes a cost-benefit analysis is one effective approach to improving audit quality. In light of the weight of the academic research debunking mandatory audit firm rotation, it would seem that there is no net benefit for investors in moving forward in the consideration of the Concept Release.

As discussed earlier, mandatory audit firm rotation would be extremely costly and disruptive to the U.S. capital markets, harmful to investors and have far reaching negative consequences. The Concept Release acknowledges that mandatory audit firm rotation would disrupt markets and increase audit costs.[14] Likewise, the costs

---

[13] For example, see letter to the PCAOB from the U.S. Chamber CCMC on *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (PCAOB Release No. 2011-003, June 21, 2011, Rulemaking Docket Matter No. 34).

[14] Concept Release (pp. 3).

and disruptions arise from many sources and are largely unexplored in the Concept Release. Disruptions would extend to capital formation activities including initial public offerings and mergers and acquisitions. Mandatory audit firm rotation makes auditor choice and change a much more complicated proposition for companies and audit firms with interdependencies beyond the control of any particular party. Indeed, it is possible that overlaying mandatory audit firm rotation on top of all the many existing restrictions on audit choice would leave some large global companies without any available, eligible, requisite audit firm.

That would be a disaster for investors, companies, and capital formation with direct negative consequences for economic growth and job creation.

The Concept Release does note that the GAO Report includes an estimate that initial year audit costs—which includes costs beyond the audit fee itself— would increase by more than 20 percent with mandatory audit firm rotation.[15] However, this estimate was made before integrated audits of both the financial statements and internal control over financial reporting. It is likely that those costs would be higher today, in light of the additional reporting requirements imposed by post SOX legislation and regulations including the Dodd-Frank Wall Street Reform and Consumer Protection Act. Also, as stated earlier, research shows that there is an increase in costs and fraud potential during the first three years of a new auditor engagement.

Increases in costs associated with the audit process and potential fraud are just the tip of iceberg. For example, mandatory audit firm rotation would require company personnel and board/audit committee members to devote significantly more time and effort to the external audit function and activities in order to obtain the same results as now.

The Concept Release argues for overlaying mandatory audit firm rotation on top of the existing audit regulatory and governance structures that are already far-reaching and complex. However, the Concept Release provides no analysis of how mandatory audit firm rotation would even work under and interact with the existing structures.

---

[15] Ibid (pp. 14).

As just one example, the Concept Release provides no analysis of the implications of overlaying mandatory auditor rotation on top of a very rules-based system of auditor independence. The rules include the more visible ones that implement SOX provisions precluding certain non-audit services to audit clients and mandating audit partner rotation. Yet, there are many other less visible SEC and PCAOB independence rules that impact the hiring and retention of the audit firm and other accounting firms for non-audit services, as well as the hiring and retention of management, employees, and board members, too. As a result there are likely to be many companies, including those with large global operations, which will find themselves in the position of not being able to use any large audit firm as their external auditor.

An added complication is that audit firms are not fungible. As just one example, audit firms have differences in industry experience and expertise. Some firms have developed industry specializations. But, not even the larger audit firms specialize in all industries. It is not just a matter of severely altering and limiting audit firm choice from a company perspective. Mandatory rotation changes the ability of audit firms to develop and maintain expertise and complicates audit firm staff planning and allocation decisions, including geographically—all to the potential detriment of audit quality.

The Concept Release suggests that the PCAOB might consider precluding voluntary audit firm changes unless such changes are "for cause."[16] This is an untenable constraint on audit committees in their engagement of auditors and oversight of the audits. It naturally raises the question of what represents "for cause" and who decides. However, another problem is that preventing audit committees from dismissing an auditor at their discretion in this way actually reduces the amount of useful information available to investors. Voluntary auditor changes are informative to investors and other stakeholders in financial reporting. Eliminating this source of information by mandating audit firm rotation does not make investors better off.

Similarly, it should be noted that Congress, during the Dodd-Frank debates, considered and ultimately rejected a system whereby the SEC would assign credit

[16] Ibid (pp. 23-24)

rating agencies to review companies or products. It would seem incongruous for the PCAOB then to consider a mechanism whereby it could either assign or withdraw a firm from engagement, again depriving the audit committee of its discretion and judgment.

The Concept Release asks for feedback on the PCAOB imposing mandatory audit firm rotation on some subset of public companies. For example, the Concept Release suggests the possibility of the PCAOB requiring mandatory audit firm rotation for the largest issuer audits, or audits of companies in certain industries.[17] But, the largest issuers are those where the problems with mandatory audit firm rotation would be most pronounced. Focusing on large issuers and companies in certain industries seems pointed towards large systemic risk institutions.

Given all the problems with mandatory audit firm rotation, mandating it for this subset would be akin to heightening systemic risk into the capital markets for systemically risky institutions. If this is the case, the management of systemic risk is left to the prudential regulators and the Financial Stability Oversight Council ("FSOC").

It seems that the Concept release is totally devoid of any consideration of the need of a cost benefit analysis. PCAOB standards must go through the SEC rulemaking process to be approved. The SEC must perform a cost benefit analysis in order to pass the appropriate legal muster in promulgating a regulation, *Business Roundtable & U.S. Chamber of Commerce v. Securities and Exchange Commission*. The SEC has also that it will comply with the Presidential Executive Orders 13563 and 13579 on regulatory reform.[18] These Executive Orders require an agency to choose the least burdensome means of imposing a regulation.

Therefore, it would seem prudent for these cost benefit issues to be addressed early in the process.

**e. PCAOB Lacks Authority for Mandating Audit Firm Rotation**

---

[17] Ibid (pp. 3 and 21).

[18] See October 6, 2011 letter from U.S. Chamber of Commerce to the Securities and Exchange Commission on the process enhancements needed to comply with the Executive Orders.

As was noted earlier, the CCMC believes that SOX provides the SEC and not the PCAOB with authority over the operation of the audit committee.

The CCMC is concerned that mandating audit firm rotation exceeds the authority of the PCAOB. The CCMC appreciates that the Concept Release frames mandatory audit firm rotation as related to auditor independence and that auditor independence rulemaking falls within the purview of the PCAOB. However, this appears to be more of a convenience of form. In substance, mandatory audit firm rotation, including proscriptions on voluntary auditor change, would contravene audit committee responsibilities under SOX. Mandatory audit firm rotation would directly affect issuers and the status of issuer filings, which are under the purview of the SEC. As such, any requirements in this regard would need to be addressed by the SEC through Commission rulemaking and the SEC's due process.[19]

Finally, the CCMC is concerned that the Concept Release discusses the benefits of mandatory audit firm rotation "as a catalyst to introduce more dynamism and capacity into the audit market" as argued by the European Commission "Green Paper."[20] [21] The Concept Release goes on to explain that "if the largest firms were periodically displaced from their positions auditing the largest companies, more firms might develop additional capacity and expertise in order to compete for those engagements. If so, auditor choice would be increased."[22] Not only is this speculative, but it does not recognize the long timeframe over which any such emergence might occur or appreciate the severe discontinuities that would be encountered during the emergence process. More importantly, promoting competition is *not* the mission of the PCAOB. The PCAOB's mission focuses on maintaining and improving audit quality. Needless to say, the Concept Release does not further this mission either.

## I. Conclusion

[19] It is inadequate to argue that the SEC must approve any rule adopted by the PCAOB before it can go into effect. The SEC rulemaking process is subject to requirements, including those related to transparency and cost-benefit analysis, which the PCAOB is not. Also, the Commission has delegated authority for approving certain PCAOB rules and standards to the Office of the Chief Accountant, where Commission action is required for SEC rulemaking.
[20] European Commission, *Audit Policy: Lessons from the Crisis* (October 2010).
[21] See also December 7, 2010 letter from the U.S. Chamber of Commerce to the European Commission with comments on the Green Paper.
[22] Concept Release (pp. 21).

The CCMC has serious concerns that the Concept Release will harm investors, adversely impact the competitiveness of American public companies and degrade audits in general. While we believe that improvements can be made to financial reporting, suggestions, ideas, and debates must be based upon hard facts, analysis and not on anecdotal information. The PCAOB is almost 10 years old and it is responsible for the system it has overseen, it is not a bystander that can simply opine pronouncements.

Public companies not only compete for capital internationally, but also against other conduits for investment return. The other competitors for capital include private equity, hedge funds, angel investing, venture capital, and debt instruments to name a few. Each of these venues of capital formation has its place and this variety is necessary for a fully functioning 21st century economy. However, the sharp amount of de-listings indicate that public companies are not able to compete for capital as they once did and there is an adverse economic consequence for us all as a result. The notion of mandatory audit firm rotation will not stem that tide, it will only exacerbate it.

The PCAOB has failed to answer questions or presented factual evidence that would justify the issuance of the Concept Release. As we should all work together to provide a sound basis for a strong capital market system that must create the 20 million jobs needed to recover economically and restore prosperity, this is the wrong idea at the wrong time and it should not only be rejected, it should be withdrawn.

Sincerely,

Tom Quaadman

RE: PCAOB Rulemaking Docket Matter No. 34, Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments

Union First Market Bankshares, Corporation (Union) appreciates the opportunity to comment on the exposure draft, Public Company Accounting Oversight Board (PCAOB) Rulemaking Docket Matter No. 34, *Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments* (Docket Matter 34). Docket Matter 34 significantly expands the auditor's report, disclosing factual elements regarding the auditor as well as a discussion of critical audit matters (CAMs) specific to the audit. This exposure draft also addresses auditor responsibility and reporting over other information included with the audited financial statements.

We believe that level of detail required by Docket Matter 34 (assuming an unqualified opinion) adds specific information that may confuse a reader as to the nature of the opinion rendered.

The matters identified as CAMS are currently required to be addressed in the auditor's report, specifically regarding internal controls over financial reporting, Sarbanes-Oxley Act of 2002 (SOx). If a matter arose during the audit that reached the level of a material weakness (as defined by the Committee of Sponsoring Organizations – Treadway Commission), the auditor would be required to discuss any ramifications in detail, in an emphasis paragraph. If a matter does not rise to a level that impacts the audit, the inclusion required under Docket Matter 34 would add little to no value for the reader.

Information specific to the auditor should not be included as part of the report. These details: years of service, partner's name, independence under PCAOB and Securities and Exchange Commission (SEC) Rules, can be included in the issuer's proxy or Management Discussion and Analysis. The SEC could also expand the Audit Committee's report section of the proxy to include these facts, possibly as part of the consideration for the ratification of the auditor's election. Under Docket Matter 34, this other information would be included in the new report.

Financial statements remain the responsibility of the issuer. Since the financial statements, by definition, include the notes to the financial statements, expanding a reference to the notes within the report appears redundant. The notes, under the current system receive the identical scrutiny as the financial statements themselves.

References to fraud in the auditor's report, while basically the same as those included in the required communication to the audit committee, might unnecessarily alarm the reader. Inclusion serves no understandable benefit.

Union First Market Bankshares Corporation P.O. Box 940 24010 Partnership Boulevard Ruther Glen, Virginia 22546
804.448.0350 **Toll Free** 800.990.4828

The auditor's report may benefit from a disclosure regarding responsibility over "Other Information", as defined by Docket Matter 34, regardless of the proposed new standard. Docket Matter 34's proposed enhancement of the auditor's responsibility, with respect to other information, will necessarily compress already accelerated timelines for SEC filings and increase costs. The current standard seems to have few flaws and the correct level of scrutiny. It is unclear as to the value added in the requirement of an opinion audit of the other information.

The PCAOB has asked for a discussion of the prospective costs associated with the implementation of the new standard. This is very difficult to estimate, especially as it relates to the additional responsibilities added regarding other information. In discussions with our auditor we collectively estimated an approximate 15% to 20% increase in the audit fee, if Docket Matter 34 is implemented in its entirety. In the world of financial institutions, regulatory burden has become onerous. The weight of many compliance related costs, in concert with compressed margins, has already resulted in the resetting of investor expectations industry wide. The value does not appear to outweigh the cost.

SOx, in concert with other SEC Rules, have placed the oversight of the financial statements, and quality of financial reporting, squarely on the Chief Executive Officer, the Chief Financial Officer and the Audit Committee. We believe this responsibility is taken seriously. Accountability under SOx has proven effective. In today's complex regulatory environment, additional disclosures are simply unnecessary.

Union is a $4 billion single bank holding company, headquartered in Richmond, Virginia. Our 1,200 employees serve a wide variety of small to medium sized companies with an array of loan and treasury management products. In early 2014, Union will acquire StellarOne Corporation, becoming a $7 billion financial holding company.

Thank you very much for soliciting our comments.

Sincerely,

Patrick J. McCann

Re: PCAOB Rulemaking Docket Matter No. 034

Thank you for the opportunity to comment on the two new proposed auditing standards, *"The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion"* and *"The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report."*

As the Audit Committee Chairman of United Continental Holdings, Inc. ("UCH" or the "Company"), my views on the proposed audit standards are based on numerous meetings with audit committee members of other companies, representatives of the Securities and Exchange Commission, analysts from Wall Street investments banks, and some of the PCAOB Board members. I believe these interactions provide me with a comprehensive understanding of what is important to the users of UCH's financial statements.

**Critical Audit Matters**

In light of my experiences, I question the necessity of the Board's new proposed rules that would require the auditor to report on critical audit matters ("CAMs").

First, I strongly believe that the PCAOB Board needs to demonstrate (through field testing) how the communication of CAMs will benefit the users of UCH's financial statements. What is important to an auditor in conducting an audit may not align with what is important to investors. The main feedback the Company gets from investors and Wall Street analysts is to increase the disclosure of the type of information that will assist with modeling future financial results. Investors who make buy/sell decisions are uncertain about how CAMs would enhance their analysis without clear discussion. The belief that auditors will be able to adequately summarize extremely complex audit matters in a manner that is useful to a diverse set of constituents in a cost-beneficial basis is therefore dubious.

Second, proposed rules on critical audit matters would result in disclosures of information that are already disclosed by management to the extent there is close alignment to CAMs and management's critical accounting policies (which we believe there will be). There is a risk that the description of CAMs will be inconsistent with or perceived to be inconsistent with management's disclosures about similar issues. This lack of consistency between CAMs and management's disclosures will create confusion for readers of the financial statements.

Third, the proposed rule could potentially result in disclosure of information that is currently not required to be disclosed by management (for example, control deficiencies that are not material weaknesses and immaterial misstatements that are either unrecorded or recorded during the period). We believe it is inappropriate for the auditor to disclose information in management's financial statements that has not been disclosed by management, or for which no current disclosure requirements exist. We believe such a situation is contrary to maintaining the company's responsibility for the financial statements and the auditor's responsibility for providing an opinion on those financial statements.

Fourth, as a practical matter, a requirement to disclose critical audit matters has the potential to significantly alter the collaborative nature of the relationship between a public company and its independent auditor. As proposed by the Board, matters disclosed by the independent auditors and the audit committee are subject to consideration as to inclusion as a CAM. Company representatives will likely approach discussions with the auditors with the disclosure obligation in mind, which may impact the manner in which they share information about matters including critical audit matters and misstatements.

Finally, and perhaps most importantly, there is not enough objective criteria established around the definition and disclosure of CAMs to ensure consistency in their identification and disclosure, which will invite the inevitable comparison among peer companies. We believe there will be a tendency amongst users of the financial statements to compare the number and content of CAMs across companies in similar industries. Companies in the same industry could vary widely in their disclosure of CAMs simply by virtue of how their auditor interprets the proposed requirements. For example, if the nature and/or number of CAMs identified by our auditor differs from those of our peers, investors could come to several conclusions that may be neither true nor useful, such as a) we have additional complexity and/or risk in our financial statements compared to our peers or b) the audit of a peer that identified fewer CAMs than us may have been less diligent than our audit.

**Auditor's Responsibility for and the Evaluation of Other Information**

The proposal would require our auditors to read and evaluate other information in certain documents containing audited financial information. We believe that the proposed rule does adequately describe what is intended by the term "evaluate" with respect to the level of work required. In addition, we believe that the term "evaluate" may imply a higher level of effort regarding the other information than under current standards. Given the significant amount of other information that may accompany audited financial information, increasing the extent of audit effort on such information may increase the costs to companies significantly. The Company is also concerned about the potential time pressures and delays that could result from adding additional auditor time needed to review this information.

**Summary**

The Board decided not to pursue an Auditor's Discussion and Analysis ("AD&A") because it could (1) change the auditors role from that of providing attestation on financial statements to providing a qualitative analysis, (2) potentially expose investors to competing information from both the company and the auditor, which could complicate understanding of the financial statements , (3) diminish the governance role the audit committee has over the financial statements, and (4) add time pressures due

UNITED CONTINENTAL HOLDINGS, INC.

to the effort needed to develop a free-form AD&A report. I recommend the PCAOB Board not enact the proposed auditing standards for these same reasons and due to the lack of alignment between these rules and the objective outcome of better information for investors. I also do not believe changing the requirement for the auditor to read and evaluate other information is justified at this time. The cost-benefit of these rules is not evident and should be reconsidered if the Board continues to pursue the proposed standards.

Thank you for the opportunity to express my concerns. If you have any questions for me, I can be reached at (904) 359-1329.

Sincerely,

Oscar Munoz

Subject: *PCAOB Rulemaking Docket Matter No. 034: PCAOB Release No. 2013-005: Proposed Auditing Standard Related to the Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; the Auditor's Responsibilities regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards*

This letter provides the U.S. Government Accountability Office's (GAO) comments on the Public Company Accounting Oversight Board's (PCAOB) exposure draft.

We support efforts to improve the quality of financial reporting and increase the confidence users have in the audit of financial statements. However, we do not believe that certain of the proposed enhancements to the auditor's report, such as reporting critical audit matters, will enhance the perceived value of the financial statement audit or add value to the users of the financial statements. However, if the PCAOB nevertheless determines that it is appropriate to require reporting of critical audit matters, we encourage the PCAOB to work closely with other standard setters, such as the International Auditing and Assurance Standards Board (IAASB) and the Auditing Standards Board, to ensure a consistency of practice by harmonizing their standards on reporting critical audit matters, absent any compelling reasons that would require different practice. For example, the standard setters should determine thresholds or other guidance that facilitates the consistent reporting of critical audit matters.

**Requests for Specific Comments**

The PCAOB is seeking comments on a number of areas in the proposed standards. We have provided discussion on the areas listed in the exposure draft below. Our responses to specific questions in appendixes 5 and 6 of the exposure draft are included in the enclosure to this letter.

<u>Critical Audit Matters</u>

We do not support the requirement for a new section in the auditor's report describing matters the auditor determines to have posed the most difficulty during the audit (critical audit matters), and believe that this requirement will not enhance the usefulness of the auditor's report or add value to the users. We believe that, in practice, such requirements will result in entities reporting the substance of critical audit matters in the notes to the financial statements, to the extent they are not already included, and the inclusion of this information in the audit report would add little value to the users. We are also concerned that the incentives for consistent reporting of critical audit matters across entities would likely lead to "boilerplate" reporting language for each type of critical audit matter. Further, such a requirement may increase the risk of blurring the roles between entity management and the auditor, as it requires the auditor to comment on elements that are generally management's responsibility to discuss or disclose.

We are also concerned about the application of the requirement for reporting matters that posed the "most" difficulty to auditors as critical audit matters. Certain matters, while posing the most difficulty to the auditor, may be less significant to financial statement users and the requirement may lead to the reporting of an extensive discussion of matters unimportant to financial statement users.

In addition, the connotation of "critical" may lead users to believe that these matters necessarily could affect the entity's ability to be a going concern, instead of matters that the auditor determines should be disclosed to help the users focus on aspects of the company's financial statements that the auditor found to be challenging. The IAASB uses "Key Audit Matters", and we encourage the PCAOB, if moving forward with a requirement to report such matters, to harmonize its term with that of the IAASB unless there is a compelling reason for a different term.

Further, while we believe that the auditors should document significant audit matters in the audit documentation as required by current standards, we do not support the need for a separate documentation requirement solely based on critical audit matters. We also do not support a requirement for the auditor to disclose audit procedures performed in the critical audit matters section of the audit report as it will add little value to the users of the financial statements and may create unwieldy reports.

We believe that if a requirement is kept for statements from the auditor regarding critical audit matters, the auditor's communication of such matters should be limited to the audit of the most recent financial period when comparative financial information is presented. We also encourage the PCAOB to provide further guidance as to what should be considered a "critical audit matter". For example, this guidance could include information on the thresholds for determining whether a matter is a critical audit matter, as the proposed standard allows for the auditor to determine that there are no critical audit matters and could result in situation where the most difficult audit issues may nevertheless be unimportant with respect to the entity.

Finally, we do not support the proposed requirement to include a statement related to auditor independence in the auditor's report. We question whether such additional disclosures would benefit users; for example, the user may already be aware of auditor independence requirements or, if not, the user may have difficulty in understanding the concept of independence without extensive discussions in the auditor's report. We also do not agree with the inclusion of the tenure of the auditor on the engagement and question what value this information would provide to users of the financial statements. We are concerned that including this information could lead to incorrect interpretations about the entity, its current fiscal situation, and the auditor. Information about tenure may be relevant information to disclose in the proxy statement, as that document is more closely aligned with decisions concerning auditor selection.

<u>Auditor's Responsibility for Other Information</u>

While we agree that expanding the auditor's responsibility for other information has merit, we are concerned about the requirement in paragraph 3 of the proposed standard regarding material misstatements of fact. We believe that the identification of any material misstatements of fact should be based solely on the procedures in paragraph 4 of the proposed standard. However, we are concerned that the current proposed standard is unclear as to whether the auditor would be required to identify material misstatements of fact, beyond those that would be identified through performing the procedures described in paragraph 4 of the proposed standard. We believe it is important that this requirement be clearly stated to avoid confusion in its application

Further, we note that certain types of other information could be subsequently changed without the knowledge of the auditor, particularly those that are not incorporated into the same document as the financial statements. We also note that it will be challenging to convey to users of the auditor’s report that some of the other information reviewed by the auditor could be subject to change or revision, especially if presented in filings other than the annual report. However, we believe that auditors may be able to report that they evaluated other information as of a certain date, and that they would have no control over any subsequent changes to other information.

\- - - - -

We thank you for considering our comments on these important issues as the PCAOB continues its effort to enhance the value of auditor reporting.

James R. Dalkin
Director
Financial Management and Assurance

Enclosure

**Enclosure – Answers to Questions**

**Appendix 5**

1. **Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?**

We agree that the first objective assists the auditor in understanding the requirements of what would be communicated. Although the second objective may be clear as stated, we do not believe that the reporting of critical audit matters will add value for the users of the financial statements for the reasons stated in our letter.

2. **The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?**

The current standard is sufficient in this area.

3. **The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the PCAOB's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?**

We agree with the revisions to the description of the nature of an audit and do not suggest additional responsibilities be included.

4. **The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?**

We do not support the proposed requirement to include a statement related to auditor independence in the auditor's report, and we question whether such additional disclosures would benefit the users. For example, the user may be already aware of auditor independence requirements or, if not, the user may have difficulty understanding the concept of independence without extensive discussions in the auditor's report.

5. **The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**

    a. **Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**
    b. **Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**
    c. **Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

We do not support the inclusion of the tenure of the auditor on the engagement and question what value this information would provide to the user of the financial statements. We are concerned that including this information could lead to incorrect interpretations about the entity, its current fiscal situation, and the auditor. Information about tenure may be relevant information to disclose in the proxy statement, as that document is more closely aligned with decisions concerning auditor selection.

**6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

We agree with the proposed description.

**7. Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?**

We believe the PCAOB should require a specific order for basic elements required in an auditor's report to promote consistency among auditors' reports.

**8. What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?**

We do not note any other necessary changes, unless additional changes would be required to enhance consistency with the standards of other standard setters.

**9. What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.**

The proposed changes to the basic elements would not appear to significantly affect audit costs.

**10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

We do not believe the introduction of a critical audit matters section would enhance the usefulness of the auditor's report and may make it more difficult for users to read and understand the audit report. We believe that in practice, such requirements will result in entities reporting the substance of critical audit matters in the notes to the financial statements, to the extent they are not already included, and the inclusion of this information in the audit report would add little value to the users. Also, we are concerned that incentives for consistent reporting of similar matters across entities would likely lead to "boilerplate" report language for each potential type of critical audit matter. Finally, we are concerned that the connotation of the word "critical" may lead users of the financial statements to misinterpret the purpose of the disclosure of such matters.

**11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

Please see our response to question 10.

**12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statements users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?**

The definition of critical audit matters should be clearer. As proposed, it could lead to an inconsistency in the practice of critical audit matter reporting.

**13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

We believe an audit under current PCAOB standards would address the critical audit matters and risks. Additional time would likely be required and such time would be focused on developing appropriate audit report language, coordinating with management on such language, and perhaps increasing legal counsel time and expense. In addition this time would likely be required near the end of the audit, and could compete or interfere with other critical audit steps performed to complete the audit.

**14. Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?**

We find the definition of critical audit matters unclear and do not agree that the reporting of critical audit matters will add value for the users of the financial statements.

**15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

We do not support the inclusion of audit procedures performed in an auditor's report, as we do not believe it would add value to the users of the financial statements and it could result in lengthy descriptions that are difficult to evaluate. The auditor's opinion should provide sufficient information about whether the auditor was able to perform adequate audit procedures related to the matter and obtain sufficient appropriate audit evidence

**16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

The factors are generally useful and informative; however, we encourage further development and expansion of examples to assist auditors in identifying critical audit matters, if the PCAOB requires disclosure of such matters.

**17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

We do not note any other necessary factors, unless additional factors would be required to enhance consistency with the standards of other standard setters.

**18. Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?**

The requirement is sufficiently clear and the illustrative examples are generally useful.

**19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?**

We encourage the PCAOB to consider how the documentation requirements for critical audit matters could be addressed under current auditing standards documentation requirements for auditor's audit documentation.

**20. Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?**

Please see our response to question 19.

**21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?**

In addition to the cost related to the additional time requirements discussed in our response to question 13 above, there would be additional costs associated with documenting the audit matters. These additional costs would likely be more significant to the audit costs related to smaller entities.

**22. What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?**

Please see our response to question 21.

**23. How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?**

We expect the audit fees to vary by audit.

**24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?**

If reported, we believe that only critical audit matters related to the current fiscal period should be communicated, unless they were also relevant to the prior fiscal period.

**25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?**

The illustrative examples are generally useful and informative.

**26. What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.**

If the proposal is implemented, we are concerned about consistency between audit reports of critical audit matters and believe that the standard should be further developed to help auditors in their determination of the significance of audit matters. Tools such as threshold determinations would be useful, and we encourage further development and expansion of examples to assist auditors in their identification of critical audit matters and the consistent reporting of these matters.

**27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**

We believe that in practice, such requirements will result in entities reporting the substance of critical audit matters in the notes to the financial statements, to the extent they are not already included, and the inclusion of this information in the audit report would add little value to the users. We are also concerned that the incentives for consistent reporting of critical audit matters across entities would likely lead to “boilerplate” reporting language for each type of critical audit matter. Further, we believe that such a requirement may increase the risk of blurring the roles between entity management and the auditor, as it requires the auditor to comment on elements that are currently management’s responsibility to discuss or disclose under current accounting standards.

**28. What effect, if any, would the auditor’s communication of critical audit matters under the proposed auditor reporting standard have on an auditor’s potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor’s potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor’s potential liability in private litigation?**

We do not offer a response to this question.

**29. Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?**

We believe that it would be appropriate for the PCAOB to include such a description.

**30. Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?**

We believe that the retention of the Emphasis of Matter paragraphs is valuable. These paragraphs provide additional information not included elsewhere in the auditor's report. This would also be consistent with the other standard setters' approaches.

**31. Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?**

We believe that the inclusion of Emphasis of Matter paragraphs should be left to the auditor's discretion.

**32. Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?**

The proposed examples are generally sufficient, unless additional examples would be required to enhance consistency with the standards of other standard setters.

**33. Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?**

Please see our responses to the previous questions.

**34. What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ?**

Please see our responses to questions 21, 22, and 23.

**35. Are the proposed auditor reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?**

We support consistency in auditor reports for all entities as variations would be confusing to the users of the financial statements.

**36. Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report critical audit matters appropriate for audits of brokers and dealers? Why or why not?**

Please see our response to question 35.

**37. Since a broker or dealer may elect to file with the SEC a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?**

Please see our response to question 35.

**38. Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditor's reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?**

Please see our response to question 35.

**39. Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?**

Please see our response to question 35.

**40. Should audits of certain companies be exempted from being required to communicate critical audit matters in the auditor's report? Why or why not?**

Please see our response to question 35.

**41. Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?**

We ask the PCAOB to be consistent with the effective dates of other standard-setting bodies' new requirements regarding auditor reporting.

**42. Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

We do not support a delayed compliance date as we believe it would cause confusion for users of the financial statements.

**Appendix 6**

**1. Is the scope of the proposed other information standard clear and appropriate? Why or why not? Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?**

We encourage development of examples of quantitative and qualitative financial information that may be included in other information to assist auditors in their evaluation of other information.

**2. Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?**

We do not support the application of the proposed other information standard to information incorporated by reference. Such information may be difficult for users to locate and may be subsequently modified after the date of the auditor's report.

**3. Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?**

We agree that it is appropriate to apply the proposed standard to amended reports in relation to the other information previously reviewed.

**4. Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are these practical issues with applying the proposed other information standard to the other entity's audited financial statements?**

We do not offer a response to this question.

**5. Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?**

We believe that the requirements should be further developed to help the auditor determine the significance of its findings and the manner in which these findings should be presented in the report. Tools such as threshold determinations and a description of qualitative and quantitative factors would be useful.

**6. Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?**

While we agree that expanding the auditor's responsibility for other information has merit, we are concerned about the requirement in paragraph 3 of the proposed standard regarding material misstatements of fact. We believe that the identification of any material misstatements of fact should be based solely on the procedures in paragraph 4 of the proposed standard. However, we are concerned that the current proposed standard is unclear as to whether the auditor would be required to identify material misstatements of fact, beyond those that would be identified through performing the procedures described in paragraph 4 of the proposed standard. We believe it is important that this requirement be clearly stated to avoid confusion in its application

**7. Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?**

It is unclear whether the evaluation of the other information would increase the quality of information available, but it could provide users with greater clarity about the auditor's responsibilities with respect to such information and greater confidence in the quality of the information.

**8. Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information? Would applying the definition represent a change to the materiality considerations auditors currently use under AU sec. 550?**

Please see our response to question 5.

**9. Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?**

We are concerned that the proposed procedures may not provide sufficient detail for auditors to be consistent in their evaluation of other information. We encourage the Board to develop examples of quantitative and qualitative information to aid the auditor's evaluation of the other information

**10. Is it understood which amounts in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?**

Please see our response to question 1.

**11. Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?**

We do not offer a response to this question.

**12. Are the proposed auditor responses under paragraph 5 appropriate when the auditor indentifies a potential material inconsistency, a potential material misstatement of fact, or both? If not, why not?**

We agree with the proposed responses.

**13. Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?**

The costs would likely vary by the nature of the potential material inconsistency or material misstatement of fact.

**14. Are the proposed auditor's responses under paragraph 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

We agree with the proposed responses.

**15. Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or**

**both? Under what circumstances would such a report be appropriate or not appropriate?**

Please see our response to question 14.

**16. Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

We agree with the proposed responses.

**17. Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed other information standard, the auditor determines that there is a potential misstatement in the financial statements? Why or why not?**

We agree with the proposed responses.

**18. Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?**

We believe that paragraphs 13 and 14 provide adequate illustrative language.

**19. Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples?**

We do not support a requirement for an auditor to identify information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against, as we question what value this would add for users of the financial statements.

**20. What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?**

The additional costs will likely vary depending on the nature of the material inconsistency or material misstatement.

**21. Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?**

We believe the proposed reporting is appropriate.

**22. Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?**

If management has revised the material inconsistency or material misstatement of fact in other information prior to the issuance of the auditor's report, a practical consideration may be evaluation of the cause of the material inconsistency or material misstatement of fact. If the inconsistency or misstatement was caused by a control deficiency, the auditor should consider following the same process of evaluation as used for those deficiencies that cause material misstatements in the financial statements. The auditor may also consider whether it was an intentional act and could reflect on the integrity of management.

**23. Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?**

The responsibilities are clear and follow logically from the requirements in the standards. However, from an implementation perspective, the role of ensuring that the predecessor auditor fulfills the responsibilities would most likely fall on the successor auditor.

**24. What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability?**

We do not offer a response to this question.

**25. Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11, of the Securities Act? Would it affect an auditor's potential liability under state law?**

We do not offer a response to this question.

**26. Are the proposed amendments to PCAOB standards, as related to the proposed other information standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed other information standard that the Board should consider?**

We feel the proposed amendments are generally appropriate, unless additional amendments would be required to be consistent with the standards of other standard setters.

**27. In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?**

We believe the decision to include such statements should be left to the discretion of the auditor.

**28. Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?**

We support the proposed requirements being applied consistently.

**29. Is the Board's effective date appropriate for the proposed other information standard? Why or why not?**

We ask the PCAOB to be consistent with the effective dates of other standard-setting bodies' new requirements regarding auditor reporting.

**30. Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

We support a uniform date for compliance with the proposed other information standard and amendments to avoid confusion.

**31. Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?**

We do not support extending the application of the proposed standard.

**32. Are there some elements of the proposed other information standard that the Board should consider requiring the auditor to perform related to other information contained in filings under the Securities Act, such as the auditor's responsibility to evaluate the other information? If so, which elements of the proposed other information standard should the Board consider including in the procedures currently required for Securities Act documents under AU sec. 711? If not, why not?**

Please see our response to question 31.

**33. What costs or other challenges should the Board consider when assessing whether to propose extending some elements of the proposed other information standard to other information contained in documents filed under the Securities Act?**

We do not offer a response to this question.

UNS Energy Corp.

December 6, 2013

Office of the Secretary
PCAOB
1666 K Street, NW
Washington, D.C. 20006-2803

To Whom It May Concern:

UNS Energy Corporation is a utility services holding company engaged, through its primary subsidiaries, in the electric generation and energy delivery business primarily in the state of Arizona. Our largest operating subsidiary, Tucson Electric Power Company, which is a regulated public utility, represents more than 80% of our consolidated assets and 70% of our net income. Both UNS Energy and Tucson Electric Power are filers with the Securities and Exchange Commission ("SEC"). UNS Energy is a Large Accelerated Filer pursuant to Rule 12b-2 of the Exchange Act.

This letter is in response to the two proposed reporting standards issued for comment on August 13, 2013 in PCAOB Release No. 2013-005 (the "PCAOB Release"): *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses and Unqualified Opinion* ("Proposed Auditor Reporting Standard") and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* ("The Proposed Other Information Standard").

Respectfully, this letter provides general feedback of the proposed standards. An attachment to this letter responds specifically to certain questions asked by the PCAOB in Appendices 5 and 6 of the PCAOB Release.

We have several concerns with the Proposed Auditor Reporting Standard (as detailed in PCAOB Release Appendix 5). The SEC, in conjunction with the FASB, has historically developed rules and regulations regarding the required communications to be included in the financial statements for financial statement users to make investment decisions. The SEC has provided regulations on 'what' information needs to be disclosed. Importantly, these rules have allowed management to determine 'how' to communicate this information to best reflect the company's financial results and position. The auditor, with oversight by the Audit Committee, has ensured that the information complied with applicable disclosure rules and that the financial information was accurate. We believe the proposed standard would mark a significant shift in the regulatory framework by requiring an outside entity to communicate new information about a registrant's specific accounts, transactions and risks to financial statement users.

We believe the current framework, where a registrant's financial information is management's responsibility, continues to be valid. Communication of such information to financial statement users is likewise the responsibility of management. We believe the SEC, with the support of the FASB, should continue to serve as the sole regulator of the information provided to investors and that management should be the sole party responsible for communicating such information.

We believe the Proposed Auditor Reporting Standard and especially the provisions requiring Critical Audit Matters ("CAM") to be discussed within an auditor's report would:

i. Undermine the usefulness of the audit report and the Audit Committee's role of overseeing management and the auditor;

ii. Result in duplicative or irrelevant disclosure which would decrease the relevance of either the audit report or other disclosures within the financial statements;

iii. Decrease the comparability of audit reports between industries and among similar companies which may confuse users of the financial statements; and

iv. Significantly increase audit costs while providing little, if any, benefit to financial statement users.

The rationale for such beliefs is explained in our response to selected questions in the attachment.

We support clarifying the auditor's procedures and responsibility for other information contained in SEC filings within the audit report (as detailed in PCAOB Release Appendix 6). We do not support expanding the auditor's responsibility for testing or documenting the procedures over the other information as we don't believe the perceived benefits outweigh the costs. As described in the attached responses, we believe that the cost of compliance for this standard is expected to be high without comparable benefit to the financial statement users; that unintended consequences may result in delayed filings or may lead to registrants omitting informational content in the MD&A; and that implementation may be problematic as materiality cannot be easily applied to non-financial information such as customer counts or pipeline miles.

We appreciate this opportunity to provide comments on proposed standards and thank you in advance for your consideration of our comments in developing any final standards. If you would like to further discuss our comments, feel free to contact me directly.

Sincerely,

Frank P. Marino

**Attachment – UNS Energy responses to select questions from PCAOB Release No. 2013-005: *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards.***

---

**Additional Discussion Related to the Proposed Auditor Reporting Standard. (Appendix 5)**

***Question No. 5 - The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.***

Company Response - We believe this is neither necessary nor useful to be included in the auditor report because it has no bearing on the audit of the financial statements and could undermine the usefulness of other information included in the auditor's report. We believe that a registrant's Audit Committee should make a decision whether such information would be useful to its shareholders and to disclose such tenure information at its discretion in the annual Audit Committee report.

***Question No. 10 - Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?***

Company Response – We believe the auditor should not provide critical audit matters ("CAMs") in the audit report or elsewhere in the financial statements or annual report. We believe the role of the auditor is to attest that management's communication is correct in all material respects. We do not believe that communication of CAMs would be relevant or useful due to the following:

A. **It would undermine the usefulness of the audit report and the Audit Committee's role of overseeing management and the auditor.** Some users may interpret the auditor's communication of CAMs as limitations on the audit report or as the provision of a separate level of assurance. The auditor exercises judgment in determining whether the financial statements are fairly presented as a whole. Disclosure and discussion of CAMs may be interpreted as the auditor providing a piecemeal opinion and would not address all of the other factors the auditor considered relevant when forming the overall audit conclusion. As a result, the proposed audit report may provide investors with an incomplete or unbalanced picture of the audit. Critical aspects of the audit may be under emphasized as they do not meet the criteria of being a CAM. Likewise, CAMs may be over emphasized by users in making investment decisions.

Currently the Audit Committee, as part of the shareholder-elected Board of Directors, has the authority to oversee the audit and ensure the financial statements contain appropriate disclosure on behalf of shareholders. In its oversight role, the Audit Committee is already made aware of those items that would be considered CAMs under the proposed rule. We believe the Audit Committee is the appropriate body to evaluate these and other items of audit importance because the Audit Committee has in-depth knowledge of the Registrant's businesses, strategy and financial statements. The Audit Committee has the ability to ask questions and engage in dialogue with both management and the auditors regarding complex and judgmental audit areas that may be misinterpreted or inappropriately over or under emphasized without the appropriate context. **Bypassing the Audit Committee by disclosing CAMs directly to the shareholders will undermine the governance role of the Audit Committee.**

B. **It would result in duplicative or irrelevant disclosure which would decrease the relevance of either the audit report or other disclosures within the financial statements.** A description of significant accounting matters relevant for investing decisions, including critical management judgments, risks and uncertainties, accounting estimates and policies are already provided by management as required by US GAAP and SEC rulemaking. The form of these disclosures, including the level of detail and specificity is a matter of professional judgment. This judgment is best exercised by personnel most familiar with the risks and uncertainties of the business – management with oversight from the Audit Committee.

The auditor provides an attest service which includes the disclosures of management's estimates, judgments and accounting policies. We believe the disclosure of CAMs will provide new information to the investor that is not already contained in the financial statements including disclosure of additional forward looking information which may confuse users of the financial statements.

Matters for which the auditor has the most difficulty in obtaining sufficient appropriate evidence may not be relevant to users of the financial statements or may already be included in US GAAP or SEC disclosures. The proposed rule lists the following factors to take into account when determining whether an item would be considered a CAM:

a. *The degree of subjectivity involved in determining or applying audit procedures to address the matter or in evaluating the results of those procedures* – As further noted above, subjective and judgmental accounting areas are already provided elsewhere in the financial statements. Subjective or judgmental audit areas (i.e. sample size selection, methodology, audit coverage, etc) requires professional judgment and will likely vary between firms and individual audit partners. Investment decisions are based upon timely and accurate financial information; not the subjectivity of how that information was audited.

b. *The nature and extent of audit effort required to address the matter* - Audit effort does not always translate or signify relevance to users of the financial statements. For example if an IT application is found to have ineffective IT controls, it may require significant additional audit effort. However, risk to the financial statements can be mitigated by other audit procedures and discussion of such audit matters would not be relevant to users of the financial statements.

c. *The nature and amount of available relevant and reliable evidence regarding the matter or the degree of difficulty in obtaining such evidence* - Often this is disclosed as part of general GAAP requirements for estimates and uncertainties or in specific GAAP pronouncements (e.g., ASC 820 disclosures on fair value measurements with unobservable inputs). Investors expect auditors to conclude on their audit procedures based on relevant audit evidence. They are less likely to be concerned with the degree of difficulty in obtaining such information.

d. *The severity of control deficiencies identified relevant to the matter, if any* - Auditors currently disclose material weaknesses in internal control. Additional discussions of control failures, that may have been remediated, are not relevant to users and could serve to confuse users and over-emphasize their importance if disclosed.

e. *The degree to which the results of audit procedures to address the matter resulted in changes in the auditor's risk assessments, including risks that were not identified previously, or required changes to planned audit procedures, if any* – Any significant new financial statement risk or business risk should already be disclosed as part of SEC Rule Nos. 229.305 and 229.904. Whether these risks were identified by management, the Audit Committee or the auditor is not relevant to financial statement users.

f. *The nature and significance, quantitatively or qualitatively, of corrected and accumulated uncorrected misstatements related to the matter, if any* - Corrected errors are included in the financial statement balances presented to investors. The notes to the financial statements also explain to the user the nature of the corrections. For immaterial uncorrected errors there is not, by definition, "a substantial likelihood that the ...fact would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available" (Excerpt from PCAOB AS No. 14). More prominence of misstatements whether corrected or uncorrected could be misinterpreted by investors and given more importance by virtue of their mention in the auditor report. Such information may not be relevant to an investor's understanding of the registrant, its business or its financial statements.

g. *The extent of specialized skill or knowledge needed to apply audit procedures to address the matter or evaluate the results of those procedures, if any; and the nature of consultations outside the engagement team regarding the matter, if any* - The nature of external resources employed in an audit are often a function of audit staffing and the judgment of the audit partner. Many audit areas commonly use outside experts, including lawyers, actuaries and valuation specialists for common and frequently occurring transactions that may be over-emphasized as a CAM under the proposed rules and provide little, if any, additional benefit to users of financial statements.

C. **It would decrease the comparability of audit reports between industries and among similar companies which may confuse users of the financial statements.** As noted above, the auditor's determination of what is considered to be a CAM will involve a considerable amount of professional judgment. Therefore, the comparability between audit reports for similar companies or industries would likely vary greatly.

There is potential for audit firms to either:

a. Include more CAMs than was the PCAOB's intention in order to avoid potential inspection findings. This could result in auditors producing voluminous audit reports, which would diminish their usefulness and make comparability of audit reports challenging.

b. Alternatively, to ensure uniformity in practice and quality control, CAMs could simply be reduced to boilerplate language, resulting in additional communication of irrelevant information to the users of financial statements.

c. Additionally, investor decisions should not be driven by subjective judgments made by an auditor.

Moreover, the inclusion of CAMs for only the current year, while the financial statements present three years, would require the user to review the two previous sets of financial statements in order to obtain a full understanding of the CAMs.

***Question No. 11 - What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?***

Company Response - We believe that there could be several unintended consequences including:

*A.* **Undue emphasis** – Reported matters that may be necessary to ensure an audit addressed complex areas of accounting may not require emphasis to a reader because the existing accounting disclosures provide an adequate description of the accounting. Users of financial statements may believe that such emphasis was necessary because of lack of judgment by management, misapplication of policy or some other matter and give the reader an incorrect and perhaps negative impression of the company or its management.

*B.* **Misunderstanding** – There may be a misunderstanding on the part of users of the financial statements about the information reported by the audit firm and its relevance to a registrant's ongoing operations or financial condition.

*C.* **Information Overload** - Each identified CAM has the opportunity to add several paragraphs to the auditor's report while providing little, if any, additional value to the user of the financial statements. The reader would bear the risk of information overload and be distracted from reading the notes to the financial statements or other pertinent disclosures that the management of a company deems important.

D. **Auditor Judgment** – As discussed earlier, the auditor's determination of what is considered to be a CAM will involve a considerable amount of professional judgment. Therefore, there is the potential for audit firms to either:

   a. Include more CAMs rather than less, in order to avoid having their judgment on what is considered a CAM second guessed. This could result in auditors producing voluminous audit reports, which could potentially confuse users regarding the opinion being given and make comparability of audit reports challenging.

   b. Or, to ensure uniformity in practice and quality control, CAMs could simply be reduced to boilerplate language, resulting in the additional communication of irrelevant information to the user.

E. **Release of Competitive Information** – Depending on the nature of the CAM, competitively confidential information may be discussed. When dealing with critical accounting estimates, pertinent details leading to corroboration of the audit evidence may reveal information that is not a significant driver of the registrant's business but, if disclosed, may have pertinent "trade" implications that could be a detriment to the registrant.

***Question No. 12 - Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?***

Company Response - We believe the application of the definition to be highly subjective by an audit team and may not be consistently applied by another audit team or independent firm. As such, two companies in the same industry may have similar accounting issues in which one auditor highlights a

CAM which may not be highlighted within the industry competitor's audit report leading to confusion when comparing such companies to make an investment decision.

***Question No. 13 - Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?***

Company Response - We believe that the additional time incurred regarding CAMs will have an effect on the quality of the audits. For those areas identified as a CAM, we believe an extensive amount of additional time would be incurred to assist the auditor with their understanding in order for specific disclosures to be written by the auditor. As such, the audit over these matters should improve the quality. We believe however that the additional time to focus on particular CAMs could detract from the amount of time and effort applied to other audit areas which would be a detriment to the quality of the audit, especially if SEC current reporting deadlines are not extended to compensate for the increased reporting responsibilities.

***Question No. 15 - Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?***

Company Response – As described above, although the information may be informative, it is not clear how the information would be useful to the investor. The notes to the financial statements already include information describing a company's critical accounting policies and its complexities. Management's discussion and analysis likewise discusses critical accounting estimates, which we believe many of the CAMs will also address. The description of the CAM may specifically discuss audit procedures performed and how a matter was resolved to the auditor's satisfaction but the only benefit this provides the investor is comfort that the auditor performed the necessary procedures to corroborate the matter. Investors already expect this diligence under already prescribed auditing standards and as such would not benefit "hearing from the auditor" that the auditor "did its job" with respect to the complex accounting matter.

***Question No. 21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?***

Company Response – See response to Question No. 22 below.

***Question No. 22 - What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?***

Company Response – The additional costs that will be incurred and other considerations consist of:

A. Increase Audit Fees – Incremental time will be incurred by the audit firm to comply with the Proposed Auditor Reporting Standard. This incremental time could be significant depending on the identified CAMs. We would anticipate that partner and senior engagement personnel will be most used in this effort, causing incremental hours at the highest hourly rates.

B. Increased Audit Committee and Management Time – Incremental time will be incurred discussing CAMs with the auditor, evaluating the corroborative details gathered by the auditor and understanding the rationale for an auditor's CAM conclusion. This time could be extensive depending on the type and number of CAMs identified by the auditor.

C. Investor Queries and Potential Lawsuits – Depending on the nature of the CAM, investors may seek additional information from the registrant. If questions arise on the application of audit procedures, registrant personnel may be unable to satisfy the investor's question. The auditor also will not respond directly to investor inquiries about a particular audit engagement. In addition, unwarranted lawsuits could arise from the disclosure related to a CAM.

D. Delays in Reporting – Over the past several years Accelerated Filers and their auditors have been faced with new accounting pronouncements, XBRL reporting, and additional efforts associated with compliance of PCAOB standards resulting in extremely tight SEC reporting deadlines. The additional efforts required to comply with the Proposed Auditors Reporting Standard would create even further strain on both registrant and auditor resources potentially resulting in late filed documents, which could have a negative impact on the registrant.

***Question No. 23 - How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?***

Company Response – We believe audit fees will increase significantly and a registrant's ability to provide the auditor with assistance from the internal auditor will be reduced. We expect that documentation procedures will be expanded for all areas that the auditor believes a CAM may arise because the auditor will need to assess each potential CAM for disclosure in order to comply with the standard. Once a CAM is identified for disclosure, the auditor will continue to monitor in future years as long as such audit matters continue. In addition, we expect that the time required for concluding on CAMs and writing the disclosure will not come from junior level employees of the accounting firm but more experienced senior managers and partners at the highest level of the engagement team, at higher hourly rates.

***Comment No. 41 - Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?***

Company Response - The proposed standard is scheduled to be effective beginning January 1, 2016, a time during which registrants and their auditors will be busy preparing for the impending adoption of the new lease and revenue recognition guidance. The compounding effect of all of these new requirements could increase the likelihood of misstatements in the financial statements. We would request that any change to the audit opinion be delayed so as to not coincide with the adoption of these standards.

**Appendix 6 - Additional Discussion Related to the Proposed Other Information Standard**

***Question No. 2 - Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?***

Company Response – We believe the proposed requirement to apply the other information standard to information incorporated by reference that will be filed with the SEC following the filing of the Form 10-K would be overly burdensome and costly for registrants. Amending a Form 10-K and the auditor's opinion for information subsequently filed may require the auditor to update their report issuance procedures, subsequent event inquiries, independence and other aspects of their field work to address the new information incorporated by reference which would result in additional audit fees borne by the registrant. In addition, the length of time the auditor may require to complete such procedures may be extensive depending on the nature of the required procedures.

An amended Form 10-K could also cause undue investor concern and be negatively viewed by public markets and mistaken for a "restatement" if the investor does not properly consider the new information in the appropriate context.

***Question No. 3. Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?***

Company Response – If adopted, we believe it may be appropriate to apply the proposed other information standard to amended annual reports. If disclosure changes to an amended annual report would affect previous disclosures made by the auditor in their audit opinion, it may be appropriate for the auditor to reissue or update their opinion within the amended annual report. This decision should be made by the auditor and not required by the standard since auditor consent would be required in the amended Form 10-K.

In the event the auditor report were reissued or updated, we believe significant additional costs would be incurred by the registrant depending on the procedures that the auditor would be required to perform to reissue the report. The magnitude of such additional costs would be determined based on the nature of the changes to the annual report, the nature and extent of other information added, whether any new CAMs were identified or changes to previously reported information. Additional internal costs and time would also be incurred by the registrant and its audit committee to understand and facilitate the auditor's procedures and updated disclosures.

***Question No. 6 - Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?***

Company Response – We do not support expanding the auditor's responsibility for testing or documenting the procedures over the other information as we do not believe the perceived benefits would outweigh the costs, unintended consequences could arise and the proposed standard could be difficult to implement. There are several factors to consider:

A. Audit scope and resulting cost has expanded over the past 10 years due to SOX and incremental standard setting in US GAAP. The proposed audit standard will continue that expansion. It is not clear that the perceived benefits, if any, would outweigh the cost.

   a. Auditors already review information accompanying audited financial statements to ensure consistency with the statements. Expanded assurance would not provide additional useful information and may provide a distraction to procedures performed over information contained in the financial statements.

   b. In those circumstances in which additional assurance is desired (i.e. upon a new security or debt issuance) auditors provide comfort letters to underwriters to provide additional assurance over other information.

B. The cost of compliance is expected to be high.

   a. In order to timely test the other information contained in the financial statements, auditors may need to expand their testing of a company's internal controls to include the other information. This will result in additional audit cost to the registrant.

   b. The requirement to evaluate qualitative statements in the other information (for example, having the "largest market share in the company's industry" as discussed on p. 235 of the proposed standard) will lead to an increase in audit costs and time spent complying with audit requests as information required to evaluate qualitative statements may not be as readily available or as objective as financial information.

C. Unintended consequences

   a. Given the additional work that would be required for auditors to review the other information, and additional time preparers would need to prepare audit support, filing dates may be delayed and may be more susceptible to missing deadlines.

   b. More stringent requirements on the auditors around other information may deter preparers from disclosing non-required, but informational content in the MD&A so as to avoid the requirement to furnish supporting information that would be difficult / time-consuming to evaluate. This could diminish the value to the shareholder of the MD&A disclosures.

D. Implementation issues

   a. The proposed standard states that auditors "would not be required to perform procedures to obtain additional evidence regarding other information not directly related to the financial statements that was not required to be obtained during the audit." Determining what information is "not directly related to the financial statements" may be subjective. If approved, more clarity is needed to remove subjectivity.

   b. Materiality cannot easily be applied to non-financial information such as customer counts or pipeline miles.

***Question No. 7 - Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?***

Company Response – We do not believe the quality of information available to investors and other financial statement users would increase as a result of additional auditor evaluation. By virtue of its inclusion, management has already determined that the information is relevant to investor understanding and the context such information is unlikely to change solely as a result of auditor evaluation. Investors expect management to be best qualified to explain such information and its relevance and importance to the business. As we discussed above, auditor "involvement" with this disclosure could actually reduce quality if it now has to be written from an "auditor's perspective". There is greater risk that information would be omitted if a registrant believes it will be overly costly for an auditor to perform a more in-depth analysis of management's assertion. It may also prove difficult for the auditor to develop the appropriate procedures to validate the information or determine materiality in the case of non-financial information.

We do not believe that such auditor evaluation would sufficiently contribute to greater confidence in the other information. Investors already expect registrants to provide accurate and insightful information in the MD&A. Investors understand that it is a current PCAOB requirement for the auditor to read the other information contained in the Form 10-K for material inconsistencies and material misstatements of fact when their audit report is included in the public filing. Accordingly investors would expect the Form 10-K to be free of material inconsistencies or misstatement since they have provided consent for the registrant to include their report in the Form 10-K.

***Question No. 29 - Is the Board's effective date appropriate for the proposed other information standard? Why or why not?***

Company Response - If adopted, the proposed standard is scheduled to be effective beginning January 1, 2016, a time during which registrants and their auditors will be busy preparing for the impending adoption of the new lease and revenue recognition guidance. The compounding effect of all of these new requirements could increase the likelihood of misstatements in the financial statements. We would request that any change to the audit opinion be delayed so as to not coincide with the adoption of these standards.

**Re: PCAOB Rulemaking Docket Matter No. 34; PCAOB Release No. 2013-005 – Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments**

Dear Members of the Public Company Accounting Oversight Board:

Vanguard appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (the "PCAOB") proposed auditing standards – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (together, the "Proposed Standards").

We appreciate the PCAOB's continued focus on the concerns of investors in relation to financial statements and the auditor's report, and we commend the PCAOB for seeking input from various stakeholders who participate in the audit and financial reporting process, including an issuer's management, independent auditors and investors. As discussed below, we support meaningful disclosures in an auditor's report that focus on matters of critical importance to investors and that the auditor is well-positioned to provide. Accordingly, we generally support those aspects of the Proposed Standards which would result in the meaningful disclosure of critical audit matters, the auditor's evaluation of financial information, and additional clarifying language in the auditor's report.

As both an *issuer* of hundreds of financial statements and as a *consumer* of financial information, we believe that Vanguard brings a special perspective to this area. Vanguard offers more than 180 U.S. mutual funds holding aggregate assets of approximately $2.4 trillion at October 31, 2013. Each of these mutual funds is registered with the Securities and Exchange Commission ("SEC") under the Investment Company Act of 1940, and their shares are registered with the SEC under the Securities Act of 1933. Investment companies, as issuers of securities, are required to file audited financial statements with the SEC and mail annual and semi-annual reports to their shareholders within designated time frames under SEC rules. In addition, in their capacities as investors in the securities markets, investment companies review and analyze companies' financial statements that are filed with the SEC when making investment decisions on behalf of their investors.

Vanguard supports meaningful disclosure of critical audit matters in the auditor's report

We generally support the idea of auditors communicating information about critical audit matters in the auditor's report *but only if applicable*. For example, disclosure of critical audit matters could be useful to investors when reviewing complex financial statements, where the identification of critical matters would allow investors to focus their attention on these areas in the financial statements and the accompanying notes. However, to be useful to investors, disclosure of critical audit matters should only be used to emphasize areas of the audit that were objectively difficult, subjective, or complex, and not 'over-used' to call out non-critical matters. In that regard, we note that the Proposed Standards state that in most audits the auditors would determine that there are in fact critical audit matters. We strongly recommend that the PCAOB revise the Proposed Standards to avoid suggesting that auditors essentially be required to identify and disclose critical audit matters. We believe that any sort of *de facto* requirement to include critical audit matters in the auditor's report could lessen the impact of such disclosures, inevitably resulting in unnecessary boilerplate language that could detract from, rather than enhance, a better understanding of the financial statements and the audit process. More, rather than better, runs the risk of not serving the best interests of investors.

To this end, we agree with comments submitted by the Independent Directors' Council and the Investment Company Institute on December 11, 2013 (the "IDC/ICI Letter") to the effect that requiring disclosure of critical audit matters in every investment company audit report generally would not result in meaningful disclosure for investors and therefore should not be required. In this regard we encourage the PCAOB to acknowledge that financial reporting for mutual funds is inherently less complex than for operating companies, principally because a fund's activities are limited primarily to issuing and redeeming capital shares and investing in securities. Further, as acknowledged by the PCAOB, disclosures of critical audit matters would necessarily increase audit costs as auditors, particularly more senior members of the audit team, would be required to spend more time documenting and reviewing critical audit matters. For fund complexes like Vanguard, these increased costs would be multiplied by the number of funds and their corresponding audits, with the additional costs ultimately passed on to investors in the form of higher operating costs - *i.e.*, fund expense ratios. In our view, any change that would impose additional costs on investors without meaningful benefits for investors is not in investors' best interests.

Auditors should only be required to evaluate financial information

While management is responsible for preparing the financial statements and other financial information, the audit process provides auditors information about a company's overall financial condition. During the course of the audit process, auditors may gain unique and relevant insight into the financial condition of a company that auditors could use to review financial information about the company outside of the financial statements. Accordingly, we support requiring auditors to evaluate *financial* information contained in an issuer's annual report that could reasonably be expected to relate to the financial statements. However, due to an auditor's role and specialized expertise, we recommend that the PCAOB limit an auditor's evaluation of "other information" to other *financial* information that could reasonably be expected to relate to an issuer's financial statements. We also encourage the PCAOB to provide additional guidance and specificity to auditors with respect to the particular types of financial information they should be evaluating.

As accountants and auditors of financial statements, auditors have unique insight into a company's financial condition; however auditors do not necessarily have either unique insight or expertise in evaluating non-financial information about a company. An audit requires the auditor to express an opinion on an issuer's financial statements by examining supporting evidence, including the issuer's accounting records, and considering the issuer's internal control over financial reporting. Based on the nature of audit work, auditors are not well-positioned to evaluate non-financial information in an annual report, and requiring them to evaluate such non-financial information would be requiring something outside the scope of their expertise. We do not believe it would benefit investors to have auditors review non-financial information; in fact, such a review could be misleading in suggesting that an auditor agreed with information that it was not positioned to properly evaluate.

Additional clarifying information in the auditor's report

Lastly, we support adding language to the auditor's report relating to an auditor's independence. We believe that this information could enhance an investor's understanding of the auditor's role. With respect to tenure, we would not object to adding information about an auditor's tenure; however we agree with the IDC/ICI Letter and recommend that the PCAOB clarify that, for investment companies and for the reasons cited in the letter, this disclosure requirement applies at the fund complex level. We also support enhancing certain standardized language relating to the auditor's responsibility with respect to the audit. We recognize that some investors may not fully understand what an audit represents or the related auditor responsibilities and that adding clarifying language could meaningfully increase financial statement users' understanding and knowledge of the audit process and the auditor's report.

* * * * *

Vanguard appreciates the opportunity to provide these comments on the PCAOB's Proposed Standards. If you have any questions about Vanguard's comments or would like additional information, please contact Toai Chin, Director of Fund Accounting Policy, at 610-503-3043.

Sincerely,

/s/ Glenn W. Reed

**Re: PCAOB Rulemaking Docket Matter No. 034**

Dear Mr. Secretary:

Verizon Communications Inc. ("Verizon") appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or the "Board") proposed auditing standard on The Auditor's Report on the Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to the PCAOB Standards (together the "proposal").

We support the Board's goal to provide investors with the information necessary to make informed decisions; however, we believe that management, not a company's auditors, should be the primary source for providing investors with information about the company's business and operational risks. While we understand that some modifications to the auditor's report may be desirable, we believe that the Board should carefully assess whether aspects of the current proposal will blur the line between the unique responsibilities of management and auditors. Moreover, we believe certain changes could negatively impact audit quality in ways that would be expensive, and could lead to investor confusion, disagreements between preparers and auditors, and inhibit open communication between management, the audit committee and auditors.

***Critical Audit Matters***

We believe the subjective nature of the proposal's criteria for identifying critical audit matters may lead to several potential issues in practice. Without a defined structure or precedent concerning the methods for determining critical audit matters, we foresee potential differences in opinion between auditors and preparers as to the number of critical audit matters, the wording used to describe them and their significance. We are concerned that the resulting discussions between these parties to indentify critical audit matters under this proposal may ultimately lead to a reduction in the quality of the overall audit process in order to complete the auditor's report given the filing time restrictions. We also foresee situations where companies with similar audit issues receive substantially different audit reports. This could include identifying different critical audit matters or identifying the same critical audit matters with different descriptions. While some investors have indicated that this situation is not problematic for them (as they are used to reviewing differing Management's Discussion & Analyses), other investors may wrongly conclude that significant differences exist between the companies and make invalid investment decisions.

In addition to the high level of subjectivity in the current proposal, we believe there is potential for duplication of information. We are concerned that critical audit matters focusing on the background of the matter rather than the audit procedures used to address the matter create the potential for duplication. For instance, we believe the examples provided in the proposal include redundancies with Item 303 of Regulation S-K, which requires management to identify and discuss critical estimates that are used in critical accounting estimates and policies. If critical audit matters are to be included in the auditor's report, the report should focus on audit procedures and reference to the background information within the financial statements, management's discussion and analyses, or other information.

Another unintended consequence of the proposal relates to the possibility for confusion by the investor or user of the audit report. The auditor will identify, describe and refer to the relevant financial statement accounts and disclosures for each critical audit matter; however, no conclusion or resolution is communicated for each matter. While we do agree that communication of a conclusion for each critical audit matter may lead to a piecemeal opinion, we anticipate that investors will have trouble connecting the critical audit matters to the "pass or fail" nature of the audit opinion. If critical audit matters are included in the auditor's report, the report should indicate these matters did or did not cause an audit finding or deficiency. In addition, we believe there is ambiguity in the current proposal concerning disclosures related to the audit matters not considered critical. If the auditor determines a matter not to be a critical audit matter in accordance with the proposal, then the additional disclosure should not be warranted. Eliminating this requirement will ultimately benefit investors as they will be relieved of the burden of sorting through extraneous levels of reporting. Finally, if investors have questions or request clarification on descriptions of critical audit matters, preparers will be put in the position of answering for the auditor which further blurs the role of preparer and auditor.

***Other Information Outside of the Financial Statements***

We recommend the Board limit the proposal as it relates to other information to identifying material inconsistencies with financial statement information that is included as part of a company's filing. Auditors currently have the responsibility to read non-financial statement information in public filings to ensure such information is materially consistent with the audited financial statements. The additional auditor requirements to provide attestation that other information falling outside the financial statements, such as management's discussion and analysis or other information incorporated by reference, is free from material misstatements of fact could be unreasonably burdensome. We are concerned that requiring these additional procedures will add significant cost with little countervailing benefits for investors, as the expertise of auditors may not extend to information beyond the financial statements. We believe an audit over areas that are not based on authoritative accounting requirements would create a costly, time intensive process for the auditors and preparers, and would ultimately make timely reporting more difficult. In addition, imposing this additional requirement may actually have the unintended effect of causing companies to reduce the financial information they include in their MD&A.

***Other Auditor Report Proposed Changes***

We do not oppose the proposed change to provide investors with information about the auditor's independence and tenure, although we do not necessarily believe communicating this information will enhance an investor's understanding of a company. The name of the current auditor's report includes the word "independent", which we believe is sufficient for investors to understand the auditor's obligations related to independence.

We commend the Board's efforts to enhance the communications to investors regarding audit information; however, we strongly believe there are significant unintended consequences and implementation concerns with the current proposal.

Thank you for the opportunity to comment on this proposal.

Sincerely,

Monty Garrett

**Subject: Docket 034 : Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments**

Dear Mr. Chairman and Members of the Board:

Thank you for the opportunity to comment. Your retention of the "pass/fail" model is appropriate in my opinion. Attempting to install some sort of qualitative grading would only result in endless unwinnable arguments and little additional information, likely more confusion, for investors, energy better spent in other existing forums debating proper reporting.

The current proposal represents much work and energy for you and others. The proposal is a big step for which I commend you. You have no real choice. Your review results and the 2008 financial crisis are strong evidence problems exist in audits, probably more than can be cured by only this current proposal.

The results of PCAOB reviews of audits have been very helpful, but troubling. The database of your results is building. It is tending to show much effort is necessary to push private auditors to higher performance standards. You have now looked at thousands of audits with far too many conclusions saying "the work does not support the audit conclusions."

Regarding the 2008 financial crisis, mentioned above, I still shake my head in amazement that this situation was undetected and misreported under long existing requirements. It happened on the heels of many clean audit reports on financial statements and internal controls, issued up to immediately before the insolvencies, bailouts and forced mergers. The audit firms are likely not guilty of intentional complicity; other parties were responsible for creating the problems. However, the problems were auditor discoverable accounting and reporting problems long before they became one of history's largest financial crises. Auditors are supposed to discover problems like these.

You are constrained to some extent by coordination with your international counterparts; but you now have some temporary comfort from economic measures to restore confidence which hopefully dampens the pressure that historically has caused aggressive accounting and financial fraud. I hope it works and gives you the time you need.

In the end, probably after the next crisis, other major changes may be required. I have said before, seven things need to be fixed to provide the base of good audits. Among them are firm organization, capitalization and independence. I think I am right! Much smarter people have other ideas. The United States Treasury Advisory Committee offered a long report of suggestions, post Enron but pre 2008 financial crisis.

But, the next crisis will come. I do not think changes are yet made that make the audit firms effective warning systems for investor protection which they should be. Audit firm capital and management attention is more often, too often, spent building other service lines.

Let me then comment on components of your proposals with which I, respectfully, do not entirely agree: 1) the communication of critical audit matters; 2) a statement of the year the auditor began serving consecutively as the company's auditor; and 3) the city and state from which the auditor's report has been issued.

I know you are far down the road considering the proposals but you should recognize that misunderstandings may result.

All agree the new requirements will increase audit costs. If that is what it takes to get to the job done, it is unfortunate but necessary. The cost as usual is due to the few business managers and auditors who cause the problems, not the vast majority who consistently do a good job. Penalties for this misbehavior are far too light for the guilty, making the rest of the cost fall on the innocent.

**Communication of Critical Audit Matters**

This idea sounds better than reality, in my opinion.

The definition of "critical audit matters" is difficult so you must expect some evolutionary development, during which it may be premature to start listing things in the audit report. You attempt some definition using the words ***difficult***, ***subjective*** and ***complex***--- a big box to me, but not to some. You identify them as those that may have been discussed in certain audit documentation.

You have proposed a very good, robust documentation requirement for auditor consideration of Critical Audit Matters. If such documentation is not now taking place, your proposal for internal documentation is good and should be required.

Concurrently, I must also conclude that investors should accept some responsibility for their own knowledge and investigation of business risks relative to their own risk appetite, including that their auditors do not find everything. Investors will rightfully believe any list of critical matters is complete: "Nothing more is critical." They are wrong; but, it is a great argument in court.

The result of listing the critical audit matters will be, I think, an expansion of the infamous "expectation gap." This year I heard a high level management partner of a U. S. big 4 firm tell an audience that, "unlike Enron" the 2008 financial crisis was not an accounting problem. On the contrary, I think the accounting and controls in mortgage generation and for credit default swaps were awful, and had been for years. Assets were overstated; liabilities understated. There is a huge expectation gap as to what is a "critical audit matter" between the partner and me.

“Critical audit matters” go deeper than accounting matters. Other matters are often more difficult. For example, there are “tone at the top” issues and personal issues of key executives. These get much attention from auditors and audit committees and they should. But, I have to stop short of saying these matters should therefore be discussed in the audit report by anyone who has no legal right to subpoenas, sworn statements or protection from liability for public speculation.

**A Statement Containing the Year the Auditor Began Serving Consecutively**

Maybe auditor tenure would be appropriate information in the proxy statement, but not in the audit opinion. Keep the report confined to the central theme: the financial statements. Are they right or wrong?

Many big companies use the only audit firm they can use due to restrictive conflicts in a small group of suppliers, a fact more important for investors to know than “how long.”

If there is a concern with the auditor’s history, it should be with things that may compromise auditor objectivity. For example, if the auditor had previously served as a consultant to the company and is now subsequently the auditor, what was the nature of the prior relationship and how have they and the audit committee resolved the objectivity question? Further, for international companies or companies with significant, remote subsidiaries or divisions, to what extent is the auditor relying on the work on its own affiliated firms or other firms? But, even on these questions, if deemed important, the discussion should be in the proxy statement or annual report, not in the audit report.

I prefer not to clutter the important theme of financial statement trueness with other “clatter.”

**The City and State from which the Auditor's Report has been Issued**

Auditors’ reports disclose this now without your proposal. I would eliminate the disclosure. City and State of issuance is probably the least significant item in the auditors’ reports. Often, it is a little untrue, not a good way to append an audit opinion.

The effect of identifying a city or state for each audit report ranges from harmless to misleading. The range does not extend to “that’s good.”

There are many examples of audits performed by industry teams where the partner is from one city, the manager from another, staff from various locations, few of which are in the city or state of the audited company or the location of the issuing office. This dispersion of professional personnel, all transporting in for their work, can be an audit risk. It is the job of the audit committee and the audit firm to balance the risk with comfort of added expertise. If the PCAOB reviewers later disagree with the geographic staffing, they should say so.

In fact, there are other more important issues not disclosed that should be discussed somewhere, but not in an auditor’s report. What may be important to some investors is the disclosure of jurisdiction under which the audit contract must be interpreted. More often than not, that is not the state being identified in the audit report. It may also be important to know of any restrictions the audit contract places on where and how the company may pursue disputes and claims.

For smaller registered firms, I believe it is important for investors to consider remoteness of the auditor to the audited company. For large registered firms, I think it is important to consider which affiliated entity is taking responsibility for the work, regardless of who is doing the work and where. But, put this information in the proxy statement.

Otherwise, knowing the state of the issuing office, adds little to nothing. It would be better to eliminate the disclosure.

Thank you for your dedication.

Sincerely,

Gilbert F. Viets

Re: PCAOB Rulemaking Docket Matter No. 034; PCAOB Release No. 2013-005 dated August 13, 2013

Visa Inc. is a global payments technology company that connects consumers, businesses, financial institutions and governments around the world to fast, secure and reliable electronic payments. We provide our clients with payment processing platforms that encompass consumer credit, debit, prepaid and commercial payments.

We appreciate the opportunity to provide our comments to the Public Company Accounting Oversight Board on the two new auditing standards and other related amendments to PCAOB standards proposed in PCAOB Release No. 2013-005. We appreciate the Board's efforts and outreach in order to evaluate the effectiveness and relevance of the auditor's report for financial statement users. While we are amenable to certain proposed changes to the auditor's report, we respectfully request that the PCAOB strongly reconsider the proposals surrounding "Critical Audit Matters" and "Auditor's Responsibilities Regarding Other Information," for the reasons discussed below.

We strongly believe that management continues to be in the best position to communicate critical matters to investors given their intimate knowledge of and experience with the company and its business. We believe that the auditor's main responsibilities should remain focused on information grounded in authoritative accounting and reporting requirements. Proposed disclosures, such as those that may rise to the level of "Critical Audit Matters", should be addressed by existing GAAP or SOX accounting and disclosure requirements. Auditors are responsible for assessing the adequacy of these disclosures and should qualify their opinions if they believe such matters are not properly addressed. If current requirements are not providing an appropriate level of information for investors, then they should be revisited.

We do not believe that, in most cases, the proposed audit standards will improve the quality of information provided to financial statement users. We further believe that the standards will be inconsistently evaluated by different audit engagement teams and the resulting disclosure will be frequently misinterpreted by investors, potentially diminishing the content and quality of disclosures and the auditor's report.

The proposed standards are subject to differences in interpretation by individual audit engagement teams and investors. Given the diversity amongst audit engagement teams, divergences in the evaluation and application of the standards are inevitable. This likely will result in a fundamental lack of comparability between the auditor reports' discussion of "Critical Audit Matters", and confuse investors as they try to reconcile this discussion with the company's existing disclosures. The new disclosures can also misdirect investors to topics that are technically challenging for accountants and auditors, but are not as relevant to investors, while remaining silent on straight-forward matters, or topics deemed less critical, that are more material to the financial statements. The new disclosures may also be misleading without proper context and an understanding of the auditor's audit methodology. To manage these risks, the public accounting industry may adopt boilerplate language, which adds no further insight for the investor.

The scope of the "Auditor's Responsibilities Regarding Other Information" is also subject to differences in interpretation and application, and may provide false assurances for investors. For example, the forward-looking financial guidance disclosed in our Management's Discussion and Analysis is based on internal forecasts, only portions of which are shared with our auditor to inform current year valuation and other accrual decisions. This fact is not clear to a financial statement user, nor is the level of assurance an auditor is providing over this type of information.

Finally, we believe that both proposals surrounding "Critical Audit Matters" and "Auditor's Responsibilities Regarding Other Information" will significantly increase the cost and burden of audits and even prolong the audit process, all without yielding incremental value to investors. A prolonged audit process may also delay the availability of information to investors. We believe the risk of all these effects far outweigh the benefits that may result from implementing these changes.

We appreciate the opportunity to share our views with the Board. If you have any questions about our comments, please contact me at (650) 432-8165.

Sincerely,

/s/ James Hoffmeister

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Board Members and Staff:

We appreciate the opportunity to comment on PCAOB Release No. 2013-005 ("Exposure Draft") related to the auditor's report and to the auditor's responsibilities regarding other information. Washington Real Estate Investment Trust ("WRIT") is a publicly traded real estate investment trust with a diverse portfolio of properties in the Washington metro region.

We appreciate the thorough process the Public Company Accounting Oversight Board ("Board") has undertaken to evaluate the auditor's report and the auditor's responsibilities to make the report more informative, useful and relevant to financial statement users. However, we believe that key provisions in the Exposure Draft would add significant time and expense to audits without commensurate benefits. We discuss our specific objections and propose alternatives in our responses to the following questions provided in the Exposure Draft:

**Auditor's Report**

**6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

The existing other information standard requires the auditor to consider whether the other information is materially inconsistent with information in the financial statements. The exposure draft would enhance the auditor's responsibility with respect to other information by adding procedures for the auditor to perform and would require communication of the procedures performed and their results in the auditor's report.

We do not object to adding to the audit report a description of the extent and nature of the existing standard for auditor's review of other information. We prefer that any modifications to the auditor's report be clear and objective. We believe that standardized language provides value for financial statement users by minimizing the potential for misunderstanding and facilitating comparisons across companies.

We are opposed to any expansion of the scope of the auditor's responsibilities on other information. We believe that such an expansion requires a significant increase to the scope of an audit. In particular, the management discussion and analysis ("MD&A") section of the Form 10-K contains extensive disclosures, many of which contain prospective financial information. A requirement for the auditor to perform additional procedures on these disclosures would inevitably entail a substantial increase in the time, effort and expense needed to complete an audit. In addition to this added expense, this increase in audit scope could cause financial statement preparers to adapt the nature and extent of their MD&A disclosures to be readily reviewable by the auditor and to meet SEC filing timelines. We believe that the potential costs and unintended consequences of changing the auditing standards for other information clearly outweigh the potential benefits to financial statement users, and that the Board should simply require a description of the existing other information standard in the auditor's report. In addition, such information is reviewed by management as part of the financial statement disclosure process.

**Critical Audit Matters**

**10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

**11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

The Board is proposing that communication of critical audit matters be included in the auditor's report. The Board defines critical audit matters as matters that:

1. involved the most difficult, subjective, or complex auditor judgments;
2. posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or
3. posed the most difficulty to the auditor in forming the opinion on the financial statements.

The Exposure Draft indicates that critical audit matters would ordinarily include matters of such importance that they are:

1. documented in the engagement completion document, which summarizes the significant issues and findings from the audit;
2. reviewed by the engagement quality reviewer; or
3. communicated to the audit committee.

While we are supportive of the Board's objective to make the auditor's report more informative for the investor, we have several concerns about the proposed communication of critical audit matters.

First, the proposed content of the critical audit matters is largely duplicative of items that should already be covered in the "critical accounting estimates" section of the MD&A. We therefore do not believe that the addition of critical audit matters to the auditor's report would add significant new information for the users of the financial statements. On the contrary, duplicating elements of the quarterly filings in the auditor's report would likely make the financial statements more confusing for the users.

Further, we believe that over time the volume of items considered to be critical audit matters will expand. In an effort to be thorough, the auditor may end up including extensive lists of critical audit matters in their audit reports. We question the usefulness of multi-page auditor's reports for financial statement users, as any useful information in the auditor's report would be obscured by the potential volume of disclosures.

Finally, we are concerned that critical audit matters could be used by the plaintiff's bar in asserting claims against public companies. Issues and findings from the audit or matters reviewed by the engagement quality reviewer could be improperly construed as potential areas of misstatement. We firmly believe that communications between the auditor and a company's audit committee should remain confidential for matters that do not rise to the level of material weakness.

We propose that the auditor should be required to provide in the auditor's report a more thorough description of auditing procedures performed, without disclosure of critical audit matters. If the Board believes that financial statement users need more information about subjective or complex items in the financial statements, then this would be better addressed through improved standards for MD&A disclosures.

Thank you for the opportunity to comment on this Exposure Draft. If you have any questions or would like to discuss our comments and concerns, please contact Robert Fisher, WRIT's Director of Financial Reporting, at (301) 255-0825 or bfisher@writ.com.

Sincerely,

Robert W. Fisher

Washington, DC 20006-2803

Rulemaking Docket No. 34 - PCAOB Release No. 2013-005:
Proposed Auditing Standard - The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and The Related Auditor's Report

Dear Secretary:

My General Comments on the above-mentioned proposal and my responses to the questions asked in Appendix 6 follow:

**<u>General Comments</u>**

**Auditor's Report**

I support replacing AU 550 with a stronger and more robust auditing standard; however, for the reasons stated in this letter, I recommend reissuing the proposal after deleting the auditor's external reporting requirements, making appropriate revisions as a result of the comment process, conferring with legal counsel concerning potential auditor liabilities, and field testing it.

Investors and other financial statement users believe that when auditors read and evaluate other information, they are in reality auditing such other information - despite the auditor's report asserting "we did not audit the other information and do not express an opinion on the other information." Considering that the auditor's evaluation is based on relevant audit evidence gathered during the audit, it is not credible that investors and other financial statement users will conclude that the auditor's "evaluation" is not an audit service; under this proposal, auditors are in appearance and fact auditing other information.

Since the auditor is not required to detail exactly which other information has been "evaluated" and which has not, investors and other financial statement users will believe that the auditors corroborated <u>all</u> the other information in the annual report and perhaps give such other information more credibility than is warranted.

Further, in that the audit report does not specify which other information has been evaluated, but nevertheless reports on it, it is expected that auditors will increase their litigation exposure to third parties for any material inconsistency or misstatement of fact either <u>not</u> (a) found and revised, or (b) disclosed in the audit report. In addition, given that the auditor's "evaluation" must comply with professional standards; any failure to meet these standards would also be the basis for accounting malpractice and other potential claims.

If a significant number of registrants and their audit committees believe the benefits to their investors will clearly outweigh the additional costs of the audit; the Board should at that time consider meeting this perceived need by formulating a separate report from the auditor (possibly using a form of "negative assurance") on other information.

**Audit Guidance**

Certain of the audit guidance in Appendix 6 is helpful in applying the proposed standard and should be incorporated into the final standard as a footnote, a Note to the applicable paragraph, or in a separate Appendix to the standard.

Other suggested revisions and comments are described below.

**Responses to the Questions in Appendix 6**

**I have answered the following questions as though the Board will proceed with this proposal substantially as written; however, these responses are subject to my overall disagreement with the auditor reporting required by paragraphs 13 and 14.**

**1. Is the scope of the proposed other information standard clear and appropriate? Why or why not?**

Yes, the proposal is clear regarding other information included in the scope; however, for increased clarity, I suggest the following additions:

a. That the 1934 Act annual reports listed on page A6-6 ("annual reports filed on Forms 10-K, 20-F, 40-F, and N-CSR, among others") be included as examples in the final standard.

b. That the Note to paragraph 1 (which states, "information incorporated by reference … that is available to the auditor prior to the issuance of the auditor's report") specifically mention the incorporation by reference of the annual report to security holders (the "glossy").

c. That the second sentence of footnote 4 be amended as follows:

   When the company's amended annual report contains ~~(1)~~ revisions to amounts or disclosures in the previously issued audited financial statements ~~and (2) a related auditor's report~~ that affect the auditor's report that was filed with the original Form 10-K, the auditor would apply all paragraphs of this standard.

d. The scope should state that the company's auditor does not have any responsibilities regarding (i) the audited financial statements of another entity, or (ii) any related other information required to be filed in a company's annual report under Article 3 of Regulation S-X – see Question 4.

e. The scope should be expanded to include the responsibilities of a predecessor auditor – see Question 23.

**Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?**

No other Exchange Act reports should be included in the scope.

**2. Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not?**

Yes. Information incorporated by reference, for example, under General Instruction G to Form 10-K (e.g., from the definitive proxy statement, or provided in an amended Form 10-K, or from the annual report to security holders (the "glossy")), is properly included in the scope of the proposal. As mentioned on page A6-8, this information "is an essential part of the company's annual report on Form 10-K and is necessary to make the document complete."

**Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?**

Practical Issues

Appendix 6 states (in footnote 15) that any documents contained in the list of exhibits to the annual report are considered to be other information. Thus, under the proposal, the exhibits incorporated by reference and listed under Item 15(a)(3) of Form 10-K would be required to be read for material inconsistencies, material misstatements of fact, or both. As is often the case, many of these exhibits and their various amendments have been filed with the SEC over many years. The other information included in the Item 15(a)(3) exhibits may or may not be compared with or traceable to any audit evidence obtained during the current audit and reading and "evaluating" all of these exhibits will be a significant enlargement of the audit scope, especially in the initial year of implementation of this proposal, and for large or complex registrants.

Consequently, I recommend that the final standard clarify the auditor's responsibilities regarding the exhibits filed under Item 601 of Regulation S-K.

Additional Audit Costs

AU 550 does not discuss incorporation by reference. Additional costs would be incurred to the extent auditors were not fully "reading and considering" the documents that are incorporated by reference (e.g., the exhibits, the definitive proxy statement, and amendments to other information in the annual report using Form 10-K/A).

Further, additional audit costs would include complying with AS 3 (Audit Documentation) which requires specific documentation of the information added to the audit working papers after "lock-down."

**3. Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not?**

Yes, other information included in an amended annual report is properly included in the scope of the proposal.

**Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?**

See Question 2.

**4. Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are there practical issues with applying the proposed other information standard to the other entity's audited financial statements?**

The company's auditor should not have any responsibilities regarding audited financial statements of another entity, or any related other information required to be filed in a company's annual report under

Article 3 of Regulation S-X, since (as pointed out in Appendix 6) those financial statements were already subject to a separate audit.

I suggest this scope exception be clearly stated in the final standard – see Question 1.

There will be practical issues and related additional costs involved in coordinating and documenting the other auditor's evaluation of the other information that is related to the other entity's audited financial statements.

**5. Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?**

<u>Paragraph 2</u>

Concerning the overall Objectives, paragraph 12 addresses the auditor's responses to the potential misstatements in the financial statements. Page A6-31 explains that "[t]hese procedures would provide an increased auditor focus on other information, which could improve the auditor's identification of potential misstatements in the financial statements." I believe this is as important an objective as those mentioned in paragraph 2, and should be included in the Objectives paragraph in the final standard.

<u>Paragraph 2.a</u>

<u>Meaning of "evaluate"</u>

What does "evaluate" mean to investors and other financial statement users?

a. The other information (i) is not audited, (ii) is not unaudited, and (iii) is not reviewed; it has been evaluated!

b. What meaning will investors and financial statement users attach to the term "evaluate"? How will non-accountants understand this verb? The proposal tells us that since the other information being "evaluated" is based on "relevant audit evidence obtained and conclusions reached during the audit" the other information is in appearance and fact "audited."

I believe that investors and other financial statement users can come to no other conclusion – "evaluated = audited" – despite the auditor's report saying "we did not audit the other information and do not express an opinion on the other information" (required by paragraph 13.d).

This "evaluated = audited" conclusion is further supported by –

a. Appendix 6 (page A6-15) which explains that "should evaluate" is used in PCAOB standards when the auditor is expected to "come to a conclusion based on the performance of certain [audit] procedures (the footnote cites AS 7 and AS 12)."

b. Paragraph 12 which states that the potential misstatement in the audited financial statements uncovered by the procedures (outlined in paragraphs 4 and 5) must be evaluated using the audit procedures found in AS 14 (Evaluating Audit Results), AU 508 and AU 561.

c. The procedures undertaken (under paragraphs 9 and 11), when there is an uncorrected material inconsistency or misstatement of fact (or both), indicates that "evaluate" is equivalent to "audit."

<u>Other comments</u>

The word "fact" in paragraph 2.a should be footnoted and the audit guidance found on page A6-12 should be included in the final standard. This guidance suggests that the term fact "could relate to, among others, statements about the company's competitive environment, technological developments, or supplier relationships" and that "the auditor might have knowledge of such information as part of obtaining audit evidence or reaching conclusions during the audit."

<u>Paragraph 2.b</u>

To circumscribe any possible auditor liability –

a. The auditor should detail exactly the other information that has been "evaluated." This will also tell investors and other financial statement users that the auditor did not "evaluate" everything in the annual report (likely contrary to most investor and user expectations). In most cases, such a detailed listing would be impractical.

b. Require the specific identification of other information for which the auditor did not have relevant audit evidence (which other information may be considered to be "unevaluated/unaudited"). Such a listing would be substantially longer than that mentioned in a. above, overly cumbersome, and impractical to apply in practice.

   Under this proposal, the auditor does not specifically detail the other information evaluated and not evaluated. The auditor's report says nothing other than "we evaluated whether the other information … contains a material inconsistency with the financial statements, a material misstatement of fact, or both." Here the audit report is misleading those investors and other financial statement users who may believe and expect that the auditor has "audited" <u>all</u> the other information in the annual report, despite any statement to the contrary in the auditor's report – see paragraph 13 and Question 18.

c. Regarding the phrase "relevant audit evidence," AS 14 tells us that in forming an opinion on the financial statements, "the auditor should take into account all <u>relevant audit evidence</u>, regardless of whether it appears to <u>corroborate or to contradict</u> the assertions in the financial statements" (emphasis added). It would be helpful if the phrase "relevant audit evidence" be expanded to say that it should be used to corroborate or to contradict the assertions made by management in the annual report.

Paragraph 13.e.(1) requires the audit report to state that, based on the evaluation, the auditor has not identified a material inconsistency or a material misstatement of fact in the other information. This directive is contrary to the objective stated in paragraph 2.b.; accordingly, paragraph 2.b should be restated to insert the words "whether or not" and thus read –

> When issuing an auditor's report … and conclusions reached during the audit, <u>whether or not</u> the other information contains a material inconsistency, a material misstatement of fact, or both.

Unless registrants believe the benefits to financial statement users clearly outweigh the additional audit costs, and are willing to pay for the additional auditing procedures required by this proposal, auditors should not be required to report on their "evaluation." The additional costs would then pay for the procedures auditor's deem needed as a result of the their assessment of the potential exposure to the increased risk of litigation involved in the reading, evaluating and reporting on other information.

**6. Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?**

Yes, the objective regarding material inconsistencies of amounts or information, or the manner of their presentation, and material misstatements of facts (or both) is proper.

**7. Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?**

Quality of Information

I would anticipate that management would increase the accuracy and factual basis of other information in the annual report knowing that their auditors will be reading and "evaluating" such other information under an auditing standard.

Greater Confidence

As currently proposed, the auditor will evaluate the other information based on "relevant audit evidence" obtained during the audit. As discussed in Question 5, a detailed listing of the other information (both evaluated and not evaluated) is not required to be furnished by the auditor, nor in most circumstances is it practicable to do so. This lack of specificity generates the following questions –

a. How will investors determine what other information has been evaluated/audited vs. not evaluated/unaudited?

b. Will investors believe that the auditor read and "evaluated" all the other information in the annual report? Most or some of the other information? What percentage?

c. Should investors take any comfort in believing that some of the other information was evaluated even if a significant percentage of other information may not have been evaluated?

d. How can investors and users gain any confidence regarding such unevaluated other information?

As the proposal is now written, investors will believe that the auditors evaluated and corroborated all if not most of the other information and thus perhaps give such other information more credibility than is warranted.

While some may assume that investors and financial statement users will have greater confidence in other information, I have no information nor is there any direct evidence that the proposed auditor's report would "contribute to greater confidence." Assuming greater confidence posits the idea that investors confidence level would rise by some material and measureable degree – this is an entirely problematic inference and empirically unverified.

In sum, I do not believe that the proposed reporting will instill in investors and other financial statement users more confidence in the other information.

**8. Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information?**

Yes. I suggest that the term "material" be referenced to AS 14 (Evaluating Audit Results) and to TSC Industries, Inc. v Northway, Inc. in paragraph 2.

**Would applying this definition represent a change to the materiality considerations auditors currently use under AU sec. 550?**

Materiality under AU 550 is consistent with the requirements of SAB 99 (Materiality) and AS 14; both documents cite the Supreme Court's decision in TSC Industries.

**9. Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?**

Paragraph 4.b

The proposed procedures in paragraph 4.b mentions "[c]onsistency of any qualitative statement in the other information …."

I recommend that the meaning of "qualitative statement" in the context of this proposal be clarified by incorporating into the final standard the discussion found on pages A6-12 and A6-19. This guidance explains qualitative statements as "the description of the company's critical accounting policies, estimates, and related assumptions in the other information of an annual report … [that] would be directly related to accounts and disclosures in the financial statements …." This qualitative "other information might appear in the MD&A section … of Form 10-K and relate to, for example, accounting policies, practices, and estimates or the description of off-balance sheet arrangements."

Paragraph 4.c

Page A6-20 provides some additional guidance to paragraph 4.c observing that "[w]ith respect to other information that is not directly related to the financial statements … [this other information] might appear in the Business, Risk Factors, or Quantitative and Qualitative Disclosures about Market Risk sections … on Form 10-K or the MDFP section … on Form NCSR…."

This additional guidance continues saying that "management might state in the other information that the company has the largest market share in the company's industry. This information could be material to an investor's decision about the company. The auditor might be aware, based on relevant audit evidence obtained during the audit, that the company does not have the largest share in the relevant industry. The proposed other information standard would require the auditor to evaluate whether management's statement represents a material misstatement of fact."

I recommend that the above guidance regarding "other information not directly related to the financial statements" be incorporated into the final standard.

Paragraph 4.c should be reworded

So that it more closely relates to the objective in paragraph 2.a (which states, "To evaluate whether the other information contains … a material misstatement of fact …."), paragraph 4.c should be amended as follows:

> "Facts ~~Other information~~ not directly related to the financial statements as compared to relevant audit evidence obtained and conclusions reached during the audit …."

Paragraph 5

Paragraph 5 requires the auditor "perform additional procedures, as necessary, to determine whether there is a material inconsistency, a material misstatement of fact, or both." Page A6-21 says "[s]uch additional procedures might include (1) requests for additional documentation and (2) consultations outside of the engagement team, such as a national office or other parties with appropriate expertise. The procedures would vary based on the auditor's evaluation of the relevant facts and circumstances."

At a minimum, this guidance (regarding these additional audit procedures that either supplement, or are in addition to those undertaken during the audit to corroborate the amounts or disclosures in the financial statements and in other information) should be incorporated into the final standard.

**10. Is it understood which amounts in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?**

The amounts required to be recalculated are reasonably clear; however –

a. The audit guidance found on page A6-20 ("… the auditor would not be required to evaluate the appropriateness or sufficiency of the formula used in the calculation.") should be included in paragraph 4.d of the final statement.

b. The final standard should address those situations where the auditor believes (using professional judgment) a metric or formula used –

- Is not common (or standard) practice in the entity's industry, or
- Produces a misleading result (though potential management bias, error or otherwise).

c. In that the SEC encourages the use of tables, schedules charts and graphic illustrations in annual reports to security holders (1934 Act Rule 14a-3); the final standard should address financial and "factual" information presented in the form of charts or graphs. Among other things, this guidance should comment on the consistency of the other information with the financial statements, the completeness of the information, the manner of presentation and the possible misstatements that may enter into such chart or graph presentations.

**11. Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?**

Appendix 6 deals with the additional costs of complying with this proposal very broadly. More specifically additional costs incurred would include for example: keeping the audit working papers "open" past their "lockdown" date to comply with AS 3; the review of multiple drafts of documents; coordinating the "evaluation" of other information by other auditors and predecessor auditors; and coordinating with audit teams involved with subsidiaries of the registrant located outside the United States whose working papers contain the appropriate audit evidence.

**12. Are the proposed auditor responses under paragraph 5 appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If not, why not?**

Yes, the responses under paragraph 5 requiring a discussion with management and the performance of additional procedures are appropriate.

**13. Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?**

None beyond those broadly mentioned in Appendix 6

**14. Are the proposed auditor's responses under paragraphs 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

Yes, the responses under paragraphs 8 and 9 are appropriate.

**15. Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? Under what circumstances would such a report be appropriate or not appropriate?**

Yes, it is appropriate to identify and disclose in the auditor's report (a) other information containing amounts or information that is materially inconsistent with the audited financial statements, (b) other information whose presentation is materially inconsistent with the audited financial statements, and (c) a material misstatement of fact, that is not corrected by management.

Since it is left unstated, the proposal implies that the auditor has no responsibility to correct the other information that does not agree with the "relevant audit evidence obtained." Nevertheless, to eliminate any uncertainty, the final standard should affirmatively state that the auditor has no duty to, nor should the auditor correct the other information in the audit report.

In addition to the auditor's "evaluation" of other information incorporated by reference after the issuance of the audit report, paragraph 7 outlines the audit procedures to be followed when management does not revise the other information and the other information is not available to the auditor prior to the issuance of the auditor's report. The final standard should address the impact, if any, of these procedures on the date of the audit report (AU 530, Dating of the Independent Auditor's Report).

**16. Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

Yes, the responses under paragraphs 10 and 11 are appropriate

**17. Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed other information standard, the auditor determines that there is a potential misstatement in the financial statements? Why or why not?**

Yes, they are appropriate. If the audit report has not been issued, I suggest that – in addition to AS 14 (to determine whether or not the auditor has obtained "sufficient appropriate audit evidence") – AS 12 (Identifying and Assessing Risks of Material Misstatement) should be referenced in the final statement so that auditors can determine that they had properly identified and appropriately assessed the risk of material misstatements, and had correctly considered the design and implementation of their responses to material misstatements.

**18. Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?**

Paragraph 13.d requires a "statement that the auditor did not audit the other information and does not express an opinion on the other information" be included in the auditor's report. This reporting contradicts the requirement that the auditor evaluate the other information based on relevant audit evidence obtained and conclusions reached during the audit, which procedure is viewed as tantamount to auditing the other information.

Concerning paragraph 13.e.(1), there is no logical reason for auditors to affirmatively report that they have has not identified a material inconsistency or a material misstatement of fact in the other information. This reporting is merely a form of negative assurance (e.g., "we have not identified a material inconsistency etc.", or "we are not aware of any material modifications that should be made to the other information etc.") submerged in the audit report of the registered public accounting firm.

**19. Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.**

The standard should neither require nor permit the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence.

**20. What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?**

After the audit report has been issued, additional costs would be incurred in discussions with management and the audit committee, and audit procedures to comply with Section 10A, AS 3, AS 12, AS 14, AU 508, AU 561, and other auditing standards and procedures as considered necessary in the circumstances.

**21. Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?**

No, see discussion under General Comments and Question 18.

**22. Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?**

No practical considerations come to mind.

**23. Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?**

I recommend that the final standard expand footnote 6 to paragraph 2 by including the discussion on page A6-38. This additional guidance requires "the predecessor auditor to perform the procedures with respect to a material inconsistency based on relevant audit evidence obtained and conclusions reached during the predecessor auditor's previous audit." Consequently, the "predecessor auditor's procedures would include reading and evaluating the other information in the current period annual report … for any material inconsistencies with the audited financial statements for the prior period."

This guidance continues "[i]f the predecessor auditor concludes that there are no material inconsistencies, the predecessor auditor's report may be reissued. If, after communication with management and the audit committee, the predecessor auditor determines that the other information contains a material inconsistency, the predecessor auditor would be required to determine his or her responsibilities under federal securities laws and PCAOB standards. The predecessor auditor also may withhold the use of the auditor's report for the prior period."

**24. What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability?**

Notwithstanding the auditor's report specifically states that "the auditor did not audit the other information and does not express an opinion on the other information," it is not plausible for investors and other financial statement users to believe that the "evaluation" is a non-audit service, since (a) the auditor expresses an opinion based on their "evaluation" (i.e., there are no material inconsistencies or misstatements of fact [a pass], or the contrary [a fail]), (b) the other information opinion is included in the basic auditor's report (under a separate section titled The Auditor's Responsibilities Regarding Other Information), and (c) that the evaluation was based on relevant audit evidence obtained and conclusions reached during the audit.

For these reasons, the auditor would increase their litigation exposure to third parties since they are in appearance and fact auditing such other information.

Further, the auditor's "evaluation" must comply with professional standards, i.e., due professional care, planning and supervision, sufficient relevant data, etc., and therefore a failure to meet these standards would be the basis for audit malpractice and other potential legal claims.

**Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?**

Yes, I recommend abandoning the reporting requirements in this proposal, but keeping the standard. A separate report on other information may then be formulated by the Board, possibly using a form of "negative assurance" saying, for example –

> Based on our work, described in Note X of this report, nothing has come to our attention that causes us to believe that other information (denoted with the symbol ** in the annual report on Form 10-K filed on xx) is materially inconsistent with the financial statements audited by us (referred to above), or contains a material misstatement of fact, or both.
>
> Note: The use of a symbol is one mechanism to let financial statement users know exactly what has been read and the procedures that were followed by the auditor. This method would be impractical in most cases.

This separate report assumes registrants believe the benefits and value added to their investors will clearly outweigh the additional costs of the auditor's procedures.

**25. Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?**

If the Board proceeds with this proposal substantially as written, I recommend that the Board seek legal advice from qualified counsel to determine the impact on the auditor's potential liability under the federal securities laws, as well as the laws in all jurisdictions.

**26. Are the proposed amendments to PCAOB standards, as related to the proposed other information standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed other information standard that the Board should consider?**

The proposed amendment to AU 9634 (Auditing Interpretations of Section 634, page A4-8) is not appropriate for the reasons set forth under General Comments and the answers to the above Questions.

**27. In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?**

I support the Boards requiring a statement in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report.

**28. Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?**

This proposal should apply only to broker-dealers who either are issuers (as defined in the 1934 Act), or are a subsidiary of an issuer; thus all of the above comments and responses are applicable to other information disclosed by such broker-dealers.

**29. Is the Board's effective date appropriate for the proposed other information standard? Why or why not?**

Yes, the effective date of the standard (applicable to audits of financial statements for fiscal years beginning on or after December 15, 2015) is appropriate. See Question 30. ,

**30. Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

Notwithstanding the substantial expansion of the audit work and documentation, in that the obligation to read and consider is already required by AU 550, there is no reason why auditors of large accelerated filers, accelerated filers, non-accelerated filers or smaller reporting companies cannot read and "evaluate" the other information in annual reports by the effective date of the proposed standard.

**31. Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?**

The discussion in Appendix 6 of the difficulties involved and hurdles encountered in having the auditor report on other information in 1933 Act filings support a "no" answer to this question.

The perceived needs of investors are currently being met for certain 1933 Act filings since other identified information is read and reported on by the auditors in a letter addressed to the underwriter with a statutory due diligence defense under AU Section 634 (Letters for Underwriters and Certain Other Requesting Parties). In addition, 1933 Act filings are also subject to the requirements of AU 711.

**32. Are there some elements of the proposed other information standard that the Board should consider requiring the auditor to perform related to other information contained in filings under the Securities Act, such as the auditor's responsibility to evaluate the other information? If so, which elements of the proposed other information standard should the Board consider including in the procedures currently required for Securities Act documents under AU sec. 711? If not, why not?**

At this time, no elements of the proposal should be extended to 1933 Act filings; however, a review of AU 711 and AU 9711 is warranted and should be added to the Board's standard-setting agenda.

**33. What costs or other challenges should the Board consider when assessing whether to propose extending some elements of the proposed other information standard to other information contained in documents filed under the Securities Act?**

See Question 32.

* * * * *

I appreciate your consideration of my comments, suggestions and responses to the Appendix 6 Questions and would be pleased to answer any questions the Board or the Staff may have concerning this letter.

Sincerely,

Robert N. Waxman, CPA

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, D.C. 20006-2803

**Re: PCAOB Release No. 2013-005, Rulemaking Docket Matter No. 034, *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* ("Proposed Auditing Standards")**

Dear Members of the Board:

WeiserMazars LLP ("WeiserMazars") welcomes this opportunity to comment on the Public Company Accounting Oversight Board's (the "PCAOB" or the "Board") Proposed Auditing Standards. WeiserMazars supports the PCAOB in its efforts to enhance audit quality for audits of issuers in order to provide investors and other financial statement users transparency in financial reporting so they can make appropriately informed investment decisions.

For this reason, we are joining the discussion about how best to address specific concerns raised by the Board regarding the demands of investors and other financial statement users that the current auditor's pass/fail reporting model does not provide sufficient information relating to a particular audit of an issuer. WeiserMazars is a firm with over 100 partners and 650 professionals in six offices across the United States ("U.S."), an independent member firm of the Mazars Group, an organization with 13,500 professionals in more than 70 countries around the world, and a member of Praxity, a global alliance of independent firms. We understand the increased complexity of global business operations and the use of judgments and estimates made by management of issuers as well as complex privately-held businesses. Because we are a U.S. registered public accounting firm, and a member of an international network, our perspectives may differ from our international counterparts due to variations in the client population and litigation environment.

We understand the PCAOB wants to enhance the current auditor's reporting model while at the same time does not want to create undue hardship to both independent registered public accounting firms and issuers, increase litigation, add further complexity in the capital markets or promulgate reporting requirements for which the costs outweigh the benefits.

Our responses to the Board's Proposed Auditing Standards are driven primarily by our position in the U.S. marketplace as a medium-sized public accounting firm servicing issuers with less than $.5 billion in market capitalization held by non-affiliates. Therefore, our focus is to address our concerns and challenges to companies with similar characteristics to our issuer client base as well as to similar accounting firms.

MAZARS

WeiserMazars

**Overall Views**
We understand the Board's position with respect to the auditor's unique insights and knowledge developed during the audit process and that certain information should be shared with investors and other financial statements users. However, we do not believe it would be appropriate to mandate auditors to provide such information in the auditor's report. Auditing of an issuer is a highly complex professional discipline that requires many years of experience, training and education and knowledge of the issuer's business. An audit requires extensive use of the auditor's professional judgment. In our view, the disclosure of critical audit matters within the auditor's report would not incrementally help investors make informed decisions or enhance transparency and may confuse investors and dilute the value of an independent auditor's report.

We fully support improvement to the auditor's reporting model and also recognize investors' needs for meaningful information on which to base their investment decisions. But certain of the proposed changes will require significant judgments to be made by auditors, management, audit committees and other members of the Boards of Directors which may generate inconsistency between firms and issuers and could be widely misinterpreted by investors. We believe that investors and other users of financial statements may not reasonably and meaningfully assess the effectiveness of such judgments of critical audit matters without all the factual and technical data that is available to the auditor.

We believe the assessment of audit quality is the responsibility of practice and technical leaders of audit firms, regulators (such as the SEC and the PCAOB), state boards of accountancy and most importantly, audit committees of issuers upon whom investors should be able to place their reliance as to such matters. In our opinion, we view the regulation and strengthening of audit committee responsibility as "gatekeepers" as the most important aspect and viable alternative to assure that investor needs are served.

**Appendix 5 – Additional Discussion of the Proposed Auditor Reporting Standard, Proposed Amendments to PCAOB Standards, and Comments on the Concept Release**

**<u>Questions Related to Section IV:</u>**

2. ***The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?***

   We do not believe that there is a need to change the provisions of AU Section 508.09. The proposed standard indicates that the "requirement for the auditor's report to be addressed to investors might serve as a reminder to the auditor that the auditor's ultimate customer is the investor." We do not believe that the proposed requirement regarding the addressee will cause any change in an auditor's view of the importance of the investor. Therefore, the current provisions of AU Section 508.09 are adequate and appropriate. We also believe that because the current addressee model is appropriate, there are no others to whom the auditor's report should be addressed.

3. ***The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?***

   We believe that the revisions related to the description of the nature of an audit, as described in the proposed auditor reporting standard, are adequate and appropriate. We do not believe that there are any additional auditor responsibilities that need to be included to further describe the nature of an audit.

4. ***The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?***

We do not believe that a statement in the auditor's report relating to auditor independence is necessary. The title of the auditor's report states the auditor is independent, and we believe this is sufficient. Therefore, further disclosure regarding auditor independence is unnecessary.

5. ***The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.***

   *a.* ***Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?***

   Information regarding the tenure of the auditor does not fit into the context of the auditor's report and, therefore, would not be useful to investors or other financial statement users. Tenure of the auditor is not related to auditor responsibilities. There is no meaningful analysis that can be attributed to auditor tenure. The number of years an auditor serves an issuer may or may not impact audit quality.

   *b.* ***Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?***

   We believe auditor tenure is meaningless, and more so, if there have been a series of mergers among auditing firms.

   *c.* ***Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?***

   Auditor tenure is not a meaningful measure and should not be reported in the auditor's report or elsewhere.

**<u>Questions Related to Section V:</u>**

10. ***Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?***

We believe the inclusion of critical audit matters in the auditor's opinion will add further confusion to investors who do not fully understand the auditing process or how an engagement team reaches its conclusions regarding risk assessments. We would expect that the auditor and the issuer would incur additional costs related to the reporting of critical audit matters. We are also concerned, that such inclusion may become recurring disclosures of routine critical audit matters with "boilerplate" language, because issuers in similar industries will presumably have the same recurring critical audit matters (e.g., loan loss reserves for a bank). Use of the auditor's report to convey important information about the company is not a practical solution for providing critical information that should be authored by management, approved by members of the Board of Directors, particularly the audit committee, and included elsewhere in issuer filings.

11. ***What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?***

We do not believe there are any benefits derived from including critical audit matters in the auditor's report. Unintended consequences of such inclusion may include negative impacts on the relationship between the auditor, issuer's management and the audit committee regarding an ongoing and open dialogue, and forthright communication of significant audit matters. Another unintended consequence is that auditor judgment may be impacted whereby matters may be excluded from the Engagement Completion Document or not communicated to the audit committee.

12. ***Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?***

We believe the definition of a critical audit matter is clearly stated in the proposal. However, such matters would not necessarily be understood by financial statement users. We are concerned that some investors may misinterpret the communication of a critical audit matter to be indicative of an issue with respect to the quality of the financial statements or operations of a company, or that such communication may be seen as a qualified auditor's report.

We agree that the use of the word "most" as understood in the definition of critical audit matters in the Proposed Auditing Standard would be clear to a reasonable investor.

15. ***Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?***

We believe the inclusion of audit procedures performed, critical audit matters and other information subject to the auditor's judgment in the auditor's report will not be relevant or useful, and may even be further confusing to investors; this may result in more questions being raised than answers provided, which could impact the U.S. capital markets in a negative way. For instance, smaller sized filers may be significantly impacted by the inclusion of critical audit matters in the auditor's report because they may not have the same sophistication and resources as larger filers. Investors may not be able to understand critical audit matters or other information without the bases needed to put these matters in proper perspective.

21. ***What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?***

We believe additional recurring costs will be incurred by auditors, especially for smaller and medium sized accounting firms, caused by additional review time incurred by the lead engagement partner, engagement quality reviewer ("EQR"), Engagement Quality Control Reviewer ("EQCR"), and potential review by auditor's in-house or outside legal counsel. Auditors may also have increased liability insurance coverage.

For many non-accelerated filers, these activities will also require input from management, audit committees and others, including issuer's in-house or outside legal counsel. Also see our response to question #23 below.

23. ***How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?***

Substantial first-time through and recurring costs in these areas could be expected by auditors and their issuer clients. For auditors this could include training and manuals/template updates. For the issuers, there could also be additional training and increased professional fees. Consequently, we believe that additional time incurred and resources used by the engagement team and other firm personnel will cause audit fees to increase. Such fee increases may have an unintended consequence as issuers may consider changing auditors, which may compromise the quality of the audit in order to lower the cost of obtaining an audit opinion.

24. ***Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?***

We believe significant matters warranting inclusion in the auditor's report should be addressed through an emphasis of a matter paragraph in accordance with existing standards and based on auditor judgment; such matters should not be mandated by the Board.

26. ***What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.***

We believe that the time incurred for the inclusion of critical audit matters in auditor's reports would be quite lengthy and not particularly useful to investors, while simultaneously increasing costs and exposure to frivolous litigation for smaller to medium sized public accounting firms. Smaller to medium sized public accounting firms, as compared to the larger international public accounting firms, may not have the resources to protect their practices.

Critical audit matters for a smaller or non-accelerated filer may not be deemed as critical for a larger or accelerated filer. Therefore, the Board's single requirement for different sized filers may not be equally weighted in practice causing additional burden to non-accelerated filers. This also applies to complex verses simple accounting issues whereby a complex issue for a smaller or non-accelerated filer that would be deemed a critical audit matter by an auditor may not be deemed critical for a larger or accelerated filer.

Further, the comparability of auditor's reports that include critical audit matters would add confusion to investors, particularly if a critical audit matter existed in only one year. In addition, for critical audit matters to be truly comparative, a detailed history would need to be provided to the financial statement user. Provision of a detailed history would become a "form over substance" approach, whereby such long and technically detailed information would not be useful to investors. Additionally, we believe this information could be interpreted by the investing public potentially as "unresolved issues," which could lead to possible misinterpretation by analysts, investors and other financial statement users, leading to increased litigation against both the issuer and the auditor.

27. ***What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?***

We do not believe that overall users of the audited financial statements, particularly investors, would receive any additional benefit from this information, which would also prove to be more costly to the issuer. Such responsibility should be borne by management and not the independent auditor. Therefore, critical audit matters that have been satisfactorily resolved among management, the audit committee, other members of the Board of Directors and the auditor should not be included in the auditor's report.

28. ***What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?***

We believe the auditor's communication of critical audit matters would substantially expand the scope of auditor liability in private securities litigation without providing any corresponding benefit to investors. Any comment made (or omitted) would be scrutinized under the current "recklessness" *scienter* standard for liability under Section 10(b) of the Securities Exchange Act of 1934 for fraudulent or misleading statements made with respect to securities traded in the public markets. It would be extremely difficult to obtain dismissal of such claims on motion. This would revive the ability of class action securities counsel to present auditors with the choice of paying unreasonable settlements or enduring the very substantial costs of civil discovery on claims without legal merit. This, in turn, would increase the legal and insurance expenses of auditors and thus require material increases in fees to issuer clients.

The same considerations would inhere to any discussions of non-financial information required by the proposal. This problem would be exacerbated by the lack of auditor qualifications to understand and comment on non-financial, subjective company information and the inability to apply objective verification procedures to such matters.

A potential solution to these concerns might be the creation of a legislative "safe harbor" for such non-financial information comments (similar to that existing for projected financial statements). But it would be difficult to define that "safe harbor" to distinguish it from the current opinion on compliance with U.S. GAAP and it would require U.S. Congressional action.

The Board should consider proposing a related project to address the clarification of critical audit matters by considering the development of safe harbor language that auditors can insert in their auditor's reports in order to decrease the likelihood of financial statement users misunderstanding the nature, content and context of critical audit matters disclosed by auditors.

**Questions Related to Section VI:**

29. ***Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?***

We believe that the Board's description of circumstances that would require explanatory language is appropriate.

30. ***Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?***

We believe that it is valuable to retain the auditor's ability to emphasize a matter in the auditor's report. In general, the auditor should be able to exercise professional judgment regarding what matter(s) needs to be emphasized (taking into consideration materiality from a quantitative and qualitative perspective and other relevant facts and circumstances).

**Question Related to Section VII:**

34. ***What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.***

See our response to question #21 in Section V above. In addition, costs incurred by small to medium-sized accounting firms and smaller or non-accelerated filers, proportionately, will have a much greater impact on them than on larger or accelerated filers and larger international accounting firms.

**Questions Related to Section VIII:**

35. ***Are the proposed reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?***

Broker-dealers are not issuers. Although there are some broker-dealers that are subsidiaries of issuers, that is a small number and, we believe, to have the entire industry subjected to the proposed rule would be burdensome.

As the broker-dealer industry is heavily-regulated and subject to oversight by both FINRA, the SEC, and in some cases other exchanges, and with auditors of all broker-dealers being subjected to PCAOB standards in June 2014, existing layers of regulation pose significant costs already. Many broker-dealers are small in size. In fact, according to a recent presentation on October 31, 2013 at the PCAOB Forum on Auditing Smaller Broker-Dealers in Jersey City, of the approximately 4,200 broker-dealers, over 2,200 of the broker-dealers have minimum net capital of $5,000 and nearly 1,700 broker-dealers have revenues of less than $1 million.

Additionally, regulators receive monthly or quarterly regulatory reports (FOCUS Reports); broker-dealers are under constant scrutiny and maintain regular communication with regulatory bodies. Annual broker-dealer auditor's reports are filed with both the SEC and FINRA, and the SEC maintains a public library where investors can review the financial statements of broker-dealers. Regulators also review these filings. In addition, examinations of broker-dealers occur periodically by the regulators depending on the risk associated with that broker-dealer entity. If the Board decides that it would be appropriate to include all broker-dealers under the proposed reporting standards and amendments, consideration should be given to limit the rule change to broker-dealers that hold customer securities, only.

36. ***Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report critical audit matters appropriate for auditors of brokers and dealers? If not, why not?***

As noted above, significant regulatory oversight already exists for auditors who audit broker-dealers. We believe that the inclusion of a requirement to communicate in the auditor's report critical audit matters for audit of brokers and dealers would provide no additional benefit. However, it is our understanding that those brokers who carry customer balances are the Board's focus. Therefore, if the Board requires critical audit matters to be included in the auditor's report, such requirement should be limited to audits of those broker-dealers who carry customer balances.

37. ***Since a broker or dealer may elect to file with the SEC a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?***

We do believe that neither the balance sheet only auditor's report nor the full financial statement report should include critical audit matters or other information. This may cause confusion for investors as noted above for non-broker-dealer entities. However, the carrying broker-dealer should be the only broker-dealer entity considered for additional reporting as the risks of holding customer cash and securities rest with those firms.

38. ***Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of a master feeder fund or fund of fund structures?***

Investors in registered investment companies are required to meet the definitions of an accredited investor or qualified purchaser. Such investors are deemed sophisticated and the inclusion of a discussion of critical audit matters in the auditor's report would not add value for the investor.

**Question Related to Section X:**

42. ***Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?***

If the Board adopts the new reporting standards, we believe that there should be a time delayed phase-in of the proposed reporting requirements for auditors of smaller or non-accelerated filers or smaller reporting companies in order to provide the necessary training and guidance as well as to make appropriate revisions to their respective quality control policies and procedures. However, auditors of larger or accelerated filers should be the first to comply with the proposed auditing standards.

**Appendix 6 – Additional Discussion of the Proposed Other Information Standard, Proposed Amendments to PCAOB Standards, and Comments on the Concept Release**

**Questions Related to Section III:**

6. ***Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?***

We do not believe that the auditor should evaluate the other information for any material inconsistencies or material misstatement of facts. While the auditor gains an understanding of the other information, it would not be subjected to the same audit procedures and scrutiny as financial statement information and related footnotes, their source originating from the issuer's financial reporting system (general ledger). Therefore, much of the auditor's evaluation of other information would be conjecture, further subjecting the auditor to possible litigation and undue costs.

13. ***Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?***

As mentioned above, we believe there would be significant additional costs incurred in the instance when there is an identification of a potential material inconsistency and/or material misstatement of fact discovered. The concept of a "close call" leads to significant costs in ensuring that the documentation is accurate and not deemed to be misleading to the users of the audited financial statements. Further, there is an implicit risk that the mere reference to a potential material inconsistency and/or misstatement of fact could be interpreted by investors or other users of financial statements that there is a material inconsistency and/or misstatement of fact when in fact there is not. We also believe this would significantly increase the risk of litigation against both the registrant and the independent registered accounting firms by providing such information to the investing public.

**Question Related to Section IV:**

15. ***Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? Under what circumstances would such a report be appropriate or not appropriate?***

We believe that it is appropriate for the auditor to appropriately address such circumstances prior to issuing the auditor's report. Specifically, the auditor should exhaust all reasonable means to understand the fact pattern causing the material inconsistency, material misstatement of fact, or both of such other information. In addition, the auditor should discuss with management and the audit committee why the issuer believes such material inconsistency, material misstatement of fact, or both, remains unresolved.

If, after performing the above procedures, the other information remains materially inconsistent, materially incorrect in fact, or both, then the auditor could consider including an emphasis of a matter paragraph in the auditor's report.

We also believe that the PCAOB may want to consider defining "material inconsistency" for purposes of evaluating circumstances to which this concept applies.

**Questions Related to Section VI:**

19. ***Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.***

We do not believe the Board should permit or require the auditor to identify in the auditor's report information not directly related to the financial statements and related footnotes. We do believe such decision should not be based upon whether the auditor had relevant audit evidence against which to evaluate because items outside the financial statements are outside of the scope of the auditor's engagement.

20. ***What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?***

We believe both the auditor and issuer would incur substantial time and resources when involving a material inconsistency, a material misstatement of fact, or both, when attempting to report such matters to the investing public. In accordance with current PCAOB requirements, such items should be documented in the Engagement Completion Document. Such documentation includes specific fact pattern identification with a basis for conclusion. In order to transfer this knowledge into a format that is appropriate, the following may be required:

- Additional time and resources in drafting the appropriate reporting presentation content. This may also require additional time and resources from management and perhaps even from in-house or outside legal counsel depending on the nature of the reported item.

- We expect that the presented content will require the application of significant professional judgment. Specifically, judgment will be required as to the nature of the information to disclose and the amount of information to disclose. To the extent auditor judgment in this area is required, additional auditor and issuer resources will be required to limit the auditor's and issuer's risk in disseminating information that is subject to misinterpretation by the investing public regardless of how careful and thorough the auditor and issuer may be in crafting this presentation.

- We also expect an increase in time to document such additional procedures required to follow up with management, audit committee and other designated parties of the issuer, in-house or outside legal counsel, and the national office (or quality control department) review including EQR.

To the extent the Board decides to invoke this provision, it should consider providing "safe harbor" provisions for the auditor.

21. ***Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?***

We believe the proposed reporting, including the illustrative language, may provide information only to a select group of investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information. It is highly unlikely that the majority of investors will derive benefit from these proposed standards regarding other information or would the related proposed reporting, including the illustrative language, provide clarity of the auditor's responsibilities. The group of investors and other financial statement users that may benefit consists of management, attorneys, audit committees, boards of directors, and sophisticated analysts and traders.

The typical investor or financial statement user is likely unable to distinguish between the audit procedures performed and assurance given on the financial statements and on other information. The proposed reporting includes a statement that *"the auditor's evaluation of the other information was based on relevant audit evidence obtained and conclusions reached during the audit"* and then goes on to say that *"the auditor did not audit the other information and does not express an opinion on the other information."* These two statements can be easily confused and along with the other proposed reporting language would create a more cumbersome and complex auditor's report.

**<u>Questions Related to Section VIII</u>:**

**24.** ***What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?***

The auditor's communication of other information would substantially expand the scope of auditor liability in private securities litigation without providing any corresponding benefit to investors. Any comment made (or omitted) would be scrutinized under the current "recklessness" *scienter* standard for liability under Section 10b of the Exchange Act for fraudulent or misleading statements made with respect to securities traded in the public markets. It would be extremely difficult to obtain dismissal of such claims on motion. This would revive the ability of class action securities counsel to present auditors with the choice of paying unreasonable settlements or enduring the very substantial costs of civil discovery on claims without legal merit. This, in turn, would increase the legal and insurance expenses of auditors and thus require material increases in fees to clients.

The same considerations would inhere to any discussions of non-financial information required by the proposal. This problem would be exacerbated by the lack of auditor qualifications to understand and comment on non-financial, subjective company information and the inability to apply objective verification procedures to such matters.

A potential solution to these concerns might be the creation of a legislative "safe harbor" for such non-financial information comments (similar to that existing for projected financial statements). But it would be difficult to define that "safe harbor" to distinguish it from the current opinion on compliance with U.S. GAAP and it would require congressional action.

**25.** ***Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?***

We believe while Section 11 liability is evaluated under a lower "negligence" standard, the same considerations apply, as would the lack of commonly agreed selection criteria for the matters discussed and terminology used in such discussions. As most securities related litigation is relegated to the federal courts by current law, the proposals would likely not have much impact on liability under state law.

MAZARS

WeiserMazars

**Question Related to Section X:**

**28.** ***Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?***

We believe the proposed standard should not apply to broker-dealers because of the soon-to-be-effective (in 2014) compliance and exemption reports. As enacted, those reports will require significant detail in the identification of exceptions.

**Question Related to Section XI:**

**30.** ***Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?***

The Board should consider a delayed compliance date for the proposed other information standard and amendments for audits, particularly of smaller and non-accelerated filers.

**In Summary**

We applaud the Board's efforts in improving transparency in the audit of financial statements and related information, thereby beginning to close the expectation gap between investors and auditors. Our lack of support for certain aspects of the proposed auditing standards is mostly related to our conviction that we should not supplant the responsibilities of management or audit committees. We remain committed to participating in future discussions with the Board and its staff about how to best implement appropriate provisions of the proposed auditing standards that would further enhance audit quality with respect to issuers. Lastly, we fully support the mission of educating investors and other users of financial statements about the process of auditing issuers and the meaning behind the issuance of the independent auditor's report.

We would be pleased to discuss our comments with you at your convenience. Please direct any questions to Wendy B. Stevens, Partner-in-Charge, Quality Assurance, at (212) 375-6699 (wendy.stevens@weisermazars.com), Salvatore A. Collemi, Director, Quality Assurance, at (212) 375-6552 (Salvatore.collemi@weisermazars.com) or David Bender, Director, Quality Assurance at (516) 620-8497 (david.bender@weisermazars.com).

Very truly yours,

**Re: PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 34**

Wells Fargo & Company (Wells Fargo) is a diversified financial services company with over $1.5 trillion in assets providing banking, insurance, investments, mortgage and consumer finance services. We appreciate the opportunity to comment on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report, and Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting Standard*.

We support efforts to improve audit quality that will enhance investor confidence in and understanding of the audit process and the auditor's responsibilities related to other information. However, we do not support the Board's proposals in their current form.

**Critical Audit Matters ("CAMs"):**

We are most concerned that the Board's proposal to discuss critical audit matters ("CAMs") in the auditor's report may be construed as an implicit qualification of the audit creating a perception that there may be weaknesses or deficiencies in management's judgment, financial statement estimates or internal control environment. The pass/ fail model has served constituents well precisely because an opinion is expressed on the financial statements *taken as a whole*. While we strongly support the decision to retain the pass/ fail model, the subjective nature of the definition, interpretation and ultimately the description in the auditor's report of CAMs increases the likelihood that users may perceive different levels of assurance on different areas of the financial statements. If the perception of the audit opinion is compromised, all stakeholders will be ill-served as corporate governance, auditor independence and user investment decisions could be adversely impacted.

Sophisticated users understand that extensive information related to matters that may qualify as CAMs is already available in existing disclosures. Quarterly and annual financial reports filed with the SEC already include extensive disclosure of critical accounting policies, significant estimates, business and operating trends, as well as financial and operating risks. This is compounded by an ever-increasing disclosure burden as standard setters, regulators[1] and non-authoritative bodies[2] continue to promulgate additional disclosure requirements. Given the litigious environment in the U.S., preparers are often reluctant to remove existing disclosures. Moreover, due to the nature and sheer volume of these disclosures, a meaningful portion may occur outside of periodic SEC filings. While sophisticated users understand and know how to find these disclosures, all of this contributes to a complex patchwork of disclosures that may hinder the casual user's ability to fully comprehend the information that is readily available. Accordingly, we believe any user frustration or confusion regarding the audit process is symptomatic of a larger issue, disclosure overload, that the Board should address with the SEC and other standard setters and regulators to develop a more robust, transparent and user friendly disclosure framework.

Many entities, including financial institutions, operate in complex industries with unique challenges based on the prevailing business or economic climate. During the course of an audit, auditors naturally may encounter areas that involve difficult, subjective or complex judgments that require communication to the audit committee, consultation with experts or require extensive corroboration and documentation. We are concerned that the practical application of the identification, documentation and justification of conclusions regarding inclusion of CAMs in the auditor's report will result in an overabundance of caution by the auditors. In other words, auditors will be motivated to include more rather than less CAMs in the auditor's report to avoid being second guessed during the PCAOB inspection process. Consequently, the auditor's report, at the expense of clarity of the auditor's opinion, will inappropriately become a mechanism to communicate matters of importance or significance related to an entity's financial reporting.

Financial statement users may confuse the roles of the auditor, management and the audit committee. Management is responsible for preparing and filing all financial reports. The financial reporting process is overseen by the audit committee, which oversees a reporting entity's accounting policies, internal controls, financial reporting and the audit process. The auditor should never be the first source of information, provide disclosure of information that is not otherwise required to be disclosed by management or have the appearance that it is making financial reporting decisions on behalf of management. Any confusion of these roles could undermine both the reporting entity's corporate governance as well as the auditor's independence.

It is also likely that reporting entities will incur incremental costs associated with the increased documentation requirements as auditors will now be compelled to justify in their workpapers why certain items either qualify or do not qualify as CAMs. When coupled with the potential harm to investors, corporate governance and auditor independence, we do not see any incremental benefit to users from the Board's proposal. Notwithstanding the Board's stated objective, it appears that the practical purpose of the Board's proposal is to highlight significant disclosures and risks for users of financial statements. Given the level of disclosure information that is already available to users and the costs involved, we cannot support the Board's proposal.

[1] Financial institutions subject to Basel 3 will be required to provide extensive qualitative and quantitative disclosures of capital, liquidly and other risk information starting in 2014.

[2] In our industry, certain regulators are strongly encouraging compliance with extensive risk disclosure recommendations of the Enhanced Disclosure Task Force ("EDTF"). The EDTF is a task force created by the Financial Stability Board and comprised primarily of industry analysts.

**Reporting on Other Information:**

We agree that users may benefit from a clearer articulation in the auditor's report of the auditor's responsibility for the other information in annual reports filed with the SEC. However, we are concerned that the Board has proposed a more stringent standard of auditor involvement with other information. Rather than "read and consider" other information, the auditor will be required to "read and evaluate" whether other information is materially consistent with the audited financial statements. We understand that, as a result of this change, some accounting firms believe substantial incremental auditing procedures will be necessary to satisfy this new requirement. It is unclear to what extent the Board intended to substantively change the auditor's responsibilities related to other information or if the Board simply intends to enhance users' understanding of auditors' existing responsibilities related to other information. If it is the Board's intent to substantively change the auditor's existing responsibilities, we encourage the Board to consider whether it is necessary for users to expect auditors to provide incremental assurance on other information as rigorous and effective procedures already exist to ensure other information is materially consistent with the audited financial statements.

Current laws and regulations require CEO and CFO certifications of disclosure required in the annual and quarterly reports, as well as the establishment of disclosure controls. Public companies are subject to independent audit committee oversight of annual and quarterly financial reporting. Moreover, many disclosures outside of the primary financial statements, such as in the MD&A, are more subjective or forward looking. These disclosures are based on management's analysis and insights and often may not be objectively verifiable. We believe it would be extremely difficult for the auditors to evaluate this information effectively. Given the inherent limitations associated with such an increase in the auditor's scope, and the difficulties this would pose to both auditors and management, it may be necessary to curtail the amount or type of information disclosed in the MD&A, ultimately reducing the overall insight and benefit to users. Lastly, questions regarding the auditor's independence may also surface as an increased level of assurance on subjective or forward looking information may be seen as advocating or challenging the decisions of management.

We encourage the Board to field test how accounting firms will apply the proposed guidance to understand whether the proposal will be unduly costly to preparers. Given the expected increase in auditing procedures and level of auditor experience necessary to provide assurance on potentially subjective and forward looking information, we expect a meaningful increase in recurring audit fees. We do not believe the increase in audit fees, as well as any indirect costs related to increased management time and focus, justify a change in scope. While we support clarification of the auditor's report to explain the auditor's responsibilities related to other information, we do not support the proposal as written. We encourage the Board to retain the existing requirement to "read and consider" and revise the proposed language in the auditor's report accordingly.

**Auditor Tenure:**

While we do not object to the disclosure of auditor tenure in the auditor's report, we do not think it is necessary as there is not a correlation between auditor tenure and audit quality[3].

**RE: PCAOB Rulemaking Docket Matter No. 34**
Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments

Williams (NYSE: WMB) is a leading energy infrastructure company focused on connecting North America's significant hydrocarbon resource plays to growing markets for natural gas, natural gas liquids and olefins.

Thank you for the opportunity to provide comments on the above referenced proposed auditing standard. While we find certain of the proposed changes acceptable, we believe most parts of the standard warrant further consideration.

Communication of critical audit matters: As a reporting entity, we believe that it is fundamentally the company's responsibility to communicate any critical information through the financial statements and notes or other disclosure requirements. A discussion of critical audit matters by the auditor would seem to significantly overlap certain existing requirements for public entities to discuss critical accounting estimates. If there is a perceived deficiency in the disclosure of critical information for investors, it should be within the domain of the Securities and Exchange Commission to address.

We are also concerned with the potential impact of disclosing information that would otherwise not be required to be disclosed. For example, as noted in the proposal, a critical audit matter may result in disclosure of an internal control deficiency that was determined not to be a material weakness. As such, this may result in a discussion of internal control over financial reporting that would otherwise not require disclosure in Item 9A of the Form 10-K. Additionally, it could raise the level of disclosure/discussion with an Audit Committee to include internal control deficiencies that are not considered a significant deficiency or a material weakness. We believe that the prominence and sensitivity of such a discussion in the audit opinion without the broader context could lead an investor to question the auditor's ultimate conclusion and assume their own worst-case interpretation. In the view of an investor, it is difficult to imagine any scenario where such disclosure would not reflect negatively on the reporting entity.

Finally, we would generally expect an increase in audit costs associated with this potential requirement. Given that this is only a hypothetical proposal at this point and that we do not have a similar point of reference, we are not currently able to provide a more precise estimate of the costs. However, realizing that such disclosures in the auditor's report would likely be highly sensitive for the issuing auditor, we would expect this to require additional work by the highest-level auditors on the engagement. This fact alone suggests that such incremental costs may be more than insignificant.

Responsibility for fraud: We believe that describing the auditor's responsibility related to fraud is acceptable as it does not modify any existing responsibilities. We do, however, question whether such an addition would actually enhance the communication to an investor when presented along with an unqualified opinion.

Independence: Similar to our comments regarding responsibility for fraud above, we believe this change is acceptable as well as it does not modify existing responsibilities. Again, though, we question whether this actually enhances communication to an investor.

Tenure: We do not believe that the audit opinion is the appropriate venue to address the client/auditor relationship, especially when there are other long-standing SEC requirements addressing that relationship (see Form 10-K, Part III, Item 14 regarding Principal Accountant Fees and Services and Item 9 of Schedule 14A (Proxy Statement) regarding Independent Public Accountants). These other two options would seem to be a much more appropriate location for a disclosure of auditor tenure if the SEC believed there was value in such a disclosure.

The lack of such a requirement by the SEC is perhaps reflective of the fact that there is not currently a generally accepted correlation between auditor tenure and audit quality. The prominence of the proposed disclosure of auditor tenure within the audit report would either imply such a correlation or impart a much greater significance on this information, well beyond that of a simple "data point" as characterized on page A5-16 of the proposal.

Additionally, page A5-17 of the proposal acknowledges the usefulness of the SEC's EDGAR system in researching auditor tenure. Thus, this information is already available to those users with a strong interest in it. It seems this would be a preferable alternative rather than requiring the auditor tenure in the audit report.

Evaluation of other information outside the financial statements: We are generally supportive of the scope of the proposed other information standard as it applies to information in annual reports filed with the SEC. However, we are opposed to the expansion of the auditor's role in evaluating such other information from the perspective of both cost and difficulty in communicating that responsibility in the audit report.

In general, we believe that an expansion of the auditor's role will directly translate into increased audit fees as it is reasonable to assume that the auditor's expanded role will drive significant additional documentation of their evaluation of the other information. The auditor's increased costs will likely be passed through to the reporting entity as additional fees, with no perceived additional value to the reporting entity. Similar to the discussion of increased costs related to critical audit matters, we do not have a similar point of reference from which to provide a more precise estimate of the costs.

We further question whether the auditor's expanded evaluation can be effectively communicated in an audit report. While the proposed standard would require an auditor to evaluate the other information based on audit evidence already obtained, would it ever be clear to an investor what exact information was or was not evaluated? It would not be practical to specifically identify every single disclosure that was or was not evaluated by the auditor. But absent this specificity, how would an investor know what information was evaluated?

It is also conceivable that an auditor could seek additional audit evidence to evaluate all other information. While not necessarily the intent or requirement of the proposed standard, this possible outcome could have a significant further impact on the associated increased costs.

As a final point on this topic, the proposal did not discuss any evidence that the current standard has been ineffective relative to the quality of information available to investors. As such, we believe that further consideration of the motive is warranted before imposing a standard that we believe will increase costs for little perceived benefit.

Again, thank you for the opportunity to provide these comments to the proposed rulemaking.

Sincerely,

/s/ Ted T. Timmermans

**Re: PCAOB Rulemaking Docket Matter No. 034:** *Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments*

Dear Office of the Secretary:

Wolf & Company, P.C. is a regional accounting Firm based in Boston, Massachusetts, with offices in Springfield, Massachusetts and Albany, New York. We are a PCAOB registered Firm providing audit and assurance services to public and private companies in diverse industries.

We welcome the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or the Board) *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (proposed auditor reporting standard); *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (proposed other information standard); and *Related Amendments to PCAOB Standards* (collectively, the proposal).

We are supportive of the PCAOB's efforts to update and enhance the auditor's reporting model to provide additional information that is meaningful to stakeholders. We also recognize that any such efforts must balance many resultant issues related to, among others, (1) the clarity and source of information provided, (2) the qualitative and judgmental considerations involved, (3) litigation risk attributable to misinterpreted or inconsistent information, and (4) cost benefit analysis.

We recognize that change is needed to enhance the information communicated by the auditor. In commenting on the proposed standard, we focused on the following overarching principles that were included in the Center for Audit Quality's comment letters dated June 28, 2011 and September 30, 2011, and which we believe continue to be most relevant to the proposal:

- Auditors should not be an original source of disclosure about the entity; management's responsibility should be preserved with this regard.
- Any changes to the auditor's reporting model need to enhance, or at least maintain, audit quality.
- Any changes to the auditor's reporting model should narrow, or at least not expand, the expectation gap.
- Any changes to the reporting model should add value and not create investor misunderstanding. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee, and independent auditors.

## I. Critical Audit Matters

We support the overall efforts of the PCAOB to improve the information communicated to financial statement users through the auditor's report. However, we believe the proposal presents important implementation issues that require further consideration, as follows:

*CAM Determination*

In the determination of matters that represent CAMs, we believe that the auditor should initially identify matters that were significant to the audit of the financial statements (significant audit matters). These matters should be derived from those matters communicated to the audit committee under PCAOB Auditing Standard No. 16, *Communications with Audit Committees* (AS 16).

We believe that the nature of the matters required to be communicated to the audit committee pursuant to AS 16 is the first step in the identification of any audit matter that would be significant enough to the audit to be a CAM.

We believe that the auditors consideration of the eight factors identified by the PCAOB in paragraph 9 of the proposed auditor reporting standard provides the criteria for the auditor to follow in determining which matters required to be communicated to the audit committee were significant audit matters. The auditor would then need to identify which of the significant audit matters are CAMs, by determining those matters that, in the auditor's judgment: a) were material to the financial statements; b) involved the most complex, subjective, or challenging auditor judgments or posed the greatest challenge to the auditor in obtaining sufficient appropriate audit evidence; and c) resulted in the most significant interaction (in terms of nature or extent) with the audit committee.

In addition, it is important that auditors communicate only the most important matters, as including too many areas would minimize the intended emphasis. We therefore recommend that the standard should provide an explicit requirement that if an auditor has initially identified a large number of CAMs for potential communication in the auditor's report, the auditor may consider reassessing whether each of these matters meets the definition of a CAM.

*CAM Communication*

The proposed auditor reporting standard requires the auditor to describe the considerations that led the auditor to determine that a particular matter is a CAM. The proposal's CAM examples lead one to believe that the auditor's descriptions of each CAM are expected to address each of the specific factors included in paragraph 9 that were present. If that is the PCAOB's intent, we believe several potential issues arise from this interpretation. First, having to describe each of the particular factors in paragraph 9 would obscure the more essential factors in the auditor's description of why the matter was critical to the audit and may contribute to user misunderstanding. Second, the example CAM reporting in the proposal could lead to an auditor providing original information that is currently not required to be disclosed by the company (e.g., control deficiencies less severe than a material weakness, or corrected and accumulated uncorrected misstatements). This would add confusion to the roles of management and the auditor, and potentially widen the expectation gap.

We believe that requiring the auditor to describe the *principal* consideration(s) that led the auditor to conclude the matter was a CAM would allow the auditor to utilize his or her professional judgment to describe the factors that were most important to the determination that a matter was a CAM, rather than each of the factors, in all cases relating to the specific matter.

We also note that while the proposed standard does not require the auditor to describe the CAM's effect on the audit, each of the PCAOB's three examples of CAM reporting include such descriptions. We believe that in some cases describing the CAM's effect on the audit may help to explain why a matter was a CAM. We believe the proposed auditor reporting standard should explicitly state that the auditor may provide a description of the CAM's effect on the audit if the auditor considers it necessary in describing why a matter is a CAM.

Because describing the CAM's effect on the audit could imply to financial statement users that the auditor is providing a separate level of assurance on specific accounts or balances referenced in the CAM (i.e., "piecemeal opinions") or, conversely, undermine the auditor's opinion on the financial statements taken as a whole, we recommend including an explicit requirement that the audit opinion must not convey that the auditor is providing a separate opinion or conclusion on the critical audit matters.

Consistent with the overarching principles articulated above, we believe that the auditor should not be the original source of information about the company. We do recognize, however, that in the auditor's judgment, there may be rare situations where such information is necessary to the auditor's description of the CAM. In these situations, we believe that communication of such information would be appropriate, if otherwise not prohibited by law or regulation. In such circumstances, the auditor should encourage management to make relevant disclosures, to avoid the auditor being the source of such information.

*CAM Documentation*

We believe the auditor should document the auditor's basis for (a) identifying those matters that were communicated to the audit committee that were determined to be significant audit matters, and (b) determining which significant audit matters were CAMs. We believe this approach avoids the practical challenges associated with the proposal's requirement that audit documentation contain sufficient information to understand the auditor's determination that matters that "appear to be CAMs" were not CAMs."

**II. Other Information**

We support enhancements to the auditor's report that provide transparency regarding the auditor's responsibility with respect to other information. We are also supportive of enhancing the auditor's performance responsibilities related to information that is both directly related to the audited financial statements and meaningful to the user of the financial statements. However, we caution against expansion of the auditor's responsibilities without meaningful cost/benefit analysis. In this increasingly complex accounting and auditing environment, the enhancement of audit quality is paramount. We believe that any diversion of the auditor's efforts to procedures that have not been determined to create value would not be in the best interests of the stakeholders as a whole.

*Performance Responsibilities*

The proposed other information standard expands the auditor's performance responsibilities from "read and consider" under AU section 550, *Other Information in Documents Containing Audited Financial Statements* (AU 550), to "read … and, based on relevant audit evidence obtained and conclusions reached during the audit, evaluate" the other information for a material inconsistency, a material misstatement of fact, or both. The concept of evaluation appears to expand the auditor's performance responsibilities. It is uncertain to us, the degree of procedures and the level of documentation that would be required to support the evaluation concept. Accordingly, we believe the auditor's performance responsibilities regarding other information should be based on defined limited procedures.

Reference is made to AU 634, *Letters for Underwriters and Certain Other Requesting Parties* and AT 701, *Management's Discussion and Analysis*. These standards illustrate the concept of defined limited procedures that are applied to specified financial information. For example, AU 634 indicates that procedures may be performed on information (*a*) that is expressed in dollars (or percentages derived from such dollar amounts) and that has been obtained from accounting records that are subject to the entity's controls over financial reporting or (*b*) that has been derived directly from such accounting records by analysis or computation. Under AU 634, the auditor may also comment on quantitative information that has been obtained from an accounting record if the information is subject to the same controls over financial reporting as the dollar amounts. AT 701 indicates that when the auditors have conducted an examination or a review of MD&A in accordance with AT 701, they may agree to trace nonfinancial data presented outside MD&A to similar data included within MD&A.

We believe that a definition for other information directly related to the audited financial statements should be developed and focused on other information derived either (1) from the financial statements or (2) from accounting records subject to the audit.

We believe the auditor's performance responsibilities should apply only to material other information that is directly related to the audited financial statements. For other information that is not directly related to the audited financial statements, we believe the auditor's responsibilities should be consistent with AU 550, which requires the auditor to read the other information and, if the auditor becomes aware of a potential material misstatement of fact in the other information, to respond appropriately.

We recommend the PCAOB provide guidance within the other information standard on what limited procedures should be performed and how the auditor should document the procedures performed, to provide consistency in practice.

*Reporting Responsibilities*

Requiring the auditor to communicate in the auditor's report that the auditor has evaluated the other information and conclude whether the auditor has identified a material inconsistency, a material misstatement of fact, or both, would imply a level of assurance that is inconsistent with the proposed procedures. Users of the financial statements may perceive the auditor's "conclusion" on the entirety of other information as a form of reasonable assurance on such information, despite the auditor making an explicit statement in the auditor's report that he or she did not audit the other information and does not express an opinion on the other information. We believe this would widen the expectation gap. In addition, the requirement of the auditor to state whether he or she has identified a material inconsistency, a material misstatement of fact, or both, would most certainly create significant incremental litigation risk for auditors. We suggest reporting of the auditor's responsibilities with respect to other information and procedures performed, and, where applicable, describing any unresolved material inconsistencies or material misstatements of fact. This approach makes more explicit an auditor's current responsibilities and we believe will mitigate certain legal risks inherent in the proposed other information standard.

*Scope of Other Information*

The proposed other information standard defines other information broadly as information in the annual report, other than the audited financial statements and the related auditor's report, and includes documents contained in the list of exhibits to, and information incorporated by reference in, the annual report. We believe that exhibits to the annual report should be scoped out of other information due to both the volume and content of the exhibits. Exhibits that are relevant and significant to the issuer's financial reporting would have been subject to audit procedures due to their relevance to the audit of the financial statements. Exhibits that are not relevant and significant to the audit of the financial statements should not be the subject of extended procedures, as the auditor will not be in a position to assume any level of responsibility for such exhibits.

The proposed other information standard would require the auditor to evaluate other information that is incorporated by reference in the annual report, such as information included in the proxy statement. Proxy statements may not be filed until 120 days after year end. It is unclear how this requirement can be applied in practice, as this information may not be prepared or available until after the respective Form 10-K is filed. Accordingly, an auditor would be unable to apply procedures to, or conclude on, information that is not available. Such information should not be included in the scope of other information.

**III. Auditor Tenure**

As noted in the proposal, the PCAOB has not found a correlation between audit quality and auditor tenure. Including auditor tenure in the auditor's report would imply that such a correlation exists and may result in false conclusions being drawn. Accordingly, we do not believe that auditor tenure should be included in the auditor's report. However, we do support the provision of this information in the PCAOB's periodic filings and the transparency that provides.

**IV. Auditor's Unqualified Report & Clarifying Language Changes**

We support the "pass/fail" opinion in the auditor's report, and the use of standardized language to enhance the user's understanding of the auditor's role and responsibilities, the audit process, and the responsibilities of others in the financial reporting process.

We support proposed changes to enhance the wording of the auditor's report in relation to independence and the auditor's responsibilities regarding the notes to the financial statements and material misstatement, whether due to error or fraud. We also support proposed changes to better align the description of the nature of an audit with the Board's risk assessment standards.

We do not support addressing the auditor's report to parties other than shareholders and the board of directors (or an equivalent body). We believe this would create additional litigation risk and would not improve the communicative value of the auditor's report.

****

We appreciate the opportunity to comment on the proposal, and appreciate the Board's efforts with regard to the proposed standards.

Sincerely,

/s/ Wolf & Company, P.C.

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//
